Australian Law Reform Commission

Review of Australian Privacy Law

DISCUSSION PAPER

You are invited to provide a submission or comment on this Discussion Paper

VOLUME 1
DISCUSSION PAPER 72
SEPTEMBER 2007

This Discussion Paper reflects the law as at 31 July 2007

ISBN- 978-0-9758213-9-8

Commission Reference: DP 72

The Australian Law Reform Commission was established on 1 January 1975 by the *Law Reform Commission Act 1973* (Cth) and reconstituted by the *Australian Law Reform Commission Act 1996* (Cth). The office of the ALRC is at Level 25, 135 King Street, Sydney, NSW, 2000, Australia.

All ALRC publications can be made available in a range of accessible formats for people with disabilities. If you require assistance, please contact the ALRC.

Making a submission

Any public contribution to an inquiry is called a submission and these are actively sought by the ALRC from a broad cross-section of the community, as well as those with a special interest in the inquiry.

Submissions are usually written, but there is no set format and they need not be formal documents. Where possible, submissions in electronic format are preferred.

It would be helpful if comments addressed specific proposals and questions or numbered paragraphs in this paper.

Open inquiry policy

In the interests of informed public debate, the ALRC is committed to open access to information. As submissions provide important evidence to each inquiry, it is common for the ALRC to draw upon the contents of submissions and quote from them or refer to them in publications. As part of ALRC policy, non-confidential submissions are made available to any person or organisation upon request after completion of an inquiry, and also may be published on the ALRC website. For the purposes of this policy, an inquiry is considered to have been completed when the final report has been tabled in Parliament.

However, the ALRC also accepts submissions made in confidence. Confidential submissions may include personal experiences where there is a wish to retain privacy, or other sensitive information (such as commercial-in-confidence material). Any request for access to a confidential submission is determined in accordance with the federal *Freedom of Information Act 1982*, which has provisions designed to protect sensitive information given in confidence.

In the absence of a clear indication that a submission is intended to be confidential, the ALRC will treat the submission as non-confidential.

Submissions should be sent to:

The Executive Director
Australian Law Reform Commission
GPO Box 3708
SYDNEY NSW 2001
Email: privacy@alrc.gov.au

Submissions may also be made using the online form on the ALRC's homepage:

<www.alrc.gov.au>

The closing date for submissions in response to DP 72 is Friday 7 December 2007.

Contents

Terms of Reference **15**
List of Participants **17**
List of Proposals and Questions **21**
List of Proposed Unified Privacy Principles **89**

Volume 1

Part A – Introduction 101

1. Introduction to the Inquiry **103**
Introduction 103
Key proposals for reform 105
Background 107
Privacy Act 110
The scope of the Inquiry 111
Related privacy references 112
Defining 'privacy' 114
Privacy beyond the individual 122
Organisation of this paper 136
Process of reform 140

2. Overview—Privacy Regulation in Australia **145**
Introduction 145
The *Australian Constitution* and privacy 145
Federal regulation of privacy 146
State and territory regulation of privacy 148
Legislative rules, codes and guidelines 167
Non-legislative rules, codes and guidelines 168

3. The *Privacy Act* **169**
Introduction 169
Overview of the *Privacy Act* 171
The structure of the Act 182
The name of the Act 184
The objects of the Act 187
Some important definitions 194
Deceased individuals 219

4. Achieving National Consistency **235**
Introduction 235
The federal system 237
Is national consistency important? 238
National legislation 241
Commonwealth-state cooperative scheme 247
A model for national consistency 253
A permanent standing body 262
A single privacy regulator? 267
Other methods to achieve national consistency 270

5. Protection of a Right to Personal Privacy **277**
Introduction 277
Background 278
Right to personal privacy—developments in Australia and elsewhere 280
NSWLRC Consultation Paper on invasion of privacy 290
Recognising an action for breach of privacy in Australia 291
ALRC's view 294

Part B – Developing Technology **309**

6. Overview—Impact of Developing Technology on Privacy **311**
Introduction 311
Privacy enhancing technologies 312
The internet 315
Radio frequency identification 321
Other wireless technologies 325
Data-matching and data-mining 325
Smart cards 327
Biometric technologies 330
DNA-based technologies 333
Voice over internet protocol 334
Location detection technologies 335
Surveillance technologies 337
Other developing technologies 339

7. Accommodating Developing Technology in a Regulatory Framework **341**
Introduction 341
Should the *Privacy Act* be technologically neutral? 342
Designing a 'technologically aware' framework 346
Statutory protection 350
Standards 354
The role of the regulator 358

Proactive regulation 358
Oversight functions of the OPC 359
Guidance on particular technologies 361
Co-regulation 372
Other regulatory mechanisms 374

8. Individuals, the Internet and Generally Available Publications 375
Introduction 375
Individuals acting in a personal capacity 376
Generally available publications 383

9. Identity Theft 393
Introduction 393
What is identity theft? 394
How prevalent is it? 395
Criminalising identity theft 396
Other responses to identity theft 398
Identity theft and privacy laws 399

Part C – Interaction, Inconsistency and Fragmentation 404

10. Overview—Interaction, Inconsistency and Fragmentation 405
Introduction 405
The costs of inconsistency and fragmentation 406
Federal information laws 408
Required or authorised by or under law 412
Interaction with state and territory laws 415

11. The Costs of Inconsistency and Fragmentation 419
Introduction 419
Sharing information 420
Compliance burden and cost 428
Multiple regulators 435
Government contractors 438

12. Federal Information Laws 447
Introduction 447
Terms and definitions 447
Freedom of Information Act 1982 (Cth) 449
Archives Act 1983 (Cth) 468

A single information Act? 472
A single regulator? 474
Secrecy provisions 476
Obligations of confidence 482

13. Required or Authorised by or Under Law 487
Introduction 487
'Required or authorised by or under law' 487
Census and Statistics Act 1905 (Cth) 498
Corporations Act 2001 (Cth) 502
Commonwealth Electoral Act 1918 (Cth) 506
Anti-Money Laundering and Counter-Terrorism Financing Act 2006 (Cth) 510

14. Interaction with State and Territory Laws 519
Introduction 519
Interaction of federal, state and territory regimes 519
Privacy rules, codes and guidelines 526
Residential tenancy databases 528

Volume 2

Part D – The Privacy Principles 541

15. Structural Reform of the Privacy Principles 543
Introduction to Part D 543
Development of current Australian privacy principles 544
Principles-based regulation of privacy 548
Level of detail, guidance and protection 554
Towards a single set of privacy principles 560
Scope and structure of Unified Privacy Principles 567

16. Consent 571
Introduction 571
'Consent' and 'bundled consent' in the *Privacy Act* 572
A separate privacy principle dealing with consent? 583

17. Anonymity and Pseudonomity 587
Introduction 587
Expansion of anonymity principle 588
The option to transact anonymously or pseudonymously 593
Summary of proposed 'Anonymity and Pseudonymity' principle 597

18. Collection **599**
Introduction 599
Collection from the individual 601
Unsolicited personal information 605
Other aspects of the 'Collection' principle 608
Summary of proposed 'Collection' principle 610

19. Sensitive Information **613**
Introduction 613
Expansion of sensitive information principle to agencies? 615
Regulation of other aspects of sensitive information handling 618
Emergency situations 622
Research 625

20. Specific Notification **627**
Introduction 627
Location of notification requirements: separate principle? 628
Notification of collector's identity and individual's rights 630
Notification of the fact and circumstances of collection 633
Standardising requirements of agencies and organisations 635
Notification where information collected from a third party 640
Meaning of 'reasonable steps' 645
Summary of proposed 'Specific Notification' principle 648

21. Openness **651**
Introduction 651
Separate 'Openness' principle? 652
Regulatory structure: 'Privacy Policies' 654
Matters to be included in a Privacy Policy 656
Availability of Privacy Policy 660
Short form privacy notices 662
Summary of proposed 'Openness' principle 664

22. Use and Disclosure **667**
Introduction 667
Towards a single 'Use and Disclosure' principle 670
Use and disclosure of personal information for a related secondary purpose 674
Emergencies, disasters and threats to life or health 679
Missing persons 685
Disclosure of 'incidents' by insured professionals to insurers 688
Use and disclosure in other contexts 690
Logging disclosures 694

Summary of proposed 'Use and Disclosure' principle 697

23. Direct Marketing 699
Introduction 699
Direct marketing generally 701
Scope of direct marketing privacy principle 703
Relationship between privacy principles and other legislation 706
Opt-in or opt-out requirement? 708
Other possible requirements 713
Summary of proposed 'Direct Marketing' principle 716

24. Data Quality 719
Introduction 719
Application of data quality principle to agencies 720
Scope of data quality principle 721
Clarification of data quality principle 726
Summary of proposed 'Data Quality' principle 727

25. Data Security 729
Introduction 729
Towards a single data security principle 731
Protection of personal information 733
Destruction versus retention of personal information 739
Extension of destruction and de-identification requirements to agencies 741
When is destruction or deletion appropriate? 745
General right to destruction of personal information? 748
Meaning of 'destroy or permanently de-identify' 750
Summary of proposed 'Data Security' principle 753

26. Access and Correction 755
Introduction 755
Scope of proposed 'Access and Correction' principle 757
Access by intermediaries 759
Barriers to access: fees and timeframe 761
Right to correction of personal information 763
Incorrect information: notification of third parties 765
Consequential amendments 769
Notification of access rights 770
Summary of proposed 'Access and Correction' principle 771

27. Identifiers 775
Introduction 776
Separate principle to regulate identifiers? 778

Application of 'Identifiers' principle to agencies? 779
Definition of 'identifier' 783
Content of privacy principle dealing with identifiers 787
Unique multi-purpose identifiers 794
Regulation of Tax File Numbers 805
Summary of proposed 'Identifiers' principle 811

28 Transborder Data Flows 815
Introduction 815
Extra-territorial operation of the *Privacy Act* 817
National Privacy Principle 9 821
Related bodies corporate 836
The role of the Privacy Commissioner 838
Requirement of notice that personal information is being sent overseas 844
International privacy protection 848
Summary of proposed 'Transborder Data Flows' principle 862

29. Additional Privacy Principles 865
Introduction 865
Accountability principle 866
Prevention of harm principle 869
No disadvantage principle 872

Part E – Exemptions 875

30. Overview—Exemptions from the *Privacy Act* 877
Introduction 877
Exemptions under the *Privacy Act* 878
Exemptions under international instruments 881
Should there be any exemptions from the *Privacy Act*? 883
The number and scope of exemptions 887
Complexity of the exemption provisions 892
Location of the exemption provisions 894

31. Defence and Intelligence Agencies 899
Introduction 899
The exempt agencies 900
Rationale for the exemption of the AIC agencies 903
Issues concerning the exemption of the IGIS 916
Submissions and consultations 918
ALRC's view 922

32. Federal Courts and Tribunals **927**
Introduction 927
Federal courts 927
Federal tribunals 942

33. Exempt Agencies under the *Freedom of Information Act 1982* (Cth) **955**
Introduction 955
Australian Fair Pay Commission 956
Schedule 2 Part I Division 1 of the *Freedom of Information Act* 959
Schedule 2 Part II Division 1 of the *Freedom of Information Act* 963
ALRC's view 971

34. Other Public Sector Exemptions **975**
Introduction 976
Royal commissions 976
Australian Crime Commission 978
Integrity Commissioner 987
Other agencies with law enforcement functions 991
Parliamentary departments 994
State and territory authorities and prescribed instrumentalities 996

35. Small Business Exemption **1007**
Introduction 1007
Current law 1007
Retention of the exemption 1010
Removal of the exemption 1019
Voluntary compliance and opting in 1035
ALRC's view 1036

36. Employee Records Exemption **1039**
Introduction 1039
Current law 1039
Adequacy of privacy protection for employee records 1043
Evaluative material 1056
Location of privacy provisions concerning employee records 1061

37. Political Exemption **1065**
Introduction 1065
Current law 1065
Government inquiries 1069
International instruments 1070
Electoral databases 1071
Implied freedom of political communication 1072

Submissions and consultations 1073
ALRC's view 1077

38. Media Exemption 1081
Introduction 1081
Scope of the exemption 1090
Criteria for media privacy standards 1100
Adequacy of the self-regulatory and co-regulatory models 1106
Enforcement mechanisms 1110

39. Other Private Sector Exemptions 1113
Introduction 1113
Personal or non-business use 1113
Related bodies corporate 1115
Change in partnership 1121

40. New Exemptions 1123
Introduction 1123
New exemptions and partial exemptions 1123
Declared emergencies 1137

Part F – Office of the Privacy Commissioner 1141

41. Overview—Office of the Privacy Commissioner 1143
Introduction 1143
Facilitating compliance with the *Privacy Act* 1144
Structure of the OPC 1145
Powers of the OPC 1146
Investigation and resolution of privacy complaints 1147
Enforcing the *Privacy Act* 1148
Data breach notification 1148
Summary of proposals to address systemic issues 1149

42. Facilitating compliance with the *Privacy Act* 1151
Introduction 1151
Compliance-oriented approach to privacy regulation 1152

43. Structure of the Office of the Privacy Commissioner 1159
Introduction 1160
Structure, functions and powers 1160
Manner of exercise of powers 1166

Accountability mechanisms 1169
Criminal liability 1172
Immunity 1172
Privacy Advisory Committee 1175

44. Powers of the Office of the Privacy Commissioner 1185
Introduction 1186
Oversight powers 1186
Guidelines 1193
Personal Information Digest 1196
Privacy impact assessments 1199
Compliance powers 1210
Audit functions 1211
Self-auditing 1218
Functions under other Acts 1221
Public interest determinations 1223
Privacy codes 1226

45. Investigation and Resolution of Privacy Complaints 1239
Introduction 1239
Investigating privacy complaints 1240
Transferring complaints to other bodies 1244
Resolution of privacy complaints 1248
Accountability and transparency 1259
Other issues in the complaint-handling process 1264

46. Enforcing the *Privacy Act* 1275
Introduction 1275
Enforcing own motion investigations 1276
Enforcing a determination 1279
Reports by the Commissioner 1281
Injunctions 1281
Other enforcement mechanisms following non-compliance 1283

47. Data Breach Notification 1293
Overview 1293
Rationale for data breach notification 1294
Models of data breach notification laws 1297
Submissions and consultations 1306
ALRC's view 1309

Volume 3

Part G – Credit Reporting Provisions 1321

48. Overview—Credit Reporting 1323
Introduction 1323
What is credit reporting? 1325
Credit reporting agencies 1327
Background to national regulation 1328
Legislative history 1331

49. The Credit Reporting Provisions 1337
Introduction 1337
Application of the credit reporting provisions 1339
Content of credit information files 1342
Accuracy and security of personal information 1345
Disclosure of personal information 1346
Use of personal information 1350
Rights of access, correction and notification 1352
Responsibilities and powers of the OPC 1353
Remedies and penalties 1358

50. The Approach to Reform 1359
Introduction 1359
Part IIIA and the NPPs 1360
Options for reform 1362
Repeal and new regulation under the Act 1363
Approaches to the new credit reporting regulations 1372
Application of the regulations 1377
Credit reporting industry code 1398

51. More Comprehensive Credit Reporting 1401
Introduction 1401
'Positive' or 'more comprehensive' credit reporting? 1402
Australia's approach to more comprehensive credit reporting 1404
The argument for more comprehensive credit reporting 1408
Benefits of more comprehensive credit reporting 1409
Problems with more comprehensive credit reporting 1418
Empirical studies 1421
Regulation in other jurisdictions 1426
Models of more comprehensive credit reporting 1429

Privacy safeguards 1436
Should more comprehensive reporting be permitted? 1437
ALRC's view 1440

52. Collection of Credit Reporting Information 1445
Introduction 1445
Collection and notification 1446

53. Use and Disclosure of Credit Reporting Information 1475
Introduction 1475
Use and disclosure 1475
Consent and credit reporting 1497

54. Data Quality and Security 1503
Introduction 1503
Data quality 1504
Improving data quality 1513
Regulating data quality 1520
Deletion of credit reporting information 1523
Data security 1526

55. Rights of Access, Complaint Handling and Penalties 1529
Introduction 1529
Access and correction 1529
Complaint handling 1540
Penalties 1554

Part H – Health Services and Research 1557

56. Regulatory Framework for Health Information 1559
Introduction 1559
National consistency 1561
A separate set of Health Privacy Principles? 1570
Electronic health information systems 1581

57. The *Privacy Act* and Health Information 1595
Introduction 1595
Privacy Act 1988 (Cth) 1595
Privacy (Health Information) Regulations 1614

58. Research **1653**
Introduction 1653
The current arrangements 1654
Research other than health and medical research 1663
Definition of research 1667
The public interest balance 1670
Impracticable to seek consent 1676
Human Research Ethics Committees 1681
An exception to the proposed Unified Privacy Principles 1689
Identifiable personal information 1692
Databases and data linkage 1699

Part I – Children, Young People and Adults Requiring Assistance **1713**

59. Children, Young People and Privacy **1715**
Introduction 1715
Generational difference 1716
Attitudes of young people 1719
ALRC consultations with young people 1723
Online social networking 1728
Photographs and other images 1735
ALRC's view 1744

60. Decision Making by Individuals Under the Age of 18 **1751**
Introduction 1751
Privacy rights of children and young people at international law 1753
Existing Australian laws relating to privacy of individuals under the age of 18 1756
Assessing the decision-making capacity of children and young people 1759
Specific privacy issues affecting children and young people 1787

61. Adults with a Temporary or Permanent Incapacity **1815**
Introduction 1815
Equality and the presumption of capacity 1816
Problems with the *Privacy Act* 1819
Suggestions for reform 1822
ALRC's view 1829

62. Other Third Party Assistance **1839**
Introduction 1839

Problems with the *Privacy Act* in practice 1839
Existing third party arrangements 1841
ALRC's view 1844

Part J – Telecommunications 1847

63. *Telecommunications Act* 1849
Introduction 1849
Telecommunications Act 1997 (Cth) 1851
Are two privacy regimes necessary? 1853
Does the *Telecommunications Act* provide adequate privacy protection? 1858
Interaction between the *Privacy Act* and the *Telecommunications Act* 1859
Exceptions to the use and disclosure offences 1860
Integrated public number database 1878
Small business exemption 1889
Criminal or civil penalties 1891
New technologies 1893
Telecommunications regulators 1896
A redraft of the Part 1899

64. Other Telecommunications Privacy Issues 1901
Introduction 1901
Interception and access 1901
Spam and telemarketing 1916
Telecommunications regulators 1930

Appendix 1. List of Submissions 1939

REVIEW OF THE PRIVACY ACT 1988

I, Philip Ruddock, Attorney-General of Australia, having regard to:

- the rapid advances in information, communication, storage, surveillance and other relevant technologies
- possible changing community perceptions of privacy and the extent to which it should be protected by legislation
- the expansion of State and Territory legislative activity in relevant areas, and
- emerging areas that may require privacy protection,

refer to the Australian Law Reform Commission for inquiry and report pursuant to subsection 20(1) of the *Australian Law Reform Commission Act 1996*, matters relating to the extent to which the *Privacy Act 1988* and related laws continue to provide an effective framework for the protection of privacy in Australia.

1. In performing its functions in relation to this reference, the Commission will consider:

(a) relevant existing and proposed Commonwealth, State and Territory laws and practices

(b) other recent reviews of the *Privacy Act 1988*

(c) current and emerging international law and obligations in this area

(d) privacy regimes, developments and trends in other jurisdictions

(e) any relevant constitutional issue

(f) the need of individuals for privacy protection in an evolving technological environment

(g) the desirability of minimising the regulatory burden on business in this area, and

(h) any other related matter.

2. The Commission will identify and consult with relevant stakeholders, including the Office of the Federal Privacy Commissioner, relevant State and Territory bodies and the Australian business community, and ensure widespread public consultation.

3. The Commission is to report no later than 31 March 2008.

Dated 30th January 2006

[signed]

Philip Ruddock

Attorney-General

List of Participants

Australian Law Reform Commission

Division

The Division of the ALRC constituted under the *Australian Law Reform Commission Act 1996* (Cth) for the purposes of this Inquiry comprises the following:

Professor David Weisbrot (President)
Professor Les McCrimmon (Commissioner in-charge)
Professor Rosalind Croucher (Commissioner)
Justice Robert French (part-time Commissioner)
Justice Susan Kenny (part-time Commissioner)
Justice Susan Kiefel (part-time Commissioner) (until August 2007)

Senior Legal Officers

Carolyn Adams
Bruce Alston
Jonathan Dobinson

Legal Officers

Lisa Eckstein (from August 2007)
Althea Gibson (until March 2007)
Lauren Jamieson
Huette Lam
Erin Mackay (from March 2007)
Edward Santow
Peter Turner (until August 2006)

Research Manager

Lani Blackman

Librarian

Carolyn Kearney

Project Assistant

Tina O'Brien

Legal Interns

Megan Caristo
Justin Carter
Elizabeth Crook
Joash Dache
Maggie Fung
Dawnie Lam
Robert Mullins
Danni Nicholas-Sexon
Elnaz Nikibin
Michael Ostroff
Christina Raymond

Dr Graeme Miller, Family Medicine Research Centre
Ms Julia Nesbitt, Australian Medical Association
Professor Margaret Otlowski, Faculty of Law, University of Tasmania
Ms Dianne Scott, Department of Human Services (Vic)
Dr Heather Wellington, Peter MacCallum Cancer Centre

List of Proposals and Questions

Part A—Introduction

1. Introduction to the Inquiry

Proposal 1–1 The Office of the Privacy Commissioner should, either on its own motion or where approached in appropriate cases, encourage and assist agencies and organisations, in conjunction with Indigenous and other ethnic groups in Australia, to create publicly available protocols that adequately respond to the particular privacy needs of those groups.

3. The *Privacy Act*

Proposal 3–1 The *Privacy Act* should provide for the making of regulations that modify the operation of the proposed Unified Privacy Principles (UPPs) to impose different or more specific requirements in particular contexts, including imposing more or less stringent requirements on agencies and organisations than are provided for in the UPPs.

Proposal 3–2 The *Privacy Act* should be amended to achieve greater logical consistency, simplicity and clarity. For example, the Information Privacy Principles and the National Privacy Principles should be consolidated into a set of UPPs; the exemptions should be clarified and grouped together in a separate part of the Act; and the Act should be restructured and renumbered.

Proposal 3–3 If the *Privacy Act* is amended to incorporate a cause of action for invasion of privacy, the name of the Act should remain the same. If the Act is not amended in this way, however, the *Privacy Act* should be renamed the *Privacy and Personal Information Act*.

Proposal 3–4 The *Privacy Act* should be amended to include an objects clause. The objects of the Act should be to:

(a) implement Australia's obligations at international law in relation to privacy;

(b) promote the protection of individual privacy;

(c) recognise that the right to privacy is not absolute and to provide a framework within which to balance the public interest in protecting the privacy of individuals with other public interests;

(d) establish a cause of action to protect the interests that individuals have in the personal sphere free from interference from others;

(e) promote the responsible and transparent handling of personal information by agencies and organisations;

(f) facilitate the growth and development of electronic commerce, nationally and internationally, while ensuring respect for the right to privacy; and

(g) provide the basis for nationally consistent regulation of privacy.

Proposal 3–5 (a) The *Privacy Act* should define 'personal information' as 'information or an opinion, whether true or not, and whether recorded in a material form or not, about an identified or reasonably identifiable individual'.

(b) The Explanatory Memorandum of the amending legislation should make clear that an individual is 'reasonably identifiable' when the individual can be identified from information in the possession of an agency or organisation or from that information and other information the agency or organisation has the capacity to access or is likely to access.

(c) The Office of the Privacy Commissioner should provide guidance on the meaning of 'identified or reasonably identifiable'.

Proposal 3–6 The definition of 'sensitive information' in the *Privacy Act* should be amended to include: (a) biometric information collected for the purpose of automated biometric authentication or identification; and (b) biometric template information.

Proposal 3–7 The definition of 'sensitive information' in the *Privacy Act* should be amended to refer to 'sexual orientation and practices' rather than 'sexual preferences and practices'.

Proposal 3–8 The definition of 'record' in the *Privacy Act* should be amended in part to include: (a) a document; and (b) information stored in electronic or other forms.

Proposal 3–9 The definition of 'generally available publication' in the *Privacy Act* should be amended to clarify that a publication is 'generally available' whether or not a fee is charged for access to the publication.

Proposal 3–10 The personal information of deceased individuals held by agencies should continue to be regulated by the *Freedom of Information Act 1982* (Cth) and the *Archives Act 1983* (Cth).

Proposal 3–11 The *Privacy Act* should be amended to include a new Part dealing with the personal information of individuals who have been dead for 30 years or less

where the information is held by an organisation. The new Part should provide as follows:

(a) Use and disclosure

Organisations should be required to use or disclose the personal information of deceased individuals in accordance with the proposed 'Use and Disclosure' principle in the UPPs. Where the principle requires consent, the organisation should be required to consider whether the proposed use or disclosure would involve an unreasonable use or disclosure of personal information about any person, including the deceased person.

(b) Access

Organisations should be required to consider providing third parties with access to the personal information of deceased individuals in accordance with the access elements of the proposed 'Access and Correction' principle in the UPPs. Organisations should be required to consider in each case whether providing access to the information would have an unreasonable impact on the privacy of other individuals, including the deceased individual.

(c) Data quality

Organisations should be required to ensure that the personal information of deceased individuals is, with reference to a use or disclosure permitted under the UPPs, accurate, complete, up-to-date and relevant before they use or disclose the information.

(d) Data security

Organisations should be required to take reasonable steps to protect the personal information of deceased individuals from misuse and loss and from unauthorised access, modification or disclosure.

Organisations should be required to take reasonable steps to destroy or render personal information of deceased individuals non-identifiable if it is no longer needed for any purpose permitted under the proposed UPPs.

Organisations should be required to take reasonable steps to ensure that personal information of deceased individuals they disclose to a person pursuant to contract, or otherwise in connection with the provision of a service, is protected from being used or disclosed by that person otherwise than in accordance with the *Privacy Act*.

Proposal 3–12 The proposed provisions dealing with the use or disclosure of personal information of deceased individuals should make clear that it is reasonable for an organisation to use or disclose genetic information to a genetic relative of a

deceased individual where the organisation reasonably believes that the use or disclosure is necessary to lessen or prevent a serious threat to the life, health or safety of a genetic relative. Any use or disclosure of genetic information of deceased individuals should be in accordance with rules issued by the Privacy Commissioner.

Proposal 3–13 Breach of the proposed provisions relating to the personal information of a deceased individual should be considered an interference with privacy under the *Privacy Act*. The following individuals should have standing to lodge a complaint with the Privacy Commissioner alleging an interference with the privacy of a deceased individual:

(a) in relation to an alleged breach of the use and disclosure, data quality or data security provisions, the deceased individual's parent, child or sibling who is at least 18 years old, spouse, de facto partner or legal personal representative; and

(b) in relation to an alleged breach of the access provision, any person who has made a request for access to the personal information of a deceased individual.

4. Achieving National Consistency

Proposal 4–1 The *Privacy Act* should be amended to provide that the Act is intended to apply to the exclusion of state and territory laws dealing specifically with the handling of personal information by organisations. In particular, the following laws of a state or territory would be excluded to the extent that they apply to organisations:

(a) *Health Records and Information Privacy Act 2002* (NSW);

(b) *Health Records Act 2001* (Vic);

(c) *Health Records (Privacy and Access) Act 1997* (ACT); and

(d) any other laws prescribed in the regulations.

Proposal 4–2 States and territories with information privacy legislation that purports to apply to private sector organisations should amend that legislation so that it is no longer expressed to apply to private sector organisations.

Proposal 4–3 The *Privacy Act* should not apply to the exclusion of a law of a state or territory so far as the law deals with any 'non-excluded matters' set out in the legislation. The Australian Government, in consultation with state and territory governments, should develop a list of 'non-excluded matters', for example matters such as:

(a) reporting for child protection purposes;

(b) reporting for public health purposes; and

(c) the handling of personal information by state and territory government contractors.

Proposal 4–4 The states and territories should enact legislation that regulates the handling of personal information in that state or territory's public sector that:

(a) applies the proposed Unified Privacy Principles (UPPs) and the proposed *Privacy (Health Information) Regulations* as in force under the *Privacy Act* from time to time; and

(b) includes at a minimum:

(i) relevant definitions used in the *Privacy Act* (including 'personal information', 'sensitive information' and 'health information');

(ii) provisions allowing public interest determinations and temporary public interest determinations;

(iii) provisions relating to state and territory incorporated bodies (including statutory corporations);

(iv) provisions relating to state and territory government contracts; and

(v) provisions relating to data breach notification.

The legislation also should provide for the resolution of complaints by state and territory privacy regulators and agencies with responsibility for privacy regulation in that state or territory's public sector.

Proposal 4–5 The Australian Government should initiate a review in five years to consider whether the proposed Commonwealth-state cooperative scheme has been effective in achieving national consistency. This review should consider whether it would be more effective for the Australian Parliament to exercise its legislative power in relation to information privacy in the state and territory public sectors.

Proposal 4–6 To promote and maintain uniformity, the Standing Committee of Attorneys-General (SCAG) should adopt an intergovernmental agreement which provides that any proposed changes to the proposed:

(a) UPPs must be approved by SCAG; and

(b) Privacy *(Health Information) Regulations* must be approved by SCAG, in consultation with the Australian Health Ministers' Advisory Council (AHMAC).

The agreement should provide for a procedure whereby the party proposing a change requiring approval must give notice in writing to the other parties to the agreement, and the proposed amendment must be considered and approved by SCAG before being implemented.

Proposal 4–7 The Standing Committee of Attorneys-General should be assisted by an expert advisory committee to:

(a) provide advice in relation to the amendment of the proposed UPPs and *Privacy (Health Information) Regulations*;

(b) address issues related to national consistency such as the scrutiny of federal, state and territory bills that may adversely impact on national consistency in the regulation of personal information; and

(c) address issues related to the enforcement of privacy laws, including information sharing between privacy regulators and cooperative arrangements for enforcement.

Appointments to the expert advisory committee should ensure a balanced and broad-based range of expertise, experience and perspectives relevant to the regulation of personal information. The appointments process should involve consultation with state and territory governments, business, privacy and consumer advocates and other stakeholders.

5. Protection of a Right to Personal Privacy

Proposal 5–1 The *Privacy Act* should be amended to provide for a statutory cause of action for invasion of privacy. The Act should contain a non-exhaustive list of the types of invasion that fall within the cause of action. For example, an invasion of privacy may occur where:

(a) there has been an interference with an individual's home or family life;

(b) an individual has been subjected to unauthorised surveillance;

(c) an individual's correspondence or private written, oral or electronic communication has been interfered with, misused or disclosed; or

(d) sensitive facts relating to an individual's private life have been disclosed.

Proposal 5–2 The *Privacy Act* should provide that, in determining what is considered 'private' for the purpose of establishing liability under the proposed statutory cause of action, a plaintiff must show that in all the circumstances:

(a) there is a reasonable expectation of privacy; and

(b) the act complained of is sufficiently serious to cause substantial offence to a person of ordinary sensibilities.

Proposal 5–3 The *Privacy Act* should provide that:

(a) only natural persons should be allowed to bring an action under the *Privacy Act* for invasion of privacy;

(b) the action is actionable without proof of damage; and

(c) the action is restricted to intentional or reckless acts on the part of the defendant.

Proposal 5–4 The Office of the Privacy Commissioner should provide information to the public concerning the proposed statutory cause of action for invasion of privacy.

Proposal 5–5 The range of defences to the proposed statutory cause of action for invasion of privacy provided for in the *Privacy Act* should be listed exhaustively. The defences should include that the:

(a) act or conduct was incidental to the exercise of a lawful right of defence of person or property;

(b) act or conduct was required or specifically authorised by or under law;

(c) information disclosed was a matter of public interest or was a fair comment on a matter of public interest; or

(d) disclosure of the information was, under the law of defamation, privileged.

Question 5–1 In addition to the defences listed in Proposal 5–5, are there any other defences that should apply to the proposed statutory cause of action for invasion of privacy?

Proposal 5–6 To address an invasion of privacy, the court should be empowered by the *Privacy Act* to choose the remedy that is most appropriate in all the circumstances, free from the jurisdictional constraints that may apply to that remedy in

the general law. For example, the court should be empowered to grant any one or more of the following:

(a) damages, including aggravated damages, but not exemplary damages;

(b) an account of profits;

(c) an injunction;

(d) an order requiring the defendant to apologise to the plaintiff;

(e) a correction order;

(f) an order for the delivery up and destruction of material;

(g) a declaration; and

(h) other remedies or orders that the court thinks appropriate in the circumstances.

Proposal 5–7 Until such time as the states and territories enact uniform legislation, the state and territory public sectors should be subject to the proposed statutory cause of action for invasion of privacy in the *Privacy Act*.

Part B—Developing Technology

7. Accommodating Developing Technology in a Regulatory Framework

Proposal 7–1 The *Privacy Act* should be technologically neutral.

Proposal 7–2 The *Privacy Act* should be amended to empower the Minister responsible for the *Privacy Act*, in consultation with the Office of the Privacy Commissioner, to determine which privacy and security standards for relevant technologies should be mandated by legislative instrument.

Proposal 7–3 In exercising its research and monitoring functions, the Office of the Privacy Commissioner should consider technologies that can be deployed in a privacy enhancing way by individuals, agencies and organisations.

Proposal 7–4 The Office of the Privacy Commissioner should educate individuals, agencies and organisations about specific privacy enhancing technologies and the privacy enhancing ways in which technologies can be deployed.

Proposal 7–5 The Office of the Privacy Commissioner should provide guidance in relation to technologies that impact on privacy (including, for example, guidance for

use of RFID or data collecting software such as 'cookies'). Where appropriate, this guidance should incorporate relevant local and international standards. The guidance should address:

(a) when the use of a certain technology to collect personal information is not done by 'fair means' and is done 'in an unreasonably intrusive way';

(b) when the use of a certain technology will require, under the proposed 'Specific Notification' principle, agencies and organisations to notify individuals at or before the time of collection of personal information;

(c) when agencies and organisations should notify individuals of certain features of a technology used to collect information (for example, how to remove an RFID tag contained in clothing; or error rates of biometrics systems);

(d) the type of information that an agency or organisation should make available to an individual when it is not practicable to provide access to information held in an intelligible form (for example, what biometric information is held about an individual when the information is held as an algorithm); and

(e) when it may be appropriate for an agency or organisation to provide human review of a decision made by automated means.

Proposal 7–6 The Office of the Privacy Commissioner should provide guidance to organisations on the privacy implications of data-matching.

8. Individuals, the Internet and Generally Available Publications

Question 8–1 Should the online content regulation scheme set out in the *Broadcasting Services Act 1992* (Cth), and in particular the ability to issue take down notices, be expanded beyond the *National Classification Code* and decisions of the Classification Board to cover a wider range of content that may constitute an invasion of an individual's privacy? If so, what criteria should be used to determine when a take down notice should be issued? What is the appropriate body to deal with a complaint and issue the take down notice?

Proposal 8–1 The Office of the Privacy Commissioner should provide guidance that relates to generally available publications in an electronic form. This guidance should:

(a) apply whether or not the agency or organisation is required by law to make the personal information publicly available;

(b) set out certain factors that agencies and organisations should consider before publishing personal information in an electronic form (for example, whether it is in the public interest to publish on a publicly accessible website personal information about an identified or reasonably identifiable individual); and

(c) set out the requirements in the proposed Unified Privacy Principles with which agencies and organisations need to comply when collecting personal information from generally available publications for inclusion in a record or another generally available publication (for example, when a reasonable person would expect to be notified of the fact and circumstances of collection).

Part C—Interaction, Inconsistency and Fragmentation

11. The Costs of Inconsistency and Fragmentation

Proposal 11–1 The Office of the Privacy Commissioner should provide further guidance to agencies and organisations on privacy requirements affecting information sharing.

Proposal 11–2 Agencies that are required or authorised by legislation or a public interest determination to share personal information should develop and publish documentation that addresses the sharing of personal information; and where appropriate, publish other documents (including memoranda of understanding and ministerial agreements) relating to the sharing of personal information.

Proposal 11–3 The Australian Government should convene an inter-agency working group of senior officers to identify circumstances where it would be appropriate to share or streamline the sharing of personal information among Australian Government agencies.

Proposal 11–4 The Australian Government, in consultation with: state and territory governments, intelligence agencies, law enforcement agencies, and accountability bodies (including the Office of the Privacy Commissioner; the Inspector-General of Intelligence and Security; the Australian Commission for Law Enforcement Integrity; state and territory privacy commissioners and agencies with responsibility for privacy regulation; and federal, state and territory ombudsmen), should:

(a) develop and publish a framework relating to interjurisdictional sharing of personal information within Australia by intelligence and law enforcement agencies; and

(b) develop memoranda of understanding to ensure that accountability bodies can oversee interjurisdictional information sharing within Australia by law enforcement and intelligence agencies.

Question 11–1 Are the definitions of 'contracted service provider' and 'State contract' under the *Privacy Act* adequate? For example, do they cover all the types of activities that organisations might perform on behalf of agencies?

12. Federal Information Laws

Proposal 12–1 The Australian Government and state and territory governments should ensure the consistency of definitions and key terms (for example, 'personal information', 'sensitive information' and 'health information') in federal, state and territory legislation that regulates the handling of personal information.

Proposal 12–2 Section 41(1) of the *Freedom of Information Act 1982* (Cth) should be amended to provide that a document is exempt if it:

(a) contains personal information, and the disclosure of that information would constitute a breach of the proposed 'Use and Disclosure' principle and disclosure would not, on balance, be in the public interest; or

(b) contains personal information of a deceased individual, and the disclosure of that information would constitute a breach of the proposed 'Use and Disclosure' principle (but where the principle would require consent the agency must consider whether the proposed disclosure would involve the unreasonable disclosure of personal information about any individual including the deceased individual) and disclosure would not, on balance, be in the public interest.

Proposal 12–3 'Personal information' should be defined in the *Freedom of Information Act 1982* (Cth) as 'information or an opinion, whether true or not, and whether recorded in a material form or not, about an identified or reasonably identifiable individual'.

Proposal 12–4 The *Freedom of Information Act 1982* (Cth) should be amended to require that the body that is primarily responsible for administration of the Act is to:

(a) develop and publish guidelines on the interpretation and application of s 41;

(b) consult with the Office of the Privacy Commissioner before issuing guidelines on the interpretation and application of s 41.

Proposal 12–5 The *Freedom of Information Act 1982* (Cth) should be amended to provide that disclosure of personal information in accordance with the *Freedom of Information Act 1982* (Cth) is a disclosure that is required or authorised for the purposes of the proposed 'Use and Disclosure' principle under the *Privacy Act*.

Proposal 12–6 The *Privacy Act* should be amended to provide a new Part dealing with access to, and correction of, personal information held by an agency.

Proposal 12–7 The *Freedom of Information Act 1982* (Cth) should be amended to:

(a) provide that an individual's right to access or correct his or her own personal information is dealt with under the *Privacy Act*; and

(b) repeal Part V of the Act.

Proposal 12–8 The proposed Part of the *Privacy Act* dealing with access to, and correction of, personal information held by an agency should provide that:

(a) if an agency holds personal information about an individual the agency must, if requested by the individual, provide the individual with access to the information, subject to a number of exceptions under the Part;

(b) where an individual is given access to personal information, the individual must be advised that he or she may request the correction of that information;

(c) where an agency is not required to provide the individual with access to personal information because of an exception, the agency must take reasonable steps to reach an appropriate compromise, involving the use of a mutually agreed intermediary, provided that the compromise would allow for sufficient access to meet the needs of both parties; and

(d) nothing in the Part is intended to prevent or discourage agencies from publishing or giving access to personal information, otherwise than as required by the Part, where they can do so properly or are required to do so by law.

Question 12–1 What exceptions should apply to the general provision granting an individual the right to access his or her own personal information held by an agency? For example, should the exceptions mirror the provisions in Part IV of the *Freedom of Information Act 1982* (Cth) or should another set of exceptions apply?

Proposal 12–9 The proposed Part of the *Privacy Act* dealing with access to, and correction of, personal information held by an agency should provide that, if an agency holds personal information about an individual, the agency must:

(a) if requested by the individual, take such steps to correct (by way of making appropriate corrections, deletions or additions) the information as are, in the circumstances, reasonable to ensure that the information is, with reference to a purpose of collection permitted by the proposed Unified Privacy Principles, accurate, complete, up-to-date, relevant and not misleading;

(b) where the agency has taken the steps outlined in (a) above, if requested to do so by the individual, and provided such notification would be practicable in the circumstances, notify any other entities to whom the personal information has already been disclosed.

Proposal 12–10 The proposed Part of the *Privacy Act* dealing with access to, and correction of, personal information held by an agency should provide that where an agency decides not to correct the personal information of an individual, and the individual requests the agency to annotate the personal information with a statement by the individual claiming that the information is not accurate, complete, up-to-date, relevant, or is misleading, the agency must take reasonable steps to do so.

Proposal 12–11 The proposed Part of the *Privacy Act* dealing with access to, and correction of, personal information held by an agency should set out a process for dealing with a request to access or correct personal information that addresses:

(a) the requirements for making an application for correction or annotation of personal information;

(b) time periods for processing a request to access or correct personal information;

(c) the transfer of a request to access or correct personal information to another agency in certain circumstances (for example, when a document is not in the possession of an agency but is, to the knowledge of that agency, in the possession of another agency);

(d) how personal information is to be made available to the individual (including by giving the individual a reasonable opportunity to inspect the records, or by providing a copy of the record, by giving a summary of the contents of the record, or by providing oral information about the contents of the record);

(e) how corrections are to be made (including by additions and deletions);

(f) the deletion of excepted matter or irrelevant material;

(g) the persons authorised to make a decision on behalf of an agency in relation to a request to access or correct personal information;

(h) when a request for access to personal information may be refused by an agency (for example, when it would substantially and unreasonably divert the resources of the agency from its other operations, or in the case of a minister, would substantially and unreasonably interfere with the performance of the minister's functions); and

(i) the provision of reasons for a decision to deny a request to access or correct personal information.

Proposal 12–12 The proposed Part of the *Privacy Act* dealing with access to, and correction of, personal information held by an agency should provide for:

(a) internal review by an agency of a decision made under the Part;

(b) review by the Administrative Appeals Tribunal of a decision made under the Part (including the power to make an order for compensation); and

(c) complaints to the Commonwealth Ombudsman.

Proposal 12–13 The Office of the Privacy Commissioner should issue guidelines on access to, and correction of, records containing personal information held by an agency.

Question 12–2 Should the Office of the Privacy Commissioner's complaint-handling, investigative and reporting functions be exempt under the *Freedom of Information Act 1982* (Cth)?

Proposal 12–14 Part VIII of the *Privacy Act* (Obligations of confidence) should be repealed.

13. Required or Authorised by or under Law

Question 13–1 Should the definition of a 'law' for the purposes of determining when an act or practice is required or specifically authorised by or under a law include:

(a) a common law or equitable duty;

(b) an order of a court or tribunal;

(c) documents that are given the force of law by an Act of Parliament, such as industrial awards; and

(d) statutory instruments such as a Local Environmental Plan made under a planning law?

Question 13–2 Should a list be compiled of laws that require or authorise acts or practices in relation to personal information that would otherwise be regulated by the *Privacy Act*? If so, should the list have the force of law? Should it be comprehensive or indicative? What body should be responsible for compiling and updating the list?

Proposal 13–1 If the exemption that applies to registered political parties and political acts and practices is not removed, the *Commonwealth Electoral Act 1918* (Cth) should be amended to provide that prescribed individuals, authorities and organisations to whom the Australian Electoral Commission must give information in relation to the electoral roll and certified lists of voters must take reasonable steps to:

(a) protect the information from misuse and loss and from unauthorised access, modification or disclosure; and

(b) destroy or render the information non-identifiable if it is no longer needed for a permitted purpose.

Proposal 13–2 The Australian Electoral Commission and state and territory electoral commissions, in consultation with the Office of the Privacy Commissioner, should develop and publish protocols that address the collection, use, storage and destruction of personal information shared for the purposes of the continuous update of the electoral roll.

Proposal 13–3 The review of the *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth), the regulations and the Anti-Money Laundering and Counter-Terrorism Financing Rules under s 251 of the Act should consider, in particular, whether:

(a) reporting entities and designated agencies are appropriately handling personal information under the legislation;

(b) the number and range of transactions for which identification is required should be more limited than currently provided for under the legislation;

(c) it remains appropriate that reporting entities are required to retain information for seven years; and

(d) it is appropriate that reporting entities are able to use the electoral roll for the purpose of identification verification.

Proposal 13–4 The *Anti-Money Laundering* and *Counter-Terrorism Financing Act 2006* (Cth) should be amended to provide that state and territory agencies that access personal information provided to the Australian Transaction Reports and Analysis Centre under the Act be regulated under the *Privacy Act* in relation to the handling of that personal information, except where they are covered by obligations under a state or territory law that are, overall, at least the equivalent of all the relevant obligations in the *Privacy Act.*

14. Interaction with State and Territory Laws

Proposal 14–1 The *Privacy Act* should be amended to provide that when an Australian Government agency is participating in an intergovernmental body or other arrangement involving state and territory agencies, the Australian Government agency should ensure that a memorandum of understanding is in place so that the intergovernmental body and its members do not act, or engage in a practice, that would breach the Act.

Part D—The Privacy Principles

15. Structural Reform of the Privacy Principles

Proposal 15–1 The privacy principles in the *Privacy Act* should be drafted to pursue, as much as practicable, the following objectives:

(a) the obligations in the privacy principles generally should be expressed as high level principles;

(b) the privacy principles should be simple, clear and easy to understand and apply; and

(c) the privacy principles should impose reasonable obligations on agencies and organisations.

Proposal 15–2 The *Privacy Act* should be amended to consolidate the current Information Privacy Principles and National Privacy Principles into a single set of privacy principles—the Unified Privacy Principles (UPPs)—that would be generally applicable to agencies and organisations, subject to such exceptions as required.

Proposal 15–3 The proposed UPPs should apply to information privacy except to the extent that:

(a) the *Privacy Act* or another piece of Commonwealth primary legislation imposes different or more specific requirements in a particular context; or

(b) subordinate legislation under the *Privacy Act* imposes different or more specific requirements in a particular context.

Proposal 15–4 The National Privacy Principles should provide the general template in drafting and structuring the proposed UPPs.

16. Consent

Proposal 16–1 The Office of the Privacy Commissioner should provide further guidance about what is required of agencies and organisations to obtain an individual's consent for the purposes of the *Privacy Act*. This guidance should: (a) cover consent as it applies in various contexts; and (b) include advice on when it is and is not appropriate to use the mechanism of 'bundled consent'.

17. Anonymity and Pseudonymity

Proposal 17–1 The proposed Unified Privacy Principles should contain a principle called 'Anonymity and Pseudonymity' that sets out the requirements on agencies and organisations in respect of anonymous and pseudonymous transactions with individuals.

Proposal 17–2 The proposed 'Anonymity and Pseudonymity' principle should include a pseudonymity requirement that when an individual is transacting with an agency or organisation, the agency or organisation must give the individual the option of identifying himself or herself by a pseudonym. This requirement is limited to circumstances where providing this option is lawful, practicable and not misleading.

Proposal 17–3 The proposed 'Anonymity and Pseudonymity' principle should provide that, subject to the relevant qualifications in the principle, an agency or organisation is required to give individuals the clear option to transact anonymously or pseudonymously.

Proposal 17–4 The Office of the Privacy Commissioner should provide guidance to agencies and organisations on: (a) when it is and is not lawful and practicable to give individuals the option to transact anonymously or pseudonymously; (b) when it would be misleading for an individual to transact pseudonymously with an agency or organisation; and (c) what is involved in providing a clear option to transact anonymously or pseudonymously.

18. Collection

Proposal 18–1 (a) The proposed Unified Privacy Principles (UPPs) should contain a principle called 'Collection' that requires agencies and organisations, where reasonable and practicable, to collect personal information about an individual only from the individual concerned.

(b) The Office of the Privacy Commissioner should provide guidance to clarify when it would not be reasonable and practicable to collect such information from the individual concerned.

Proposal 18–2 The 'Collection' principle in the proposed UPPs should provide that, where an agency or organisation receives unsolicited personal information, it must either: (a) destroy the information immediately without using or disclosing it; or (b) comply with all relevant provisions in the UPPs that apply to the information in question, as if the agency or organisation had taken active steps to collect the information.

Proposal 18–3 The 'Collection' principle in the proposed UPPs should provide that an agency or organisation must not collect personal information unless it reasonably believes the information is necessary for one or more of its functions or activities.

19. Sensitive Information

Proposal 19–1 The proposed Unified Privacy Principles should set out the requirements on agencies and organisations in relation to the collection of personal information that is defined as 'sensitive information' for the purposes of the *Privacy Act*. These requirements should be located in the proposed 'Collection' principle.

Proposal 19–2 The proposed sensitive information provisions should contain an exception permitting the collection of sensitive information by an agency or organisation where the collection is required or specifically authorised by or under law.

Proposal 19–3 The proposed sensitive information provisions should contain an exception permitting the collection of sensitive information by an agency or organisation where the collection is necessary to lessen or prevent a serious threat to the life or health of any individual, where the individual whom the information concerns is incapable of giving consent.

Question 19–1 Should the proposed sensitive information provisions provide that sensitive information can be collected where all of the following conditions apply:

(a) the individual is incapable of giving consent;

(b) the collection is necessary to provide an essential service for the benefit of the individual; and

(c) the collection would be reasonable in all the circumstances?

20. Specific Notification

Proposal 20–1 The proposed Unified Privacy Principles should contain a principle called 'Specific Notification' that sets out the requirements on agencies and organisations to provide specific notification to an individual of particular matters relating to the collection and handling of personal information about the individual.

Proposal 20–2 The proposed 'Specific Notification' principle should provide that, at or before the time (or, if that is not practicable, as soon as practicable after) an agency or organisation collects personal information about an individual from the individual, it must take reasonable steps to ensure that the individual is aware of the:

(a) fact and circumstances of collection (for example, how, when and from where the information was collected);

(b) identity and contact details of the agency or organisation;

(c) fact that the individual is able to gain access to the information;

(d) purposes for which the information is collected;

(e) main consequences of not providing the information;

(f) types of people, organisations, agencies or other entities to whom the agency or organisation usually discloses personal information; and

(g) avenues of complaint available to the individual if he or she has a complaint about the collection or handling of his or her personal information.

This requirement should only apply: (1) in circumstances where a reasonable person would expect to be notified; (2) except to the extent that making the individual aware of the matters would pose a serious threat to the life or health of any individual; and (3) subject to any other relevant exceptions.

Proposal 20–3 The Office of the Privacy Commissioner should provide guidance to assist agencies and organisations in ensuring that individuals are properly informed of the persons to whom their personal information is likely to be disclosed.

Proposal 20–4 An agency should be required to notify an individual of the matters listed in the proposed 'Specific Notification' principle, except to the extent that the agency is required or specifically authorised by or under law not to make the individual aware of such matters.

Proposal 20–5 (a) The proposed 'Specific Notification' principle should provide that where an agency or organisation collects personal information from someone other than the individual concerned, it must take reasonable steps to ensure that the individual is or has been made aware of:

(i) the matters listed in Proposal 20–2; and

(ii) on request by the individual, the source of the information.

(b) This requirement should only apply:

(i) in circumstances where a reasonable person would expect to be notified;

(ii) except to the extent that making the individual aware of the matters would pose a serious threat to the life or health of any individual; and

(iii) in the case of an agency, except to the extent that it is required or specifically authorised by or under law not to make the individual aware of one or more of these matters.

Proposal 20–6 The Office of the Privacy Commissioner should provide guidance on the circumstances in which it is necessary for an agency or organisation to notify an individual when it has received personal information about the individual from a source other than the individual concerned.

Proposal 20–7 The Office of the Privacy Commissioner should provide guidance on the meaning of the term 'reasonable steps' in the context of an agency's or organisation's obligations to fulfil its notification requirements under the proposed 'Specific Notification' principle.

21. Openness

Proposal 21–1 The proposed Unified Privacy Principles should contain a principle called 'Openness' that sets out the requirements on an agency or organisation to operate openly and transparently by providing general notification in a Privacy Policy of how it manages personal information and how personal information is collected, held, used and disclosed by it.

Proposal 21–2 The Privacy Policy in the proposed 'Openness' principle should set out an agency's or organisation's policies on the management of personal information, including how the personal information is collected, held, used and disclosed. This document should also include:

(a) what sort of personal information the agency or organisation holds;

(b) the purposes for which personal information is held;

(c) the avenues of complaint available to individuals in the event that they have a privacy complaint;

(d) the steps individuals may take to gain access to personal information about them held by the agency or organisation;

(e) the types of individuals about whom records are kept;

(f) the period for which each type of record is kept; and

(g) the persons, other than the individual, who can access personal information and the conditions under which they can access it.

Proposal 21–3 The Office of the Privacy Commissioner should issue guidance on how agencies and organisations can comply with their obligations in the proposed 'Openness' principle to produce and make available a Privacy Policy.

Proposal 21–4 An agency or organisation should take reasonable steps to make its Privacy Policy, as referred to in the proposed 'Openness' principle, available without charge to an individual: (a) electronically (for example, on its website, if it possesses one); and (b) in hard copy, on request.

Proposal 21–5 The Office of the Privacy Commissioner should continue to encourage and assist agencies and organisations to make available short form privacy notices summarising their personal information handling practices. Short form privacy notices should be seen as supplementing the more detailed information that is required to be made available to individuals under the *Privacy Act*.

22. Use and Disclosure

Proposal 22–1 The proposed Unified Privacy Principles should contain a principle called 'Use and Disclosure' that sets out the requirements on agencies and organisations in respect of the use or disclosure of personal information for a purpose other than the primary purpose of collecting the information.

Proposal 22–2 The proposed 'Use and Disclosure' principle should contain an exception permitting an agency or organisation to use or disclose an individual's personal information for a purpose (the secondary purpose) other than the primary purpose of collection if the:

(a) secondary purpose is related to the primary purpose and, if the personal information is sensitive information, directly related to the primary purpose of collection; and

(b) individual would reasonably expect the agency or organisation to use or disclose the information for the secondary purpose.

Proposal 22–3 The proposed 'Use and Disclosure' principle should contain an exception permitting an agency or organisation to use or disclose an individual's personal information for a purpose (the secondary purpose) other than the primary purpose of collection if the agency or organisation reasonably believes that the use or

disclosure for the secondary purpose is necessary to lessen or prevent a serious threat to: (a) an individual's life, health or safety; or (b) public health or public safety.

Question 22–1 Should the proposed 'Use and Disclosure' principle contain an exception allowing an agency or organisation to use or disclose personal information for a purpose other than the primary purpose of collection where this is 'required or *specifically* authorised by or under law' instead of simply 'required or authorised by or under law'?

23. Direct Marketing

Proposal 23–1 The proposed Unified Privacy Principles should regulate direct marketing by organisations in a discrete privacy principle, separate from the 'Use and Disclosure' privacy principle. This principle should be called 'Direct Marketing' and it should apply irrespective of whether the organisation has collected the individual's personal information for the primary purpose or a secondary purpose of direct marketing.

Question 23–1 Should agencies be subject to the proposed 'Direct Marketing' principle? If so, should any exceptions or exemptions apply specifically to agencies?

Proposal 23–2 The proposed 'Direct Marketing' principle should set out the generally applicable requirements for organisations engaged in the practice of direct marketing. These requirements should be displaced, however, to the extent that more specific sectoral legislation regulates a particular aspect or type of direct marketing.

Proposal 23–3 The proposed 'Direct Marketing' principle should require organisations to present individuals with a simple means to opt out of receiving direct marketing communications.

Proposal 23–4 The proposed 'Direct Marketing' principle should provide that an organisation involved in direct marketing must comply, within a reasonable time, with an individual's request not to receive direct marketing communications.

Proposal 23–5 The proposed 'Direct Marketing' principle should provide that an organisation involved in direct marketing must, when requested by an individual to whom it has sent direct marketing communications, take reasonable steps to advise the individual from where it acquired the individual's personal information.

Proposal 23–6 The Office of the Privacy Commissioner should issue guidance to organisations involved in direct marketing, which should:

(a) highlight their obligation to maintain the quality of any database they hold containing personal information and assists them in achieving this requirement; and

(b) clarify their obligations under the *Privacy Act* in dealing with particularly vulnerable people, such as elderly individuals and individuals aged 14 and under.

24. Data Quality

Proposal 24–1 The proposed Unified Privacy Principles (UPPs) should contain a principle called 'Data Quality' that applies to agencies and organisations.

Proposal 24–2 The proposed 'Data Quality' principle should require an agency or organisation to take reasonable steps to make sure that the personal information it collects, uses or discloses is, with reference to a purpose of collection permitted by the proposed UPPs, accurate, complete, up-to-date and relevant.

25. Data Security

Proposal 25–1 The proposed Unified Privacy Principles (UPPs) should contain a principle called 'Data Security' that applies to agencies and organisations.

Proposal 25–2 The proposed 'Data Security' principle should require an agency or organisation to take reasonable steps to ensure that personal information it discloses to a person pursuant to a contract, or otherwise in connection with the provision of a service to the agency or organisation, is protected from being used or disclosed by that person otherwise than in accordance with the UPPs.

Proposal 25–3 The Office of the Privacy Commissioner should provide guidance about the meaning of the term 'reasonable steps' in the context of the proposed 'Data Security' principle. Matters that could be dealt with in this guidance include:

(a) the inclusion of contractual provisions binding a contracted service provider of an agency or organisation to handle personal information consistently with the UPPs;

(b) technological developments in this area and particularly in relation to relevant encryption standards; and

(c) the importance of training staff adequately as to the steps they should take to protect personal information.

Proposal 25–4 The proposed 'Data Security' principle should require an agency or organisation to take reasonable steps to destroy or render non-identifiable personal information if it is no longer needed for any purpose permitted by the UPPs.

Proposal 25–5 The Office of the Privacy Commissioner should provide guidance about when it is appropriate for an agency or organisation to destroy or render non-identifiable personal information that is no longer needed for a purpose permitted under the UPPs. This guidance should cover, among other things:

(a) personal information that forms part of a historical record;

(b) personal information, or a record of personal information, that may need to be preserved, in some form, for the purpose of future dispute resolution; and

(c) the interaction between the UPPs and legislative records retention requirements.

Proposal 25–6 The Office of the Privacy Commissioner should provide guidance about what is required of an agency or organisation to destroy or render non-identifiable personal information, particularly when that information is held or stored in an electronic form.

26. Access and Correction

Proposal 26–1 The proposed Unified Privacy Principles (UPPs) should contain a principle called 'Access and Correction' that:

(a) sets out the requirements that apply to organisations in respect of personal information that is held by organisations; and

(b) contains a note stating that the provisions dealing with access to, and correction of, personal information held by agencies are located in a separate Part of the *Privacy Act*.

Proposal 26–2 (a) The proposed 'Access and Correction' principle should provide that, where an organisation is not required to provide an individual with access to his or her personal information because of an exception to the general provision granting a right of access, the organisation must take reasonable steps to reach an appropriate compromise, involving the use of a mutually agreed intermediary, that would allow for sufficient access to meet the needs of both parties.

(b) The Office of the Privacy Commissioner should provide guidance about the meaning of 'reasonable steps' in this context, making clear, for instance, that an organisation need not take any steps where this would undermine a lawful reason for denying a request for access in the first place.

Proposal 26–3 The proposed 'Access and Correction' principle should provide that an organisation must respond within a reasonable time to a request from an individual for access to personal information held by the organisation. The Office of

the Privacy Commissioner should provide guidance about the meaning of 'reasonable time' in this context.

Proposal 26–4 The proposed 'Access and Correction' principle should provide that where, in accordance with this principle, an organisation has corrected personal information it holds about an individual, and the individual requests that the organisation notify any other entities to whom the personal information has already been disclosed prior to correction, the organisation must take reasonable steps to do so, provided such notification would be practicable in the circumstances.

Proposal 26–5 The proposed 'Access and Correction' principle should provide that, where an organisation holds personal information about an individual that the individual wishes to have corrected or annotated, the individual should seek to establish that the personal information held by the organisation is, with reference to a purpose of collection permitted by the UPPs, not accurate, complete, up-to-date and relevant.

Proposal 26–6 The proposed 'Access and Correction' principle should provide that, where an organisation holds personal information about an individual, it is not required to provide access to that information to the individual to the extent that providing access would be reasonably likely to pose a serious threat to the life or health of any individual.

27. Identifiers

Proposal 27–1 The proposed Unified Privacy Principles (UPPs) should contain a principle called 'Identifiers' that applies to agencies and organisations. As a consequence, s 100(2) and (3) of the *Privacy Act* should be amended to apply also to agencies.

Proposal 27–2 The proposed 'Identifiers' principle should define 'identifier' inclusively to mean a number, symbol or any other particular that:

(a) uniquely identifies an individual for the purpose of an agency's or organisation's operations; or

(b) is determined to be an identifier by the Office of the Privacy Commissioner.

However, an individual's name or ABN, as defined in the *A New Tax System (Australian Business Number) Act 1999* (Cth), is not an 'identifier'.

Proposal 27–3 The proposed 'Identifiers' principle should contain a note stating that a determination referred to in the 'Identifiers' principle is a legislative instrument for the purposes of s 5 of the *Legislative Instruments Act 2003* (Cth).

Proposal 27–4 The proposed 'Identifiers' principle should regulate the use by agencies and organisations of identifiers that are assigned by state and territory agencies.

Question 27–1 Should the *Privacy Act* regulate the assignment of identifiers by agencies, organisations or both? If so, what requirements should apply and should these requirements be located in the proposed UPPs or elsewhere?

Proposal 27–5 Before the introduction by agencies of any unique multi-purpose identifier, the Australian Government, in consultation with the Privacy Commissioner, should consider the need for a privacy impact assessment.

Proposal 27–6 The Office of the Privacy Commissioner, in consultation with the Australian Taxation Office and other relevant stakeholders, should review the *Tax File Number Guidelines* issued under s 17 of the *Privacy Act*.

28. Transborder Data Flows

Proposal 28–1 The *Privacy Act* should be amended to clarify that it applies to acts done, or practices engaged in, outside Australia by an agency.

Proposal 28–2 The proposed Unified Privacy Principles (UPPs) should contain a principle called 'Transborder Data Flows' that applies to agencies and organisations.

Proposal 28–3 The proposed 'Transborder Data Flows' principle should provide that an agency or organisation in Australia or an external territory may transfer personal information about an individual to a recipient (other than the agency, organisation or the individual) who is outside Australia if the transfer is necessary for one or more of the following by or on behalf of an enforcement body:

(a) the prevention, detection, investigation, prosecution or punishment of criminal offences, breaches of a law imposing a penalty or sanction or breaches of a prescribed law;

(b) the enforcement of laws relating to the confiscation of the proceeds of crime;

(c) the protection of the public revenue;

(d) the prevention, detection, investigation or remedying of seriously improper conduct or proscribed conduct;

(e) the preparation for, or conduct of, proceedings before any court or tribunal, or implementation of the orders of a court or tribunal; or

(f) extradition and mutual assistance.

Question 28–1 Should the *Privacy Act* provide that for the purposes of the proposed 'Transborder Data Flows' principle, a 'transfer':

(a) includes where personal information is stored in Australia in such a way that allows it to be accessed or viewed outside Australia; and

(b) excludes the temporary transfer of personal information, such as when information is emailed from one person located in Australia to another person also located in Australia, but, because of internet routing, the email travels (without being viewed) outside Australia on the way to its recipient in Australia?

Proposal 28–4 Subject to Proposal 28–3, the proposed 'Transborder Data Flows' principle should provide that an agency or organisation in Australia or an external territory may transfer personal information about an individual to a recipient (other than the agency, organisation or the individual) who is outside Australia only if at least one of the following conditions is met:

(a) the agency or organisation reasonably believes that the recipient of the information is subject to a law, binding scheme or contract which effectively upholds privacy protections that are substantially similar to the proposed UPPs; or

(b) the individual consents to the transfer; or

(c) the agency or organisation continues to be liable for any breaches of the proposed UPPs; and

    (i) the individual would reasonably expect the transfer, and the transfer is necessary for the performance of a contract between the individual and the agency or organisation;

    (ii) the individual would reasonably expect the transfer, and the transfer is necessary for the implementation of pre-contractual measures taken in response to the individual's request;

    (iii) the transfer is necessary for the conclusion or performance of a contract concluded in the interest of the individual between the agency or organisation and a third party;

    (iv) all of the following apply: the transfer is for the benefit of the individual; it is impracticable to obtain the consent of the individual to that transfer; and if it were practicable to obtain such consent, the individual would be likely to give it; or

(v) before the transfer has taken place, the agency or organisation has taken reasonable steps to ensure that the information will not be dealt with by the recipient of the information inconsistently with the proposed UPPs.

Proposal 28–5 The proposed 'Use and Disclosure' principle should contain a note stating that agencies and organisations are subject to the requirements of the proposed 'Transborder Data Flows' principle when transferring personal information about an individual to a recipient who is outside Australia.

Proposal 28–6 The proposed 'Transborder Data Flows' principle should contain a note stating that agencies and organisations are subject to the requirements of the proposed 'Use and Disclosure' principle when transferring personal information about an individual to a recipient who is outside Australia.

Proposal 28–7 Section 13B of the *Privacy Act* should be amended to clarify that, if an organisation transfers personal information to a related body corporate outside Australia, this transfer will be subject to the proposed 'Transborder Data Flows' principle.

Proposal 28–8 The Australian Government should develop and publish a list of laws and binding schemes that effectively uphold principles for fair handling of personal information that are substantially similar to the proposed UPPs.

Proposal 28–9 The Office of the Privacy Commissioner should develop and publish guidance on the proposed 'Transborder Data Flows' principle, including guidance on:

(a) when personal information may become available to a foreign government;

(b) outsourcing government services to organisations outside Australia;

(c) the issues that should be addressed as part of a contractual agreement with the overseas recipient of personal information;

(d) when a transfer of personal information is 'for the benefit' or 'in the interests of' the individual concerned; and

(e) what constitute 'reasonable steps' to ensure the information it has transferred will not be held, used or disclosed by the recipient of the information inconsistently with the proposed UPPs.

Proposal 28–10 The Privacy Policy of an agency or organisation, referred to in the proposed 'Openness' principle, should set out whether personal information may be transferred outside Australia.

Question 28–2 Would the use of trustmarks be an effective method of promoting compliance with, and enforcement of, the *Privacy Act* and other international privacy regimes? If so, should they be provided for under the *Privacy Act*?

Part E—Exemptions

30. Overview—Exemptions from the *Privacy Act 1988* (Cth)

Proposal 30–1 The *Privacy Act* should be amended to group together in a separate part of the Act exemptions for certain categories of entities or types of acts and practices.

Proposal 30–2 The *Privacy Act* should be amended to set out in a schedule to the Act exemptions for specific, named entities. The schedule should distinguish between entities that are completely exempt and those that are partially exempt from the Privacy Act. For those entities that are partially exempt, the schedule should specify those acts and practices that are exempt.

31. Defence and Intelligence Agencies

Proposal 31–1 The privacy rules and guidelines, which relate to the handling of intelligence information concerning Australian persons by the Australian Security Intelligence Organisation, Australian Security Intelligence Service, Defence Imagery and Geospatial Organisation, Defence Intelligence Organisation, Defence Signals Directorate and Office of National Assessments, should be amended to include consistent rules and guidelines relating to:

(a) incidents involving the incorrect use and disclosure of personal information (including a requirement to contact the Inspector-General of Intelligence and Security and advise of the incident and measures taken to protect the privacy of the Australian person);

(b) the accuracy of personal information; and

(c) the storage and security of personal information.

Proposal 31–2 Section 15 of the *Intelligence Services Act 2001* (Cth) should be amended to provide that:

(a) the responsible minister in relation to the Defence Intelligence Organisation is required to make written rules regulating the communication and retention by the Defence Intelligence Organisation of intelligence information concerning Australian persons; and

(b) before making rules to protect the privacy of Australian persons, the ministers responsible for the Australian Security Intelligence Service, the Defence Imagery and Geospatial Organisation, the Defence Signals Directorate and the Defence Intelligence Organisation should consult with the Office of the Privacy Commissioner.

Proposal 31–3 The *Office of National Assessments Act 1977* (Cth) should be amended to provide that:

(a) the responsible minister in relation to the Office of National Assessments (ONA) is required to make written rules regulating the communication and retention by the ONA of intelligence information concerning Australian persons; and

(b) before making rules to protect the privacy of Australian persons, the minister responsible for the ONA should consult with the Office of the Privacy Commissioner.

Proposal 31–4 Section 8A of the *Australian Security* and *Intelligence Organisation Act 1979* (Cth) should be amended to provide that, before making rules to protect the privacy of Australian persons, the responsible minister should consult with the Office of the Privacy Commissioner.

Proposal 31–5 The privacy rules and guidelines referred to in Proposal 31–1 should be made available electronically to the public; for example, on the websites of those agencies.

Proposal 31–6 The *Privacy Act* should be amended to apply to the Inspector-General of Intelligence and Security (IGIS) in respect of the administrative operations of that office.

Proposal 31–7 The Inspector-General of Intelligence and Security, in consultation with the Office of the Privacy Commissioner, should develop and publish information-handling guidelines to ensure that the personal information handled by IGIS is protected adequately.

32. Federal Courts and Tribunals

Proposal 32–1 Federal courts that do not have a policy on granting access for research purposes to court records containing personal information should develop and publish such policies.

Question 32–1 Should the *Privacy Act* be amended to provide that federal tribunals are exempt from the operation of the Act in respect of their adjudicative functions? If so, what should be the scope of ‘adjudicative functions’?

33. Exempt Agencies under the *Freedom of Information Act 1982* (Cth)

Proposal 33–1 The *Privacy Act* should be amended to remove the partial exemption that applies to the Australian Fair Pay Commission under s 7(1) of the Act.

Proposal 33–2 The following agencies listed in Schedule 2 Part I Division 1 and Part II Division 1 of the *Freedom of Information Act 1982* (Cth) should be required to demonstrate to the Attorney-General of Australia that they warrant exemption from the operation of the *Privacy Act*:

(a) Aboriginal Land Councils and Land Trusts;

(b) Auditor-General;

(c) National Workplace Relations Consultative Council;

(d) Department of the Treasury;

(e) Reserve Bank of Australia;

(f) Export and Finance Insurance Corporation;

(g) Australian Communications and Media Authority;

(h) Classification Board;

(i) Classification Review Board;

(j) Australian Trade Commission; and

(k) National Health and Medical Research Council.

The Australian Government should remove the exemption from the operation of the *Privacy Act* for any of these agencies that, within 12 months, do not make an adequate case for retaining their exempt status.

Proposal 33–3 The *Privacy Act* should be amended to remove the exemption of the Australian Broadcasting Corporation and the Special Broadcasting Service listed in Schedule 2 Part II Division 1 of the *Freedom of Information Act 1982* (Cth).

34. Other Public Sector Exemptions

Proposal 34–1 The Attorney-General's Department, in consultation with the Office of the Privacy Commissioner, should develop and publish information-handling guidelines for royal commissions to assist in ensuring that the personal information they handle is protected adequately.

Proposal 34–2 The *Privacy Act* should be amended to remove the exemption that applies to the Australian Crime Commission and the Board of the Australian Crime Commission by repealing s 7(1)(a)(iv), (h) and 7(2) of the Act.

Proposal 34–3 The *Privacy Act* should be amended to apply to the Integrity Commissioner in respect of the administrative operations of his or her office.

Proposal 34–4 The Integrity Commissioner, in consultation with the Office of the Privacy Commissioner, should develop and publish information-handling guidelines to ensure that the personal information handled by the Integrity Commissioner and the Australian Commission for Law Enforcement Integrity is protected adequately.

Question 34–1 Should the *Privacy Act* be amended to set out, in the form of an exemption, the range of circumstances in which agencies that perform law enforcement functions, such as the Australian Federal Police and the Australian Crime Commission, are not required to comply with specific privacy principles?

Question 34–2 Should the Department of the Senate, the Department of the House of Representatives and the Department of Parliamentary Services continue to be exempt from the operation of the *Privacy Act*? If so, what should be the scope of the exemption?

Proposal 34–5 Subject to Proposal 4–4 (states and territories to enact legislation applying the proposed Unified Privacy Principles and *Privacy (Health Information) Regulations*), the *Privacy Act* should be amended to:

(a) apply to all state and territory incorporated bodies, including statutory corporations, except where they are covered by obligations under a state or territory law that are, overall, at least the equivalent of the relevant obligations in the *Privacy Act*; and

(b) empower the Governor-General to make regulations exempting state and territory incorporated bodies from coverage of the *Privacy Act* on public interest grounds.

Proposal 34–6 The *Privacy Act* should be amended to provide that, in considering whether to exempt state and territory incorporated bodies from coverage of the *Privacy Act*, the Minister must:

(a) be satisfied that the state or territory has requested that the body be exempt from the Act;

(b) consider:

(i) whether coverage of the body under the *Privacy Act* adversely affects the state or territory government;

(ii) the desirability of regulating under the *Privacy Act* the handling of personal information by that body; and

(iii) whether the state or territory law regulates the handling of personal information by that body to a standard that is at least equivalent to the standard that would otherwise apply to the body under the *Privacy Act*; and

(c) consult with the Privacy Commissioner about the matters mentioned in paragraphs (ii) and (iii) above.

35. Small Business Exemption

Proposal 35–1 The *Privacy Act* should be amended to remove the small business exemption by:

(a) deleting the reference to 'small business operator' from the definition of 'organisation' in s 6C(1) of the Act; and

(b) repealing ss 6D–6EA of the Act.

Proposal 35–2 Before the proposed removal of the small business exemption from the *Privacy Act* comes into effect, the Office of the Privacy Commissioner should provide support to small businesses to assist them in understanding and fulfilling their obligations under the Act, including by:

(a) establishing a national small business hotline to assist small businesses in complying with the Act;

(b) developing educational materials—including guidelines, information sheets, fact sheets and checklists—on the requirements under the Act;

(c) developing and publishing templates for small businesses to assist in preparing Privacy Policies, to be available electronically and in hard copy free of charge; and

(d) liaising with other Australian Government agencies, state and territory authorities and representative industry bodies to conduct programs to promote an understanding and acceptance of the privacy principles.

36. Employee Records Exemption

Proposal 36–1 The *Privacy Act* should be amended to remove the employee records exemption by repealing s 7B(3) of the Act.

Proposal 36–2 The *Privacy Act* should be amended to provide that an agency or organisation may deny a request for access to evaluative material, disclosure of which would breach an obligation of confidence to the supplier of the information. 'Evaluative material' for these purposes means evaluative or opinion material compiled solely for the purpose of determining the suitability, eligibility, or qualifications of the individual concerned for employment, appointment or the award of a contract, scholarship, honour, or other benefit.

37. Political Exemption

Proposal 37–1 The *Privacy Act* should be amended to remove the exemption for registered political parties and the exemption for political acts and practices by:

(a) deleting the reference to a 'registered political party' from the definition of 'organisation' in s 6C(1) of the Act;

(b) repealing s 7C of the Act; and

(c) removing the partial exemption that is currently applicable to Australian Government ministers in s 7(1) of the Act.

Proposal 37–2 The *Privacy Act* should be amended to provide that the Act does not apply to the extent, if any, that it would infringe any constitutional doctrine of implied freedom of political communication.

Proposal 37–3 Before the proposed removal of the exemptions for registered political parties and for political acts and practices from the *Privacy Act* comes into effect, the Office of the Privacy Commissioner should develop and publish guidance to registered political parties and others to assist them in understanding and fulfilling their obligations under the Act.

38. Media Exemption

Proposal 38–1 The *Privacy Act* should be amended to define 'journalism' to mean the collection, preparation for dissemination or dissemination of the following material for the purpose of making it available to the public:

(a) material having the character of news, current affairs or a documentary; or

(b) material consisting of commentary or opinion on, or analysis of, news, current affairs or a documentary.

Proposal 38–2 In consultation with the Australian Communications and Media Authority and peak media representative bodies, the Office of the Privacy Commissioner should establish criteria for assessing the adequacy of media privacy standards for the purposes of the media exemption.

Proposal 38–3 The Office of the Privacy Commissioner should issue guidelines containing the criteria for assessing the adequacy of media privacy standards established under Proposal 38–2.

Proposal 38–4 Section 7B(4)(b)(i) of the *Privacy Act* should be amended to provide that the standards must 'deal *adequately* with privacy in the context of the activities of a media organisation (whether or not the standards also deal with other matters)'.

Proposal 38–5 The Office of the Privacy Commissioner should issue guidance to clarify that the term 'publicly committed' in s 7B(4) of the *Privacy Act* requires both:

(a) express commitment by a media organisation to observe privacy standards that have been published in writing by the media organisation or a person or body representing a class of media organisations; and

(b) conduct by the media organisation evidencing commitment to observe those standards.

40. New Exemptions

Question 40–1 Should the Australian Government request that the Standing Committee of Attorneys-General consider the regulation of private investigators and the impact of federal, state and territory privacy and related laws on the industry?

Question 40–2 Should the *Privacy Act* or other relevant legislation be amended to provide exemptions or exceptions applicable to the operation of alternative dispute resolution (ADR) schemes? Specifically, should the proposed:

(a) 'Specific Notification' principle exempt or except ADR bodies from the requirement to inform an individual about the fact of collection of personal information, including unsolicited personal information, where to do so would prejudice an obligation of privacy owed to a party to the dispute, or could cause safety concerns for another individual;

(b) 'Use and Disclosure' principle authorise the disclosure of personal and sensitive information to ADR bodies for the purpose of dispute resolution; and

(c) 'Sensitive Information' principle authorise the collection of sensitive information without consent by an ADR body where necessary for the purpose of dispute resolution?

Part F—Office of the Privacy Commissioner

43. Structure of the Office of the Privacy Commissioner

Proposal 43–1 The *Privacy Act* should be amended to change the name of the 'Office of the Privacy Commissioner' to the 'Australian Privacy Commission'.

Proposal 43–2 Part IV, Division 1 of the *Privacy Act* should be amended to provide for the appointment by the Governor-General of one or more Deputy Privacy Commissioners. The Act should provide that, subject to the oversight of the Privacy Commissioner, the Deputy Commissioners may exercise all the powers, duties and functions of the Privacy Commissioner under this Act—including a power conferred by s 52 and a power in connection with the performance of the function of the Privacy Commissioner set out in s 28(1)(a)—or any other enactment.

Proposal 43–3 Section 29 of the *Privacy Act* should be amended to provide that the Privacy Commissioner must have regard to the objects of the Act, as set out in Proposal 3–4, in the performance of his or her functions and the exercise of his or her powers.

Proposal 43–4 Section 82 of the *Privacy Act* should be amended to make the following changes in relation to the Privacy Advisory Committee:

(a) require the appointment of a person to represent the health sector;

(b) expand the number of members on the Privacy Advisory Committee, in addition to the Privacy Commissioner, to not more than seven; and

(c) replace 'electronic data-processing' in s 82(7)(c) with 'information and communication technologies'.

Proposal 43–5 The *Privacy Act* should be amended to empower the Privacy Commissioner to establish expert panels at his or her discretion to advise the Privacy Commissioner.

44. Powers of the Office of the Privacy Commissioner

Proposal 44–1 The *Privacy Act* should be amended to delete the word 'computer' from s 27(1)(c) of the *Privacy Act*.

Proposal 44–2 The *Privacy Act* should be amended to reflect that where guidelines issued by the Privacy Commissioner are binding they should be renamed 'rules'. For example, the following should be renamed to reflect that a breach of the rules is an interference with privacy under s 13 of the *Privacy Act*:

(a) Tax File Number Guidelines issued under s 17 of the *Privacy Act* should be renamed *Tax File Number Rules*;

(b) Medicare and Pharmaceutical Benefits Programs Privacy Guidelines (issued under s 135AA of the *National Health Act 1953* (Cth)) should be renamed the *Medicare and Pharmaceutical Benefits Programs Privacy Rules*;

(c) Data Matching Program (Assistance and Tax) Guidelines (issued under s 12 of the *Data-Matching Program (Assistance and Tax) Act 1990* (Cth)) should be renamed the *Data Matching Program (Assistance and Tax) Rules*; and

(d) Guidelines for National Privacy Principles about genetic information should be renamed *Genetic Information Privacy Rules*.

Proposal 44–3 Following the adoption of Proposal 21–1 to require agencies to produce and publish Privacy Policies, the *Privacy Act* should be amended to remove the requirement in s 27(1)(g) to maintain and publish the Personal Information Digest.

Proposal 44–4 The *Privacy Act* should be amended to empower the Privacy Commissioner to:

(a) direct an agency or organisation to provide to the Privacy Commissioner a privacy impact assessment in relation to a new project or development that the Privacy Commissioner considers may have a significant impact on the handling of personal information; and

(b) report to the Minister an agency or organisation's failure to comply with such a direction.

Proposal 44–5 The Office of the Privacy Commissioner should develop Privacy Impact Assessment Guidelines tailored to the needs of organisations.

Proposal 44–6 The *Privacy Act* should be amended to empower the Privacy Commissioner to conduct audits of the records of personal information maintained by

organisations for the purpose of ascertaining whether the records are maintained according to the proposed Unified Privacy Principles (UPPs), Privacy Regulations, Rules and any privacy code that binds the organisation.

Proposal 44–7 The Office of the Privacy Commissioner should maintain and publish on its website a list of all the Privacy Commissioner's functions, including those functions that arise under other legislation.

Proposal 44–8 The *Privacy Act* should be amended to empower the Privacy Commissioner to refuse to accept an application for a public interest determination where the Privacy Commissioner is satisfied that the application is frivolous, vexatious, misconceived or lacking in merit.

Proposal 44–9 Part IIIAA of the *Privacy Act* should be amended to specify that:

(a) privacy codes approved under Part IIIAA operate in addition to the proposed UPPs and do not replace those principles; and

(b) a privacy code may provide guidance or standards on how any one or more of the proposed UPPs should be applied, or are to be complied with, by the organisations bound by the code, as long as such guidance or standards contain obligations that are at least equivalent to those under the Act.

Proposal 44–10 Part IIIAA of the *Privacy Act* should be amended to empower the Privacy Commissioner to:

(a) request the development of a privacy code to be approved by the Privacy Commissioner pursuant to s 18BB; and

(b) develop and impose a privacy code that applies to designated agencies and organisations.

45. Investigation and Resolution of Privacy Complaints

Proposal 45–1 Section 41(1) of the *Privacy Act* should be amended to provide that, in addition to existing powers not to investigate, the Commissioner may decide not to investigate, or not to investigate further, an act or practice about which a complaint has been made under s 36, or which the Commissioner has accepted under s 40(1B), if the Commissioner is satisfied that:

(a) the complainant has withdrawn the complaint; or

(b) the complainant has not responded to the Commissioner for a specified period following a request by the Commissioner for a response in relation to the complaint; or

(c) an investigation, or further investigation, of the act or practice is not warranted having regard to all the circumstances.

Proposal 45–2 The *Privacy Act* should be amended to empower the Privacy Commissioner to:

(a) decline to investigate a complaint where the complaint is being handled by an approved external dispute resolution scheme; or

(b) decline to investigate a complaint that would be more suitably handled by an approved external dispute resolution scheme, and to refer that complaint to the external dispute resolution scheme with a request for investigation.

Proposal 45–3 Section 99 of the *Privacy Act* should be amended to empower the Privacy Commissioner to delegate to a state or territory authority all or any of the powers, including a power conferred by section 52, in relation to complaint handling conferred on the Commissioner by the *Privacy Act*.

Proposal 45–4 Sections 27(1)(a) and (ab) of the *Privacy Act* should be amended to make it clear that the Privacy Commissioner's functions in relation to complaint handling include:

(a) to receive complaints about an act or practice that may be an interference with the privacy of an individual;

(b) to investigate the act or practice about which a complaint has been made; and

(c) where the Commissioner considers it appropriate to do so and at any stage after acceptance of the complaint, to endeavour, by conciliation, to effect a settlement of the matters that gave rise to the complaint or to make a determination in respect of the complaint under s 52.

Proposal 45–5 The *Privacy Act* should be amended to include new provisions dealing expressly with conciliation. These provisions should give effect to the following:

(a) If, at any stage after receiving the complaint, the Commissioner considers it reasonably possible that the complaint may be conciliated successfully, he or she must make all reasonable attempts to conciliate the complaint.

(b) Where, in the opinion of the Commissioner, all reasonable attempts to settle the complaint by conciliation have been made and the Commissioner is satisfied that there is no reasonable likelihood that the complaint will be resolved by conciliation, the Commissioner must notify the complainant and respondent that

conciliation has failed and the complainant or respondent may require that the complaint be resolved by determination.

(c) Evidence of anything said or done in the course of a conciliation is not admissible in a determination hearing or any enforcement proceedings relating to the complaint, unless all parties to the conciliation otherwise agree.

Proposal 45–6 Section 52 of the *Privacy Act* should be amended to empower the Privacy Commissioner to make an order in a determination that an agency or respondent must take specified action within a specified period for the purpose of ensuring compliance with the Act.

Proposal 45–7 The *Privacy Act* should be amended to provide that a complainant or respondent can apply to the Administrative Appeals Tribunal for merits review of a determination made by the Privacy Commissioner under s 52 and the current review rights set out in s 61 should be repealed.

Proposal 45–8 The Office of the Privacy Commissioner should prepare and publish a document setting out its complaint-handling policies and procedures.

Proposal 45–9 Section 38B(2) of the *Privacy Act* should be amended to allow a class member to withdraw from a representative complaint at any time if the class member has not consented to be a class member.

Proposal 45–10 Section 42 of the *Privacy Act* should be amended to empower the Privacy Commissioner to make preliminary inquiries of third parties as well as the respondent.

Proposal 45–11 Section 46(1) of the *Privacy Act* should be amended to empower the Privacy Commissioner to compel parties to a complaint, and any other relevant person, to attend a compulsory conference.

Proposal 45–12 Section 69(1) and (2) of the *Privacy Act* should be deleted, which would allow the Privacy Commissioner, in the context of an investigation of a privacy complaint, to collect personal information about an individual who is not the complainant.

Proposal 45–13 The *Privacy Act* should be amended to provide that the Privacy Commissioner may direct that a hearing for a determination may be conducted without oral submissions from the parties if:

(a) the Privacy Commissioner considers that the matter could be determined fairly on the basis of written submissions by the parties; and

(b) the complainant and respondent consent to the matter being determined without oral submissions.

46. Enforcing the *Privacy Act*

Proposal 46–1 The *Privacy Act* should be amended to empower the Privacy Commissioner to:

(a) issue a notice to comply to an agency or organisation following an own motion investigation, where the Commissioner determines that the agency or organisation has engaged in conduct constituting an interference with the privacy of an individual;

(b) prescribe in the notice that an agency or organisation must take specified action within a specified period for the purpose of ensuring compliance with the *Privacy Act*; and

(c) commence proceedings in the Federal Court or Federal Magistrates Court for an order to enforce the notice.

Proposal 46–2 The *Privacy Act* should be amended to allow a civil penalty to be imposed where there is a serious or repeated interference with the privacy of an individual. The Office of the Privacy Commissioner should develop and publish enforcement guidelines setting out the criteria upon which a decision to pursue a civil penalty is made.

47. Data Breach Notification

Proposal 47–1 The *Privacy Act* should be amended to include a new Part on data breach notification, to provide as follows:

(a) An agency or organisation is required to notify the Privacy Commissioner and affected individuals when specified personal information has been, or is reasonably believed to have been, acquired by an unauthorised person and the agency, organisation or Privacy Commissioner believes that the unauthorised acquisition may give rise to a real risk of serious harm to any affected individual.

(b) An agency or organisation is not required to notify any affected individual where:

  (i) the specified information was encrypted adequately;

  (ii) the specified information was acquired in good faith by an employee or agent of the agency or organisation where the agency or organisation was otherwise acting for a purpose permitted by the proposed Unified Privacy

Principles (provided that the personal information is not used or subject to further unauthorised disclosure); or

(iii) the Privacy Commissioner does not consider that notification would be in the public interest.

(c) Failure to notify the Privacy Commissioner of a data breach as required by the Act may attract a civil penalty.

Part G—Credit Reporting Provisions

50. The Approach to Reform

Proposal 50–1 The credit reporting provisions of the *Privacy Act* should be repealed and credit reporting regulated under the general provisions of the *Privacy Act* and proposed Unified Privacy Principles (UPPs).

Proposal 50–2 Privacy rules, which impose obligations on credit reporting agencies and credit providers with respect to the handling of credit reporting information, should be promulgated in regulations under the *Privacy Act*—the proposed *Privacy (Credit Reporting Information) Regulations*.

Proposal 50–3 The obligations imposed on credit reporting agencies and credit providers by the proposed *Privacy (Credit Reporting Information) Regulations* should be in addition to those imposed by the proposed UPPs.

Proposal 50–4 The proposed *Privacy (Credit Reporting Information) Regulations* should be drafted to contain only those requirements that are different or more specific than provided for in the proposed UPPs.

Proposal 50–5 The proposed *Privacy (Credit Reporting Information) Regulations* should apply only to the handling by credit reporting agencies and credit providers of personal information maintained by credit reporting agencies and used by credit providers in assessing an individual's credit worthiness. This category of personal information should be defined as 'credit reporting information'.

Proposal 50–6 The definition of a 'credit reporting business' in the proposed *Privacy (Credit Reporting Information) Regulations*, if based on that in s 6(1) of the *Privacy Act*, should exclude the phrase 'other than records in which the only personal information relating to individuals is publicly available information'.

Proposal 50–7 The proposed *Privacy (Credit Reporting Information) Regulations* should include a simplified definition of 'credit provider' under which those individuals or organisations who are currently credit providers for the purposes of Part IIIA of the *Privacy Act* (whether by operation of s 11B of the *Privacy Act* or pursuant

to determinations of the Privacy Commissioner) should generally continue to be credit providers for the purposes of the regulations.

Question 50–1 Should organisations be regarded as credit providers if they make loans in respect of the provision of goods or services on terms that allow the deferral of payment, in full or in part, for at least thirty days as compared to seven days, as is currently the case under the OPC's *Credit Provider Determination No. 2006–4 (Classes of Credit Provider)*?

Question 50–2 Should the definition of 'credit provider' under the *Credit Reporting Privacy Code* 2004 (NZ) be adopted as the definition of 'credit provider' under the proposed *Privacy (Credit Reporting Information) Regulations*? That is, should 'credit provider' be defined simply as 'a person that carries on a business involving the provision of credit to an individual'; and credit as 'property or services acquired before payment, and money on loan'?

Proposal 50–8 The proposed *Privacy (Credit Reporting Information) Regulations* should exclude: the reporting of personal information about foreign credit and foreign credit providers; and the disclosure of credit reporting information to foreign credit providers.

Proposal 50–9 The Australian Government should consider including credit reporting regulation in the list of areas identified as possible issues for coordination pursuant to the *Memorandum of Understanding Between the Government of New Zealand and the Government of Australia on Coordination of Business Law* (2000).

Proposal 50–10 The proposed *Privacy (Credit Reporting Information) Regulations* should apply to personal information relating to credit advanced to an individual for any purpose and not limited to 'domestic, family or household' purposes as is currently the case under the definition of 'credit' in the *Privacy Act*.

Proposal 50–11 Credit reporting agencies and credit providers should develop, in consultation with consumer groups and regulators, including the Office of the Privacy Commissioner, an industry code dealing with operational matters such as default reporting obligations and protocols and procedures for the auditing of credit reporting information.

51. More Comprehensive Credit Reporting

Proposal 51–1 The proposed *Privacy (Credit Reporting Information) Regulations* should permit the inclusion in credit reporting files of the following categories of personal information in addition to those currently permitted under s 18E of the *Privacy Act*:

(a) the type of each current credit account opened (for example, mortgage, personal loan, credit card);

(b) the date on which each current credit account was opened;

(c) the limit of each current credit account (for example, initial advance, amount of credit approved, approved limit); and

(d) the date on which each credit account was closed.

Proposal 51–2 The credit reporting industry code (see Proposal 50–11) should provide for access to information on credit information files according to principles of reciprocity. That is, in general, credit providers only should have access to the same categories of personal information that they provide to the credit reporting agency.

Proposal 51–3 The proposed *Privacy (Credit Reporting Information) Regulations* should provide for a review after five years of operation. The review should focus on the impact of more comprehensive credit reporting on privacy and the credit market.

52. Collection of Credit Reporting Information

Proposal 52–1 The proposed *Privacy (Credit Reporting Information) Regulations* should provide for the recording, on the initiative of the relevant individual, of information that the individual has been the subject of identity theft.

Proposal 52–2 Credit reporting agencies only should be permitted to list overdue payments of more than a minimum amount.

Question 52–1 Should the proposed *Privacy (Credit Reporting Information) Regulations* provide a minimum amount for overdue payments listed by credit reporting agencies? If not, by what mechanism should a minimum amount for overdue payments be set and enforced?

Proposal 52–3 The proposed *Privacy (Credit Reporting Information) Regulations* should not permit credit reporting information to include information about presented and dishonoured cheques, as currently permitted under s 18E(1)(b)(vii) of the *Privacy Act*.

Proposal 52–4 The proposed *Privacy (Credit Reporting Information) Regulations* should permit credit reporting information to include personal insolvency information recorded on the National Personal Insolvency Index (NPII) administered under the *Bankruptcy Regulations 1966* (Cth).

Proposal 52–5 Credit reporting agencies, in accordance with obligations to ensure the accuracy and completeness of credit reporting information, should ensure that

credit reports adequately differentiate the forms of administration identified on the NPII.

Question 52–2 Should the proposed *Privacy (Credit Reporting Information) Regulations* allow for the listing of a 'serious credit infringement' or similar and, if so, how should this concept be defined?

Proposal 52–6 The proposed *Privacy (Credit Reporting Information) Regulations* should permit credit reporting information to include publicly available information.

Proposal 52–7 The proposed *Privacy (Credit Reporting Information) Regulations* should prohibit the collection in credit reporting information of 'sensitive information', as that term is defined in s 6(1) of the *Privacy Act*.

Proposal 52–8 The proposed *Privacy (Credit Reporting Information) Regulations* should prohibit the collection in credit reporting information about individuals the credit provider or credit reporting agency knows to be under the age of 18 years.

Proposal 52–9 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that, at or before the time credit reporting information is collected about an individual, credit providers must take reasonable steps to ensure that the individual is aware of:

(a) the fact and circumstances of collection (for example, how and where the information was collected);

(b) the credit provider's and credit reporting agency's identity and contact details;

(c) the fact that the individual is able to gain access to the information;

(d) the main consequences of not providing the information;

(e) the types of people, organisations, agencies or other entities to whom the credit provider and credit reporting agency usually discloses credit reporting information; and

(f) the avenues of complaint available to the individual if he or she has a complaint about the collection or handling of his or her credit reporting information.

Proposal 52–10 The proposed *Privacy (Credit Reporting Information) Regulations* should prescribe the specific circumstances in which a credit provider must inform an individual that personal information might be disclosed to a credit reporting agency, for example, in circumstances where the individual defaults in making payments.

Question 52–3 In what specific circumstances should a credit provider be obliged to inform an individual that personal information might be disclosed to a credit reporting agency; and what information should notices contain? Who should give notice when a debt is assigned—the original credit provider, the assignee or both?

Question 52–4 Should the proposed *Privacy (Credit Reporting Information) Regulations* prescribe specific circumstances in which a credit reporting agency must inform an individual that it has collected personal information?

53. Use and Disclosure of Credit Reporting Information

Proposal 53–1 The proposed *Privacy (Credit Reporting Information) Regulations* should provide a simplified list of circumstances in which a credit reporting agency or credit provider may use or disclose credit reporting information, based on those uses and disclosures currently permitted under ss 18K, 18L and 18N of the *Privacy Act*.

Proposal 53–2 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that, in addition, a credit reporting agency or credit provider may use or disclose credit reporting information for related secondary purposes, as permitted by the proposed 'Use and Disclosure' principle.

Question 53–1 Should the proposed *Privacy (Credit Reporting Information) Regulations* allow credit providers (but not credit reporting agencies) to disclose an individual's credit reporting information to a mortgage or trade insurer, where access to the information is required to assist in the assessment of the individual's credit worthiness?

Proposal 53–3 The proposed *Privacy (Credit Reporting Information) Regulations* should prohibit the use or disclosure of credit reporting information for the purposes of direct marketing.

Question 53–2 Should credit providers be permitted to use credit reporting information to 'pre-screen' credit offers? If so, should credit providers be required to allow individuals to opt out, or should credit providers only be permitted to engage in pre-screening if the individual in question has expressly opted in to receiving credit offers?

Question 53–3 If the use and disclosure of credit reporting information for identity verification purposes is not authorised under the proposed *Privacy (Credit Reporting Information) Regulations*, what other sources of data might be used by credit providers to satisfy obligations under the *Anti-Money Laundering* and *Counter-Terrorism Financing Act 2006* (Cth) and similar legislation? What are the advantages and disadvantages of the alternate sources of data?

Proposal 53–4 There should be no equivalent in the proposed *Privacy (Credit Reporting Information) Regulations* of s 18N of the *Privacy Act*, which limits the disclosure by credit providers of personal information related to credit worthiness. The use and disclosure limitations should apply only to personal information maintained by credit reporting agencies and used in credit reporting.

54. Data Quality and Security

Proposal 54–1 The proposed *Privacy (Credit Reporting Information) Regulations* should prohibit expressly the listing of any overdue payment where the credit provider is prevented under any law of the Commonwealth, a State or a Territory from bringing proceedings against the individual to recover the amount of the overdue payment.

Proposal 54–2 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that where the individual has entered into a new arrangement with a credit provider to repay an existing debt, such as by entering into a scheme of arrangement with the credit provider, an overdue payment under the new arrangement may be listed and remain part of the individual's credit reporting information file for the full five year period permissible under the regulations.

Proposal 54–3 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that credit reporting agencies must:

(a) enter into agreements with credit providers that contain obligations to ensure data quality in the information credit providers provide to credit reporting agencies;

(b) establish and maintain controls to ensure that only information that is accurate, complete, up-to-date and relevant is used or disclosed;

(c) monitor data quality and audit compliance with the agreements and controls; and

(d) identify and investigate possible breaches of the agreements and controls.

Proposal 54–4 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that credit providers and credit reporting agencies have an obligation to take reasonable steps to ensure that credit reporting information is accurate, up-to-date, complete and not misleading.

Proposal 54–5 The credit reporting industry code (see Proposal 50–11) should promote data quality by mandating procedures to ensure consistency and accuracy in the reporting of overdue payments and other personal information by credit providers. These procedures should deal with matters including:

(a) the timeliness of the reporting of personal information, such as overdue payments;

(b) the calculation of overdue payments for credit reporting purposes;

(c) obligations to prevent the multiple listing of the same debt;

(d) the updating of personal information reported, including where schemes of arrangement have been entered into; and

(e) the linking of credit reporting information where it is unclear whether the information relates to more than one individual with similar identifying details or to one individual who has used different identifying details.

Proposal 54–6 The proposed review of the *Privacy (Credit Reporting Information) Regulations* after five years' of operation (Proposal 51–3) also should consider whether further regulation is required to ensure the data quality of credit reporting information.

Proposal 54–7 The proposed *Privacy (Credit Reporting Information) Regulations* should provide for the deletion of different categories of credit reporting information after the expiry of maximum permissible periods, based on those currently set out in s 18F of the *Privacy Act*.

Proposal 54–8 The proposed *Privacy (Credit Reporting Information) Regulations* should provide for the deletion of information about voluntary arrangements with creditors under Part IX and Part X of the *Bankruptcy Act 1966* (Cth) five years from the date of the arrangement as recorded on the National Personal Insolvency Index.

Proposal 54–9 The proposed *Privacy (Credit Reporting Information) Regulations* should contain no equivalent to s 18G(b) and (c), dealing with the security of credit information files and credit reports, as these obligations are adequately covered by the proposed 'Data Security' principle.

55. Rights of Access, Complaint Handling and Penalties

Question 55–1 Should the proposed *Privacy (Credit Reporting Information) Regulations* provide that individuals have the right to obtain a free copy of their credit reporting information?

Question 55–2 Should the proposed *Privacy (Credit Reporting Information) Regulations* provide an equivalent to s 18H(3) of the *Privacy Act*, so that an individual's rights of access to credit reporting information may be exercised by a person authorised in writing and for a credit-related purpose?

Proposal 55–1 The proposed *Privacy (Credit Reporting Information) Regulations* should provide individuals with rights to access and correct credit reporting information based on the provisions currently set out in ss 18H and 18J of the *Privacy Act*.

Proposal 55–2 The proposed *Privacy (Credit Reporting Information) Regulations* should provide individuals with rights to be notified where a credit provider refuses an application for credit based wholly or partly on credit reporting information, based on the provisions currently set out in s 18M of the *Privacy Act*.

Proposal 55–3 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that the information to be given if an individual's application for credit is refused based wholly or partly on credit reporting information should include any credit score or ranking used by the credit provider, together with explanatory material on scoring systems, to allow individuals to understand how the risk of the credit application was assessed.

Proposal 55–4 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that:

(a) credit reporting agencies and credit providers must handle credit reporting complaints in a fair, efficient and timely manner;

(b) credit reporting agencies and credit providers must establish procedures to deal with a request by an individual for resolution of a credit reporting complaint;

(c) a credit reporting agency should refer to a credit provider for resolution of a complaint about the content of credit reporting information provided to the agency by that credit provider; and

(d) where a credit reporting agency or credit provider establishes that it is unable to resolve a complaint it must immediately inform the individual concerned that it is unable to resolve the complaint and that the individual may complain to an external dispute resolution scheme or to the Privacy Commissioner.

Proposal 55–5 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that the information to be given if an individual's application for credit is refused based wholly or partly on credit reporting information should include the avenues of complaint available to the individual if he or she has a complaint about the content of his or her credit reporting information.

Proposal 55–6 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that credit providers may only list overdue payment information where

the credit provider is a member of an external dispute resolution scheme approved by the Office of the Privacy Commissioner.

Proposal 55–7 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that credit providers have an obligation to provide evidence to individuals and dispute resolution bodies to substantiate disputed credit reporting information, such as default listings, and that if the information is not provided within 30 days the credit reporting agency must delete the information on the request of the individual concerned.

Proposal 55–8 The *Privacy Act* should be amended to:

(a) remove the credit reporting offences by repealing ss 18C(4), 18D(4), 18K(4), 18L(2), 18N(2), 18R(2), 18S(3) and 18T; and

(b) allow a civil penalty to be imposed where there is a serious or repeated breach of the proposed *Privacy (Credit Reporting Information) Regulations*.

Part H—Health Services and Research

56. Regulatory Framework for Health Information

Proposal 56–1 The Privacy Commissioner should consider delegating the power to handle complaints under the *Privacy Act* in relation to interferences with health information privacy by organisations to state and territory health complaint agencies.

Proposal 56–2 Health information should continue to be regulated under the general provisions of the *Privacy Act* and the proposed Unified Privacy Principles (UPPs). Amendments to the proposed UPPs that relate specifically to the handling of health information should be promulgated in regulations under the *Privacy Act*—the *Privacy (Health Information) Regulations*.

Proposal 56–3 The Office of the Privacy Commissioner should publish a document bringing together the proposed UPPs and the amendments set out in the *Privacy (Health Information) Regulations*. This document will contain a complete set of the proposed UPPs as they relate to health information.

Proposal 56–4 The Office of the Privacy Commissioner—in consultation with the Australian Government Department of Health and Ageing and other relevant stakeholders—should develop guidelines on the handling of health information under the *Privacy Act* and the *Privacy (Health Information) Regulations*.

Proposal 56–5 The national Unique Healthcare Identifiers (UHIs) scheme and the national Shared Electronic Health Records (SEHR) scheme should be established

under specific enabling legislation. The legislation should address information privacy issues, such as:

(a) the nomination of an agency or organisation with clear responsibility for managing the respective systems, including the personal information contained in the systems;

(b) the eligibility criteria, rights and requirements for participation in the UHI scheme and the SEHR scheme by health consumers and health service providers, including consent requirements;

(c) permitted and prohibited uses and linkages of the personal information held in the systems;

(d) permitted and prohibited uses of UHIs and sanctions in relation to misuse; and

(e) safeguards in relation to the use of UHIs; for example, that it is not necessary to use a UHI in order to access health services.

57. The Privacy Act and Health Information

Proposal 57–1 The definition of 'health information' in the *Privacy Act* should be amended to make express reference to information or an opinion about the *physical*, *mental or psychological* health or disability of an individual.

Proposal 57–2 The *Privacy Act* should be amended to define a 'health service' as:

(a) an activity performed in relation to an individual that is intended or claimed (expressly or otherwise) by the individual or the service provider to:

  (i) assess, record, maintain or improve the individual's health;

  (ii) diagnose the individual's illness, injury or disability; or

  (iii) treat the individual's illness, injury or disability or suspected illness, injury or disability; or

(b) a disability service, palliative care service or aged care service; or

(c) the dispensing on prescription of a drug or medicinal preparation by a pharmacist.

Proposal 57–3 The *Privacy (Health Information) Regulations* should provide that a health service provider may collect health information from a health consumer, or a person responsible for the health consumer, about third parties without consent when:

(a) the collection of the third party's information into a health consumer's social, family or medical history is necessary to enable health service providers to provide a health service directly to the consumer; and

(b) the third party's information is relevant to the family, social or medical history of that consumer.

Question 57–1 Should the proposed *Privacy (Health Information) Regulations* provide that health information may be collected without consent where it is necessary to provide a health service to the individual and the individual would reasonably expect the agency or organisation to collect the information for that purpose?

Proposal 57–4 The provisions of National Privacy Principle 2 dealing with the disclosure of health information in the health services context to a person responsible for an individual should be moved to the *Privacy (Health Information) Regulations*. The proposed regulation should:

(a) be expressed to apply to both agencies and organisations;

(b) provide that an agency or organisation that provides a health service to an individual may disclose health information about the individual to a person who is responsible for the individual if the individual is 'incapable of giving consent' to the disclosure and all the other circumstances currently set out in NPP 2.4 are met;

(c) include a definition of a person 'responsible' for an individual amended to incorporate the term 'authorised representive'; and

(d) refer to 'de facto partner' rather than 'de facto spouse'.

Proposal 57–5 National Privacy Principle 2.1(ea) on the use and disclosure of genetic information should be moved to the *Privacy (Health Information) Regulations* and amended to apply to both agencies and organisations. Any use or disclosure under the proposed regulation should be in accordance with binding rules issued by the Privacy Commissioner.

Proposal 57–6 The *Privacy (Health Information) Regulations* should provide that, if an organisation denies an individual access to his or her own health information on the ground that providing access would be reasonably likely to pose a serious threat to the life or health of any individual, the:

(a) organisation must advise the individual that he or she may nominate a registered medical practitioner to be given access to the health information;

(b) individual may nominate a registered medical practitioner and request that the organisation provide access to the information to the nominated medical practitioner;

(c) organisation must provide access to the health information to the nominated medical practitioner; and

(d) nominated medical practitioner may assess the grounds for denying access to the health information and may provide the individual with sufficient access to the information to meet the individual's needs if he or she is satisfied that to do so would not be likely to pose a serious threat to the life or health of any individual.

Proposal 57–7 The *Privacy (Health Information) Regulations* should provide that where a health service practice or business is sold, amalgamated or closed down and a health service provider will not be providing health services in the new practice or business, or the provider dies, the provider, or the legal representative of the provider, must take all reasonable and appropriate steps to:

(a) make individual users of the health service aware of the sale, amalgamation or closure of the health service or the death of the health service provider; and

(b) inform them about proposed arrangements for the transfer or storage of individuals' health information.

Proposal 57–8 The *Privacy (Health Information) Regulations* should provide that if an individual:

(a) requests that a health service provider, or the health service provider's legal representative, make the individual's health information available to another health service provider; or

(b) authorises a health service provider to request that another health service provider transfers the individual's health information to the requesting health service provider,

the health service provider must transfer the individual's health information as requested. The health information may be provided in summary form.

Proposal 57–9 The *Privacy (Health Information) Regulations* should make express provision for the collection, use and disclosure of health information without

consent where necessary for the funding, management, planning, monitoring, improvement or evaluation of a health service where:

(a) the purpose cannot be achieved by the collection, use or disclosure of information that does not identify the individual;

(b) it is impracticable for the agency or organisation to seek the individual's consent before the collection, use or disclosure; and

(c) the collection, use or disclosure is conducted in accordance with rules issued by the Privacy Commissioner.

Proposal 57–10 The *Privacy Act* should be amended to empower the Privacy Commissioner to issue rules in relation to the handling of personal information for the funding, management, planning, monitoring, improvement or evaluation of a health service.

58. Research

Proposal 58–1 The Privacy Commissioner should issue one set of rules under the proposed exceptions to the 'Collection' principle and the 'Use and Disclosure' principle in the Unified Privacy Principles (UPPs) to replace the *Guidelines Under Section 95 of the Privacy Act 1988* and the *Guidelines Approved Under Section 95A of the Privacy Act 1988*.

Proposal 58–2 The *Privacy Act* should be amended to extend the existing arrangements relating to the collection, use or disclosure of personal information without consent in the area of health and medical research to cover the collection, use or disclosure of personal information without consent in human research more generally.

Proposal 58–3 The *Privacy Act* should be amended to provide that 'research' is any activity, including the compilation or analysis of statistics, subject to review by a Human Research Ethics Committee under the *National Statement on Ethical Conduct in Human Research* (2007).

Proposal 58–4 The research exceptions to the proposed 'Collection' principle and the proposed 'Use and Disclosure' principle should provide that before approving an activity that involves the collection, use or disclosure of sensitive information or the use or disclosure of other personal information without consent, Human Research Ethics Committees must be satisfied that the public interest in the activity outweighs the public interest in maintaining the level of privacy protection provided by the proposed UPPs.

Proposal 58–5 The Privacy Commissioner should consult with relevant stakeholders in developing the rules to be issued under the research exceptions to the proposed 'Collection' principle and the proposed 'Use and Disclosure' principle, to ensure that the approaches adopted in the rules and the *National Statement on Ethical Conduct in Human Research* (2007) are compatible.

Proposal 58–6 The *National Statement on Ethical Conduct in Human Research* (2007) should be amended to require that, where a research proposal seeks to rely on the research exceptions in the *Privacy Act,* it must be reviewed and approved by a Human Research Ethics Committee.

Proposal 58–7 In developing the rules to be issued in relation to research under the proposed 'Collection' principle and the proposed 'Use and Disclosure' principle, the Privacy Commissioner, in consultation with relevant stakeholders, should review the reporting requirements currently imposed on the Australian Health Ethics Committee and Human Research Ethics Committees. Any new reporting mechanism should aim to promote the objects of the *Privacy Act*, have clear goals and impose the minimum possible administrative burden to achieve those goals.

Proposal 58–8 The research exception to the proposed 'Collection' principle should state that, despite subclause 2.6, an agency or organisation may collect sensitive information about an individual where:

(a) the collection is necessary for research;

(b) the purpose cannot be served by the collection of information that does not identify the individual;

(c) it is impracticable for the agency or organisation to seek the individual's consent to the collection;

(d) a Human Research Ethics Committee has reviewed the proposed activity and is satisfied that the public interest in the activity outweighs the public interest in maintaining the level of privacy protection provided by the UPPs; and

(e) the information is collected in accordance with rules issued by the Privacy Commissioner.

Where an agency or organisation collects sensitive information about an individual in accordance with this provision, it must take reasonable steps to ensure that the information is not disclosed in a form that would identify the individual or from which the individual would be reasonably identifiable.

Proposal 58–9 The research exception to the proposed 'Use and Disclosure' principle should state that despite the other provisions of the Use and Disclosure principle, an agency or organisation may use or disclose personal information where:

(a) the use or disclosure is necessary for research;

(b) it is impracticable for the agency or organisation to seek the individual's consent to the use or disclosure;

(c) a Human Research Ethics Committee has reviewed the proposed activity and is satisfied that the public interest in the activity outweighs the public interest in maintaining the level of privacy protection provided by the UPPs;

(d) the information is used or disclosed in accordance with rules issued by the Privacy Commissioner; and

(e) in the case of disclosure—the agency or organisation reasonably believes that the recipient of the personal information will not disclose the personal information in a form that would identify the individual or from which the individual would be reasonably identifiable.

Proposal 58–10 The Privacy Commissioner should provide guidance on the meaning of 'not reasonably identifiable'.

Proposal 58–11 The Privacy Commissioner should address the following matters in the rules to be issued under the research exceptions to the proposed 'Collection' principle and the proposed 'Use and Disclosure' principle:

(a) the process by which a Human Research Ethics Committee should review a proposal to establish a health information database or register for research purposes;

(b) the matters a Human Research Ethics Committee should take into account in considering whether the public interest in establishing the health information database or register outweighs the public interest in maintaining the level of privacy protection provided by the UPPs; and

(c) the fact that, where a database or register is established on the basis of Human Research Ethics Committee approval, that approval does not extend to future unspecified uses. Any future proposed use of the database or register for research would require separate review by a Human Research Ethics Committee.

Proposal 58–12 The Privacy Commissioner should address the following matters in the rules to be issued under the research exceptions to the proposed 'Collection' principle and the proposed 'Use and Disclosure' principle:

(a) the process by which a Human Research Ethics Committee should review a proposal to examine a health information database or register to identify potential participants in research; and

(b) the matters a Human Research Ethics Committee should take into account in considering whether the public interest in allowing the examination of the health information database or register outweighs the public interest in maintaining the level of privacy protection provided by the UPPs.

Proposal 58–13 Agencies or organisations developing systems or infrastructure to allow the linkage of personal information for research purposes should consult the Office of the Privacy Commissioner to ensure that the systems or infrastructure they are developing meet the requirements of the *Privacy Act*.

Part I—Children, Young People and Adults Requiring Assistance

59. Children, Young People and Privacy

Proposal 59–1 The Australian Government should fund a longitudinal study of the attitudes of Australians, including young Australians, to privacy.

Proposal 59–2 The Office of the Privacy Commissioner should develop and publish educational material about privacy issues aimed at children and young people.

Proposal 59–3 NetAlert should include specific guidance on using social networking sites as part of its educational material on internet safety.

Proposal 59–4 In order to promote awareness of personal privacy and respect for the privacy of others, state and territory education departments should incorporate education about privacy, and in particular privacy in the online environment, into school curricula.

60. Decision Making by People Under the Age of 18

Proposal 60–1 The *Privacy Act* should be amended to provide that:

(a) an individual aged 15 or over is presumed to be capable of giving consent, making a request or exercising a right of access unless found to be incapable (in accordance with the criteria set out in Proposal 60–2) of giving that consent, making that request or exercising that right;

(b) where it is practicable to make an assessment about the capacity of an individual aged 14 or under to give consent, make a request or exercise a right of access, an assessment about the individual's capacity should be undertaken; and

(c) where it is not practicable to make an assessment about the capacity of an individual aged 14 or under to give consent, make a request or exercise a right of access, then the consent, request or exercising of the right to access must be provided by an authorised representative of the individual.

Proposal 60–2 The *Privacy Act* should be amended to provide that an individual aged under 18 is incapable of giving consent, making a request or exercising a right if, despite the provision of reasonable assistance by another person, he or she is incapable, by reason of maturity, injury, disease, illness, cognitive impairment, physical impairment, mental disorder, any disability or any other circumstance, of:

(a) understanding the general nature and effect of giving the consent, making the request or exercising the right; or

(b) communicating such consent or refusal of consent, making the request or personally exercising the right of access.

Where an individual under the age of 18 is considered incapable of giving consent, making a request or exercising a right, then an authorised representative of that individual may give the consent, make the request or exercise the right on behalf of that individual.

Proposal 60–3 The Office of the Privacy Commissioner should develop and publish guidance for applying the provisions relating to individuals under the age of 18, including on:

(a) the involvement of children, young people and their authorised representatives in decision-making processes;

(b) situations where children and young people are capable of giving consent, making a request or exercising a right on their own behalf;

(c) practices and criteria to be used in determining whether a child or young person is incapable of giving consent, making a request or exercising a right on his or her own behalf;

(d) the provision of reasonable assistance to children and young people to understand and communicate decisions; and

(e) the requirements to obtain consent from an authorised representative of a child or young person in appropriate circumstances.

Proposal 60–4 The *Privacy Act* should be amended to provide that an agency or organisation will not be considered to have acted without consent if it did not know, and could not reasonably be expected to have known from the information available, that an individual was aged 14 or under, and the agency or organisation acted upon the consent given by the individual.

Proposal 60–5 An agency or organisation that handles the personal information of individuals under the age of 18 should address in its Privacy Policy how such information is managed.

Proposal 60–6 An agency or organisation that regularly handles the personal information of individuals under the age of 18 should ensure that its staff are adequately trained to assess the decision-making capacity of children and young people.

Proposal 60–7 Schools should clarify in their Privacy Policies how the personal information of students will be handled, including when personal information:

(a) will be disclosed to, or withheld from, persons with parental responsibility; and

(b) collected by school counsellors will be disclosed to the school management, persons with parental responsibility, or others.

Proposal 60–8 The Office of the Privacy Commissioner should include consideration of the privacy of children and young people in the proposed criteria for assessing the adequacy of media privacy standards for the purposes of the media exemption.

61. Adults with a Temporary or Permanent Incapacity

Question 61–1 Should the *Privacy Act* be amended to provide expressly that all individuals aged 18 and over are presumed to be capable of giving consent, making a request or exercising a right of access unless found to be incapable of giving that consent, making that request or exercising that right?

Proposal 61–1 The *Privacy Act* should be amended to provide that an individual aged 18 or over is incapable of giving consent, making a request or exercising a right under the Act if, despite the provision of reasonable assistance by another person, he or she is incapable by reason of injury, disease, illness, cognitive impairment, physical impairment, mental disorder, any disability, or any other circumstance, of:

(a) understanding the general nature and effect of giving the consent, making the request or exercising the right; or

(b) communicating such consent or refusal of consent, making the request or personally exercising the right of access.

Where an individual is considered incapable of giving consent, making a request or exercising a right under the Act, then an authorised representative of that individual may give the consent, make the request or exercise the right on behalf of the individual.

Proposal 61–2 The *Privacy Act* should be amended to introduce the concept of 'authorised representative', defined as a person who is, in relation to an individual:

(a) a guardian of the individual appointed under law;

(b) a guardian for the individual under an appointment of enduring guardianship;

(c) an attorney for the individual under an enduring power of attorney;

(d) a person who has parental responsibility for the individual if the individual is under the age of 18; or

(e) otherwise empowered under law to perform any functions or duties as agent or in the best interests of the individual.

The *Privacy Act* should state that an authorised representative is not to act on behalf of the individual in any way that is inconsistent with an order made by a court or tribunal, in contravention of the terms of any appointment under law, or beyond the powers provided for in an enduring power of attorney.

Question 61–2 Should the definition of 'authorised representative' include a person who was nominated by the individual at a time when the individual had the capacity to make the nomination?

Proposal 61–3 The *Privacy Act* should be amended to provide that an agency or organisation that has taken reasonable steps to validate the authority of an authorised representative will not be considered to have engaged in conduct constituting an interference with privacy of an individual merely because it acted upon the consent, request or exercise of a right by that authorised representative, if it is later found that the authorised representative:

(a) was not properly appointed; or

(b) exceeded the authority of his or her appointment.

Proposal 61–4 The Office of the Privacy Commissioner should develop and publish guidance for applying the provisions relating to individuals aged 18 and over

incapable of giving consent, making a request or exercising a right on their own behalf, including on:

(a) the provision of reasonable assistance to individuals to understand and communicate decisions; and

(b) practices and criteria to be used in determining whether an individual is incapable of giving consent, making a request or exercising a right on his or her own behalf.

Proposal 61–5 Agencies and organisations that handle personal information about people incapable of making a decision should address in their Privacy Policies how such information is managed.

Proposal 61–6 Agencies and organisations that regularly handle personal information about adults incapable of making a decision should ensure that their staff are trained adequately to assess the decision-making capacity of individuals.

62. Other Third Party Assistance

Proposal 62–1 Practice and procedures allowing for the involvement of third parties to assist an individual to make and communicate privacy decisions should be developed and published in guidance issued by the Office of the Privacy Commissioner.

Question 62–1 Should the *Privacy Act* be amended expressly to allow a third party nominated by the individual to give consent, make a request or exercise a right of access on behalf of the individual, either for one-off or long term arrangements?

Part J—Telecommunications

63. *Telecommunications Act*

Proposal 63–1 The Australian Government should initiate a review to consider the extent to which the *Telecommunications Act 1997* (Cth) and the *Telecommunications (Interception and Access) Act 1979* (Cth) continue to be effective in light of technological developments (including technological convergence), changes in the structure of communication industries and changing community perceptions and expectations about communication technologies. In particular, the review should consider:

(a) whether the Acts continue to regulate effectively communication technologies and the individuals and organisations that supply communication technologies and communication services;

(b) how the Acts interact with each other and with other legislation;

(c) the extent to which the activities regulated under the Acts should be regulated under general communications legislation or other legislation; and

(d) the roles and functions of the various bodies currently involved in the regulation of the telecommunications industry, including the Australian Communications and Media Authority, the Australian Government Attorney-General's Department, the Office of the Privacy Commissioner, the Telecommunications Industry Ombudsman, and Communications Alliance.

Question 63–1 Sections 279 and 296 of the *Telecommunications Act 1997* (Cth) permit the use or disclosure by a person of information or a document if the use or disclosure is made 'in the performance of the person's duties' as an employee or contractor. Is the exception too broadly drafted? Is it resulting in the inappropriate use or disclosure of personal information? If so, how should the exception be confined?

Proposal 63–2 Sections 280(1)(b) and 297 of the *Telecommunications Act 1997* (Cth) should be amended to clarify that the exception does not authorise a use or disclosure that would be permitted by the proposed 'Use and Disclosure' principle under the *Privacy Act* if that use or disclosure would not be otherwise permitted under Part 13 of the *Telecommunications Act*.

Question 63–2 Does the Telecommunications (Interception and Access) Amendment Bill 2007 provide adequate protection of personal information that is used or disclosed for law enforcement purposes? For example, should the Bill be amended to:

(a) define 'telecommunications data';

(b) provide greater guidance on how the privacy implications of an authorisation should be considered and documented under proposed s 180(5);

(c) include positive obligations on law enforcement agencies to destroy in a timely manner irrelevant material containing personal information and information which is no longer needed; and

(d) provide that the Inspector-General of Intelligence and Security monitor the use of powers by the Australian Security Intelligence Organisation to obtain prospective telecommunications data?

Proposal 63–3 Sections 287 and 300 of the *Telecommunications Act 1997* (Cth) should be amended to provide that a use or disclosure by a person of information or a document is permitted if:

(a) the information or document relates to the affairs or personal particulars (including any unlisted telephone number or any address) of another person; and

(b) the person reasonably believes that the use or disclosure is necessary to lessen or prevent a serious threat to:

  (i) a person's life, health or safety; or

  (ii) public health or public safety.

Proposal 63–4 Section 289 of the *Telecommunications Act 1997* (Cth) should be amended to provide that a use or disclosure by a person of information or a document is permitted if the information or document relates to the affairs or personal particulars (including any unlisted telephone number or any address) of another person; and

(a) the other person has consented to the use or disclosure; or

(b) if the use or disclosure is for a purpose other than the primary purpose for which the information was collected (the secondary purpose):

  (i) the secondary purpose is related to the primary purpose and, if the information or document is sensitive information (within the meaning of the *Privacy Act 1988* (Cth)), the secondary purpose is directly related to the primary purpose of collection; and

  (ii) the other person would reasonably expect the person to use or disclose the information.

Proposal 63–5 Part 13 of the *Telecommunications Act 1997* (Cth) should be amended to provide that 'consent' means 'express or implied consent'.

Question 63–3 How does s 290 of the *Telecommunications Act 1997* (Cth) operate in practice? Is the exception resulting in the inappropriate use or disclosure of personal information? If so, how should the exception be confined?

Question 63–4 Is the exception that permits the use or disclosure of information or a document for certain business needs of other carriers or service providers (s 291 and s 302 of the *Telecommunications Act 1997* (Cth)) resulting in the inappropriate use or disclosure of personal information? If so, how should the exception be confined?

Should the exception be amended to provide that silent and other blocked calling numbers can only be used or disclosed with a person's consent?

Proposal 63–6 Part 13 of the *Telecommunications Act 1997* (Cth) should be amended to provide that use or disclosure by a person credit reporting information is to be handled in accordance with the *Privacy Act*.

Proposal 63–7 The Australian Government should amend the *Telecommunications (Integrated Public Number Database—Permitted Research Purposes) Instrument 2007 (No 1)* to provide that the test of research in the public interest is met when the public interest in the relevant research outweighs the public interest in maintaining the level of protection provided by the *Telecommunications Act* to the information in the Integrated Public Number Database.

Proposal 63–8 The *Telecommunications (Integrated Public Number Database Scheme—Conditions for Authorisations) Determination 2007 (No 1)* should be amended to provide that an authorisation under the integrated public number database scheme is subject to a condition requiring the holder of the authorisation to notify the Office of the Privacy Commissioner, as soon as practicable after becoming aware:

(a) of a substantive or systemic breach of security that could reasonably be regarded as having an adverse impact on the integrity and confidentiality of the protected information; and

(b) that a person to whom the holder has disclosed protected information has contravened any legal restrictions governing the person's ability to use or disclose protected information.

Question 63–5 Should directory products that are produced from data sources other than the Integrated Public Number Database be subject to the same rules under Part 13 of the *Telecommunications Act 1997* (Cth) as directory products which are produced from data sourced from the Integrated Public Number Database?

Proposal 63–9 The *Telecommunications Act 1997* (Cth) should be amended to prohibit the charging of a fee for an unlisted (silent) number on a public number directory.

Proposal 63–10 Before the proposed removal of the small business exemption from the *Privacy Act* comes into effect (Proposal 35–1), the Australian Government should make regulations under s 6E of the *Privacy Act* to ensure that the Act applies to all small businesses in the telecommunications industry, including internet service providers and public number directory producers.

Question 63–6 Should a breach of Divisions 2, 4 and 5 of Part 13 of the *Telecommunications Act 1997* (Cth) attract a civil penalty rather than a criminal penalty?

Proposal 63–11 The Australian Communications and Media Authority, in consultation with the Office of the Privacy Commissioner, Communications Alliance and the Telecommunications Industry Ombudsman, should develop and publish guidance that addresses issues raised by new technologies such as location-based services, voice over internet protocol and electronic number mapping.

Proposal 63–12 Section 117(1)(k) of the *Telecommunications Act 1997* (Cth) should be amended to provide that the Australian Communications and Media Authority can only register a code that deals directly or indirectly with a matter dealt with by the *Privacy Act*, or an approved privacy code under the *Privacy Act*, if it has consulted with the Privacy Commissioner, and has been advised in writing by the Privacy Commissioner that he or she is satisfied with the code.

Proposal 63–13 Section 134 of the *Telecommunications Act 1997* (Cth) should be amended to provide that the Australian Communications and Media Authority only can determine, vary or revoke an industry standard that deals directly or indirectly with a matter dealt with by the *Privacy Act*, or an approved privacy code under the *Privacy Act*, if it has consulted with the Privacy Commissioner, and has been advised in writing by the Privacy Commissioner that he or she is satisfied with the standard.

Proposal 63–14 Section 306 of the *Telecommunications Act 1997* (Cth) should be amended to provide that each exception upon which a decision to disclose information or a document is based is to be recorded when that decision is based on more than one of the exceptions in Divisions 3 or 4 of Part 13 of the Act.

Proposal 63–15 Part 13 of the *Telecommunications Act 1997* (Cth) should be redrafted to achieve greater logical consistency, simplicity and clarity.

64. Other Telecommunications Privacy Issues

Question 64–1 Should ss 63B(1) and 135(3) of the *Telecommunications (Interception and Access) Act 1979* (Cth) be amended to clarify when an employee of a carrier may communicate or make use of lawfully intercepted or accessed information in the performance of his or her duties?

Question 64–2 How should the provisions that permit an employee of a carrier to communicate to another carrier intercepted or accessed information (ss 63B(2) and 135(4) of the *Telecommunications (Interception and Access) Act*) be clarified?

Question 64–3 Should further restrictions apply in relation to the use and disclosure of information obtained by a B-party interception warrant under the *Telecommunications (Interception and Access) Act 1979* (Cth)?

Proposal 64–1 Section 79 of the *Telecommunications (Interception and Access) Act 1979* (Cth) should be amended to provide that the chief officer of an agency must cause a record, including any copy of a record, made by means of an interception to be destroyed when it is no longer needed for a permitted purpose.

Proposal 64–2 The Attorney-General's Department should provide guidance on when the chief officer of an agency must cause information or a record to be destroyed when it is no longer required for a permitted purpose under s 79 and s 150 of the *Telecommunications (Interception and Access) Act 1979* (Cth). This guidance should include time limits within which agencies must review holdings of information and destroy information as required by the legislation.

Proposal 64–3 Section 79 of the *Telecommunications (Interception and Access) Act 1979* (Cth) should be amended to expressly require the destruction of non-material content intercepted under a B-party warrant.

Question 64–4 Should the regime relating to access to stored communications under the *Telecommunications (Interception and Access) Act 1979* (Cth) be amended to provide further reporting requirements in relation to the use and effectiveness of stored communications warrants?

Question 64–5 Should the *Telecommunications (Interception and Access) Act 1979* (Cth) be amended to provide for the role of a public interest monitor? If so, what should be the role of the monitor? Should its role include, for example, to:

(a) appear at any application made by an agency for interception and access warrants under the *Telecommunications (Interception and Access) Act*;

(b) test the validity of warrant applications;

(c) gather statistical information about the use and effectiveness of warrants;

(d) monitor the retention or destruction of information obtained under a warrant;

(e) provide to the Inspector General of Intelligence and Security, or other authority as appropriate, a report on non-compliance with the *Telecommunications (Interception and Access) Act*; or

(f) report to the Australian Parliament on the use of interception and access warrants?

Proposal 64–4 The Office of the Privacy Commissioner should be made a member of the Australian Communications and Media Authority's Law Enforcement Advisory Committee.

Question 64–6 Should the *Spam Act 2003* (Cth) be amended to:

(a) provide that the definition of 'electronic message' under s 5 includes Bluetooth messages;

(b) provide that facsimile messages are regulated under the Act;

(c) provide that an electronic message is required to include an unsubscribe message if the electronic message:

  (i) consists of no more than factual information; or

  (ii) has been authorised by a government body, a registered political party, a religious organisation, or a charity or charitable institution, and relates to goods or services; or

  (iii) has been authorised by an educational institution, and relates to goods or services;

(d) remove the exception for registered political parties?

Question 64–7 Should the *Do Not Call Register Act 2006* (Cth) be amended to remove the exception for registered political parties, independent members of parliament and candidates in an election?

Proposal 64–5 The Office of the Privacy Commissioner, the Telecommunications Industry Ombudsman and the Australian Communications and Media Authority should develop memoranda of understanding, addressing:

(a) the roles and functions of each of the bodies under the *Telecommunications Act 1997* (Cth), *Spam Act 2003* (Cth), *Do Not Call Register Act 2006* (Cth) and the *Privacy Act*;

(b) the exchange of relevant information and expertise between the bodies; and

(c) when a matter should be referred to, or received from, the bodies.

Proposal 64–6 The document setting out the Office of the Privacy Commissioner's complaint-handling policies and procedures (see Proposal 45–8), and its enforcement guidelines (see Proposal 46–2) should address:

(a) the roles and functions of the Office of the Privacy Commissioner, Telecommunications Industry Ombudsman and the Australian Communications

and Media Authority under the *Telecommunications Act 1997* (Cth), *Spam Act 2003* (Cth), *Do Not Call Register Act 2006* (Cth) and the *Privacy Act*; and

(b) when a matter will be referred to, or received from, the Telecommunications Industry Ombudsman and the Australian Communications and Media Authority.

Proposal 64–7 The Office of the Privacy Commissioner, in consultation with the Australian Communications and Media Authority, Australian Communications Alliance and the Telecommunications Industry Ombudsman, should develop and publish guidance relating to privacy in the telecommunications industry. The guidance should:

(a) outline the interaction between the *Privacy Act*, *Telecommunications Act 1997* (Cth), *Spam Act 2003* (Cth) and the *Do Not Call Register Act 2006* (Cth);

(b) provide advice on the exceptions under Part 13 of the *Telecommunications Act*, *Spam Act* and the *Do Not Call Register Act*; and

(c) outline what is required to obtain an individual's consent for the purposes of the *Privacy Act*, *Telecommunications Act*, *Spam Act* and the *Do Not Call Register Act*. This guidance should cover consent as it applies in various contexts, and include advice on when it is, and is not, appropriate to use the mechanism of 'bundled consent'.

Proposal 64–8 The Office of the Privacy Commissioner, in consultation with the Attorney-General's Department, the Australian Communications and Media Authority, the Office of the Commonwealth Ombudsman, the Inspector General of Intelligence and Security and the Telecommunications Industry Ombudsman, should develop and publish educational material that addresses the:

(a) rules regulating privacy in the telecommunications industry;

(b) various bodies that are able to deal with a complaint in relation to privacy in the telecommunications industry, and how to make a complaint to those bodies.

Proposed Unified Privacy Principles (UPPs)

Contents

UPP 1.	Anonymity and Pseudonymity	89
UPP 2.	Collection	89
UPP 3.	Specific Notification	90
UPP 4.	Openness	91
UPP 5.	Use and Disclosure	92
UPP 6.	Direct Marketing (only applicable to organisations)	93
UPP 7.	Data Quality	94
UPP 8.	Data Security	94
UPP 9.	Access and Correction (only applicable to organisations)	95
UPP 10.	Identifiers	97
UPP 11.	Transborder Data Flows	98

UPP 1. Anonymity and Pseudonymity

Wherever it is lawful and practicable, individuals, when transacting with an agency or organisation, should have the clear option of either:

(a) not identifying themselves; or

(b) identifying themselves with a pseudonym, provided this would not be misleading.

UPP 2. Collection

2.1 An agency or organisation must not collect personal information unless it reasonably believes the information is necessary for one or more of its functions or activities.

2.2 An agency or organisation must collect personal information only by lawful and fair means and not in an unreasonably intrusive way.

2.3 If it is reasonable and practicable to do so, an agency or organisation must collect personal information about an individual only from that individual.

2.4 If an agency or organisation collects personal information about an individual from the individual or from someone else, it must comply with UPP 3.

2.5 If an agency or organisation receives unsolicited personal information about an individual from someone else, it must either:

(a) destroy the information immediately without using or disclosing it; or

(b) comply with all relevant provisions in the UPPs that apply to the information in question, as if the agency or organisation had actively collected the information.

2.6 In addition to the other requirements in UPP 2, an agency or organisation must not collect sensitive information about an individual unless:

(a) the individual has consented; or

(b) the collection is required or specifically authorised by or under law; or

(c) the collection is necessary to prevent or lessen a serious threat to the life or health of any individual, where the individual whom the information concerns is incapable of giving consent; or

(d) if the information is collected in the course of the activities of a non-profit organisation that has only racial, ethnic, political, religious, philosophical, professional, trade, or trade union aims—the following conditions are satisfied:

(i) the information relates solely to the members of the organisation or to individuals who have regular contact with it in connection with its activities; and

(ii) at or before the time of collecting the information, the organisation undertakes to the individual whom the information concerns that the organisation will not disclose the information without the individual's consent; or

(e) the collection is necessary for the establishment, exercise or defence of a legal or equitable claim.

UPP 3. Specific Notification

3.1 At or before the time (or, if that is not practicable, as soon as practicable after) an agency or organisation collects personal information about an individual from the individual, it must take reasonable steps to ensure that the individual is aware of the:

(a) fact and circumstances of collection (for example, how, when and from where the information was collected);

(b) identity and contact details of the agency or organisation;

(c) fact that the individual is able to gain access to the information;

(d) purposes for which the information is collected;

(e) main consequences of not providing the information;

(f) types of people, organisations, agencies or other entities to whom the agency or organisation usually discloses personal information; and

(g) avenues of complaint available to the individual if he or she has a complaint about the collection or handling of his or her personal information.

3.2 Where an agency or organisation collects personal information from someone other than the individual concerned, it must take reasonable steps to ensure that the individual is or has been made aware of:

(a) the matters listed in UPP 3.1 above; and

(b) the source of the information, if requested by the individual.

3.3 An agency or organisation must comply with the obligations in UPPs 3.1 and 3.2:

(a) in circumstances where a reasonable person would expect to be notified; and

(b) except to the extent that:

(i) making the individual aware of these matters would pose a serious threat to the life or health of any individual;

(ii) in the case of an agency, the agency is required or specifically authorised by or under law not to make the individual aware of one or more of these matters.

UPP 4. Openness

4.1 An agency or organisation must create a Privacy Policy that sets out the agency's or organisation's policies on the management of personal information, including how the personal information is collected, held, used and disclosed. This document should also include:

(a) what sort of personal information the agency or organisation holds;

(b) the purposes for which personal information is held;

(c) the avenues of complaint available to individuals in the event that they have a privacy complaint;

(d) the steps individuals may take to gain access to personal information about them held by the agency or organisation in question;

(e) the types of individual about whom records are kept;

(f) the period for which each type of record is kept; and

(g) the persons, other than the individual, who can access personal information and the conditions under which they can access it.

4.2 An agency or organisation should take reasonable steps to make its Privacy Policy available without charge to an individual:

(a) electronically, for example, on its website (if it possesses one); and

(b) in hard copy, on request.

UPP 5. Use and Disclosure

5.1 An agency or organisation must not use or disclose personal information about an individual for a purpose (the ***secondary purpose***) other than the primary purpose of collection unless:

(a) both of the following apply:

(i) the secondary purpose is related to the primary purpose of collection and, if the personal information is sensitive information, directly related to the primary purpose of collection; and

(ii) the individual would reasonably expect the agency or organisation to use or disclose the information for the secondary purpose; or

(b) the individual has consented to the use or disclosure; or

(c) the agency or organisation reasonably believes that the use or disclosure is necessary to lessen or prevent a serious threat to:

(i) an individual's life, health or safety; or

(ii) public health or public safety; or

(d) the agency or organisation has reason to suspect that unlawful activity has been, is being or may be engaged in, and uses or discloses the personal information as a necessary part of its investigation of the matter or in reporting its concerns to relevant persons or authorities; or

(e) the use or disclosure is required or authorised by or under law; or

(f) the agency or organisation reasonably believes that the use or disclosure is necessary for one or more of the following by or on behalf of an enforcement body:

(i) the prevention, detection, investigation, prosecution or punishment of criminal offences, breaches of a law imposing a penalty or sanction or breaches of a prescribed law;

(ii) the enforcement of laws relating to the confiscation of the proceeds of crime;

(iii) the protection of the public revenue;

(iv) the prevention, detection, investigation or remedying of seriously improper conduct or prescribed conduct;

(v) the preparation for, or conduct of, proceedings before any court or tribunal, or implementation of the orders of a court or tribunal.

5.2 UPP 5.1 operates in respect of personal information that an organisation that is a body corporate has collected from a related body corporate as if the organisation's primary purpose of collection of the information were the primary purpose for which the related body corporate collected the information.

Note: Agencies and organisations are also subject to the requirements of the 'Transborder Data Flows' principle when transferring personal information about an individual to a recipient who is outside Australia.

UPP 6. Direct Marketing (only applicable to organisations)

6.1 An organisation must not use or disclose personal information about an individual for the primary purpose or a secondary purpose of direct marketing unless all of the following conditions are met:

(a) the individual has consented, or both of the following apply:

(i) the information is not sensitive information; and

(ii) it is impracticable for the organisation to seek the individual's consent before that particular use or disclosure; and

(b) the organisation will not charge the individual for giving effect to a request by the individual to the organisation not to receive direct marketing communications; and

(c) the individual has not made a request to the organisation not to receive direct marketing communications, and the individual has not withdrawn any consent he or she may have provided to the organisation to receive direct marketing communications;

(d) in each direct marketing communication with the individual, the organisation draws to the individual's attention, or prominently displays a notice, that he or she may express a wish not to receive any further direct marketing communications; and

(e) each written direct marketing communication by the organisation with the individual (up to and including the communication that involves the use) sets out the organisation's business address and telephone number and, if the communication with the individual is made by fax, telex or other electronic means, a number or address at which the organisation can be contacted directly electronically.

6.2 In the event that an individual makes a request of the organisation not to receive any further direct marketing communications, the organisation must comply with this requirement within a reasonable period of time.

6.3 An organisation must take reasonable steps, when requested by an individual to whom it has sent direct marketing communications, to advise the individual from where it acquired the individual's personal information.

UPP 7. Data Quality

An agency or organisation must take reasonable steps to make sure that the personal information it collects, uses or discloses is, with reference to a purpose of collection permitted by the UPPs, accurate, complete, up-to-date and relevant.

UPP 8. Data Security

An agency or organisation must take reasonable steps to:

(a) protect the personal information it holds from misuse and loss and from unauthorised access, modification or disclosure;

(b) destroy or render non-identifiable personal information if it is no longer needed for any purpose permitted by the UPPs; and

(c) ensure that personal information it discloses to a person pursuant to a contract, or otherwise in connection with the provision of a service to the agency or organisation, is protected from being used or disclosed by that person otherwise than in accordance with the UPPs.

UPP 9. Access and Correction (only applicable to organisations)

9.1 If an organisation holds personal information about an individual and the individual requests access to the information, it must respond within a reasonable time and provide the individual with access to the information, except to the extent that:

(a) providing access would be reasonably likely to pose a serious threat to the life or health of any individual;

(b) providing access would have an unreasonable impact upon the privacy of other individuals;

(c) the request for access is frivolous or vexatious;

(d) the information relates to existing or anticipated legal proceedings between the organisation and the individual, and the information would not be accessible by the process of discovery in those proceedings;

(e) providing access would reveal the intentions of the organisation in relation to negotiations with the individual in such a way as to prejudice those negotiations;

(f) providing access would be unlawful;

(g) denying access is required or authorised by or under law;

(h) providing access would be likely to prejudice an investigation of possible unlawful activity;

(i) providing access would be likely to prejudice the:

(i) prevention, detection, investigation, prosecution or punishment of criminal offences, breaches of a law imposing a penalty or sanction or breaches of a prescribed law; or

(ii) enforcement of laws relating to the confiscation of the proceeds of crime; or

(iii) protection of the public revenue; or

(iv) prevention, detection, investigation or remedying of seriously improper conduct or prescribed conduct; or

(v) preparation for, or conduct of, proceedings before any court or tribunal, or implementation of its orders;

by or on behalf of an enforcement body; or

(j) an enforcement body performing a lawful security function asks the organisation not to provide access to the information on the basis that providing access would be likely to cause damage to the security of Australia.

9.2 However, where providing access would reveal evaluative information generated within the organisation in connection with a commercially sensitive decision-making process, the organisation may give the individual an explanation for the commercially sensitive decision rather than direct access to the information.

Note: An organisation breaches UPP 9.1 if it relies on UPP 9.2 to give an individual an explanation for a commercially sensitive decision in circumstances where UPP 9.2 does not apply.

9.3 If the organisation is not required to provide the individual with access to the information because of one or more of paragraphs UPP 9.1(a) to (j) (inclusive), the organisation must take reasonable steps to reach an appropriate compromise, involving the use of a mutually agreed intermediary, provided that the compromise would allow for sufficient access to meet the needs of both parties.

9.4 If an organisation charges for providing access to personal information, those charges:

(a) must not be excessive; and

(b) must not apply to lodging a request for access.

9.5 If an organisation holds personal information about an individual and the individual is able to establish that the information is, with reference to a purpose of collection permitted by the UPPs, not accurate, complete, up-to-date and relevant, the organisation must take reasonable steps to:

(a) correct the information so that it is accurate, complete, up-to-date and relevant; and

(b) notify any other entities to whom the personal information has already been disclosed prior to correction, if requested to do so by the individual and provided such notification would be practicable in the circumstances.

9.6 If the individual and the organisation disagree about whether the information is, with reference to a purpose of collection permitted by the UPPs, not accurate, complete, up-to-date and relevant, and the individual asks the organisation to associate with the information a statement claiming that the information is not accurate, complete, up-to-date or relevant, the organisation must take reasonable steps to do so.

9.7 An organisation must provide reasons for denial of access or a refusal to correct personal information.

Note: If an individual wishes to access, or have corrected, personal information that is held by an agency, the individual should follow the requirements set out in the relevant Part of this Act.

UPP 10. Identifiers

10.1 An organisation must not adopt as its own identifier of an individual an identifier of the individual that has been assigned by:

(a) an agency;

(b) an agent of an agency acting in its capacity as agent;

(c) a contracted service provider for a Commonwealth contract acting in its capacity as contracted service provider for that contract; or

(d) an Australian state or territory agency.

10.2 An agency must not adopt as its own identifier of an individual an identifier of the individual that has been assigned by:

(a) another agency;

(b) an agent of another agency acting in its capacity as agent;

(c) a contracted service provider for a Commonwealth contract acting in its capacity as contracted service provider for that contract; or

(d) an Australian state or territory agency.

10.3 The requirements in NPPs 10.1 and 10.2 do not apply to the adoption by a prescribed agency or organisation of a prescribed identifier in prescribed circumstances.

Note: There are prerequisites that must be satisfied before those matters are prescribed: see subsection 100(2), as proposed to be amended.

10.4 Where an identifier has been 'assigned' within the meaning of UPP 10.1 or 10.2, an agency or organisation must not use or disclose the identifier unless:

(a) the use or disclosure is necessary for the agency or organisation to fulfil its obligations to the agency that assigned the identifier;

(b) one or more of UPP 5.1(c) to (f) apply to the use or disclosure;

(c) the identifier is genetic information and the use or disclosure would be permitted by the proposed Privacy (Health Information) Regulations; or

(d) the use or disclosure is by a prescribed agency or organisation of a prescribed identifier in prescribed circumstances.

10.5 The term 'identifier', for the purposes of UPP 10, includes a number, symbol or any other particular that:

(a) uniquely identifies an individual for the purpose of an agency's or organisation's operations; or

(b) is determined to be an identifier by the Office of the Privacy Commissioner.

However, an individual's name or ABN, as defined in the *A New Tax System (Australian Business Number) Act 1999*, is not an 'identifier'.

Note: A determination referred to in the 'Identifiers' principle is a legislative instrument for the purposes of section 5 of the *Legislative Instruments Act 2003* (Cth).

UPP 11. Transborder Data Flows

An agency or organisation in Australia or an external Territory may transfer personal information about an individual to a recipient (other than the agency, organisation or the individual) who is outside Australia only if:

(a) the agency or organisation reasonably believes that the recipient of the information is subject to a law, binding scheme or contract which effectively upholds principles for fair handling of the information that are substantially similar to the UPPs; or

(b) the individual consents to the transfer; or

(c) the transfer is necessary for one or more of the following by or on behalf of an enforcement body:

(i) the prevention, detection, investigation, prosecution or punishment of criminal offences, breaches of a law imposing a penalty or sanction or breaches of a prescribed law;

(ii) the enforcement of laws relating to the confiscation of the proceeds of crime;

(iii) the protection of the public revenue;

(iv) the prevention, detection, investigation or remedying of seriously improper conduct or prescribed conduct;

(v) the preparation for, or conduct of, proceedings before any court or tribunal, or implementation of the orders of a court or tribunal;

(vi) extradition and mutual assistance; or

(d) the agency of organisation continues to be liable for any breaches of the UPPs, and

(i) the individual would reasonably expect the transfer, and the transfer is necessary for the performance of a contract between the individual and the agency or organisation;

(ii) the individual would reasonably expect the transfer, and the transfer is necessary for the implementation of pre-contractual measures taken in response to the individual's request;

(iii) the transfer is necessary for the conclusion or performance of a contract concluded in the interest of the individual between the agency or organisation and a third party;

(iv) all of the following apply: the transfer is for the benefit of the individual, it is impracticable to obtain the consent of the individual to that transfer; and if it were practicable to obtain such consent, the individual would be likely to give it; or

(v) before the transfer has taken place, the agency or organisation has taken reasonable steps to ensure that the information will not be dealt with by the recipient of the information inconsistently with the UPPs.

Note: Agencies and organisations are also subject to the requirements of the 'Use and Disclosure' principle when transferring personal information about an individual to a recipient who is outside Australia.

Introduction

1.1 On 30 January 2006, the Attorney-General, the Hon Philip Ruddock MP, asked the Australian Law Reform Commission (ALRC) to conduct an inquiry into the extent to which the *Privacy Act 1988* (Cth) and related laws continue to provide an effective framework for the protection of privacy in Australia.[1] To date in this Inquiry, the ALRC has published two issues papers, *Review of Privacy* (IP 31)[2] and *Review of*

1 Such a review was recommended in two previous inquiries: Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005), rec 2; Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 1.

2 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006).

Privacy—Credit Reporting Provisions (IP 32).[3] To facilitate community involvement in the Inquiry, the ALRC also published a concise overview of IP 31 and IP 32, entitled *Reviewing Australia's Privacy Law—Is Privacy Passé?*[4]

1.2 The *Privacy Act* itself was substantially the product of a seven year research effort by the ALRC, which culminated in 1983 with the three volume report, *Privacy* (ALRC 22).[5] The Act also gave effect to Australia's obligations to implement the Organisation for Economic Co-operation and Development *Guidelines for the Protection of Privacy and Transborder Flows of Personal Data* (OECD Guidelines),[6] and partially implemented into domestic law Australia's obligations under art 17 of the *International Covenant on Civil and Political Rights* (ICCPR).[7]

1.3 ALRC 22 was not the first report of the ALRC to consider the concept of privacy. One earlier report—*Unfair Publication: Defamation and Privacy* (ALRC 11)[8]—is worthy of particular note. In addition to making recommendations for reform in the law of defamation, ALRC 11 proposed some limited privacy protection. It was recommended that a person be allowed to sue for damages or an injunction

> if 'sensitive private facts', relating to health, private behaviour, home life, and personal or family relationships, were published about him which were likely in all the circumstances to cause distress, annoyance or embarrassment to a person in the position of the individual. Wide defences were proposed allowing publication of personal information if the publication was relevant to the topic of public interest.[9]

1.4 Since the enactment of the *Privacy Act*, advances in information, communication and surveillance technologies have created a range of previously unforeseen privacy issues. At the same time, the emergence of regional political and economic blocs, such as the European Union and Asia-Pacific Economic Cooperation group (APEC), has created pressure for the alignment of our privacy protection regime with those of our key trading partners. These issues are being considered in detail during the course of the Inquiry.

7 M Paterson, *Freedom of Information and Privacy in Australia: Government and Information Access in the Modern State* (2005), [2.54]. Article 17 of the ICCPR provides: '1. No one shall be subjected to arbitrary or unlawful interference with his privacy, family, home or correspondence, nor to unlawful attacks on his honour and reputation. 2. Everyone has the right to the protection of the law against such interference or attacks': *International Covenant on Civil and Political Rights*, 16 December 1966, [1980] ATS 23, (entered into force generally on 23 March 1976).

8 Australian Law Reform Commission, *Unfair Publication: Defamation and Privacy*, ALRC 11 (1979).

9 Australian Law Reform Commission, *Privacy*, ALRC 22 (1983), [6]. See generally Australian Law Reform Commission, *Unfair Publication: Defamation and Privacy*, ALRC 11 (1979), [250]. How far Australia has progressed in recognising a common law right to privacy since the publication of ALRC 11 is discussed below.

Key proposals for reform

1.5 The current Inquiry is the one of the largest projects ever undertaken by the ALRC. In the three volumes of this Discussion Paper, approximately 300 proposals for reform are put forward for consideration. Some of the key proposals include the following:

- **Redrafting the Privacy Act and Privacy Principles.** The *Privacy Act* should be substantially redrafted to achieve greater logical consistency, simplicity and clarity. Such an amendment to the Act would include the unification of the Information Privacy Principles (IPPs) and the National Privacy Principles (NPPs) into a single set of privacy principles covering information handling in both the public and private sectors. For the purposes of this Inquiry, these principles are referred to as the Unified Privacy Principles (UPPs). This also would result in a restructuring of the Act to provide for high level principles of general application, regulations to address specific types of information, such as health and credit reporting information, and guidance issued by relevant regulators, such as the Privacy Commissioner.

- **Ensuring National Consistency.** Privacy laws should be much more consistent across all Australian jurisdictions. To achieve greater consistency, the *Privacy Act* should apply to the federal public sector and the private sector—to the exclusion of state and territory laws dealing specifically with the privacy of personal information, including personal health information, handled by organisations. Any state and territory privacy laws regulating the state or territory public sector should apply the proposed UPPs, and contain uniform provisions relating to a number of key issues—such as definitions, the making of determinations by the regulator, and data breach notification.

- **Updating Key Definitions.** Important definitions in the *Privacy Act*—such as the definition of 'personal information', 'sensitive information' and 'record'—should be updated to deal with new technologies and new methods of collecting and storing personal information.

- **Reduced Number of Exemptions.** The number of exemptions in the *Privacy Act* should be reduced. In particular, it is proposed that the Act be amended to remove the exemptions for small business, employee records and registered political parties. It must be noted, however, that the proposal to remove the small business exemption is predicated on the provision by the Office of the Privacy Commissioner (OPC) of support to small businesses to assist them in understanding and fulfilling their obligations under the *Privacy Act*, so as not to increase the regulatory burden to any significant degree.

- **Restructuring the OPC.** The OPC should be restructured. The name of the OPC should be changed to the Australian Privacy Commission, and the *Privacy Act* should be amended to increase the powers of the Privacy Commissioner. For example, it is proposed that the Privacy Commissioner should have the power to direct an agency or organisation to carry out a privacy impact assessment on a new project or development that may have a significant impact on the handling of personal information, and to conduct privacy audits of organisations.

- **Streamline Complaint Handling.** Complaint handling procedures should be streamlined. It is proposed that the Privacy Commissioner have the power to decline to investigate a complaint if, for example, the complaint is being handled by an appropriate external dispute resolution scheme.[10] Further, both complainants and respondents should have the power to require that the complaint be resolved by determination if, in the opinion of the Privacy Commissioner, all reasonable attempts to settle the complaint have failed.

- **Data Breach Notification.** The *Privacy Act* should be amended to include data breach notification provisions whereby an organisation or agency must notify the Privacy Commissioner and any affected individuals when a data breach has occurred which may give rise to serious harm to affected individuals.

- **Reform of the Credit Reporting Provisions.** The credit reporting provisions of the *Privacy Act* (Part IIIA) should be repealed and credit reporting regulated under the general provisions of the Act (including proposed credit reporting regulations), and the proposed UPPs. Further, there should be some expansion of the categories of personal information that can be included in credit reporting information held by credit reporting agencies, to include the: type of each current credit account opened; date on which each current credit account was opened; limit of each current credit account; date on which each credit account was closed. Credit providers should be prohibited from using or disclosing credit reporting information for the purposes of direct marketing, and may only list overdue payment information where the credit provider is a member of an external dispute resolution scheme approved by the OPC.

- **Presumption of Capacity.** The ALRC supports the individual assessment of the capacity of a child or young person to make decisions under the *Privacy Act*, but acknowledges it is not always practicable to conduct such assessments. The *Privacy Act* should be amended to provide that an individual aged 15 or over is presumed to be capable of giving consent, making a request or exercising a right

---

10 The term 'external dispute resolution' (EDR) is used in this Discussion Paper to refer to the resolution of complaints or disputes by an entity (other than a court, tribunal or government regulator) that is external to the organisation subject to the complaint or dispute. The term includes, but is not limited to, EDR conducted by EDR schemes approved by the Australian Securities and Investments Commission: see, *Corporations Act 2001* (Cth) ss 912A(2)(b), 1017G(2)(b).

of access concerning the individual's personal information, unless found to be incapable, on the basis of proposed criteria, of giving consent, making that request or exercising that right.

- **Reform of Part 13 of the *Telecommunications Act*** – Part 13 of the *Telecommunications Act 1997* (Cth), which deals with the use and disclosure of personal information in the telecommunications industry, should be redrafted to achieve greater logical consistency, simplicity and clarity. Further, it is proposed that the Act be amended to prohibit the charging of a fee for an unlisted (silent) number on a public number directory.

- **Statutory Cause of Action for Invasion of Privacy** – The *Privacy Act* should be amended to provide for a statutory cause of action for invasion of privacy. Where there is a reasonable expectation of privacy in all the circumstances, and the act complained of is sufficiently serious to cause substantial offence, an invasion of privacy may be found to have occurred. The circumstances in which an invasion of privacy may occur include where: there has been an interference with an individual's home or family life; an individual has been subjected to unauthorised surveillance; an individual's correspondence or private written, oral or electronic communication has been interfered with, misused or disclosed; and sensitive facts relating to an individual's private life have been disclosed.

1.6 This Discussion Paper is divided into 10 parts, and contains 64 chapters. It is hoped that those with an interest in a particular area of privacy law will be able to find the relevant information quickly through reference to the Contents, the Part headings and the chapter titles. The ALRC also has prepared *Review of Australian Privacy Law: An Overview*. This document gives an overview of the topics and key proposals in this Discussion Paper. The organisation of this Paper is discussed in greater detail later in this chapter.

Background

ALRC 22

1.7 In April 1976, the ALRC received a wide-ranging privacy reference. Due to particular public concerns at the time, a separate discussion paper and report were completed on access to census records.[11] In the privacy inquiry, two discussion papers were produced—in 1977 and 1980.[12] The final report, *Privacy* (ALRC 22), was tabled in Parliament in December 1983. Discussion of the issues is contained in Volume 1

11 Australian Law Reform Commission, *Privacy and the Census*, DP 8 (1978); Australian Law Reform Commission, *Privacy and the Census*, ALRC 12 (1979).

12 Australian Law Reform Commission, *Privacy and Publication—Proposals for Protection*, DP 2 (1977); Australian Law Reform Commission, *Privacy and Intrusions*, DP 13 (1980).

and the ALRC's recommendations are contained in Volume 2. Volume 2 also includes draft legislation. Volume 3 contains various appendices.[13]

1.8 The ALRC identified dangers to privacy, including growing official powers, new business practices (such as electronic surveillance, credit reporting and direct marketing), and new information technology. Instead of advocating a single approach to privacy, the ALRC's recommendations targeted a number of different areas in which privacy concerns were identified.

1.9 In formulating its recommendations for legislative reform, the ALRC divided privacy questions into two broad categories—those relating to intrusions, and those relating to information handling. The ALRC subdivided the first category into two broad sub-categories: (1) personal and property intrusions; and (2) spying and intercepting communications. The ALRC noted, however, that the sub-categories 'are not necessarily mutually exclusive'.[14]

1.10 Many of the recommendations relating to information privacy contained in ALRC 22 were subsequently enacted in the *Privacy Act*. In particular:

- a 'permanent statutory guardian for privacy',[15] the Privacy Commissioner, was created;
- statutory privacy principles 'to aid the Privacy Commissioner in the evaluation of complaints about privacy invasion … in respect of … misuse of personal information'[16] were given legislative force;
- access to, and an ability to correct, credit information was provided for; and
- rules governing the use, disclosure and security of some forms of personal information were implemented.

1.11 In IP 31, the recommendations in ALRC 22 relating to intrusions, and significant developments in the intervening period, were outlined.[17] The scope of the current Inquiry is not as broad as ALRC 22,[18] however major advances in information technology have greatly expanded the contexts and concerns about information privacy that are dealt with in this Inquiry. Generally, intrusions only will be reviewed in this

13 Australian Law Reform Commission, *Privacy*, ALRC 22 (1983), Appendix B, Bibliography on the Concept of Privacy; Appendix C, Tables of Commonwealth and ACT Legislation Conferring Powers of Arrest and Detention, Entry and Search, and Access to, and Production of, Information; Appendix D, Overseas Information Privacy Laws; Appendix E, Laws Regulating Interception of Oral and Written Communication; Appendix F, Course of the Inquiry.

18 See discussion of the scope of this Inquiry below.

Inquiry if they fall within the scope of information collection, use and disclosure. For example, how a marketer obtains a telephone number resulting in an unsolicited telephone communication may fall within the scope of the Inquiry; the intrusion itself does not. If, however, legislative initiatives authorising intrusions, or legislation designed to control unsolicited communications,[19] are inconsistent with the provisions of the *Privacy Act*, and the ALRC's proposals for reform of that Act, such initiatives will be considered.

1.12 Further, to the extent that the intrusion constitutes an invasion of privacy, the proposed statutory cause of action may apply. The cause of action is discussed in detail in Chapter 5.

OECD Guidelines

1.13 On 23 September 1980, the Council of the Organisation for Economic Co-operation and Development (OECD) adopted guidelines governing the protection of privacy and transborder flows of information (OECD Guidelines).[20] The OECD Guidelines were developed to facilitate the harmonisation of national privacy legislation of OECD member countries, and, while upholding human rights, to prevent interruption in the international flow of personal information.[21]

1.14 Eight basic principles of national application are set out in Part Two of the OECD Guidelines:[22]

> **Collection Limitation Principle**—There should be limits to the collection of personal data and any such data should be obtained by lawful and fair means and, where appropriate, with the knowledge or consent of the data subject.
>
> **Data Quality Principle**—Personal data should be relevant to the purposes for which they are to be used, and, to the extent necessary for those purposes, should be accurate, complete and kept up-to-date.
>
> **Purpose Specification Principle**—The purposes for which personal data are collected should be specified not later than at the time of data collection and the subsequent use limited to the fulfilment of those purposes or such others as are not incompatible with those purposes and as are specified on each occasion of change of purpose.

---

19 The *Spam Act 2003* (Cth) and the *Do Not Call Register Act 2006* (Cth) are examples of legislation designed to control unsolicited communications.

20 Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980).

21 Australian Law Reform Commission, *Privacy*, ALRC 22 (1983), [602]. Levin and Nicholson note that the OECD Guidelines were the product of the Council of Europe's efforts, immediately after its inception in 1949, to address the issue of personal information in 'the aftermath of World War II and its horrors': A Levin and M Nicholson, 'Privacy Law in the United States, the EU and Canada: The Allure of the Middle Ground' (2005) 2 *University of Ottawa Law and Technology Journal* 357, 374.

22 The full text of the OECD Guidelines can be found at <www.oecd.org>.

Use Limitation Principle—Personal data should not be disclosed, made available or otherwise used for purposes other than those specified in accordance with [the Purpose Specification Principle] except:

a) with the consent of the data subject; or

b) by the authority of law.

Security Safeguards Principle—Personal data should be protected by reasonable security safeguards against such risks as loss or unauthorised access, destruction, use, modification or disclosure of data.

Openness Principle—There should be a general policy of openness about developments, practices and policies with respect to personal data. Means should be readily available of establishing the existence and nature of personal data, and the main purposes of their use, as well as the identity and usual residence of the data controller.

Individual Participation Principle—An individual should have the right:

a) to obtain from a data controller, or otherwise, confirmation of whether or not the data controller has data relating to him;

b) to have communicated to him, data relating to him

- within a reasonable time;
- at a charge, if any, that is not excessive;
- in a reasonable manner; and
- in a form that is readily intelligible to him;

c) to be given reasons if a request made under subparagraphs (a) and (b) is denied, and to be able to challenge such denial; and

d) to challenge data relating to him and, if the challenge is successful to have the data erased, rectified, completed or amended.

Accountability Principle—A data controller should be accountable for complying with measures which give effect to the principles stated above.

1.15 The OECD Guidelines, and subsequent models to facilitate transborder data protection, are discussed in detail in Part D.

Privacy Act

1.16 Initially, the *Privacy Act* applied exclusively to the Commonwealth public sector. Public sector agencies are required to comply with IPPs, which are similar, but not identical, to the OECD Guidelines. The Act was amended shortly after its enactment 'to deal with government data-matching activities and the activities of credit

providers and was also extended to cover the Australian Capital Territory public sector'. [23]

1.17 In 2000, amendments to the *Privacy Act* established a separate set of privacy principles, known as the National Privacy Principles (NPPs), which apply to the private sector.[24] The IPPs and the NPPs are discussed in greater detail in Part D. A general overview of the *Privacy Act* is provided in Chapter 3.

The scope of the Inquiry

Terms of Reference

1.18 The Terms of Reference are reproduced at the beginning of this Discussion Paper. The ALRC is directed to focus on the extent to which the *Privacy Act* and related laws continue to provide an effective framework for protection of privacy in Australia. The Attorney-General of Australia, the Hon Philip Ruddock MP, identified four factors as relevant to the decision to initiate the Inquiry:

- rapid advances in information, communication, storage, surveillance and other relevant technologies;
- possible changing community perceptions of privacy and the extent to which privacy should be protected by legislation;
- the expansion of state and territory legislative activity in areas relevant to privacy; and
- emerging areas that may require privacy protection.

1.19 During the course of the Inquiry, the ALRC is directed to consider:

- relevant existing and proposed Commonwealth, state and territory laws and practices;
- other recent reviews of the Privacy Act;
- current and emerging international law and obligations in the privacy area;
- privacy regimes, developments and trends in other jurisdictions;

23 M Paterson, *Freedom of Information and Privacy in Australia: Government and Information Access in the Modern State* (2005), [2.54]. The credit reporting provisions are discussed in detail in Part G.

24 *Privacy Amendment (Private Sector) Act 2000* (Cth), which came into effect on 21 December 2001.

- any relevant constitutional issue;
- the need of individuals for privacy protection in an evolving technological environment;
- the desirability of minimising the regulatory burden on business in the privacy area; and
- any other related matter.

1.20 The ALRC is directed to identify and consult with relevant stakeholders, including the OPC, relevant state and territory bodies and the Australian business community. The ALRC is also directed to ensure widespread public consultation. The ALRC is asked to provide a final Report to the Attorney-General by 31 March 2008.

Related privacy references

1.21 The Victorian Law Reform Commission (VLRC), the New South Wales Law Reform Commission (NSWLRC) and the New Zealand Law Commission (NZLC) are currently working on privacy references. The Commissions and the ALRC will produce separate consultation papers and final reports; however, the ALRC will work closely with the other Commissions during the course of this Inquiry.

VLRC privacy reference

1.22 In March 2002, the VLRC was asked to examine two issues of public concern relating to privacy: workers' privacy and privacy in public places.[25] As is noted below, the inquiry into workers' privacy has been completed.[26] The VLRC has now embarked on its inquiry into surveillance in public places, and intends to release a Consultation Paper later in 2007.

Workplace privacy

1.23 Apart from the issue of whether employee records should be exempt from the provisions of the *Privacy Act*,[27] the ALRC does not propose in this Inquiry to deal with the specific issue of workplace privacy. The ALRC has been advised that the Standing Committee of Attorneys-General (SCAG) is considering the issue, with a particular focus on workplace surveillance (including email and internet monitoring), covert surveillance practices, surveillance and monitoring outside of work, and genetic testing in the workplace, including the taking of bodily samples. Currently, key stakeholders

26 See Victorian Law Reform Commission, *Workplace Privacy: Final Report* (2005); Victorian Law Reform Commission, *Workplace Privacy: Options Paper* (2004); Victorian Law Reform Commission, *Workplace Privacy: Issues Paper* (2002).

27 The use and disclosure of workers' personal information is discussed in Ch 36.

are being consulted about potential options for reform. The ALRC believes that addressing these issues in this Inquiry would duplicate unnecessarily the work being undertaken by SCAG.

1.24 The SCAG review follows the completion by the VLRC in 2005 of its final report on workplace privacy. This VLRC report considered surveillance, monitoring, physical and psychological testing, searching of workers and the collection, use and disclosure of workers' personal information.[28] The VLRC's final report included a draft Workplace Privacy Bill.

NSWLRC privacy reference

1.25 On 11 April 2006, the NSWLRC was asked by the Attorney General of New South Wales to inquire into and report on whether existing legislation in New South Wales provides an effective framework for the protection of the privacy of an individual. In undertaking the review, the NSWLRC is to consider:

- the desirability of privacy protection principles being uniform across Australia;
- the desirability of a consistent legislative approach to privacy in the *Privacy and Personal Information Protection Act 1998* (NSW), *Health Records and Information Privacy Protection Act 2002* (NSW), *State Records Act 1998* (NSW), *Freedom of Information Act 1989* (NSW) and *Local Government Act 1993* (NSW);
- the desirability of introducing a statutory tort of privacy in New South Wales; and
- any related matters.

1.26 The NSWLRC is also directed to liaise with the ALRC and other relevant Commonwealth, state and territory agencies.

1.27 In May 2007, the NSWLRC released the first of the consultation papers to be published during the course of its inquiry. Consultation Paper 1, *Invasion of Privacy* (NSWLRC CP 1), addresses the desirability of introducing a statutory cause of action for invasion of privacy in New South Wales, and puts forward for consultation proposals for the introduction of such a cause of action. The NSWLRC intends to release a second consultation paper on the remaining aspects of its inquiry in late 2007.

---

28 See Victorian Law Reform Commission, *Workplace Privacy: Final Report* (2005); Victorian Law Reform Commission, *Workplace Privacy: Options Paper* (2004); Victorian Law Reform Commission, *Workplace Privacy: Issues Paper* (2002).

A final report should be completed in early 2008. NSWLRC CP 1 is considered in detail in Chapter 5.

NZLC privacy reference

1.28 The NZLC privacy review will proceed in four stages. Stage one 'is a high level policy overview to assess privacy values, changes in technology, international trends, and their implications for New Zealand law'. In this stage the NZLC will, in conjunction with the ALRC, conduct a survey of international trends. In stage two, the NZLC 'will consider whether the law relating to public registers requires systematic alteration as a result of privacy considerations and emerging technology'. In stage 3, 'the Commission will consider and report on the adequacy of New Zealand's civil and criminal law to deal with invasions of privacy'. A review and update of the *Privacy Act 1993* (NZ) will constitute stage 4.[29] The Terms of Reference for the NZLC privacy review do not specify a reporting date for the projects.

Defining 'privacy'

1.29 It has been suggested that privacy can be divided into a number of separate, but related, concepts:

> **Information privacy**, which involves the establishment of rules governing the collection and handling of personal data such as credit information, and medical and government records. It is also known as 'data protection';
>
> **Bodily privacy**, which concerns the protection of people's physical selves against invasive procedures such as genetic tests, drug testing and cavity searches;
>
> **Privacy of communications**, which covers the security and privacy of mail, telephones, e-mail and other forms of communication; and
>
> **Territorial privacy**, which concerns the setting of limits on intrusion into the domestic and other environments such as the workplace or public space. This includes searches, video surveillance and ID checks.[30]

1.30 The issues to be covered in this Inquiry, as the preceding discussion illustrates, do not fall neatly into one concept, but the primary focus will be on information privacy.

1.31 The recognition of a general right to privacy warranting legal protection is a relatively modern phenomenon.[31] While the genesis of modern legal academic discussion of the topic is generally acknowledged to be Samuel Warren and Louis

Brandeis's article, 'The Right to Privacy' published in the *Harvard Law Review* in 1890,[32] widespread debate, particularly in the United States, only commenced in the 1960s[33] and subsequent decades.[34]

1.32 Writing in 1980, Professor Ruth Gavison argued that the modern concern for the protection of privacy can be attributed primarily to

> a change in the nature and magnitude of threats to privacy, due at least in part to technological change … Advances in the technology of surveillance and the recording, storage, and retrieval of information have made it either impossible or extremely costly for individuals to protect the same level of privacy that was once enjoyed.[35]

1.33 Other factors, according to Gavison, include the advent of tabloid journalism, and the 'tendency to put old claims in new terms'.[36]

1.34 In ALRC 22, the ALRC indicated that the chief threats to privacy in Australia included:

> *Growing Official Powers*. The powers of increasing numbers of public officials to intrude into the lives and property of Australians are growing.
>
> *New Business Practices*. New intrusive practices have developed in recent years, such as electronic surveillance, credit reporting and direct marketing.
>
> *New Information Technology*. The computerisation of personal information has enormous advantages, but it also presents Australian society with new dangers, now well documented and understood.[37]

1.35 As evidenced by the Terms of Reference for this Inquiry, all of these factors resonate with equal, if not greater, force today.

1.36 Why is privacy considered important? What is the nature of the legal 'right' requiring protection? Professor Roger Clarke suggests that the importance of privacy has a psychological, sociological, economic and political dimension.

> **Psychologically**, people need private space. This applies in public as well as behind closed doors and drawn curtains …
>
> **Sociologically**, people need to be free to behave, and to associate with others, subject to broad social mores, but without the continual threat of being observed …
>
> **Economically**, people need to be free to innovate …
>
> **[P]olitically**, people need to be free to think, and argue, and act. Surveillance chills behaviour and speech, and threatens democracy.[38]

1.37 The answer to the second question is more difficult. Despite the best efforts of legal scholars, the term 'privacy' eludes a universally accepted definition.[39] In ALRC 22 it was noted that 'the very term "privacy" is one fraught with difficulty. The concept is an elusive one'.[40] As Professor J Thomas McCarthy noted:

> It is apparent that the word 'privacy' has proven to be a powerful rhetorical battle cry in a plethora of unrelated contexts … Like the emotive word 'freedom', 'privacy' means so many different things to so many different people that it has lost any precise legal connotation that it might once have had.[41]

1.38 In ALRC 22, the ALRC adopted a definition of the term 'privacy' that 'stayed as close as possible … to the ordinary language concept'.[42] This approach has been criticised. Senator Brett Mason suggests that, in this regard, ALRC 22 'is stronger on the practical application of legal rules and remedies to certain privacy issues than it is on theoretical analysis'.[43] He concludes that 'the ordinary language concept of "privacy" … does not necessarily inform a sensible legal right'.[44]

1.39 Mason, like McCarthy, goes on to argue that 'privacy' 'has no core that survives normative analysis'.[45] According to Mason:

> Privacy represents a political or ideological claim. It is a justification or a rallying cry for political debate—just like 'freedom' or 'equality'. Privacy is the respectable

> umbrella under which diverse political claims seek shelter. But privacy has no core concern or concerns capable of informing a legal right nor principled policy decision making.[46]

1.40 Professor James Whitman suggests that 'there is no such thing as privacy as such'.[47] Comparing American, French and German approaches to privacy, Whitman maintains that:

> Americans and Europeans certainly do sometimes arrive at the same conclusions. Nevertheless, they have different starting points and different ultimate understandings of what counts as a just society … American privacy law is a body caught in the gravitational orbit of liberty values, while European law is caught in the orbit of dignity. There are certainly times when the two bodies of law approach each other more or less nearly. Yet they are constantly pulled in different directions, and the consequence is that these two legal orders really do meaningfully differ: Continental Europeans are consistently more drawn to problems touching on human dignity, while Americans are consistently more drawn to problems touching on the depredations of the state.[48]

1.41 Whitman argues that at the core of the European approach to privacy law is 'the right to control your public image—rights to guarantee that people see you the way you want to be seen'.[49] By contrast, the conceptual core of the American right to privacy is, according to Whitman, the 'right to freedom from intrusions by the state, especially in one's own home'.[50]

1.42 Whitman emphasises that the differences between American and European privacy law are comparative, not absolute.[51] It is possible to argue that 'protecting privacy means both safeguarding the presentation of self and inhibiting the investigative and regulatory excesses of the state'.[52] The differences, however, are real.

1.43 Martin Abrams makes a similar observation when he notes that:

> Privacy law is culturally based. Privacy is considered a fundamental human right in Europe, highly regarded with pragmatic interest in the United States, and is only

> beginning to emerge as a topic in Asia. What works in one country or region doesn't always work in the other.[53]

1.44 This Inquiry has been directed by its Terms of Reference to focus specifically on 'matters relating to the extent to which the *Privacy Act 1988* and related laws continue to provide an effective framework for the protection of privacy in Australia'. In the context of information privacy, Professor Margaret Jackson has noted that 'one may query whether it is possible to advance a discussion of the adequacy of the law as a regulator of information privacy if one does not define the privacy interests at risk'.[54]

1.45 Consequently, there may be some utility in attempting to ascertain, if not a 'core' or precise definition of universal application, an understanding of the way the term 'privacy' is being used in the context of this Inquiry. To achieve this objective, the ALRC invited recognised experts to a workshop to discuss the issue. This discussion was useful in articulating the best approach to adopt when tackling the elusive concept of privacy.[55]

Towards a working definition

1.46 Gavison suggests that 'privacy' is 'a term used with many meanings',[56] giving rise to two important questions.

> The first relates to the *status* of the term: is privacy a situation, a right, a claim, a form of control, a value? The second relates to the *characteristics* of privacy: is it related to information, to autonomy, to personal identity, to physical access? Support for all of these possible answers can be found in the literature.[57]

1.47 As a first step in coming to terms with the concept of 'privacy', it is important to recognise that the international community accords privacy the status of a human right through such key documents as the *Universal Declaration of Human Rights*,[58] and the ICCPR.[59] Australia signed the ICCPR on 18 December 1972 and ratified it on 13 August 1980. While 'the rights and obligations contained in the ICCPR are not incorporated into Australian law unless and until specific legislation is passed implementing the provisions',[60] the recognition of privacy as a human right in the

55 The workshop participants included Professor Des Butler; Professor Roger Clarke; Professor David Kinley; Mr David Lindsay; Associate Professor Megan Richardson; and Dr Greg Taylor.

56 R Gavison, 'Privacy and the Limits of Law' (1980) 89 *Yale Law Journal* 421, 424.

57 Ibid, 424.

58 Article 12 provides: 'No one shall be subjected to arbitrary interference with his privacy, family, home or correspondence, nor to attacks upon his honour and reputation. Everyone has the right to the protection of the law against such interference or attacks': *United Nations Universal Declaration of Human Rights*, GA Res 217A(III), UN Doc A/Res/810 (1948).

59 *International Covenant on Civil and Political Rights*, 16 December 1966, [1980] ATS 23, (entered into force generally on 23 March 1976), art 17.

60 *Dietrich v The Queen* (1992) 177 CLR 292, 305.

ICCPR lends support to the argument that such recognition in domestic law is warranted.

1.48 Recently enacted domestic human rights legislation also recognises privacy as a basic human right. For example, s 13 of the *Charter of Human Rights and Responsibilities Act 2006* (Vic) provides:

> **Privacy and reputation**
>
> A person has the right—
>
> (a) not to have his or her privacy, family, home or correspondence unlawfully or arbitrarily interfered with; …

1.49 The *Human Rights Act 2004* (ACT) contains an almost identical provision.[61] While such instruments include privacy in the list of rights accorded the status of a 'human right', they do not define the term, nor do they delineate the extent to which its scope intertwines with other freedoms, rights and interests.[62]

Status of privacy

1.50 Dealing first with the *status* of the term 'privacy' in an Australian context, the VLRC's *Workplace Privacy: Issues Paper* proposed that 'privacy can be expressed as a right, and that this *right* to privacy can then form the basis for determining what are legitimate *interests* in privacy'.[63] The VLRC formulated a working definition of privacy in terms of what the right to privacy encompasses, namely the right:

- 'not to be turned into an object or thing'; and
- 'not to be deprived of the capacity to form and develop relationships'.[64]

1.51 In *R v Broadcasting Standards Commission ex parte BBC,* Lord Mustill attempted to define the essence of privacy.

> To my mind the privacy of a human being denotes at the same time the personal 'space' in which the individual is free to be itself, and also the carapace, or shell, or umbrella, or whatever other metaphor is preferred, which protects that space from intrusion. An infringement of privacy is an affront to the personality, which is

61 *Human Rights Act 2004* (ACT) s 12.

62 R Clarke, *What's 'Privacy'?* (2004) Australian National University <www.anu.edu.au/people/Roger.Clarke/DV/Privacy.html> at 30 July 2007.

63 Victorian Law Reform Commission, *Workplace Privacy: Issues Paper* (2002), xii (emphasis in text).

64 Ibid, [2.38]. Based on this working definition, the VLRC suggested that 'a test of invasion of privacy would be an assessment of the extent to which any particular law or practice has the effect of depriving people generally of [the right not to be reduced to an object and the right to relationships]': Ibid, [2.49].

> damaged both by the violation and by the demonstration that the personal space is not inviolate.[65]

1.52 Put another way, privacy may be viewed as the bundle of interests that individuals have in the personal sphere free from interference from others.[66] In this formulation, the use of the term 'interest' rather than 'right' is intentional. While privacy is a 'right' in a legal sense, for definitional purposes, the word 'interest' may be more accurate. A right is always an interest, even if not all interests are accorded the status of legal rights.

1.53 It is important to bear in mind that privacy interests unavoidably will compete, collide and coexist with other interests. For example, privacy often competes with freedom of expression, a child's right to protection, etc. To ensure equal protection of the same interests in others, no interest, even one elevated to the status of a human right, is absolute.[67]

1.54 The Community Services Ministers' Advisory Council's submission to the Inquiry highlights the practical importance of the recognition of competing interests.

> Privacy is an important individual right. However, this does not stand alone: people also have other rights (to shelter, safety and care) and sometimes the exercise of rights on behalf of one person can have negative consequences for another person. Community services departments and agencies, with duty of care and statutory obligations to protect the vulnerable, are constantly seeking to mediate between competing rights and obligations.[68]

1.55 In a different context, in *McKennitt v Ash* Eady J noted when discussing the tension between freedom of expression and the privacy rights of an individual:

> It is clear that [in the United Kingdom] there is a significant shift taking place as between, on the one hand, freedom of expression for the media and the corresponding interest of the public to receive information, and, on the other hand, the legitimate expectation of citizens to have their private lives protected … Even where there is a genuine public interest, alongside a commercial interest in the media in publishing articles or photographs, sometimes such interests would have to yield to the individual citizen's right to the effective protection of private life.[69]

1.56 Ascertaining the appropriate policy to deal with the tension between competing interests is the challenge facing judges, legislators and law reformers. It follows from the above discussion that the status accorded to privacy, and in particular the status accorded to privacy in international and domestic human rights instruments, means that

69 *McKennitt v Ash* [2005] EMLR 10, [57].

privacy interests will usually take precedence over less fundamental interests, such as economic choice and opportunity.[70]

1.57 For example, an argument for greater access to personal information based on reduced cost to data custodians, or customer convenience will generally not tilt the balance in favour of reduced privacy protection. An argument that the use of personal information will lead to an increase in an individual's standard of living may warrant a reduced level of privacy protection, given that standard of living is directly related to the health and wellbeing of an individual or the individual's family—a recognised human right.[71]

Characteristics of privacy

1.58 Identifying the characteristics of privacy is conceptually more difficult than ascertaining its status. Professor Daniel Solove suggests that attempts to identify the characteristics of privacy—that is, the common denominators that make things private—is misguided. Solove argues that:

> the top-down approach of beginning with an over-arching conception of privacy designed to apply in all contexts often results in a conception that does not fit well when applied to a multitude of situations and problems involving privacy.[72]

1.59 Solove advocates a more pragmatic, bottom-up, approach.

> We should conceptualize privacy by focusing on the specific types of disruption and the specific practices disrupted rather than looking for the common denominator that links all of them. If privacy is conceptualized as a web of interconnected types of disruption of specific practices, then the act of conceptualizing privacy should consist of mapping the topography of the web. We can focus on particular points of the web. These 'focal points' are not categories, and they do not have fixed boundaries.[73]

1.60 Some critics, however, reject the pragmatic approach. For example, Professor Richard Bruyer argues that:

> Unless a common denominator is articulated, combining conceptions simply perpetuates the piecemeal, haphazard approach to privacy that has marked the privacy landscape so far. Nor will it provide a satisfactory answer for the hard privacy cases as they occur.[74]

1.61 The characteristics of privacy also may have a changing demographic dimension. For example, what 'Builders' and 'Baby Boomers' see as necessarily

falling within the 'topography of the web' may not resonate with 'Generations X, Y and Z'.[75] Young people appear much more willing to share personal details, post images and interact with others on internet chat sites.[76] Does this indicate a changing attitude to privacy? This is discussed in greater detail in Chapter 59.

1.62 The pragmatic approach advocated by theorists such as Solove provides a useful template for law reform. Rather than focusing on an overarching definition of privacy—the privacy 'grail' that inevitably will be so general as to be of limited use to policy makers—it makes more sense, using Solove's terminology, to focus on particular points in the web and formulate a workable approach to deal with the disruption.[77] Provided the underlying policy approach is transparent, this focus may be a more useful conceptualisation of privacy than the search for an all encompassing definition.

1.63 Adopting such an approach makes sense in the context of this Inquiry, given that the ALRC has been asked to review an existing piece of legislation, the *Privacy Act*—which deals with information privacy—and to consider emerging areas that may require privacy protection. The 'focal points' of inquiry have largely been delineated by the legislation, and the reform needed to address any disruptions to specific practices can be articulated with reference to the legislation. In the case of emerging areas that require privacy protection, and in particular those areas falling within the scope of the cause of action for invasion of privacy discussed in detail in Chapter 5, the disruption to specific practices can be identified with reference to case law, academic comment and legislation.

Privacy beyond the individual

Background

1.64 Traditionally, privacy law has protected the privacy rights of individuals—that is, 'natural persons'. Some argue that privacy law also should extend to groups, organisations, partnerships, corporations or other collective entities.[78] For ease of reference, the term 'group' is used here to refer to all such collective entities.

---

75 For a discussion of the age limits of the generational categories, see Part I.

76 L Weeks, 'See Me, Click Me: The Publizen's Life? It's an Open Blog. The Idea He May be Overexposed? LOL', *Washington Post* (online), 23 July 2006, <www.washingtonpost.com>.

77 D Solove, 'A Taxonomy of Privacy' (2006) 154(3) *University of Pennsylvania Law Review* 477, 485–486.

78 See, eg, C Doyle and M Bagaric, 'The Right to Privacy and Corporations' (2003) 31 *Australian Business Law Review* 237. Also, the OECD Guidelines note that some members suggested the possibility of extending the Guidelines to legal entities such as corporations and associations: Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980), Explanatory Memorandum, [33].

1.65 The *Privacy Act* explicitly confers protection on 'individuals'.[79] Section 6(1) defines 'individual' to mean 'a natural person'.[80] The omission of groups from the ambit of the Act was deliberate, reflecting the rejection in ALRC 22 of the notion of 'corporate privacy'.[81] The ALRC justified this position by reference to art 17 of the ICCPR,[82] the approach taken in most foreign privacy legislation and the ALRC's Terms of Reference.[83] The rejection of corporate privacy also reflects the policy position of the OECD.[84]

1.66 The decision to limit the Act's protection to individuals is reflected in the Preamble to the *Privacy Act*, which makes reference to human rights, and specifically to those guaranteed in the ICCPR. The Preamble also refers to Australia's obligations at international law 'to give effect to the right of persons not to be subjected to arbitrary or unlawful interference with their privacy, family, home or correspondence' and to protect 'privacy and individual liberties'.

1.67 In IP 31, the ALRC asked whether it was appropriate to amend the Act to accommodate some form of 'collective' or 'group' right to privacy, applicable to groups such as: (a) Indigenous or other ethnic groups; or (b) commercial entities.[85]

1.68 There are three ways in which legislative privacy protection can apply to groups. First, privacy protection can apply where an individual suffers a breach of his or her privacy as a consequence of the individual's membership of a group. In this situation, the individual's membership of the group does not prevent a claim based on the protection afforded by the *Privacy Act*.

1.69 Secondly, an individual may be permitted to claim privacy rights as a surrogate for an entity that is not a natural person and, consequently, would not otherwise be protected by the Act. Hypothetical examples of this situation are given in ALRC 22:

> Should John Brown, who is entitled to access to his credit record, also be entitled to access to that of John Brown Pty Ltd? Should John Brown Pty Ltd be allowed access to records about John Brown, and about itself? Should Dr Fred Smith, whom everyone in the neighbourhood knows is the real person behind the corporate veil of

79 *Privacy Act 1988* (Cth) pt III, div 1.
80 This is consistent with the definition in Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980), Guideline 1(b).
81 Australian Law Reform Commission, *Privacy*, ALRC 22 (1983), [27].
82 *International Covenant on Civil and Political Rights*, 16 December 1966, [1980] ATS 23, (entered into force generally on 23 March 1976).
83 Australian Law Reform Commission, *Privacy*, ALRC 22 (1983), [27].
84 Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980), Explanatory Memorandum, [31]–[33].
85 See, Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 1–1.

> Local Medical Services Pty Ltd, be entitled to access to information about both his corporation and himself?[86]

1.70 The ALRC's solution was to provide for a 'flexible test', operating as follows:

> The creation of a corporate or other business structure for a commercial, family or other purpose should not prevent a claim, in the name of a business association, which is in essence one affecting intimate personal interests of an identifiable private individual. A person should have standing in relation to any of the rights and remedies afforded by the draft legislation where he can show that his claim, while nominally concerning an artificial legal person, would affect his personal interests.[87]

1.71 Thirdly, privacy rights could be made to apply directly to a group itself, as distinct from the individuals that are the members of the group. Unlike the circumstances described above, this option is not provided for in the *Privacy Act*. Consequently, in considering reform, there are two related questions: should the *Privacy Act* be amended to provide direct protection to groups; and, if so, which groups should be covered by the Act?

Indigenous and other ethnic groups

1.72 Stakeholders have focused on whether the *Privacy Act* should be amended to respond better to the needs of Indigenous groups—with particular reference to Indigenous groups' traditional laws and customs.[88] While Associate Professor Lee Bygrave has noted that groups constituted by 'sharing certain characteristics, such as … ethnic background' are not generally given express protection in overseas privacy legislation,[89] there is some precedent for explicit privacy protection at common law, in Northern Territory legislation and in regulatory guidance.

1.73 Australian courts generally have responded to the need to maintain the confidentiality of information relating to the traditional laws and customs of Indigenous groups.[90] For example, in *Aboriginal Sacred Sites Protection Authority v Maurice*, the Aboriginal Sacred Sites Protection Authority (ASSPA) challenged the decision of the Aboriginal Lands Commissioner to require an Aboriginal group to produce certain documents as part of a land claim.[91] ASSPA claimed public interest immunity, which it argued derived from the following facts:

> the information in question was gathered under a promise it would be kept confidential … the Aboriginal custodians of the information were bound under

91 *Aboriginal Sacred Sites Protection Authority v Maurice; Re the Warumungu Claim* (1986) 10 FCR 104.

> Aboriginal law and custom to keep the information confidential … production and disclosure in the land claim proceedings would cause dismay and resentment … for the future the flow of information might reasonably be expected to be greatly reduced; and, the standing and working of the Sacred Sites Authority would be gravely prejudiced.[92]

1.74 The Aboriginal Lands Commissioner decided that the documents should be disclosed, but only in a very limited manner: in closed court and to a limited number of named persons who could only use the information in relation to the land claim proceedings. The Full Court of the Federal Court of Australia agreed with this approach, giving some limited protection to the privacy of this information, which was of particular importance to the Aboriginal group in question.[93]

1.75 The *Information Act 2002* (NT) also provides some direct protection for the information privacy of Indigenous groups. Section 50(1) sets out a general requirement that government information be made publicly available, with an exemption where 'it is not in the public interest to disclose the information'. Section 56 then provides a trigger for this exemption in respect of 'privacy and cultural information':

> (1) Information may be exempt under section 50 if disclosure of the information would—
>
> (a) be an unreasonable interference with a person's privacy; or
>
> (b) disclose information about an Aboriginal sacred site or Aboriginal tradition.
>
> (2) Disclosure of information may be an unreasonable interference with a person's privacy even though the information arises from or out of the performance of a public duty.

1.76 It is worth noting that the National Health and Medical Research Council (NHMRC) advises that those conducting research involving humans must consider the 'privacy, confidentiality and cultural sensitivities of participants and, where relevant, of their communities'.[94] Where appropriate, researchers are encouraged to engage 'properly interested parties' such as 'formally constituted bodies, institutions, families or community elders' in planning research projects.[95] In particular, the ethical acceptability of research involving Aboriginal and Torres Strait Islander people may depend upon evidence of support from the relevant communities or groups participating in the research.[96]

Corporations and commercial entities

1.77 Some have suggested that the *Privacy Act* should be extended to protect the putative privacy rights of corporations, arguing that the reason that a right to privacy traditionally has been limited to natural persons is that privacy has been inextricably, but erroneously, linked to autonomy and dignity.[97] Shorn of this link, they see no reason why the same privacy rights enjoyed by natural persons should not be extended to corporations.[98]

1.78 If adopted, this would amount to a very significant extension of the *Privacy Act*. It would also involve departing from the policy approach underlying the Act, and would require a fundamental re-conceptualisation of privacy in Australian law. Privacy is, in law, considered a *human* right—that is, a right that only may be claimed by humans.

1.79 The answer to the question of whether to extend privacy law to provide direct protection of groups will depend, at least in part, on how the jurisdiction in question conceptualises privacy. The vast majority of jurisdictions do not attempt to protect the 'privacy rights' of groups.[99]

1.80 In the United States, for example, the purpose of privacy law has traditionally been seen as 'protecting the individual and not social relationships'.[100] Professor William Prosser's *Restatement of the Law on Torts* sees privacy as denoting 'a personal right, peculiar to the individual whose privacy is invaded'.[101] Reasons for excluding corporations from the protection of US privacy law are that: corporations lack emotional traits; there is insufficient judicial precedent on the issue; and corporations have alternative remedies available to them.[102] Moreover, the rights of collective entities—especially commercial entities—may sometimes resemble privacy rights, but they are not the same, and are therefore subject to a different regime of protection:

> A corporation, partnership or unincorporated association has no personal right of privacy. It has therefore no cause of action for [breach of privacy]. It has, however, a limited right to the exclusive use of its own name or identity in so far as they are of use or benefit, and it receives protection from the law of unfair competition. To some limited extent this may afford it the same rights and remedies as those to which a private individual is entitled …[103]

1.81 Bygrave has pointed out, however, that the data protection laws of some jurisdictions, such as Austria, Italy, Argentina and Switzerland, expressly protect collective entities.[104] The South African Law Reform Commission (SALRC) also has expressed a preliminary view that privacy law should provide some protection to both types of legal person (that is, natural persons and artificial entities, such as corporations). This view was based on four main grounds:

> a) The submissions received were mostly in favour of including juristic persons in the protection of information privacy legislation.
>
> b) Internationally few countries provide privacy protection for juristic persons. However, there seems to be a movement towards broader protection.
>
> c) In terms of sec 8(4) of the Constitution a juristic person is entitled to the rights in the Bill of Rights to the extent required by the nature of the right and the nature of the juristic person.
>
> d) In each case one would have to ascertain whether appropriate circumstances exist for companies to rely on to protect their privacy interests.[105]

1.82 The SALRC acknowledged, however, that it would be inappropriate to provide the same *level* of protection to collective entities as is afforded to natural persons.[106]

Submissions and consultations

Groups generally

1.83 A large number of stakeholders opposed any legislative extension of privacy rights to groups.[107] Relatively few stakeholders were in favour of such a reform.[108] Many stakeholders observed that privacy is a fundamental *human* right, which is based on protecting dignity and autonomy—characteristics that only individuals possess. As such, it was argued that privacy rights cannot logically be extended to groups.[109] Given

that the constitutional foundation of the *Privacy Act* is partly reliant on the fact that it implements art 17 of the ICCPR, the Office of the Information Commissioner Northern Territory expressed a concern that any extension of the Act to protect groups might undermine its constitutional validity.[110]

1.84 Bygrave argued, however, that although 'much of the literature on privacy and its value is almost exclusively concerned with the interests of individual natural/physical persons', privacy need not be viewed through that prism. He stated:

> It is fairly easy to establish that the core principles of the *Privacy Act* are *logically* capable of being extended to protect data on collective entities. Further, it is fairly easy to establish that collective entities are capable of sharing most, if not all, of the interests of data subjects which the *Privacy Act* directly or indirectly safeguards …[111]

1.85 Bygrave counselled against treating 'collective entities … as an undifferentiated mass' because they do not all 'play the same economic, political, legal and social roles, nor have the same goals and resources'.[112] He concluded that, on balance, all countries should seriously consider giving collective entities 'at least some data protection rights', based on the following factors:

> First, the basic principles, rules and rationale of data protection laws are conceptually capable of servicing the interests of collective entities. Secondly, giving collective entities data protection rights can be of practical assistance to them and to the individuals who constitute them. Concomitantly, in many situations where the data protection interests of a collective entity are injured, there can also be injury to the individuals behind the entity. Thirdly, extending coverage of data protection laws to data on collective entities can enhance, in sum, the general transparency of data processing operations, thus promoting a diffusion of knowledge for the benefit of wider society. Fourthly … giving data protection rights to collective entities can expand the possibility of hindering development of control mechanisms facilitating the misuse of power and undermining the bases of pluralistic, democratic society. Finally, giving data protection rights to collective entities (at least those that are organised) does not necessarily:
>
> 1) increase such entities' ability to maintain operational secrecy to the detriment of the general public interest;
>
> 2) weaken the ability of individuals to exercise their own data protection rights;
>
> 3) force collective entities to disclose sensitive business information to their competitors;
>
> 4) overburden data protection authorities; overburden collective entities (as data controllers); or

5) significantly hinder transborder flows of collective entity data.[113]

Indigenous and other ethnic groups

1.86 A large number of stakeholders opposed extending privacy law to provide specific protection to Indigenous or other ethnic groups.[114] The Office of the Information Commissioner Northern Territory was concerned that such an extension could be used in the name of a group, but 'against the interests of individual group members'.[115]

1.87 One stakeholder submitted that any extension of the Act, if it were limited to Indigenous groups, would be inconsistent with the protection afforded to other cultural groups and it could cause difficulties for agencies in fulfilling their statutory duties.[116] The OPC submitted that such an extension would cause a number of practical problems. For example, it would be difficult to determine which ethnic groups should be afforded additional privacy protection.[117]

1.88 The Australian Government Department of Health and Ageing submitted that such an extension of the Act is unnecessary because the privacy principles already recognise cultural sensitivities adequately

> by requiring the reasonable expectations of the individual concerned to be taken into account when using or disclosing personal information for secondary purposes. Any 'cultural sensitivity' would be one of the matters to be considered in weighing up whether the individual would reasonably expect his or her personal information to be used or disclosed.[118]

1.89 Some stakeholders supported extending privacy law to provide specific protection to Indigenous or other ethnic groups.[119] The Centre for Law and Genetics stated that such an expansion would be consistent with the 'underlying ethical rationale

for privacy protection, which is based in notions of human dignity and autonomy'.[120] The Arts Law Centre of Australia and the National Association for the Visual Arts suggested that privacy law could be used to protect Indigenous culture and intellectual property, by protecting:

- the rights of Indigenous communities to maintain secrecy of Indigenous knowledge and other cultural practices;
- protection of Indigenous sites, including sacred sites;
- control of and access to recordings of cultural customs and expressions, knowledge and skills; and
- protection of secret sacred knowledge.[121]

1.90 Some stakeholders submitted that other methods should be explored to protect the privacy rights of Indigenous groups.[122] In particular, a number of stakeholders supported the creation of privacy protocols, and argued that they should be adopted widely.[123] For example, SBS stated that its Codes, Independent Indigenous Protocols and 1997 policy document, *The Greater Perspective*, all encourage 'respect for Indigenous culture and heritage, recognition of Indigenous cultural and intellectual property rights, maintenance of cultural integrity and respect for cultural beliefs, and respect for Indigenous individuals and communities'.[124] These documents

> include guidelines on consulting with Indigenous groups, and the need to take unique cultural considerations into account when creating content with Indigenous participants. The application of these protocols allow[s] for more positive collaborations with Indigenous communities, rather than the creation of a rigid framework which could serve to silence legitimate voices.[125]

1.91 SBS also did not oppose the introduction of a narrow exemption along the lines of s 56 of the *Information Act 2002* (NT).[126] As discussed above, this provision aims to protect Indigenous sacred sites.

Corporations and commercial entities

1.92 A large number of stakeholders opposed extending privacy law to protect corporations and other commercial entities.[127] Several stakeholders pointed out that

corporate and commercial entities can use other laws, such as breach of confidence and intellectual property, to protect their information.[128]

1.93 It was suggested that such an extension would lead to commercial entities operating less transparently.[129] One stakeholder stated that this would inhibit proper corporate governance.[130] The Australian Competition and Consumer Commission submitted that such an extension could allow some corporate entities to 'delay or distract when subject to investigation or other enforcement action'.[131]

1.94 While generally opposed to the extension of privacy law beyond natural persons, the Australian Bankers' Association submitted that, given incorporated entities are no longer able to protect their reputation through defamation, 'arguably a limited right of privacy should be accorded to corporations in relation to the disclosure of defamatory material harmful to the reputation of corporations'.[132]

1.95 Some stakeholders suggested that it may be appropriate to extend privacy law to protect corporations and other commercial entities.[133] Although noting that a small, but significant, number of jurisdictions protect the privacy rights of collective entities such as corporations, Bygrave suggested that this is partly the result of the 'pre-existing legal traditions' in those jurisdictions. He noted that a 'fundamental premise of the Austrian, Swiss and South African legal systems, for example, is that legal persons are to be treated as far as possible in the same way as natural persons'.[134]

ALRC's view

1.96 In the ALRC's view, the *Privacy Act* should not be extended to provide direct protection for the privacy rights of groups—whether these are Indigenous and other

ethnic groups, or commercial entities such as corporations. In coming to this view, it was necessary to consider separately whether the Act should be extended in respect of Indigenous and other ethnic groups, and whether it should be extended in respect of commercial entities.

Indigenous and other ethnic groups

1.97 None of the submissions received by the ALRC expressed concerns about the information privacy of any ethnic or cultural groups other than Indigenous groups. At this stage of the Inquiry, the ALRC has concentrated on Indigenous groups as it seems that this is the area of greatest concern. There are, therefore, two questions that need to be addressed here:

- Does the *Privacy Act* provide the necessary level of protection to the information privacy rights of Indigenous groups?

- If not, what is the most appropriate method for achieving this goal? In other words, should legislation such as the *Privacy Act* be amended, or is it more appropriate to use another method?

1.98 The ALRC acknowledges that, under the traditional laws and customs of Indigenous groups, particular information may be subject to restrictions. For example, under such laws and customs, certain information only may be viewed or disclosed to a defined category of people—such as the women of a particular Indigenous group.[135] Another example is that it is often contrary to the traditional laws and customs of Indigenous groups to broadcast the name or image of an Indigenous person who is deceased.[136]

1.99 This raises a question of categorisation. On one view, such laws and customs relate to the information privacy rights of particular Indigenous people, because the information in question is intimately connected to the identity, dignity and autonomy of those people—individually, collectively or both. On another view, these rules more closely resemble intellectual property.[137] For example, it was asserted in argument in *Western Australia v Ward* that Indigenous cultural knowledge of land is 'akin to a new species of intellectual property'.[138]

1.100 The inescapable problem, however, is that these rules do not fit neatly within the Anglo-Australian legal system's traditional conceptualisations of privacy and intellectual property. Such was the case in *Ward* where Kirby J noted, albeit in obiter, that 'the established laws of intellectual property are ill-equipped to provide full

protection of the kind sought'.[139] There are many reasons for this disjuncture, beyond obvious differences in the relevant underlying norms. For example, the ALRC has previously noted the widespread view that 'the "knowledge" of members of an [Indigenous] group … is an important component of [Indigenous] traditional laws and customs, in contrast with the Anglo-Australian legal system'.[140] Unlike Anglo-Australian law, for some Indigenous groups, the knowledge aspect of law can be confidential or private.[141] Similarly, the traditional laws and customs of Indigenous groups often delineate between individual and group rights in a way that differs from the Anglo-Australian legal system. It has been observed, for example, that:

> Indigenous legal systems revolve around group rights and group control, whereas the Australian legal system has developed out of a more individualistic tradition, with greater emphasis on personal rights and freedoms.[142]

1.101 There is, therefore, at least an argument that the *Privacy Act* does not adequately protect certain types of information connected with Indigenous groups. Assuming this to be the case, it is then necessary to identify the appropriate solution to this problem.

1.102 As a preliminary point, it should be noted that the ALRC is not persuaded by the assertion of some stakeholders that amending the *Privacy Act* to provide direct protection for the privacy rights of Indigenous groups would be problematic because it would involve unfairly discriminating *in favour* of Indigenous groups. Without detracting from the universality of human rights, there is relatively broad acceptance that particular rights can attach to members of a group of people united by, for example, ethnic origin or religion.[143] It is generally recognised that the individuals comprising certain groups may have needs that are peculiar to those groups. This may result from a group suffering historical discrimination or disadvantage, or it may flow from the particular cultural beliefs or requirements of a group.[144]

1.103 Australian law has long recognised that, in order to ensure that all members of the community enjoy substantive equality, it is sometimes necessary to make laws that are targeted towards individuals who share particular characteristics.[145] For example,

141 See, eg, the discussion in H McRae, G Nettheim and L Beacroft, *Indigenous Legal Issues* (1997), 133–134.

142 Ibid, 136.

143 This is exemplified in instruments such as Africa's principal human rights treaty, the *African Charter on Human and Peoples' Rights*, 27 June 1981, OAU Doc CAB/LEG/67/3 rev 5, (entered into force generally on 21 October 1986). The Preamble to the Charter recognises that 'fundamental human rights stem from the attributes of human beings which justifies their national and international protection and on the other hand that the reality and respect of peoples' rights should necessarily guarantee human rights'.

144 See, eg, D Feldman, *Civil Liberties and Human Rights in England and Wales* (2nd ed, 2002), 13–14.

145 See, eg, R Piotrowicz and S Kaye, *Human Rights: International and Australian Law* (2000), [12.23].

the *Racial Discrimination Act 1975* (Cth) permits the adoption of 'special measures', which operate as follows:

> Special measures taken for the sole purpose of securing adequate advancement of certain racial or ethnic groups or individuals requiring such protection as may be necessary in order to ensure such groups or individuals equal enjoyment or exercise of human rights and fundamental freedoms shall not be deemed racial discrimination, provided, however, that such measures do not, as a consequence, lead to the maintenance of separate rights for different racial groups and that they shall not be continued after the objectives for which they were taken have been achieved.[146]

1.104 Nevertheless, for the following reasons, the ALRC's considers that it is not appropriate to amend the *Privacy Act* to provide direct protection for the privacy rights of Indigenous groups. First, the Act is premised on the proposition that privacy is a human right and this is reflected in the Preamble, which makes reference to human rights, and especially to the ICCPR. This means that individual members of groups—in this case, members of Indigenous groups—should have their particular privacy needs accommodated. It does not follow, however, that a group should itself be able to claim the protection of the Act in isolation from the individuals that make up that group. As noted in submissions and consultations, such an extension could result in a group asserting privacy rights in a way that conflicts with the interests of individual members of the group.

1.105 Secondly, it should be noted that the vast majority of stakeholders opposed extending the Act's protection to directly cover Indigenous groups. Instead, there is a view that there are other, more appropriate, methods of dealing with this issue. One such method could be to reform Australian intellectual property law, but that issue falls outside the Terms of Reference for this Inquiry.

1.106 In the ALRC's view, the most appropriate means of fostering greater protection of information that is of particular significance to members of Indigenous and other ethnic groups in Australia is for the OPC to encourage and assist agencies and organisations to create publicly available protocols that respond to the privacy needs of these groups. Though generally 'expressed in mandatory language', such protocols are 'primarily ethical in nature'. They articulate 'levels of behaviour which indigenous people and communities expect of outsiders dealing with indigenous material'.[147] Such protocols often suggest ways of protecting the 'honour and dignity' of Indigenous people that are portrayed in the media.[148]

---

146 See *Racial Discrimination Act 1975* (Cth) s 8(1), incorporating *International Convention on the Elimination of all Forms of Racial Discrimination*, 7 March 1966, [1975] ATS 40, (entered into force generally on 4 January 1969), art 1(4).

147 S Gray, 'Imagination, Fraud and the Cultural Protocols Debate: A Question of Free Speech or Pornography' (2004) 9 *Media & Arts Law Review* 23, 24.

148 See L Bostock, *The Greater Perspective: Protocol and Guidelines for the Production of Film and Television on Aboriginal and Torres Strait Islander Communities* (1997) SBS <www20.sbs.com.au/sbscorporate/media/documents/5315sbs_booklet.pdf> at 17 July 2007, 23.

1.107 An important benefit of adopting such protocols is that this allows the obligations set out in the *Privacy Act* to remain relatively high level, avoiding an overly prescriptive approach.[149] This, in turn, helps the Act to retain its flexibility, allowing it to be applied in a broad range of circumstances. Moreover, such a solution encourages data collectors to consult and negotiate with the relevant members of an Indigenous group before handling information that is culturally sensitive.[150]

Corporations and commercial entities

1.108 The ALRC reaffirms the view expressed in ALRC 22 that the *Privacy Act* should not be extended to provide direct protection to corporations and other commercial entities. First, as already discussed, the *Privacy Act* is premised on the notion that privacy is a human right. It is inconsistent with the fundamental approach of Australian privacy law to try to extend the protection of a human right to an entity that is not human.[151] Furthermore, there are more appropriate avenues for protecting the information rights of commercial entities than through privacy law. Consequently, there seems no valid reason to risk distorting the theoretical basis of the *Privacy Act* by making such a change.

1.109 Secondly, such an extension of the Act would also risk undermining some of the fundamental principles of commercial law. This problem is particularly acute in relation to corporations, which are obliged to operate in a relatively transparent way. Moreover, part of the rationale for adopting the structure of a corporation to pursue a particular activity is precisely to create a barrier between the identity of the corporation and the identity of the persons who establish, run and own it. To assign rights to the corporation would require a choice: either those rights must be assigned to the corporation itself—which would make it necessary to re-conceptualise some fundamental aspects of human rights law; or one must 'pierce the corporate veil', assigning those rights to the persons behind the corporation—which would make it necessary to re-conceptualise some aspects of corporations law.

1.110 Thirdly, while accepting that commercial entities have rights and interests that, in some respects, resemble privacy rights, privacy law is not the most appropriate vehicle by which to vindicate those rights and interests. In particular, intellectual

Callinan J was more equivocal on this point: see 326–327.

property and breach of confidentiality are better tailored to the needs of such entities. Moreover, the *Privacy Act* already provides some protection for sole traders and other such commercial entities where the distinction between the commercial entity and the individual is deliberately much less pronounced.[152]

1.111 Fourthly, extending the *Privacy Act* in this way would radically alter the Act's scope and its objectives.[153] While generally supportive of such an extension of the Act, Bygrave has stated:

> Whether or not the basic principles of [a jurisdiction's data protection] laws *should* be extended to protect collective entity data can only be determined for a particular country on the basis of a consideration of the *need* for extending such protection.[154]

1.112 As noted above, the vast majority of stakeholders opposed such a significant change to these fundamental tenets of the Act. This fact, coupled with the other points noted above, reinforce the ALRC's view that such an extension of the *Privacy Act* is neither necessary nor desirable.

Proposal 1–1 The Office of the Privacy Commissioner should, either on its own motion or where approached in appropriate cases, encourage and assist agencies and organisations, in conjunction with Indigenous and other ethnic groups in Australia, to create publicly available protocols that adequately respond to the particular privacy needs of those groups.

Organisation of this paper

1.113 This Discussion Paper is organised into 10 parts. Part A deals with introductory matters, such as the foregoing discussion of the definition of the word 'privacy', an overview of privacy regulation in Australia,[155] a discussion of the *Privacy Act*,[156] models for achieving national consistency,[157] and the introduction into Australian statute law of a cause of action for invasion of privacy.[158]

1.114 Major proposals for reform in this section include: amended definitions in the *Privacy Act* of 'personal information', 'sensitive information' and 'record';[159] a new

152 Strictly speaking, sole traders are not 'groups' in that they only involve one person: L Bygrave, *Data Protection Law: Approaching its Rationale, Logic and Limits* (2002), 174. See also Australian Law Reform Commission, *Privacy*, ALRC 22 (1983), [29].
153 This is also discussed in Ch 3.
154 L Bygrave, *Data Protection Law: Approaching its Rationale, Logic and Limits* (2002), 178 (emphasis in original).
155 Ch 2.
156 Ch 3.

158 Ch 5.
159 Proposals 3–4, 3–5 and 3–6.

part of the *Privacy Act* dealing with the personal information of deceased individuals held by organisations;[160] amendments to the *Privacy Act* to provide that the Act is intended to apply to the exclusion of state and territory laws dealing specifically with the handling of personal information by organisations;[161] the enactment of legislation that regulates the handling of personal information in the state and territory public sectors;[162] and amendment of the *Privacy Act* to provide for a statutory cause of action for invasion of privacy.[163]

1.115 Part B discusses the impact on privacy of rapid advances in information, communication, storage, surveillance and other relevant technologies, and considers how best to accommodate developing technology in a regulatory framework. The impact of the internet, including how the internet has changed the nature of a 'public' space,[164] and the prevalence of identity theft in an electronic environment,[165] are also considered in this part.

1.116 Part C covers how the *Privacy Act* interacts with other federal, state and territory laws, and identifies areas of fragmentation and inconsistency in the regulation of personal information. One of the major proposals for reform contained in this part deals with the access to, and correction of, personal information held by an agency. A proposal is made to amend the *Privacy Act* to provide a new part which deals with requests to access and correct personal information held by agencies.[166]

1.117 Part D outlines the proposed reform of the privacy principles in the *Privacy Act*. A proposal is made to consolidate the existing IPPs and NPPs into one set of principles, the proposed UPPs, applying to both the public and private sector.[167] In addition, proposals are made for substantive amendments to the content of the privacy principles. The chapters are arranged thematically according to the 11 proposed UPPs. In each chapter, there is a brief explanation of how the IPPs and NPPs currently apply, followed by proposals for reform of the specific principle. A draft of the proposed UPPs is set out at the beginning of this Discussion Paper.

1.118 Part E discusses exemptions and partial exemptions to the *Privacy Act*. An exemption applies where a specified entity or a class of entity is not required to comply with the privacy principles that would otherwise be applicable to it. A partial exemption applies where a specified entity or a class of entity is required to comply with either: (1) only some, but not all, of the privacy principles; or (2) some or all of

160 Proposal 3–9.
161 Proposal 4–1.
162 Proposal 4–4.

167 Proposal 15–2.

the privacy principles, but only in relation to certain of its activities. Of particular note are the ALRC's proposals to remove the small business exemption,[168] the employee records exemption,[169] the exemption for political parties and the exemption for political acts and practices.[170]

1.119 Part F is concerned with the OPC. It applies the construct of compliance-oriented regulation to the *Privacy Act*, considering both the regulatory tools provided in the Act and the strategies and approaches adopted by the OPC in using those tools, and examines the appropriate regulatory structure to be adopted by the OPC. The part provides an overview of the Privacy Commissioner's powers and examines the accountability mechanisms which the Commissioner is subject to under the *Privacy Act*; considers the Privacy Commissioner's functions of overseeing and monitoring compliance with the *Privacy Act*; and looks at the Commissioner's powers to issue public interest determinations. One major proposal is to empower the Privacy Commissioner to audit an organisation's compliance with the proposed UPPs, privacy regulations, rules and any privacy code that binds the organisation.[171] Proposals are made to streamline and increase the effectiveness of complaint handling under the *Privacy Act*.[172] The OPC's powers to enforce compliance with the Privacy Act, and in particular whether there needs to be further remedies or penalties available under the Act to enforce compliance, is examined.[173] The issue of data breach notification is considered here, and a model is proposed where notification would be required if specified personal information has been, or is reasonably believed to have been, acquired by an unauthorised person and the agency, organisation or Privacy Commissioner believes that the unauthorised acquisition may give rise to a real risk of serious harm to any affected individual.[174]

1.120 Part G examines the credit reporting provisions contained in Part IIIA of the *Privacy Act*. The legislative history of these provisions is examined, followed by a discussion of the ALRC's approach to reform. A proposal is made to extend the current system of credit reporting to permit an extension in the categories of personal information able to be collected and disclosed for credit reporting purposes.[175] This part also addresses specific aspects of the credit reporting system, such as collection, use and disclosure of credit reporting information, data quality and security, and rights of access, complaint handling and penalties.[176]

1.121 Part H looks at health information and research, including the need for greater national consistency in health privacy regulation as well as nationwide developments

168 Proposal 35–1.
169 Proposal 36–1.
170 Proposal 37–1.

in relation to electronic health information systems.[177] The part examines the way that the *Privacy Act* regulates the handling of health information. Relevant definitions such as the definitions of 'health information' and 'health service' and the additions and exceptions in the privacy principles that relate specifically to health information, are considered. The use of health information in the health services context including the provision of health care and the management, funding and monitoring of health services are also discussed.[178] The special arrangements in place under the *Privacy Act* to allow for the use of personal information in health and medical research are examined, and consideration is given to whether the arrangements should be extended to include the use of personal information in other sorts of research in areas such as criminology and sociology.[179]

1.122 Part I focuses on children, young people and adults requiring assistance. During the early stages of this Inquiry, the ALRC heard anecdotal views that young people think of privacy differently to those of older generations. If this is true, there may be consequences for the development of proposals for privacy that meet the current and future needs of Australians. The attitudes to privacy of children and young people are considered, and major challenges such as online privacy and the taking and uploading of photographs are discussed.[180] The issue of decision making by people under the age of 18 is explored, and proposals are made concerning age of presumed capacity, consent, handling of personal information of persons under the age of 18, education, training and media privacy standards.[181] A test of capacity to give consent, make a request or exercise a right is proposed, and a proposal to introduce into the *Privacy Act* the concept of 'authorised representative' is made.[182] Issues concerning third party assistance with decision making are also discussed in Part I.[183]

1.123 The focus of Part J is on telecommunications, and in particular the interaction between Part 13 of the *Telecommunications Act 1997* (Cth) and the *Privacy Act*. Whether telecommunications-specific privacy legislation is required, and whether Part 13 provides adequate protection of personal information, is explored. The role of the OPC and the Australian Communications and Media Authority under the *Telecommunications Act* is also considered. The Part also considers the *Spam Act 2003* (Cth), *Do Not Call Register Act* 2006 (Cth) and the *Telecommunications (Interception and Access) Act 1979* (Cth).

Process of reform

Advisory Committee and Sub-committees

1.124 It is standard operating procedure for the ALRC to establish an expert Advisory Committee to assist with the development of its inquiries.[184] In this Inquiry, the Advisory Committee includes current and former Privacy Commissioners; privacy and consumer advocates; privacy professionals; health and social service professionals; academics and practicing lawyers with expertise in privacy, health law and e-commerce; and public and private sector officers with responsibility for privacy. Given the breadth of this Inquiry, the ALRC also has established three Sub-committees of the Advisory Committee in the areas of health privacy, developing technology and credit reporting.[185]

1.125 The Advisory Committee and Sub-committee members have particular value in helping the ALRC identify the key issues and stakeholders, as well as in providing quality assurance in the research and consultation effort. The Advisory Committee and Sub-committees have also assisted with the development of reform proposals and will assist with the formulation of recommendations contained in the final Report. The ultimate responsibility for the final Report and recommendations, however, remains with the Commissioners of the ALRC.

Community consultation and participation

1.126 Under the terms of its constituting Act, the ALRC 'may inform itself in any way it thinks fit' for the purposes of reviewing or considering anything that is the subject of an inquiry.[186] One of the most important features of ALRC inquiries is the commitment to widespread community consultation.

1.127 To date, approximately 200 consultations have been held with individuals, agencies and organisations. The consultations were designed to capture a wide cross-section of interested stakeholders, and included: privacy advocates; academics and lawyers with expertise in privacy; federal, state and territory government departments; state bodies such as the childrens' commissioners of New South Wales, Queensland and Tasmania; the Victorian Government Office of the Health Services Commissioner; federal, state and territory privacy commissioners; privacy commissioners from Canada, the United Kingdom and Germany; business, consumer and health representatives; organisations and agencies representing children and young people; the Access Card Taskforce; the NHMRC; and the Aboriginal Interpreter Service. A list of those with whom the ALRC has consulted is found in Appendix 2 of this Discussion Paper.

---

184 A list of Advisory Committee members can be found in the List of Participants at the front of this publication.

185 Lists of the members of the three sub-committees can be found in the List of Participants at the front of this publication.

186 *Australian Law Reform Commission Act 1996* (Cth) s 38.

1.128 In addition, the ALRC conducted a series of roundtables with individuals, agencies and organisations, on a variety of themes including: credit reporting, exemptions under the *Privacy Act*; the privacy principles; children and young people; and health and research. The ALRC also held a public forum in Melbourne (focusing on consumers and privacy), Sydney (focusing on business and privacy) and Coffs Harbour (focusing on health privacy and research). Finally, youth workshops for those aged 13–25 were held in Sydney, Perth, Brisbane and Hobart.

ALRC National Privacy Phone-in

1.129 On 1 and 2 June 2006, members of the public were invited to contact the ALRC—either by telephone or via the ALRC's website—to share their experiences of privacy breaches and protection. The National Privacy Phone-in attracted widespread media coverage, and in total the ALRC received 1,343 responses.

1.130 The majority of respondents (73%) nominated telemarketing as their main concern.[187] Other prominent issues included:[188]

- handling of personal information by private companies (19%) and government agencies (9%);
- protection of privacy in the internet age (7%);
- identity cards and smart cards (7%); and
- problems accessing and correcting personal information (7%).

1.131 The fact that callers could remain anonymous facilitated frank disclosure. The views expressed included support both for extending and reducing the scope of privacy protection, and provide useful examples of the impact of privacy law in a wide range of circumstances.

Talking Privacy Website

1.132 In early 2007, the ALRC developed a website called 'Talking Privacy', which is accessible from the ALRC's home page. Designed specifically to appeal to young people, the website contains information about the Inquiry, links to further information about privacy law, and encourages young people to send in comments to the ALRC about their privacy issues or experiences. The site also contains information aimed at teachers and students considering law reform or privacy as part of a school curriculum.

---

187 This was possibly influenced by the fact that a number of media stories about the Phone-in focused on telemarketing as a possible concern.

188 Callers were able to nominate more than one concern, which is reflected in the statistics.

1.133 The aim of the Talking Privacy website was to engage young people using a familiar and well-used medium. As at the end of July 2007, the front page of the website had received 3,277 hits. While only a small number of young people had taken the further step of submitting comments for consideration by the ALRC, these were helpful to the Inquiry.

Participating in the Inquiry

1.134 There are several ways in which those with an interest in this Inquiry may participate. First, individuals and organisations may indicate an expression of interest in the Inquiry by contacting the ALRC or applying online at <www.alrc.gov.au>. Those who wish to be added to the ALRC's mailing list for this Inquiry will receive notices, press releases and a copy of this Discussion Paper.

1.135 Secondly, individuals and organisations may make written submissions to the Inquiry in response to this Discussion Paper. There is no specified format for submissions. The ALRC gratefully will accept anything from handwritten notes and emailed dot-points, to detailed commentary on matters related to the Inquiry. The ALRC also receives confidential submissions. Details about making a submission may be found at the front of this Discussion Paper.

1.136 Thirdly, the ALRC maintains an active program of direct consultation with stakeholders and other interested parties. The ALRC is based in Sydney but, in recognition of its national character, consultations will be conducted around Australia during the next phase of the Inquiry. Any individual or organisation with an interest in meeting with the ALRC in relation to the issues being canvassed in the Inquiry is encouraged to contact the ALRC.

Timeframe for the Inquiry

1.137 Two Issues Papers were released before the publication of this Discussion Paper. IP 31 dealt with all matters relevant to the Terms of Reference, with the exception of the credit reporting provisions. Issues Paper 32, *Review of Privacy–Credit Reporting Provisions* (IP 32), dealt with the credit reporting provisions of the *Privacy Act*.

1.138 This Discussion Paper contains a more detailed treatment of the issues raised in both IP 31 and IP 32, and indicates the ALRC's current thinking in the form of specific reform proposals and focused questions. The proposals and questions are put forward for critical examination and to provide a focus for discussion. The Issues Papers and the Discussion Paper may be obtained from the ALRC free of charge on CD-ROM, and may be downloaded free of charge from the ALRC's website, <www.alrc.gov.au>. IP 32 and the Discussion Paper may also be obtained from the ALRC in hard copy.

1.139 The ALRC's final Report, containing the final recommendations, is due to be presented to the Attorney-General by 31 March 2008. Once tabled in Parliament, the Report becomes a public document.[189] The final Report will not be a self-executing document—the ALRC provides advice and recommendations about the best way to proceed, but implementation is a matter for the Government and others.[190]

1.140 The ALRC's earlier Report on privacy contained draft legislation, which formed the basis of the *Privacy Act.* Such draft legislation was typical of the law reform effort in those times. Since then the ALRC's practice has changed, and draft bills are not produced unless specifically called for by the Terms of Reference. This is partly because drafting is a specialised function better left to the legislative drafting experts and partly a recognition that the ALRC's time and resources are better directed towards determining the policy that will shape any resulting legislation. The ALRC has not been asked to produce draft legislation in this Inquiry.

In order to be considered for use in the final Report, **submissions addressing the questions and proposals in this Discussion Paper must reach the ALRC by no later than 7 December 2007**. Details about how to make a submission are set out at the front of this publication.

189 The Attorney-General must table the Report within 15 sitting days of receiving it: *Australian Law Reform Commission Act 1996* (Cth) s 23.

190 The ALRC has a strong record of having its advice followed. About 59% of the ALRC's previous reports have been fully or substantially implemented, about 29% of reports have been partially implemented, 4% of reports are under consideration and 8% have had no implementation to date.

Introduction

2.1 This chapter provides an overview of the regulation of personal information in Australia. The chapter first considers the constitutional framework for privacy laws in Australia. It then provides a brief overview of privacy protection at the federal level and discusses how the *Privacy Act 1988* (Cth) provides for the saving of state and territory privacy laws. The final section outlines the regulation of privacy by the states and territories, and privacy rules, codes and guidelines.

The *Australian Constitution* and privacy

2.2 The *Australian Constitution* establishes a federal system of government in which powers are distributed between the Commonwealth and the six states. It includes a list of subjects about which the Australian Parliament may make laws. That list does not expressly include privacy but this does not mean that the Australian Parliament has no power in relation to privacy.

2.3 The *Privacy Act* was passed in, at least partial, reliance on the basis of the Australian Parliament's express power to make laws with respect to 'external affairs'.[1] The external affairs power enables the Australian Parliament to make laws with respect to matters physically external to Australia;[2] and matters relating to Australia's obligations under bona fide international treaties or agreements, or customary international law.[3] The external affairs power is not confined to meeting international obligations, but also extends to 'matters of international concern'.[4]

2.4 The Preamble to the *Privacy Act* makes clear that the legislation was intended to implement, at least in part, Australia's obligations relating to privacy under the United Nations *International Covenant on Civil and Political Rights*[5] (ICCPR) as well as the Organisation for Economic Co-operation and Development *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (OECD Guidelines).[6] The Second Reading Speech to the Privacy Bill also referred to the Council of Europe *Convention for the Protection of Individuals with Regard to Automatic Processing of Personal Data*.[7] Chapter 4 further discusses the Australian Parliament's power under the *Australian Constitution* to enact federal privacy laws.

Federal regulation of privacy

Privacy Act 1988 (Cth)

2.5 The principal piece of federal legislation regulating privacy in Australia is the *Privacy Act*. The Act regulates the handling of personal information by the Australian Government, the ACT Government and the private sector. The Act contains a set of 11 Information Privacy Principles (IPPs) that apply to Australian Government and ACT Government agencies, and 10 National Privacy Principles (NPPs) that apply in the private sector. Chapter 3 provides an overview of the *Privacy Act*.

2.6 In general terms, the *Privacy Act* regulates the handling of personal information by the Australian Government, the ACT Government and the private sector. The Act does not regulate the handling of personal information by the state governments or the Northern Territory Government, except to a very limited extent. The *Privacy Act* is expressed to bind the Crown 'in right of the Commonwealth, of each of the States, of

6 Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980). The OECD Guidelines are discussed further in Part D.
7 *Convention for the Protection of Individuals with Regard to Automatic Processing of Personal Data*, 28 January 1981, Council of Europe, CETS No 108, (entered into force generally on 1 October 1985).

the Australian Capital Territory, of the Northern Territory and of Norfolk Island';[8] however state and territory public sector 'authorities' fall outside the definition of public sector 'agency' and are specifically excluded from the definition of private sector 'organisation'.[9] State and territory authorities include ministers, departments, bodies established or appointed for a public purpose under state and territory law and state and territory courts.[10] Under s 6F of the *Privacy Act*, however, states and territories may request that state and territory authorities be brought into the regime by regulation under the Act.[11]

Saving of state and territory privacy laws

2.7 Section 3 of the *Privacy Act* states:

> It is the intention of the Parliament that this Act is not to affect the operation of a law of a State or of a Territory that makes provision with respect to the collection, holding, use, correction, disclosure or transfer of personal information (including such a law relating to credit reporting or the use of information held in connection with credit reporting) and is capable of operating concurrently with this Act.

2.8 The provision makes clear that the Australian Parliament did not intend to 'cover the field' and to override state and territory laws relating to the protection of personal information if such laws are capable of operating alongside the *Privacy Act*. Section 3 of the *Privacy Act* is discussed in Chapter 4.

2.9 New South Wales (NSW), Victoria and the ACT all have legislation that regulates the handling of personal health information in the private sector. This means that health service providers and others in the private sector in those jurisdictions are required to comply with both federal and state or territory legislation. Part H of this Discussion Paper discusses the issues and problems inherent in this situation. Methods for dealing with these issues are outlined in Chapter 4.

Other relevant federal legislation

2.10 Other federal legislation also regulates the handling of personal information. For example, the *Freedom of Information Act 1982* (Cth) (FOI Act) provides that every person has a right to access documents held by government agencies or Ministers, other than exempt documents. A document is exempt from the freedom of information

---

8 *Privacy Act 1988* (Cth) s 4. Section 3 of the *Privacy Amendment (Private Sector) Act 2000* (Cth) makes clear that the private sector amendments were also intended to meet Australia's international obligations, as well as international concerns, relating to privacy.

9 *Privacy Act 1988* (Cth) s 6C(1).

10 Ibid s 6C(3).

11 Ibid s 6F. Only four state authorities have been brought into the regime by regulation. This issue is discussed in detail in Ch 34. In 1994, as part of the transition to self-government, the ACT public service was established as a separate entity from the Australian Government public service. The *Privacy Act* was amended at that time to ensure that ACT public sector authorities continued to be covered by the Act: *Australian Capital Territory Government Service (Consequential Provisions) Act 1994* (Cth).

regime if its disclosure would involve unreasonable disclosure of 'personal information'.[12] This exemption is subject to an exception that a person cannot be denied access to a document on the basis that it contains his or her own information.[13] The *Archives Act 1983* (Cth) provides a similar exemption.[14]

2.11 The handling of tax file numbers (TFNs) is regulated under various federal Acts including the *Income Tax Assessment Act 1936* (Cth) and the *Taxation Administration Act 1953* (Cth). The *Data-matching Program (Assistance and Tax) Act 1990* (Cth) regulates data-matching using TFNs.

2.12 Various provisions under other federal legislation require or authorise certain acts and practices, including the collection, use and disclosure of personal information. For example, the *Census and Statistics Act 1905* (Cth) and the *Commonwealth Electoral Act 1918* (Cth) require or authorise the collection of large amounts of personal information. Other Acts require or authorise the disclosure of personal information in a range of circumstances, such as the *Australian Passports Act 2005* (Cth), *Corporations Act 2001* (Cth), *Telecommunications Act 1997* (Cth), *Telecommunications (Interception and Access) Act 1979* (Cth) and *Migration Act 1958* (Cth). Federal legislation also contains a large number of secrecy provisions that impose duties on public servants not to disclose information that comes to them by virtue of their office. Federal legislation that regulates the handling of personal information is discussed in detail in Chapters 12 and 13.

State and territory regulation of privacy

2.13 Each Australian state and territory regulates the management of personal information. In some states and territories, personal information is regulated by legislative schemes, in others by administrative regimes.

New South Wales

Privacy and Personal Information Protection Act 1998 (NSW)

2.14 NSW was the first state to enact public sector privacy laws. The *Privacy and Personal Information Protection Act 1998* (NSW) contains a set of privacy standards called Information Protection Principles that regulate the way NSW public sector agencies handle personal information (excluding health information).[15]

---

12 *Freedom of Information Act 1982* (Cth) s 41.
13 Ibid s 41(2).
14 *Archives Act 1983* (Cth) s 33. See discussion in Ch 12.
15 *Privacy and Personal Information Protection Act 1998* (NSW) s 4A. See the discussion of the *Health Records and Information Privacy Act 2002* (NSW) below.

2.15 A number of the Information Privacy Principles are similar to the IPPs in the *Privacy Act*, but they are not identical.[16] There are four major sources of exemptions to the *Privacy and Personal Information Protection Act*: exemptions in the Act;[17] exemptions in regulations;[18] exemptions in a privacy code of practice, made by the Attorney General;[19] and exemptions in a public interest direction made by the NSW Privacy Commissioner.[20]

2.16 The Act provides for the development of privacy codes of practice. A privacy code may modify the application to any public sector agency of one or more of the Information Protection Principles[21] and may exempt a public sector agency or class of public sector agency from the requirement to comply with any of the Information Protection Principles.[22] The Act also provides for privacy management plans.[23]

2.17 The Act establishes the Office of the NSW Privacy Commissioner (Privacy NSW). The NSW Privacy Commissioner has a number of functions, including a complaint-handling function. The NSW Privacy Commissioner must endeavour to resolve complaints by conciliation[24] and may also make written reports on any findings or recommendations made in relation to a complaint.[25]

2.18 Under the existing privacy regime in NSW, there are two avenues of complaint available to individuals who believe that their privacy has been breached. The individual may make a complaint directly to Privacy NSW.[26] Alternatively, those who believe that their privacy has been interfered with by a NSW public sector agency can direct their complaints directly to the agency and request that the agency conduct an internal review of the behaviour that led to the complaint. Privacy NSW is responsible for the oversight of internal reviews.[27] If an individual is not satisfied with the finding of the review or the action taken by the agency in relation to the application, the

16 The *Privacy and Personal Information Protection Act 1998* (NSW) 'adopted with few modifications, the same principles as contained in the Federal Privacy Act': Privacy NSW, *Submission to the Attorney General's Department Review of the Privacy and Personal Information Protection Act 1998*, 24 June 2005, 17. The *Privacy and Personal Information Protection Act* was enacted before the inclusion of the NPPs in the *Privacy Act*.

17 For example, there are exemptions for law enforcement and investigative agencies: *Privacy and Personal Information Protection Act 1998* (NSW) pt 2 div 3.

18 For example, there are exemptions relating to privacy management plans under the *Privacy and Personal Information Protection Regulation 2005* (NSW) regs 5–7.

19 *Privacy and Personal Information Protection Act 1998* (NSW) ss 29–32.

20 Ibid s 41.

21 Ibid s 30(1).

22 Ibid s 30(2).

23 A privacy management plan must include provisions relating to the development of privacy policies and practices by a NSW public sector agency: Ibid s 33.

24 Ibid s 49.

25 Ibid s 50.

26 Ibid pt 4.

27 Ibid pt 5.

individual may apply to the NSW Administrative Decisions Tribunal for a review of the conduct.[28]

2.19 In 2005–06, 81 complaints were made directly to Privacy NSW.[29] The majority of those complaints were against state government agencies. A significant proportion, however, were also against private organisations and local governments.[30] The most common complaints received by Privacy NSW were about disclosure, surveillance and physical privacy, and collection of information.[31] NSW public sector agencies handled 100 complaints as internal reviews, which were then overseen by Privacy NSW.[32]

Health Records and Information Privacy Act 2002 (NSW)

2.20 The *Health Records and Information Privacy Act 2002* (NSW) implements a privacy regime for health information held in the NSW public sector and the private sector (except small businesses as defined in the *Privacy Act*).[33] The Act allows for individuals to access their health information and establishes a framework for the resolution of complaints regarding the handling of health information.[34]

2.21 The Act contains 15 Health Privacy Principles (HPPs) that outline how health information must be collected, stored, used and disclosed. The HPPs can be grouped into seven areas: collection; storage; access and accuracy; use; disclosure; identifiers and anonymity; and transferrals and linkage.[35] The Act provides for a number of

---

28 Ibid s 55.

29 This is a significant decrease in the number of complaints received the previous year. In 2004–05, Privacy NSW reported that it received 111 complaints: Privacy NSW, *Annual Report 2004–05* (2005), 29. Privacy NSW provides a number of reasons for the drop in complaints: the general public is becoming more aware of the internal review process and increasingly taking the internal review option rather than requesting an investigation by Privacy NSW; agencies have become increasingly familiar with the provisions of the Act; since October 2004, Privacy NSW has been unable to conduct training sessions (training activities raise the profile of the Office and generate further enquiries and requests for advice from the trainees); it is likely that the number of complaints made to a privacy regulator tends to decrease or plateau a few years after the regulator begins operation; it is expected that some individuals did not need to contact Privacy NSW because they had obtained the information they needed from the Privacy NSW website: Privacy NSW, *Annual Report 2005–06* (2006), 18.

30 The NSW Privacy Commissioner also has functions under the *Health Records and Information Privacy Act 2002* (NSW), which regulates both the public sector and private sector.

31 Privacy NSW, *Annual Report 2005–06* (2006), 47.

32 Ibid, 47.

33 See definition of 'private sector person' in *Privacy and Personal Information Protection Act 1998* (NSW) s 4. The Act did not commence until 25 September 2004: *New South Wales Government Gazette (Health Records and Information Privacy Act 2002*), 27 August 2004, 6683.

34 *Health Records and Information Privacy Act 2002* (NSW) s 3.

35 Ibid sch 1. The *Health Records and Information Privacy Act 2002* (NSW) was a result of the recommendations of the Ministerial Advisory Committee on Privacy and Health Information. According to the second reading speech the development of the legislation was also guided by three additional principles: obligations already imposed on service providers and health service providers by existing laws, such as the federal *Privacy Act*; drawing together the best elements of existing privacy legislation at a local, national and international level (in particular the obligations imposed under the *Privacy and Personal Information Protection Act 1998* (NSW) and the *Health Records Act 2001* (Vic)); and to ensure a readily accessible and usable set of principles having due regard to both individual rights and the special needs arising in the management and use of health information. Consistency with the federal *Privacy Act*

exemptions from these principles. For example, the Act does not apply to the Independent Commission Against Corruption, except in connection with the exercise of its administrative and educative functions.[36] Further, the HPPs themselves include exemptions.[37] Some of these exemptions are the subject of statutory guidelines.[38]

2.22 The *Health Records and Information Privacy Act* provides two avenues of complaint to individuals. Parts 3 and 6 of the Act allow individuals to make complaints directly to the NSW Privacy Commissioner.[39] The Act also allows individuals to direct their complaints to the NSW public sector agency for internal review of the conduct that lead to the complaint.[40] In 2005–06, Privacy NSW received 28 complaints relating to health records.[41] NSW public sector agencies handled 20 complaints concerning health records as internal reviews, which were then overseen by Privacy NSW.[42]

Other legislation

2.23 The *Workplace Surveillance Act 2005* (NSW) prohibits covert surveillance of employees in the workplace without appropriate notice. Three categories of surveillance are covered: camera surveillance; surveillance of an employee's use of a work computer; and surveillance of the location or movements of an employee.[43]

Victoria

Information Privacy Act 2000 (Vic)

2.24 The *Information Privacy Act 2000* (Vic) came into force on 1 September 2002. The Act covers the handling of personal information (except health information) in the state public sector in Victoria, and to other bodies that are declared to be 'organisations' for the purposes of Act.[44] Organisations performing work for the Victorian government may also be subject to the Act, depending on the particular contract.[45]

2.25 The Act requires public sector agencies to comply with 10 Information Privacy Principles or have an approved code of practice.[46] The Information Privacy Principles

---

was a particular issue: New South Wales, *Parliamentary Debates*, Legislative Council, 11 June 2002, 2958 (M Egan—Treasurer and Minister for State Development).

45 Ibid s 17.

46 Codes of Practice are provided for in Ibid pt 4.

are similar to the NPPs in the *Privacy Act*.[47] The Act contains a number of exemptions, including exemptions in relation to courts and tribunal proceedings, publicly available information and law enforcement.[48]

2.26 The Act establishes the Office of the Victorian Privacy Commissioner. The Victorian Privacy Commissioner's functions include the receipt of complaints about an act or practice that may contravene an Information Privacy Principle or that may interfere with the privacy of an individual.[49] The complaint-handling procedure includes a conciliation process and conciliation agreement. The Victorian Privacy Commissioner also has the power to issue compliance notices in order to enforce the Information Privacy Principles.[50] Unlike the Federal Privacy Commissioner or the Victorian Health Services Commissioner, the Victorian Privacy Commissioner has no power to decide that a breach of privacy has occurred.

2.27 The Office of the Victorian Privacy Commissioner received 82 new complaints in 2005–06.[51] Forty-two of these were against state government departments, 13 were against local councils, 12 were against law enforcement bodies and 10 against statutory authorities. The remaining complaints were against contracted service providers (three complaints) and tertiary institutions (two complaints). The most common complaints related to use and disclosure, data security and the collection of information.[52]

Health Records Act 2001 (Vic)

2.28 The *Health Records Act 2001* (Vic) covers the handling of all health information held by health service providers in the state public sector[53] and the private health sector.[54] The Act contains 11 Health Privacy Principles adapted from the NPPs in the *Privacy Act*.[55] The Act contains a few exemptions to these principles, including

---

47 Ibid sch 1. 'Some modifications to the National Principles have been made to reflect the responsibilities of public sector organisations to promote public interests and be accountable for the expenditure of public funds … In adapting the National Principles under Victorian law it is intended that as much consistency as possible can be maintained with perceptions and practice already operating nationally': Explanatory Memorandum, Information Privacy Bill 2000 (Vic), 7.

48 *Information Privacy Act 2000* (Vic) pt 2 div 2.

49 Ibid s 58.

50 Ibid s 44.

51 This is a significant increase in the number of complaints that were received in the previous year. The Office of the Victorian Privacy Commissioner reported that in 2004–05 it received 50 new complaints: Office of the Victorian Privacy Commissioner, *Annual Report 2004–05* (2005), 20. It stated that this increase is partially due to 21 of the 82 complaints received arising against one organisation out of the same incident: Office of the Victorian Privacy Commissioner, *Annual Report 2005–06* (2006), 23.

52 Office of the Victorian Privacy Commissioner, *Annual Report 2005–06* (2006), 23–25.

53 *Health Records Act 2001* (Vic) s 10.

54 Ibid s 11.

55 'The core elements of the HPPs are consistent with the Information Privacy Principles in Schedule 1 of the *Information Privacy Act 2000*. However, the HPPs specifically address issues pertaining to health information and the provision of health services, and adjusted to have appropriate application to both the public and private sectors': Explanatory Memorandum, Health Records Act 2001 (Vic), 6. *The Health Records Act 2001* (Vic) was designed to operate concurrently with any relevant Commonwealth laws: Victoria, *Parliamentary Debates*, Legislative Assembly, 23 November 2000, 1906 (J Thwaites—Minister for Health).

exemptions for dealing with health information for personal, family or household affairs; for publicly available health information; and for the news media.[56]

2.29 The Office of the Health Services Commissioner administers the Act. An individual may complain to the Office of the Health Services Commissioner about an act or practice that may be an interference with the privacy of the individual.[57] The Commissioner can deal with a complaint in a number of ways, including by: conducting an investigation, by conciliation, a hearing, issuing a compliance notice, or referring a complaint to the Victorian Civil and Administrative Appeals Tribunal.[58] The Office of the Health Services Commissioner closed 253 complaints under the Act in 2005–06. The most common complaints related to access and correction, use and disclosure and data quality.[59]

2.30 The Health Services Commissioner has the power to issue or approve guidelines. These guidelines may lessen the level of privacy protection afforded by a relevant Health Privacy Principle.[60]

Workplace privacy

2.31 In October 2005, the Victorian Law Reform Commission (VLRC) released *Workplace Privacy—Final Report* (2005).[61] The VLRC concluded that significant legislative gaps in the protection of privacy in workplaces required regulation at the state level, and recommended the enactment of workplace privacy legislation and the establishment of a workplace privacy regulator.[62]

2.32 The Victorian Parliament has recently enacted the *Surveillance Devices (Workplace Privacy) Act 2006* (Vic).[63] The Act implements the recommendation of the VLRC report that acts or practices of employers which involve installation, use or maintenance of surveillance devices in relation to their workers should be regulated.[64] The Act amends the *Surveillance Devices Act 1999* (Vic) to make it an offence for an employer knowingly to install, use or maintain an optical surveillance device or listening device to observe, listen to, record or monitor the activities or conversations

of a worker in workplace toilets, washrooms, change rooms or lactation rooms.[65] There are some limited exceptions to this general prohibition.[66]

2.33 The ALRC has been advised that the Standing Committee of Attorneys-General (SCAG) is currently consulting stakeholders about potential options for reform in the area of workplace privacy.

Charter of Human Rights and Responsibilities Act 2006 (Vic)

2.34 The recently enacted *Charter of Human Rights and Responsibilities Act 2006* (Vic) introduces a Charter of Human Rights and Responsibilities for the protection and promotion of human rights in Victoria.[67] Part 2 of the Act sets out a number of human rights including the right of a person not to have his or her privacy, family, home or correspondence unlawfully or arbitrarily interfered with. The Act will require statutory provisions to be interpreted in a way that is compatible with the human rights set out under Part 2 of the Act. It will also require public authorities to act in a way that is compatible with those human rights.

Queensland

2.35 In 1997, the Queensland Legislative Assembly Legal, Constitutional and Administrative Committee recommended the enactment of a privacy regime for Queensland based on a set of information privacy principles and the establishment of a Privacy Commissioner.[68] This recommendation has never been implemented. However, Queensland has established an administrative scheme that came into force in 2001 based on the IPPs and the NPPs in the *Privacy Act*. Details of the scheme are provided in Information Standards issued by the Department of Innovation and Information Economy in the *Financial Management Standard 1997* (Qld).[69]

Information Standard 42

2.36 *Information Standard 42—Information Privacy* requires the Queensland state public sector to manage personal information in accordance with a set of Information Privacy Principles adapted from the IPPs contained in the *Privacy Act*. The Information Standard applies to all accountable officers and statutory bodies as defined

---

65 *Surveillance Devices (Workplace Privacy) Act 2006* (Vic) s 3.

66 Surveillance is permitted: in accordance with a warrant or emergency authorisation or a corresponding warrant or emergency authorisation; in accordance with a law of the Commonwealth; or if required by a condition of a liquor licence granted under the *Liquor Control Reform Act 1998* (Vic): *Surveillance Devices (Workplace Privacy) Act 2006* (Vic) s 3.

67 The Act, except Divisions 3 (Interpretation of Laws) and 4 (Obligations of Public Authorities) of Part 3, are due to commence on 1 January 2007. Divisions 3 and 4 of Part 3 are due to commence on 1 January 2008.

68 The Committee recognised 'the desirability to have national consistency in privacy protection regimes applicable to both the public and private sectors given the increasingly blurred distinction between those two sectors' and concluded that 'as far as possible, there should be consistency in privacy standards required of the Commonwealth and Queensland public sectors': Legislative Assembly of Queensland—Legal Constitutional and Administrative Review Committee, *Privacy in Queensland*, Report No 9 (1998), [6.1.3].

69 *Financial Management Standard 1997* (Qld) ss 22(2), 56(1).

in the *Financial Administration and Audit Act 1977* (Qld) (including government departments). It also applies to most statutory government owned corporations.[70]

2.37 The requirement for agencies to comply with the Information Standard and guidelines is administratively based. This means that, where conflicting requirements exist, any legislative requirements will supersede compliance with the Information Standard; and compliance is subject to any existing outsourcing arrangements, contracts and licenses.[71]

2.38 The Information Standard provides for two types of exemptions: exemptions relating to bodies that are exempt from all or part of the Information Standard, and personal information that is exempt from the Information Standard.[72]

2.39 The Information Standard contains a number of requirements, including that departments and agencies nominate a privacy contact officer; and that they develop, publish and implement privacy plans to give effect to the Information Privacy Principles.[73] The Information Standard provides that agencies may develop codes of practice that modify the application of the Information Privacy Principles.[74] A set of guidelines has been developed to assist agencies to comply with their obligations under the Information Standard.[75]

2.40 The Queensland Government Department of Justice and Attorney General is responsible for the administration of privacy in Queensland under the Information Standard, which includes initiating whole of government privacy initiatives, providing policy advice and dispensing best practice advisory services to Queensland Government agencies and the community.

Information Standard 42A

2.41 *Information Standard 42A—Information Privacy for the Queensland Department of Health* applies only to that Department and requires health information and personal information to be managed in accordance with National Privacy Principles adapted from the NPPs contained in the *Privacy Act*.[76] A number of principles have been deleted as they do not apply to the Queensland Department of Health or are dealt with under other schemes. For example, NPP 6 has been deleted as the right of access and correction is provided for in the *Freedom of Information Act 1992* (Qld).

---

70 Queensland Government, *Information Standard 42—Information Privacy* (2001), [1.1].
71 Ibid, [1.1].
72 Ibid, [1.2].
73 Ibid, [3.1].
74 Ibid, [1.3].
75 Queensland Government, *Information Standard 42—Information Privacy Guidelines* (2001).
76 Queensland Government, *Information Standard 42A—Information Privacy for the Queensland Department of Health* (2001).

2.42 Information Standard 42A is similar to Information Standard 42: it contains the same mandatory requirements, similar exemptions and provides for the development of codes of practice. A set of guidelines has been developed to assist the Department to comply with its obligations under the Information Standard.[77]

Queensland Health Quality and Complaints Commission

2.43 In 2006, the *Health Rights Commission Act 1992* (Qld) was repealed by the *Health Quality and Complaints Commission Act 2006* (Qld). The new Act replaces the Health Rights Commission with the Health Quality and Complaints Commission.

2.44 The Queensland Health Rights Commission was established in 1992 under the *Health Rights Commission Act 1991* (Qld). The Health Rights Commission was responsible for the resolution of health care complaints in Queensland. Although there was no specific provision for privacy complaints under the *Health Rights Commission Act 1992* (Qld), the Health Rights Commission reported that in 2005–06 it received 323 complaints related to 'privacy/discrimination' out of a total of 4465 complaints.[78]

Other legislation

2.45 The *Invasion of Privacy Act 1971* (Qld) requires the licensing and control of credit reporting agents and regulates the use of listening devices.

Western Australia

2.46 The state public sector in Western Australia does not currently have a legislative privacy regime. Some privacy principles are provided for in the *Freedom of Information Act 1992* (WA). This Act provides for access to documents and the amendment of 'personal information' in a document held by an agency that is inaccurate, incomplete, out-of-date or misleading. The definition of 'personal information' is similar to the definition under the *Privacy Act* except that it also includes information about an individual who can be identified by reference to an identification number or other identifying particular such as a fingerprint, retina print or body sample.[79]

2.47 Part 4 of the *Freedom of Information Act 1992* (WA) establishes the Information Commissioner. The main function of the Commissioner is to deal with complaints about decisions made by agencies in respect of access applications and applications for amendment of personal information.[80] The Office of the Information Commissioner received 154 complaints in 2005–06. Of these complaints, 135 were for external review of a decision under the *Freedom of Information Act 1992* (WA). External

77 Queensland Government, *Information Standard 42A—Information Privacy Guidelines* (2001).
78 Queensland Health Rights Commission, *Annual Report 2005–2006* (2006), 5, 8.
79 *Freedom of Information Act 1992* (WA) Glossary.
80 Ibid s 63.

review complaints include complaints relating to applications for access to documents and the amendment of personal information under the Act.[81]

2.48 The *State Records Act 2000* (WA) affords some limited protection of privacy. For example, under the Act, no access is permitted to medical information about a person unless the person consents, or the information is in a form that neither discloses nor would allow the identity of the person to be ascertained.[82] However, neither the *State Records Act* nor the *Freedom of Information Act 1992* (WA) deals comprehensively with privacy issues associated with collection, storage and use of personal information by agencies.

Information Privacy Bill 2007

2.49 The Information Privacy Bill 2007 (WA) was introduced into the Western Australian Parliament on 28 March 2007. The Bill proposes to regulate the handling of personal information in the state public sector and the handling of health information by the public and private sectors in Western Australia.[83]

2.50 The Bill requires most state public sector agencies, and contractors to public sector agencies, to comply with a set of eight Information Privacy Principles. The Information Privacy Principles draw heavily on the NPPs contained in the *Privacy Act* and on the Information Privacy Principles in the Victorian *Information Privacy Act 2000* (Vic).[84]

2.51 The Bill also requires most public sector agencies, private sector health service providers, and persons or bodies in the private sector who handle health information about individuals, to comply with a set of 10 Health Privacy Principles. The Health Privacy Principles are adapted from, and are consistent with, the *Draft National Health Privacy Code*.[85] They are broadly similar to the general requirements of the NPPs in the *Privacy Act*, but are specifically tailored to the privacy of health information.[86] Under Part 3 Division 2 of the Bill, individuals will be given access to records held by private sector organisations and increased ability to amend their records. This is similar to the power under the *Freedom of Information Act 1992* (WA).

---

81 Information Commissioner Western Australia, *Annual Report 2005–06* (2006), 12–13.

82 *State Records Act 2000* (WA) s 49.

83 A related Bill, the Freedom of Information Amendment Bill 2007 (WA), was introduced on the same day. This Bill provides the Privacy and Information Commissioner with powers to resolve FOI complaints by conciliation.

84 Western Australia, *Parliamentary Debates*, Legislative Assembly, 28 March 2007 (J McGinty—Attorney General).

85 National Health Privacy Working Group of the Australian Health Ministers' Advisory Council, *Draft National Health Privacy Code* (2003). See Part H for a discussion of the *Draft National Health Privacy Code*.

86 Western Australia, *Parliamentary Debates*, Legislative Assembly, 28 Match 2007 (J McGinty—Attorney General).

2.52 The Act contains a number of exemptions, including for courts and tribunals[87] and publicly available information.[88] Various law enforcement agencies and child protection agencies do not have to comply with certain Information Privacy Principles and Health Privacy Principles.[89] The Bill also provides for Codes of Practice that can derogate from the Information Privacy Principles and the Health Privacy Principles.[90]

2.53 Part 6 of the Bill overrides prohibitions on the disclosure by public sector agencies of personal and health information, whether those prohibitions result from other statutes, the common law, or ethical or professional obligations, provided the disclosure meets certain criteria. These criteria include, for example, that the disclosure is for the purpose for which the information was collected, or that the disclosure falls within certain specified exceptions to the information privacy principle or health privacy principle relating to use and disclosure.

2.54 The Bill establishes the Privacy and Information Commissioner who will replace and expand the role of the current Information Commissioner. The Commissioner's functions and powers include: monitoring and promoting compliance with the Information Privacy Principles and the Health Privacy Principles, reporting to the minister on the legislation, and resolving complaints.[91] The complaint-handling process includes the use of conciliation proceedings.[92] Complaints that are not resolved through conciliation may be resolved by the State Administrative Tribunal.[93]

South Australia

Cabinet Administrative Instruction

2.55 There is no legislation that specifically addresses privacy in South Australia.[94] The South Australian Department of the Premier and Cabinet, however, has issued an administrative instruction requiring its government agencies to comply with a set of Information Privacy Principles based on the IPPs in the *Privacy Act*. *PC012—Information Privacy Principles Instruction* was first issued in July 1989 and then reissued in July 1992.[95]

2.56 The Privacy Committee of South Australia was established in 2001 to oversee the implementation of the Information Privacy Principles in the South Australian public sector and to provide advice on privacy issues. The Committee oversees the

regime and performs a complaint-handling role. The Committee's functions include the referral of written complaints concerning violations of individual privacy received by it to an appropriate authority.[96] The Committee must prepare a report of its activities annually and submit the report to the Minister (currently the Minister for Administrative Services and Government Enterprises). Members of the public who are unsatisfied with the Privacy Committee's response to their complaint are referred to the South Australian Ombudsman for further investigation.[97] The Committee is also able to exempt a person or body from one or more of the Information Privacy Principles on such conditions as the Committee thinks fit.[98]

2.57 The ALRC has been informed that State Records of South Australia (State Records), in supporting the Privacy Committee of South Australia, is developing a guideline for matching and sharing personal information. State Records is also examining other opportunities for guidelines and proposed amendments to the Instruction that might improve the protection of privacy within the South Australian public sector. Other projects include the development of a standard under the *State Records Act 1997* (SA) relating to contracting out and the handling of personal information.[99]

Code of Fair Information Practice

2.58 South Australia also has a *Code of Fair Information Practice* based on the NPPs in the *Privacy Act*.[100] The Code applies to the South Australian Department of Health and the Department for Families and Communities.[101]

---

96 Ibid, Schedule. The Committee has reported that in 2005–06 it received four new complaints in addition to six existing complaints. The Committee concluded seven of the 10 complaints: Privacy Committee of South Australia, *Annual Report of the Privacy Committee of South Australia 2004–05* (2005), [3.5].

100 South Australian Government Department of Health, *Code of Fair Information Practice* (2004), Foreword. The Information Privacy Principles are set out in Appendix B. The South Australia Department of Health considered that the NPPs provided an ideal basis for the Code because 'they are generally applicable to the private sector, particularly those organisations which collect, use, store or disclose "sensitive information"—much of the type of data held by the Department of Health and its service providers'. In adopting the NPPs the South Australia Department of Health was attempting to align 'as much as possible to what looks likely to be the model for a nationally consistent scheme for managing personal information': South Australian Government Department of Health, *Code of Fair Information Practice* (2004), 6.

101 South Australian Government Department of Health, *Code of Fair Information Practice* (2004), 7; Privacy Committee of South Australia, *Annual Report of the Privacy Committee of South Australia 2004–05* (2005), [3.3.1].

Tasmania

Personal Information Protection Act 2004 (Tas)

2.59 The *Personal Information Protection Act 2004* (Tas) regulates the collection, use and disclosure of personal information. The Act applies to 'personal information custodians' including state government agencies, statutory boards, local councils, the University of Tasmania and any body, organisation or person who has entered into a personal information contract with government agencies relating to personal information.[102] A 'personal information contract' is a contract between a personal information custodian and another person relating to the collection, use or storage of personal information.[103]

2.60 The 10 'personal information protection principles' set out in Schedule 1 of the Act are based on the NPPs in the *Privacy Act*. However, aspects of the *Privacy and Personal Information Protection Act 1998* (NSW) and the *Information Privacy Act 2000* (Vic) have also been incorporated into the principles.

2.61 The Tasmanian regime is similar to legislation in other jurisdictions in that it contains exemptions for publicly available information and law enforcement information.[104] The obligations in relation to 'employee information', however, are different to the federal and other state and territory regimes in that they allow job applicants and employees to benefit from the privacy obligations imposed on employers.[105] A personal information custodian may also apply to the Minister for Justice for an exemption from compliance with any or all of the provisions of the Act.[106]

2.62 Part 4 of the Act provides for complaints and investigations. Rather than establishing a central body (such as a privacy commissioner) to manage complaints, the Tasmanian Ombudsman either investigates and determines the complaint or refers the complaint to another person, body or authority that the Ombudsman considers appropriate in the circumstances.[107] If, on completion of an investigation of a complaint, the Ombudsman is of the opinion that a personal information custodian has contravened a personal information protection principle, the Ombudsman may make any recommendations the Ombudsman considers appropriate in relation to the subject matter of the complaint.[108]

Charter of Health Rights

2.63 The *Health Complaints Act 1995* (Tas) requires the Tasmanian Health Complaints Commissioner to develop a *Charter of Health Rights*.[109] A Charter was developed and tabled in Parliament in 1999. The Charter applies to a wide range of health service providers.

2.64 The Charter provides for six rights, including the right to confidentiality, privacy and security.[110] It sets out a range of rights of health service consumers including the right of a consumer: to have his or her personal health information and any matters of a sensitive nature kept confidential; for health service facilities to ensure his or her privacy when receiving health care; and to expect that information about his or her health is kept securely and cannot easily be accessed by unauthorised persons. The Charter also provides that health service providers have the right to discuss the health care and treatment of a consumer with other providers for advice and support if it is in the best interest of the consumer's health and wellbeing.[111]

2.65 The Tasmanian Health Complaints Commissioner administers the Charter.[112] The Tasmanian Health Complaints Commissioner has a number of functions including the receipt, assessment and resolution of complaints.[113] Complaints may be resolved by conciliation and through the use of enforceable agreements between a complainant and health service provider.[114] In 2005–06, the Commissioner reported that she resolved 38 privacy-related complaints out of a total of 663 complaints resolved in that period.[115] The ALRC has been advised that the Charter will be reviewed in late 2007.[116]

Australian Capital Territory

2.66 The ACT public sector complies with an amended version of the *Privacy Act*.[117] The Office of the Privacy Commissioner (OPC) administers the Act on behalf of the ACT government.

117 See *Australian Capital Territory Government Service (Consequential Provisions) Act 1994* (Cth). For example, the amended version provides that certain reports following the investigation of a complaint by the Privacy Commissioner are to be supplied to the ACT Attorney-General.

Health Records (Privacy and Access) Act 1997 (ACT)

2.67 The *Health Records (Privacy and Access) Act 1997* (ACT) removes health records from the jurisdiction of the OPC. The Act regulates the handling of health records held in the public sector in the ACT and also applies to acts or practices of the private sector. The Act contains 14 privacy principles that have been modified to suit the requirements of health records.[118]

2.68 The Act gives people access to their own health records or any other record to the extent that it contains personal health information.[119] The Act imposes obligations on both the person requesting access to a health record[120] and the person who responds to a request for access.[121] The Act contains a number of exemptions to the general right to access health records. For example, it is a ground of 'non-production' if the record or part of the record does not relate in any respect to the person requesting it.[122]

2.69 The ACT Human Rights Commission administers the Act.[123] Under Part 4, a complaint may be made to the Commissioner on the following grounds: the act or omission contravenes the privacy principles in relation to a consumer; the act or omission is a refusal to give access in accordance with the Act to a health record relating to a consumer; or the act or omission is a refusal by a record keeper of a health record to give access to the health record under the Act.

2.70 The Human Rights Commission commenced on 1 November 2006. The Commission is an independent agency established by the *Human Rights Commission Act 2005* (ACT). The Commission brings together the existing functions of the ACT Human Rights Office and the Community and Health Services Complaints Commissioner. The *Health Records (Privacy and Access) Act* was previously administered by the ACT Community and Health Services Complaints Commissioner. In 2005–06, the Community and Health Services Complaints Commissioner received 25 complaints about access to health records, and 10 complaints about disclosure of personal health information.[124]

Human Rights Act 2004 (ACT)

2.71 Section 12 of the *Human Rights Act 2004* (ACT) provides that all individuals have the right not to have their privacy, family, home or correspondence interfered with unlawfully or arbitrarily or have their reputation unlawfully attacked. The Act also imposes a duty of consistent interpretation in respect of other legislation. Under

the Act, when a court is interpreting an ACT law it must adopt an interpretation 'consistent with human rights' as far as possible.[125]

Northern Territory

Information Act 2002 (NT)

2.72 The Northern Territory has combined its information privacy, freedom of information, and public records laws into a single Act, the *Information Act 2002* (NT). Schedule 2 of the Act contains 10 Information Privacy Principles. The Information Privacy Principles are based on the NPPs in the *Privacy Act*.[126] The Act provides for a number of exemptions to the Information Privacy Principles. For example, the Information Privacy Principles do not apply to publicly available information,[127] or to court or tribunal proceedings.[128]

2.73 The Act also provides for approved codes of practice.[129] A code may specify the manner in which a public sector agency is to apply or comply with one or more of the Information Privacy Principles. A code may also modify an Information Privacy Principle, but only in limited circumstances.[130]

2.74 Part 6 of the Act establishes the Information Commissioner for the Northern Territory. The Information Commissioner may authorise a public sector agency to collect, use or disclose personal information in a manner that would otherwise contravene or be inconsistent with specified Information Privacy Principles.[131] The Commissioner also has the power to issue a notice requiring a public sector organisation to take specified action within a period to ensure that in the future it complies with an IPP or code of practice.[132]

2.75 A person may make a complaint to the Commissioner about a public sector organisation that has collected or handled his or her personal information in a manner that contravenes an Information Privacy Principle, a code of practice or an authorisation; or has otherwise interfered with the person's privacy.[133] The Information Commissioner has the power to conduct a hearing in relation to the complaint and

133 Ibid s 104.

make a number of orders.[134] In 2005–06, the Information Commissioner received five privacy complaints.[135]

Information Privacy Code of Conduct

2.76 The Northern Territory does not have health specific privacy legislation. In 1997, however, the Territory Health Services issued the *Territory Health Services Information Privacy Code of Conduct*.[136] The Code of Conduct includes 11 principles that are based on the IPPs in the *Privacy Act*.[137] The Code covers personally identifiable health information, data collections, staff records, and commercially sensitive information. It is enforceable under the *Public Sector Employment and Management Act* (NT).[138] However, legislative provisions take precedence over the *Code of Conduct*.[139]

Code of Health Rights and Responsibilities

2.77 The *Code of Health Rights and Responsibilities* made under s 104(3) of the *Health and Community Services Complaints Act 1998* (NT), confers a number of rights and responsibilities on all users and providers of health and community services in the Northern Territory.[140] The rights and responsibilities set out in the Code are not absolute—they do not override duties set out in Northern Territory or federal legislation.

2.78 Principle 4 of the Code relates to personal information. It provides that people have a right to information about their health, care and treatment. They do not have, however, an automatic right of access to their care or treatment records. Under the Principle, health service providers may prevent health service users from accessing their records where legislative provisions restrict the right to access information, or the provider has reasonable grounds to consider that access to the information would be prejudicial to the user's physical or mental health. The Principle also provides that health service providers have a responsibility to protect the confidentiality and privacy of health service users.

2.79 The Northern Territory Health and Community Services Complaints Commission handles complaints in relation to non-compliance with the Code. Complaints are administered under the *Health and Community Services Complaints Act 1998* (NT). Under that Act, the Commissioner may resolve complaints by conciliation,[141] and may receive complaints from the Information Commissioner.[142]

141 *Health and Community Services Complaints Act 1998* (NT) pt 6.
142 Ibid s 25A.

The Health and Community Services Complaints Review Committee may review decisions by the Commissioner.[143] In 2005–06, the Commission reported that it did not receive any complaints relating to access to records, and that it received two complaints relating to 'privacy/confidentiality'.[144]

Proposed health privacy legislation

2.80 In March 2002, the Northern Territory Department of Health and Community Services released a discussion paper, *Protecting the Privacy of Health Information in the Northern Territory*.[145] The discussion paper sought views on the need for the development of health-specific privacy protection for the Northern Territory. The legislation proposed by the discussion paper would apply to public sector organisations only, and consisted of three main elements: the protection of the privacy of an individual's health information in both the public and private sectors in the Northern Territory; the establishment of a right for individuals to access their own health information; and the conferral of jurisdiction on the Health and Community Services Complaints Commissioner to oversee the health privacy regime and to handle and resolve complaints.[146] To date, a final report has not been released.

Other relevant state and territory legislation

2.81 Personal information is also regulated under state and territory legislation that is not specifically concerned with the protection of personal information. Examples of such legislation include legislation that contains secrecy provisions, freedom of information legislation, public records legislation, listening and surveillance devices legislation and telecommunications legislation.

2.82 Legislation in each state and territory includes provisions that place obligations on public sector agencies and individuals in the public sector not to use or disclose certain information. For example, s 9 of the *Public Sector Management Act 1994* (WA) requires all public sector bodies to be 'scrupulous in the use of official information'. Other state and territory legislation includes secrecy provisions. Often these provisions state that the disclosure of certain information is an offence.[147] For example, s 22 of the *Health Administration Act 1982* (NSW) provides that it is an offence to disclose information obtained in connection with the administration of the Act, subject to a number of exceptions.

146 Ibid, Ch 8.

147 Other examples of secrecy provisions include *Health Administration Act 1982* (NSW) s 22; *Public Health Act 1991* (NSW) s 75; *Criminal Code 1913* (WA) s 81; *Health Act 1911* (WA) ss 246ZM and 314; *Public Sector Management Act 1995* (SA) s 57; *Public Health Act 1997* (Tas) s 139.

2.83 Each state and territory has freedom of information legislation that enables the public to access information held by that state or territory government. The right of access to information is subject to a number of exceptions. Documents affecting personal privacy of third parties will usually be exempt from the access requirements under the Act or will only be released after a consultation process.[148] Freedom of information legislation also attempts to ensure that records held by the Government concerning the personal affairs of members of the public are complete, correct, up-to-date and not misleading.[149]

2.84 Public records legislation in each state and territory is intended to ensure the effective management of government records and improved record keeping. The legislation provides for public access to records as well as setting out restrictions on access to certain records. Some state and territory public records legislation restricts access to records that contain personal information.[150]

2.85 Some privacy protection is also provided in state and territory legislation regulating the use of listening and other surveillance devices,[151] and telecommunications interception.[152]

2.86 Various state and territory laws regulate the private sector. For example, s 19 of the *Introduction Agents Act 1997* (Vic) regulates the handling of personal information by introduction agencies about their clients. State and territory public health Acts require health service providers, including private health service providers, to collect and record certain information about health consumers with 'notifiable diseases', such as, tuberculosis, Creutzfeldt-Jakob disease and AIDS.[153] State and territory adoption laws contain a range of provisions regulating adoption records held by Government and private adoption agencies, including providing for retention, disclosure and access

152 *Telecommunications (Interception) (New South Wales) Act 1987* (NSW); *Telecommunications (Interception) (State Provisions) Act 1988* (Vic); *Telecommunications (Interception) Western Australia Act 1996* (WA); *Telecommunications Interception Act 1988* (SA); *Telecommunications (Interception) Tasmania Act 1999* (Tas); *Telecommunications (Interception) Northern Territory Act 2001* (NT).

153 See, eg, *Public Health Act 1991* (NSW) s 14; *Health (Infectious Diseases) Regulations 2001* (Vic) reg 6.

to information.[154] State and territory laws that regulate the private sector are discussed further in Chapter 4.

Legislative rules, codes and guidelines

2.87 Legislation other than the *Privacy Act* requires the development of privacy codes or guidelines.[155] For example, s 112 of the *Telecommunications Act* enables bodies and associations in the telecommunications industry to develop industry codes relating to telecommunications activities. In 2003, the Australian Communications Industry Forum released an industry code on calling number display (CND). The Code aims to regulate the manner in which CND is to be offered to customers by suppliers; options that customers have in relation to using or blocking the display of CND information from their services; charges that may apply in relation to enabling or blocking the display of CND information to CND services; and measures to be undertaken by suppliers to ensure that the public is aware of CND services and their implications.[156]

2.88 Another example is codes developed pursuant to s 123 of the *Broadcasting Services Act 1992* (Cth). Under this provision, the industry group responsible for representing various radio and television licensees (that is, commercial, subscription and community broadcasters) must develop a code of practice applicable to that section of the broadcasting industry. Privacy provisions are included in the various broadcasting codes of practice developed by representative industry bodies. In the commercial broadcasting and subscription broadcasting sectors, the privacy provisions relate to news and current affairs programs. In the case of the community broadcasting sector, the privacy provisions relate to all programs. For example, s 2 of the *Commercial Radio Codes of Practice* provides that news programs (including news flashes) broadcast by a licensee must not use material relating to a person's personal or private affairs, or which invades an individual's privacy, unless there is a public interest in broadcasting such information.[157]

2.89 As noted above, a number of state and territory privacy laws provide for the making of codes that may derogate from the privacy principles in the primary legislation. The Attorney General of NSW has approved a number of privacy codes of practice that modify the application of the *Privacy and Personal Information Protection Act 1998* (NSW). For example, the *Privacy Code of Practice for Local*

---

154 See, eg, *Adoption Act 2000* (NSW) ch 8; *Adoption Act 1984* (Vic) pt 6; *Adoption of Children Act 1964* (Qld) pt 4A; *Adoption Act 1988* (SA) pt 2A, pt 3; *Adoption Act 1994* (WA) pt 4; *Adoption Act 1988* (Tas) pt 6; *Adoption Act 1993* (ACT) pt 5; *Adoption of Children Act* (NT) pt 6.

Government has the effect of modifying the application of Part 6 of the *Privacy and Personal Information Protection Act 1998* (NSW) (the 'public register' provisions) and the application of the 12 Information Protection Principles as they apply to local government.[158]

Non-legislative rules, codes and guidelines

2.90 In addition to legislative protection of personal information, organisations will often develop and publish privacy guidelines that are not required by legislation.[159] For example, the private sector provisions of the *Privacy Act* exempt from its ambit acts by media organisations in the course of journalism when the organisation is publicly committed to observing a set of privacy standards.[160] The Australian Press Council (APC) has developed a set of eight privacy standards to regulate the handling of personal information.[161] The Standards relate to the collection, use and disclosure of personal information; quality and security of personal information; anonymity of sources; correction, fairness and balance of media reports; sensitive personal information; and complaint handling. The APC receives and deals with complaints in relation to the Standards.

158 See, eg, Privacy NSW, *Privacy Codes of Practice* <www.lawlink.nsw.gov.au/lawlink/privacynsw/ll_pnsw.nsf/pages/PNSW_03_ppipcodes> at 30 July 2007.

Introduction

3.1 This chapter provides an overview of the *Privacy Act 1988* (Cth) in its current form and proposes some basic changes. For example, it is proposed that the name of the Act be changed and that an objects clause be included in the Act. The chapter proposes amending some of the key definitions in the Act, such as the definition of

'personal information'. It also proposes that a level of privacy protection be extended to the personal information of deceased individuals.

3.2 The Privacy Bill 1988 was introduced into the Australian Parliament in November 1988[1] by the then Attorney-General, the Hon Lionel Bowen MP. The Bill was in part a response to a number of developments in the 1970s and 1980s including continuing advances in the technology available for processing information.

3.3 The Preamble to the Bill makes clear that the legislation was intended to implement Australia's obligations relating to privacy under the United Nations *International Covenant on Civil and Political Rights*[2] (ICCPR) as well as the Organisation for Economic Co-operation and Development *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data*[3] (OECD Guidelines). The Second Reading Speech to the Privacy Bill also referred to the Council of Europe *Convention for the Protection of Individuals with Regard to Automatic Processing of Personal Data*[4] (Council of Europe Convention).

3.4 The Hon Justice Michael Kirby chaired the group of government experts that developed the OECD Guidelines. As Chairman of the Australian Law Reform Commission (ALRC), Justice Kirby also oversaw the production of the three volume report, *Privacy* (ALRC 22), published in 1983.[5] The report included draft legislation, which drew on the OECD Guidelines, and was considered by the Australian Government in developing the Privacy Bill.

3.5 The *Privacy Act*, in its original form, set out the Information Privacy Principles (IPPs), which regulate the handling of personal information by Australian Government departments and agencies. It established the position of the Privacy Commissioner, within the Human Rights and Equal Opportunity Commission. The Act provided guidelines for the handling of individual tax file number (TFN) information in both the public and private sectors following enhancements in the use of this unique identifier in 1988.[6]

3.6 The *Privacy Act* also applies to ACT public sector agencies. In 1994, as part of the transition to self-government, the ACT public service was established as a separate

---

1 A predecessor Privacy Bill was introduced into Parliament in 1986, in association with the Australia Card Bill 1986, but both Bills lapsed with the double dissolution of Parliament in 1987. The Australia Card proposal is discussed further in Ch 27.

6 *Taxation Laws Amendment (Tax File Numbers) Act 1988* (Cth). TFNs are discussed further in Ch 27.

entity from the Australian Government public service. Amendments were made at that time to ensure that ACT public sector agencies continued to be covered by the Act.[7]

3.7 The Act has been substantially amended on a number of occasions. In 1990, the Act was amended to provide safeguards for individuals in relation to consumer credit reporting.[8] These amendments governed the handling of credit reports and other credit worthiness information about individuals by credit reporting agencies and credit providers.

3.8 In 2000, the Act was amended to extend coverage to private sector organisations more generally.[9] This amendment introduced the National Privacy Principles (NPPs) into the legislation. The NPPs were developed following consultation with business, consumers and other stakeholders.[10] Further amendments in 2000 established the Office of the Privacy Commissioner (OPC) as a statutory authority independent of the Human Rights and Equal Opportunity Commission.[11]

Overview of the *Privacy Act*

Agencies and organisations

3.9 Broadly speaking, the IPPs regulate the activities of Australian Government public sector agencies. 'Agency' is defined to include ministers, departments, federal courts and other bodies established for a public purpose.[12] The NPPs regulate the activities of private sector organisations. 'Organisation' is defined as an individual, a body corporate, a partnership, any other unincorporated association or a trust.[13] There are a number of exceptions to, and exemptions from, the definitions of 'agency' and 'organisation'. These are discussed below and in Part E.

Acts and practices

3.10 The *Privacy Act* applies to 'acts and practices', that is, acts done and practices engaged in by agencies or organisations. The Act includes a wide range of exemptions for particular acts and practices discussed briefly below and in more detail in Part E.

3.11 For the purposes of this Discussion Paper, the ALRC distinguishes between the terms 'handling' and 'processing' of personal information. The ALRC uses the term *handling* personal information to refer to all acts and practices in the information cycle

13 Ibid s 6C.

including collection, use, disclosure, storage and destruction of personal information no matter what mechanism is used. The ALRC uses the term *processing* to refer to electronic processing of personal information. The ALRC notes that the European Union Article 29 Data Protection Working Party recently made the same distinction in its *Opinion 4/2007 on the Concept of Personal Data*.[14]

Exemptions and exceptions

3.12 The *Privacy Act* contains a range of exemptions and exceptions. They are found throughout the Act, in the definition of some terms, in specific exemption provisions and in the IPPs and NPPs themselves. This Discussion Paper distinguishes between exemptions, partial exemptions and exceptions to the requirements set out in the *Privacy Act*. An *exemption* applies where a specified entity or a class of entity is not required to comply with the privacy principles. A *partial exemption* applies where a specified entity or a class of entity is required to comply with either: (1) only some, but not all, of the privacy principles; or (2) some or all of the privacy principles, but only in relation to certain of its activities. An *exception* applies where a requirement in the privacy principles does not apply to any entity in a specified situation or in respect of certain conduct. This distinction is discussed in more detail in Chapter 30.

3.13 The acts and practices of some Australian Government agencies—including the intelligence agencies: the Australian Secret Intelligence Service, the Australian Security Intelligence Organisation and the Office of National Assessments—are completely exempt from the *Privacy Act*.[15]

3.14 Certain acts and practices of other agencies are also exempt. For example, while federal courts fall within the definition of agency for the purposes of the *Privacy Act*, only some acts and practices of federal courts are covered by the Act.[16] Acts and practices in relation to administrative functions such as personnel files, operational and financial records, and mailing lists, for example, are covered.[17] However, acts done and practices engaged in as part of the courts' judicial functions are not covered.

3.15 In relation to the private sector, the definition of organisation specifically excludes many small business operators and registered political parties. Small businesses are defined in the *Privacy Act* as those with an annual turnover of $3 million or less. This exemption was thought necessary to avoid the imposition of unnecessary costs on small business.[18] Some small businesses that pose a higher risk to privacy—for example, small businesses that hold health information and provide

health services or those that trade in personal information—are covered by the Act.[19] Other small business operators may choose to opt in to the regime[20] or may be brought into the regime by regulation.[21]

3.16 State and territory public sector authorities fall outside the definition of 'agency' and are specifically excluded from the definition of 'organisation'. States and territories may request, however, that such authorities be brought into the regime by regulation.[22]

3.17 The Act does not apply to personal information being collected, used or disclosed for personal, family or household purposes.[23]

3.18 The *Privacy Act* includes an exemption for employee records. Organisations are exempt in relation to past or present employees if the relevant act or practice is directly related to an employee record and the employment relationship.[24] At the time the private sector amendments were passed, the Attorney-General noted that this type of personal information is deserving of privacy protection but that the issue was more appropriately dealt with in workplace relations legislation.[25] To date, however, the issue has not been effectively dealt with in this way and so employee records in the private sector remain without adequate privacy protection.

3.19 Media organisations are exempt in relation to acts or practices in the course of journalism.[26] A media organisation is an organisation whose activities consist of or include the collection, preparation and dissemination of news, current affairs, information or documentaries. Media organisations can claim the exemption if they have publicly committed to observing published, written standards that deal with privacy in the context of media activities. This exemption is intended to allow a free flow of information to the public through the media.[27]

3.20 Political acts and practices by political representatives, such as parliamentarians, are exempt where those acts and practices relate to the political process. Contractors, subcontractors and volunteers working for registered political parties or political

representatives also may be exempt where their acts or practices are related to the political process.[28]

3.21 The IPPs and NPPs include a number of exceptions. For example, under IPP 6 individuals are entitled to access their own personal information except to the extent that a record-keeper is required or authorised by law to refuse to provide the individual with access. IPP 10 provides that personal information shall not be used for any purpose other than the purpose for which it was collected except in a number of specified circumstances, for example, where the use of the information for that other purpose is necessary to prevent or lessen a serious and imminent threat to the life or health of the individual concerned or another person; the use is required or authorised by law; or the use is necessary to enforce the criminal law. There are similar exceptions relating to the disclosure of information under IPP 11.

3.22 The NPPs contain a range of similar exceptions as well as specific and qualified exceptions for the use of non-sensitive information for direct marketing purposes and the use of health information for medical research.

Information Privacy Principles

3.23 The 11 IPPs are based on the OECD Guidelines.[29] The IPPs are a central feature of the *Privacy Act* and are discussed in detail in Part D. The IPPs require that Australian Government agencies have a lawful purpose for collecting personal information, and that the purpose is related to the functions or activities of the agency.[30] Agencies collecting personal information from individuals must ensure that those individuals are generally aware of the purpose for which the information is being collected, whether the collection is authorised or required by or under law and the agency's usual practices in relation to disclosure of such information.[31] The IPPs require agencies to ensure that information is relevant, up-to-date and complete.[32]

3.24 Agencies must also store information securely[33] and provide information about the type of personal information they hold.[34] Subject to certain exceptions, agencies must provide individuals with access to personal information about them and correct the information they hold to ensure that it is accurate, up-to-date, relevant, complete and not misleading.[35] Agencies must generally seek an individual's permission to use or disclose information for a purpose that is not directly related to the purpose for which it was collected.[36]

National Privacy Principles

3.25 The 10 NPPs—developed in consultation with private sector organisations—apply in the private sector where no approved privacy code has been put in place.[37] The NPPs are discussed in detail in Part D. The NPPs require that organisations collect personal information by lawful and fair means and not in an unreasonably intrusive manner. Information must be necessary for one of the organisation's functions or activities and must be collected from the individual concerned, where it is reasonable and practicable to do so.[38] Sensitive information, including health information, may generally only be collected with consent.[39]

3.26 Organisations may only use and disclose personal information for the purpose for which it was collected, except in a number of defined circumstances. For example, an organisation may use personal information for a related purpose if that would be within the reasonable expectations of the individual.[40] Organisations must take reasonable steps to ensure that the personal information they handle is accurate, complete and up-to-date[41] and must protect the information from misuse and loss and from unauthorised access, modification or disclosure.[42] Organisations must also take reasonable steps to destroy or permanently de-identify personal information if it is no longer needed.[43]

3.27 On request, organisations are required to let individuals know what sort of personal information they hold and how they handle that information,[44] and to give individuals access to the information held about them unless particular exceptions apply.[45] There are limits on the use of government identifiers by the private sector,[46] and on transferring personal information overseas.[47] Organisations are also required to have a written privacy policy that sets out how the organisation manages personal information and to make the policy available to anyone who asks for it.[48]

Approved privacy codes

3.28 The *Privacy Amendment (Private Sector) Act 2000* (Cth) introduced Part IIIAA into the *Privacy Act*, which allows private sector organisations and industries to develop and enforce their own privacy codes. Once the Privacy Commissioner

approves a privacy code, it replaces the NPPs for those organisations bound by the code.[49] Codes may also set out procedures for making and dealing with complaints. Such codes must provide for the appointment of an independent adjudicator to whom complaints may be made.[50]

3.29 The aim of amending the Act in this way was to encourage private sector organisations and industries to develop privacy codes of practice.[51] To date, only four codes have been approved by the Privacy Commissioner: the Market and Social Research Privacy Code, the Queensland Club Industry Privacy Code, the Biometrics Institute Privacy Code and the General Insurance Information Privacy Code. The General Insurance Information Privacy Code has since been revoked. Privacy codes are discussed further in Chapter 44.

Interference with privacy

3.30 Part III Division 1 of the *Privacy Act* sets out what amounts to an 'interference with privacy', that is, a breach of the Act that gives grounds for a complaint to the Privacy Commissioner or an independent adjudicator appointed under an approved privacy code. An act or practice by an agency that breaches an IPP is an interference with privacy.[52] An act or practice by an organisation that breaches an NPP or an approved privacy code is an interference with privacy.[53] An interference with privacy may also arise in other areas including: the handling of TFN information, data-matching, and credit reporting.

Credit reporting

3.31 As noted above, the *Privacy Act* was amended in 1990—following public controversy over the credit industry's intention to introduce a system of 'positive' (more comprehensive) credit reporting[54]—to provide safeguards for individuals in relation to consumer credit reporting.[55] In particular, Part IIIA of the Act regulates the handling of credit reports and other credit worthiness information about individuals by credit reporting agencies and credit providers. The Privacy Commissioner is required to issue a Code of Conduct that, together with Part IIIA, applies privacy protections to the handling of personal credit information.[56] The current Code includes amendments made following a number of reviews and is dated March 1996.[57]

3.32 The credit reporting provisions have been the subject of criticism[58] and are considered in detail in Part G.

Tax file numbers

3.33 TFNs are unique numbers issued by the Australian Taxation Office (ATO) to identify individuals, companies and others who lodge income tax returns with the ATO. The *Privacy Act* provides for the making of specific guidelines in relation to the collection, storage, use and security of TFN information relating to individuals.[59] The TFN Guidelines, issued under s 17 of the *Privacy Act*, are legally binding. A breach of the guidelines is an interference with privacy and provides grounds for a complaint to the Privacy Commissioner.[60] Interim Guidelines contained in a schedule to the *Privacy Act* operated until they were replaced with the *Tax File Number Guidelines 1990*. The current guidelines were issued in 1992 and have been amended on a number of occasions.[61]

Privacy Commissioner

3.34 The *Privacy Act* establishes the position of the Privacy Commissioner as an independent statutory officer who is appointed by the Governor-General for a period of up to seven years.[62] The powers and role of the Privacy Commissioner are examined in detail in Part F.

Office of the Privacy Commissioner

3.35 The *Privacy Act* establishes the OPC—consisting of the Privacy Commissioner and his or her staff—as a statutory agency to oversee the implementation of the *Privacy Act*.[63] The Office consists of the following sections:

- the Hotline Section;
- the Compliance Section;
- the Policy Section; and
- Corporate and Public Affairs.

---

58 See, eg, G Greenleaf, 'The Most Restrictive Credit Reference Laws in the Western World?' (1992) 66 *Australian Law Journal* 672; Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005), [5.11].

59 TFNs are discussed in detail in Ch 27.

60 Unauthorised use or disclosure of TFNs is also an offence under the *Taxation Administration Act 1953* (Cth). This Act protects all TFNs and not just those of individuals.

61 Office of the Federal Privacy Commissioner, *Tax File Number Guidelines* (1992).

62 *Privacy Act 1988* (Cth) ss 19–25.

63 Ibid ss 19, 26A.

3.36 The Hotline Section provides assistance to individuals in relation to their rights under the *Privacy Act* and related legislation. It also provides advice to agencies and organisations on how to comply with the Act and related legislation.

3.37 The Compliance Section investigates complaints from individuals against agencies and organisations. It also investigates possible breaches of the *Data-matching Program (Assistance and Tax) Act 1990* (Cth) and associated Guidelines, the Tax File Number Guidelines and the guidelines in force under the *National Health Act 1953* (Cth). In addition, the section audits agencies, credit providers and credit reporting agencies. Compliance also conducts audits under s 309 of the *Telecommunications Act 1997* (Cth).

3.38 The Policy Section provides guidance and advice to agencies and organisations on privacy issues; examines and makes submissions on proposed legislation; comments on inquiries that have significant privacy implications; and seeks to inform itself of technological and social developments that affect individual privacy. The Corporate and Public Affairs section assists the OPC in communicating with stakeholders through publications, media relations, secretariat support, speech writing, events and the OPC website.[64]

Functions of the Privacy Commissioner

3.39 The Privacy Commissioner's functions are set out in a number of Acts including the *Privacy Act*. Those in the *Privacy Act* include:

- promoting an understanding and acceptance of the IPPs and the NPPs and undertaking educational programs in relation to privacy;
- investigating acts or practices that may breach the IPPs or NPPs, either in response to complaints or on the Commissioner's own initiative;
- auditing the handling of personal information by agencies to ensure that they comply with the IPPs;
- considering and approving privacy codes and reviewing the operation of the codes and decisions of adjudicators appointed under those codes;
- considering legislation that might impact on privacy and ensuring that any adverse effects are minimised;
- undertaking research into and monitoring developments in data processing and computer technology to ensure that any adverse privacy effects of such developments are minimised;

64 Office of the Privacy Commissioner, *About the Office* <www.privacy.gov.au/about/> at 30 July 2007.

- publishing various guidelines, including binding guidelines, on the development of privacy codes and the use of health information for medical research;[65] and

- providing advice to the Minister and others.[66]

3.40 As noted above, the Privacy Commissioner also has functions under the *Privacy Act* in relation to TFN information and credit reporting. In addition, the Commissioner has responsibilities under the:

- *Data-matching Program (Assistance and Tax) Act 1990* (Cth) in regulating the conduct of Australian Government data-matching programs. The Privacy Commissioner is required to issue guidelines under the Act and has the power to investigate acts or practices that may breach the guidelines;[67]

- *National Health Act 1953* (Cth) in regulating the handling of Medicare and Pharmaceutical Benefits Program claims information. The Privacy Commissioner is required to issue guidelines under the Act and has the power to investigate acts or practices that may breach the guidelines;[68]

- *Crimes Act 1914* (Cth) in regulating the handling of information about spent convictions. Part VIIC of the Act provides for a spent convictions scheme that prevents discrimination against individuals on the basis of certain previous convictions. The Commissioner has the power to investigate complaints about breaches of Part VIIC;[69] and

- *Telecommunications Act 1997* (Cth) in monitoring disclosures of personal information to law enforcement agencies and consulting on industry codes and standards in a range of consumer protection and privacy areas.[70]

3.41 In performing his or her functions, the Privacy Commissioner is required to take certain matters into account, including Australia's international obligations and relevant international guidelines on privacy. The Commissioner is also required to have due regard to the protection of important human rights and social interests that compete

65 The guidelines made under ss 95 and 95A of the *Privacy Act* in relation to the use of health information in research are discussed in Ch 58.

66 *Privacy Act 1988* (Cth) s 28A.

67 These guidelines are discussed further in Chs 7 and 44.

68 These guidelines are discussed further in Chs 44 and 56.

69 These functions are discussed further in Ch 44.

70 Office of the Privacy Commissioner, *About the Office* <www.privacy.gov.au/about/> at 30 July 2007. These functions are discussed further in Ch 63, including the question of whether these functions should be consolidated into the *Privacy Act*.

with privacy such as the free flow of information through the media and the right of government and business to achieve their objectives in an efficient way.[71]

Investigations

3.42 The Privacy Commissioner has the power to investigate on his or her own motion, or in response to a complaint, acts and practices of agencies or organisations that may breach the IPPs or NPPs.[72] In conducting such investigations, the Commissioner can require the production of documents and information, and may also require people to appear and answer questions.[73] The Commissioner may examine such witnesses on oath or affirmation.[74]

3.43 The Privacy Commissioner may make a determination where there has been a breach of the IPPs or NPPs.[75] The Commissioner may determine that the conduct must not be repeated; that the agency or organisation must take action to redress the loss or damage caused; or that the complainant is entitled to a specified amount of compensation. The Commissioner may also dismiss the complaint or decide to take no further action. Such determinations, however, are not binding as between the parties. If it becomes necessary to enforce the determination, action must be taken in the Federal Court or the Federal Magistrates Court.[76]

Public Interest Determinations

3.44 The Privacy Commissioner has the power to make Public Interest Determinations (PIDs) and Temporary Public Interest Determinations (TPIDs) that exempt certain acts and practices from the operation of the Act, where they would otherwise be a breach of the IPPs or NPPs.[77] The Commissioner may issue a PID where he or she is satisfied that the public interest in an agency or organisation doing an act or engaging in a practice substantially outweighs the public interest in adhering to the IPPs or NPPs. The Privacy Commissioner may make a TPID, in limited circumstances, where an application for a PID contains matters of an urgent nature.

3.45 The Privacy Commissioner has made nine PIDs to date. PIDs and TPIDs are disallowable instruments under the *Legislative Instruments Act 2003* (Cth). They must be tabled in the Australian Parliament and are then subject to disallowance.[78]

71 *Privacy Act 1988* (Cth) s 29.
72 Ibid pt V.
73 Ibid s 44.
74 Ibid s 45.
75 Ibid s 52.
76 Ibid s 55A.
77 Ibid ss 72, 80A and 80B.
78 Ibid ss 80 and 80C. These provisions both refer to s 46A of the *Acts Interpretation Act 1901* (Cth). That provision has been repealed. Section 6(d)(i) of the *Legislative Instruments Act 2003* (Cth) provides that instruments declared to be disallowable instruments for the purposes of section 46A of the *Acts*

Privacy Advisory Committee

3.46 The *Privacy Act* provides for the establishment of a Privacy Advisory Committee made up of the Privacy Commissioner and not more than six other members.[79] The Act requires that members of the Advisory Committee have a range of expertise, for example, in industry or public administration, the trade union movement, electronic data processing, social welfare and civil liberties.[80]

3.47 The Advisory Committee is intended to provide high level strategic advice to the Privacy Commissioner and, subject to any direction by the Commissioner, to engage in community education and consultation.[81]

Privacy regulations

3.48 Section 100 of the *Privacy Act* provides in part that:

> The Governor-General may make regulations, not inconsistent with this Act, prescribing matters:
>
> (a) required or permitted by this Act to be prescribed; or
>
> (b) necessary or convenient to be prescribed for carrying out or giving effect to this Act.

3.49 Various other provisions in the Act also provide for the making of regulations. Section 6(5C), for example, states that the regulations may provide that businesses or undertakings of a specified kind are not credit reporting businesses within the meaning of the Act. Section 6E provides that the regulations may prescribe certain small business operators to be organisations for the purposes of the Act. Section 6F provides that the regulations may prescribe certain state and territory authorities and instrumentalities to be organisations for the purposes of the Act.

3.50 In Chapter 50, the ALRC proposes that the provisions dealing with credit reporting be promulgated as regulations under the *Privacy Act*.[82] In Chapter 56, the ALRC proposes that the provisions dealing specifically with the handling of health information be promulgated as regulations under the Act. Both these sets of regulations

---

Interpretation Act should be deemed legislative instruments for the purposes of the *Legislative Instruments Act*.

79 Ibid s 82. The Privacy Advisory Committee is discussed further in Ch 43.

80 The current members of the Advisory Committee are Peter Coroneos, Chief Executive Officer, Internet Industry Association; Associate Professor John M O'Brien, School of Organisation and Management, University of New South Wales; Suzanne Pigdon, former Privacy and Customer Advocacy Manager, Coles Myer Group; Dr William Pring, Director of Consultation-Liaison, Psychiatry Services, Box Hill Hospital; Joan Sheedy, Assistant Secretary, Information Law Branch, Attorney-General's Department; and Robin Banks, Chief Executive Officer, Public Interest Advocacy Centre Ltd and Director, Public Interest Law Clearing House Inc.

81 *Privacy Act 1988* (Cth) s 83.

82 Proposal 50–1.

are intended to modify the operation of the proposed Unified Privacy Principles (UPPs)—discussed in detail in Part D—in relation to credit information and health information respectively. As discussed in those chapters, the regulations need to be able to impose more *or* less stringent requirements than provided for in the UPPs.

3.51 The ALRC's view is that such modifications can be consistent with the *Privacy Act*, even where they impose less stringent requirements on agencies and organisations. It may be necessary to modify the operation of the UPPs in this way in order to achieve an appropriate balance between the public interest in protecting the privacy of individuals with other public interests, such as allowing important public health research to proceed. This is consistent with the proposed objects of the *Privacy Act* discussed further below. The ALRC is of the view that the Act should make clear that the regulations may modify the operation of the UPPs to impose different or more specific requirements in particular contexts, including imposing more or less stringent requirements on agencies and organisations than are provided for in the UPPs.

Proposal 3–1 The *Privacy Act* should provide for the making of regulations that modify the operation of the proposed Unified Privacy Principles (UPPs) to impose different or more specific requirements in particular contexts, including imposing more or less stringent requirements on agencies and organisations than are provided for in the UPPs.

The structure of the Act

3.52 Because the *Privacy Act* has been substantially amended on a number of occasions, the numbering and the structure of the Act have become confusing and difficult to navigate. For example, while the IPPs are found in s 14 of the Act, the NPPs are found in Schedule 3. In addition, the Act refers to legislation such as the *Conciliation and Arbitration Act 1904* (Cth) and provisions such as s 46A of the *Acts Interpretation Act 1901* (Cth) that have been repealed and replaced.

3.53 As discussed above, and in Parts D and E of this Discussion Paper, exemptions and exceptions are found throughout the Act and, in some cases, in other pieces of legislation. This can make it difficult to ascertain whether the *Privacy Act* covers a particular agency or organisation and, if so, to what extent. In addition, the drafting of some exemptions, such as exempt acts and practices in s 7, is complex and difficult to understand.

Submissions and consultations

3.54 A significant number of stakeholders commented on the problems caused by the complex structure of the *Privacy Act* and expressed support for some consolidation and

restructuring.[83] Electronic Frontiers Australia expressed the view that the Act was 'complex, confusing and unwieldy' and that this was leading to misapplication of the provisions.[84] The Centre for Law and Genetics agreed that the Act has become difficult to work with:

> We would strongly support the redrafting of the legislation to achieve a greater degree of simplicity and clarity. Nevertheless, the original flow from collection through to release arose from the OECD Guidelines and this remains a defensible template.[85]

3.55 The Office of the Information Commissioner Northern Territory was of the view that the *Privacy Act* had 'lost its way' and should be redrafted, using plain English, and restructured, including grouping exemptions together.[86] A number of commentators have also been critical of the Act's complexity.[87]

ALRC's view

3.56 In the ALRC's view, such complexity seems undesirable in legislation intended to protect individuals' personal information. An individual is unlikely to be able to take action to protect his or her rights if it is difficult to ascertain what acts and practices of agencies and organisations are covered by the legislation.

3.57 In Chapter 15, the ALRC proposes a single set of UPPs applying both to agencies and organisations.[88] This change will resolve much of the complexity in the current provisions. In Chapter 30 the ALRC proposes that the exemptions in the *Privacy Act* should be clarified and located together.[89] Amending the *Privacy Act* in line with these proposals would provide an excellent opportunity to restructure the Act entirely to achieve greater logical consistency, simplicity and clarity.

85 Centre for Law and Genetics, *Submission PR 127*, 16 January 2007.

86 Office of the Information Commissioner (Northern Territory), *Submission PR 103*, 15 January 2007.

87 R Clarke, *The Australian Privacy Act 1988 as an Implementation of the OECD Data Protection Guidelines* (1989) Australian National University <www.anu.edu.au/people/Roger.Clarke/DV/PActOECD.html> at 30 July 2007, [6.1]; T Dixon, 'Preparing for the New Privacy Legislation' (Paper presented at Australia's New Privacy Legislation, Baker & McKenzie Cyberspace Law and Policy Centre CLE Conference, Sydney, 24–25 May 2001).

88 Proposal 15–2.

89 Proposal 30–1.

Proposal 3–2 The *Privacy Act* should be amended to achieve greater logical consistency, simplicity and clarity. For example, the Information Privacy Principles and the National Privacy Principles should be consolidated into a set of UPPs; the exemptions should be clarified and grouped together in a separate part of the Act; and the Act should be restructured and renumbered.

The name of the Act

3.58 The *Privacy Act* is essentially limited in its scope to the protection of personal information. It does not regulate other elements of the right to privacy, for example, the right to be free from arbitrary or unlawful interference with one's home or family life. The Privacy Commissioner, Karen Curtis, noted in evidence to the Senate Legal and Constitutional References Committee inquiry into the *Privacy Act* (Senate Committee privacy inquiry):

> I think we should all remember that, while our Privacy Act is about the protection of personal information or sensitive information, it is really about data protection. It is not about privacy in the broader sense of bodily privacy or privacy in other areas. I think 'privacy' is often seen as a catch-all and so our Privacy Act does not address all aspects of territorial privacy or bodily privacy.[90]

3.59 The Australian Government is not alone in using this nomenclature for legislation that protects personal information. Both Canada and New Zealand have a Privacy Act. The Canadian *Privacy Act 1985* regulates the handling of personal information by the public sector. The New Zealand *Privacy Act 1993* regulates the handling of personal information in both the public and the private sector.

3.60 Names given to similar legislation in a number of other jurisdictions, however, indicate more accurately the scope of the legislation; for example:

- *Privacy and Personal Information Protection Act 1998* (NSW);
- *Information Privacy Act 2000* (Vic);
- *Personal Information Protection Act 2004* (Tas);
- *Information Act 2002* (NT);
- *Data Protection Act 1998* (United Kingdom);

90 Commonwealth, *Parliamentary Debates*, Senate Legal and Constitutional References Committee, 19 May 2005, 51 (K Curtis—Privacy Commissioner).

- *Personal Information Protection and Electronic Documents Act 2000* (Canada).[91]

3.61 Nomenclature in the legislative context is important because accurate descriptive names provide a snapshot of the content of the legislation. Names may also serve political purposes, for example, assisting the passage of a Bill through Parliament, and may act to publicise the legislation locally and internationally.[92] Names that do not describe accurately the scope of legislation may mislead the public into believing that a law covers particular areas that, in fact, it does not.

Submissions and consultations

3.62 A number of submissions expressed support for the current name of the *Privacy Act*.[93] The OPC noted that the functions of the Privacy Commissioner set out in s 27 of the Act are wider than the protection of personal information. They include education to promote the protection of individual privacy[94] and recommendations to the Attorney-General on the need for legislative or administrative action in the interests of privacy.[95]

> Moreover, the Office observes that information privacy can intersect with other categories of privacy. For example, location detection technologies, which collect information about an individual's whereabouts, might be considered to cut across both information and physical privacy. In the view of the Office, the Privacy Act should therefore continue to be an instrument that can effectively respond to these broader privacy issues.[96]

3.63 The OPC expressed the view in its submission that the Act should be renamed the Australian Privacy Act to differentiate it more clearly from privacy legislation in other jurisdictions.

3.64 On the other hand, there was considerable support for renaming the legislation to focus more expressly on the protection of personal information. Options suggested included:

- Information Privacy Act;[97]

---

91 The *Personal Information Protection and Electronic Documents Act 2000* SC 2000, c 5 (Canada) regulates the handling of personal information by the private sector.

- Personal Information Privacy Act;[98]
- Personal Information Regulation Act;[99]
- Protection of Personal Information Act;[100]
- Privacy and Information Protection Act;[101]
- Data Protection Act;[102] and
- Privacy and Data Protection Act.[103]

3.65 The Australian Privacy Foundation did not support the use of the name Data Protection Act because it might imply that the legislation was limited to computerised information or was only concerned about security.[104]

3.66 The point was made in one submission that, in considering the name of the Act, it is necessary to consider whether the Act is to be extended to include a wider cause of action for invasion of privacy.[105]

ALRC's view

3.67 In Chapter 43, the ALRC proposes that the Office of the Privacy Commissioner be renamed the Australian Privacy Commission. One option would be to rename the Act the Australian Privacy Commission Act. The ALRC's view, however, is that the name of the Act should not focus on the establishment of the Commission, but on the substantive role of the legislation, that is, to protect privacy.

3.68 The ALRC does not agree that the Act should be renamed the Australian Privacy Act as suggested by the OPC. 'Australian' is often included in the title of legislation at the national level where it forms part of the name of the organisation established by the legislation, for example, *Australian Law Reform Commission Act 1996* (Cth). Where this is not the case, the relevant jurisdiction is traditionally indicated by a bracketed abbreviation following the name of legislation: *Privacy Act*

1988 (Cth). This avoids the need to include the word 'Australian' in the name of all federal legislation.

3.69 In Chapter 5, the ALRC proposes the establishment of a statutory cause of action for invasion of privacy. Proposal 5–1 suggests that this statutory cause of action be included in the *Privacy Act*. The statutory cause of action would arise in a range of situations, including where there has been an interference with an individual's home or family life, an individual has been subjected to unauthorised surveillance, or an individual's correspondence or private written, oral or electronic communication has been interfered with, misused or disclosed. If the *Privacy Act* is amended in accordance with this proposal, the ALRC is of the view that the name of the Act should remain the same.

3.70 If the *Privacy Act* is not amended to include a statutory cause of action, the ALRC has formed the preliminary view that the Act should be renamed the *Privacy and Personal Information Act*. The ALRC is of the view that the current name of the *Privacy Act* does not accurately reflect the main focus of the legislation and has the potential to cause confusion. This is a particular problem with a term such as 'privacy', which potentially covers a number of areas and is in general use in the community in relation to matters that are not covered by the *Privacy Act*. The proposed name more clearly reflects the main focus of the Act, that is, the privacy of personal information, while at the same time being wide enough to encompass the fact that the Privacy Commissioner has a number of functions that do not relate to personal information.

Proposal 3–3 If the *Privacy Act* is amended to incorporate a cause of action for invasion of privacy, the name of the Act should remain the same. If the Act is not amended in this way, however, the *Privacy Act* should be renamed the *Privacy and Personal Information Act*.

The objects of the Act

3.71 According to the former Privacy Commissioner, Malcolm Crompton:

> This light touch approach has manifested itself in the form of a principles based, rather than a prescriptive approach, to changing behaviour for the private sector at large … Although there may be good reasons for a less prescriptive approach, this kind of legislative regime leaves regulators with substantial uncertainty and ambiguity as they go about implementing and enforcing the law especially in the early phases.[106]

106 M Crompton, *'Light Touch' or 'Soft Touch'—Reflections of a Regulator Implementing a New Privacy Regime* (2004).

3.72 An objects clause is a provision—often located at the beginning of a piece of legislation—that outlines the underlying purposes of the legislation and can be used to resolve uncertainty and ambiguity. Objects clauses have been described as a 'modern day variant on the use of a preamble to indicate the intended purpose of legislation'.[107] The Office of Parliamentary Counsel, which is responsible for drafting Australian Government legislation, has noted that:

> One of the most valuable aids to detailed understanding of a complex set of provisions is a general understanding of the purpose, structure and direction of the provisions … Some objects provisions give a general understanding of the purpose of the legislation … Other objects provisions set out general aims or principles that help the reader to interpret the detailed provisions of the legislation.[108]

3.73 Objects clauses may assist the courts and others in the interpretation of legislation.[109] Section 15AA of the *Acts Interpretation Act 1901* (Cth) states that:

> In the interpretation of a provision of an Act, a construction that would promote the purpose or object underlying the Act (whether that purpose or object is expressly stated in the Act or not) shall be preferred to a construction that would not promote that purpose or object.

3.74 The interpretation Acts of the states and territories contain similar or identical provisions.[110] Cole JA of the New South Wales Court of Appeal has made clear that

> whilst regard may be had to an objects clause to resolve uncertainty or ambiguity, the objects clause does not control clear statutory language, or command a particular outcome of exercise of discretionary power.[111]

International instruments

3.75 The *Privacy Act* does not include a section setting out the objects of the legislation. The Act does include a Preamble that indicates that the legislation is intended to give effect to Australia's obligations in relation to privacy under the ICCPR and to implement the OECD Guidelines. The Preface to the OECD Guidelines states in part that

> although national laws and policies may differ, Member countries have a common interest in protecting privacy and individual liberties, and in reconciling fundamental but competing values such as privacy and the free flow of information.[112]

112 Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980), Preface.

3.76 Other international instruments also set out their aims and objects. Article 1 of the European Parliament's *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and the Free Movement of Such Data* (EU Directive), states that:

> 1. In accordance with this Directive, Member States shall protect the fundamental rights and freedoms of natural persons, and in particular their right to privacy with respect to the processing of personal data.
>
> 2. Member States shall neither restrict nor prohibit the free flow of personal data between Member States for reasons connected with the protection afforded under paragraph 1.[113]

3.77 The Preamble to the Asia-Pacific Economic Cooperation (APEC) Privacy Framework states that:

> Finally, this Framework on information privacy protection was developed in recognition of the importance of:
>
> - Developing appropriate privacy protections for personal information, particularly from the harmful consequences of unwanted intrusions and the misuse of personal information;
> - Recognizing the free flow of information as being essential for both developed and developing market economies to sustain economic and social growth;
> - Enabling global organizations that collect, access, use or process data in APEC member economies to develop and implement uniform approaches within their organizations for global access to and use of personal information;
> - Enabling enforcement agencies to fulfill their mandate to protect information privacy; and
> - Advancing international mechanisms to promote and enforce information privacy and to maintain the continuity of information flows among APEC economies and with their trading partners.[114]

Federal legislation

3.78 Although the *Privacy Act* does not include an objects clause, s 29 of the Act requires the Privacy Commissioner to have regard to a number of matters in performing his or her functions. These include the protection of important human rights and social interests that compete with privacy such as the general desirability of a free flow of information, through the media and otherwise, and the right of

113 European Parliament, *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data*, Directive 95/46/EC (1995), art 1 Objects of the Directive.

114 Asia-Pacific Economic Cooperation, *APEC Privacy Framework* (2005), Preamble.

government and business to achieve their objectives in an efficient way.[115] The Commissioner is also required to take into account Australia's international obligations, including those concerning the international technology of communications and developing general international guidelines relevant to the better protection of individual privacy.[116] The Commissioner must also ensure that his or her recommendations and guidelines are, within the limitations of the powers of the Commonwealth, capable of acceptance, adaptation and extension throughout Australia.[117]

3.79 Section 3 of the *Privacy Amendment (Private Sector) Act* states that the main objects of that Act are:

> (a) to establish a single comprehensive national scheme providing, through codes adopted by private sector organisations and National Privacy Principles, for the appropriate collection, holding, use, correction, disclosure and transfer of personal information by those organisations; and
>
> (b) to do so in a way that:
>
> (i) meets international concerns and Australia's international obligations relating to privacy; and
>
> (ii) recognises individuals' interests in protecting their privacy; and
>
> (iii) recognises important human rights and social interests that compete with privacy, including the general desirability of a free flow of information (through the media and otherwise) and the right of business to achieve its objectives efficiently.

3.80 A number of other federal Acts in the field of human rights—including the *Sex Discrimination Act 1984* (Cth), the *Disability Discrimination Act 1992* (Cth) and the *Age Discrimination Act 2004* (Cth)—include an objects clause. Recent federal Acts containing an objects clause include the *Future Fund Act 2006* (Cth), the *Energy Efficiency Opportunities Act 2006* (Cth) and the *Law Enforcement Integrity Commissioner Act 2006* (Cth).

State and territory privacy legislation

3.81 The *Information Privacy Act 2000* (Vic),[118] the *Information Act 2002* (NT)[119] and the Information Privacy Bill (WA)[120] expressly set out their objects. The *Privacy and Personal Information Protection Act 1998* (NSW) and the *Personal Information Protection Act 2004* (Tas), however, do not include an objects clause.

---

115 *Privacy Act 1988* (Cth) s 29(a).
116 Ibid s 29(b).
117 Ibid s 29(c).

119 *Information Act 2002* (NT) s 3.
120 Information Privacy Bill 2007 (WA) cl 3.

3.82 Section 5 of the Victorian *Information Privacy Act* provides that the objects of that Act are:

> (a) to balance the public interest in the free flow of information with the public interest in protecting the privacy of personal information in the public sector;
>
> (b) to promote awareness of responsible personal information handling practices in the public sector;
>
> (c) to promote the responsible and transparent handling of personal information in the public sector.

Submissions and consultations

3.83 There was significant support for amending the *Privacy Act* to include an objects clause.[121] The Office of the Information Commissioner Northern Territory stated that:

> I consider that the impact of the privacy principles could be significantly enhanced by a brief statement of the overarching objects to guide those who must interpret and implement them. This could either appear as an introductory statement to the principles or as an objects clause at the start of the Act.[122]

3.84 The National Health and Medical Research Council (NHMRC) suggested that an objects clause would assist health service providers, researchers and others to understand the overall purpose, structure and direction of the legislation and, on that basis, better interpret and apply the legislation.[123]

3.85 Stakeholders suggested that the objects of the *Privacy Act* might include:

- to balance the public interest in protecting individual privacy with other public interests;[124]

- to secure the right of individuals to control the dissemination of information about their own lives;[125]
- to promote the responsible and transparent handling of personal information;[126]
- to protect the information privacy of individuals while authorising appropriate uses of their personal information;[127]
- to achieve national consistency;[128] and
- the matters set out in s 29 of the *Privacy Act*, as discussed above.[129]

ALRC's view

3.86 The ALRC's view is that the *Privacy Act* would benefit from the inclusion of an objects clause setting out the purpose and aims of the legislation. This is particularly important in principles-based legislation because principles require constant interpretation and application to particular contexts and an objects clause provides a reference framework to assist with this.

3.87 Some of the matters set out in s 29 of the *Privacy Act* for consideration by the Privacy Commissioner in carrying out his or her functions would sit more appropriately in an objects clause. These matters are relevant to the interpretation and application of the Act by all stakeholders, not only the Privacy Commissioner.

3.88 The ALRC proposes, therefore, that the objects clause include the following elements. The clause should state that one of the objects of the Act is to implement Australia's obligations at international law in relation to privacy. This provides a pointer to relevant international instruments and jurisprudence that may assist in interpreting and applying the legislation. The clause should also state that the Act is intended to promote the protection of individual privacy. The right to privacy is one of a number of fundamental human rights set out in the ICCPR and other international instruments and, while the right is not absolute, one of the objects of the *Privacy Act* should be to promote protection of that right.

3.89 Chapter 1 discusses how the right to privacy competes, collides and coexists with other rights and interests, such as freedom of expression. The objects clause should expressly recognise these tensions and make clear that the Act is intended to provide a framework within which agencies and organisations must balance the public interest in protecting the privacy of individuals with other public interests. Although

128 Australian Bankers' Association Inc, *Submission PR 259*, 19 March 2007.
129 Australian Government Department of Health and Ageing, *Submission PR 273*, 30 March 2007.

the right to privacy is an individual right, there is a strong public interest in protecting that right. For example, it is essential that health consumers are confident that their health information will be handled appropriately or they may resist sharing that information with health service providers. This has the potential to have a negative impact on the health of the individual and is also an undesirable public policy outcome, with the potential to impact on the health of the community as a whole.

3.90 Chapter 5 proposes the *Privacy Act* be amended to include a statutory cause of action for invasion of privacy. The objects clause should reflect that the Act and the statutory cause of action are not limited to the protection of personal information but are intended to protect a wider set of interests that individuals have in the personal sphere free from the interference of others.

3.91 The objects clause should also make clear that the Act and, in particular, the UPPs are intended to promote the responsible and transparent handling of personal information by agencies and organisations. This will help to ensure respect for the right to privacy while, at the same time, facilitating the growth and development of electronic commerce, nationally and internationally.

3.92 Finally, the objects clause should make clear that the Act is intended to provide the basis for nationally consistent regulation in the area of privacy. Chapter 4 sets out the ALRC's proposals to achieve greater national consistency.

Proposal 3–4 The *Privacy Act* should be amended to include an objects clause. The objects of the Act should be to:

(a) implement Australia's obligations at international law in relation to privacy;

(b) promote the protection of individual privacy;

(c) recognise that the right to privacy is not absolute and to provide a framework within which to balance the public interest in protecting the privacy of individuals with other public interests;

(d) establish a cause of action to protect the interests that individuals have in the personal sphere free from interference from others;

(e) promote the responsible and transparent handling of personal information by agencies and organisations;

(f) facilitate the growth and development of electronic commerce, nationally and internationally, while ensuring respect for the right to privacy; and

(g) provide the basis for nationally consistent regulation of privacy.

Some important definitions

3.93 Part II of the *Privacy Act* sets out a number of important definitions. While these will be discussed in detail, where relevant, throughout this Discussion Paper, some core definitions are discussed below.

Personal information

3.94 Central to the regime established by the *Privacy Act* is the definition of 'personal information'. This is because the privacy principles only apply to personal information. The current definition of 'personal information' is the same as the definition found in the original 1988 Act:

> information or an opinion (including information or an opinion forming part of a database), whether true or not, and whether recorded in a material form or not, about an individual whose identity is apparent, or can reasonably be ascertained, from the information or opinion.[130]

3.95 A number of submissions to the Senate Committee privacy inquiry suggested that the definition of 'personal information' in the Act needed to be updated to deal with new technologies and new methods of collecting information.[131] Research done on behalf of the Consultative Committee of the Council of Europe Convention has also highlighted that new technology makes it possible to process data relating to individuals—and to develop profiles of those individuals—that are not linked to their legal identity such as their name and address.[132]

3.96 Both the OPC and the Senate Committee recommended that the ALRC, in its review of the *Privacy Act*, examine the definition of 'personal information' and any amendments to the definition that may be needed to reflect technological advances and international developments in privacy law.[133]

International instruments

3.97 The OECD Guidelines[134] and the Council of Europe Convention[135] define 'personal data' as 'any information relating to an identified or identifiable individual'. The EU Directive defines 'personal data' as 'any information relating to an identified or identifiable natural person' and goes on to say that an identifiable person is

> one who can be identified, directly or indirectly, in particular by reference to an identification number or to one or more factors specific to his physical, physiological, mental, economic, cultural or social identity.[136]

3.98 The APEC Privacy Framework defines 'personal information' as 'any information about an identified or identifiable individual.' The Framework goes on to state that this includes information that can be used to identify an individual, as well as information that would not meet this criteria alone, but when put together with other information would identify an individual.[137]

Other jurisdictions

3.99 A 2004 report on the meaning of 'personal data' prepared for the United Kingdom Information Commissioner examined the definition and application of the term in the privacy legislation of 18 countries. The report found that there is 'no one uncontested and coherent definition' of 'personal data'.[138]

3.100 The *Data Protection Act 1998* (UK) states that 'personal data' means:

> data which relate to a living individual who can be identified
>
> (a) from those data, or
>
> (b) from those data and other information which is in the possession of, or is likely to come into the possession of, the data controller
>
> and includes any expression of opinion about the individual and any indication of the intentions of the data controller or any other person in respect of the individual.[139]

138 S Booth and others, *What are 'Personal Data'?—A Study Conducted for the UK Information Commissioner* (2004), 8.

139 *Data Protection Act 1998* (UK) s 1(1).

3.101 Both the Canadian *Personal Information Protection and Electronic Documents Act 2000*[140] and the New Zealand *Privacy Act 1993*[141] simply define 'personal information' as 'information about an identifiable individual'.

3.102 The Information Privacy Bill 2007 (WA) defines personal information in part as follows:

> Personal information is information or an opinion, whether true or not, and whether recorded in a material form or not, about an individual, whether living or dead—
>
> (a) whose identity is apparent or can reasonably be ascertained from the information or opinion; or
>
> (b) who can be identified by reference to an identifier or an identifying particular such as a fingerprint, retina print or body sample.[142]

Submissions and consultations

3.103 A number of submissions expressed support for the existing definition.[143] The Australian Bankers' Association stated that changing key definitions in the *Privacy Act* would come at some cost to industry and should only be done if a clear case for change is made out.[144] DLA Phillips Fox noted in its submission that the current definition is broad enough to capture information in any medium and sufficiently flexible to allow for future technological developments.[145]

3.104 There was support for keeping the definition technologically neutral.[146] Technological neutrality supports technological change. The OPC noted that:

> The definition of personal information is contingent on context for its application. In the view of the Office, this is one of the strengths of the definition, allowing it to respond to change and technological advance. In order to alleviate any confusion generated by the flexibility of the term, the Office intends to issue further guidance material.[147]

3.105 A number of stakeholders expressed support for the definition of 'personal information' included in the EU Directive.[148]

About an individual

3.106 The current definition in the *Privacy Act* states that information must be 'about an individual'. The APEC Privacy Framework also requires that information be 'about' an individual. The OECD Guidelines, the Council of Europe Convention and the EU Directive require that information 'relate to' an individual.

3.107 The 2004 report prepared for the United Kingdom Information Commissioner, however, notes that not all data that relate to an individual should fall within the definition of 'personal information'. To hold that all information that could affect or be linked to an individual is 'personal information' 'runs the risk of making all data personal data'. The limiting factor is that the information must relate to an identifiable individual: the information must either identify the individual or be able to be linked to information that can identify the individual. The report defines this kind of information as being 'about' the individual.[149]

3.108 Veda Advantage noted that if the definition of 'personal information' were expanded to include information that 'referred to' or 'related to' an individual, it would make large scale data studies—where privacy is protected by de-identifying information or encrypting significant elements—impossible.[150]

3.109 One other issue that arose in submissions and consultations was whether business or commercial information was 'about' an individual, for example, information on the number and type of prescriptions issued by a particular doctor, where patient identifiers have been removed. It was suggested that this kind of information should not be protected by the *Privacy Act* as it relates to the individual doctor's business practices, rather than his or her personal affairs.[151] The Article 29 Data Protection Working Party, however, has stated that:

> Drug prescription information … whether in the form of an individual prescription or in the form of patterns discerned from a number of prescriptions, can be considered as personal data about the physician who prescribes this drug, even if the patient is anonymous.[152]

3.110 The OPC has also stated that, if an individual's identity can be determined from business information, the information is personal information for the purposes of the

Privacy Act.[153] The Australian Government noted in its response to the recommendations of the *Taskforce on Reducing the Regulatory Burden on Business* that the publication of detailed information on the charging practices and performance of health service providers is likely to have industry wide implications and any proposed reform would need to take these implications into account.[154]

3.111 While the *Privacy Act* would not stand in the way of this kind of regulatory reform, in the absence of such reform the *Privacy Act* will apply to such information. The extent to which business or commercial information is 'about' an individual and, therefore, constitutes 'personal information' is also considered in Chapter 50 in relation to credit reporting and Chapter 57 in relation to health service providers.

Whose identity is apparent, or can reasonably be ascertained

3.112 In 2002, the then Privacy Commissioner, Malcolm Crompton, stated that 'Identity and anonymity are not binary opposites, but rather different ends of the same spectrum and there are many shades of grey between them'.[155]

> An important distinction needs to be made between identity and identification. Identity is a complex, multifaceted notion. Each of us has a range of different identities defined through relations with others, position, status, actions, behaviours, characteristics, attitudes and the circumstances of the moment …
>
> Identification is the action of being identified, of linking specific information with a particular person. An individual's identity has a degree of fluidity and is likely to change over time. The extensive linking of different information about an individual may restrict or limit this fluidity …
>
> Identification can potentially relate a wide range of elements of an individual's identity. In practice, identifying an individual generally involves focusing on those things that distinguish that individual from others including, legal name, date of birth, location or address and symbolic identifiers such as a drivers license number.[156]

3.113 A number of submissions to the Inquiry expressed concern that, with the advent of the internet and other technologies—such as location based services including mobile phones and the Global Positioning System (GPS)—it is possible to build profiles of individuals using identifiers such as mobile phone numbers.[157] The 2004 report prepared for the United Kingdom Information Commissioner notes that:

> 'Identification' can potentially refer to at least two very different concepts. The first could be termed 'handshake' identification. This concept of identification requires

> that the individual concerned can actually be physically located, in order to enable a 'handshake' to take place. The second could be termed 'isolate and affect' identification. This holds that no such physical location is required; instead; identification is achieved if an individual can be effectively isolated from others and deliberately targeted in some way. Such identification may be regularly realised within electronic environments.[158]

3.114 The report provides the following example:

> An example may be provided by those individuals who 'date' online in chat rooms while concealing details of their 'real' identities or physical locations. While incapable of locating each other for the purposes of a 'handshake' they may nevertheless be able to consistently and reliably 'identify' and 'affect' each other in their virtual environment.[159]

3.115 However, the report notes that:

> Under the 'handshake' concept of identification, it would be difficult to see how the individual identified could be anything other than a living, natural person. If the 'isolate and affect' concept of identification is employed, then this could *potentially* apply to legal persons. In fact, taken to its extreme, such a concept of identification could legitimise the protection of personal data belonging to imaginary persons.[160]

3.116 Electronic Frontiers Australia has suggested including the following in the definition of 'personal information':

> Any information which enables interactions with an individual on a personalised basis, or enables tracking or monitoring of an individual's activities and/or communication patterns, or enables an individual to be contacted.[161]

3.117 The Australian Privacy Foundation suggested that the definition of personal information should include telephone numbers, email or IP addresses and information stored with an identifier code or label:

> Personal information needs to be defined as any information from which an individual can be identified, whether from the information itself or by reference to other information in the possession of, or readily accessible to, the data user.[162]

3.118 Professor William Caelli noted that, in the context of internet based information services,

> the use of pseudonyms, aliases and the like appears common, or even total, in this environment. Users maintain their privacy through protection of an 'association', ie, exposure of the relationship between the assumed 'internet' identity and 'real' identity.[163]

3.119 He notes that, in order to ensure an individual's privacy, it is necessary to protect this association.

3.120 The United Kingdom Information Commissioner has issued detailed legal guidelines on the *Data Protection Act 1998* (UK) including in relation to the meaning of 'personal data'. Under the *Data Protection Act*, the individual must be capable of being identified from data in the possession of the data controller, or from those data and other information in the possession of, or likely to come into the possession of, the data controller:

> The Commissioner recognises that an individual may be 'identified' without necessarily knowing the name and address of that particular individual.
>
> The Commissioner's view is that it is sufficient if the data are capable of being processed by the data controller to enable the data controller to distinguish the data subject from any other individual. This would be the case if a data subject could be treated differently from other individuals …
>
> If the information about a particular web user is built up over a period of time, perhaps through the use of tracking technology, with the intention that it may later be linked to a name and address, that information is personal data. Information may be compiled about a particular web user, but there might not be any intention of linking it to a name and address or e-mail address. There might merely be an intention to target that particular user with advertising, or to offer discounts when they re-visit a particular web site, on the basis of the profile built up, without any ability to locate that user in the physical world. The Commissioner takes the view that such information is, nevertheless, personal data. In the context of the on-line world the information that identifies an individual is that which uniquely locates him in that world, by distinguishing him from others.[164]

3.121 DLA Phillips Fox suggested in its submission that:

> The current definition … does not require the identification of an individual by reference to the individual's legal identifiers, but rather that their identity can 'be reasonably ascertained'. This is sufficiently broad to ensure that advances in data processing and storage methods will not result in information capable of being associated with an individual falling outside the ambit of the Privacy Act.[165]

3.122 The OPC expressed the following view in its submission:

> The definition of personal information provides latitude for the Office to take into consideration contextual factors when determining if information should be subject to

---

163 W Caelli, *Submission PR 99*, 15 January 2007.

164 United Kingdom Government Information Commissioner's Office, *Data Protection Act 1998 Legal Guidance* (2001), 11.

165 DLA Phillips Fox, *Submission PR 111*, 15 January 2007.

> the *Privacy Act*. These contextual factors go to determining whether an individual's identity is 'readily ascertainable'.
>
> The Office recognises the challenges posed by the development of new technologies and processes, particularly in the field of data-matching, that have the potential to create identified information from data sources containing previously anonymous data. However, the definition of personal information leaves open the flexibility to consider the degree to which an organisation is able to 'reasonably ascertain' someone's identity, including by the use of such technologies.[166]

3.123 The OPC has expressed the view that this may depend on the resources available to an organisation to re-identify the information.[167] The OPC has suggested that it issue further guidance on what is 'personal information' taking into account the fact that in the current environment it is more difficult to assume that information about people cannot be connected.[168]

Ability to contact

3.124 A number of submissions supported expanding the definition of 'personal information' to include information that allows an individual to be contacted. The Australian Privacy Foundation suggested that the definition should include information sufficient to allow communications with an individual whether or not it is sufficient to allow the individual to be identified.[169]

3.125 On the other hand, Australia Post expressed the following concern:

> The Corporation further submits that any move to extend the definition of personal information to include 'contact information' or otherwise prevent the ability of a business to contact an unidentifiable individual, would be inconsistent with the policy objectives of Privacy Act.[170]

3.126 The OPC has made clear that a business can use personal information taken from public sources—such as the phone book—to contact potential customers. Thus, even if contact information were 'personal information', businesses could use the information to contact individuals. The obligations imposed by the *Privacy Act* in these circumstances would be to:

- tell potential customers the business' name and how to contact it, why the information has been collected, to whom the business usually discloses such information and how the customer can get access to the information (NPP 1.5);

- only use the information for the purpose it was collected, that is to approach the customer, or for a related purpose that the potential customer would expect (NPP 2.1(a));

- do what is reasonable to make sure the information is correct and to delete or correct information that it finds is not correct (NPP 3);

- keep the information reasonably secure (NPP 4);

- have a privacy policy (NPP 5); and

- give the potential customer access to the information on request and correct any errors the customer points out (NPP 6).[171]

ALRC's view

3.127 The current definition of 'personal information' contains the following elements:

- information or an opinion;

- including information or an opinion forming part of a database;

- whether true or not;

- whether recorded in a material form or not;

- about an individual;

- whose identity is apparent from the information or opinion; or

- whose identity can reasonably be ascertained from the information or opinion.[172]

Elements requiring no change

3.128 The ALRC proposes that the following elements of the definition should remain unchanged: information or an opinion, whether true or not, and whether recorded in a

171 Office of the Federal Privacy Commissioner, *Guidelines to the National Privacy Principles* (2001).
172 *Privacy Act 1988* (Cth) s 6(1).

material form or not. The ALRC did not receive any submissions indicating that these elements of the definition were problematic.

3.129 The ALRC is also of the view that 'about' an individual remains appropriate and effective. The ALRC notes that, although a number of international instruments use the term 'relates to', the *Privacy Act* terminology is consistent with the APEC Privacy Framework.

Forming part of a database

3.130 The ALRC is of the view that the second element of the definition—'including information or an opinion forming part of a database'—is unnecessary and should be deleted. It may have been helpful to make this clear in 1988 when the *Privacy Act* was originally passed, but in the current environment it is no longer a matter of uncertainty. In addition, the proposed definition of 'record', discussed below, expressly includes 'information stored in electronic or other forms'.

Whose identity is apparent or can reasonably be ascertained

3.131 The ALRC's view is that this element of the definition should be amended to bring it more into line with other jurisdictions and international instruments. The ALRC proposes that 'personal information' should be defined as information about 'an identified or reasonably identifiable individual'. The ALRC notes the distinction drawn by the former Privacy Commissioner between 'identity' and 'identification' and is of the view that the *Privacy Act* should apply to information about an individual who is 'identified or reasonably identifiable' rather than information about an individual whose 'identity' is apparent, or can reasonably be ascertained.

3.132 The ALRC notes the difficulties that stakeholders have with the existing definition and is of the view that using terminology that is more consistent with that used in relevant international instruments may assist. International jurisprudence and explanatory material based on the terms 'identified' and 'identifiable' will be more directly relevant. The APEC Privacy Framework, the OECD Guidelines, the Council of Europe Convention and the EU Directive use the terms 'identified' and 'identifiable'.

3.133 In the ALRC's view, the definition should include an element of reasonableness. Whether an individual can be identified or is identifiable depends on context and circumstances. While it may be technically possible for an agency or organisation to identify individuals from information it holds by, for example, linking the information with information held by another agency or organisation, it may be that it is not practically possible because, for example, of logistics or legislation. In these circumstances, the ALRC is of the view that individuals are not 'reasonably identifiable'.

3.134 If, however, the agency or organisation does have access to other information and is able to link that information with information it holds in such a way that individuals can be identified, the ALRC is of the view that those individuals are 'reasonably identifiable' and that the information is 'personal information' for the purposes of the *Privacy Act.* For this reason, the definition of 'personal information' should not be limited, as it currently is, to information about an individual who can be identified 'from the information'. The ALRC proposes that the Explanatory Memorandum to the amended Act make clear that an individual is 'reasonably identifiable' when the individual can be identified from information in the possession of an agency or organisation or from that information and other information the agency or organisation has the capacity to access or is likely to access.

3.135 This issue is discussed further in Chapter 58 in relation to research, data linkage and the use of intermediaries such as 'gene trustees'. Where an independent intermediary is used to remove identifying particulars and to code information provided to researchers, the ALRC is of the view that this is an effective method of protecting privacy. Where appropriate arrangements are put in place between data custodians, intermediaries and researchers, the ALRC is of the view that the information in the hands of researchers is not 'identified or reasonably identifiable' for the purposes of the *Privacy Act*.

3.136 The ALRC notes the United Kingdom Information Commission's view that information need not be linked to a name and address in order for the individual to be 'identified' and that, where information allows an agency or organisation to distinguish an individual from any other individual, this amounts to personal information. The examples provided included the collection of information about internet users with the intention of linking that information to names and addresses; and targeting individuals with advertising without linking the information to names and addresses or making any effort to identify individuals in the physical world. The Commissioner takes the view that such information is personal information. The ALRC agrees that this information should be protected by the *Privacy Act* and would fall within the proposed definition of personal information.

3.137 The ALRC does not agree, however, that 'information that identifies an individual is that which uniquely locates him in that world, by distinguishing him from others'.[173] In the ALRC's view, this is not sufficient to amount to 'personal information'. The use of an independent intermediary to code information for release to researchers allows researchers to distinguish one individual from others and to link information about that individual, without being able to 'identify' the individual. In order for information to identify an individual, it must be possible to use the information to contact, target or affect the individual in some way. If it is not possible

173 United Kingdom Government Information Commissioner's Office, *Data Protection Act 1998 Legal Guidance* (2001), 11.

to make this link with a particular individual then, in the ALRC's view, the information is not about an 'identified' or 'reasonably identifiable' individual.

3.138 Electronic Frontiers Australia has suggested that the definition of 'personal information' be amended to include information that enables interactions with an individual on a personalised basis, or enables tracking or monitoring of an individual's activities and/or communication patterns. In the ALRC's view, the proposed amended definition of 'personal information' would cover 'information that enables interactions with an individual on a personalised basis'. It would also cover information that enables 'tracking or monitoring of an individual's activities and/or communication patterns' if a link can be established to a particular individual and that individual can be contacted, targeted or affected in some way.

Ability to contact

3.139 In the ALRC's view, information that simply allows an individual to be contacted—such as a phone number, a street address or an IP address—in isolation, would not fall within the proposed definition of 'personal information'. The *Privacy Act* is not intended to implement an unqualified 'right to be let alone'. This broader issue is discussed in Chapter 1 in relation to the meaning of 'privacy'. Contact information may become 'personal information' in certain contexts, for example, once a mobile number is linked to a particular individual or the number can reasonably be linked to a particular individual. If an agency or organisation can reasonably ascertain the identities of direct mail recipients by linking data in the address database with particular names in the same or another database, that information is 'personal information' and should be treated as such.

3.140 As information accretes around a point of contact such as a telephone number, an address, an email address or an IP address, it will become possible to link that information to a particular individual, to contact or affect that individual or to target the individual, for example, with advertising material. Once this occurs, that information becomes 'personal information' for the purposes of the *Privacy Act.*

Conclusion

3.141 The then Privacy Commissioner, Malcolm Crompton expressed the view that:

> Privacy laws need to be in the form of general principles, as information handling is highly contextual. This can create a significant margin for interpretation and implementation.[174]

174 M Crompton, 'Under the Gaze, Privacy Identity and New Technology' (Paper presented at International Association of Lawyers 75th Anniversary Congress, Sydney, 28 October 2002).

3.142 Because of this, elements of the definition of 'personal information' will continue to give rise to theoretical uncertainty. While much information will fall clearly inside or outside the definition, there will be a need for ongoing practical guidance in relation to those areas of uncertainty. The OPC has suggested that the Office issue further guidance on the meaning of 'personal information'. The ALRC agrees that such guidance will be necessary to indicate how the definition operates in specific contexts. In particular, the ALRC proposes that the OPC issue guidance on the meaning of 'identified or reasonably identifiable'.

Proposal 3–5 (a) The *Privacy Act* should define 'personal information' as 'information or an opinion, whether true or not, and whether recorded in a material form or not, about an identified or reasonably identifiable individual'.

(b) The Explanatory Memorandum of the amending legislation should make clear that an individual is 'reasonably identifiable' when the individual can be identified from information in the possession of an agency or organisation or from that information and other information the agency or organisation has the capacity to access or is likely to access.

(c) The Office of the Privacy Commissioner should provide guidance on the meaning of 'identified or reasonably identifiable'.

Sensitive information

3.143 'Sensitive information' is a sub-set of personal information and is given a higher level of protection under the NPPs. The IPPs do not refer to sensitive information and agencies are required to handle all information, including sensitive information, in accordance with the IPPs. This issue is discussed further in Chapter 19.

3.144 'Sensitive information' is defined in the *Privacy Act* to mean information or an opinion about an individual's:

- racial or ethnic origin;
- political opinions;
- membership of a political association;
- religious beliefs or affiliations;
- philosophical beliefs;
- membership of a professional or trade association;

- membership of a trade union;
- sexual preferences or practices; or
- criminal record.

3.145 'Sensitive information' also includes health information[175] and genetic information about an individual that is not otherwise health information.[176]

3.146 'Sensitive information' is subject to a higher level of privacy protection than other 'personal information' handled by organisations in the following ways:

- 'sensitive information' may only be collected with consent except in specified circumstances. Consent is generally not required to collect 'personal information' that is not 'sensitive information';[177]
- 'sensitive information' must not be used or disclosed for a secondary purpose unless the secondary purpose is directly related to the primary purpose of collection and within the reasonable expectations of the individual;[178]
- 'sensitive information' cannot be used for the secondary purpose of direct marketing;[179] and
- 'sensitive information' cannot be shared by 'related bodies corporate' in the same way that they may share other 'personal information'.[180]

3.147 Similar classes of personal information are included in the definitions of 'sensitive information' in the Victorian, Tasmanian and Northern Territory privacy

175 *Privacy Act 1988* (Cth) s 6(1). The definition of 'health information' is discussed in Ch 57.

176 *Privacy Legislation Amendment Act 2006* (Cth). In the report *Essentially Yours* (ALRC 96), the ALRC and AHEC considered the definition of 'sensitive information'. They came to the conclusion that the definition did not provide an appropriate level of protection for genetic information that did not fall within the definition of health information—for example, genetic information derived from parentage or other identification testing that is not predictive of health—and recommended that the definition be amended to clarify this issue: Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), Rec 7–5. The Australian Government accepted this recommendation and the relevant amendment came into force in September 2006.

177 *Privacy Act 1988* (Cth) sch 3, NPP 10.

178 Ibid sch 3, NPP 2.1(a).

179 Ibid sch 3, NPP 2.1(c).

180 Ibid s 13B.

legislation.[181] Health information is not included in the definition of 'sensitive information' in Victoria because it is covered separately by the *Health Records Act 2001* (Vic). The *Privacy and Personal Information Protection Act 1998* (NSW) does not include a definition of sensitive information.

3.148 The Council of Europe Convention and OECD Guidelines do not specifically address sensitive information. Indeed, the Explanatory Memorandum to the OECD Guidelines expresses the view that 'it is probably not possible to identify a set of data which are universally regarded as being sensitive'.[182]

3.149 Article 8 of the EU Directive deals with 'special categories of data', which are defined as 'personal data revealing racial or ethnic origin, political opinions, religious or philosophical beliefs, trade-union membership, and the processing of data concerning health or sex life'. Article 8 prohibits the processing of this kind of information without consent except in specified circumstances and allows Member States to prohibit processing such data even with the consent of the data subject. The EU Directive also refers to 'sensitive data' but does not define the term.[183]

3.150 Sensitive information is provided with additional protection in the *Privacy Act* for a number of reasons. Information relating to race or ethnic origin, political or religious beliefs, trade union membership and sexual orientation, for example, is highly personal and may provide the basis for unjustified discrimination. In addition, this sort of information is likely to be necessary for the functions and activities of agencies and organisations in very limited circumstances. Health information, genetic information and criminal record information is also highly personal and has the potential to give rise to unjustified discrimination against individuals.

Submissions and consultations

Information made sensitive by context

3.151 In its submission to the Inquiry, the NHMRC stated that:

> it is extremely difficult to establish the categories of information which universally would be considered 'sensitive' either because of the nature of the information, the context in which it is handled or the views of the person to whom the information relates.
>
> We note that the *Personal Information Protection and Electronic Documents Act 2000* (Canada) does not define 'sensitive information' and that the Model Code allows an organisation discretion in determining whether information is sensitive. We

183 European Parliament, *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data*, Directive 95/46/EC (1995), arts 34, 70.

> also note that the sensitivity of certain categories of information may vary between cultures and individuals.[184]

3.152 The Canadian *Personal Information Protection and Electronic Documents Act 2000* states that:

> The form of the consent sought by the organization may vary, depending upon the circumstances and the type of information. In determining the form of consent to use, organizations shall take into account the sensitivity of the information. Although some information (for example, medical records and income records) is almost always considered to be sensitive, any information can be sensitive, depending on the context. For example, the names and addresses of subscribers to a newsmagazine would generally not be considered sensitive information. However, the names and addresses of subscribers to some special-interest magazines might be considered sensitive.[185]

3.153 The NHMRC suggested that:

> We support some regulatory discretion to prescribe categories of information, in addition to those that are included within the present definition contained in the *Privacy Act*, as sensitive information.[186]

3.154 The CSIRO suggested that sensitive information should include 'culturally sensitive data' or other data deemed to be sensitive by the data provider.[187]

3.155 The Queensland Government Commission for Children and Young People and Child Guardian noted that:

> For instance, a health practitioner receiving information relating to the abuse or neglect of a child may consider this information to be health information, and hence deal with it under the specific health privacy regime. However, if the same information is received by a child welfare practitioner it is not likely to be considered purely health information. The classification of child abuse information thus appears to depend not only on its nature, but also the context in which it is received.[188]

3.156 DLA Phillips Fox, however, supported the current definition of 'sensitive information':

> We also submit that the current definition of 'sensitive information' is adequate and appropriate. Introducing more subjective criteria (such as the sensitivity of the information taking into account surrounding circumstances) would:

- result in greater uncertainty of application; and
- reduce the ability of organisations to implement broad guidelines for the treatment of categories of information so as to ensure compliance with the NPPs (and equivalent state and territory requirements).[189]

Financial information

3.157 The Australian Privacy Foundation suggested that sensitive information should include financial information.[190] A number of other stakeholders described consumer credit information as sensitive information.[191] The OPC stated that:

> Community attitudes research undertaken by the Office in 2001 and 2004 has indicated that individuals consider financial information to be very sensitive. In both community attitudes surveys, financial information was the top response for individuals when rating what types of information they were most reluctant to provide to organisations.[192]
>
> The Office believes that this issue warrants further exploration to determine whether financial information should be afforded the status of sensitive information. Where a decision is made to include financial information under the definition of sensitive information, financial information will need to be adequately defined under the Privacy Act. In general terms 'financial information' may mean account numbers or account details, pin numbers, income and asset information, bank statement information and so on. It would be important to clarify the limits of the definition of financial information in order to ensure that the definition of sensitive information would, in turn, be clear and straight-forward.[193]

3.158 Legal Aid Queensland, however, noted in its submission:

> That obtaining consent as the primary criteria for the release of financial information fails to recognise the inherent disparity in the bargaining positions of consumers and corporations.[194]

Biometric information

3.159 Biometric information can be 'personal information' for the purposes of the *Privacy Act* in some circumstances, that is, where an individual's identity is apparent or can reasonably be ascertained from the information. Biometric technologies are discussed further in Chapter 6. A number of stakeholders suggested that biometric information, like genetic information, should be accorded the higher protection

provided by the *Privacy Act* in relation to 'sensitive information'.[195] Concern has been expressed that biometric technologies, such as facial recognition technologies, may be used to identify individuals without their knowledge or consent,[196] and that biometric information could reveal other sensitive personal information, such as information about a person's health, racial or ethnic origin or religious beliefs.[197]

3.160 The Biometrics Institute describes the nature of biometric technology as follows:

> Biometric technology involves the storage and use of unique personal information to verify the identity of an individual. These unique identifiers are based on personal attributes such as fingerprints, DNA, iris, facial features, hand geometry, voice etc. Even a photograph could be described as one of the lower levels of biometric recognition.[198]

3.161 As discussed in Chapter 6, in a typical biometric system, a biometric device, such as a finger scanner, is used to take a biometric sample from an individual. Data from the sample are then analysed and converted into a biometric template, which is stored in a database or an object in the individual's possession, such as a smart card. Later biometric samples taken from the individual can then be compared to the stored biometric information to determine who the individual is (identification, or one-to-many matching) or to attempt to verify that an individual is who he or she claims to be (authentication, or one-to-one matching).

3.162 Recognising some of the special sensitivities around the use of biometric technology, the Biometrics Institute, in consultation with the OPC, has developed a privacy code to regulate the handling of biometric information.[199] The code binds private sector organisations that apply to become Code Subscribers and whose applications are approved by the Biometrics Institute Board. To date, only four organisations have elected to be bound by the Code. The Biometrics Institute has stated in relation to the Code:

> A Code can send a positive statement to the community that Biometrics Institute members are conscious of the privacy concerns of individuals and are prepared to voluntarily adopt higher standards for privacy protection than the National Privacy Principles (NPPs) require.

198 Biometrics Institute, *Biometrics Institute Privacy Code Information Memorandum* (2006), 1.

199 Biometrics Institute, *Biometrics Institute Privacy Code* (2006).

> While the need for higher standards than those contained in the Privacy Act is debated by some Biometrics Institute members, there is a general consensus that a degree of public scepticism will need to be overcome before biometric systems are accepted as mainstream, or even privacy-enhancing.[200]

3.163 The *Biometrics Institute Privacy Code* includes a number of Supplementary Biometrics Institute Privacy Principles. One of the additional principles is similar in scope to the protection provided for 'sensitive information' by NPP 2.1(a):

> Secondary analysis or function creep of biometric information collected for purposes such as authentication or identification is not permitted without express free and informed consent. For example biometric information collected for the purposes of authentication and identification shall not be used to examine that information in search of genetic patterns or disease identification without express free and informed consent.[201]

3.164 In its submission to the Inquiry, the Health Informatics Society of Australia noted that:

> Sensitive information by definition relates to those areas where prejudices can prevail, eg sexual preferences, political or religious beliefs, criminal records, etc. The concern individuals have over the way that other parties might act based on the knowledge gained from genetic information puts this into the sensitive information category. Furthermore, biometric information can be considered sensitive since it is fixed and unlike a password or PIN cannot be reset once it has been inappropriately released.[202]

3.165 The OPC expressed the view that

> all biometric template information should be covered by the stricter provisions in the *Privacy Act* for sensitive information. However, it may be impractical and undesirable for all biometric samples to be included under the definition of sensitive information, especially where there is no intention to use the sample for biometric matching or identification. For example, it would be difficult and overly burdensome to require consent every time a photograph of a person (technically a biometric sample) is taken.
>
> The Office takes the view that sensitive information provisions should only apply to: (a) biometric samples collected for the purpose of biometric matching or biometric identification; and (b) biometric template information.
>
> The Office notes however that biometric samples—if they were to fall outside this definition of sensitive information—may still be covered by the *Privacy Act* as personal information and therefore achieve legislative protections. Furthermore, as noted in IP31 (at IP31 paragraph 11.46) there may be instances where a biometric sample reveals sensitive information about an individual such as health information and will thus be defined as sensitive information under the *Privacy Act*.[203]

ALRC's view

3.166 The ALRC recognises that personal information can become more or less sensitive because of the context in which it is considered and notes that this can apply to almost any personal information. The ALRC is not of the view, however, that the definition of 'sensitive information' should be amended to include information made sensitive by context. On balance, the existing approach of listing categories of information as sensitive provides greater certainty, which is important because the *Privacy Act* imposes more stringent requirements for handling sensitive information. In particular, the Act and the proposed UPPs provide that sensitive information should generally only be collected with consent and should be used only for the purpose for which the information was collected or a directly related secondary purpose. This regime is significantly different to the regime regulating the handling of other personal information, which can be collected without consent and used and disclosed for a broader range of purposes. It is important to be clear about what information is covered by the more stringent requirements.

3.167 It is also for this reason that the ALRC does not support the NHMRC's proposal to allow further categories of personal information to be added to those defined as sensitive by regulation. If the categories of information defined as sensitive are to be expanded, this should be done following full Parliamentary and community consideration and debate.

3.168 The ALRC's view is that financial information should not be included in the definition of sensitive information in the *Privacy Act*. Financial information is sensitive in some respects and does require appropriate handling, for example, appropriate security. Financial information has a number of characteristics, however, that set it apart from the categories of information currently included in the definition of sensitive information. It does not relate to the physical attributes or personal beliefs of the individual in the same way as other information currently defined as sensitive.

3.169 In addition, agencies and organisations often have a legitimate interest in an individual's financial information, for example, in relation to providing credit. Such information is necessary to the functions and activities of agencies and organisations in order to protect the interests of all parties to transactions. The *Privacy Act* already recognises that personal information relating to credit can be prejudicial and should only be collected, used and disclosed in appropriate circumstances. The Act provides a range of safeguards in relation to credit reporting that are discussed in detail in Part G. It is important to note, however, that these safeguards are not the same as the safeguards provided in relation to 'sensitive information'. For example, the credit reporting provisions do not require consent for the collection of credit information.

3.170 The ALRC is of the view, however, that the definition of sensitive information should be amended to include certain biometric information. Biometric information

shares many of the attributes of information currently defined as sensitive in the *Privacy Act*. It is very personal because it is information about an individual's physical self. Biometric information can reveal other sensitive information, such as health or genetic information and racial or ethnic origin. Biometric information can provide the basis for unjustified discrimination.

3.171 The ALRC recognises that requiring consent to collect all biometric information may be impracticable. For this reason, the ALRC has limited the type of biometric information to be included in the definition of sensitive information. The proposal below only includes biometric information collected for use in automated biometric authentication and identification systems and biometric template information. This proposal is intended to address the most serious privacy concerns around the handling of biometric information, for example, that such information may be used to identify individuals without their knowledge or consent.

3.172 The ALRC also proposes that the phrase 'sexual preferences and practices' currently used in the definition of 'sensitive information' should be changed to 'sexual orientation and practices'. The term 'sexual orientation' is consistent with language used in recent federal legislation[204] and state and territory anti-discrimination and human rights legislation[205] and reflects modern usage.

3.173 The ALRC notes that the provisions relating to sensitive information do not currently apply to agencies. In Chapter 19, the ALRC proposes that the UPPs dealing with 'sensitive information' apply to both agencies and organisations.[206] The ALRC also proposes in Chapter 19 to broaden the circumstances in which sensitive information may be collected without consent to include collection 'required or specifically authorised by or under law' to meet concerns raised by agencies.[207] Where biometric information is to be collected by agencies, for example, for inclusion in automated biometric authentication or identification systems, such as the 'SmartGate' automated border processing system,[208] such collection should be carried out on the basis of consent, or as required or specifically authorised by or under law.

204 *Private Health Insurance Act 2007* (Cth) s 55.5.

205 *Equal Opportunity Act 1995* (Vic) s 6; *Charter of Human Rights and Responsibilities Act 2006* (Vic) s 3; *Equal Opportunity Act 1984* (WA) s 35O; *Anti-Discrimination Act* 1998 (Tas) s 16; *Human Rights Act 2004* (ACT) s 8.

206 Proposal 19–1.

207 Proposal 19–2.

208 SmartGate is an automated border processing system. It performs the customs and immigration checks normally made by a Customs Officer on arrival in Australia. SmartGate takes a live image of an individual's face and using facial recognition technology matches that image with the digitised image stored in an ePassport.

Proposal 3–6 The definition of 'sensitive information' in the *Privacy Act* should be amended to include: (a) biometric information collected for the purpose of automated biometric authentication or identification; and (b) biometric template information.

Proposal 3–7 The definition of 'sensitive information' in the *Privacy Act* should be amended to refer to 'sexual orientation and practices' rather than 'sexual preferences and practices'.

Records

3.174 Generally, the privacy principles only apply to personal information that is held, or collected for inclusion, in a 'record'.[209] A record is defined as follows:

> (a) a document; or
>
> (b) a database (however kept); or
>
> (c) a photograph or other pictorial representation of a person;
>
> but does not include:
>
> (d) a generally available publication; or
>
> (e) anything kept in a library, art gallery or museum for the purposes of reference, study or exhibition; or
>
> (f) Commonwealth records as defined by subsection 3(1) of the *Archives Act 1983* that are in the open access period for the purposes of that Act; or
>
> (fa) records (as defined in the *Archives Act 1983*) in the custody of the Archives (as defined in that Act) in relation to which the Archives has entered into arrangements with a person other than a Commonwealth institution (as defined in that Act) providing for the extent to which the Archives or other persons are to have access to the records; or
>
> (g) documents placed by or on behalf of a person (other than an agency) in the memorial collection within the meaning of the *Australian War Memorial Act 1980*; or
>
> (h) letters or other articles in the course of transmission by post.[210]

3.175 This section deals only with the first part of the definition, describing what is included in the definition of record. There were very few concerns raised about the second part of the definition, describing what is excluded from the definition of record,

---

209 Note, however, that the privacy principles also apply to information collected for inclusion in a 'generally available publication'. The definition of 'generally available publication' is discussed further below.

210 *Privacy Act 1988* (Cth) s 6(1).

apart from one issue raised by the OPC about the definition of 'generally available publication'. This issue is considered in the following section.

3.176 The first part of the definition includes electronic records about individuals such as social security records and doctors' records, and may also include photos or videos, where the person can be identified from the context or in other ways. A person's name appearing on a list of clients or patients may also fall within the definition of personal information because the context provides information, possibly sensitive personal information, about the individual.

3.177 The OPC commented that 'used in conjunction with definitions in the *Acts Interpretation Act 1901*, the definition for record is adequately broad to take in new or evolving information storage media'.[211] Section 25 of the *Acts Interpretation Act* provides:

> In any Act, unless the contrary intention appears:
>
> **document** includes:
>
> (a) any paper or other material on which there is writing;
>
> (b) any paper or other material on which there are marks, figures, symbols or perforations having a meaning for persons qualified to interpret them; and
>
> (c) any article or material from which sounds, images or writings are capable of being reproduced with or without the aid of any other article or device.
>
> **record** includes information stored or recorded by means of a computer.
>
> **writing** includes any mode of representing or reproducing words, figures, drawings or symbols in a visible form.

3.178 The OPC made a number of suggestions for improving the definition of 'record', including amending the definition in order to clarify its scope and application to developing technology and allow it to 'stand alone'. The OPC also recommended the removal of the phrase 'of a person' from 'a photograph or other pictorial representation of a person' on the basis that a photograph may be 'personal information' even though it is not a photograph of a person. For example, a photograph of a house may be personal information if it is kept together with other information that identifies the resident.[212]

3.179 The *Privacy and Personal Information Act 1998* (NSW) covers information 'whether or not recorded in a material form'.[213] The Victorian and Tasmanian Acts include the requirement for information to be recorded in the definition of 'personal

---

211 Office of the Privacy Commissioner, *Submission PR 215*, 28 February 2007.

212 The OPC also suggested that the definitions of 'record' and 'document' in the *Privacy Act*, the *Freedom of Information Act 1982* (Cth) and the *Archives Act 1983* (Cth) should be harmonised. This issue is discussed further in Ch 12.

213 *Privacy and Personal Information Protection Act 1998* (NSW) s 4.

information'. Personal information is defined as 'information or an opinion … that is recorded in any form'[214] and 'any information or opinion in any recorded format'.[215]

3.180 The Western Australian Information Privacy Bill provides an inclusive definition of 'record' that sets out essentially the same elements as the *Acts Interpretation Act* definition of 'document', plus the following additional elements:

- any map, plan, diagram or graph;
- any drawing, pictorial or graphic work, or photograph;
- any article on which information has been stored or recorded, either mechanically, magnetically or electronically.[216]

ALRC's view

3.181 The approach adopted in the Victorian and Tasmanian Acts—that is, including the requirement that information be recorded as part of the definition of 'personal information'—is not desirable. It excludes information that is being collected for inclusion in a record but has not yet been recorded, for example, information being collected orally from a health consumer by a health services provider.

3.182 The ALRC does not agree with the OPC that the definition of record needs to 'stand alone.' The long title of the *Acts Interpretation Act* is 'An Act for the Interpretation of Acts of Parliament and for Shortening their Language.' It is appropriate to rely on the definitions provided in that Act unless the Australian Parliament intends a particular term to have a meaning that is different from the meaning set out in the *Acts Interpretation Act.* This promotes consistency and brevity in federal legislation.

3.183 The term 'record' is defined in the *Acts Interpretation Act*. It includes 'information stored or recorded by means of a computer'. The ALRC's view is that this definition is not sufficient in the context of the *Privacy Act.* It does not give an indication of the intended broad scope of the *Privacy Act*, which is not limited to information stored on computer. It is therefore appropriate to define the term separately and to include a reference to information stored in electronic or other forms. The ALRC's view is that the definition of record in the *Privacy Act* should be inclusive rather than exhaustive.

---

214 *Information Privacy Act 2000* (Vic) s 3.
215 *Personal Information Protection Act 2004* (Tas) s 3.
216 Information Privacy Bill 2007 (WA) cl 4.

3.184 The term 'document' is also defined in the *Acts Interpretation Act.* This definition is appropriate and should be incorporated in the definition of record in the *Privacy Act* by reference.

3.185 The ALRC agrees with the OPC that photographs or other pictorial representations should be covered by the term 'record' in the *Privacy Act* and that they should not be limited by the phrase 'of a person'. This can be achieved by relying on the definition of 'document' in the *Acts Interpretation Act*, which includes 'any article or material from which sounds, images or writings are capable of being reproduced with or without the aid of any other article or device'. The term 'images' is wide enough to cover photographs and other pictorial representations. If this approach is adopted, existing paragraph (c) of the definition of record in the *Privacy Act* is not needed.

Proposal 3–8 The definition of 'record' in the *Privacy Act* should be amended in part to include: (a) a document; and (b) information stored in electronic or other forms.

Generally available publications

3.186 The definition of 'record' in the *Privacy Act* excludes a range of things such as items kept in libraries, art galleries or museums for reference, study or exhibition; a range of Commonwealth archival records, including those in the open access period; documents in the memorial collection of the Australian War Memorial and letters and other articles in the course of transmission by post. There were very few concerns raised with these elements of the definition and the ALRC does not propose any changes to them.

3.187 The definition of 'record' in the *Privacy Act* also excludes 'generally available publications'—that is, 'a magazine, book, newspaper or other publication (however published) that is or will be generally available to members of the public'. It is important to note, however, that the collection of personal information for inclusion in a generally available publication is regulated by the privacy principles.[217]

3.188 The OPC commented in its submission that:

> The Office notes that the phrase 'generally available publication' may appear to apply only to publications that do not involve fees for access. However, access to generally available publications is not necessarily free. For example, the National Insolvency Index is accessible only by subscribers who pay to view the Index.

217 *Privacy Act 1988* (Cth) ss 14, 16B.

> For this reason, the Office believes that the definition would benefit from the clarification that a generally available publication is generally available even where payment of a fee is necessary to access the information.[218]

ALRC's view

3.189 The ALRC notes that a great number of generally available publications are only available for a fee including those examples expressly included in the current definition such as books and magazines. The ALRC sees merit in clarifying that a publication is 'generally available' whether or not a fee is charged for access to the publication.

Proposal 3–9 The definition of 'generally available publication' in the *Privacy Act* should be amended to clarify that a publication is 'generally available' whether or not a fee is charged for access to the publication.

Deceased individuals

3.190 With the exception of Part VIA dealing with declared disasters and emergencies, the *Privacy Act* does not protect the personal information of deceased individuals. The term 'individual' is defined as 'a natural person'.[219] The OPC review stated that:

> The term 'natural person' is not defined under the *Privacy Act* or the *Acts Interpretation Act 1901*; however it appears the term is usually used to distinguish human beings from artificial persons or corporations. Whether the term 'natural persons' includes a deceased human being does not appear to have been subject to judicial consideration in Australia or the United Kingdom. The Office considers the term 'natural person' to mean a living human being as this is the plain English meaning of the term.[220]

3.191 Paul Roth notes that:

> It is normally accepted that in law, deceased persons have no privacy interests. This is presumably on the basis that the *raison d'être* for privacy protection no longer exists, since dead people can feel no shame or humiliation. The underlying common law principle here is much the same as in the law of defamation, which in most jurisdictions does not countenance civil actions that seek to vindicate the reputation of the dead.[221]

---

218 Office of the Privacy Commissioner, *Submission PR 215*, 28 February 2007.

219 *Privacy Act 1988* (Cth) s 6(1).

220 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 281.

221 P Roth, 'Privacy Proceedings and the Dead' (2004) 11 *Privacy Law & Policy Reporter* 50.

3.192 Part VIA of the *Privacy Act*—dealing with personal information in declared emergencies and disasters—explicitly states, however, that for the purposes of Part VIA, the definition of 'personal information' 'is taken to include a reference to an individual who is not living'. The provisions in Part VIA displace some of the requirements in the IPPs and NPPs by providing a separate regime for the collection, use and disclosure of personal information in the case of a declared emergency. The aim of Part VIA is to enhance information exchange between Australian Government agencies, state and territory authorities, organisations, non-government organisations and others, in emergencies and disasters. The provisions are discussed in detail in Chapter 40.

3.193 The OPC makes the following suggestion in relation to the 'personal information' of deceased individuals:

> Although information about dead people is not technically considered to be personal information, Agencies are encouraged to respect the sensitivities of family members when using or disclosing it.[222]

Freedom of Information and Archives Acts

3.194 The *Freedom of Information Act 1982* (Cth) (the FOI Act) establishes a legally enforceable right of access to documents held by Australian Government public sector agencies. The Act sets out a number of exceptions to that right of access and these are described as 'exempt documents'. One class of exempt document is as follows:

> A document is an exempt document if its disclosure under this Act would involve the unreasonable disclosure of personal information about any person (including a deceased person).[223]

3.195 Where a request is made for access to the personal information of a deceased individual held by an agency and it appears to the decision maker under the FOI Act that the legal personal representative of the person might reasonably wish to contend that the document should not be released, the representative must be given a reasonable opportunity to make submissions in relation to the matter.[224] Where a decision is made that the personal information of a deceased individual is to be released under the FOI Act, the legal personal representative of the deceased person may apply to the Administrative Appeals Tribunal for review of the decision.[225] The FOI Act does not provide for amendment or annotation of personal information by a third party on behalf of a deceased individual.

---

222 Office of the Federal Privacy Commissioner, *Plain English Guidelines to Information Privacy Principles 4–7: Advice to Agencies about Storage and Security of Personal Information, and Access to and Correction of Personal Information* (1998), 3.

223 *Freedom of Information Act 1982* (Cth) s 41(1). There are similar provisions in state and territory legislation. See, eg, *Freedom of Information Act 1989* (NSW) sch 1, pt 2 cl 6(1); *Freedom of Information Act 1982* (Vic) s 33(1); *Freedom of Information Act 1989* (ACT) s 41(1).

224 *Freedom of Information Act 1982* (Cth) s 27A. Legal personal representative includes the executor or administrator of a deceased individual's estate.

225 Ibid s 59A.

3.196 Once records are no longer required to be readily available to an agency, most agencies are required to transfer the records to the National Archives of Australia. The *Archives Act* deals with storage, disposal and destruction of such records. The Act also provides that, once records are 30 years old and in the open access period, they should be made available to the public except in some circumstances. These include where they contain

> information or matter the disclosure of which under this Act would involve the unreasonable disclosure of information relating to the personal affairs of any person (including a deceased person).[226]

3.197 Thus, while both the FOI Act and the *Archives Act* provide avenues for third parties to apply for access to information about deceased individuals, agencies are required to consider whether releasing the information would amount to an 'unreasonable' disclosure.

State and territory legislation

3.198 Some New South Wales and Victorian privacy legislation covers personal information about individuals who have been dead for not more than 30 years.[227] This reflects the 30 year period after which government archival records are generally open to public access.[228] The Northern Territory *Information Act*, which combines privacy, freedom of information and archives provisions, covers personal information within the first five years after an individual dies.[229] Tasmanian privacy legislation extends to the personal information of individuals who have been dead for not more than 25 years,[230] and ACT health privacy legislation covers deceased individuals without imposing any time restrictions.[231]

3.199 A number of these Acts contain arrangements to address the situation where a decision is required by an individual in relation to his or her personal information under the Act, but the individual does not have capacity to make the decision. These arrangements extend to individuals who are unable to make decisions because they have died. Under the New South Wales *Health Records and Information Privacy Act*, for example, an 'authorised representative' may make decisions on behalf of a deceased individual.[232] 'Authorised representative' includes 'a person who is otherwise

empowered under law to exercise any functions as an agent of or in the best interests of the individual',[233] including an executor or administrator of a deceased estate.

Duty of confidentiality

3.200 A legal duty of confidentiality may arise in equity, at common law or under contract and provides some protection for personal information provided in confidence. How such duties arise and their consequences are discussed in Chapter 12. A duty of confidence ends when the information loses its quality of confidence, whether through the passage of time, loss of secrecy or other change of circumstances.[234] This does not mean, however, that the duty necessarily ends when the person who has provided the information dies. The law of confidentiality, therefore, may provide some protection for the personal information of deceased individuals where that personal information was provided in confidence to banks, lawyers, doctors and others.

Genetic information

3.201 In the report *Essentially Yours: The Protection of Human Genetic Information* (ALRC 96), the ALRC and the Australian Human Ethics Committee (AHEC) of the NHMRC recommended that:

> The Commonwealth should amend the *Privacy Act* to provide that 'health information' includes information about an individual who has been dead for 30 years or less. These amendments should include provision for decision making by next-of-kin or an authorised person in relation to the handling of a deceased individual's health information.[235]

3.202 The policy justification for extending the protection of the *Privacy Act* to the genetic information of deceased individuals is that this information may have implications for living genetic relatives.[236] The Australian Government noted in its response to ALRC 96 that this recommendation was being considered in the context of the development of the *National Health Privacy Code*.[237] The draft *National Health Privacy Code* is expressed to apply to the health information of individuals who have been dead for not more than 30 years.[238]

The OPC review

3.203 The OPC review noted that extending the Act to cover the personal information of deceased individuals would require some reworking of provisions and principles

relating to consent and the lodging of complaints. The OPC review recommended that this issue be considered in the context of a wider review of the Act.[239]

Submissions and consultations

3.204 A number of submissions highlighted problems in this area. One stakeholder was distressed at being contacted by direct marketing companies attempting to contact her deceased husband.[240] Another stakeholder expressed concern about an insurance company seeking to collect health information about an individual from the individual's next of kin in the mistaken belief that the individual was deceased.[241]

3.205 There was significant support expressed in submissions and consultations for extending at least some privacy principles to the personal information of deceased individuals.[242] A number of stakeholders expressed the view that the principles should only apply so far as practicable.[243]

3.206 In its submission to this Inquiry, the Australian Privacy Foundation noted that there are good arguments both for and against extending privacy rights to cover the personal information of deceased individuals. The Foundation noted that not all the privacy principles sensibly apply to the personal information of deceased individuals—since the person cannot be notified or consulted about how his or her personal information is handled—and that it might be preferable to write specific provisions to address this issue, rather than simply extend the definition of 'personal information' to include the personal information of deceased individuals.[244]

3.207 The Commonwealth Ombudsman noted that it

> has had to deal with occasional issues relating to deceased people—one example being medical records of Defence personnel. Different standards apply under FOI (where exempt personal information can relate to a deceased person) and privacy (where the legislation does not require it but where OFPC suggests a cautious

244 Australian Privacy Foundation, *Submission PR 167*, 2 February 2007.

> approach). A commonsense approach might be to permit disclosure of sensitive information only where there is a balance of public interest in doing so.[245]

3.208 The Centre for Law and Genetics expressed support for extending the *Privacy Act* to cover the personal information of deceased individuals and noted that the justification is particularly strong in relation to Indigenous communities because those communities have 'religious and spiritual concerns about representations of deceased individuals'.[246]

3.209 AAMI expressed support for extending the *Privacy Act* to cover the information of deceased individuals:

> AAMI often sadly is dealing with a deceased person's information, mainly as a result of a fatality claim on a motor vehicle insurance policy or as part of a compulsory third party (CTP) claim. AAMI currently applies its privacy protection procedures to the deceased personal information as it would to a natural person, as far as is practicable. Therefore AAMI supports amending the Act to include personal information of the deceased, with the provision that in certain circumstances it may not be practicable.[247]

3.210 Other organisations also noted that, for simplicity or in order to comply with state and territory legislation, they handled the personal information of deceased individuals in the same way as they handled the personal information of living individuals.[248] The Australian Government Department of Community Services expressed support for covering the personal information of deceased individuals and noted that the secrecy provisions included in Medicare and Centrelink legislation continued to cover individuals after death.[249] Part 5 of the Exposure Draft of the Human Services (Enhanced Service Delivery) Bill 2007, which deals with the confidentiality of information collected in relation to the proposed access card, defines 'protected information' as 'information relating to an individual (living or dead)'.[250]

3.211 The NHMRC stated that:

> The present situation, whereby the health information of deceased persons is protected by legislation in several States and Territories but not by Commonwealth legislation adds to the complexity and confusion created by the existing regulatory regime; and
>
> Information about the health of deceased persons, in particular but not limited to genetic information, may have significant implications for living relatives, both genetic and non-genetic. It is preferable for representatives of the deceased to be able to consent to collection, use and disclosure of such information.[251]

3.212 Some concerns were raised about extending the *Privacy Act* to include the personal information of deceased individuals. These included: increased complexity for executors, family members and insurance companies following the death of an individual;[252] more limited access to information for research and other activities of interest to family members or in the public interest;[253] and an additional compliance burden for business.[254]

3.213 The Australian Federal Police did not support extending the *Privacy Act* to cover the personal information of deceased individuals because of the potential to complicate their investigations relating to deceased individuals.[255] The Australian Tax Office stated that:

> In our view, there may be some justification for expanding the definition to include information about the deceased, particularly health and medical information. However, we would be hesitant to recommend any changes that would restrict the way that regulatory and enforcement agencies can access information about the deceased to maintain up-to-date and accurate registers. The ability to collect and use information about deceased persons helps us to keep our taxpayer records as accurate as possible. Access to this information is also a key way of combating identity fraud as it helps to prevent 'new' identities being registered using details of the deceased.[256]

3.214 A number of stakeholders also commented on the difficulties that arise when it is necessary to seek decisions on behalf of deceased individuals from alternative decision makers. One submission noted that family members do not speak with one voice on such matters.[257] Other stakeholders noted that obtaining consent can be difficult especially where there is a dispute in the family[258] and that it becomes more difficult to identify and locate alternative decision makers as time passes.[259] Where it is not possible to identify and locate an alternative decision maker, this may mean that information cannot be collected, used or disclosed.

3.215 The State Records Office of Western Australia commented that concerns about sensitive personal information of deceased individuals tend to diminish over time.[260] The Privacy Committee of South Australia noted that, in dealing with the personal

information of deceased individuals, it was necessary to balance privacy concerns with what is reasonable and what is in the public interest.[261]

ALRC's view

3.216 Currently, when someone dies, his or her personal information is no longer subject to the provisions of the *Privacy Act*, apart from Part VIA dealing with declared emergencies and disasters. Access to the personal information of a deceased individual in the Australian Government public sector is governed by the FOI Act and the *Archives Act*. Access to personal information in the private sector may be subject to state or territory legislative requirements, a duty of confidentiality or simply dealt with as a matter of organisational policy.

3.217 While there was significant support among stakeholders for extending the *Privacy Act* to cover the personal information of deceased individuals, submissions and consultations did not indicate that there were widespread problems caused by the current lack of coverage. Some specific problems were identified, including the use of inaccurate and out-of-date personal information and the need to allow access to genetic information for genetic relatives.

3.218 In the ALRC's view, the personal information of deceased individuals should be expressly addressed in the *Privacy Act* and that some provision should be made for the use and disclosure of that information in appropriate circumstances.

3.219 The ALRC does not believe, however, that it is appropriate simply to extend the definition of 'personal information' in the Act to include the personal information of deceased individuals. It is clear that not all the privacy principles can be applied sensibly, or applied in full, to the personal information of deceased individuals. Instead, the *Privacy Act* should be amended to make specific provision for dealing with the personal information of deceased individuals.

3.220 In the ALRC's view, the *Privacy Act* should be amended to include a new Part setting out a number of provisions dealing specifically with the handling of the personal information of deceased individuals. The new Part should apply only to organisations and to information about individuals who have been dead for 30 years or less.

3.221 In relation to agencies, access to personal information of deceased individuals should continue to be regulated by the FOI Act and the *Archives Act.* The archiving and destruction of personal information of deceased individuals held by agencies should continue to be regulated by the *Archives Act.*

261 Privacy Committee of South Australia, *Consultation PC 110*, Adelaide, 1 March 2007.

Decisions on behalf of deceased individuals

3.222 As discussed above, some state and territory privacy legislation makes provision for decisions to be made by third parties on behalf of deceased individuals. This issue also arises under the *Privacy Act*. For example, NPP 2 requires consent to use personal information for a secondary purpose that is unrelated to the primary purpose of collection and outside the reasonable expectations of the individual. The ALRC is not proposing, however, that the *Privacy Act* be amended to provide for decisions to be made by third parties on behalf of deceased individuals.

3.223 The ALRC notes that where there is a request to access the personal information of a deceased individual under the FOI Act, the Act requires agencies to provide a deceased individual's legal personal representative with a reasonable opportunity to make submissions in relation to that request. The agency, however, retains the power to make the decision on whether access is granted.

3.224 In considering whether to impose an obligation on organisations to consult with third parties, or a requirement to seek a decision from a third party on behalf of a deceased individual, the ALRC considered the difficulties with these processes highlighted by stakeholders and the likely compliance costs such processes would impose on organisations. On balance, the ALRC considers that such an obligation or requirement should not imposed on organisations.

3.225 Instead, the ALRC proposes that organisations should be required to consider whether a proposed use or disclosure of the personal information of a deceased individual would involve an unreasonable use or disclosure of personal information about any person, including the deceased person. In making this decision, organisations may find it useful to consult the individual's family or legal personal representative, but the ALRC does not propose that there be a legal requirement to do so.

3.226 In relation to health information, in particular, the ALRC's view is that one individual or family member should not be able to stop another family member from gaining access to a deceased family member's information. Family members often have different views on the appropriateness of access to information or the sensitivity of that information. In ALRC 96, the ALRC and AHEC noted that:

> If the law requires that access to genetic information about a deceased individual can be granted only with the consent of that person's legal or other authorised representative, genetic relatives may still have problems in gaining access.[262]

262 Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), [7.93].

Use and disclosure

3.227 The *Privacy Act* should specify that organisations must only use or disclose the personal information of deceased individuals in accordance with the proposed 'Use and Disclosure' principle. Where such use or disclosure would require consent, the organisation should be required to consider whether the proposed use or disclosure would involve an unreasonable use or disclosure of personal information about any person, including the deceased person. This is consistent with the test imposed on agencies under the FOI Act relating to the release of information in response to an access request. The test of what amounts to 'unreasonable disclosure' has been considered in the FOI context:

> The application of the test involves a consideration of all the factors relevant in a particular case and a balancing of all legitimate interests (*Wiseman v. Commonwealth*, (D251) eg *Re Chandra and Minister for Immigration and Ethnic Affairs* (D33)).[263]

3.228 The ALRC's view is that there are circumstances in which it would be reasonable for organisations to use or disclose the personal information of deceased individuals for a secondary purpose unrelated to the primary purpose of collection, for example, in the administration of a deceased estate or in response to a request from a family member undertaking family history research. In considering all the factors relevant to a particular case and balancing all legitimate interests, organisations will need to consider issues such as any existing duty of confidentiality to the deceased individual, the interests of family members and any public interest in the use or disclosure. In some circumstances it may be important to contact family members or the deceased individual's legal personal representative in order to be able to make an informed decision about what is reasonable.

3.229 This same test should also be applied to the use or disclosure of sensitive information.[264] Where consent to use or disclose sensitive information would be required—that is, where the secondary purpose is not directly related to the primary purpose of collection or the individual would not reasonably expect the organisation to use or disclose the information for that secondary purpose—organisations should be required to consider whether the proposed use or disclosure would involve an unreasonable use or disclosure of sensitive information about any person, including the deceased person. In considering what is reasonable, the organisation would be required to consider the sensitivity of the information.

Access

3.230 Organisations should be required to consider providing third parties with access to the personal information of deceased individuals in accordance with the access

---

263 Australian Government Attorney-General's Department, *Freedom of Information Memorandum 98: Exemption Sections in the FOI Act* (2005).

264 Health information of deceased individuals is discussed further below.

elements of the proposed 'Access and Correction' principle. Organisations should be required to consider in each case whether providing access to the information would have an unreasonable impact on the privacy of other individuals, including the deceased individual.

Correction

3.231 In the ALRC's view, a third party should not have a right to seek to correct the personal information of a deceased individual under the *Privacy Act*. This is consistent with the position under the FOI Act. In relation to the personal information of deceased individuals, the proposed 'Data Quality' principle, discussed below, would operate to ensure that information is kept accurate, complete, up-to-date and relevant. In order to comply with the Data Quality principle, an organisation would be required to consider information provided by third parties relating to the personal information of a deceased individual.

Data Quality

3.232 Organisations should be required to ensure that the personal information of deceased individuals is accurate, complete, up-to-date and relevant to any proposed use or disclosure, before they use or disclose the information. This should help to ensure that surviving family members do not continue to receive correspondence addressed to the deceased individual.

Data security

3.233 Organisations should be required to take reasonable steps to protect the personal information of deceased individuals from misuse and loss and from unauthorised access, modification or disclosure. Organisations should be required to take reasonable steps to destroy or render personal information of deceased individuals non-identifiable, if it is no longer needed for a purpose permitted under the proposed UPPs.

3.234 Organisations should be required to take reasonable steps to ensure that personal information of deceased individuals it discloses to a person pursuant to contract, or otherwise in connection with the provision of a service, is protected from being used or disclosed by that person otherwise than in accordance with the proposed UPPs.

Health information

3.235 In ALRC 96, the ALRC and AHEC recommended that the definition of 'health information' in the *Privacy Act* be amended to include information about an individual

who has been dead for 30 years or less and that these amendments should include provision for decision making by next-of-kin or an authorised person.[265]

3.236 The ALRC is of the view that the provisions discussed above should also apply to the health information, including the genetic information, of deceased individuals. For the reasons discussed above, however, the ALRC no longer supports requiring decisions to be made by third parties on behalf of deceased individuals.

3.237 In Chapter 57 the ALRC considers NPP 2.1(ea) in relation to the use or disclosure of an individual's genetic information to a genetic relative. NPP 2.1(ea) allows an organisation to use or disclose an individual's genetic information where the organisation reasonably believes that the use or disclosure is necessary to lessen or prevent a serious threat to the life, health or safety of a genetic relative of the individual. NPP 2.1(ea) also provides that any such use or disclosure must be in accordance with guidelines issued by the NHMRC and approved by the Privacy Commissioner. In Chapter 57, the ALRC proposes that this provision be amended to replace the reference to guidelines issued by the NHMRC with a reference to rules issued by the Privacy Commissioner. It is also proposed that the provision be moved to the proposed *Privacy (Health Information) Regulations*.

3.238 It is anticipated that the proposed rules will address issues such as providing access to genetic information by making the information available to the genetic relative's nominated medical practitioner or genetic counsellor, who can explain the clinical relevance of the information. Any use or disclosure of genetic information of a deceased individual should also be conducted in accordance with these rules.

3.239 On the basis of the proposed provisions relating to deceased individuals, discussed above, a genetic relative would be able to apply for access to the genetic information of a deceased individual. An organisation would then be required to consider whether the proposed use or disclosure of the information would involve an unreasonable use or disclosure of personal information about any person, including the deceased person.

3.240 It should be made clear, in the proposed provisions dealing with the personal information of deceased individuals, that it is reasonable for an organisation to use or disclose genetic information to a genetic relative where the organisation reasonably believes that the use or disclosure is necessary to lessen or prevent a serious threat to the life, health or safety of the genetic relative. In addition, the provision should provide that, where an organisation decides to disclose the genetic information of a deceased individual to a genetic relative, that disclosure must be in accordance with the rules issued by the Privacy Commissioner.

---

265 Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), Rec 7–6.

Complaints

3.241 The ALRC's view is that a breach of the provisions relating to the personal information of a deceased individual should be considered an interference with privacy under the *Privacy Act* and that it should be possible to lodge a complaint with the Privacy Commissioner in relation to any such alleged interference with privacy. The complaint process should parallel, as far as possible, the process provided for complaints by living individuals about their personal information.

3.242 The following individuals should have standing to lodge a complaint about the handling of the personal information of a deceased individual. In relation to an alleged breach of the use and disclosure, data quality or data security provisions, the ALRC is of the view that the deceased individual's parent, child or sibling who is at least 18 years old, spouse, de facto partner[266] or legal personal representative should have standing to allege an interference with privacy. In relation to a request for access to the personal information of a deceased individual, the ALRC's view is that any person who has made a request for access to the personal information of a deceased individual should have standing to allege an interference with privacy.

3.243 These proposed changes will provide a regime in which organisations can disclose the personal information of deceased individuals in appropriate circumstances and third parties can get access to the personal information of deceased individuals where it is reasonable for them to do so.

Proposal 3–10 The personal information of deceased individuals held by agencies should continue to be regulated by the *Freedom of Information Act 1982* (Cth) and the *Archives Act 1983* (Cth).

Proposal 3–11 The *Privacy Act* should be amended to include a new Part dealing with the personal information of individuals who have been dead for 30 years or less where the information is held by an organisation. The new Part should provide as follows:

266 The ALRC proposes that the term 'de facto spouse' in the *Privacy Act* be changed to 'de facto partner': at Proposal 57–4.

(a) Use and disclosure

Organisations should be required to use or disclose the personal information of deceased individuals in accordance with the proposed 'Use and Disclosure' principle in the UPPs. Where the principle requires consent, the organisation should be required to consider whether the proposed use or disclosure would involve an unreasonable use or disclosure of personal information about any person, including the deceased person.

(b) Access

Organisations should be required to consider providing third parties with access to the personal information of deceased individuals in accordance with the access elements of the proposed 'Access and Correction' principle in the UPPs. Organisations should be required to consider in each case whether providing access to the information would have an unreasonable impact on the privacy of other individuals, including the deceased individual.

(c) Data quality

Organisations should be required to ensure that the personal information of deceased individuals is, with reference to a use or disclosure permitted under the UPPs, accurate, complete, up-to-date and relevant before they use or disclose the information.

(d) Data security

Organisations should be required to take reasonable steps to protect the personal information of deceased individuals from misuse and loss and from unauthorised access, modification or disclosure.

Organisations should be required to take reasonable steps to destroy or render personal information of deceased individuals non-identifiable if it is no longer needed for any purpose permitted under the proposed UPPs.

Organisations should be required to take reasonable steps to ensure that personal information of deceased individuals they disclose to a person pursuant to contract, or otherwise in connection with the provision of a service, is protected from being used or disclosed by that person otherwise than in accordance with the *Privacy Act*.

Proposal 3–12 The proposed provisions dealing with the use or disclosure of personal information of deceased individuals should make clear that it is reasonable for an organisation to use or disclose genetic information to a genetic relative of a deceased individual where the organisation reasonably believes that the use or disclosure is necessary to lessen or prevent a serious threat to the life, health or safety of a genetic relative. Any use or disclosure of genetic information of deceased individuals should be in accordance with rules issued by the Privacy Commissioner.

Proposal 3–13 Breach of the proposed provisions relating to the personal information of a deceased individual should be considered an interference with privacy under the *Privacy Act*. The following individuals should have standing to lodge a complaint with the Privacy Commissioner alleging an interference with the privacy of a deceased individual:

(a) in relation to an alleged breach of the use and disclosure, data quality or data security provisions, the deceased individual's parent, child or sibling who is at least 18 years old, spouse, de facto partner or legal personal representative; and

(b) in relation to an alleged breach of the access provision, any person who has made a request for access to the personal information of a deceased individual.

Introduction

4.1 In its 1983 report *Privacy* (ALRC 22), the ALRC proposed a national approach to the protection of privacy 'at the very least in relation to information practices'.[1] Australia is yet to achieve uniformity in the regulation of personal information. A key

1 Australian Law Reform Commission, *Privacy*, ALRC 22 (1983), [1092].

issue raised in recent inquiries[2] and the current ALRC Inquiry,[3] is that Australian privacy laws are multi-layered, fragmented and inconsistent. For example, the Senate Legal and Constitutional References Committee inquiry into the *Privacy Act 1988* (Cth) (Senate Committee privacy inquiry) concluded that:

> The committee is greatly concerned at the significant level of fragmentation and inconsistency in privacy regulation. This inconsistency occurs across Commonwealth legislation, between Commonwealth and state and territory legislation, and between the public and private sectors. As mentioned above, the committee believes that this inconsistency is one of a number of factors undermining the objectives of the Privacy Act and adversely impacting on government, business, and mostly importantly, the protection of Australians' privacy.[4]

4.2 The various problems caused by inconsistency and fragmentation in privacy regulation are outlined in Part C of this Discussion Paper. This chapter outlines a number of proposals for reform to deal with inconsistency and fragmentation in the regulation of privacy. The chapter first considers whether national consistency should be one of the goals of the regulation of personal information. It then considers various mechanisms for achieving consistency at the federal, state and territory level. These include: the Australian Parliament legislating to the exclusion of the states and territories in relation to the handling of personal information in the private sector; privacy legislation that is consistent with the *Privacy Act* regulating state and territory public sectors; and the establishment of a permanent standing body to monitor and ensure continuing national consistency. The final section of the chapter considers

various other methods for achieving national consistency including binding codes, guidelines, privacy impact assessments and scrutiny of legislation.

The federal system

4.3 The *Australian Constitution* establishes a federal system of government in which powers are distributed between the Commonwealth and the six states. Section 109 of the *Australian Constitution* provides that: 'when a law of a State is inconsistent with a law of the Commonwealth, the latter shall prevail, and the former shall, to the extent of the inconsistency, be invalid'. This provision may operate in two ways: it may directly invalidate state law where it is impossible to obey both the state law and the federal law;[5] or it may indirectly invalidate state law where the Australian Parliament's legislative intent is to 'cover the field' in relation to a particular matter.[6]

4.4 It has been observed that inconsistency in the regulation of personal information stems largely from the failure of federal law to 'cover the field'.[7] Section 3 of the *Privacy Act* states:

> It is the intention of the Parliament that this Act is not to affect the operation of a law of a State or of a Territory that makes provision with respect to the collection, holding, use, correction, disclosure or transfer of personal information (including such a law relating to credit reporting or the use of information held in connection with credit reporting) and is capable of operating concurrently with this Act.

4.5 The provision makes clear that the Australian Parliament did not intend to 'cover the field' or to override state and territory laws relating to the protection of personal information, if such laws are capable of operating alongside the *Privacy Act*. Section 3 of the *Privacy Act* does not, however, sit comfortably with s 3 of the *Privacy Amendment (Private Sector) Act 2000* (Cth), which states that one of the objects of the Act is

> to establish a single comprehensive national scheme providing, through codes adopted by private sector organisations and National Privacy Principles, for the appropriate collection, holding, use, correction, disclosure and transfer of personal information by those organisations.[8]

4.6 A number of the states and territories have enacted privacy regimes. In particular, different privacy regimes regulate the handling of personal information in state and territory public sectors. In some states and territories personal information is regulated by legislative schemes, in others by administrative regimes. These regimes

8 *Privacy Amendment (Private Sector) Act 2000* (Cth) s 3(a).

are sometimes inconsistent with the *Privacy Act* and with each other.[9] Further, New South Wales (NSW), Victoria and the ACT all have legislation that regulates the handling of personal health information in the private sector. This means that health service providers and others in the private sector in those jurisdictions are required to comply with both federal and state or territory legislation.[10]

4.7 Chapters 2 and 14 note that although the Information Privacy Principles (IPPs), the National Privacy Principles (NPPs) and privacy principles under state and territory privacy regimes are similar, they are not identical. The privacy regimes in some jurisdictions include privacy principles that are similar to the IPPs, while other jurisdictions have modelled their principles on the NPPs. As noted in Chapter 15, there are significant differences between the IPPs and the NPPs.

4.8 In *Essentially Yours: The Protection of Human Genetic Information in Australia* (ALRC 96) the ALRC and the Australian Health Ethics Committee (AHEC) of the National Health and Medical Research Council considered whether the NSW, Victorian and ACT health privacy legislation might be inconsistent with the *Privacy Act* and to that extent invalid.[11] The Australian Government Attorney-General's Department stated in its submission to that inquiry that s 3 of the *Privacy Act* was not intended to enable state and territory law to regulate the same types of personal information and organisations that are regulated by the *Privacy Act*. Privacy NSW, on the other hand, submitted that the states should be free to 'enhance the Commonwealth's minimum standards in state legislation'.[12]

4.9 The Office of the Privacy Commissioner (OPC) review of the private sector provisions of the *Privacy Act* (OPC Review) recommended that:

> The Australian Government should consider amending section 3 of the *Privacy Act* to remove any ambiguity as to the regulatory intent of the private sector provisions.[13]

Is national consistency important?

4.10 A threshold issue is whether national consistency in the regulation of personal information is important.[14] In Issues Paper 31, *Review of Privacy* (IP 31), the ALRC asked whether national consistency was desirable or whether there were circumstances that justified some level of inconsistency.

---

9 See discussion in Ch 2.

14 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 2–1.

4.11 All submissions that addressed this issue strongly supported national consistency.[15] Most focused on how a nationally consistent privacy regime would lessen unjustified compliance burden and cost. For example, a number of stakeholders emphasised that national consistency is essential to lessen the compliance burden for organisations and agencies that operate across state borders.[16] A large number of submissions identified that state and territory legislation regulating the handling of personal information in the private sector is a major cause of inconsistency, complexity and costs.[17] Other submissions noted that the use of technologies—such as the internet—justifies a harmonised approach to privacy regulation at both a national and international level.[18] These issues are discussed in more detail below and in Chapter 11.

4.12 Some stakeholders noted, however, that while national consistency is a valuable objective, it should not be pursued to the detriment of the level of protection afforded by privacy legislation.[19] The OPC submitted that:

> Consistency does not mean the elimination of multi-layered regulation. In many cases, additional protections that regulate particular sectors, or protect certain information, can enhance privacy (such as privacy codes and secrecy provisions). However, in the interests of all parties, it is critical to ensure these layers are not unnecessary, inconsistent, or poorly interactive.[20]

4.13 The Government of South Australia submitted that it supported 'harmonisation of privacy regimes between governments, and between the public and private sectors', but not uniform privacy laws that mirrored the *Privacy Act*.[21]

4.14 The ALRC has found that inconsistency and fragmentation in privacy regulation causes a number of problems including unjustified compliance burden and cost, impediments to information sharing and national initiatives and confusion about who to approach to make a privacy complaint. It is the ALRC's view, therefore, that national consistency should be one of the goals of privacy regulation.[22] This finding is consistent with the Senate Committee privacy inquiry and the OPC Review which both concluded that privacy laws should aim to be consistent across Australia. The Senate Committee privacy inquiry recommended that a comprehensive review of privacy regulation consider measures to ensure national consistency.[23] The OPC Review also made a number of recommendations directed to national consistency.[24]

4.15 The ALRC has adopted a flexible definition of the term 'national consistency' for the purposes of this Inquiry. For example, in some areas national consistency in the regulation of personal information requires uniformity, for example, the adoption of uniform privacy principles at the federal, state and territory level.[25] National consistency can also involve the interoperability of laws that regulate the handling of personal information, such as the harmonisation of the *Privacy Act* and the *Freedom of Information Act 1982* (Cth).[26] In other contexts, national consistency may require consistent approaches to the implementation of privacy laws and therefore require cooperation and coordination between privacy regulators.[27] In other cases, consistency in the coverage of privacy laws is the goal—for example, the removal of the small business and the employee records exemptions, or regulations for particular industries.[28]

4.16 A nationally consistent privacy regime will ensure that Australians' personal information will attract similar protection whether that personal information is being handled by an Australian Government agency or a state or territory government agency, a multinational organisation or a small business, and whether that information

is recorded in a paper file or electronically. Ensuring national consistency also will assist:

- individuals to determine what their rights are and how to enforce them;
- agencies and organisations to understand their obligations and how to comply effectively and efficiently with them; and
- regulators in managing the possible overlap of functions in some areas.[29]

4.17 The ALRC is also mindful, however, of the need for flexibility in some areas. A number of stakeholders noted that consistency of information privacy regulation across jurisdictions, between the public and private sectors, and between different kinds of business, can only be achieved if the regulation is flexible enough to accommodate the different interests, business practices, and accountabilities of those subject to the regulation.[30] The ALRC acknowledges that some sectors require specific laws when dealing with personal information, for example, the health sector, credit reporting industry and the telecommunications industry.[31]

National legislation

4.18 In IP 31, the ALRC asked what are the most effective methods of achieving nationally consistent and comprehensive laws for the regulation of personal information in Australia.[32]

4.19 One option discussed in IP 31 was national privacy legislation regulating the handling of personal information throughout Australia. Such legislation could regulate the handling of personal information in both the Australian Government public sector and the private sector. National legislation could also regulate personal information handled in the state and territory public sectors, subject to some constitutional limits. This could be achieved by amending the *Privacy Act* to clarify that the Act was intended to 'cover the field' to the exclusion of state and territory legislation. As noted in IP 31, this would raise complex political and constitutional issues.

Constitutional issues

4.20 This section of the chapter will examine the scope of the Commonwealth's constitutional power to legislate with respect to privacy, and particularly its constitutional capacity to 'cover the field' in this area. First, it will consider various constitutional bases of power that the Commonwealth could seek to rely on for the purposes of national privacy legislation. It will then discuss the express and implied constitutional restrictions on Commonwealth legislative power.

4.21 The *Australian Constitution* includes a list of subjects about which the Australian Parliament may make laws. That list does not expressly include privacy but this does not mean that the Australian Parliament has no power in relation to privacy. The *Privacy Act* was passed on the basis of the Australian Parliament's express power to make laws with respect to 'external affairs'.[33] The external affairs power enables the Australian Parliament to make laws with respect to matters physically external to Australia;[34] and matters relating to Australia's obligations under bona fide international treaties or agreements, or customary international law.[35] The external affairs power is not confined to meeting international obligations, but also extends to 'matters of international concern'.[36]

4.22 An important limitation on the scope of the external affairs power is that the Commonwealth Act must be an appropriate means of giving effect to the object of the relevant international treaty or agreement.[37] The Preamble to the *Privacy Act* makes clear that the legislation was intended to implement, at least in part, Australia's obligations relating to privacy under the United Nations *International Convention on Civil and Political Rights*[38] (ICCPR) as well as the Organisation for Economic Co-operation and Development *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (the OECD Guidelines).[39]

4.23 The Second Reading Speech to the Privacy Bill also referred to the Council of Europe *Convention for the Protection of Individuals with Regard to Automatic*

There remains legislative discretion to choose among appropriate means for implementing those obligations: *Commonwealth v Tasmania* (1983) 158 CLR 1, 130–131.

38 *International Covenant on Civil and Political Rights*, 16 December 1966, [1980] ATS 23, (entered into force generally on 23 March 1976), art 17. See discussion in Ch 1 and Ch 5.

39 Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980). The OECD Guidelines are discussed further in Ch 1 and Part D.

Processing of Personal Data.[40] Section 3 of the *Privacy Amendment (Private Sector) Act* makes clear that the private sector amendments were also intended to meet Australia's international obligations, as well as international concerns, relating to privacy.

4.24 In addition to the 'external affairs' power, the Commonwealth may seek to rely on other constitutional heads of power as a basis for legislating on privacy,[41] including:

- s 51(v), which empowers the Australian Parliament to make laws with respect to 'postal, telegraphic, telephonic, and other like services';[42]
- s 51(i), which empowers the Australian Parliament to make laws with respect to 'trade and commerce with other countries, and among the States'; and
- in part at least, on s 51(xx), which empowers the Australian Parliament to make laws with respect to 'foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth'.[43]

4.25 National privacy legislation may also be constitutionally grounded in s 51(xiii) and (xiv) of the *Constitution* which empowers the Australian Parliament to make laws with respect to banking and insurance,[44] but not state banking or state insurance unless it extends beyond the limits of the state.

4.26 The Commonwealth may legislate so as to 'cover the field' (either expressly or impliedly) of a particular subject matter within its legislative powers.[45] The Australian Parliament could legislate in this way in relation to the handling of personal information to the exclusion of the states and territories. Such legislation, however, would be affected by the express and implied restrictions applying to all Commonwealth constitutional powers, discussed below.

Express and implied constitutional limits

4.27 As noted above, express constitutional limitations include those in ss 51(xiii) and 51(xiv) of the *Australian Constitution*, which provide that the Australian

---

40 *Convention for the Protection of Individuals with Regard to Automatic Processing of Personal Data*, 28 January 1981, Council of Europe, CETS No 108, (entered into force generally on 1 October 1985).

41 Recent human rights legislation has been based on a range of constitutional powers. See, eg, *Age Discrimination Act 2004* (Cth) s 10.

42 For example, pt IIIA of the *Privacy Act* seeks to engage s 51(v) by regulating the use of 'eligible communications services' in the course of activities relevant to credit reporting. The term 'eligible communications services' is defined to mean 'a postal, telegraphic, telephonic or other like service, within the meaning of paragraph 51(v) of the *Constitution*': *Privacy Act 1988* (Cth) s 6(1).

43 The *Privacy Act* is partly directed towards the actions of 'organisations' in respect of an individual's personal information. 'Organisation' is defined to include 'a body corporate': Ibid s 6C.

44 This restriction is reflected in s 12A of the *Privacy Act* and is discussed further below.

45 *Botany Municipal Council v Federal Airports Corporation* (1992) 175 CLR 453, 464.

Parliament may legislate with respect to banking and insurance, but not state banking or state insurance that does not extend beyond the limits of the state. 'State banking' for the purposes of s 51(xiii) is the business of banking conducted within a state by a bank owned or controlled by a state.[46] Similarly, 'state insurance' bears its ordinary meaning, referring to an insurance business established and conducted by a state or its authority.[47]

4.28 In *Bourke v State Bank of New South Wales*, the High Court found that a law is a law with respect to state banking if it 'affects the actions of banks in their banking business'.[48] If the *Privacy Act* were to operate upon state banking or state insurance not extending beyond the limits of the state concerned, it would be constitutionally valid only so long as it could not be characterised as a law with respect to banking. The same rationale and outcome would apply with respect to the insurance power.

4.29 Implied constitutional limitations include the principles that a federal law may not discriminate against a state,[49] or prevent a state from continuing to exist and function as an independent unit of the federation.[50] In *Western Australia v The Commonwealth* (the *Native Title Act* Case) a majority of the High Court of Australia determined that:

> For constitutional purposes, the relevant question is not whether State powers are effectively restricted or their exercise made more complex or subjected to delaying procedures by the Commonwealth law. The relevant question is whether the Commonwealth law affects what Dixon J [in *Melbourne Corporation v The Commonwealth*] called the 'existence and nature' of the State body politic … A Commonwealth law cannot deprive the State of the personnel, property, goods and services which the State requires to exercise its powers and cannot impede or burden the State in the acquisition of what it so requires.[51]

4.30 While state powers may be 'effectively restricted or their exercise made more complex or subjected to delaying procedures' by the operation and requirements of the *Privacy Act*, the Act does not affect the existence and nature of the 'State body politic'. Therefore, it is the ALRC's view that provided that the Commonwealth acts pursuant

51 *Western Australia v Commonwealth* (1995) 183 CLR 373 at 480.

to a s 51 constitutional head of power, the Commonwealth could legislate to the exclusion of the states regarding privacy in the state public and private sectors.[52]

4.31 One qualification to this may be in regards to legislative provisions applying to public sector employees in the higher levels of state government. The High Court has found that Commonwealth laws that seek to regulate state employees at the 'higher levels of government' (including ministers, ministerial assistants and advisers, heads of departments and judges) may interfere with the existence and nature of a state.[53] Another limitation may be if the *Privacy Act* purported to regulate the handling of information that goes to the core of state government functions, such as cabinet-in-confidence documents and other highly sensitive documents.

4.32 It is important to note that express and implied constitutional limitations do not apply to the territories because the Australian Parliament has plenary power to legislate in relation to them.[54] Further, Commonwealth legislation regulating the handling of personal information in the private sector to the exclusion of state legislation would not breach either the express or implied restrictions on Commonwealth power.[55]

Submissions and consultations

4.33 A large number of submissions supported comprehensive national legislation in relation to the private sector.[56] For example, the OPC submitted that:

> implementation of Australia-wide programs would be greatly assisted by overarching national standards. This could include include amending s 3 of the *Privacy Act* to clarify that the Act is intended to cover the private sector, to the exclusion of state and territory privacy legislation. With appropriate consultation, education and implementation, this may resolve many current difficulties, particularly in the private health sector.[57]

56 See, eg, Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007; Law Council of Australia, *Submission PR 177,* 8 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007; Australian Health Insurance Association, *Submission PR 161,* 31 January 2007; AAMI, *Submission PR 147,* 29 January 2007; National Association for Information Destruction, *Submission PR 133,* 19 January 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007; AXA, *Submission PR 119,* 15 January 2007; Australasian Compliance Institute, *Submission PR 102,* 15 January 2007; S Crothers, *Submission PR 43,* 14 July 2006.

57 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

4.34 The Law Council of Australia submitted that it was strongly of the view that every effort should be made to develop national privacy legislation administered by a single authority.[58]

4.35 Many submissions focused on the problems caused by overlapping federal, state and territory laws in relation to the handling of health information in the private sector. For example, Telstra submitted that:

> the operation of the *Privacy Act* should be clarified to reinforce the primacy of the national privacy regime. The introduction of State-based legislation, particularly in relation to health privacy, has resulted in additional compliance costs and an extra layer of protection that should be consolidated at a national level.[59]

4.36 A number of stakeholders suggested that the adoption of a single set of privacy principles in federal, state and territory privacy laws would assist national consistency. For example, the OPC submitted that:

> A single set of principles would be most effective where it is implemented, not only in the *Privacy Act* (to replace the IPPs and NPPs), but also in applicable state and territory legislation. This would allow for a more clear and straight-forward approach to regulating the many different sectors covered by privacy laws in Australia.[60]

4.37 Both the Queensland Government and the Government of Victoria supported the adoption of a single set of principles to regulate the Australian public sector, the private sector and state and territory public sectors.[61]

4.38 Some submissions suggested that a national law should be enacted to cover state and territory public sectors.[62] Other stakeholders submitted, however, that the states and territories should be left to regulate the handling of personal information in the public sector. For example, the Legal Aid Commission of New South Wales submitted that there are benefits in different levels of Government being able to innovate or respond to local conditions.[63] The Government of South Australia did not support national legislation regulating its public sector. It submitted that:

> Given the broad range of State and Territory law that would interrelate with any model of privacy protection, it is important that the relevant State or Territory is able to make necessary adjustments to each regime.[64]

---

63 Legal Aid Commission of New South Wales, *Submission PR 107,* 15 January 2007.

64 Government of South Australia, *Submission PR 187,* 12 February 2007.

4.39 The Government of Victoria also noted that there are a number of state laws that regulate the handling of personal information by both the private sector and the state public sector, for example the *Infertility Treatment Act 1995* (Vic) and the *Adoption Act 1984* (Vic). The Government submitted that these laws typically form one critical part of the overall regulation of a particular subject matter, and cannot be divorced from, or viewed in isolation from, the general statute in which they are located.

> The Government would not support the dilution of section 3 as this may remove the ability of States and Territories to legislate for the handling of information about individuals where this is necessary to address particular policy areas administered by the State. These areas are not necessarily confined to the activities of the State public sector, but may apply to the private sector.[65]

4.40 The Australian Government Department of Health and Ageing also noted that a number of state laws would need to be preserved or incorporated into national legislation:

> Any attempt at nationally consistent legislation must consider the interaction between privacy laws and other specific legal requirements which may come directly within State or Territory responsibility, such as child protection, disability and public health.[66]

Commonwealth-state cooperative scheme

4.41 An alternative to the Australian Parliament enacting national privacy legislation is a Commonwealth-state cooperative scheme. A cooperative scheme has been defined as a scheme in which each participating jurisdiction promulgates legislation to facilitate the application of a standard set of legislative provisions in that jurisdiction to regulate a matter of common concern.[67] Commonwealth-state cooperative schemes may be categorised into three types: reference of power to the Commonwealth, mirror legislation and complementary law regimes.[68] These schemes may involve not only mirror or complementary legislation, but the cooperative use of Commonwealth or state and territory officials to administer them and to monitor compliance with them.[69]

4.42 A cooperative scheme could be used to regulate the handling of personal information in the federal and state public sectors and the private sector. Alternatively, national legislation could deal with the federal public sector and the private sector,

69 R French, 'Cooperative Federalism in Australia: An Intellectual Resource for Europe' (Institute of Advanced Legal Studies Public Lecture, London, 22 February 2005), 14.

while a cooperative scheme could address the handling of personal information in each of the state public sectors.

Reference to the Commonwealth

4.43 Section 51(xxxvii) of the *Australian Constitution* gives the Commonwealth Parliament power to make laws with respect to:

> matters referred to the Parliament of the Commonwealth by the Parliament or Parliaments of any State or States, but so that the law shall extend only to States by whose Parliaments the matter is referred, or which afterwards adopt the law.

4.44 The states have referred a number of matters to the Commonwealth including corporations and counter-terrorism.[70] The referral of power in relation to counter-terrorism was made on the basis that the Australian Parliament does not have a specific constitutional power to legislate in relation to terrorism. The *Security Legislation Amendment (Terrorism) Act 2002* (Cth)—which inserted a new Part 5.3 (Terrorism) into Chapter 5 of the Commonwealth *Criminal Code*—relied on a patchwork of constitutional powers. It was feared that any legal complexity or uncertainty would become the focus of litigation into the effectiveness of the new federal terrorism offences. In order to remove doubts about the extent of the Commonwealth's constitutional power, the states referred the matter under s 51(xxxvii).[71]

4.45 While the scope of the Australian Parliament's power to legislate in relation to the handling of personal information, based on the external affairs power, is wide, a referral of power by the states would ensure that federal privacy legislation was comprehensive in its coverage and less vulnerable to constitutional challenge.

Mirror legislation

4.46 Mirror legislation usually refers to a system where one jurisdiction enacts a law that is then enacted in similar terms by other jurisdictions.[72] An example of mirror legislation is the fair trading legislation contained in the *Trade Practices Act 1975* (Cth). Each Australian state and territory has passed legislation that largely mirrors the consumer protection provisions of Divisions 1 and 1A of Part V of the *Trade Practices Act.*

---

70 See, eg, *Workplace Relations Act 1996* (Cth) pt XV; *Commonwealth Powers (Industrial Relations) Act 1996* (Vic); *Criminal Code Act 1995* (Cth) pt 5.3; *Terrorism (Commonwealth Powers) Act 2003* (Vic). The *Corporations Act 2001* (Cth) is based, in part, on reference of matters by the states to the Commonwealth. The decision to adopt such references was influenced by a number of successful challenges to the Commonwealth's attempts to develop uniform corporations law: see *R v Hughes* (2000) 171 ALR 155; *Re Wakim; ex parte McNally* (1999) 198 CLR 511. A reference to the Commonwealth would not be required from the ACT, the Northern Territory and Norfolk Island because s 122 of the *Australian Constitution* assigns to the Commonwealth the power to 'make laws for the government' of the territories.

71 Explanatory Memorandum, Terrorism (Commonwealth Powers) Bill 2003 (Vic).

72 M Farnan, 'Commonwealth-State Cooperative Schemes: Issues for Drafters' (Paper presented at 4th Australasian Drafting Conference, Sydney, 3–5 August 2005), 4–5.

4.47 Each Australian state could pass similar legislation to regulate the handling of personal information by the private sector, or that state's public sector. Mirror legislation can result in inconsistency, however, both at the time the legislation is enacted and as laws are amended.[73] One option for dealing with this is to have a central body to maintain uniformity.[74]

Complementary law regime

4.48 A complementary applied law scheme involves one jurisdiction (which need not be the Commonwealth) enacting a law on a topic, which is then applied by other jurisdictions.[75] Where the Australian Parliament enacts a law that applies to specified matters within Commonwealth constitutional power, the law will apply in the states as a Commonwealth law to the extent possible. State legislation will apply to the extent that its application is consistent with the application of the Commonwealth law.[76]

> In the perfect applied law regime where a law is promulgated by one jurisdiction and is picked up by other jurisdictions as in force from time to time, there are effective limits (which may be non-legislative) on modification and there is central administration and enforcement of that law, which can be expected to provide a substantial degree of uniformity.[77]

4.49 Uniformity can be reduced, however, if an applied law regime does not involve central administration. Further, any capacity for the applying state to have control over the text of the legislation can also lead to inconsistency.[78]

4.50 An example of a complementary applied law scheme is the agricultural and veterinary chemicals legislation under the *Agricultural and Veterinary Chemicals Code Act 1994* (Cth). The Australian Parliament enacted the *Agricultural and Veterinary Chemicals Code* to apply to 'participating territories' and with provisions to enable the states to apply the text of the Code as a law of the state. All states and territories have adopted the Code in relevant legislation. The Act confers regulatory functions on the National Registration Authority for Agricultural and Veterinary Chemicals, establishing it as the national authority responsible for the evaluation, registration and review of agricultural and veterinary chemicals and their control up to their point of sale. The states and territories retain responsibility for control-of-use activities, such as licensing of pest control, operators and aerial spraying. Some states have also enacted

78 Ibid, 10.

legislation relating to the enforcement of the Code. For example, the *Agricultural and Veterinary Chemicals (Control of Use) Act 1995* (Tas) establishes the Agricultural, Silvicultural and Veterinary Chemical Council.

4.51 The *Competition Code* under the *Trade Practices Act 1975* (Cth) is another example of a complementary applied law regime.[79] An issue that challenges national consistency in relation to the *Competition Code* is a state's ability not to apply a Commonwealth amendment to the Code within their jurisdiction. For example, s 6 of the *Competition Policy Reform (Queensland) Act 1996* (Qld) enables the Queensland Parliament to pass a regulation declaring that a Commonwealth amendment does not apply in the state. Section 150K of the *Trade Practices Act 1974* (Cth), however, enables the Commonwealth Minister to prevent a state from enacting a law that provides an exemption from the Act.

4.52 One option would be for the Australian Parliament to enact legislation dealing with the handling of personal information by the Australian Government public sector and private sector. This legislation would include the proposed Unified Privacy Principles, and the proposed *Privacy (Health Information) Regulations* as in force under the *Privacy Act*. The Unified Privacy Principles and the *Privacy (Health Information) Regulations* could then be adopted by the states in legislation to apply to state and territory public sectors as in force under the *Privacy Act* from time to time.

4.53 A complementary (non-applied) law scheme has been adopted in relation to the classification of films, publications and computer games. Films, publications and computer games are classified under the *Classification (Publications, Films and Computer Games) Act 1995* (Cth) while the controls and penalties are imposed under state and territory legislation.[80] One option would be for the Australian Parliament to enact laws establishing a set of privacy principles, and for the states and territories to enact legislation to enforce compliance.

Combined scheme

4.54 Another model is a scheme that combines mirror legislation and applied law approaches. In this model, some states could enact their own law mirroring federal laws that regulate personal information and other states could apply the Commonwealth law as a law of the state. Examples of this approach include the therapeutic goods and gene technology regulatory schemes.

4.55 The *Gene Technology Act 2000* (Cth) extends to matters within the Commonwealth's power, leaving the states with the option of either applying the

---

80 See, eg, *Classification (Publications, Films and Computer Games) Enforcement Act 1995* (Vic). The *Classification (Publications, Films and Computer Games) Act 1995* (Cth) was recently amended to provide for, among other things, integration of the Office of Film and Literature Classification into the Attorney-General's Department: *Classification (Publications, Films and Computer Games) Amendment Act 2007* (Cth).

federal Act or enacting their own legislation. Both options have been adopted by different states. For example, NSW has opted for the applied law model while Victoria has adopted mirror legislation.[81] Section 26 of the *Gene Technology Act 2000* (Cth) establishes the independent position of the Gene Technology Regulator. The Regulator oversees the accreditation of research facilities and licences experimental and commercial dealings.[82]

4.56 Some commentators have suggested that national consistency of the gene technology scheme is being undermined by the states having inconsistent approaches to the issuing of moratoriums on the commercial release of genetically modified organisms.[83] A recent statutory review recommended that all jurisdictions should reaffirm their commitment to a nationally consistent scheme, including a nationally consistent approach to market considerations, and work together to develop a national co-existence framework.[84]

Submissions and consultations

4.57 A large number of submissions were supportive of a cooperative scheme, noting that the regulation of personal information should not be left to the Commonwealth.[85] For example, the OPC submitted that ensuring that privacy protections in state and territory jurisdictions are consistent with, and at least equivalent to, the *Privacy Act* would assist national consistency. It noted that for the purposes of introducing uniform privacy principles across both Commonwealth and state and territory public sectors, a cooperative scheme between the Australian Government and the states may provide the best avenue.

> An ideal outcome would be for the states to have input into the development of a uniform set of principles for the *Privacy Act* and then amend their own privacy legislation to enact the agreed upon principles.[86]

4.58 The Office of the Information Commissioner Northern Territory submitted that:

> The obvious merits of adopting a consistent approach to privacy protection should not prevent states and territories from making decisions about what best suits their constituents. Any move to general consistency should recognise that particular aspects

> of the scheme may be modified if it is considered necessary by a particular jurisdiction.[87]

4.59 While a reference of power to the Commonwealth under s 51(xxxvii) of the *Australian Constitution* has a number of advantages in terms of constitutional validity and national consistency, there was very little support for this model in submissions.[88] For example, the Office of the Victorian Privacy Commissioner (OVPC) stated that this model would remove the state's ability to provide enhanced protection and raised issues of interaction with state-based freedom of information, archives and human rights laws.[89] The Australian Privacy Foundation submitted that it would not be desirable to have a referral of powers, emphasising the importance of having a local regulator to handle complaints, and provide advice and training programs.[90]

4.60 A number of submissions and consultations supported mirror legislation.[91] For example, the Queensland Government submitted that a consistent set of privacy principles binding both public and private sectors should be adopted by each jurisdiction by way of mirror legislation. Each jurisdiction would then be responsible for administering the relevant legislation, for establishing and maintaining complaint resolution mechanisms, undertaking advocacy, education and awareness activities and monitoring the operation of the scheme.[92]

4.61 The Government of South Australia preferred a complementary cooperative scheme, whether legislatively applied or not, where the Commonwealth has responsibility for the private sector and the Australian Government, and the states and territories have responsibility for state and local government and universities.[93]

4.62 The Government of Victoria stated that its preferred model is an applied law model because it has the advantage of rating highly on 'federal values' whilst still ensuring a very high level of uniformity, making it an appropriate model for harmonising privacy principles. The Government noted that if such a model were adopted in relation to privacy regulation, it could be underpinned by an intergovernmental agreement that provides for the following:

> - Commonwealth legislation establishing nationally agreed and binding privacy principles for its own public sector based on principles adapted from the NPPs;
>
> - legislation establishing the same privacy principles for the private sector (presumably Commonwealth legislation covering all jurisdictions,

87 Office of the Information Commissioner (Northern Territory), *Submission PR 103,* 15 January 2007.

93 Government of South Australia, *Submission PR 187,* 12 February 2007.

> although other options would be possible such as State legislation automatically applying the same principles to their own private sector if all jurisdictions agreed to do this);
>
> - State and Territory legislation adopts and automatically applies the privacy principles to their respective public sectors (that is, incorporating them by reference, not repeating the principles in their own legislation), and applying that law as it is set out in the Commonwealth Act from time to time. The intergovernmental agreement would provide that the Commonwealth Act would only be amended per the process outlined below;
>
> - a national process for reaching agreement about alterations to the privacy principles which would require the approval of a ministerial council or another intergovernmental process. This would ensure that the scheme remains a truly co-operative one, that would take into account the experiences of all jurisdictions;
>
> - an agreed statutory complaints handling process, generally involving local resolution of complaints using locally based privacy regulators and access to remedies within the jurisdiction.[94]

4.63 Electronic Frontiers Australia Inc was opposed to a complementary non-applied scheme such as that adopted in relation to the classification of films, publications and computer games. It was said that such a model enables a single jurisdiction to prevent changes to the legislation, notwithstanding overwhelming support from the public and other jurisdictions' governments for change.[95]

A model for national consistency

National legislation

4.64 The problems associated with overlapping and inconsistent federal, state and territory laws that regulate the handling of personal information are documented throughout this Discussion Paper. These problems include unjustified compliance burden and cost, impediments to information sharing and national initiatives and confusion about who to approach to make a privacy complaint. It is the ALRC's view that the most appropriate method of responding to these problems is the enactment of federal legislation to regulate the handling of personal information, to the exclusion of state and territory privacy laws, subject to a qualification discussed below in relation to state and territory public sectors.

4.65 As noted above, it is the ALRC's view that the Australian Parliament has the power under the *Australian Constitution* to legislate to the exclusion of the states regarding privacy in the state public and private sectors. The only qualification to this may be in regards to legislative provisions applying to state banking and state

---

94 Government of Victoria, *Submission PR 288,* 26 April 2007.

95 Electronic Frontiers Australia Inc, *Submission PR 76,* 8 January 2007.

insurance that does not extend beyond the limits of the state, public sector employees in the higher levels of state government, and information that goes to the core of state government functions, such as cabinet-in-confidence documents.

4.66 The ALRC notes, however, the concerns raised by state governments and others that the states and territories should be left to regulate the handling of personal information in the public sector. In particular, the ALRC notes concerns relating to the need for state and territory privacy legislation to respond to local conditions, and to interact with existing state and territory information laws such as freedom of information and public records legislation. Further, the ALRC acknowledges the advantages of having state and territory privacy regulators to deal with complaints, provide advice, and perform educational functions.

4.67 While the *Privacy Act* could accommodate many of these concerns, the ALRC's view is that, for the time being, the Australian Parliament should only exercise its legislative power in relation to the handling of personal information by the private sector. The ALRC proposes below a Commonwealth-state cooperative scheme in relation to state and territory public sectors.

4.68 The problems associated with overlapping federal, state and territory laws that regulate the handling of personal information in the private sector are detailed in Chapter 11 and Part H of this Discussion Paper. A large number of submissions focused on inconsistency in the regulation of personal health information. Submissions suggested that various problems arise because the handling of health information in the private sector is regulated by the *Privacy Act* and state and territory legislation in NSW, Victoria and the ACT.[96]

4.69 Submissions noted that these laws are creating a significant compliance burden and cost, and are preventing the implementation of projects that are in the public interest, such as medical research. In addition, health consumers in those jurisdictions are faced with two sets of principles and two possible avenues of complaint. These submissions urged the ALRC to propose the enactment of national privacy laws that regulate the handling of health information.

4.70 It is the ALRC's view that these issues would be effectively dealt with if organisations were required to comply with a single set of principles in relation to the handling of health information. In the 2003 report, *Essentially Yours: The Protection of Human Genetic Information in Australia* (ALRC 96), the ALRC and AHEC recommended that:

> As a matter of high priority, the Commonwealth, States and Territories should pursue the harmonisation of information and health privacy legislation as it relates to human

96 *Health Records and Information Privacy Act 2002* (NSW); *Health Records Act 2001* (Vic); *Health Records (Privacy and Access) Act 1997* (ACT).

> genetic information. This would be achieved most effectively by developing nationally consistent rules for handling all health information.[97]

4.71 The ALRC proposes that the *Privacy Act* should be amended to provide that the Act is intended to apply to the exclusion of state and territory laws dealing specifically with the handling of personal information by the private sector. In particular, the following laws of a state or territory should be excluded to the extent that they apply to organisations: *Health Records and Information Privacy Act 2002* (NSW); *Health Records Act 2001* (Vic); and the *Health Records (Privacy and Access) Act 1997* (ACT).

4.72 The ALRC notes that other state and territory laws may be introduced that seek to regulate the handling of personal information in the private sector. The ALRC has therefore proposed that regulations made under the *Privacy Act* should operate to exclude laws that regulate the handling of personal information by organisations. For example, the Information Privacy Bill 2007 (WA) proposes to regulate the handling of health information by the private sector in Western Australia. Further, the *Information Privacy Act 2000* (Vic) could potentially regulate the handling of personal information by private sector organisations that are declared to be 'organisations' for the purposes of the Act.[98] It is the ALRC's view that the *Privacy Act* should operate to exclude the operation of such laws.

4.73 A number of federal laws include provisions that state the Commonwealth's intention to 'cover the field'. Section 16(1) of the *Workplace Relations Act 1996* (Cth) states that the Act is intended to apply to the exclusion of a number of listed laws of a state and territory so far as they would otherwise apply in relation to an 'employee' or 'employer'.[99] The ALRC has adopted this provision as a model for its proposal to exclude the operation of state and territory laws dealing with the handling of personal information by organisations.

4.74 The ALRC also proposes that states and territories with information privacy legislation that purports to apply to private sector organisations, should amend that legislation so that it is no longer expressed to apply to private sector organisations.

---

97 Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), Rec 7–1.

98 *Information Privacy Act 2000* (Vic) s 9.

99 Another model is *Corporations Act 2001* (Cth) pt 1.1A.

Proposal 4–1 The *Privacy Act* should be amended to provide that the Act is intended to apply to the exclusion of state and territory laws dealing specifically with the handling of personal information by organisations. In particular, the following laws of a state or territory would be excluded to the extent that they apply to organisations:

(a) *Health Records and Information Privacy Act 2002* (NSW);

(b) *Health Records Act 2001* (Vic);

(c) *Health Records (Privacy and Access) Act 1997* (ACT); and

(d) any other laws prescribed in the regulations.

Proposal 4–2 States and territories with information privacy legislation that purports to apply to private sector organisations should amend that legislation so that it is no longer expressed to apply to private sector organisations.

4.75 As noted above, submissions from state and territory governments and others noted that there are various state and territory laws that regulate the handling of personal information in the private sector that would need to be preserved if the Australian Government enacted national privacy legislation. These laws include state and territory laws that require reporting for public health purposes and reporting for child protection purposes.

4.76 It is the ALRC's view that there are good public interest reasons why these state and territory laws should be preserved under national privacy legislation. For example, state and territory public health Acts require health service providers (including health service providers in the private sector) to collect and record certain information about health consumers with 'notifiable diseases', such as tuberculosis, Creutzfeldt-Jakob disease and HIV/AIDS.[100] Other state and territory laws contain provisions that require mandatory reporting when a child is suspected of being at risk of harm.[101] These provisions usually apply to persons who work in areas such as health care, welfare, education, children's services, residential services, or law enforcement in both the public and private sectors.

4.77 In Chapter 11, the ALRC notes that some state and territory legislation does not include provisions in relation to contracted service providers. Stakeholders have

100 See, eg, *Public Health Act 1991* (NSW) s 14; *Health (Infectious Diseases) Regulations 2001* (Vic) reg 6.

101 See , eg, *Children, Youth and Families Act 2005* (Vic) pt 4.4; *Child Protection Act 1999* (Qld); *Children's Protection Act 1993* (SA) pt 4; *Children Young Persons and Their Families Act 1997* (Tas) pt 3.

expressed concern that this results in some organisations that contract with state and territory governments, in particular small businesses, being unregulated by privacy legislation. The ALRC therefore proposes that state and territory legislation should include provisions that regulate the handling of personal information by organisations when contracting with state and territory government agencies.[102] These laws would also need to be preserved by national legislation that regulates personal information by the private sector to the exclusion of the states and territories.

4.78 While the proposed Unified Privacy Principles would accommodate most of these laws,[103] to ensure clarity the ALRC proposes that the *Privacy Act* should not apply to the exclusion of a law of a state or territory so far as the law deals with any 'non-excluded matters' set out in the legislation. Section 16 of the *Workplace Relations Act 1996* (Cth), for example, provides that the Act operates to the exclusion of state and territory law, except in relation to a list of 'non-excluded matters'. The non-excluded matters are broad categories of laws such as 'superannuation', 'long service leave' and 'child labour'. The ALRC has adopted this provision as a model to deal with state and territory laws that should be preserved under the *Privacy Act*.

4.79 The ALRC has been advised of a range of other state and territory laws that regulate the handling of personal information in the private sector that should be preserved under national privacy laws. These laws include laws regulating adoption, infertility treatment, disability service providers, and health services.[104] The ALRC has not undertaken a comprehensive review of all state and territory laws that regulate the handling of personal information. It is the ALRC's view, however, that it is vital that the Australian Government should consult with state and territory governments about what groups of laws should be preserved under an extended *Privacy Act*. The ALRC proposes that the Australian Government, in consultation with state and territory governments, should develop a list of 'non-excluded matters' for the purposes of the *Privacy Act*.

Proposal 4–3 The *Privacy Act* should not apply to the exclusion of a law of a state or territory so far as the law deals with any 'non-excluded matters' set out in the legislation. The Australian Government, in consultation with state and territory governments, should develop a list of 'non-excluded matters', for example matters such as:

(a) reporting for child protection purposes;

---

102 See Proposal 4–4 below.

103 Such as the exception to the proposed 'Use and Disclosure' principle in the Unified Privacy Principles for uses and disclosures that are 'required or authorised by or under a law'.

104 See, eg, Government of Victoria, *Submission PR 288,* 26 April 2007, Attachment A.

(b) reporting for public health purposes; and

(c) the handling of personal information by state and territory government contractors.

A Commonwealth-state cooperative scheme

4.80 It is the ALRC's view that national consistency will be promoted if the Commonwealth, and state and territory governments enter into an intergovernmental agreement in relation to the handling of personal information. The intergovernmental agreement should establish a Commonwealth-state cooperative scheme that provides that the states and territories should enact legislation that regulates the handling of personal information in that state or territory's public sector.

4.81 The ALRC has not proposed that the states and territories develop legislation that mirrors the *Privacy Act*. As noted above, it is the ALRC's view that the states and territories should develop their own legislation that can accommodate existing state and territory information laws and complaint and enforcement mechanisms. State and territory legislation should apply the privacy principles under the *Privacy Act* and should, at a minimum, adopt certain provisions of the *Privacy Act*.

4.82 A major cause of inconsistency in Australian privacy laws is that the *Privacy Act* and state and territory privacy laws include similar, but not identical, privacy principles. In the ALRC's view, the most effective method of dealing with these inconsistencies is the adoption of identical privacy principles at the federal, and state and territory level. The ALRC therefore proposes that the intergovernmental agreement establishing the Commonwealth-state cooperative scheme should provide that state and territory legislation should apply the proposed Unified Privacy Principles and the proposed *Privacy (Health Information) Regulations* as in force under the *Privacy Act* from time to time. The ALRC notes the success of other applied law schemes in achieving national consistency, including the agricultural and veterinary chemical legislation, the *Competition Code*, and gene technology laws.

4.83 The various problems caused by the use of inconsistent terms and definitions across federal information laws are outlined in Chapter 12. As noted in Chapter 14, definitions of key terms used in state and territory privacy laws generally conform to those used under the *Privacy Act*. However, there are some differences. In the ALRC's view, relevant definitions of key terms used in the *Privacy Act* (including 'personal information', 'sensitive information' and 'health information') should be adopted in state and territory laws that regulate the handling of personal information in the public sector.[105]

105 Proposed definitions of these terms are discussed in Ch 3 and Ch 57.

4.84 Chapter 11 examines how inconsistency in federal, state and territory privacy laws acts as an impediment to appropriate information sharing across state borders. It is the ALRC's view that, rather than preventing appropriate information sharing, privacy laws and regulators should encourage public sector agencies and private sector organisations to design information sharing schemes that are compliant with privacy requirements or, where necessary, seek suitable exemptions or changes to legislation to facilitate information sharing projects.

4.85 In the ALRC's view, an effective way to facilitate information sharing between Australian Government agencies, state and territory agencies and the private sector is the adoption of the *Privacy Act* provisions that allow public interest determinations and temporary public interest determinations in state and territory laws regulating the public sectors. This proposal will allow state and territory agencies to share information with Australian Government agencies and organisations when it is in the public interest, but would otherwise be prevented under that state's or territory's privacy laws.

4.86 Inconsistencies between the *Privacy Act* and state and territory privacy laws have resulted in regulatory gaps in relation to state and territory incorporated bodies (including statutory corporations) in some jurisdictions.[106] State and territory laws that regulate the handling of personal information in that state or territory's public sector should include provisions relating to state and territory incorporated bodies (including statutory corporations). In the event that the states and territories do not enact such provisions, the ALRC has proposed that the *Privacy Act* will apply to statutory corporations in that jurisdiction.[107]

4.87 In Chapter 11, the ALRC notes that some state and territory privacy regimes require organisations that provide contracted services to a state or territory government agency to be bound by the relevant state or territory privacy principles for the purposes of the contract. Other state regimes provide that compliance with the state privacy regime is subject to any outsourcing arrangements, or are silent on this issue. A number of concerns were raised in submissions that organisations that contracted with state governments, in particular, small business, remain unregulated by privacy legislation. The ALRC therefore proposes that state and territory legislation regulating the handling of personal information in that state or territory's public sector should include provisions relating to state and territory government contracts.

4.88 In Chapter 47, the ALRC proposes the adoption of a data breach notification requirement. It is the ALRC's view that an agency (including a state or territory agency) should be required to notify the relevant regulator and any affected individuals when a data breach poses a real risk of serious harm to any affected individuals. The

106 See Ch 14.
107 See Ch 34.

ALRC notes the various benefits of this requirement, and the problems caused by an inconsistent approach to this requirement in the United States.[108]

Proposal 4–4 The states and territories should enact legislation that regulates the handling of personal information in that state or territory's public sector that:

(a) applies the proposed Unified Privacy Principles (UPPs) and the proposed *Privacy (Health Information) Regulations* as in force under the *Privacy Act* from time to time; and

(b) includes at a minimum:

(i) relevant definitions used in the *Privacy Act* (including 'personal information', 'sensitive information' and 'health information');

(ii) provisions allowing public interest determinations and temporary public interest determinations;

(iii) provisions relating to state and territory incorporated bodies (including statutory corporations);

(iv) provisions relating to state and territory government contracts; and

(v) provisions relating to data breach notification.

The legislation also should provide for the resolution of complaints by state and territory privacy regulators and agencies with responsibility for privacy regulation in that state or territory's public sector.

Other options

4.89 In IP 31, the ALRC considered whether national legislation should set out minimum standards for the protection of personal information in state and territory public sectors, but allow those provisions to 'roll back' once a state or territory enacts laws that conform to specified federal minimum standards. There are examples of rollback provisions in various federal laws.[109] An example of this kind of scheme is s 26(2)(b) of the *Personal Information Protection and Electronic Documents Act 2000* (Canada) (PIPED Act). That section provides that the Governor-in-Council may, by order, exempt an organisation, activity or class of organisations or activities from the

108 See discussion in Ch 47.

109 *Gene Technology Act 2000* (Cth) s 14; *Environmental Protection (Sea Dumping) Act 1981* (Cth) s 9.

application of the Act if satisfied that legislation of a province that is 'substantially similar' to the PIPED Act applies to that organisation.

4.90 The Australian Privacy Foundation submitted that the federal, state and territory governments should each be directly responsible and accountable for the decisions they make concerning the information they collect from the public. It would support, however, interim provisions in a federal law that could apply to the jurisdictions that do not yet have a privacy law and which could be 'rolled back' upon the introduction of a local equivalent law.[110] The OVPC also supported such a proposal provided it allowed for higher protection to be adopted by the state and territory governments.[111]

4.91 The ALRC has not proposed that a 'roll back' provision should operate generally in relation to state and territory agencies. It has proposed, however, the use of such a mechanism in relation to state statutory corporations, and state and territory agencies that access personal information provided to the Australian Transaction Reports and Analysis Centre under the *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth).[112]

4.92 The ALRC also notes s 6F of the *Privacy Act* allows the Act to be extended to cover the handling of personal information by state and territory instrumentalities at the initiative of the states and territories. The OVPC submitted that s 6F of the *Privacy Act* should be retained in its current form.

> While it appears not to have been used, it may be in the future and this type of mechanism maintains control by and independence of the states.[113]

4.93 The ALRC agrees that s 6F is a useful mechanism to bring state and territory bodies under the operation of the *Privacy Act* and should be retained in the Act.

A review

4.94 The Australian Parliament has the power under the *Australian Constitution* to legislate to the exclusion of the states regarding privacy in the state public and private sectors, subject to some limitations.[114] The ALRC considers, however, that for the time being the states and territories should participate in a Commonwealth-state scheme that provides for state and territory laws to regulate the handling of personal information in state and territory public sectors.

4.95 Given the importance of national consistency, as discussed above, it is the ALRC's view that the Australian Government should initiate a review in five years

114 See discussion of 'Constitutional issues' above.

time to consider whether the participation in the proposed Commonwealth-state scheme in relation to the handling of personal information in state and territory public sectors has achieved its goal. This review should consider whether it would be more effective for the Australian Parliament to exercise its legislative power in relation to information privacy in the state and territory public sectors.

Proposal 4–5 The Australian Government should initiate a review in five years to consider whether the proposed Commonwealth-state cooperative scheme has been effective in achieving national consistency. This review should consider whether it would be more effective for the Australian Parliament to exercise its legislative power in relation to information privacy in the state and territory public sectors.

A permanent standing body

4.96 The OPC Review suggested that if national consistency is to be achieved there needs to be greater cooperation between the Australian and state and territory governments in developing legislation that has privacy implications.[115] The Australian Information Industry Association submitted to the OPC Review that the Australian Government needs to take the lead to ensure that disparate policies do not emerge.[116] The Insurance Council of Australia submitted that:

> Federal and State Ministers should work together to ensure that privacy regulation is developed in a coherent and consistent manner. Health ministers should promote co-ordination between the States in the development of privacy legislation.[117]

4.97 The health sector has in place a process for ensuring ongoing Australian and state and territory government cooperation in the area of health privacy. The National Health Privacy Working Group of the Australian Health Ministers' Advisory Council (AHMAC) has developed a draft *National Health Privacy Code*.[118] Further, the Australian Government has announced that SCAG has agreed to establish a working group to advise Ministers on options for improving consistency in privacy regulation.[119]

4.98 In IP 31, the ALRC discussed the establishment of a permanent standing body to ensure national consistency in the regulation of personal information. Such a proposal raises a number of issues including: the membership of such a body, its functions and powers, who the body would be required to report to, and resourcing.

Options for reform

4.99 One option for consideration is to broaden the membership and functions of the Privacy Advisory Committee established under the *Privacy Act*.[120] Another option would be for a ministerial council to perform such a function. A ministerial council is generally made up of ministers of all Australian states and territories, and the Commonwealth who meet to discuss matters of mutual interest.

4.100 COAG is the peak intergovernmental forum in Australia. COAG comprises the Prime Minister, state premiers, territory chief ministers and the President of the Australian Local Government Association (ALGA). The COAG Secretariat is located within the Department of the Prime Minister and Cabinet. The role of COAG is to initiate, develop and monitor the implementation of policy reforms that are of national significance and which require cooperative action by Australian governments.

4.101 The Standing Committee of Attorneys-General (SCAG) is a national ministerial council. Its members are the Australian Attorney-General and Minister for Justice and Customs, the state and territory attorneys-general and the New Zealand Attorney-General. Norfolk Island has observer status at SCAG meetings. SCAG seeks to achieve uniform or harmonised action within the portfolio responsibilities of its members. The types of issues that SCAG considers can be quite varied. An item is likely to be appropriate for SCAG if it:

- requires joint action from the Australian, state and territory governments;
- involves the development of model or uniform model legislation; or
- is of relevance to attorneys-general.[121]

4.102 SCAG has considered privacy issues related to residential tenancy databases,[122] and is currently consulting stakeholders about potential options for reform in the area of workplace privacy. SCAG also has oversight of a cooperative scheme—the National Classification Scheme for film and video and for printed material. The

120 The Privacy Advisory Committee is discussed in Ch 43.

122 See Ministerial Council on Consumer Affairs/Standing Committee of Attorneys-General Residential Tenancy Database Working Party, *Report on Residential Tenancy Databases* (2005).

Intergovernmental Agreement on Censorship requires that certain changes to the National Classification Scheme must be considered and agreed to by all ministers.

4.103 Another example of a ministerial council model is the Gene Technology Ministerial Council (GTMC). The GTMC oversees the implementation of the *Gene Technology Act 2000* (Cth) and the Gene Technology Regulator. The GTMC was established by an intergovernmental agreement between the Australian Government and all state and territory governments. The intergovernmental agreement also commits state and territory governments to enact corresponding state and territory legislation.[123]

4.104 The functions conferred upon the GTMC by the intergovernmental agreement include: issuing policy principles, policy guidelines and codes of practice to govern the activities of the Regulator and the operation of the scheme; approve the appointment (and, if necessary, the dismissal) of the Regulator; and consider and, if thought fit, agree on proposed changes to the scheme.[124] The GTMC is supported by the Gene Technology Standing Committee comprised of senior Commonwealth and state department officials, and the Regulator is supported by the Office of the Gene Technology Regulator.

Submissions

4.105 Only a few submissions addressed the option of a permanent standing body. Of those submissions, the majority supported a body to ensure national consistency in the regulation of personal information. In most cases, such a body was supported as a means of ensuring consistency in a Commonwealth-state cooperative scheme such as mirror legislation or applied legislation.

4.106 Most submissions addressing this issue supported a ministerial council model. For example, the Centre for Law and Genetics suggested a ministerial council model similar to that used in the gene technology regulatory scheme.[125] The Government of Victoria proposed:

> a national process for reaching agreement about alterations to the privacy principles which would require the approval of a ministerial council or another intergovernmental process. This would ensure that the scheme remains a truly co-operative one, that would take into account the experiences of all jurisdictions … A similar model would apply in relation to nationally agreed health privacy principles, which are currently being progressed through the Australian Health Ministers' Conference (AHMC).[126]

4.107 Privacy NSW submitted that it is important that a coordinating body such as SCAG maintain a supervisory role over any national scheme for privacy regulation.[127]

---

Some stakeholders in consultation meetings questioned whether SCAG or COAG would be the appropriate bodies. On the other hand, it was noted that the COAG and SCAG processes are time consuming, but that where there is the political will, the process can work effectively.

4.108 The Queensland Government's preferred model for a permanent standing body involves a national standing committee of privacy representatives selected by constituent governments to assess and endorse proposals for future reform and amendment of the privacy principles.[128] The OVPC submitted that there is some merit in the creation of a permanent standing body comprising all jurisdictions' privacy commissioners to consider and promote national consistency, information sharing between regulators, cooperative arrangements for enforcement, and enhanced legislative scrutiny of bills that may adversely impact on privacy.[129]

4.109 The Australian Privacy Foundation did not support the establishment of a permanent standing body on privacy. The Foundation submitted that such bodies have 'delayed or buried privacy issues in the past'.

> The Issues Paper mentions the Health Privacy Working Group of the Australian Health Ministers' Advisory Council, which is a poor example. It has failed after many years to produce a national health privacy code, the most recent public draft of which was released in 2003. The Standing Committee of Attorneys General has similarly been unsuccessful in tacking national privacy issues.[130]

ALRC's view

4.110 The ALRC considers that a permanent standing body will assist in maintaining national consistency in the regulation of personal information. As noted above, it is the ALRC's view that national consistency will be promoted if the Commonwealth, state and territory governments enter into an intergovernmental agreement to establish a cooperative scheme in relation to the regulation of personal information. The intergovernmental agreement should provide that any proposed changes to the proposed:

- Unified Privacy Principles must be approved by SCAG; and
- *Privacy (Health Information) Regulations* must be approved by SCAG, in consultation with the Australian Health Ministers' Advisory Council (AHMAC).

4.111 The agreement should provide for a procedure whereby the party proposing a change requiring approval must give notice in writing to the other parties to the

130 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

agreement, and the proposed amendment must be considered and approved by SCAG before being implemented.

4.112 It is the ALRC's view that SCAG is the most appropriate body to ensure national consistency as it is an established body that has experience in considering privacy issues and in promoting consistency through cooperative schemes. One issue is that, while the majority of state and territory ministers with responsibility for the regulation of personal information are Attorneys General, the Minister responsible for information privacy in South Australia is not.[131] However, SCAG has adopted procedures to accommodate this situation in its oversight of the National Classification Scheme. SCAG procedures provide that where in any jurisdiction the Minister responsible for censorship is not the Attorney-General, that Minister attends for discussion of censorship matters. When considering any changes to the *Privacy (Health Information) Regulations*, SCAG must consult with the Australian Health Ministers' Advisory Council (AHMAC).

4.113 To ensure that all views are taken into account when issues relating to the unified privacy principles and *Privacy (Health Information) Regulations* arise, the ALRC has proposed that the amendment process should be informed by the advice of an expert advisory committee established to assist SCAG. The committee should comprise representatives from state and territory bodies with responsibility for privacy, as well as others with an interest in privacy issues. The Advisory Committee established by the ALRC for the purposes of this Inquiry provides a workable model. The Committee could address issues related to national consistency such as information sharing between privacy regulators, cooperative arrangements for enforcement, and enhanced legislative scrutiny of federal, state and territory bills that may adversely impact on national consistency in the regulation of personal information.

Proposal 4–6 To promote and maintain uniformity, the Standing Committee of Attorneys-General (SCAG) should adopt an intergovernmental agreement which provides that any proposed changes to the proposed:

(a) UPPs must be approved by SCAG; and

(b) *Privacy (Health Information) Regulations* must be approved by SCAG, in consultation with the Australian Health Ministers' Advisory Council (AHMAC).

131 The Minister responsible for information privacy in South Australia is currently the Minister for Finance.

The agreement should provide for a procedure whereby the party proposing a change requiring approval must give notice in writing to the other parties to the agreement, and the proposed amendment must be considered and approved by SCAG before being implemented.

Proposal 4–7 The Standing Committee of Attorneys-General should be assisted by an expert advisory committee to:

(a) provide advice in relation to the amendment of the proposed UPPs and *Privacy (Health Information) Regulations*;

(b) address issues related to national consistency such as the scrutiny of federal, state and territory bills that may adversely impact on national consistency in the regulation of personal information; and

(c) address issues related to the enforcement of privacy laws, including information sharing between privacy regulators and cooperative arrangements for enforcement.

Appointments to the expert advisory committee should ensure a balanced and broad-based range of expertise, experience and perspectives relevant to the regulation of personal information. The appointments process should involve consultation with state and territory governments, business, privacy and consumer advocates and other stakeholders.

A single privacy regulator?

4.114 As noted in Chapter 11, a number of issues may arise because more than one body is responsible for the regulation of personal information. In Australia there are multiple privacy regulators in particular industry sectors as well as across jurisdictions. In IP 31, the ALRC noted that one issue for consideration is whether all formal complaints about privacy should be dealt with by the Privacy Commissioner, rather than by industry ombudsmen and other federal, state and territory regulators. Another option is that all formal complaints about privacy under federal legislation could be referred to the Privacy Commissioner. Alternatively, the various regimes governing the regulation of privacy at the federal, state and territory levels could be amended to clarify the jurisdiction of each of the bodies that regulate the handling of personal information.

Submissions

4.115 The ALRC did not receive many submissions on this issue. A number of stakeholders, however, vigorously opposed a body, such as the OPC, regulating state and territory public sectors.

4.116 The Government of South Australia submitted that it would not accept

> Commonwealth law directly regulating its public sector, in particular, any proposal that the Commonwealth Privacy Commissioner exercises powers of entry, search and examination in respect of State or Territory Governments. Other models discussed in the Issues Paper, such as complementary laws, are preferable.[132]

4.117 The Government of Victoria submitted that local accessible complaints resolution and remedies through state-based commissioners should be preserved. The OVPC noted that having a comprehensive national privacy law can impact negatively on enforcement and other functions associated with privacy regulation if regulation is to be the sole province of a single national office by:

- reducing the field for public comment on privacy issues of multi- or cross-jurisdictional concern;
- eliminating an avenue for state bodies to seek advice on potential adverse privacy impact, if a state body is not empowered or available to provide advice (including on cabinet-in-confidence matters and sensitive pilot and other projects);
- reducing individuals' ability to access justice in making complaints locally and seeking redress, if having to rely on a national regulator; and
- minimising the ability to conduct audits and investigations into privacy sensitive acts and practices.

4.118 The OVPC submitted that maintaining and promoting a national framework for having privacy laws and regulators in each jurisdiction fosters greater access to justice by those seeking redress, enables advice to be provided by offices that have developed local expertise, and allows for compliance actions to be undertaken in response to issues and concerns that arise within particular jurisdictions. The OVPC noted that there is more likely to be resourcing problems for handling complaints and generating awareness, and a lack of expertise in other relevant state and territory laws, if national legislation was to establish a single national privacy regulator.[133]

---

132 Government of South Australia, *Submission PR 187,* 12 February 2007.
133 Office of the Victorian Privacy Commissioner, *Submission PR 217,* 28 February 2007.

ALRC's view

4.119 A number of Commonwealth-state cooperative schemes employ a single national regulator to enforce compliance with the scheme. For example, the corporations law scheme is enforced by the Australian Securities and Investments Commission, and the gene technology scheme is enforced by the Gene Technology Regulator.

4.120 The ALRC considers, however, that there are advantages to having a number of agencies and bodies with responsibility for information privacy. These advantages are discussed in Ch 11, and include the pooling of resources, peer review and the promotion of high standards in the performance of regulators, the ability of individuals to approach a local regulator for advice and to make a complaint, and the expertise that an industry-specific dispute resolution body can provide that a general regulator cannot.

4.121 However, the jurisdiction of the various bodies with responsibility for privacy needs to be clarified. Chapter 11 outlines various problems caused by multiple regulators including confusion about where and how to make a privacy complaint, as well as unjustified compliance burden and cost.

4.122 This chapter has outlined a model for national consistency that seeks to clarify the scope of federal, state and territory information privacy laws. It is the ALRC's view that the jurisdiction of the various federal, state and territory bodies with responsibility for information privacy will be clarified once the scope of the *Privacy Act* is clarified in relation to the private sector, and state and territory privacy legislation, amended in accordance with the scheme proposed in this Discussion Paper, is in place.

4.123 There are currently a number of provisions under federal legislation that allow the transfer of complaints concerning information privacy between various bodies.[134] It is the ALRC's view that there are advantages to having privacy complaints dealt with by local regulators. The OPC, however, does not have a power under the *Privacy Act* to delegate its power to state and territory privacy regulators. Therefore, the ALRC has proposed that the *Privacy Act* be amended to empower the Privacy Commissioner to delegate to a state or territory authority all or any of the powers in relation to complaint handling conferred on the Commissioner by the *Privacy Act*.[135]

4.124 Telstra submitted to the OPC Review that it wanted to see more cooperation between the OPC and other regulators to ensure a national and consistent approach to

---

134 See, eg, *Privacy Act 1988* (Cth) s 50; *Telecommunications Act 1997* (Cth) s 515A; *Ombudsman Act 1974* (NSW) s 6(4A).

135 See Ch 45.

enforcement.[136] One method of achieving this is the development of memoranda of understanding between privacy regulators in relation to enforcement of privacy laws. The ALRC notes that the OPC has already entered into a number of memoranda of understanding with other bodies with responsibility for information privacy, including the Office of the NSW Privacy Commissioner. The ALRC would encourage the OPC to enter memoranda of understanding with each of the bodies with responsibility for information privacy in Australia including industry-specific dispute resolution bodies and state and territory bodies with responsibility for privacy.[137]

4.125 In Chapter 45, the ALRC proposes that the OPC publish documents setting out its complaint-handling policies and enforcement guidelines. These guidelines should address the jurisdiction of the OPC and other bodies involved in the regulation of privacy. For example, the ALRC has proposed that these documents address:

- the roles and functions of the OPC, Telecommunications Industry Ombudsman and the Australian Communications and Media Authority under the *Telecommunications Act 1997* (Cth), *Spam Act 2003* (Cth), *Do Not Call Register Act 2006* (Cth) and the *Privacy Act*; and

- when a matter will be referred to, or received from, the Telecommunications Industry Ombudsman and the Australian Communications and Media Authority.[138]

4.126 The ALRC has also proposed that the OPC develop and publish educational material in a variety of areas, including material that addresses the various bodies that are able to deal with a complaint in relation to privacy, and when it is appropriate to make a complaint to those bodies.[139] It is the ALRC's view that the OPC's educational material should, where relevant, address the existence of multiple bodies with responsibility for information privacy, and provide guidance on the jurisdiction of each of those bodies.

Other methods to achieve national consistency

4.127 This section of the chapter summarises various methods for dealing with inconsistency and fragmentation in the regulation of personal information that are discussed in detail in other chapters of this Discussion Paper.

137 The ALRC has proposed the development of memoranda of understanding to clarify the roles of each of the bodies with responsibility for information privacy in the telecommunications industry: see Ch 64.

138 See Ch 64.

139 See Ch 64.

Binding codes

4.128 The OPC Review suggested that one way of overcoming the problems caused by inconsistent state and territory legislation regulating a particular activity is to provide for a power under the *Privacy Act* to develop binding codes.[140] The OPC Review considered that binding codes could be used to regulate a number of areas, at a national level.[141] The OPC reiterated this view in its submission to this Inquiry.[142]

4.129 The Law Council of Australia submitted that a cooperative scheme between the Australian Government and the states and territories utilising the powers to make and impose binding codes of conduct is a possible solution to problems caused by inconsistency and fragmentation. In the Council's view,

> a model along these lines is consistent with the overall 'light touch' approach undertaken in the *Privacy Act*. The introduction of binding codes could clarify the requirements for compliance, and greatly reduce the level of confusion and uncertainty in the current system.[143]

4.130 The OVPC noted that the *Privacy Act* does not authorise the development of joint codes—where codes are developed by more than one regulator. The OVPC submitted that state and territory privacy regulators should be able to review, consult and recommend whether a code be adopted, rather than being required to comply with a code issued by a federal Minister or the federal Privacy Commissioner. This would allow for state and local interests to be reflected better in the final form of code.[144]

4.131 In Chapter 44 of this Discussion Paper, the ALRC proposes a power within the *Privacy Act* for the Privacy Commissioner to develop and impose a privacy code that applies to designated agencies and organisations, or to request the development of a privacy code to be approved by the Privacy Commissioner. This proposal is based on the industry code provisions in Part 6 of the *Telecommunications Act*. It is the ALRC's view that such a power may assist overcoming the problems caused by inconsistent state and territory legislation regulating a particular activity. While the ALRC has not proposed the development of a binding code relating to residential tenancy databases at this stage, it is an example of an area where a binding code could be appropriate in the future.[145]

4.132 A number of state and territory privacy regulators have the ability to make privacy codes.[146] It is the ALRC's view that the proposal to empower the Privacy

146 See Ch 2.

Commissioner to make or direct the making of a code would not preclude consultation with state and territory privacy regulators when making a code. A memorandum of understanding between the OPC and state and territory privacy regulators could also include a process for consultation with privacy commissioners in other jurisdictions when developing codes.

Non-binding guidelines

4.133 Another option is the making of non-binding guidelines. The Privacy Commissioner publishes a number of non-binding guidelines.[147] This option was considered by the Taskforce on Reducing Regulatory Burdens on Business. Submissions to the Taskforce's review suggested that the OPC could develop voluntary national workplace privacy guidelines. The success of the guidelines would depend on their being widely adopted by business. It was noted that the Privacy Commissioner has already issued guidelines on workplace email, web browsing and privacy. While the guidelines are not legally binding,[148] the Taskforce stated that business has largely adopted them as a benchmark. The Taskforce saw merit in considering this option further in a wider review of the *Privacy Act*.[149]

4.134 The ALRC has made a number of proposals for the OPC and other bodies to develop and publish guidance or non-binding guidelines. For example, the ALRC has proposed that the OPC should provide support to small businesses to assist them in understanding and fulfilling their proposed obligations under the Act, including by developing plain English educational materials—including guidelines—on the requirements under the Act.[150] While non-binding guidelines have the benefit of assisting organisations and agencies to comply with privacy laws, they will not always deal with national consistency issues.

Rules, codes and guidelines

4.135 The potential for inconsistency and complexity to arise because of the development of privacy rules, privacy codes and guidelines by agencies and organisations is discussed in Chapter 11. The ALRC has considered whether the Australian Government should amend the *Privacy Act* to provide that all privacy rules, privacy codes and guidelines developed by agencies and organisations are required to be approved by the Privacy Commissioner. The ALRC did not receive any submissions on this issue. The ALRC considers that such a proposal would have serious resource implications for the OPC, particularly if the ALRC's proposal to remove the small business exemption is implemented. It is the ALRC's view, however, that

150 See Ch 35.

organisations and agencies should consult the OPC when developing privacy rules, codes and guidelines.

Guidance on the interaction of legislation

4.136 The complex interactions between the *Privacy Act* and other federal, state and territory regimes that regulate personal information are detailed throughout this Discussion Paper.[151] One issue for consideration is whether the Privacy Commissioner should further develop and publish guidance on the interaction of the *Privacy Act* with other federal, state and territory legislation.[152] Another option for consideration is whether Australian Government and state and territory government agencies that administer legislation that regulates personal information should develop and publish guidance on how that legislation interacts with the *Privacy Act*.

4.137 The OPC Review noted that detailed guidance, issued jointly by the OPC and the body responsible for regulating telecommunications, may assist in increasing understanding of the interaction of the *Privacy Act* and the *Telecommunications Act*. The OPC stated that it would discuss the development of guidance to clarify the relationship between the two Acts.[153] This recommendation has not been implemented to date. The Australian Government Attorney-General's Department has issued guidance on how the *Freedom of Information Act* interacts with the *Privacy Act*.[154]

4.138 In its submission to this Inquiry, the OPC noted that providing greater guidance on the operation of existing laws and how they relate to other regulations will help harmonise current privacy laws.[155] The OVPC submitted that relevant state privacy regulators from the affected jurisdictions should prepare and issue jointly any such guidance.[156]

4.139 The ALRC has made a number of proposals in this Discussion Paper for the OPC to provide guidance on the interaction of legislation, in consultation with other bodies. For example, the ALRC has proposed that the OPC, in consultation with the Australian Communications and Media Authority, Australian Communications Alliance and the Telecommunications Industry Ombudsman, should develop and publish guidelines that outline the interaction between the *Privacy Act*, *Telecommunications Act*, *Spam Act*, and the *Do Not Call Register Act*.[157]

---

151 See, eg, Part H (Health Services and Research) and Part J (Telecommunications).

152 The Privacy Commissioner has power to issue such guidance under *Privacy Act 1988* (Cth) s 27(1)(e).

153 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 10. See also rec 11 relating to the *Spam Act 2003* (Cth).

156 Office of the Victorian Privacy Commissioner, *Submission PR 217,* 28 February 2007.

157 See Ch 64.

4.140 It is the ALRC's view that, while non-binding guidance does not deal directly with national consistency issues, it does assist individuals, agencies and organisations, and regulators to understand how the *Privacy Act* and other federal, state and territory laws operate and interact. A memorandum of understanding between the OPC and state and territory privacy regulators could include a consultation process when developing guidance on the interaction of federal, state and territory privacy laws.

Scrutiny of legislation

4.141 Section 27 of the *Privacy Act* provides that one of the Privacy Commissioner's functions is to examine (with or without a request from a minister) a proposed enactment that would require or authorise acts or practices that would otherwise be interferences with the privacy of individuals or which may have any adverse effect on the privacy of individuals. Submissions to the OPC Review submitted that this function should be enhanced—for example, the OPC could act as a clearinghouse for ensuring that proposed federal legislation is consistent with the *Privacy Act*.[158] While this function may be used to ensure that federal legislation remains consistent, it may not assist national consistency.[159]

Privacy impact statements and assessments

4.142 Primary legislation and delegated legislation that affect business may require the preparation of a Regulatory Impact Statement (RIS). An RIS is a document prepared by the department, agency, statutory authority or board responsible for a regulatory proposal following consultation with affected parties, formalising some of the steps that must be taken in good policy formulation. It requires an assessment of the costs and benefits of each option, followed by a recommendation supporting the most effective and efficient option. Subject to limited exceptions,[160] the preparation of an RIS is mandatory for all reviews of existing regulation, proposed new or amended regulation and proposed treaties which will directly affect business, have a significant indirect effect on business, or restrict competition.[161]

4.143 One issue is whether a 'privacy impact statement' should accompany any federal, state and territory government proposal to introduce legislation that impinges on privacy.[162] Such a statement could include a privacy impact assessment and an analysis of whether the government proposal is consistent with existing federal, state and territory laws relating to the regulation of privacy. This may include consideration of privacy matters other than the protection of personal information.[163]

163 Privacy impact assessments are discussed further in Ch 44.

4.144 The NSW Council of Civil Liberties submitted that every parliamentary bill that affects human rights, including privacy, should require a human rights impact assessment.[164] The OVPC noted that federal bills have been enacted without consideration being given to the affect on privacy regulation in Victoria and other jurisdictions. It submitted that a privacy impact assessment should include consideration of whether the proposal is consistent with federal, state and territory privacy laws.[165]

4.145 The ALRC has not proposed that a privacy impact assessment should accompany every federal, state and territory government proposal to introduce legislation that impinges on privacy. It is the ALRC's view that a mandatory requirement of this kind would involve an unjustified compliance burden and cost, and that compliance with a direction to prepare a privacy impact assessment in particular cases can be more effectively monitored than a mandatory requirement. Therefore, the ALRC has proposed that the *Privacy Act* be amended to empower the Privacy Commissioner to direct an agency or organisation to provide to the Privacy Commissioner a privacy impact assessment in relation to a new project or development that the Privacy Commissioner considers may have a significant impact on the handling of personal information.[166]

4.146 New government projects will often require the enactment of legislation. It is the ALRC's view that when a government agency is conducting a privacy impact assessment of a new project that is supported by legislation, the assessment should address how the new legislation will interact with existing federal, state and territory privacy laws with the aim of maintaining national consistency.

Introduction

5.1 In Issues Paper 31, *Review of Privacy* (IP 31), the ALRC asked whether a cause of action for breach of privacy should be recognised by the courts or the legislature in Australia.[1] It was also noted that, as part of its review of privacy laws in New South Wales, the New South Wales Law Reform Commission (NSWLRC) was looking at the desirability of introducing a statutory tort of privacy in New South Wales.

5.2 The ALRC confirmed that, in an effort to ensure uniform development in this important area of law, the NSWLRC would take primary responsibility for the formulation of proposals for reform. With the consent of those consulted or making a

1 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 1–2.

submission, consultation notes and submissions to the ALRC Inquiry were shared with the NSWLRC.

5.3 In May 2007, the NSWLRC released Consultation Paper 1, *Invasion of Privacy* (NSWLRC CP 1), which is discussed in detail below. The ALRC generally agrees with the proposals for reform put forward in NSWLRC CP 1, therefore the consideration of the issues in this Discussion Paper will be confined to: a brief overview of developments in the law in Australia and elsewhere; a discussion of the submissions and consultations to this Inquiry; and an analysis of NSWLRC CP 1 with particular emphasis on the impact federally of the proposals in that consultation paper. Readers should consider NSWLRC CP 1 when responding to the proposals and question at the end of this chapter.

Background

Previous ALRC Reports

5.4 The ALRC first considered tort protection of privacy in *Unfair Publication: Defamation and Privacy*.[2] After reviewing the existing case law relating to privacy in Australia, proposals by academics and state legislatures aimed at protecting privacy, and approaches to the protection of privacy adopted in overseas jurisdictions, the ALRC proposed a tort of 'unfair publication'. The tort was designed to protect from publication the details of individuals' sensitive private facts relating to their home life, private behaviour, health and personal and family relationships, and to protect against the appropriation for commercial or political purposes of a person's name, identity, reputation or likeness.[3]

5.5 Significantly, the ALRC intended that the scope of the tort would be limited to the publication of 'sensitive' facts. The publication would have to cause distress, embarrassment or annoyance to a person in the position of that individual for an action in tort to lie.[4] For example, the ALRC suggested that the publication, without consent, of a photograph taken in a private place could give rise to an action in the tort of unfair publication where the photograph related to the individual's home life, private behaviour, health, personal and family relationships.[5]

5.6 The ALRC also recommended that an action in tort be available to a person whose name, identity or likeness was published by another person in circumstances where the other person had not obtained the consent of the first person, and published for their own benefit with the intent to exploit the first person's name, identity or

4 Ibid, [236].
5 Ibid, [240].

likeness. The ALRC confined its recommendation on this issue to matters published for commercial purposes or candidature of office.[6]

5.7 In its later report, *Privacy* (ALRC 22), the ALRC rejected the creation of a general tort of invasion of privacy. In the ALRC's view at that time, 'such a tort would be too vague and nebulous'.[7]

Privacy Act 1988 (Cth)

5.8 During the passage through Parliament of the Privacy Bill 1988 (Cth), the Senate proposed an amendment to the Bill to provide for an action for breach of privacy. The proposed amendment provided that 'interference with the privacy of an individual taking place after the commencement of this Act shall give rise to an action at the suit of the individual for breach of privacy'.[8] The remedies that the Federal Court of Australia or the Supreme Court of a state or territory may award were also stipulated.[9]

5.9 The Senate's proposed amendment was narrower than the general tort of invasion of privacy rejected by the ALRC in ALRC 22. The proposed statutory cause of action would lie only 'against an agency or a tax file number recipient or both'.[10] The House of Representative rejected the proposed amendment.[11]

Article 17 of the ICCPR

5.10 As has been noted in Chapter 1, on 13 August 1980, the Australian Government ratified the *International Covenant on Civil and Political Rights* (ICCPR). Article 17 of the ICCPR states:

> 1. No person shall be subjected to arbitrary or unlawful interferences with his privacy, family, home or correspondence, nor to unlawful attacks on his honour and reputation.
>
> 2. Everyone has the right to the protection of the law against such interference or attacks.[12]

5.11 In 1988, the Office of the United Nations (UN) High Commissioner for Human Rights released General Comment Number 16, which discussed how the UN interprets

art 17 and how it should be promoted through domestic law. It is noted in the General Comment that art 17 should protect a nation's citizens against all interferences and attacks on privacy, family, home or correspondence, 'whether they emanate from State authorities or from natural or legal persons'.[13] To this end, all member states are required 'to adopt legislative and other measures to give effect to the prohibition against such interferences and attacks as well as to the protection of this right'.[14] Furthermore, 'state parties are under a duty themselves not to engage in interferences inconsistent with article 17 of the Covenant and to provide the legislative framework prohibiting such acts by natural or legal persons'.[15]

Right to personal privacy—developments in Australia and elsewhere

5.12 A tort of invasion of privacy has, since the 1970s, found legislative expression in some jurisdictions in the United States and Canada. While the courts in the United Kingdom do not recognise such a tort, the equitable action for breach of confidence has been used to address the misuse of private information. In Australia, no jurisdiction has enshrined in legislation a cause of action for invasion of privacy; however, the door to the development of such a cause of action at common law has been left open by the High Court in *Australian Broadcasting Corporation v Lenah Game Meats Pty Ltd* ('*Lenah Game Meats*').[16] To date, two lower courts have held that such a cause of action is part of the common law of Australia.[17]

5.13 The developments in Australia and other comparable overseas jurisdictions cast light on the policy choices available for reform in this area. Of particular interest are the statutory expressions of the tort of invasion of privacy in some of the provinces of Canada[18] and in the Privacy Bill currently before the Irish Parliament,[19] and the development in Australia and the United Kingdom of the test to determine what is considered 'private' for the purpose of determining liability for a breach of privacy.

Australia

5.14 At common law, the major obstacle to the recognition in Australia of a right to privacy was, before 2001, the 1937 High Court decision in *Victoria Park Racing and Recreation Grounds Co Ltd v Taylor* ('*Victoria Park*').[20] In a subsequent decision, the

20 *Victoria Park Racing and Recreation Grounds Co Ltd v Taylor* (1937) 58 CLR 479. See discussion in D Butler, 'A Tort of Invasion of Privacy in Australia?' (2005) 29 *Melbourne University Law Review* 339,

High Court in *Lenah Game Meats* indicated clearly that the decision in *Victoria Park* 'does not stand in the path of the development of … a cause of action [for invasion of privacy]'.[21] The elements of such a cause of action—and whether the cause of action is to be left to the common law tradition of incremental development or provided for in legislation—remain open questions.[22]

5.15 Two Australian cases have expressly recognised a common law right of action for invasion of privacy. In the 2003 Queensland District Court decision in *Grosse v Purvis*, Skoien SDCJ awarded aggravated compensatory damages and exemplary damages to the plaintiff for the defendant's breach of the plaintiff's privacy.[23] After noting that the High Court in *Lenah Game Meats* had removed the barrier the *Victoria Park* case posed to any party attempting to rely on a tort of invasion of privacy, his Honour took what he viewed as 'a logical and desirable step' and recognised 'a civil action for damages based on the actionable right of an individual person to privacy'.[24]

5.16 While emphasising that 'it is not my task nor my intent to state the limits of the cause of action nor any special defences other than is necessary for the purposes of this case', Skoien SDCJ enumerated the essential elements of the cause of action:

> 1 a willed act by the defendant;
>
> 2 which intrudes upon the privacy or seclusion of the plaintiff;
>
> 3 in a manner which would be considered highly offensive to a reasonable person of ordinary sensibilities; and
>
> 4 which causes the plaintiff detriment in the form of mental, physiological or emotional harm or distress, or which prevents or hinders the plaintiff from doing an act which he or she is lawfully entitled to do.[25]

5.17 His Honour noted that a defence of public interest should be available, but that no such defence had been made out on the facts of the case.[26]

24 Ibid, [442].

25 Ibid, [444].

26 Ibid, [34].

5.18 In *Doe v Australian Broadcasting Corporation*, currently the subject of an appeal, the defendant broadcaster published in its afternoon and evening radio news bulletins information that identified the plaintiff—a victim of a sexual assault.[27] In doing so, the defendant breached s 4(1A) of the *Judicial Proceedings Reports Act 1958* (Vic), which makes it an offence in certain circumstances to publish information identifying the victim of a sexual offence. Judge Hampel in the County Court of Victoria held that, in addition to breaching a statutory duty owed to the plaintiff by virtue of the *Judicial Proceedings Reports Act,* the defendant broadcaster and two of its employees were liable to the plaintiff in equity for breach of confidence, and in tort for invasion of privacy.[28]

5.19 In holding that a tort for invasion of privacy had been proved, Judge Hampel noted that

> this is an appropriate case to respond, although cautiously, to the invitation held out by the High Court in *Lenah Game Meats* and to hold that the invasion, or breach of privacy alleged here is an actionable wrong which gives rise to a right to recover damages according to the ordinary principles governing damages in tort.[29]

5.20 Responding to the repeated suggestion by defence counsel that recognition of a tort of invasion of privacy would be a 'bold step',[30] her Honour stated:

> If the mere fact that a court has not yet applied the developing jurisprudence to the facts of a particular case operates as a bar to its recognition, the capacity of the common law to develop new causes of action, or to adapt existing ones to contemporary values or circumstances is stultified. Lenah Game Meats, and the UK cases … in particular those decided since Lenah Game Meats, demonstrate a rapidly growing trend towards recognition of privacy as a right in itself deserving of protection.[31]

United States

5.21 In the United States, the *Restatement of the Law, 2nd, Torts* provides for privacy tort protection where:

> 1 One who intentionally intrudes, physically or otherwise, upon the solitude or seclusion of another or his private affairs or concerns, is subject to liability to the other for invasion of his privacy, if the intrusion would be highly offensive to a reasonable person;

---

27 *Doe v Australian Broadcasting Corporation* [2007] VCC 281.

28 In *Giller v Procopets* [2004] VSC 113, an earlier case from the Victorian Supreme Court, Gillard J concluded that 'the law has not developed to the point where the law in Australia recognises an action for breach of privacy': *Giller v Procopets* [2004] VSC 113, [188]. See also *Kalaba v Commonwealth* [2004] FCA 763; leave to appeal refused: *Kalaba v Commonwealth* [2004] FCAFC 326. 29 *Doe v Australian Broadcasting Corporation* [2007] VCC 281 [157].

30 Ibid, [157].

31 Ibid, [161].

> 2 One who appropriates to his own use or benefit the name or likeness of another is subject to liability to the other for invasion of his privacy;
>
> 3 One who gives publicity to a matter concerning the private life of another is subject to liability to the other for invasion of his privacy, if the matter publicized is of a kind that (a) would be highly offensive to a reasonable person, and (b) is not of legitimate concern to the public;
>
> 4 One who gives publicity to a matter concerning another that places the other before the public in a false light is subject to the other for invasion of his privacy, if (a) the false light in which the other was placed would be highly offensive to a reasonable person, and (b) the actor had knowledge of or acted in reckless disregard as to the falsity of the publicized matter and the false light in which the other would be placed.[32]

5.22 The defences to the privacy torts are subject to the same defences that apply in the United States to defamation.[33] Such defences include an absolute parliamentary and court privilege, consent, and conditional privileges for other activities, such as reporting public proceedings and reasonable investigation of a claim against a defendant.[34]

5.23 The privacy torts have proved to be of limited effect, due in no small part to the existence of a constitutionally entrenched right to a free press. If the subject is newsworthy, and the newsworthy event occurs in a public place, privacy protection tends to take a backseat to the First Amendment protection of freedom of the press.[35] The concept of 'newsworthy' in the United States appears to be broader than the concept of 'public interest', discussed below, applied by the United Kingdom courts in privacy cases.

5.24 California has attempted to provide some additional protection, in particular for celebrities, through the enactment of a cause of action for physical invasion of privacy. This applies

> when the defendant knowingly enters on to the land of another without permission or otherwise commits a trespass in order to physically invade the privacy of the plaintiff with the intent to capture any type of visual image, sound recording, or other physical impression of the plaintiff engaging in a personal or familial activity and the physical invasion occurs in a manner that is offensive to a reasonable person.[36]

36 *California Civil Code* § 1708.8(a).

5.25 To address the problems associated with an evolving technological environment, § 1708.8 of the *California Civil Code* also establishes an action for constructive invasion of privacy when

> the defendant attempts to capture, in a manner that is offensive to a reasonable person, any type of visual image, sound recording, or other physical impression of the plaintiff engaging in a personal or other familial activity under circumstances in which the plaintiff had a reasonable expectation of privacy, through the use of a visual or auditory enhancing device, regardless of whether there is a physical trespass, if this image, sound recording, or other physical impression could not have been achieved without a trespass unless the visual or auditory enhancing device was used.[37]

5.26 The legislation has been in force since 1998,[38] and the provision's teeth are found in the penalties that apply for committing the invasion, constructive invasion or assault. The penalties include up to three times the amount of general and special damages proximately caused by the invasion, constructive invasion or assault; punitive damages; and possible forfeiture of any proceeds or consideration obtained.[39] Those that direct, solicit, actually induce or cause another person to commit such an assault may also be liable.[40] Whether the legislation survives a constitutional challenge remains to be seen.[41]

Canada

5.27 An individual's right to privacy has received statutory protection in four provinces in Canada.[42] Generally, the legislation provides that 'it is a tort, actionable without proof of damage, for a person wilfully and without claim of right, to violate the privacy of another person'.[43] The legislation also generally stipulates a number of defences, including consent, exercise of a lawful right of defence of person or property, acts or conduct authorised or required by law, privilege and fair comment on a matter

The British Columbia legislation differs from the statutes in force in the other provinces in that it also protects the unauthorised use of the name or portrait of another: *Privacy Act 1996* RSBC c 373 (British Columbia) s 3.

of public interest.[44] Remedies generally include damages, an injunction, an account for profits and an order for the delivery up of material.[45]

5.28 While the *Canadian Charter of Rights and Freedoms 1982*[46] does not guarantee specifically a right to privacy, the Supreme Court of Canada has interpreted the right in s 8 to be secure against unreasonable search and seizure to include a reasonable expectation of privacy in relation to governmental acts.[47] The province of Quebec has guaranteed 'a right to respect for his personal life' in the Quebec *Charter of Human Rights and Freedoms*.[48]

New Zealand

5.29 In *Hosking v Runting*, a majority of the New Zealand Court of Appeal held that the tort of invasion of privacy should be recognised as part of the common law of New Zealand.[49] While the majority stressed that 'the cause of action will evolve through future decisions as courts assess the nature and impact of particular circumstances',[50] the Court was prepared to extend tort protection to wrongful publicity given to private lives. In so holding, the Court of Appeal was influenced by the third formulation of the United States privacy tort[51] when it held that:

> there are two fundamental requirements for a successful claim for interference with privacy:
>
> 1 The existence of facts in respect of which there is a reasonable expectation of privacy; and
>
> 2 Publicity given to those private facts that would be considered highly offensive to an objective reasonable person.[52]

United Kingdom

5.30 In the United Kingdom, the courts have repeatedly stated that 'English law knows no common law tort of invasion of privacy'.[53] Instead, the cause of action for breach of confidence has been extended to encompass misuse or wrongful dissemination of private information.[54] Extensive expansion of the law in this area has occurred in recent years.

5.31 Professor Des Butler notes that:

> Breach of confidentiality in the United Kingdom has … migrated away from an obligation of confidence to being a doctrine based on the surreptitious means of acquiring private information, thus extending to situations where either: 1 disclosure would be likely to lead to serious physical injury or death of the claimant, and seeking relief from the court is the only way of protecting the claimant; or 2 one person knows or ought to know that another person reasonably expects his or her privacy to be respected.[55]

5.32 In extending the scope of the breach of confidence tort, the courts in the United Kingdom have 'drawn upon the tort of wrongful publication of private facts as developed in the United States of America'.[56]

5.33 In *Ash v McKennitt*, the Court of Appeal recognised that a

> feeling of discomfort arises from the action for breach of *confidence* being employed where there was no pre-existing relationship of confidence between the parties, but the 'confidence' arose from the defendant having acquired by unlawful or surreptitious means information that he should have known he was not free to use …[57]

The court went on to note that, 'at least the verbal difficulty … has been avoided by the rechristening of the tort as misuse of private information: per Lord Nicholls of Birkenhead in *Campbell*'.[58]

5.34 However christened, the developments in the United Kingdom of an action for breach of privacy must now be discussed with reference to the human rights legislation in force in the European Union. The European Convention on Human Rights came into force in the United Kingdom in October 2000.[59] Since that time, the courts in the

59 *Convention for the Protection of Human Rights and Fundamental Freedoms*, 10 December 1948, Council of Europe, ETS No 005, (entered into force generally on 3 September 1953). The Convention was implemented by the *Human Rights Act 1998* (UK).

United Kingdom have been influenced by art 8 of the Convention,[60] and by the Strasbourg jurisprudence interpreting art 8.[61]

5.35 When analysing whether the elements of the tort have been established in a case of unlawful publication of private information (which constitutes the majority of the case law in the United Kingdom), the court engages in a two-part balancing exercise. The court first ascertains whether the information is private 'in the sense that it is in principle protected by article 8'.[62] If the answer is 'yes', the court then asks: 'in all the circumstances, must the interest of the owner of the private information yield to the right of freedom of expression conferred on the publisher by article 10'? [63]

5.36 The courts in the United Kingdom have avoided setting too high a bar when determining what 'private' means within the context of art 8. When considering the first limb of the test, the person alleging a breach of art 8 must establish that interference with private life was of 'some seriousness' before art 8 is engaged.[64]

5.37 It is unclear whether 'some seriousness' equates to, or is less than, the standard of disclosure that is 'highly offensive to a reasonable person of ordinary sensibilities', propounded in cases such as *Lenah Game Meats*. In *Campbell v MGN Ltd*, Nicholls LJ warned that the 'highly offensive' formulation

> should be used with care for two reasons. First, the 'highly offensive' phrase is suggestive of a stricter test of private information than a reasonable expectation of privacy. Second, the 'highly offensive' formulation can all too easily bring into account, when deciding whether the disclosed information was private, considerations which go more properly to issues of proportionality; for instance, the degree of intrusion into private life, and the extent to which publication was a matter of proper public concern. This could be a recipe for confusion. [65]

5.38 Hope LJ noted that the threshold test is 'what a reasonable person of ordinary sensibilities would feel if she was placed in the same position as the claimant and faced with the same publicity'.[66] Baroness Hale LJ suggested a similar formulation.[67]

5.39 Once the information is identified as 'private', the court must then 'balance the claimant's interest in keeping the information private against the countervailing interest of the recipient in publishing it'.[68] This balancing test is contextual—that is,

67 Ibid, [136].
68 Ibid, [137].

determined by reference to the facts of the particular case. The principles formulated by the trial judge in *McKennitt v Ash*, and endorsed by the Court of Appeal, to determine the second limb of the test are:

> i) Neither article [8 and 10 of the European Convention on Human Rights] has as such precedence over the other.
>
> ii) Where conflict arises between the values under Articles 8 and 10, an 'intense focus' is necessary upon the comparative importance of the specific rights being claimed in the individual case.
>
> iii) The court must take into account the justifications for interfering with or restricting each right.
>
> iv) So too, the proportionality test must be applied to each.[69]

5.40 In *Von Hannover v Germany*,[70] a decision of the European Court of Human Rights which has been followed in the United Kingdom,[71] the Court established the benchmark from which an analysis of the application of art 8 must proceed. First, the Court recognised the 'fundamental importance of protecting private life from the point of view of the development of every human being's personality'.[72] The Court noted that the protection 'extends beyond the private family circle and also includes a social dimension … anyone, even if they are known to the general public, must be able to enjoy a "legitimate expectation" of protection of and respect for their private life'.[73]

5.41 It is clear from the reasoning in *Von Hannover v Germany* that the court took into account, to use the words found in the Terms of Reference for this Inquiry,[74] 'the need of individuals for privacy in an evolving technological environment'. The Court stressed the fact that 'increased vigilance in protecting private life is necessary to contend with new communication technologies which make it possible to store and reproduce personal data'.[75]

5.42 The Court also acknowledged the essential role played by the press in a democratic society, and in particular in the exercise of the right of freedom of expression.[76] This role, however, is circumscribed if, for example, the publication interferes with the privacy of an individual. If freedom of expression is to take precedence over an individual's right to privacy, the interference must be in the public interest. In this context, 'what interests the public is not necessarily in the public interest'.[77]

5.43 In *Jameel v Wall Street Journal Europe*, Baroness Hale LJ, in commenting on 'the obligation of the press, media and other publishers to communicate important information upon matters of general public interest and the general right of the public to receive such information',[78] noted:

> The public only have a right to be told if two conditions are fulfilled. First, there must be a real public interest in communicating and receiving the information. This is, as we all know, very different from saying that it is information which interests the public—the most vapid tittle-tattle about the activities of footballers' wives and girlfriends interests large sections of the public but no-one could claim any real public interest in our being told all about it … Secondly, the publisher must have taken care that a responsible publisher would take to verify the information published.[79]

5.44 The first condition has also been held to apply to a determination involving a conflict between art 8 and art 10 rights.[80]

5.45 In a recent case, JK Rowling, the author of the phenomenally successful *Harry Potter* series, and her husband sued a photo agency on behalf of their 18 month old son. The agency's photographer took a covert photograph of the couple and their son on a street in Edinburgh. The photograph, which was published in a newspaper, clearly showed the son's profile. Rowling and her husband claimed that the photograph breached their son's right to privacy, and that its publication was a misuse of private information.[81]

5.46 In dismissing the case before trial, Patten J stated:

> If a simple walk down the street qualifies for protection then it is difficult to see what would not. For most people who are not public figures in the sense of being politicians or the like, there will be virtually no aspect of their life which cannot be characterized as private. Similarly, even celebrities would be able to confine unauthorized photography to the occasions on which they were at a concert, film premiere or some similar function.[82]

5.47 Patten J went on to note that 'even after *Von-Hannover* there remains, I believe, an area of routine activity which when conducted in a public place carries no guarantee of privacy'.[83] If the decision is not overturned on appeal, it has the potential to limit the breadth of *Von Hannover v Germany*.[84]

NSWLRC Consultation Paper on invasion of privacy

5.48 As has been noted above, the NSWLRC has, as part of its review of privacy law in New South Wales, released a Consultation Paper that discusses whether a statutory cause of action for invasion of privacy should be introduced in that state. The NSWLRC has reached the preliminary view that persons should be protected in a broad range of contexts from unwanted intrusions into their private lives or affairs.[85] A statutory model to ensure such protection is put forward for consultation.[86] A case for reform is articulated in Chapter 1 of NSWLRC CP 1 and will not be repeated here.

5.49 After an extensive review of developments in Australia and overseas, the NSWLRC considered four possible statutory models:

> 1. One general, non-specific right to seek redress for invasion of personal privacy.
>
> 2. A general cause of action for invasion of privacy, supplemented by a non-exhaustive list of the circumstances that could give rise to the cause of action.
>
> 3. A general cause of action for invasion of privacy, together with other specific statutory causes of action, for example, in respect of unauthorised surveillance activity.
>
> 4. Several narrower and separate causes of action based on various distinct heads of privacy.[87]

5.50 The second option, which is the one favoured by the NSWLRC, is modelled on the existing law in the Canadian provinces of British Columbia, Saskatchewan, Manitoba, and Newfoundland and Labrador.[88] It is also the model upon which the Privacy Bill currently before the Irish Parliament is based.[89] Unlike the Canadian and Irish statutes, which frame the cause of action in tort, the NSWLRC suggests that the cause of action should be expressed in terms of a right of action for invasion of privacy, rather than as a tort of violation of privacy.

5.51 The NSWLRC suggests the following as an example of a statutory cause of action:

> A person would be liable under the Act for invading the privacy of another, if he or she:
>
> (a) interferes with that person's home or family life;
>
> (b) subjects that person to unauthorised surveillance;
>
> (c) interferes with, misuses or discloses that person's correspondence or private written, oral or electronic communication;

89 Privacy Bill 2006 (Ireland).

(d) unlawfully attacks that person's honour and reputation;

(e) places that individual in a false light;

(f) discloses irrelevant embarrassing facts relating to that person's private life;

(g) uses that person's name, identity, likeness or voice without authority or consent.

This list should be interpreted as illustrative and not exhaustive.[90]

5.52 Having suggested that a general cause of action for invasion of privacy could be provided for by statute, the NSWLRC goes on to discuss the essential elements of the cause of action. The defences to such a cause of action are also discussed. On these issues, the NSWLRC calls for submissions and refrains from making any proposals.[91]

5.53 In the final chapter, the NSWLRC explores a range of common law, equitable and statutory remedies that could be available to a person who has had his or her privacy unlawfully invaded. The Commission proposes that:

> The statute should provide that where the court finds that there has been an invasion of the plaintiff's privacy, the Court may, in its discretion, grant any one or more of the following:
>
> - damages, including aggravated damages, but not exemplary damages;
> - an account of profits;
> - an injunction;
> - an order requiring the defendant to apologise to the plaintiff;
> - a correction order;
> - an order for the delivery up and destruction of material;
> - a declaration;
> - other remedies or orders that the Court thinks appropriate in the circumstances.[92]

5.54 The NSWLRC is currently conducting consultations on its proposals. The ALRC understands that the NSWLRC intends to have its final report completed in early 2008.

Recognising an action for breach of privacy in Australia

5.55 In IP 31, the ALRC asked the following question:

---

90 New South Wales Law Reform Commission, *Invasion of Privacy*, Consultation Paper 1 (2007), [6.32].
91 Ibid, [7.60].
92 Ibid, Proposal 2.

> Should a cause of action for breach of privacy be recognised by the courts or the legislature in Australia? If so, and if legislation is preferred, what should be the recognised elements of the cause of action, and the defences? Where should the cause of action be located? For example, should the cause of action be located in state and territory legislation or federal legislation? If it should be located in federal legislation, should it be in the *Privacy Act* or elsewhere?[93]

5.56 There was general support for the recognition of a cause of action for breach of privacy in the submissions that addressed the question.[94] A significant minority, however, expressed serious reservations.[95] Comment on the question was more widespread in consultations, and the support for and against was similar to that evidenced in submissions.

5.57 The comments in the submission of the Centre for Law and Genetics are representative of the types of comments expressed by those who favoured the enactment of a statutory cause of action.

> It is most surprising that the Australian courts have yet to develop common law or equitable principles for breach of privacy in Australia. Australia is becoming increasingly out of step with other common law jurisdictions in this regard. It may well be that the courts would be amenable to such a development, should the right case come before them. In the absence of common law or equitable protection, there is good justification for the development of legislation to fill the void.[96]

5.58 In support of its view that a cause of action for breach of privacy should be recognised, AAMI noted:

> International law is moving this way, thus it would be logical to include this concept. Social expectations are also moving in this direction, especially with the advent of the internet and digital technology. Preferred method is statutory, as it's a lot easier for businesses to digest and apply.[97]

5.59 Of those expressing support for a cause of action, statutory enactment in federal legislation was the preferred option. The Office of the Privacy Commissioner (OPC) suggested that, when formulating the elements of a statutory cause of action, the focus

97 AAMI, *Submission PR 147,* 29 January 2007.

should be on torts relating to invasion of privacy, and in particular unreasonable intrusion upon privacy and disclosure of private facts.[98]

5.60 The OPC noted that, while the nature of any defences would depend on the specific wording of the torts, the most significant likely defences would be: express or implied consent; public interest, and in particular, this defence should cover 'the existing freedom of communication concerning government or political matters … as well as matters of public concern'; and other defences based on existing defences in defamation.[99]

5.61 The arguments raised by stakeholders against the enactment of a cause of action fall into the following categories:

- the privacy of Australians is adequately protected under the current regulatory regime;[100]
- recognition of a cause of action for breach of privacy is best left to incremental development at common law through the courts;[101] and
- a statutory cause of action for breach of privacy will tip the balance too heavily in favour of privacy rights for individuals at the expense of the free flow of information on matters of public concern,[102] and the benefits to society flowing from artists who create art in public places, for example photographers.[103]

5.62 Media organisations, in particular, were concerned that a statutory cause of action for breach of privacy would 'be just another weapon in the arsenal of those in society who would seek to deflect public scrutiny of their possible malfeasance or non-feasance'.[104] The Australian Press Council stated:

> In the development of any proposal towards a putative cause of action for breach of privacy, the Commission needs to place a stress on the public interest as an appropriate criterion to be used to determine the balance between privacy rights for

98 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007. The OPC suggested that the elements of a tort of privacy proposed by Professor Butler, in D Butler, 'A Tort of Invasion of Privacy in Australia?' (2005) 29 *Melbourne University Law Review* 339, would be a useful model for the ALRC to consider.

99 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

> individuals and the public's right to the free flow of information on matters of public concern.[105]

5.63 SBS stressed that, 'being able to film or gather information without restrictions is important not only for the proper reporting of news and current affairs items, but also, for example, in projects which reflect Australian society'.[106] The Arts Law Centre of Australia expressed a related concern that 'a cause of action for breach of privacy would limit the creativity and expression of the Australian artists whose work takes on a documentary focus and attempts to capture everyday life, people and public space'.[107]

ALRC's view

Statutory cause of action

5.64 In the absence of a statutory cause of action, the common law in this area will continue to develop. Whether this evolution results in the recognition of a tort of invasion of privacy, the adoption by Australian courts of the United Kingdom's approach to breach of confidence, a combination of the two or a rejection of the international trend, is a question for the courts.

5.65 If Australian courts follow the United Kingdom's approach of developing the cause of action within the equitable action for breach of confidence, or decide tort law should be the preferred vehicle, they will have to develop the cause or causes of action within the rules of equity and tort. This has an impact on the circumstances that will be recognised as giving rise to the cause of action, and on the remedies available to address the wrong.

5.66 Sir Roger Toulson, co-author of a leading text on confidentiality[108] and a judge of the England and Wales Court of Appeal, has highlighted, in the context of the United Kingdom's approach, a limitation inherent in the incremental development of the common law. He identifies an important limitation on the use of breach of confidence to address privacy issues.

> A consequence of the development of privacy within the action for breach of confidentiality is that it is presently confined to cases involving the use of information of a private nature, whether in word or pictorial form. So however strong and understandable may be the feeling of harassment of a person who is hounded by photographers when carrying out activities of a private nature, and however unacceptable the behaviour of the pack, there will be no cause of action until an intrusive photograph is published. From the viewpoint of the mischief against which Article 8 [of the *Human Rights Act* (1998)] is aimed, this is illogical.[109]

---

105 Ibid.
106 SBS, *Submission PR 112,* 15 January 2007.

109 R Toulson, 'Freedom of Expression and Privacy' (Paper presented at Association of Law Teachers Lord Upjohn Lecture, London, 9 February 2007), 7.

5.67 To put these comments in an Australian context, if the United Kingdom's approach applied, the plaintiff in *Doe v ABC* would (and did on the findings of the trial judge) have a recognised cause of action for breach of confidence, but the plaintiff in *Grosse v Purvis* would be without a remedy.

5.68 Such constraints can be overcome if a statutory cause of action for invasion of privacy is enacted. This avoids the problems inherent in attempting to fit all the circumstances that may give rise to an invasion of privacy into a pre-existing cause of action—such as breach of confidence—or formulating a previously unrecognised cause of action—such as the tort of invasion of privacy. It also allows for a more flexible approach to defences and remedies.[110]

5.69 The ALRC agrees with the preliminary view of the NSWLRC that individuals should be protected from unwanted intrusions into their private lives or affairs in a broad range of contexts, and proposes that a statutory cause of action is the best way to ensure such protection. It forecloses the possibility of Australia adopting breach of confidence as the primary vehicle to protect from invasion an individual's private life, and alleviates the necessity of judges taking the 'bold step'[111] of formulating a new tort. Further, it does away with the distinction between equitable and tortious causes of action, and between the defences and remedies available under each. Finally, and importantly, this view is supported by a majority of those making submissions to the Inquiry on this issue, and by a majority of those consulted to date.

5.70 It follows that the ALRC supports the NSWLRC's preliminary view that the 'statutory cause of action for invasion of privacy should not be constrained at the outset by an assumption that rules otherwise applicable to torts generally should necessarily apply to the statutory cause of action for invasion of privacy'.[112] In addition, as the NSWLRC notes, this approach allows for the consideration of competing interests, including the public interest, 'that have not traditionally been relevant in the development of tortious causes of action'.[113]

5.71 The ALRC's view is that it is also appropriate to set out a non-exhaustive list of the types of acts or conduct that could constitute an invasion of privacy. Whether all of the categories set out in the example put forward in NSWLRC CP 1 should be adopted is a separate issue.[114]

---

110 A case note on *Doe v ABC* published in the *Australian Press Council News* noted, 'if a privacy tort were defined by statute, it could incorporate workable defences. In addition to a strong public interest defence, a defence could be based on an appropriate offer-of-amends procedure': I Ryan, 'Doe v ABC—A Case Note' (2007) 19(2) *Australian Press Council News* <www.presscouncil.org.au>, 7.

111 *Doe v Australian Broadcasting Corporation* [2007] VCC 281, [157].

112 New South Wales Law Reform Commission, *Invasion of Privacy*, Consultation Paper 1 (2007), [1.7].

113 Ibid, [1.7].

114 Ibid, [6.32].

5.72 In particular, it is questionable whether an unlawful attack on a person's honour and reputation, placing a person in a false light and using a person's name, identity, likeness or voice without authority or consent are properly characterised as invasions of privacy. It has been argued, at least in relation to false light and appropriation, that such conduct is better left to the law of defamation.[115] The same argument applies to an unlawful attack on a person's honour and reputation, which clearly falls within the parameters of defamation law.[116]

5.73 In *Lenah Game Meats,* Gummow and Hayne JJ commented on the tenuous nexus between privacy and the appropriation and false light torts.

> Whilst objection possibly may be taken on non-commercial grounds to the appropriation of the plaintiff's name or likeness, the plaintiff's complaint is likely to be that the defendant has taken the steps complained of for a commercial gain, thereby depriving the plaintiff of the opportunity of commercial exploitation of that name or likeness for the benefit of the plaintiff. To place the plaintiff in a false light may be objectionable because it lowers the reputation of the plaintiff or causes financial loss or both. The remaining categories [of the *Restatement of the Law, 2nd, Torts, 1977* (US)], the disclosure of private facts and unreasonable intrusion upon seclusion, perhaps come closest to reflecting a concern for privacy 'as a legal principle drawn from the fundamental value of personal autonomy', the words of Sedley LJ in *Douglas v Hello! Ltd*.[117]

5.74 It has also been suggested that the appropriation tort is a form of intellectual property, in that it protects a property right as distinct from the privacy of a person. Alternatively, an extension of the tort of 'passing off', or the development of a 'right of publicity', may be a better way to deal with the perceived problem.[118]

Elements of a statutory cause of action

5.75 The NSWLRC suggests two possible approaches to establishing the elements of a statutory cause of action for invasion of privacy.

> An invasion of privacy could be determined as made out where:
>
> - The plaintiff had, in all the circumstances, a reasonable expectation of privacy in relation to the relevant conduct or information; and/or

117 *Australian Broadcasting Corporation v Lenah Game Meats Pty Ltd* (2001) 208 CLR 199, [125].

118 For a discussion of the application to appropriation cases of intellectual property law, the tort of 'passing off' and the development of a 'right of publicity', see R Zapparoni, 'Propertising Identity: Understanding the United States Right of Publicity and it's Implications—Some Lessons for Australia' (2004) 28 *Melbourne University Law Review* 690. For a discussion of information privacy as a form of property, see J Rule, 'Towards Strong Privacy: Values, Markets, Mechanisms, and Institutions' (2004) 54 *University of Toronto Law Journal* 183. A contrary view is discussed in R Toulson and C Phipps, *Confidentiality* (2nd ed, 2006), [2–056]–[2–066].

- The defendant's invasion of that privacy in relation to that conduct or information, is, in all the circumstances, offensive (or highly offensive) to a reasonable person of ordinary sensibilities.[119]

5.76 The fact that the two approaches are not mutually exclusive is evidenced by *Hosking v Runting*. As has been noted above, the court found that the fundamental requirements for a successful interference with privacy, in the context of wrongful publicity given to private lives, includes both a reasonable expectation of privacy and conduct that would be considered highly offensive to the hypothetical reasonable person.[120]

5.77 The NSWLRC concedes that these two approaches 'may often be two sides of the same coin. They are not necessarily mutually exclusive'. It suggests, however, that this may not always be the case. To illustrate this point, the NSWLRC gives the example of a medical practitioner who reveals the plaintiff's HIV status by mistake. The NSWLRC suggests that the plaintiff may have a reasonable expectation of privacy, but that the disclosure of the plaintiff's HIV status will not be 'highly offensive to a reasonable person of ordinary sensibilities'.[121]

5.78 Such a distinction illustrates the point made by Nicholls LJ in *Campbell v MGN Ltd*, noted above. The 'highly offensive' formulation should be approached with care; one reason being that the phrase 'highly offensive' is suggestive of a stricter test of what should be considered private than a reasonable expectation of privacy.[122]

5.79 The ALRC's view is that, in determining what is considered 'private' for the purpose of establishing liability under the statutory cause of action, there must be *both* a reasonable expectation of privacy in all the circumstances, and the act complained of must satisfy an objective test of seriousness. In determining the latter, the bar should not be set too high.

5.80 Adopting the phrase used by Gleeson CJ in *Lenah Game Meats*—that is, 'highly offensive to a reasonable person of ordinary sensibilities'[123]—may be too high a threshold. A more appropriate test of seriousness may be where the act complained of is, in all the circumstances, sufficiently serious to cause substantial offence to a person of ordinary sensibilities.[124]

The role of consent

5.81 Consent, whether express or implied by the plaintiff or some person entitled to consent on the plaintiff's behalf, will, in most cases, provide an answer to a cause of action for invasion of privacy. Legislatively, it can be dealt with in the following ways.[125] It can:

- be included as an essential element of the cause of action—for example, to use 'letters, diaries or other personal documents of a person … *without the consent, express or implied, of the person or some other person who has the lawful authority to give the consent*', may in a variety of circumstances constitute an invasion of privacy;[126]

- be considered when determining whether there was a reasonable expectation of privacy in all the circumstances, or as a circumstance in determining whether the act complained of meets the test of 'sufficiently serious to cause substantial offence to a person of ordinary sensibilities';

- operate as an exception to the general cause of action;[127] or

- be a defence to an action.[128]

5.82 The ALRC's view is that, when formulating a statutory cause of action for invasion of privacy, issues of consent are best dealt with in the context of an essential element of the cause of action, when determining whether the plaintiff had a reasonable expectation of privacy in the circumstances or when determining whether the act complained of is sufficiently serious to cause substantial offence to a person of ordinary sensibilities. This is consistent with the approach to consent adopted in the protection of personal information. Consent is considered when determining whether there has been a breach of the proposed Unified Privacy Principles, not as a defence to justify a breach.[129]

Defences

5.83 The defences to a cause of action for invasion of privacy generally include where the:

---

125 Generally see New South Wales Law Reform Commission, *Invasion of Privacy*, Consultation Paper 1 (2007), [7.12]–[7.17].

126 *Privacy Act 1978* RSS c P–24 (Saskatchewan) s 3(d) (emphasis added).

127 *Privacy Act 1996* RSBC c 373 (British Columbia) s (2)(a).

128 *Privacy Act 1990* RSNL c P–22 (Newfoundland and Labrador) s5(1)(a); *Privacy Act 1978* RSS c P–24 (Saskatchewan) s4(1)(a); *Privacy Act* CCSM s P125 (Manitoba) s5(a). See also, Hong Kong Law Reform Commission, *Civil Liability for Invasion of Privacy* (2004), recs 4, 9.

129 The role of consent in the context of the proposed Unified Privacy Principles is discussed in detail in Ch 16.

- act or conduct was incidental to the exercise of a lawful right of defence of person or property;
- act or conduct was authorised or required by or under law;
- disclosure of information was of public interest or was fair comment on a matter of public interest; or
- disclosure of information was, under defamation law, privileged.[130]

Public interest

5.84 Of particular concern in the context of this Inquiry is the defence of public interest, or fair comment on a matter of public interest. In this context, the circumstances giving rise to an invasion of privacy may also involve a competing right of freedom of expression.

5.85 The public interest defence commonly arises, as the above review of the case law illustrates, when private information is published. Perhaps less notoriously, it can also arise when artists and documentary filmmakers attempt 'to capture everyday life, people and public space'.[131] When the defence is raised, the court will have to determine if, in all the circumstances, the public interest asserted outweighs the individual's right to privacy.[132]

5.86 Recognition of the public interest defence simply reflects the fact that the right to privacy is not absolute. In appropriate circumstances, it will have to give way to other competing rights, such as freedom of expression. The ALRC agrees with the Australian Press Council that public interest is an essential criterion to be used to determine 'the balance between privacy rights for individuals and the public's right to the free flow of information on matters of public concern'.[133]

5.87 It is important to keep in mind, however, that 'freedom of expression' and 'freedom of the press' are not synonymous, although the latter often facilitates the former. Professor Eric Barendt notes:

> Press freedom is parasitic to some extent on the underlying free speech rights and interests of readers and listeners, and the role which the press and other media play in informing them. It is not the same as the free speech argument, and that should be

132 See *Aubry v Éditions Vice Versa Inc* [1998] 1 SCR 591.

133 Australian Press Council, *Submission PR 48,* 8 August 2006.

> borne in mind when we consider how much weight should be attached to the freedom when it conflicts with the right to privacy which certainly is a fundamental human right.[134]

5.88 While Barendt's comments are couched in the language of 'free speech rights', which is a right expressly recognised in the *United States Constitution*, the underlying rationale applies equally in an Australian context. The result is that publication of personal information may constitute an invasion of privacy if the privacy interest asserted by the plaintiff outweighs any public interest asserted by the defendant.

Authorised or required by or under law

5.89 Another important defence is that the act or conduct was authorised or required by or under law. This defence assumes particular importance in the context of law enforcement and national security.

5.90 In Chapter 13, the scope of this exception in the context of the *Privacy Act* is discussed in detail. Generally, the ALRC's view is that the *Privacy Act* should not fetter a government's discretion to require or authorise that personal information be handled in a particular way. It follows, therefore, that a requirement that the act or conduct was required or authorised by or under law would be a defence to the statutory cause of action.

5.91 The ALRC asks whether the definition of a 'law' for the purpose of determining when an act or practice is required or specifically authorised by or under a law includes:

- a common law or equitable duty;
- an order of a court or tribunal;
- documents that are given the force of law by an Act of Parliament, such as industrial awards; and
- statutory instruments, such as a Local Environmental Plan made under a planning law.[135]

5.92 Stakeholder responses to this question will assist the ALRC to develop a final view on the scope of this defence to the statutory cause of action.

135 See Question 13–1.

Remedies

5.93 In NSWLRC CP 1, the NSWLRC, as has been noted above, articulates the range of remedies that could be used to address an invasion of privacy. Given the wide range of circumstances in which an action for invasion of privacy may be brought under the statute, the ALRC agrees with the NSWLRC that it makes sense to 'enable the court to choose the remedy that is most appropriate in the fact situation before it, free from the jurisdictional constraints that may apply to that remedy in the general law'.[136] The underlying rationale, and a description of the range of appropriate remedies, is discussed in NSWLRC CP 1.[137]

Should the statutory cause of action be in federal legislation?

5.94 Having proposed statutory recognition of a cause of action for invasion of privacy, a question arises as to where the cause of action should be located. For example, should the cause of action be located in state and territory legislation or federal legislation? If the latter, should it be in the *Privacy Act* or elsewhere?[138]

5.95 Inconsistency and fragmentation of laws regulating the handling of personal information is, as detailed in Part C, a major issue in this Inquiry. To avoid a similar problem arising in relation to the enactment of a statutory cause of action for invasion of privacy, it is desirable to ensure national consistency from the outset. Models for achieving national consistency are canvassed in detail in Chapter 4.

5.96 Supporters of a statutory cause of action also issued a plea for uniformity. The Centre for Law and Genetics, for example, stated that, if a statutory cause of action is developed, 'it is critically important that it should be consistent across Australia, either as uniform state and territory legislation through agreement between the relevant Ministers, or as federal legislation'.[139] The OPC noted that

> it would be preferable to introduce a tort of privacy in a uniform manner throughout Australia, particularly to avoid inconsistencies and 'forum shopping' … Nevertheless, by what method a tort would be established and in what manner it would be introduced, it should not contribute to the national inconsistency that currently exists in the privacy laws arena.[140]

5.97 Most of those in favour of a statutory cause of action expressed the view that it be enacted in federal legislation. The Queensland Government, for example, recommended that, 'if implementation of a statutory cause of action for breach of

140 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

privacy is proposed, such a cause of action should be located in federal legislation'.[141] AAMI stated, 'the legislation should definitely be federal (one set of rules for the whole country). The *Privacy Act* is the logical place for it'.[142]

5.98 Professor Graham Greenleaf, Nigel Waters and Associate Professor Lee Bygrave of the Cyberspace Law and Policy Centre suggested that:

> Given that the Commonwealth has asserted constitutional power in relation to the protection of privacy in the private sector, it may be consistent with this for the Commonwealth to also legislate, in the Privacy Act, for a statutory tort or torts to protect other aspects of privacy in relation to the private sector. It will be necessary to carefully align the elements of a statutory privacy tort with what is already protected by privacy principles.[143]

5.99 For the reasons noted in Chapter 4, the federal government has the constitutional power to enact a statutory cause of action for invasion of privacy, to the exclusion of state and territory legislation. The federal government could decide, however, to include a provision that provides that the federal Act is not intended to exclude or limit the operation of a law of a state or territory that is capable of operating concurrently with the federal Act.[144]

5.100 If this policy option prevails, it is essential to ensure that the states and territories enact uniform legislation. Failure to do so would give rise to the fragmentation and inconsistency that has characterised the regulation of information privacy.

5.101 The ALRC's view is that, to ensure uniformity and to avoid the problems associated with inconsistent legislation, the statutory cause of action for invasion of privacy should be in federal legislation and should cover federal agencies, organisations and individuals. It should also cover state and territory public sector agencies until such time as uniform state and territory legislation is enacted.[145]

5.102 The ALRC acknowledges that this approach differs from the proposed model for reform of information privacy legislation relating to the state and territory public sectors discussed in Chapter 4. The difference is warranted, however, because the handling of personal information is currently regulated in all state and territory public sectors. As no states or territories currently have a statutory cause of action for invasion of privacy, failure to extend the coverage of the cause of action to state and territory public sectors would result in gaps in coverage, rather than simply inconsistent regulation.

144 For an example of such a provision, see the *Age Discrimination Act 2004* (Cth) s 12(3).
145 The distinction between federal, state and territory agencies is discussed in detail in Ch 34.

Should the statutory cause of action be in the *Privacy Act*?

5.103 The prevailing view of supporters of a cause of action for invasion of privacy is that the cause of action be enacted in federal legislation. The OPC suggests that the role, if any, to be played by the Privacy Commissioner should determine the location of the cause of action.

> If the tort is actionable via the complaints process administered by the Privacy Commissioner, then there may be merit in streamlining all privacy-related complaints through this process. By contrast, if the tort will be actionable directly in the Courts it may be preferable to create a separate statute, to distinguish the tort of invasion of privacy from complaints handled under the Privacy Act.[146]

5.104 The proposed cause of action for invasion of privacy is broader than simply information privacy—the current focus of the *Privacy Act*. Disclosure of personal information may give rise, however, to both a breach of the privacy principles and liability under the cause of action. Conversely, adherence to guidelines issued by the OPC, or protocols designed to ensure compliance with privacy principles, may be a relevant factor in determining whether the privacy principles have been breached, or the elements of the cause of action made out.

5.105 The same circumstances, therefore, may give rise to a complaint to the Privacy Commissioner under the *Privacy Act*, and an action in court for invasion of privacy. While the statute could provide that an individual must choose either to lodge a complaint or institute a cause of action, the ALRC's view is that such a requirement is undesirable. An individual should be able to choose the forum that will provide the most appropriate remedy. The costs associated with pursuing the action or complaint will also be a relevant factor. Further, if pursuing both avenues simultaneously can be shown to be unfair, the proceedings in one forum may be stayed pending the outcome in the other forum.[147]

5.106 Finally, the Privacy Commissioner should play a role in educating the public about the existence of the statutory cause of action.

5.107 In summary, the ALRC's view is that the *Privacy Act* should be amended to include a new part setting out the provisions relating to the cause of action for invasion of privacy. This is the preferred outcome expressed by the majority of those that support the enactment of a statutory cause of action. It will also mean that the scope of the *Privacy Act* is broader than simply data protection, and therefore reflects more accurately the title of the Act. This is discussed in greater detail in Chapter 3.

---

146 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

147 For a discussion of the power of a court to grant a stay, see *Walton v Gardiner* (1993) 177 CLR 380, 392–393; S Odgers, *Uniform Evidence Law* (6th ed, 2004), [1.1.1240]–[1.1.1260]. For a discussion of the complaint handling powers of the OPC, see Ch 45.

5.108 Further, as is evidenced by the Preamble to the *Privacy Act*, and discussed in Chapters 1 and 3, the *Privacy Act* partially implemented into domestic law Australia's obligations under art 17 of the ICCPR. Locating the statutory cause of action in the Act essentially fulfils Australia's international obligations arising under art 17.[148]

5.109 Whether the appropriate forum to bring the action is the state and territory or federal courts is a related, but separate, question. Locating the cause of action in federal legislation does not preclude state courts from hearing such matters. The use of state courts to hear federal matters is made possible by ss 71 and 77(iii) of the *Australian Constitution*. Section 71 vests the judicial power of the Commonwealth in the High Court, in such other federal courts as the Australian Parliament creates, and in such other courts as it invests with federal jurisdiction. Section 77(iii) provides that the Australian Parliament may make laws investing state courts with federal jurisdiction. Section 39(2) of the *Judiciary Act 1903* (Cth) invests state courts with federal jurisdiction in both civil and criminal matters, subject to certain limitations and exceptions.

5.110 The appropriate court to hear the action will depend on the circumstances giving rise to liability, and the nature and extent of the remedies claimed. If the cases brought to date in Australia are any guide, it is likely that the District/County Court will be the most appropriate forum given the scope of its jurisdiction, the cost of litigating in that court, and the expertise of the judges in hearing comparable matters, such as tort actions.

Limitations on the statutory cause of action

5.111 If a statutory cause of action for invasion of privacy is enacted, what limitations should apply? For example, who should be permitted to bring the action? Should the cause of action be restricted to intentional invasions of privacy, or should it also include reckless, negligent or accidental acts? Is proof of damage a prerequisite to bringing the cause of action? All of these issues are canvassed in some detail in NSWLRC CP 1,[149] and therefore will be discussed only briefly here.

Who should be permitted to bring the action?

5.112 It was suggested by two members of the High Court in *Lenah Game Meats* that the development of an emergent tort of invasion of privacy should benefit natural, not artificial, persons.[150] This accords with the ALRC's view in this Inquiry that the *Privacy Act* should not be amended to provide direct protection for corporate entities or groups.[151] Based on the reasoning set out in detail in Chapter 1, the ALRC's view is

148 While Proposal 5–1 does not list 'unlawful attacks on honour and reputation' as an actionable element, as is noted above, protection from such attacks is already adequately provided for in domestic defamation law.

149 New South Wales Law Reform Commission, *Invasion of Privacy*, Consultation Paper 1 (2007), Ch 7.

150 *Australian Broadcasting Corporation v Lenah Game Meats Pty Ltd* (2001) 208 CLR 199, [132] (per Gummow and Hayne JJ).

151 See Ch 1.

that the statutory cause of action for invasion of privacy should benefit individuals, not corporations, unincorporated commercial entities or groups.

Intentional, reckless, negligent and accidental acts

5.113 An act is intentional when the defendant deliberately or wilfully invades the plaintiff's privacy. The meaning of 'reckless' was discussed by Diplock LJ in the criminal case of *R v Caldwell*:

> 'Reckless' … is an ordinary English word. It had not by 1971 [the year the *Criminal Damage Act* considered in the case came into force] become a term of legal art with some more limited esoteric meaning than that which it bore in ordinary speech, a meaning which surely includes not only deciding to ignore a risk of harmful consequences resulting from one's acts that one has recognised as existing, but also failing to give any thought to whether or not there is any such risk in circumstances where, if any thought were given to the matter, it would be obvious that there was.[152]

5.114 The Law Reform Commission of Hong Kong, in recommending a cause of action for intrusion into the solitude, seclusion or private affairs of another person, rejected the suggestion that a plaintiff should be allowed to recover for accidental or negligent intrusions. It was, however, of the view that liability should lie for reckless intrusions.

> Since indifference to the consequences of an invasion of privacy is as culpable as intentionally invading another's privacy, we consider that an intrusion must be either intentional or reckless before the intruder could be held liable.[153]

5.115 The NSWLRC suggests that 'including liability for negligent or accidental acts in relation to all invasions of privacy would, arguably, go too far'.[154] The ALRC agrees, and suggests that the fault element of the cause of action for invasion of privacy should be restricted to intentional or reckless acts on the part of the defendant.

Proof of damage

5.116 The statutes of British Columbia, Saskatchewan, Manitoba, Newfoundland and Labrador providing for the tort of violation of privacy, and the Privacy Bill currently before the Irish Parliament, all provide that the tort of violation of privacy is actionable without proof of damage. In other words, the cause of action is actionable *per se*—there is no requirement on the plaintiff to prove that any actual damage arose from the invasion of privacy.

5.117 In this regard, the tort of invasion of privacy differs from the tort of negligence, in that proof of damage is an essential element of the latter. The treatment of the tort of

---

152 *R v Caldwell* [1981] 1 All ER 961, 966.
153 Hong Kong Law Reform Commission, *Civil Liability for Invasion of Privacy* (2004), [6.71].
154 New South Wales Law Reform Commission, *Invasion of Privacy*, Consultation Paper 1 (2007), [7.24].

invasion of privacy is, therefore, more akin to trespass to the person or defamation, which are actionable without proof of damage.

5.118 Providing that the proposed cause of action for invasion of privacy is actionable without proof of damage will allow for an award of compensation for insult and humiliation.[155] It will also allow the court to award a wider range of remedies to address the invasion—for example, an order requiring the defendant to apologise to the plaintiff.

5.119 Finally, providing that invasion of privacy is actionable without proof of damage is itself recognition that the cause of action protects a fundamental human right. A breach of such a right should not be dependent on proof of damage flowing from the breach.[156]

Proposal 5–1 The *Privacy Act* should be amended to provide for a statutory cause of action for invasion of privacy. The Act should contain a non-exhaustive list of the types of invasion that fall within the cause of action. For example, an invasion of privacy may occur where:

(a) there has been an interference with an individual's home or family life;

(b) an individual has been subjected to unauthorised surveillance;

(c) an individual's correspondence or private written, oral or electronic communication has been interfered with, misused or disclosed; or

(d) sensitive facts relating to an individual's private life have been disclosed.

Proposal 5–2 The *Privacy Act* should provide that, in determining what is considered 'private' for the purpose of establishing liability under the proposed statutory cause of action, a plaintiff must show that in all the circumstances:

(a) there is a reasonable expectation of privacy; and

(b) the act complained of is sufficiently serious to cause substantial offence to a person of ordinary sensibilities.

Proposal 5–3 The *Privacy Act* should provide that:

(a) only natural persons should be allowed to bring an action under the *Privacy Act* for invasion of privacy;

155 F Trindade and P Cane, *The Law of Torts in Australia* (3rd ed, 1999), 23.

156 For a discussion of the status of privacy as a human right, see Ch 1.

(b) the action is actionable without proof of damage; and

(c) the action is restricted to intentional or reckless acts on the part of the defendant.

Proposal 5–4 The Office of the Privacy Commissioner should provide information to the public concerning the proposed statutory cause of action for invasion of privacy.

Proposal 5–5 The range of defences to the proposed statutory cause of action for invasion of privacy provided for in the *Privacy Act* should be listed exhaustively. The defences should include that the:

(a) act or conduct was incidental to the exercise of a lawful right of defence of person or property;

(b) act or conduct was required or specifically authorised by or under law;

(c) information disclosed was a matter of public interest or was a fair comment on a matter of public interest; or

(d) disclosure of the information was, under the law of defamation, privileged.

Question 5–1 In addition to the defences listed in Proposal 5–5, are there any other defences that should apply to the proposed statutory cause of action for invasion of privacy?

Proposal 5–6 To address an invasion of privacy, the court should be empowered by the *Privacy Act* to choose the remedy that is most appropriate in all the circumstances, free from the jurisdictional constraints that may apply to that remedy in the general law. For example, the court should be empowered to grant any one or more of the following:

(a) damages, including aggravated damages, but not exemplary damages;

(b) an account of profits;

(c) an injunction;

(d) an order requiring the defendant to apologise to the plaintiff;

(e) a correction order;

(f) an order for the delivery up and destruction of material;

(g) a declaration; and

(h) other remedies or orders that the court thinks appropriate in the circumstances.

Proposal 5–7 Until such time as the states and territories enact uniform legislation, the state and territory public sectors should be subject to the proposed statutory cause of action for invasion of privacy in the *Privacy Act*.

6. Overview—Impact of Developing Technology on Privacy

Introduction

6.1 Developments in technology have always influenced discussions about privacy and the development of information privacy laws. The first modern academic discussion of privacy in 1890[1] was prompted by concerns at that time about the impact of new technologies on privacy, in particular 'instantaneous photography'.[2] In 1983, concerns about dangers to privacy, including developments in information technology and surveillance technology, led the ALRC to recommend that legislation containing information privacy principles be introduced.[3] In the second reading speech for the Privacy Bill 1988 (Cth) the then Attorney-General, the Hon Lionel Bowen MP, stated that rapid developments in technology for the processing of information had 'focused attention on the need for the regulation of the collection and use of personal

information by government agencies and for an independent community spokesperson for privacy'.[4] In 2000, concerns about the security of personal information disclosed during online transactions provided impetus for the introduction of the private sector provisions of the *Privacy Act 1988* (Cth).[5]

6.2 Two recent reviews have considered privacy and emerging technologies. In 2005, the Office of the Privacy Commissioner (OPC) concluded a review of the private sector provisions of the *Privacy Act* (OPC Review) and the Senate Legal and Constitutional References Committee concluded an inquiry into the *Privacy Act* (Senate Committee privacy inquiry). Both the OPC and the Senate Committee recommended that there should be a wider review of privacy laws in Australia and that this review should consider whether the provisions of the *Privacy Act* remained adequate and effective in light of developments in technology.[6]

6.3 Part B of this Discussion Paper considers the impact of developing technology on privacy. This chapter provides an overview of several developing technologies. Chapter 7 discusses how best to accommodate developing technology in a regulatory framework. The impact of Web 2.0 and how the internet has changed the nature of a 'public' space are discussed in Chapter 8.[7] Finally, Chapter 9 discusses the prevalence of identity theft in an electronic environment.

Privacy enhancing technologies

6.4 Some technologies known as privacy enhancing technologies (PETs) operate to protect privacy. The way that technology is used often determines whether it is privacy enhancing or privacy invasive.[8] Particular PETs that can be implemented by individuals are discussed throughout this chapter.[9] It is important to note, however, that agencies and organisations should be encouraged to incorporate PETs into technical systems at the design stage. For example, the United States National Security Agency and members of the IT industry are developing a system that implements a mandatory access control (MAC) framework that provides enforced security settings and prevents the setting of discretionary preferences by a computer application or user.[10] Two other

PETs that can be used in the online environment are encryption and identity management, considered in more detail below.

Encryption

6.5 Encryption, a form of cryptography, refers to a sequence of processes that ensure that information stored in electronic form or transmitted over networks such as the internet is not accessible to any person not authorised to view that information. Encryption can be used to convert data to a form which cannot be read without using an appropriate 'key'. A particular form of encryption, public-key cryptography, enables the creation and use of 'digital signatures'—that is, the encryption of data in a message with a private key allocated to a particular sender that assures others that only the sender could have created the message.[11] Encryption does not, however, prevent the deletion of information.

6.6 Encryption systems use either, or both, symmetric or asymmetric key ciphers. Information encoded by a symmetric key cipher requires the decoder of the message to hold a key that is identical to, or readily derived from, the key held by the encoder. An asymmetric key cipher system, such as public-key cryptography, uses a combination of a secret 'private' key and a widely available 'public' key. In this system, information encoded using the public key remains encrypted and secure until a person holding the corresponding private key receives the information and uses the private key to decode the information. In some asymmetric systems, the private key can also be used to encode information so that the corresponding public key can be used to decode the information. This reverse approach provides a 'guarantee of authenticity' rather than an encryption method as any person can decode the information using a public key.[12] In comparison to symmetric key cipher systems, asymmetric systems are complex and slow in execution.[13]

6.7 Symmetric and asymmetric encryption systems can be used in conjunction with mechanisms such as one-way-hash functions to ensure that information stored or transmitted in an encrypted form remains unaltered. A hash function can be applied to data, or a message, to produce data of a fixed bit length—for example, 8, 16 or 32 characters. The hash function condenses the message to a 'hash value' of the original message. In a security system intended to safeguard the integrity of messages against any alteration, a hash value together with an original message is transmitted to a receiver who knows the relevant hash function. The receiver can apply the hash function to the original message to create a second hash value that may be compared against the original hash value. Identical hash values indicate that the original message

13 United States Department of Commerce—National Institute of Standards and Technology, *Introduction to Public Key [Technology and the Federal PKI Infrastructure]* (2001), 11.

was not altered in transmission. The message, however, could have been intercepted, altered and a new hash value calculated and added. To prevent this, the hash value may itself be encrypted before being added to the message for transmission. A receiver who possesses a corresponding cipher key can then decrypt the hash value and compare it against a second hash value that is recalculated from the received message.[14]

Identity management

6.8 The remote nature of online transactions has led many agencies and organisations to require individuals to authenticate routinely their identity during transactions. Arguably, however, it is not always necessary for individuals to identify themselves when engaging in online transactions and it is more desirable for some forms of transactions to be 'pseudonymous'.[15] Pseudonymous transactions could be achieved through the use of 'identity escrow'—that is, a system where a trusted third party holds evidence about a person's identity and issues that person an identifier enabling him or her to conduct transactions with other parties.[16] Identity management systems are another measure that could facilitate the use of pseudonyms and partial identities.

6.9 Identity management systems provide a mechanism for establishing trust between individuals, agencies and organisations transacting in the online environment.[17] The Privacy Identity Management for Europe (PRIME) project, for instance, emphasises the privacy enhancing nature of its identity management project, noting that it allows individuals to minimise the disclosure of their personal information in the online environment and provides individuals with technical tools to negotiate privacy preferences with online entities.[18]

6.10 Identity management has been described as a three step process. First, an identity is established by a process of verification, which may require an individual to choose a password or verify his or her identity in person. Before using an identity, authentication through the presentation of credentials is required. A credential may be something that an individual *has*, such as a radio frequency identification (RFID) tag; something that an individual *knows*, such as a password; or something that an individual *is*, such as a facial biometric or fingerprint.[19] Finally, revocation of identity refers to the removal of an identity when use of that identity is no longer required, such

as where a customer changes banks. Revocation of identity is an important measure to reduce identity theft.[20]

6.11 User-centric authentication systems require both an individual and the entity with which the individual is transacting to authenticate their identities. Such mutual authentication projects have emerged as a response to the 'asymmetric sharing of control … [that] commonly leads to a corresponding asymmetry of risk allocation' in the one-way trust model.[21] Microsoft and IBM have both developed user-centric identity management systems.[22]

6.12 A new trend in identity management is the development of the federated identity system.[23] Identity federation systems use a central identity provider to authenticate an individual, who can then access certain other domains without needing to re-authenticate their identity. In an identity federation system, individuals can manage their identities by setting pseudonyms for use in different domains and determining what information can be revealed in different contexts. Standardisation in identity federation systems is required for their effective operation, and this is currently the subject of deliberation in international forums.[24]

The internet

6.13 The internet is a worldwide collection of interconnected computer networks based on a set of standard communication protocols. The World Wide Web (the Web)—a global collection of publicly accessible electronic information—is accessed by individual computer 'nodes' that are attached to the internet. Individual computer nodes could be, for example, a personal computer (PC) or a wireless device such as a mobile phone. The internet was created in the mid 1980s and widespread use of it commenced in the 1990s. In 2006, surveys conducted by the Australian Bureau of Statistics indicated that 66% of Australians aged over 15 had accessed the internet within the past 12 months.[25]

6.14 The internet can be used for a myriad of social, economic and political transactions. It can be used by individuals to send and receive messages that include text, images and sound (email). It can also be used by individuals and organisations to engage in trade (e-commerce) or to advertise or promote goods or services (e-marketing). Further, it can be used by individuals to communicate with governments and access government services (e-government); to engage in leisure activities, such as online gaming; or to access information for personal purposes. It has been noted that user-generated content (or 'Web 2.0') sites such as MySpace, Facebook, Second Life, LinkedIn and YouTube are increasingly used by individuals for the dissemination of information and social and professional networking purposes.[26] Increasingly, social, business and political communications take place through user-generated sites, internet chatrooms, webcams and two-way videoconferencing.

Data collection on the internet

6.15 Currently, vast amounts of data are collected about internet users, often without their knowledge or consent. For example, data are often collected about the search terms an internet user has entered into an online search engine; the websites an internet user has visited; and the goods or services an internet user has purchased or enquired about online.[27] Data are also collected about internet users who use tools provided by online search engines, such as free email and map services.[28] These data have the potential to reveal a substantial amount of information about an internet user, including 'information about health, education, credit history, [and] sexual or political orientation'.[29] Information collected about internet users is not usually linked directly to an individual, but rather to a particular computer. This is because each computer connected to the internet is allocated a unique Internet Protocol (IP) address for the duration of each internet session.[30] Some information collected on the internet may be subject to the proposed Unified Privacy Principles (UPPs).[31]

6.16 Information collected about internet users can be used for a variety of purposes, such as to create a profile of the individual for marketing purposes. In 2004, 62% of respondents to research conducted for the OPC indicated that they had more concerns about their privacy than usual when using the internet.[32] Two in three respondents indicated that they had more concerns about their privacy when using the internet than they did two years previously.[33] This section provides a brief overview of the way in which data about internet users can be collected.

Cookies

6.17 A 'cookie' is a piece of information that is sent from a computer or website to an internet user's browser. The browser stores the information on the internet user's computer. If the user accesses the same website at a later time, the cookie is sent back from the user's computer to the website, thereby indicating that the same user has returned to the same website.

6.18 Cookies are used for a number of purposes, such as to personalise online search engines and store lists of items to be purchased online. Although cookies are principally linked to computers, they can also be linked to an individual in certain circumstances. For example, a cookie could be linked to an individual user if the user provides identifying details, such as his or her name and address, when browsing a website.

6.19 Cookies are often stored on an internet user's computer, and accessed by websites visited by the user, without the user's knowledge or consent. In addition, cookies can in some circumstances have a lifespan of several years. It is possible, however, for an internet user to take steps to prevent cookies being stored on his or her computer. For example, if the user's operating system allows it, he or she can limit the lifespan of cookies so that they are only stored for as long as the user's browser is running. Alternatively, an internet user can purchase and install software to assist the user to control the use of cookies when he or she enters the online environment.

Web bugs

6.20 A web bug is a small, invisible image that is included on a web page or email. When a web page containing a web bug is accessed, the web bug collects certain information, such as the IP address of the computer, the time the web page was accessed, and the type of browser used to access it. Web bugs are often used on web pages by third parties, such as advertisers, to track the web pages accessed by users. It has been noted that virus scanners have mixed success in locating web bugs on web pages as it is impractical to scan every web page that is accessed by a user.[34]

6.21 When an email containing a web bug is opened, the sender of the email is informed that the email has been opened and the time at which it was opened. In addition, web bugs can identify the IP address of the computer that opened the email. Web bugs can be used by marketers and 'spammers' to verify the validity of email addresses, or by individuals wishing to be informed of the number of times their email has been forwarded and read.[35]

---

34 W Caelli, *Correspondence*, 2 April 2007.

35 Y Lim, *Cyberspace Law: Commentaries and Materials* (2002), 118.

Hypertext transfer protocol

6.22 Hypertext transfer protocol (HTTP) is a set of rules developed to enable information to be requested and sent on the Web. In order to access a particular web page, an internet user's browser must first request certain information. For example, it must send information about the Uniform Resource Locator (URL) of the web page that the user wishes to access. Further information can also be sent during the request for information, however, or the last web page viewed by the user.[36] If the last web page viewed by the user was an online search engine, then the search term entered is also transmitted.[37] In addition, it is possible for the identity of the user to be disclosed if the user's internet service provider (ISP) does not take steps to prevent this from happening.[38]

Spyware and remote access software

6.23 Software such as remote access software or spyware installed on a computer can enable a third party to view the activity or data on that computer.[39] Remote access software can be used for beneficial purposes, for example, by an employee in an organisation to fix another employee's computer from another location. Software that allows remote access to computers is not inherently harmful. On the other hand, spyware can be installed without the knowledge or consent of the user of the computer for malicious purposes, such as to collect personal information about the user for the purpose of engaging in fraudulent activities.

6.24 Spyware can be installed on a computer in a number of ways. For example, it can be physically installed by another individual, or installed in the online environment where it may be attached to an email or to downloaded material. In 2005, the Department of Communications, Information Technology and the Arts announced the outcome of a review of spyware. It concluded that the most serious and malicious uses of spyware were adequately addressed by existing laws, such as computer offences in the *Criminal Code* (Cth).[40]

Social engineering

6.25 Social engineering practices, such as pretexting or phishing, rely on a person providing information to another person, whether face-to-face or over the telephone or over the internet. Social engineering involves 'human interaction (social skills) to

obtain or compromise information about an organization or its computer systems'.[41] Phishing is discussed further in relation to identity theft in Chapter 9.

Security of the internet

6.26 There is concern about the security of personal information transmitted via the internet, particularly the security of information disclosed during the course of e-commerce. Such information may be intercepted during transmission or accessed in an unauthorised manner when stored electronically. Shortcomings in internet security have prompted research projects such as the 'Clean Slate Program' at Stanford University, which aims to design a new internet that is robust, predictable and 'inherently secure'.[42] This section focuses on internet and computer security. It should also be noted, however, that other technologies—such as wireless networks—have security risks that present significant privacy implications.[43]

6.27 A number of reports suggest that data thieves are increasingly 'hacking' into computer systems.[44] There are a number of ways that hackers can access personal information transmitted over the internet or stored on computer systems. For example, a hacker may infect a computer with spyware that can collect personal information displayed on a computer screen or stored on a computer system.[45] More sophisticated hacking techniques include the use of 'rootkits', which can be installed directly in an operating system kernel or system hardware and take over an entire computer system.[46] Rootkits have been described as 'cloaking technologies' since they can operate with other malware to hide 'files, registry keys and other operating system objects from diagnostic, antivirus and security programs'.[47]

6.28 Rootkits can be used to establish 'botnets', which are automated crime networks controlled by 'botherders' who use malware to infect numerous computers. Botnet computers are referred to as 'zombies' because a user of an infected computer generally is unaware that the computer has become part a botnet. Zombies can be used

by botherders to carry out phishing and spam attacks and, ultimately, identity theft. The FBI has arrested a number of botherders in the United States. Botherders operate in several nations, however, and effective policing of botnets depends on inter-jurisdictional cooperation.[48]

6.29 Individuals are often advised to use commercially-available programs such as anti-virus and anti-spyware programs to ensure computer and network security.[49] It has been noted, however, that market-based solutions may not provide adequate protection against hackers.[50] Moreover, an online safety study conducted in the United States in 2004 indicates that many individuals incorrectly assume that their anti-virus protection is adequate and up-to-date.[51]

6.30 In Chapter 7, the ALRC proposes that the *Privacy Act* be amended to empower the appropriate minister to determine relevant privacy and security standards. Such standards could require that technical systems meet certain security requirements before they are marketed to individuals, agencies and organisations. Further, the ALRC proposes in Chapter 47 that the *Privacy Act* be amended to require agencies and organisations to notify the OPC and any affected individuals of data breaches in certain circumstances.[52] This measure is intended to reduce the likelihood of security breaches that may lead to identity theft.

Internet of things

6.31 The United Nations agency for information and communications technologies, the International Telecommunication Union, has predicted that the next development in information transfer will be the 'internet of things'. The internet of things, or ubiquitous computing, will allow the transfer of information between inanimate objects, humans, the internet, intranets and peer-to-peer networks—without the need for personal computers.[53] The internet of things will use wireless technologies such as RFID, which is discussed below, together with smart and sensor technologies and miniaturising technologies such as nanotechnology.[54]

6.32 The internet of things will be based on next generation networks (NGNs), which use 'packet-based' Internet Protocol (IP) Technology. Many telecommunications devices currently use the Public Switched Telephone Network (PSTN), which is a 'circuit-switched' network. In NGN networks, linked devices are more mobile than in

PSTN networks, and service delivery is not linked to the underlying transport technologies.[55]

6.33 The internet of things could impact on privacy by allowing more information to be collected from an individual without his or her knowledge or consent. In addition, the convergence of technologies in the internet of things means that individuals could be more easily tracked, monitored and profiled.[56] It has also been noted that remote access to sensor networks could impact on security of information, as data thieves could 'collect information from further away and from multiple locations simultaneously'.[57] The European Commission is monitoring these developments and at the end of 2008 intends to issue to the European Parliament a communication on privacy, trust and governance issues related to the internet of things.[58]

Radio frequency identification

6.34 An RFID system consists of a 'transponder', a 'reader' and a 'back office' system. A transponder is a small object—often referred to as an 'RFID tag'—that transmits data by emitting radio waves.[59] These data are collected by a device known as a reader. Readers can be mobile, resembling hand-held barcode scanners, or fixed at certain locations, such as the entrance to a warehouse or a vehicle toll gateway.[60] Once data are collected by a reader they are sent to a 'back office'—namely, a data processing system.[61] In June 2006, BP commenced a 'mesh network' trial in which RFID tags or 'nodes' communicated information directly to other RFID tags. In this trial, an RFID node transmitted 'details of its environment and content … to all other nodes within a 3-meter range'.[62]

6.35 There are two main types of RFID tags—passive tags and active tags.[63] Passive tags lack an internal power source and can only operate if they are in range of a reader

that activates the tag.[64] Accordingly, they have a limited 'read range'. They are relatively inexpensive, however, and have a longer life-cycle than active tags.[65] Active tags have an internal power source (usually a battery) that allows them to emit radio waves.[66] These radio waves can be read if the tag is in range of a reader. The 'read range' of active tags is much greater than that of passive tags (up to several kilometres).[67] Active tags also have larger amounts of memory and better processing capabilities than passive tags.[68]

6.36 RFID tags can be attached to objects, such as clothes, shopping trolleys or plastic cards. They can also be attached to animals and people. Passive tags are usually physically smaller than active tags and can be difficult for an individual to detect. An RFID tag can transmit data that identifies the object or entity to which it is attached, such as an unique serial number. It can also transmit data about the price, expiry date, colour, or date of purchase of a product.[69] If an RFID tag is combined with a sensor, it can also transmit data about its surroundings, such as the temperature in its location or the composition of the atmosphere surrounding it.[70]

6.37 RFID technology has been in existence since the 1940s.[71] Currently, it has a number of established uses, including facilitating automated payments at vehicle toll booths, enabling people to lock and unlock cars remotely, and enabling people to access secure buildings.[72] Additional uses for RFID technology are being deployed as the cost of the technology decreases.[73] In October 2004, the United States Food and Drug Administration approved the use of a subdermal RFID tag for medical purposes, such as to enable health service providers to obtain identity and health information relating to unconscious patients.[74] It has been predicted that between 2006 and 2016 the value of the RFID market will rise from $2.77 billion to $26.23 billion.[75]

6.38 The use of RFID technology can benefit businesses, individuals and governments. RFID technology can benefit individuals in the areas of safety, convenience and accessibility. For example, RFID can be used to trace food, lead to shorter supermarket queues and track patients suffering from Alzheimer's disease.[76] It may also be used by businesses to track products from the point of manufacture to the point of sale, thereby reducing inventory and labour costs, and stock losses.[77] Other applications of RFID technology include:

> prevention of counterfeiting of consumer goods; pinpointing the location of theft; library book check-out; tracking passenger bags in airports; residential garbage collection; sensitive document tracking; asset management; equipment and personnel tracking in hospitals; parcel and post management; livestock management; inmate and guard tracking systems for prison security management; parking permits; tire pressure monitoring; and pharmaceutical labelling for monitoring of location, expiration and anti-counterfeiting.[78]

6.39 It has also been suggested that RFID technology could be used to create 'smart products', such as washing machines that wash garments in accordance with instructions on their RFID tags.[79]

6.40 Some uses of RFID technology raise privacy concerns. In particular, concerns arise about the ability of agencies, organisations or individuals to

> surreptitiously collect a variety of data all related to the same person; track individuals as they walk in public places (airports, train stations, stores); enhance profiles through the monitoring of consumer behaviour in stores; [and] read the details of clothes and accessories worn and medicines carried by customers.[80]

6.41 These concerns are exacerbated by the fact that individuals may not be given notice that the products they purchase or the objects they use contain RFID tags and may not be given the choice to remove or disable RFID tags. Further, they may not be able to ascertain when, or how many times, data on an RFID tag have been collected.[81] Technologies have been developed that aim to prevent the unwanted scanning of RFID tags, such as 'blocker tags' which 'impair readers by simulating the signals of many

different RFID tags'.[82] An individual may not be aware, however, that a product contains an RFID tag and it may not be practical to purchase and carry an RFID blocker. It has been argued, therefore, that PETs are unable completely to 'assuage the danger to privacy engendered by RFID technology'.[83]

6.42 In 2002, one commentator proposed that organisations wishing to use RFID technology should comply voluntarily with an 'RFID Bill of Rights' that granted consumers the right to:

- know whether a product contained an RFID tag;
- have an RFID tag removed or deactivated at the point of purchase;
- use RFID-enabled services without RFID tags;
- access an RFID tag's stored data; and
- know when, where and why RFID tags are being read.[84]

6.43 To these, other commentators have added that consumers should have the right to:

- own and use readers that enable them to detect and permanently disable RFID tags;
- know who to contact in order to access information pertaining to them that has been collected by RFID technology; and
- the secure transmission and storage of data.[85]

6.44 In March 2007, the European Commission issued a Communication on RFID to the European Parliament, noting the need for legal certainty for both investors and users of RFID. The European Commission plans to establish a widely constituted RFID Stakeholder Group to discuss security and privacy issues with a view to issuing

at the end of 2007 a recommendation that sets out the principles that European public authorities and stakeholders should apply in respect of RFID usage.[86]

Other wireless technologies

6.45 Wireless technologies enable devices to transmit and receive data 'by means of a signal that uses some part of the electromagnetic spectrum'.[87] RFID technology, discussed above, is a wireless technology. 'WiFi' and 'Bluetooth' are examples of other wireless technologies.[88] WiFi technology enables devices to connect to the internet in certain 'hotspots', while Bluetooth technology enables devices to connect to each other across short distances.

6.46 Wireless technologies can be used to purchase goods, services or digital content (m-commerce), to enhance business performance (m-enterprise) and to provide services that do not involve commercial transactions, such as mobile banking services (m-services). Wireless devices such as personal digital assistants (PDAs) and mobile telephones are increasingly using similar hardware and software systems to those used in PCs. The use of wireless technologies raises privacy concerns because 'device limitations, along with different network configurations mean that wireless technologies present a higher risk from eavesdropping and hackers'.[89] Further, devices that use wireless technologies are vulnerable to theft and subsequent misuse.

Data-matching and data-mining

6.47 Rapid advances in information and communication technology since the 1970s have enabled agencies and organisations to collect and store vast amounts of personal information. This information is often generated by individuals conducting everyday activities, such as

> withdrawing cash from ATMs; paying with debit or credit cards; using loyalty cards; borrowing money; writing cheques; renting a car or a video; making a telephone call

88 The term 'WiFi' is commonly used to describe wireless local area networks based on a particular standard developed by the Institute of Electrical and Electronics Engineers (the IEEE 802.11 standard), while the term 'Bluetooth' is commonly used to describe wireless personal area networks based on the IEEE 802.15.1 standard. In June 2007, the Minister for Communications, Information Technology and the Arts, Senator Helen Coonan, announced the implementation of a national wireless broadband network based on the IEEE 806.16d standard. Standards are discussed in Ch 7.

> or an insurance claim; and, increasingly, sending or receiving e-mail and surfing the Net.[90]

6.48 In addition, some technologies enable large amounts of personal information to be organised and analysed. Two methods of processing and analysing information are discussed in this section—data-matching and data-mining. This chapter discusses data-matching and data-mining outside the health and research context. A number of data-linkage models that provide for the linking of de-identified personal information for the purposes of health and medical research are discussed in Chapter 58.

6.49 Data-matching is 'the large scale comparison of records or files … collected or held for different purposes, with a view to identifying matters of interest'.[91] Developments in information technology in the 1970s made data-matching economically feasible and it is conducted regularly in Australia, particularly by government agencies.[92] Data-matching can be conducted for a number of purposes, including to detect errors and illegal behaviour, locate individuals, ascertain whether a particular individual is eligible to receive a benefit, and facilitate debt collection.[93]

6.50 Data-mining has been defined as 'a set of automated techniques used to extract buried or previously unknown pieces of information from large databases'.[94] Data-mining can be used in different contexts to achieve different goals. For example, it is increasingly used by organisations to enable them to 'design effective sales campaigns, precision targeted marketing plans, and develop products to increase sales and profitability'.[95] Data-mining can also be used by law enforcement agencies to investigate criminal activities. For example, in 2006 it was reported that the National Security Agency in the United States was collecting telephone records of millions of Americans to analyse calling patterns in an effort to detect terrorist activities.[96]

6.51 There are three main steps in the data-mining process: (1) the data are prepared (or 'scrubbed') for use in the data-mining process; (2) a data-mining algorithm is used to process the data; and (3) the results of the data-mining process are evaluated.[97]

6.52 Data-matching and data-mining practices that involve personal information raise a number of privacy concerns. A major concern is that the practices can reveal large

amounts of previously unknown personal information about individuals.[98] This concern is exacerbated by the fact that data-matching or data-mining can occur without the knowledge or consent of the data subject, thereby limiting the ability of the data subject to seek access to information derived from a data-matching or data-mining program.[99]

6.53 Another concern relates to the accuracy of the data derived from a data-matching or data-mining process. Data-matching and data-mining involve using information collected for different purposes and in different contexts.[100] If information is incorrect or incomplete at the time of collection, or ceases to be accurate some time after collection, the information generated by the data-matching or data-mining process will be inaccurate. In the case of data-mining, an additional concern is that it is often difficult to inform the data subject of the exact purpose for which his or her personal information is to be collected or used. This is because data-mining activities aim to discover previously unknown information. Further, there is concern about the storage of large amounts of personal information gathered for the purpose of data-matching or data-mining.[101] In Chapter 7, the ALRC proposes that the OPC provide guidance on data-matching to organisations.

Smart cards

6.54 A smart card is usually a plastic card with an embedded microchip that can be programmed to perform multiple and varied functions.[102] A microchip embedded in a smart card can vary in sophistication.[103] Some microchips have memory functions only, while others have 'a micro-controller, various types of memory and an operating system'.[104] It has been noted that 'multi-application smartcards today have approximately the same capabilities and logical powers as the first commercial micro-computers in the mid 1970s'.[105]

6.55 Smart card technology has existed for several decades and has been described as 'technology looking for an application'.[106] Currently, smart card technology has a

number of established uses. For example, a Subscriber Identity Module (SIM) card in a mobile telephone uses smart card technology.[107] Smart cards also have a number of nascent uses, including for identity authentication and financial transactions. For example, a smart card could store a cardholder's biometric information in order to enable the cardholder to access a building or computer network. It could also contain an 'electronic purse' that can be used as a substitute for cash in small value transactions, such as for travel on public transport or small retail purchases.[108]

6.56 Smart cards can be divided into two main categories: 'contact smart cards' and 'contactless smart cards'. Information contained on a contact smart card can only be read if the card is inserted directly into a card reader. Contactless smart cards, however, use low-frequency radio waves to communicate with readers. Accordingly, they can be read from a distance.[109]

6.57 The use of smart card technology raises several privacy concerns. One concern is that a particular smart card may be linked to a particular individual, for example, where the individual uses his or her bank account to add value to the card's electronic purse. Widespread use of smart cards that are linked to identifiable individuals may mean that individuals no longer have the option of transacting anonymously.[110] Further, widespread use of these cards could enable vast amounts of information about the activities of cardholders to be collected and stored. In the future, smart cards could

> generate records of the date, time and location of all movements on public and private transport systems, along with details of all goods purchased, telephone use, car parking, attendance at the cinema, and any other activities paid for by smart cards.[111]

6.58 These records could then be used by smart card operators or third parties for a number of purposes, for example, to generate detailed profiles of individuals to market goods and services to them. They may also be sought by third parties, such as law enforcement agencies.[112]

6.59 Another concern is that smart card schemes that are used by numerous agencies or organisations may lack a central data controller. Accordingly, it may be unclear who is accountable for the use, disclosure, accuracy and security of personal information collected by the smart card system.[113] Concern has also been expressed about the potential for function creep[114] and the ability to read contactless smart cards without

the cardholder's knowledge or consent. Finally, the security of a smart card system depends on the reliability and security of the various components of the system—that is, the security of the data pathways between the smart card and any reading, processing, storage or transmission system.

6.60 In 2004, the Council of Europe published a set of guiding principles for the protection of personal information in systems using smart card technology.[115] After acknowledging that the protection of personal information in any smart card system depended 'on many different factors and circumstances', the Council set out 11 principles to be taken into account by those who issue smart cards, as well as other participants in smart card systems, such as project designers and managers.

6.61 Among other things, the principles require the collection of personal information for storage on a smart card to be for 'legitimate, specific and explicit purposes'.[116] They also require a smart card to offer an appropriate level of security given the state of technology, the data stored on the card, the applications of the card, and the security risks.[117] Further, they require a data subject to be alerted every time personal information is exchanged between a smart card and a smart card system.[118]

6.62 In 2006, the Australian Government released part of a framework to assist agencies seeking to implement smart card technology.[119] The framework requires agencies implementing smart card technologies to include data protection clauses in agreements with third parties about the supply of smart cards and related services, and to undertake privacy impact assessments during the design of smart card systems. It also requires agencies implementing smart card technologies to produce comprehensive privacy policy statements and to revise these statements 'whenever a third party agency adds additional functionality to an existing smartcard deployment'.[120] In March 2007, the Australian Government released the final parts of the framework, the *Smartcard Implementation Guide* and *Standards and Model Specification*. At the time of writing in July 2007, the Australian Government is considering public comments on the proposed Smartcard framework.[121]

Biometric technologies

6.63 Biometric technologies enable unique behavioural or physiological attributes of people to be used for identification and authentication.[122] Major biometric technologies include finger scanning, facial recognition, iris and retinal scanning, finger geometry, voice recognition and dynamic signature verification.[123] Other biometric technologies include ear geometry, body odour measurement, keystroke dynamics and gait recognition.[124] Palm vein biometric systems are being developed for application in Automated Teller Machine (ATM) transactions.[125]

6.64 In a typical biometric system, a biometric device, such as a finger scanner, is used to take a biometric sample from an individual.[126] Data from the sample are then analysed and converted into a biometric template, which is stored in a database or an object in the individual's possession, such as a smart card.[127] Later biometric samples taken from the individual can then be compared to the stored biometric information to determine who the individual is (identification, or one-to-many matching) or to attempt to verify that an individual is who he or she claims to be (authentication, or one-to-one matching).[128] One-to-one systems currently provide higher accuracy of matches, although the accuracy of biometric systems varies greatly between systems.[129]

6.65 Biometric technologies have existed for decades.[130] The use of biometric technologies is increasing, however, because of globalisation, developments in information technology, and the desire to identify individuals in order to manage security threats such as terrorism.[131] Biometric systems enable the identification of an individual to be ascertained or authenticated with a fair degree of certainty. Further, advances in biometric technologies mean that biometric systems are now automated, allowing for 'mass identity checks within seconds … with a sufficient degree of certainty'.[132] For this reason, biometric technologies are increasingly used in

identification systems, along with other passwords or identity objects, such as smart cards.[133]

6.66 Since 2003, members of the European Union have been required to take fingerprints from all asylum seekers over the age of 14. These fingerprints are then compared to those in a centralised database to determine whether an asylum seeker has previously sought asylum in another Member State.[134] In addition, in 2003 the International Civil Aviation Organisation (ICAO) published 'a global, harmonized blueprint for the integration of biometric identification information into passports and other Machine Readable Travel Documents (MRTDs)'. The ICAO standards require MRTDs to include a facial image in a contactless chip.[135]

6.67 Biometric systems are also being introduced by the Australian Government. For example, in 2003 legislation was passed enabling officials to collect certain types of biometric information from non-citizens in Australia.[136] The legislation aims to ensure that non-citizens are identified accurately in order to enable officials to prevent identity fraud in the visa application process, to determine which non-citizens are of national security concern, and to detect forum shopping by visa applicants.[137] Further, in October 2005 the Australian Government introduced the 'ePassport'—a passport with an embedded microchip containing, among other things, a digitised facial image of the passport holder.[138] From 2007, those holding an ePassport will be able to use an automated border security system called 'SmartGate' in at least one airport in Australia. The SmartGate system will use facial recognition technology to perform the customs and immigration checks normally performed by Australian customs officers.[139] Australian ePassport holders will also be able to participate in the United States Visa Waiver Program.[140]

6.68 Biometric systems are being increasingly used or contemplated by organisations, including in methadone programs, taxi booking services, ATMs and online banking, and access to buildings.[141]

6.69 The use of biometric technologies raises a number of privacy concerns. These may vary according to the context in which the biometric information is collected and the type of biometric system in operation.[142] Some of the general concerns are as follows.

6.70 First, there is a concern that widespread use of biometric systems will enable extensive monitoring of the activities of individuals.[143] This is particularly so if the same form of biometric information is used to identify individuals in a number of different contexts—that is, if a type of biometric information is used as a unique multi-purpose identifier.[144] Secondly, there is a concern that biometric technologies, such as facial recognition technologies, may be used to identify individuals without their knowledge or consent.[145] Thirdly, there is a concern that biometric information could reveal sensitive personal information, such as information about a person's health or religious beliefs.[146] Fourthly, there is a concern that the security of biometric systems could be compromised and that biometric information stored in a central or local database, or on an object in the possession of an individual, could be acquired by those wishing to use it for some kind of gain.[147] Finally, the accuracy and reliability of many biometric systems are still unknown,[148] causing some to express concern about the potentially serious consequences for an individual who is falsely accepted or rejected by a biometric system.[149]

6.71 The Council of Europe has cautioned that biometric systems should not be implemented for the mere sake of convenience.[150] It has recommended that before introducing a biometric system

> the controller should balance the possible advantages and disadvantages for the data subject's private life on the one hand and the envisaged purposes on the other hand, and consider possible alternatives that are less intrusive for private life.[151]

DNA-based technologies

6.72 It has been argued that DNA-based technologies differ from biometric technologies because they require actual physical samples to be taken from a person, as opposed to the taking of an image or scan of a person; and because DNA matching is not automated or done in real time.[152] The use of DNA-based technologies, however, raise a number of the same privacy issues as are raised by the use of biometric technologies.

Genetic samples

6.73 In 2003, the ALRC and the Australian Health Ethics Committee (AHEC) of the National Health and Medical Research Council released *Essentially Yours: The Protection of Human Genetic Information in Australia* (ALRC 96). The report was the product of a joint two-year inquiry into the legal and ethical issues surrounding human genetic information. In this report the ALRC and AHEC considered the privacy of human genetic samples, an issue that is discussed further below, and the privacy of human genetic information, which is discussed in Chapter 56.

6.74 ALRC 96 concluded that the *Privacy Act* did not cover genetic samples. This was because it was unlikely that genetic samples constituted 'information', or information stored in a 'record', for the purposes of the *Privacy Act*. Further, an unidentified and uncoded genetic sample might not constitute 'personal information' for the purposes of the Act.[153] Consequently these types of samples could be collected, stored and transferred with little or no regulation.

6.75 The ALRC and AHEC, therefore, recommended that the *Privacy Act* be amended to extend the coverage of the Information Privacy Principles (IPPs) and the NPPs to identifiable genetic samples. In particular, the ALRC and AHEC recommended that the definition of 'personal information' be amended to include bodily samples from an individual whose identity was apparent or could reasonably be ascertained from the sample, and that the definition of a 'record' be amended to include a bodily sample.[154]

6.76 The ALRC and AHEC also recommended that the *Privacy Act* be amended to provide that an individual had a right to access part of his or her own bodily samples, through a nominated medical practitioner, for the purpose of medical testing, diagnosis or treatment. Access could be refused in certain circumstances.[155]

154 Ibid, Rec 8–2.

155 Ibid, Rec 8–3.

6.77 Finally, the ALRC and AHEC recommended that the *Privacy Act* be amended to enable an individual to access part of a bodily sample of his or her first-degree genetic relatives, through a nominated medical practitioner, where such access was necessary to lessen or prevent a serious threat to his or her life, health, or safety. An organisation subject to the *Privacy Act* that received such a request would be obliged to seek consent from the genetic relative, where practicable, before determining whether to provide access. Again, access could be refused in certain circumstances, including when it would have an unreasonable impact upon the privacy of the individual from whom the sample comes.[156] The Australian Government rejected these recommendations and, to date, they have not been implemented.[157] The ALRC does not propose to revisit these issues in the current Inquiry.

Voice over internet protocol

6.78 Voice over internet protocol (VoIP) enables spoken conversations to be conducted in real time over the internet.[158] It is a subset of technology referred to as 'IP Telephony', which enables facsimile messages, video and other forms of data traditionally transmitted via the Public Switched Telephone Network (PSTN) to be transmitted via the internet. IP telephony also enables the transmission of television and radio services.

6.79 VoIP technology transmits the sound waves of speech via the internet in the form of IP data packets.[159] It enables users to avoid the costs of communicating over long distances that are often incurred with traditional telecommunication carriers. It also enables users to encrypt telephone conversations and conduct telephone conversations with groups of people. VoIP technology can offer a variety of services, including 'peer-to-peer services'—services that are isolated from the traditional PSTN. These allow users to make and receive calls only over the internet.[160] Alternatively, VoIP technology can offer 'any-to-any connectivity' services, allowing users to make and receive calls to and from any telephone number.[161]

6.80 VoIP services will usually be classified as carriage services for the purposes of the *Telecommunications Act 1997* (Cth).[162] This means that VoIP service providers will generally be 'carriage service providers' that are required to observe the provisions in Part 13 of the *Telecommunications Act 1997* that protect the confidentiality of telecommunications information. These provisions are discussed in Part J. If, however, a VoIP service does not connect with the PSTN at all, the service provider may not be

162 Ibid, 19.

regulated by the *Telecommunications Act 1997* but may be regulated by the *Privacy Act.*[163]

6.81 A concern that has arisen in relation to VoIP technology is that Australians may access voice services from providers outside Australia.[164] This may impact on the standards of protection for personal information disclosed during a VoIP call.[165] The OPC Review recommended that the Australian Government initiate discussions in international forums to deal with international jurisdictional issues arising from the global reach of new technologies such as VoIP.[166] VoIP technology is discussed further in Part J.

Location detection technologies

6.82 A number of technologies can provide real time information about the location of devices, and hence the location of users of the devices. The types of devices that can be located include mobile telephones, laptop computers, personal digital assistants and gaming consoles.[167] Location detection technologies, such as the global positioning system (GPS), are included as a standard feature in many 'next generation' mobile phones.

6.83 The accuracy of location information varies depending on the location detection technology used. For example, GPS can be used to determine the location of a device with a high degree of accuracy if the device transmits its position. The GPS is a network of 24 satellites established and operated by the United States Department of Defense.[168] Each satellite emits a signal that can be detected by a receiver. The satellites are positioned so that a minimum of four can be simultaneously detected by a receiver anywhere on the Earth's surface.[169] A receiver can determine its location with a high degree of accuracy by calculating the amount of time it takes for the signals emitted by the satellites to reach it.[170] Alternatively, the location of a mobile telephone can be determined with a moderate degree of accuracy by calculating the time a signal takes to receive three or more base stations.[171] Geo-location technologies can determine the location of an individual's IP address with a degree of accuracy that,

depending on source and circumvention factors, ranges from country to city, to street level.[172]

6.84 Location detection technologies and other wireless technologies allow 'location-based services' to be provided to individuals.[173] There are many types of location-based services, including services that assist individuals to travel to particular locations; inform individuals about local conditions, such as traffic and weather conditions; provide individuals with information about goods or services in their immediate vicinity, and target advertising of goods and services to individuals on the basis of their location.[174]

6.85 Location detection technologies may also enhance service delivery by emergency services. Emergency call persons in Australia utilise subscriber information in the Integrated Public Number Database to determine the location of users of fixed telephone lines.[175] They are unable, however, to determine accurately the location of users of mobile telephones.[176] In the United States, mobile telephone providers are required to provide emergency call persons with precise information about the location of the mobile telephone used to call the emergency service.[177]

6.86 Location detection services enable the location of individuals to be determined in real time. Further, they generate records of the physical movements of individuals. For this reason, they have the potential to impact significantly on privacy. By analysing information about the location of an individual, a third party may derive or infer personal information about an individual, such as information about his or her consumer preferences or social activities.

6.87 The European Union Directive on privacy and electronic communications deals explicitly with 'location data' in the electronic communications sector.[178] Location data is defined as 'any data processed in an electronic communications network, indicating the geographic position of the terminal equipment of a user of a publicly available electronic communications service'.[179] The Directive prohibits the processing of location data that has not been anonymised without the consent of the user of the service.[180] It also requires service providers to inform users, before obtaining their

consent, of the type of location data to be processed, the purpose and duration of the proposed processing, and whether the data will be transmitted to a third party for the purpose of providing a value added service.[181] Users must be given the opportunity to withdraw their consent at any time to the processing of location data.[182] Further, processing of the data must be restricted to that which is necessary for the purposes of providing the value added service.[183] Location detection technologies are discussed further in Part J.

Surveillance technologies

6.88 Surveillance involves the monitoring of a person, place or object to obtain certain information or to alter or control the behaviour of the subject of the surveillance.[184] Surveillance can be covert or overt and can be conducted by a variety of individuals, agencies or organisations for different reasons. For example, surveillance can be conducted by authorities to prevent or investigate crime, by the media to obtain commercially valuable information, or by individuals to monitor the activities of family members. The practice of surveillance is antithetical to privacy because the goal of surveillance is to 'pierce the privacy shield'.[185] While surveillance is said to be 'at least as old as recorded history',[186] developments in surveillance technology and the increased availability of this technology pose significant risks to privacy.

6.89 In ALRC 22, the ALRC considered the use of listening devices. It concluded that, as a general principle, an individual's private communications should not be monitored without his or her consent.[187] Accordingly, it recommended that legislation prohibit the use of listening devices for non-consensual or secret surveillance,[188] with some exceptions for the use of listening devices for law enforcement purposes and for 'participant monitoring'.[189]

6.90 In ALRC 22 the use of optical surveillance devices was also considered. The ALRC noted that the 'growth and increased sophistication of modern technological surveillance devices make it imperative that some legislative control be imposed on

Participant monitoring can occur: when a party to a private conversation uses a listening device to record the conversation without the consent of the other party; and when a party to a private conversation uses a listening device to transmit the conversation to someone who is not a party. Australian Law Reform Commission, *Privacy*, ALRC 22 (1983), [1127].

their use for optical surveillance'.[190] The ALRC concluded that there should be no regulation of optical surveillance in public places—where individuals could expect to be observed—but recommended that the use of optical surveillance devices to observe people who would otherwise reasonably expect to be safe from observation be prohibited.[191] The ALRC recommended that there should be exceptions to the general prohibition on optical surveillance in private places, such as an exception for the use of an optical surveillance device by a person for the purpose of observing what, on reasonable grounds, appeared to be the commission of an offence, and an exception for the use of an optical surveillance device for law enforcement purposes.[192]

6.91 There are infinite innovations in the design of surveillance technologies. Currently, surveillance devices are used by agencies and organisations for a variety of purposes, including to prevent criminal activity and to monitor access to property. Some surveillance technologies, such as Closed Circuit Television (CCTV), can be combined with software that operates automatically to detect certain matters of interest.[193] For example, CCTV surveillance systems can be used in combination with character recognition technologies to enable automatic number plate recognition. Automatic number plate recognition systems extract the text of number plates from visual images of cars for a number of purposes, such as to compare them to records of stolen vehicles and unregistered cars.[194] Intelligent software can reduce the need for live monitoring of surveillance systems and reduce costs associated with recording irrelevant activity.[195]

6.92 The use of surveillance devices by federal law enforcement officers is regulated by the *Surveillance Devices Act 2004* (Cth). A surveillance device is defined as 'a data surveillance device, a listening device, an optical surveillance device or a tracking device', a device that is a combination of any two or more of these types of devices, or a device prescribed by regulations.[196] Generally, federal law enforcement officers must obtain a warrant to use a surveillance device. In certain circumstances, however, a surveillance device can be used without a warrant if use of the device does not involve entry onto premises, or interference with any vehicle or thing, without permission.[197] In addition, a listening device can be used without a warrant if an officer is participating in the conversation.[198] The use of surveillance devices by the Australian Security Intelligence Organisation is regulated by the *Australian Security Intelligence Organisation Act 1979* (Cth), while the intelligence gathering functions of the Australian Security Intelligence Service and the Defence Signals Directorate are set out in the *Intelligence Services Act 2001* (Cth).

196 *Surveillance Devices Act 2004* (Cth) s 6(1).
197 Ibid ss 37–39.
198 Ibid s 38.

6.93 The handling of personal information obtained by the use of surveillance devices is generally regulated by the *Privacy Act* when the use of the device involves the collection of personal information for inclusion in a record. As noted in Chapter 1, the Victorian Law Reform Commission is currently examining surveillance in public places as part of a larger inquiry into privacy. It is anticipated that the recommendations resulting from this Inquiry will be considered by the Standing Committee of Attorneys-General.

Other developing technologies

6.94 There are other developing technologies that have the potential to impact adversely on privacy. For example, it has been argued that electronic number mapping (ENUM) may provide agencies, organisations and individuals with increased ability to track others.[199] ENUM is 'an electronic numbering system that can link the public telephone network and the internet by allowing telephone numbers to be converted into internet domain names'.[200] In summary, ENUM enables telephones connected to the internet to make calls to the Public Switched Telephone Network (PSTN) and receive calls from the PSTN.[201] The Australian Communications and Media Authority submitted that the next development in ENUM technology, infrastructure ENUM, will involve the mapping of blocks of ENUM registrations 'to a single Internet resource—generally a Voice over Internet Protocol (VoIP) address'.[202] One application of infrastructure ENUM could involve the 'peering'—or direct connection—of VoIP services in isolation from the PSTN.[203]

6.95 Digital Rights Management (DRM) technologies also have the potential to impact adversely on privacy. DRM technologies enable copyright owners to protect digital material by controlling the ways in which the material is accessed, used, copied and distributed.[204] It has been noted that virtually all DRM technologies require the collection of personal information about consumers of copyright material.[205] Accordingly, they limit the ability of these consumers to access material anonymously.

6.96 Further, DRM technologies can be used to monitor the activities of consumers by collecting information about the 'content used, the time of use, the frequency of use,

and the location of use'.[206] The Australia-United States Free Trade Agreement requires the parties to introduce a scheme imposing liability for activites relating to the circumvention of 'effective technological measures' used by copyright owners to protect their material.[207] In September 2006, the Attorney-General of Australia released an exposure draft of amendments to the *Copyright Act 1968* (Cth) and the *Copyright Regulations 1969* (Cth) intended to implement this requirement of the Australia-United States Free Trade Agreement.[208]

6.97 Another area of concern relates to the use of application service providers. An application service provider is a business that enables customers to access software applications over a network, typically the internet. Use of an application service provider may result in large amounts of a customer's data being stored remotely.[209] The ALRC is interested in hearing about other technologies that may impact on privacy. The next chapter considers how best to accommodate these techologies in a regulatory framework.

Introduction

7.1 This chapter discusses how to accommodate developing technology in a regulatory framework. The chapter first considers whether the *Privacy Act 1988* (Cth) should attempt to regulate the handling of information by specific technologies or whether the *Privacy Act* should be technologically neutral. The remainder of the

chapter discusses mechanisms that ensure that a technologically neutral *Privacy Act* remains technologically *aware*. The chapter considers the interaction between privacy enhancing technologies (PETs) and the individual. The chapter then summarises the proposed amendments to the *Privacy Act* that are relevant to technology, and proposes a proactive mechanism to mandate privacy and security standards in the *Privacy Act*. Finally, the chapter discusses the important role of the Office of the Privacy Commissioner (OPC) in protecting individual privacy in light of technological developments.

Should the *Privacy Act* be technologically neutral?

7.2 The explanatory memorandum to the Privacy Amendment (Private Sector) Bill 2000 noted that the National Privacy Principles (NPPs) were intended to be technologically neutral. Technologically neutral privacy principles were intended to ensure that the *Privacy Act* remained flexible and relevant in the case of technological change.[1] In Chapter 6, the ALRC considers the impact on privacy of several new and developing technologies. These technologies facilitate easier, cheaper and faster methods by which information may be collected, accessed, aggregated and communicated. Further, there is an increasing ability to store large quantities of information. In light of these technological developments—many of which have increased in application since 2000—the ALRC asked in Issues Paper 31, *Review of Privacy* (IP 31) whether technological neutrality should remain the objective of the *Privacy Act*.[2]

Submissions and consultations

7.3 The overwhelming majority of stakeholders who commented on this issue indicated that the *Privacy Act* should remain technologically neutral.[3] This view was based on several considerations. First, technology is developing at such a rate that attempts to regulate certain technologies through the *Privacy Act* will quickly render the legislation out-of-date. The Victorian Society for Computers and the Law noted that this is also the case for 'classes of technologies, given that these may change or merge over time'.[4] It was also noted in submissions that the impact on privacy of future applications of existing technologies may be difficult to predict.[5]

4 See, eg, Victorian Society for Computers and the Law Inc, *Submission PR 137,* 22 January 2007.

5 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

7.4 The Australian Retailers Association submitted that reference to specific technologies in the *Privacy Act* may, by implication, exclude from its ambit other technologies that have a significant impact on privacy.[6]

7.5 Microsoft Australia noted that the international 'patchwork' of privacy legislation resulted in commercial challenges. In supporting technologically neutral legislation generally, Microsoft noted that nationally legislated privacy protection may operate as a 'tariff' on transborder flows of information. Microsoft submitted that technologically neutral privacy principles interacted well with 'international privacy frameworks and domestic privacy law in other countries'.[7]

7.6 The Australian Communications and Media Authority suggested that responding to the impact of developing technology on privacy could be informed less by reference to technology and more by the 'two more stable considerations' of consumer privacy expectations and the 'conduct of organisations in using personal and sensitive information'.[8]

7.7 The OPC suggested that an effective approach to regulating technology would involve some amendment to a technologically neutral *Privacy Act* to ensure that the Act remains both 'technologically neutral' and 'technologically relevant'.[9]

7.8 Stakeholders in support of a technologically neutral *Privacy Act* suggested that the impact of technology on privacy could be addressed by technologically specific legislation, regulations, guidelines or binding codes. For example, the Australian Privacy Foundation submitted that privacy laws

> need to be as 'technology neutral' as possible so that the objective of the principles are satisfied irrespective of the medium or channel used. At the same time, some technologies are known to raise particular issues (such as VoIP, RFID and so-called geo-identification), and it may be appropriate to address these specifically as they arise, either by amendment of the law, or through Codes of Practice and Guidelines.[10]

7.9 The OPC submitted that:

> To accommodate particular technologies that create privacy risks which fall outside the scope of privacy legislation, the Privacy Act should provide for the Commissioner to make binding codes that go to certain acts or practices or certain technologies …

9 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
10 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

> This would facilitate timely responses to new technologically specific privacy issues.[11]

Contrary views

7.10 Professor Roger Clarke queried whether the concept of technological neutrality operates effectively in practice.[12] For example, Clarke has noted previously that the impact of some technologies on privacy may be inconceivable until the technologies have actually been invented and deployed.[13] One submission queried the adequacy of a technologically neutral *Privacy Act* given 'the introduction of the SPAM Act which was in direct response to the abuse of a reasonably new technology by marketers'.[14]

7.11 In addition, the Legal Aid Commission of New South Wales noted that technologies such as optical surveillance devices can collect information not covered by the *Privacy Act.* For example, the privacy principles apply only to personal information collected for inclusion in a 'record'. The Legal Aid Commission submitted that the privacy principles may not be able to regulate adequately developing technologies.

> The [I]nformation Privacy Principles (IPPs) and National Privacy Principles (NPPs) are based on the way data was processed in the late 1970s, before the Internet, desktop computers, and widespread applications of digital sound and visual recording and telephony. They assume computer systems that were designed to process information in pre-defined ways, rather than contemporary customer relationship or client management systems that are designed to record a flexible range of interactions between organisations and people. They assume that information is disclosed by individuals at a definite point in time and can be regulated at distinct stages of collection, storage, use and disclosure and by establishing clear lines of custodial responsibility for the way personal information [is] handled.[15]

7.12 Finally, Professor William Caelli submitted that no law is truly 'technologically neutral', noting that it is unclear

> just what is meant by the term 'technology neutral' ... perhaps we mean that the Act should be 'artefact' neutral in that no specific manifestation of a given technology is specified.[16]

ALRC's view

7.13 Making the *Privacy Act* technologically (or artefact) neutral is the most effective way to ensure individual privacy protection in light of developing technology.[17] Current technologies do not alter fundamentally the nature of the information-handling

14 National Australia Bank and MLC Ltd, *Submission PR 148,* 29 January 2007.
15 Legal Aid Commission of New South Wales, *Submission PR 107,* 15 January 2007.
16 W Caelli, *Submission PR 99,* 15 January 2007.
17 While the ALRC accepts Professor Caelli's point, the ALRC has decided to use the term 'technologically neutral' as it is the more commonly understood term. Note, however, that a technologically neutral *Privacy Act* does not preclude the use of words such as 'technology'.

cycle. For example, surveillance devices and radio frequency identification (RFID) systems may facilitate the collection of personal information without the knowledge or consent of an individual but the *collection* of the information will still be regulated by the 'Collection' principle in the proposed Unified Privacy Principles (UPPs) set out in the beginning of this Discussion Paper. Similarly, personal information that is shared electronically will be regulated by the proposed 'Use and Disclosure' principle. In addition, storage and destruction of personal information that is held in an electronic form must take place in line with the requirements in the proposed 'Data Security' principle. The ALRC's view, therefore, is that the handling of personal information by developing technologies can be regulated by high level and technologically neutral UPPs.[18] It is not desirable to propose an entire overhaul of the *Privacy Act* on the basis that technologies, which are yet to be invented or deployed, may not be accommodated by the proposed UPPs.

7.14 The OPC has the function to research and monitor developments in technology and to report to the Minister the results of such research and monitoring.[19] The ALRC is of the view that the OPC could exercise this function to provide a continuing review mechanism of the adequacy and effectiveness of the *Privacy Act* in light of further developments in technology.

7.15 The enactment of separate legislation directed towards particular technologies does not of itself represent a failure of a technologically-neutral *Privacy Act*. Instead, it indicates that information handled by particular technologies may require stronger protection in certain, limited circumstances. In addition, while the *Privacy Act* should be technologically neutral, some technologies that impact on privacy may require regulation through standards and legislative instruments. This chapter discusses mechanisms to ensure that a technologically-neutral *Privacy Act* does not result in a technologically *blind* privacy framework.

7.16 Finally, a number of concerns raised by stakeholders in this Inquiry about the impact of technology on privacy are dealt with in other sections of this Discussion Paper. In Part A, the ALRC proposes amendments to the definitions of 'personal information', 'sensitive information' and 'record'. In Part D, the ALRC proposes several amendments to the privacy principles. In Part F, the ALRC proposes additional OPC powers and functions that are relevant to technological developments. These proposals are discussed below and in Chapter 8.

Proposal 7–1 The *Privacy Act* should be technologically neutral.

18 Proposal 15–1.
19 *Privacy Act 1988* (Cth) s 27(1)(c).

Designing a 'technologically aware' framework

7.17 The OPC submitted that the privacy regulatory framework should be informed by the assumption that 'information will be handled in electronic form'.[20] The OPC cited a University of California, Berkeley study that found that only 0.01% of all new information produced in 2002 was paper-based.[21] Effective privacy protection, therefore, requires the development of a 'technologically aware' framework. The remainder of this chapter considers how to ensure that a technologically neutral *Privacy Act* remains relevant in light of developments in technology.

7.18 Professor Lawrence Lessig has described four modes of regulation in cyberspace, noting that these modes are reflected in 'real space'. These modes—and examples of their application in cyberspace—are as follows:

- *law*, which may include prohibitions and sanctions for online defamation and copyright infringement;
- *social norms*, which may involve a user conforming the behaviour of their avatar to community expectations in an online world such as Second Life or a social networking site such as Facebook;
- *markets*, which regulate the price paid for access to the internet and access to information on the internet; and
- *architecture*, which is the code, hardware or software that shapes the appearance of cyberspace.[22]

7.19 Cyberspace regulatory theorists disagree on the role that should be taken by each modality in Lessig's analysis.[23] Lessig demonstrates, however, that regulation of the internet and other developing technologies must be through measures additional to conventional 'law'. Otherwise, the regulation through law can be circumvented or undermined by, for example, the architecture of the internet.

7.20 As a starting point, broadly drafted statutory principles could address developing technology. A regulatory framework, however, should also accommodate co-regulation between the OPC and agencies and organisations, and it should seek to empower individuals by providing them with mechanisms to protect their privacy. A focus on the deployment of PETs by agencies, organisations and individuals underpins the framework suggested in this chapter.

7.21 A technologically aware regulator plays a crucial role in dealing with the impact of technology on privacy. In this chapter, the ALRC proposes that the OPC should provide guidance that outlines how certain requirements in the proposed UPPs can be met by agencies and organisations that use particular technologies to handle information.[24]

7.22 Education is a further important feature of the regulator's role. In this chapter, the ALRC proposes that the OPC should educate individuals about how to use PETs to protect their privacy. In addition, education programs focused on PETs should be directed towards agencies and organisations that design and deploy new and developing technologies.[25]

7.23 In Chapter 44, the ALRC discusses the importance of proactive regulation. This is reflected in the proposals to empower the OPC to conduct audits of records held by both agencies and organisations, and direct privacy impact assessments for new projects and developments.[26] These proposals are intended, in part, to promote the early implementation of PETs.

7.24 Finally, while this chapter focuses on domestic regulation of developing technology, the global nature of technology development and deployment requires industry, the OPC, and the Australian Government to coordinate and engage with others in the international arena. The OPC noted its support for 'Australia's involvement in international forums to coordinate data protection schemes'.[27] A report prepared by the Australian Communications Authority in 2005 made a similar point.[28]

Privacy enhancing technologies

7.25 A number of stakeholders submitted that the Inquiry consider the role that PETs could play in a regulatory framework.[29] The term 'PETs' can be used in a number of different contexts. PETs can refer to particular technologies that form part of the architecture of technological systems used by agencies and organisations to deliver services.[30] Chapter 6 includes a discussion of these types of PETs, which may include mandatory access control devices or identity management systems. Secondly,

29 See, eg, Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; CSIRO, *Submission PR 176,* 6 February 2007; Australian Electrical and Electronic Manufacturers' Association, *Submission PR 124,* 15 January 2007 Edentiti, *Submission PR 29,* 3 June 2006.
30 Commission of the European Communities, *Communication From the Commission to the European Parliament and the Council on Promoting Data Protection by Privacy Enhancing Technologies (PETs)*, COM(2007) 228 (2007), 3.

individuals can utilise PETs to exercise control over the collection of their personal information.[31] Chapter 6 discusses several of these types of PETs, including encryption and RFID signal 'blockers'. Finally, the way that technology is used often determines whether its impact is privacy enhancing or invasive.[32] An holistic approach to regulating technology would encourage agencies and organisations to develop and deploy all technologies to enhance privacy.

7.26 In May 2007, the European Commission issued a communication on PETs to the European Parliament and Council, noting that PETs were most effective when 'applied according to a regulatory framework of enforceable data protection rules'.[33] The ALRC's view is that PETs promote enhanced security and trust and are therefore an essential component of the regulatory structure. Some PETs, however, can be physically unwieldy and costly to implement. Moreover, use of PETs may require a certain level of technological expertise. PETs alone, therefore, cannot address the impact of technology on privacy and should complement, rather than replace, the legislative and regulatory structure outlined below.

Empowering the individual

7.27 Use of PETs by individuals—and education of individuals about PETs—can provide individuals with greater control over their personal information when using technologies such as the internet. The OPC submitted that:

> Education and PET solutions together will be crucial for dealing with the international nature of the internet and for ensuring that individuals are able to exercise appropriate control of their personal information when its handling falls outside of the national jurisdiction of Australian privacy law.[34]

7.28 A national survey conducted in May 2007 found that Australians were more concerned about online privacy than the threat of a terrorist attack.[35] PETs, therefore, could play a role in increasing consumer trust in online interactions. Chapter 6 discusses two main types of PETs that may be deployed by individuals to protect their privacy online: encryption and identity management.

7.29 In Chapter 5, the ALRC proposes that the *Privacy Act* be amended to include a statutory cause of action for invasion of privacy.[36] The proposed statutory cause of action may be commenced against an individual acting in a non-commercial capacity—such as an internet blogger who does not fall within the definition of a 'media organisation'—as well as against an agency or organisation. In addition to

36 Proposal 5–1.

using PETs, therefore, individuals may be able to obtain, if the ALRC's proposal is implemented or the common law continues to develop, remedies for invasion of privacy.

7.30 Some commentators have also suggested that individuals could benefit from the introduction of property or market-based schemes.[37] Such schemes are based on the premise that individuals should have the right of ownership over their personal information and, therefore, enjoy commercial exploitation of this information. It has been noted, however, that property and market-based rights schemes have a number of drawbacks. For example, it has been questioned whether personal information is ever freely alienable.[38] It has also been argued that the 'market approach has difficulty assigning the proper value to personal information'.[39]

7.31 In the ALRC's view, promoting mechanisms that enhance individual control over personal information is one way to deal with the protection of individual privacy in light of technological developments. Emphasising only the responsibility of individuals to protect their information privacy is undesirable. It places a 'premium' on the individual

> having sufficient interest in protection and the 'cultural capital'—the ability and the means to comprehend what is happening … to read obscure fine print on the web, and to assert herself in controlling inroads or seeking redress once these threats have been realised.[40]

7.32 Submissions made to the current review into the Electronic Funds Transfer (EFT) Code of Conduct, which is being conducted by the Australian Securities and Investments Commission (ASIC), should be considered in light of the reasonable limits of individual responsibility. For example, some banking and financial industry stakeholders submitted to ASIC that individuals who do not maintain a certain level of equipment security should be made liable under the EFT Code of Conduct 'for the full amount of losses from malicious code compromises of account access data'.[41] In the ALRC's view, shifting privacy risk from organisations to individuals using existing and developing technology is questionable from a policy perspective. The following sections consider the role of legislation and the OPC in regulating the impact of developing technology on privacy.

Statutory protection

7.33 This section focuses on the amendments to the *Privacy Act* that the ALRC proposes to ensure that the Act remains relevant in light of technological development. The section first discusses amendments to the proposed UPPs that are relevant to technology. The section then discusses proposed amendments to relevant definitions in the *Privacy Act*. Finally, the chapter proposes a mechanism for mandating appropriate privacy and security standards.

7.34 It should also be noted that, in some circumstances, regulation of specific technologies may be appropriate. The *Spam Act 2003* (Cth) and the *Do Not Call Register Act 2006* (Cth) are examples.[42] In the United States, several technologically specific bills are currently before Congress.[43]

The proposed Unified Privacy Principles

7.35 The proposed UPPs are intended to regulate personal information throughout the information-handling cycle. In formulating the UPPs, the ALRC addressed developments in technology by proposing several additions and amendments to the NPPs. Part D contains a detailed examination of each proposed UPP.

Anonymity and Pseudonymity

7.36 As discussed in Chapter 17, a number of stakeholders submitted that the 'Anonymity' principle in the NPPs should be expanded to deal with pseudonymous interactions. Having the option to transact anonymously provides an individual with control over what information is collected about them by an agency or organisation, particularly in an electronic environment. It may not always be practicable, however, for an agency or organisation to transact anonymously with individuals. In these circumstances it may be practicable for an individual with an authenticated identity to transact with an agency or organisation using a pseudonym.

7.37 The ALRC proposes that the privacy principle dealing with anonymity should also include a pseudonymity requirement that states that when an individual is transacting with an agency or organisation, the agency or organisation must give the individual the clear option of identifying themselves by a pseudonym. This requirement is limited to circumstances where providing this option is lawful, practicable and not misleading.[44] The ALRC also proposes that the meaning of the terms in this principle should be accompanied by guidance issued by the OPC.[45]

---

42 The ALRC discusses the regulation of specific telecommunications technologies in Part J.

43 See, eg, S 1625—Proposed Counter Spy Act of 2007 (US); HR 964—Proposed Securely Protect Yourself Against Cyber Trespass Act (SPY ACT) of 2007 (US); HR 1525—Proposed Internet Spyware (I-SPY) Protection Act of 2007 (US).

44 Proposal 17–2.

45 Proposal 17–4.

7.38 The proposed 'Anonymity and Pseuonymity' principle is the first listed principle in the proposed UPPs. It reflects

> the idea that the lifecycle of information begins before collection, when organisations and agencies should consider the fundamental question of whether they need to collect personal information at all.[46]

Collection

7.39 In Chapter 18, the ALRC proposes that, where an agency or organisation receives unsolicited personal information, it must either: (a) destroy the information immediately without using or disclosing it; or (b) comply with all relevant provisions in the UPPs that apply to the information in question, as if the agency or organisation had taken active steps to collect the information.[47] This proposal provides a mechanism for dealing with circumstances when an agency or organisation might inadvertently 'collect' information—for example, when information electronically 'passes over' a system.

7.40 The *Privacy Act* does not require agencies or organisations to obtain an individual's consent before collecting personal information. On the other hand, sensitive information is subject to greater restrictions and, usually, consent is required in order to collect sensitive information. In IP 31, the ALRC asked whether there are categories of personal information that can be collected by new technologies that should only be collected with consent.[48] Two stakeholders submitted that consent should be obtained prior to the collection of information by RFID or biometric systems.[49] Several stakeholders, however, opposed the introduction into the 'Collection' principle of a requirement that an agency or organisation needs to obtain consent prior to the collection of personal information by certain technologies because such a requirement would be inconsistent with the technological neutrality of the *Privacy Act*.[50]

7.41 The OPC submitted that another approach may be to 'increase protections for particular types of information rather than particular types of technology'.[51] The ALRC agrees with this approach. In Chapter 3, the ALRC proposes that biometric

51 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

information, collected for certain purposes, should be included in the definition of sensitive information.[52]

Specific notification

7.42 As discussed in Chapter 6, technologies such as optical surveillance devices and computer software can allow the collection of information about an individual from that individual without his or her knowledge.

7.43 In Chapter 20, the ALRC proposes that, at or before the time (or, if that is not practicable, as soon as practicable after) an agency or organisation collects personal information about an individual from the individual, it must take reasonable steps to ensure that the individual is aware of, amongst other things, the fact and circumstances of collection (for example, how, when and from where the information was collected).[53] This will provide the individual with the knowledge that their information has been collected, and some understanding of how technology was used to collect it.

Identifiers

7.44 In Chapter 27, the ALRC notes that agencies increasingly use biometric information such as photographs as identifiers. The ALRC therefore proposes an amended definition of an 'identifier' in the proposed 'Identifiers' principle that makes it clear that the definition includes biometric information that is used as an identifier.[54]

Data breach notification

7.45 In IP 31, the ALRC asked whether there should be a new privacy principle dealing with data breach notification. The ALRC noted that breaches of data security are particularly relevant in the context of developing technology given that technologies such as the internet can provide a vehicle for the widespread dissemination of personal information.[55]

7.46 In Chapter 47, the ALRC proposes that the *Privacy Act* be amended to include a new Part on data breach notification. Generally, an agency or organisation would be required to notify the Privacy Commissioner and affected individuals when a data breach occurs and unauthorised acquisition may give rise to a real risk of serious harm to any affected individual.[56]

Definitions in the *Privacy Act*

7.47 This section outlines the amendments to definitions of terms in the *Privacy Act* that are relevant to technology. Detailed discussion of the following amendments is contained in Chapter 3.

---

52 Proposal 3–6.
53 Proposal 20–2.
54 Proposal 27–2.
55 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), [11.140].
56 Proposal 47–1.

Personal information

7.48 In IP 31, the ALRC asked whether the definition of personal information was adequate and appropriate in light of advances in technology.[57] The ALRC noted that, in some circumstances, information such as an individual's Internet Protocol (IP) address, mobile telephone number, email address or biometric information will not be personal information because it does not enable the *identity* of an individual 'reasonably [to] be ascertained'.[58] In the context of RFID technology, it could be argued that information about tagged items in an individual's possession may not be personal information if the identity of the individual cannot 'reasonably be ascertained'. These types of information, however, may enable individuals to be contacted, tracked or profiled.

7.49 In 2000, the Senate Select Committee on Information Technologies recommended that the *Privacy Act* be amended to regulate the collection of personal information through the use of technologies such as cookies and web bugs, which could indirectly identify consumers.[59] It suggested that this could be achieved by amending the definition of 'personal information' in the Act.

7.50 In Chapter 3, the ALRC proposes that 'personal information' be defined in the *Privacy Act* as 'information or an opinion, whether true or not, and whether recorded in a material form or not, about an identified or reasonably identifiable individual'.[60] This means that once information is able to be linked to an individual—and that individual is able to be contacted or targeted—it would become personal information for the purposes of the *Privacy Act.* The proposed definition would mean that telephone numbers, email addresses or IP addresses are personal information for the purposes of the *Privacy Act* once a sufficient amount of other information accretes around such points of contact.

Sensitive information

7.51 In IP 31, the ALRC asked whether the definition of sensitive information should include types of personal information collected by new technologies.[61] A number of stakeholders supported the amendment of the definition of 'sensitive information' to include biometric information. These submissions are discussed in Chapter 3. Limited feedback was received on other types of information that could be collected by existing and developing technologies.

7.52 The ALRC's view is that biometric information shares characteristics with other types of sensitive information and should be subject to more stringent protection than

non-sensitive personal information. Biometric information can be very difficult to replace once it has been accessed improperly. Further, biometric information may reveal health, genetic, racial and ethnic information about an individual. The ALRC notes, however, that it is neither necessary nor practicable to classify all types of biometric information as 'sensitive information'. In Chapter 3, the ALRC proposes that the definition of 'sensitive information' in the *Privacy Act* should be amended to include (a) biometric information collected for the purpose of automated biometric authentication or identification; and (b) biometric template information.[62]

Record

7.53 It has also been noted that the requirement that personal information be held or collected for inclusion in a record means that some privacy invasive practices, such as the use of live closed circuit television (CCTV), are not governed by the *Privacy Act*.[63] It has been argued that consideration should be given to ensuring that agencies and organisations are not allowed to breach the spirit of the *Privacy Act* by avoiding making a record.[64] As noted in Chapter 1, the Victorian Law Reform Commission is currently examining surveillance in public places as part of a larger inquiry into privacy. It is anticipated that the recommendations resulting from that inquiry will be considered by the Standing Committee of Attorneys-General.

7.54 In Chapter 3, the ALRC proposes that the definition of 'record' in the *Privacy Act* should be amended to include (a) a document; and (b) information stored in electronic or other form. The *Acts Interpretation Act 1901* (Cth) defines a document to include an image, which covers photographs and other pictorial representations.[65]

7.55 The ALRC notes that the definition of a record excludes a 'generally available publication'.[66] This means that several of the proposed UPPs do not apply to personal information in generally available publications. Publicly available information, including the concept of a generally available publication, is examined further in Chapter 8.

Standards

7.56 Another way to minimise the impact of developing technology on privacy is to require software and hardware systems to comply with certain technical standards before being released to the public or otherwise used. The term 'standardisation' can be used to refer to consistency and interoperability between technical systems. Standards

also require compliance with certain specifications and procedures that are intended to result in appropriate levels of safety, privacy or security.

7.57 It has been noted that information security is increasingly relevant to privacy.[67] Local and international bodies are continuing to develop standards on privacy and security issues such as identification, authentication and encryption. This section examines several privacy and security standards that could be applied in Australia.

Standards Australia

7.58 Standards Australia is the peak standards-developing body in Australia.[68] In the communications, information technology and e-commerce area, a number of privacy and security standards have been or are being developed, including in the areas of biometrics and identification and automatic identification and data capture techniques.[69] These standards are developed with the input of technical committees, which include industry, government and consumer stakeholders. Standards Australia also adopts several standards that are developed by international standards bodies such as the European Committee for Standardization, the International Standards Organization (ISO) and the International Electrotechnical Commission.[70]

Standards bodies in other jurisdictions

United States

7.59 The activities of the National Institute of Standards and Technology (NIST) include the development of standards and guidelines on information and communications technologies. NIST has published standards and guidelines on computer security, biometrics and digital information access. A number of other standards are being developed, including those on smart card security, anti-spam technologies, mobile and wireless security, personal identity verification and encryption.[71]

International standards

7.60 A number of international bodies have developed relevant privacy and security standards. The United Nations agency for information and communications technologies, the International Telecommunication Union (ITU-T), publishes privacy and security standards on RFID, biometric authentication, password-authenticated key

exchange, spyware and anonymous authentication architecture systems.[72] The ISO, which comprises 157 national standards bodies, is developing privacy standards on biometric systems and has published standards on the security of information processing systems, identification cards and banking and personal identification number management systems.[73]

7.61 The World Wide Web Consortium (W3C) develops open standards that aim to achieve trust and interoperability on the internet. These standards are developed by a W3C expert technical team with input from the public and W3C members. Membership of the W3C includes vendors of technology products and services, content providers, corporate users, research laboratories, standards bodies and governments.[74] The W3C Platform for Privacy Preferences (P3P) Working Group had developed a number of internet privacy specifications until work on this project was suspended at the end of 2006.[75]

7.62 The Common Criteria for Information Technology Security Evaluation (Common Criteria) is a standard that provides methods for evaluating the capabilities of various security products and techniques and establishing trust in these products and techniques.[76] In Australia, the Common Criteria is administered by the Defence Signals Directorate.[77]

7.63 Finally, the Payment Card Industry (PCI) Security Standards Council comprises a membership of five major credit card companies, including American Express and Visa. The PCI Security Standards Council has developed a data security standard that requires companies that handle customer information using the payment card services of its member organisations to comply with certain security policies and procedures for network architecture and software design.[78]

Mandating standards

7.64 Standards and codes developed by standards and industry bodies, as discussed above, can be a form of proactive privacy protection in a 'light-touch' regulatory regime. It has been noted, however, that there may not be adequate incentive for agencies and organisations to comply with standards because of a lack of adequate

78 See, eg, PCI Security Standards Council, *About the PCI Data Security Standard (PCI DSS)* <https://www.pcisecuritystandards.org/tech/index.htm> at 16 July 2007.

enforcement mechanisms. For example, it was noted recently that 83% of large merchants using Visa are not in compliance with the PCI Data Security Standard.[79] In addition, a proliferation of local and international standards for technologies such as voice over internet protocol (VoIP) and RFID can result in inconsistent privacy and security protection for individuals.[80]

7.65 Providing a mechanism for the introduction of appropriate privacy and security standards into legislation, therefore, would promote consistency in standards and compliance with such standards. Such a mechanism would ensure that security mechanisms and PETs are incorporated at the systems design stage.

Options for mandating standards

7.66 Standards Australia states on its website that 'around a third of all Australian Standards form some part of Territory, State or Federal law'.[81] An example of Australian legislation that incorporates standards is the *Motor Vehicle Standards Act 1989* (Cth). This Act provides for the making of legislative instruments that determine standards for road vehicles or vehicle components.[82] In determining these standards, the Minister may consult with relevant state or territory authorities, persons or organisations involved in the road vehicle industry, or organisations that represent road vehicle users.[83] The Act also provides for the incorporation of standards developed by national and international bodies.[84]

7.67 Other than in certain circumstances, the Act prevents the supply to the market of vehicles that do not comply with standards.[85] Further, a corporation that manufactures a vehicle that does not comply with the standard generally cannot use this vehicle for transport in Australia.[86]

ALRC's view

7.68 The *Privacy Act* should be amended to empower the Minister responsible for the *Privacy Act* (currently the Attorney-General)[87] to determine privacy and security standards for relevant technologies. This is a proactive approach that will ensure that appropriate privacy and security requirements form part of technical systems used by agencies, organisations and individuals. Providing the Minister with the power to

determine relevant standards would not require the mandating of all privacy and security standards. Rather, it would allow the Minister to mandate certain standards where appropriate. This proposal strikes an appropriate balance in a light-touch regulatory regime.

7.69 The *Motor Vehicle Standards Act* is an instructive example in determining how to mandate appropriate privacy and security standards. In particular, the ALRC notes that s 7A provides for the mandating of relevant standards that have been developed by Australian and international standards bodies such as those outlined above.

7.70 The ALRC notes that the OPC has several functions and powers relevant to technology. For example, the OPC's research and monitoring function is intended to ensure that the OPC stays abreast of the impact of technology on privacy. The Minister should, therefore, determine relevant privacy and security standards in consultation with the OPC.

Proposal 7–2 The *Privacy Act* should be amended to empower the Minister responsible for the *Privacy Act*, in consultation with the Office of the Privacy Commissioner, to determine which privacy and security standards for relevant technologies should be mandated by legislative instrument.

The role of the regulator

7.71 This part of the chapter considers the role of the OPC in dealing with the impact of developing technology on privacy.[88] The following section highlights the importance of proactive regulation in the face of developing technology. The chapter then discusses the OPC's oversight functions that relate to technology and the OPC's power to issue non-binding guidance for certain technologies. The chapter proposes instances where such guidance would be appropriate. Finally, the section considers the co-regulatory basis of the proposed enhanced power of the OPC to approve and direct the making of binding privacy codes in relation to certain technologies.

Proactive regulation

7.72 In Chapter 44, the ALRC discusses the desirability of early regulatory intervention in order to prevent interferences with privacy. Reflecting the emphasis that should be placed on proactive regulatory measures, the ALRC proposes that the *Privacy Act* be amended to empower the Privacy Commissioner to conduct audits of the records of organisations for the purpose of ascertaining whether an organisation's records are maintained according to the requirements in the proposed UPPs, privacy regulations and any privacy code that binds the organisation.[89] Further, the ALRC

88 See Ch 44 for a detailed discussion of the existing and proposed powers and functions of the OPC.
89 Proposal 44–6.

proposes that the OPC should have the power to direct agencies and organisations to conduct privacy impact assessments (PIAs) for new projects and developments.[90]

7.73 Audits and PIAs could be used to encourage compliance with requirements of the proposed UPPs to prevent a developing technology from having an adverse impact on privacy. For example, the proposed 'Anonymity and Pseudonymity' principle requires agencies and organisation to design systems that allow for anonymous or pseudonymous transactions where it would be 'practicable' to do so.[91] It has been noted that it may not be 'practicable' to alter retrospectively to alter systems such as biometric identification systems or transport systems using smart card technology to allow for anonymity in transactions.[92] PIAs, however, could ensure that agencies and organisations take privacy into account before the system is developed and develop and use systems that provide for anonymous or pseudonymous transactions.

Oversight functions of the OPC

Research and monitoring

7.74 The OPC has two research and monitoring functions that are relevant to the regulation of new and developing technologies. These are to:

- conduct research and monitoring into data processing and computer technology (including data-matching and data-linkage) to ensure that any adverse effects of such developments on the privacy of individuals are minimised, and to report to the Minister the results of such research and monitoring;[93] and

- monitor and report on the adequacy of equipment and user safeguards.[94]

7.75 In Chapter 44, the ALRC proposes that the first function be amended to remove the word 'computer' to make it clear that the OPC's research and monitoring function is not limited to computer technology.[95]

7.76 In 2006, the UK Information Commissioner published a report noting that an effective regulator needs to stay 'abreast of, and knowledgeable about, new

90 Proposal 44–4.

95 Proposal 44–1.

technologies and systems'.[96] Noting the resource implications that this may involve, the report suggested that

> it is advantageous … to develop a pooled technological knowledge-and-awareness capability, as may be occurring, for instance, at the level of the EU, through the Article 29 Working Party and other networks and channels in which many national and sub-national regulators participate.[97]

7.77 The OPC's research and monitoring functions could be complemented by active engagement with international data protection networks. In Chapter 43, the ALRC proposes that the OPC be empowered to convene expert panels.[98] Such a panel could include experts in information and communication technologies.[99] Along with participation in international fora, advice from experts will equip the OPC with the relevant expertise to carry out its research and monitoring function and other powers and functions relevant to developing technology.

7.78 In the ALRC's view, the OPC should prioritise PETs when exercising its research and monitoring function. In particular, the function to research and monitor user safeguards could be used to research PETs such as online authentication and identity management systems.

Proposal 7–3 In exercising its research and monitoring functions, the Office of the Privacy Commissioner should consider technologies that can be deployed in a privacy enhancing way by individuals, agencies and organisations.

Education

7.79 The OPC also has the ability to undertake and coordinate educational programs for the purposes of promoting individual privacy.[100] The expertise attained by the OPC in exercising its researching and monitoring functions could form the basis of educational programs.

7.80 The OPC's education function is sufficiently broad to allow the OPC to conduct education programs that relate to the privacy impacts of technology on individuals.[101] In the ALRC's view, the OPC should conduct education programs which focus on specific PETs and the privacy enhancing ways in which technologies can be deployed. Such education programs should be directed towards those designing technical

99 In addition, the OPC is required to include on its Advisory Committee a member with extensive experience in 'electronic data-processing': *Privacy Act 1988* (Cth) s 82(7)(c). In Ch 43, the ALRC proposes that the term 'electronic data-processing' in s 82(7)(c) be replaced with the term 'information and communication technologies': Proposal 43–4(c).

100 Ibid s 27(1)(m).

101 The OPC's education function is discussed further in Ch 44.

systems; agencies and organisations that use the systems to deliver services; and individuals that use such systems.

7.81 The ALRC also proposes that, to promote awareness of personal privacy and respect for the privacy of others, state and territory education departments should incorporate education about privacy and, in particular, privacy in the online environment, into school curricula.[102]

Proposal 7–4 The Office of the Privacy Commissioner should educate individuals, agencies and organisations about specific privacy enhancing technologies and the privacy enhancing ways in which technologies can be deployed.

Guidance on particular technologies

Background

7.82 As discussed in Chapter 15, principles-based regulatory schemes require the issuing of guidance that clarifies the rights and obligations contained in the legislation. Chapter 6 examines a number of developing technologies that may require such guidance when used by agencies and organisations to handle personal information.[103] For example, RFID systems, surveillance devices and internet software could allow an agency or organisation to collect personal information about an individual without his or her knowledge or consent. Security issues may arise when information is transmitted by wireless technologies, and large quantities of information are stored electronically. It may also be difficult for an individual to gain meaningful access to personal information that an organisation holds in an encrypted form.

7.83 Agencies and organisations using such technologies to handle an individual's personal information may be required to do certain things to meet the obligations set out in the proposed UPPs. Guidance issued by the OPC—for example, technologically specific guidelines—could specify what is required to fulfil the obligations in the proposed UPPs when personal information is handled by a particular technology.

7.84 In Chapter 44, the ALRC discusses the power of the OPC to prepare guidelines that assist agencies and organisations to avoid acts or practices that may be

---

102 See Proposal 59–4. In Ch 59, the ALRC discusses different attitudes to privacy held by members of different generations.

103 In Ch 64, the ALRC proposes that ACMA, in consultation with the OPC, Australian Communications Alliance and the Telecommunications Industry Ombudsman should develop and publish guidelines that address issues raised by new telecommunications technologies such as location-based data, VoIP and electronic number mapping: Proposal 64–3.

interferences with, or affect adversely, the privacy of individuals. The OPC has used this power to issue guidelines that deal with the data-matching activities of agencies.[104] While guidelines such as these are not binding, they indicate the OPC's understanding of the requirements set out in the UPPs. Guidelines, therefore, can provide greater detail than high level principles, help to modify behaviour and be highly persuasive in the complaint-handling process. The OPC may also take into account compliance with guidelines when conducting an audit.[105]

7.85 The OPC's function to research and monitor technology could provide the OPC with the expertise to develop, in consultation with relevant stakeholders, guidance for personal information handled using particular technologies. In formulating such guidance, the OPC could examine similar guidelines published in other jurisdictions. For example, in June 2006, the Information and Privacy Commissioner Ontario issued *Privacy Guidelines for RFID Systems*. These guidelines are not mandatory, but encourage agencies and organisations to comply with certain limits on collection, use and disclosure of information collected by RFID tags embedded in retail items.[106] In the United States, guidelines issued in April 2007 by NIST outline several steps that could be taken to protect the security of information handled by RFID systems.[107]

7.86 In IP 31, the ALRC asked whether the privacy principles should be amended to deal with the impact of developing technology on privacy.[108] The next section discusses a number of requirements that, in the view of the ALRC, should not be set out in the proposed UPPs, but which could form the subject of technologically specific guidance.

Setting out requirements in the proposed UPPs

Collection

7.87 The proposed 'Collection' principle requires an agency or organisation to collect information only by fair means, and not in an unreasonably intrusive way.[109] Guidance issued by the OPC could explain the meaning of the terms 'fair means' and 'unreasonably intrusive' in relation to certain technologies. This may be required where technologies allow the collection of information without the knowledge of an individual.

7.88 For example, an 'unreasonably intrusive' collection of information by RFID systems might involve collection of information from a RFID tag combined with a

109 See the proposed 'Collection' principle set out at the beginning of this Discussion Paper.

location detection sensor embedded in an item of clothing sold by a retailer. In addition, collection of information by keystroke software installed on internet café computers may not fall within the definition of 'fair means'.

Specific notification

7.89 The ALRC received limited support for requiring agencies and organisations that use certain technologies to collect personal information to comply with additional notice requirements. In the ALRC's view, including such requirements in the proposed 'Specific Notification' principle is not consistent with the high level, technologically neutral approach proposed in this Discussion Paper. [110]

7.90 This could, however, form the subject of technologically specific guidance on the Specific Notification principle. For example, organisations using RFID technology could be required to inform individuals how to remove or deactivate an RFID tag embedded in a product. In addition, agencies and organisations using biometric systems could be required to inform individuals of the error rates of the systems, and the steps that can be taken by an individual wishing to challenge the system's results.[111] Further, guidance could encourage agencies or organisations to inform individuals of the format in which personal information may be disclosed, for example, whether it will be disclosed in an electronic format.

Data security

7.91 The proposed 'Data Security' principle requires agencies and organisations to take reasonable steps to protect personal information from loss, misuse and unauthorised access, modification or disclosure.[112] In relation to the IPPs and the NPPs that deal with data security, the OPC has indicated that what are reasonable steps will depend on: the sensitivity of the personal information held; the circumstances in which the personal information is held; the risks of unauthorised access to the personal information; the consequences to the individual of unauthorised access; and the costs of security systems.[113]

7.92 In Chapter 25, the ALRC proposes that the OPC provide guidance about the meaning of the term 'reasonable steps' in the 'Data Security' principle. This guidance should refer to technological developments in this area and, in particular, relevant encryption standards.[114] In addition, the ALRC proposes that the OPC provide guidance about what is required of an agency or organisation to destroy or render non-

114 Proposal 25–3.

identifiable personal information, particularly when that information is held or stored in an electronic form.[115]

Access and correction

7.93 The proposed 'Access and Correction' principle provides individuals with a general right to access personal information about them that is held by organisations.[116] In IP 31, the ALRC noted that some personal information may be stored in a way that makes it difficult to analyse or comprehend.[117] The European Parliament *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (EU Directive) requires personal information to be communicated to an individual in an 'intelligible form'.[118] This could mean, for example, that a machine capable of reading biometric information, or an expert with the ability to interpret the results of a machine's analysis of biometric information, should be made available to an individual seeking to exercise his or her right of access to this type of personal information.[119]

7.94 The OPC submitted that individuals should have a right to access information in an intelligible form where this is practicable:

> it may be the case that the only information held by the organisation is a biometric template of the individual which exists as a set of numbers and cannot be converted into an image or more meaningful product.

7.95 Further, the OPC submitted that:

> Where it is impracticable for the information to be presented in an intelligible form, an individual should have access to information explaining for instance that the organisation holds a template of one of his or her biometrics and what that template refers to (for example, the face or left index finger).[120]

ALRC's view

7.96 It is implicit in the proposed 'Access and Correction' principle that, where an individual requests access to personal information about him or her that is held by an organisation, the organisation should provide access to the information in an intelligible form where this is practicable. Moreover, the ALRC notes that it is best practice for organisations to hold some information only in encrypted form. For example, the sensitive nature of biometric information—and the difficulty of replacing such information if it is compromised—means that an organisation should destroy the raw data, such as digital photographs, that are obtained when an individual enrols in a

---

115 Proposal 25–6.

116 See the proposed 'Access and Correction' principle. Ch 12 discusses the access and correction requirements for information about an individual that is held by agencies.

119 Council of Europe, *Progress Report on the Application of the Principles of Convention 108 to the Collection and Processing of Biometric Data* (2005), [82].

120 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

biometric system.[121] Drafting the proposed 'Access and Correction' principle in line with the OPC's submission, therefore, would be undesirable as well as unnecessary. Requiring organisations to provide an individual with information held about them in an intelligible form may encourage organisations to hold certain information, which for security reasons should be encrypted permanently, in an unencrypted form or a form that is able to be decrypted.

7.97 On balance, therefore, the ALRC's view is that the 'Access and Correction' principle should not be drafted to provide individuals with a right to access information in an intelligible form. The OPC should provide guidance about the type of information that an agency or organisation should make available to an individual when information is held in an encrypted form. This could include, for example, information about whether an encrypted biometric template is a facial or fingerprint biometric.

7.98 The ALRC also notes that the proposed 'Access and Correction' principle requires an organisation to take reasonable steps to correct personal information about an individual when that individual establishes that information held by the organisation is not accurate, complete, up-to-date or relevant.[122] For example, if an organisation's biometric system repeatedly fails to identify or authenticate an individual who had provided the organisation with biometric information to enrol in the system, this indicates that the biometric information held by the organisation is not accurate, complete or up-to-date. In this context, it would be 'reasonable' for the organisation to re-enrol that individual in the biometric system.[123]

Automated decision review mechanisms

7.99 In IP 31, the ALRC asked whether an additional privacy principle was required for automated decision-making processes. The ALRC noted that art 15(1) of the EU Directive reflects concern about the increasing automisation of decisions that affect individuals.[124] It states:

> Member States shall grant the right to every person not to be subject to a decision which produces legal effects concerning him or significantly affects him and which is based solely on automated processing of data intended to evaluate certain personal aspects relating to him, such as his performance at work, creditworthiness, reliability, conduct, etc.[125]

---

121 See, eg, Biometrics Institute, *Biometrics Institute Privacy Code* (2006), Principle 11.

122 See Ch 26.

123 Biometric systems are discussed in detail in Ch 6.

124 L Bygrave, 'Minding the Machine: Art 15 of the EC Data Protection Directive and Automated Profiling' (2000) 7 *Privacy Law & Policy Reporter* 67, 68.

125 European Parliament, *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data*, Directive 95/46/EC (1995), art 15(1).

7.100 A person may be subjected to a decision of this kind, however, if the decision is made in certain contractual contexts, or is authorised by a law that also lays down measures to safeguard the data subject's legitimate interests.[126] The Working Party on the Protection of Individuals with regard to the Processing of Personal Data, set up under art 29 of the EU Directive, commented that

> where the purpose of the transfer [of personal information] is the taking of an automated decision in the sense of Article 15 of the directive, the individual should have the right to know the logic involved in this decision, and other measures should be taken to safeguard the individual's legitimate interest.[127]

7.101 In the United Kingdom, a data controller, on request in writing by an individual, is required 'to ensure that no decision taken by or on behalf of the data controller which significantly affects that individual is based solely on the processing by automatic means of personal data'.[128]

7.102 In 2004, the Administrative Review Council (ARC) published a report that contains a number of principles for agencies carrying out automated decision-making processes, and included a principle that provided for the manual review of decisions in certain circumstances.[129] The ARC Report was the basis for a guide published in February 2007 by the Australian Government Information Management Office (AGIMO).[130] This guide provides suggestions on when automated systems may be suitable for administrative decision making, the development and governance of automated systems and the design of such systems.

7.103 Research into computer systems indicates that such systems are not inherently accurate and reliable. Dr Cameron Spenceley notes that the reliability of computer hardware 'is governed not only by the validity and integrity of its design, but also by the lifespan of its physical components'.[131] Further, Spenceley states that the 'proposition that the reliability of computer software generally meets or exceeds some threshold is not demonstrable on an inherent or empirical basis with information and data that are generally available'.[132]

Submissions and consultations

7.104 Two stakeholders addressed whether there should be a privacy principle on automated decision making. The OPC submitted that:

132 Ibid 151.

> Currently, individuals are offered some protections through data quality and access and correction principles. However, the Office would support the clarification of the privacy principles to ensure that review mechanisms for automated decisions are a requirement under the Privacy Act.
>
> The Office notes that sometimes review mechanisms will involve the human checking of automated decisions but believes that there may be occasions where a review of a decision will include further automated processes or a combination of human and automated processes. The Office takes the view that, in the interests of technological neutrality, it will [be] important for the Privacy Act both to support fair and reasonable review mechanisms and allow for technological development which enables effective review via automated systems.[133]

7.105 Another submission stated that the ALRC should consider the introduction of a privacy principle that requires human intervention before any adverse action is taken on the sole basis of an automated process.[134]

ALRC's view

7.106 The ALRC supports the practice of human review of decisions that are made by automated means, particularly when an agency or organisation plans to take adverse action against an individual on the basis of such a decision. In supporting this practice, the ALRC notes research that indicates that computer software and hardware may not necessarily produce accurate and reliable results.

7.107 The ALRC has not received sufficient feedback, however, to propose that the UPPs include a prescriptive requirement for agencies and organisations to provide processes for human review of automated decisions. As discussed in Chapter 15, the proposed UPPs generally provide high-level and outcomes-based requirements. The proposed 'Data Quality' and 'Access and Correction' principles in the UPPs provide for outcomes that could be relevant to such a requirement. On balance, therefore, the ALRC has formed the preliminary view that human review of automated decision-making processes should be the subject of guidance issued by the OPC. Such guidance could be based on the material on automated decision-making processes produced by the ARC and AGIMO. In making this proposal, the ALRC notes that ensuring that accurate decisions are made about individuals is in the interests of the agencies and organisations that make such decisions.

Data-matching

7.108 Data-matching is 'the large scale comparison of records or files … collected or held for different purposes, with a view to identifying matters of interest'.[135] Privacy

---

133 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

134 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007.

135 Office of the Federal Privacy Commissioner, *The Use of Data Matching in Commonwealth Administration—Guidelines* (1998), [14].

concerns over data-matching include the: revealing of previously unknown information about an individual without the knowledge or consent of that individual; profiling of an individual; difficulty for an individual in accessing information contained in the new data-set without knowledge that such a data-set was compiled; accuracy of the matched data; and the security of large amounts of data collected for the purposes of data-matching or data mining.[136] The impact on privacy of data-matching is discussed further in Chapter 6. Currently, agencies that conduct data-matching activities are subject to some regulation. As discussed in Chapter 27, data-matching activities of organisations may be subject to some of the privacy principles. This section considers whether greater regulation of data-matching activities is required.

Regulation of data-matching

7.109 The Privacy Commissioner has functions relating to data-matching, including undertaking research and monitoring developments in data processing and computer technology (including data-matching and data linkage) to help minimise any adverse effects of such developments on privacy.[137] In addition, the Privacy Commissioner can examine (with or without a request from a Minister) any proposal for data-matching or data linkage that may involve an interference with privacy or that may have any adverse effects on the privacy of individuals.[138] The Privacy Commissioner may report to the Minister (currently the Attorney-General)[139] about the results of any research into developments in data-matching or proposals for data-matching.[140]

7.110 As discussed in Chapter 27, the *Data-matching Program (Assistance and Tax) Act 1990* (Cth) and the *Data-matching Program (Assistance and Tax) Guidelines* (the Guidelines) regulate the use of tax file numbers to match data held by certain agencies, such as the Australian Taxation Office and Centrelink. The Privacy Commissioner monitors compliance with the Act and the Guidelines. The Privacy Commissioner advises agencies about the interpretation of the Act and inspects the way in which they undertake data-matching regulated by the Act.[141] An act or practice that breaches Part 2 of the *Data-matching Program (Assistance and Tax) Act*, or the Guidelines, constitutes an 'interference with privacy'.[142] An individual can complain to the Privacy Commissioner about any such act or practice.[143]

7.111 Agencies may also engage in data-matching activities that do not involve the use of tax file numbers. For example, in early 2004 ASIC began matching data from its public database with data from the Insolvency and Trustee Service Australia's National

143 Ibid s 36; *Data-matching Program (Assistance and Tax) Act 1990* (Cth) s 14.

Personal Insolvency Index.[144] The purpose of this data-matching program is to identify individuals who should be disqualified automatically from managing corporations under the *Corporations Act 2001* (Cth).[145]

7.112 The Privacy Commissioner has issued guidelines for agencies that engage in data-matching practices that are not regulated by the *Data-matching (Assistance and Tax) Act 1990* (Cth) (the voluntary data matching guidelines).[146] The voluntary data matching guidelines aim to ensure that data-matching programs 'are designed and conducted in accordance with sound privacy practices'.[147] Although the guidelines are not legally binding, a number of agencies have agreed to comply with them.[148]

7.113 The voluntary data matching guidelines apply to agencies that match data from two or more databases if at least two of the databases contain information about more than 5,000 individuals.[149] In summary, the guidelines require agencies to: give public notice of any proposed data-matching program; prepare and publish a 'program protocol' outlining the nature and scope of a data-matching program; provide individuals with an opportunity to comment on matched information if the agency proposes to take administrative action on the basis of it; and destroy personal information that does not lead to a match. Further, the voluntary data matching guidelines generally prohibit agencies from creating new, separate databases from information about individuals whose records have been matched.[150]

7.114 In IP 31, the ALRC asked whether data-matching programs that fall outside the *Data-matching Program Assistance and Tax Act* should be regulated more formally.[151]

Submissions and consultations

7.115 A number of stakeholders stated that agencies should be subject to greater regulation when conducting data-matching programs. The OPC submitted that:

> In light of the expanding capacity to conduct widescale data manipulation in timely and cost effective ways, the Office recommends that consideration be given to making the voluntary public sector data matching guidelines mandatory. In making the

> guidelines enforceable, the Office notes that they may require reviewing to bring them in line with current practices and new technologies.[152]

7.116 The Australian Privacy Foundation also submitted that agencies should be subject to mandatory data-matching rules based on the OPC guidelines, although the Foundation was 'indifferent to whether this is effected through the Data-matching or Privacy legislation'.[153]

7.117 The Office of the Victorian Privacy Commissioner submitted that data-matching should be specifically addressed, 'preferably by separate data-matching provisions'.[154] The Centre for Law and Genetics stated that 'modern technology enables sophisticated data matching and it may be timely for there to be a separate principle on this issue'.[155] Similarly, the Queensland Government submitted that there was a

> need for privacy principles dealing with data-matching, and related processes where data is used by other parties or in ways not anticipated when the information was originally collected … controlling the level of aggregation of specific de-identified data items—for example, using age ranges rather than specific ages or dates of birth—would address this issue to ensure de-identified data items do not allow individuals to be reasonably identified.[156]

7.118 In addition, the Queensland Government submitted that:

> Competing with these privacy interests are the demands of administrative efficiency, including the need to reduce the burden of data collection for respondents and collection agencies, and the need to cater for re-use of administrative data for statistical purposes. Any privacy principle dealing with data-matching ought to be tempered with recognition of the need for statistical and administrative efficiency.[157]

7.119 A number of stakeholders submitted that the privacy principles do not regulate adequately the data-matching activities of organisations. The Office of the Information Commissioner Northern Territory submitted that:

> NPP 2 and IPP 11 regulate the disclosure of information for the purposes of data-matching by an agency or organisation. NPP 7 currently provides a limitation on the facilitation of data-matching by use of an identifier assigned by another. However, other principles regarding collection of personal information do not present significant checks on collection of information for data-matching purposes.[158]

7.120 The Office of the Victorian Privacy Commissioner noted that data-matching 'occurs across federal, state and territory government agencies and across public and private sectors within Australia and overseas'.[159] Similarly, the OPC submitted that:

> As the necessary technology becomes widely available, there is likely to be significant potential for increased data matching in the private sector. In the Office's view, private sector data matching activity might be an area best dealt with under a binding code making power for the Privacy Commissioner.[160]

7.121 It was suggested in another submission that:

> The Discussion Paper should give consideration to the inclusion of a definition of 'data matching' and to empowering the Privacy Commissioner to regulate all data matching practices according to a set of statutory principles. Consideration should be given to whether such regulation should also apply to the private sector.[161]

ALRC's view

7.122 It would appear from the information provided to the ALRC in this Inquiry that agencies are complying with the voluntary data-matching guidelines issued by the OPC. The ALRC does not propose, therefore, that these guidelines be made mandatory. The ALRC notes that the OPC has the function to research and monitor technology, including data-matching, and report the result to the Minister.[162] The OPC submitted that the data-matching guidelines should be reviewed if they were made mandatory. In the ALRC's view, the OPC could review the existing guidelines if the OPC deems this to be necessary.

7.123 The ALRC notes, however, that stakeholders indicated that the application of the privacy principles to the data-matching activities of organisations was not clear.[163] Further, there is currently no OPC guidance that applies to organisations engaged in data-matching. The ALRC's view is that the OPC should issue guidance that applies to data-matching by organisations. This guidance could be in the form of guidelines that are based on the existing data-matching guidelines that apply to agencies.

7.124 In addition, in Chapter 44 the ALRC proposes that the OPC should be empowered to request the development of a privacy code, and to develop and impose a privacy code that applies to designated agencies and organisations.[164] The ALRC's view is that this mechanism could be used to regulate more prescriptively the data-matching activities of agencies and organisations if the OPC deems this to be necessary.

163 See also the discussion of data-matching in relation to the proposed 'Identifiers' principle in Ch 27.
164 Proposal 44–10.

Proposal 7–5 The Office of the Privacy Commissioner should provide guidance in relation to technologies that impact on privacy (including, for example, guidance for use of RFID or data collecting software such as 'cookies'). Where appropriate, this guidance should incorporate relevant local and international standards. The guidance should address:

(a) when the use of a certain technology to collect personal information is not done by 'fair means' and is done 'in an unreasonably intrusive way';

(b) when the use of a certain technology will require, under the proposed 'Specific Notification' principle, agencies and organisations to notify individuals at or before the time of collection of personal information;

(c) when agencies and organisations should notify individuals of certain features of a technology used to collect information (for example, how to remove an RFID tag contained in clothing; or error rates of biometrics systems);

(d) the type of information that an agency or organisation should make available to an individual when it is not practicable to provide access to information held in an intelligible form (for example, what biometric information is held about an individual when the information is held as an algorithm); and

(e) when it may be appropriate for an agency or organisation to provide human review of a decision made by automated means.

Proposal 7–6 The Office of the Privacy Commissioner should provide guidance to organisations on the privacy implications of data-matching.

Co-regulation

7.125 The *Privacy Act* currently provides, through the OPC's power to approve privacy codes, a form of co-regulation for agencies and organisations that develop and deploy particular technologies.[165] In effect, privacy codes replace the privacy principles. Once a privacy code has been developed by an industry and approved by the OPC, the requirements set out in the code are binding on organisations that have agreed to be bound. Further discussion of the operation of the current code-making power and the co-regulatory nature of privacy codes is contained in Chapter 44.

7.126 In Chapter 44, the ALRC proposes that the OPC be empowered to request the development of a privacy code; and develop and impose a privacy code that applies to

165 *Privacy Act 1988* (Cth) pt IIIAA.

designated agencies and organisations.[166] This section provides an overview of two codes that could inform the OPC's exercise of these proposed powers.

Internet Industry Association Draft Code

7.127 The Internet Industry Association (IIA) has expressed the view that government regulation of privacy on the internet is problematic because the process of making new laws is too slow to deal adequately with developments in technology.[167] Accordingly, it believes that co-regulation between government and businesses in relation to privacy issues is 'a flexible way of maintaining relevant and enforceable best practice standards within a rapidly changing communications environment'.[168]

7.128 In 2003, the IIA lodged a draft privacy code with the OPC for approval under s 18BB of the *Privacy Act*.[169] If approved, the code will apply to members of the IIA who: (i) agree to be bound by it; and (ii) provide services on or through the internet from a location within Australia; are engaged in an internet related business; or are directly or indirectly commercially interested in the internet.[170]

7.129 The code aims to close a number of gaps in the existing privacy regime. It may apply to small business operators who are currently exempt from the operation of the *Privacy Act*.[171] It may also apply when personal information is included in an employee record or is collected for inclusion in a generally available publication.[172] The code, however, would not apply to individuals dealing with personal information in their personal capacity.[173]

Biometrics Institute Code

7.130 On 27 July 2006, the Privacy Commissioner announced the approval of the *Biometrics Institute Privacy Code*.[174] The preamble to the Code notes that 'Biometrics Institute members understand that only by adopting and promoting ethical practices, openness and transparency can these technologies gain widespread acceptance'.[175] The Code binds Biometrics Institute members who sign the Biometrics Institute Privacy

Code Agreement to Comply.[176] To date, four organisations have agreed to be bound by the Code.[177]

7.131 The Code aims to: (i) facilitate the protection of personal information provided by, or held in relation to, biometric systems; (ii) facilitate the process of identity authentication in a manner consistent with the *Privacy Act* and the NPPs; and (iii) promote biometrics as PETs.[178] It includes information privacy standards that are at least equivalent to the NPPs.[179] In addition, it requires organisations that have agreed to be bound by the Code to observe higher levels of privacy protection than those in the NPPs in certain circumstances. For example, the Code applies to acts and practices relating to employee records that are exempt from the operation of the *Privacy Act* if a biometric is included as part of the employee record, or has a function related to the collection and storage of, access to, or transmission of an employee record.[180]

7.132 The Code also contains three new information privacy principles. Principle 11 (Protection) sets out the steps that Code subscribers must take to protect biometric information, including ensuring that biometric information is de-identified where practicable, only stored in encrypted form and is not held in a way that makes it easy to match to other personal information. Principle 12 (Control) requires enrolment in biometric systems to be voluntary, and prevents organisations from using biometric information for some secondary purposes without 'free and informed consent'. Principle 13 (Accountability) requires individuals to be informed of the purposes for which a biometric system is being deployed. It also requires biometric systems to be audited and Code subscribers to adopt a holistic approach to privacy policy and procedures. Finally, it mandates the use of privacy impact assessments as part of the planning and management process for biometrics implementation.

Other regulatory mechanisms

7.133 The ALRC is interested in hearing whether the mechanisms proposed in this chapter provide an adequate and effective framework for addressing the impact of developing technology on privacy. In particular, the ALRC is interested in hearing about any effective regulatory mechanisms that have not been considered in this chapter.

Introduction

8.1 The *Privacy Act 1988* (Cth) does not regulate the handling of personal information by individuals for the purposes of, or in connection with, their personal, family or household affairs.[1] This means that an individual acting in a personal capacity—for example, an individual who posts personal information about others on a personal 'blog'—is not regulated by the *Privacy Act.* In addition, the privacy principles apply to personal information that is *collected* by an agency or organisation for inclusion in a record or a generally available publication but not to personal information that is *held* in a generally available publication—only to personal information held in a 'record'. Publications that are generally available, including publicly accessible websites, are not 'records' for the purposes of the *Privacy Act.*[2]

8.2 The application of the *Privacy Act* is also limited by a number of provisions that excuse an agency or organisation from complying with specific privacy principles in certain circumstances.[3] For example, some small business operators that are not bound by the *Privacy Act*, such as some internet service providers (ISPs) handle large

1 *Privacy Act 1988* (Cth) ss 7B(1), 16E.
2 Ibid s 6(1).
3 All private and public sector exemptions are examined in detail in Part E.

amounts of personal information. It has been estimated that approximately 25% of ISPs in Australia fall within the small business exemption in the *Privacy Act*.[4] In Chapter 35, the ALRC proposes that the *Privacy Act* be amended to remove this exemption.[5]

8.3 This chapter discusses concerns about two other limitations of the *Privacy Act* given developments in technology and, in particular, the internet. The chapter first discusses whether the *Privacy Act* should regulate individuals who publish information in the online environment. The chapter then discusses whether the *Privacy Act* needs to be amended to address issues about generally available publications in electronic form.

Individuals acting in a personal capacity

8.4 A major concern about individuals handling personal information relates to the content of information published on the internet. For example, individuals can monitor the online activities of others through the use of spyware.[6] One submission to the Inquiry noted that emails sent to multiple people may disclose to each other the email addresses of all of the recipients.[7] In addition, individuals regularly use social networking and user-generated sites such as Facebook and YouTube to post photographs, videos and commentary that may interfere with the privacy of other individuals.[8] Further, it has been estimated that there are at least 100 websites that contain images of people caught showering or undressing.[9]

8.5 Currently, a procedure exists for removing offensive or illegal content that is accessible via the internet.[10] There is no similar procedure, however, for removing other privacy-invasive information published on the Web by an individual acting in his or her non-business capacity.

Submissions and consultations

8.6 The Australian Communications and Media Authority (ACMA) submitted that 'the suppliers of content on the web are increasingly individuals who are not, in the

10 The Australian Communications and Media Authority (ACMA) can investigate complaints about content available via the internet. If satisfied that content is hosted in Australia and is 'prohibited content'—namely, content that has been given a certain classification by the Classification Board—or potentially prohibited content, ACMA must direct the relevant internet content host to remove the content: see *Broadcasting Services Act 1992* (Cth) sch 5.

main, regulated in any way by current privacy provisions'.[11] Similarly, the Legal Aid Commission of NSW submitted that:

> the Internet creates an environment where responsibility for protection of personal information should be spread as widely as possible, and not limited to commercial and administrative users.[12]

8.7 One individual advised the Inquiry that extensive personal information about herself and several family members has been published on an amateur genealogy website since late 2006. The information was posted without the knowledge or consent of the relevant individuals. She noted that she had unsuccessfully requested both the individual that owned the website and the relevant ISP to remove the information but 'there is no one with the authority … to discover the source of this information or to have the information removed from the website'.[13]

8.8 In Issues Paper 31, *Review of Privacy* (IP 31), the ALRC asked whether the *Privacy Act* should be amended to cover any acts or practices of individuals relating to their personal, family or household affairs.[14] The majority of submissions did not support an expansion of the scope of the *Privacy Act* to regulate individuals acting in a non-commercial capacity. For example, Electronic Frontiers Australia submitted that the *Privacy Act* is not 'an appropriate vehicle for application to the acts or practices of individuals relating to their personal, family or household affairs'. This was because it would be 'impractical and undesirable' to require individuals acting in a private capacity to comply with the requirements in the privacy principles.[15] Electronic Frontiers Australia submitted further that:

> the primary issues of concern are publication and/or public distribution and that collection and private use of information is generally of significantly less concern except under some particular circumstances.[16]

8.9 Similarly, the Office of the Privacy Commissioner (OPC) submitted that:

> the Privacy Act has been specifically tailored to regulate agencies and organisations and as such is ill-suited to the regulation of individuals in their personal capacity. For instance, it would be difficult and undesirable to require individuals to give notice or seek consent for collection of personal information. Also, applying data quality and data security principles to an individual's address book could be inappropriate.[17]

Take down notices for online content

8.10 One method to deal with the issues associated with the user-generated nature of Web 2.0[18] is to broaden the scope of the existing 'take down' notice scheme that deals with internet content.[19] ACMA administers the co-regulatory scheme, which relies on the classification decisions of the Classification Board to determine what is prohibited content.[20] While it is not an offence to host prohibited content, if ACMA acts on a complaint and issues a take down notice to an internet content host, the prohibited content must be removed as soon as practicable or, at the latest, by 6pm the next business day. Potential prohibited content can be the subject of an interim take down notice while waiting for the outcome of classification. This is important as, in practice, internet content is not classified until ACMA, acting on a complaint, refers the material to the Classification Board to be classified in the same way as a film or computer game.

8.11 The RC (refused classification) classification covers content that describes or depicts in a way that is likely to cause offence to a reasonable adult a person who is, or appears to be, a child under 18 (whether the person is engaged in sexual activity or not).[21] When undertaking classification, the Classification Board can take into account the context in which an image appears. For example, the Classification Board has previously classified as RC (and therefore prohibited content) an inoffensive image of a five year old child fully clothed on a web page with an offensive URL.[22]

8.12 As with any scheme regulating online content, the online content classification scheme has jurisdictional limitations. If the internet content is hosted outside Australia, ACMA is unable to issue a take down notice. If sufficiently serious, however, ACMA can refer a matter to law enforcement authorities. ACMA can also refer the matter to ISPs to take appropriate technical steps to minimise access to the material by end-users in Australia.[23]

---

18 The term 'Web 2.0' can be used in various contexts. In this Discussion Paper, it is used to refer to the social phenomenon where internet users—often individuals acting in a personal capacity—upload and distribute content such as text, photographs and videos.

19 The online regulation scheme is set out in *Broadcasting Services Act 1992* (Cth) sch 5. The current scheme focuses on stored content made available over the internet. The *Communications Legislation Amendment (Content Services) Act 2007* (Cth), due to commence operation in January 2008, will expand the scheme to cover live streamed content services, mobile phone-based services and services that provide links to content, and move the entire online content scheme to a new schedule 7 of the *Broadcasting Services Act 1992* (Cth).

20 Content that is, or would be, classified as RC or X18+, or is classified R18+ and not subject to an appropriate age-restricted access system that complies with the criteria determined by ACMA, is considered to be prohibited internet content: *Broadcasting Services Act 1992* (Cth) sch 5, cl 10.

21 *National Classification Code* (2005). There are other aspects of the RC classification focused on matters of sex, drug misuse or addiction, crime, cruelty, violence or revolting or abhorrent phenomena.

22 Standing Committee of Attorneys-General, *Unauthorised Photographs on the Internet and Ancillary Privacy Issues*, Discussion Paper (2005), 21–22. The SCAG paper identified a small gap in existing classification laws in relation to considering both the image and the text of website links. This issue will not be addressed by the ALRC.

23 *Broadcasting Services Act 1992* (Cth) sch 5, cl 40.

8.13 In its current format, the take down notice scheme cannot be used for making general complaints regarding internet content and concerns about invasion of privacy. The existing scheme's dependence on the *National Classification Code* and decisions of the Classification Board limits the extent to which the take-down notice procedure can be used. It is essentially an extension of the censorship scheme into the online environment and balances a number of competing interests.

> In relation to freedom of expression, Schedule 5 is premised on the principle that what is illegal offline should also be illegal online. It does not provide for more onerous restrictions than those that apply to conventional media regulated under the Act. Definitions of prohibited material are based on specific and detailed criteria of the widely accepted national classification scheme administered by the Office of Film and Literature Classification. This scheme is designed to balance the public interest in allowing adults to read, hear and see material of their own choosing, with the public interest in protecting minors from material likely to harm or disturb them, and in protecting the community generally from offensive material.[24]

8.14 A 2004 review of the operation of the scheme found that it had clear community support, in particular for the existing complaints mechanism, the co-regulatory framework including the industry codes of practice, and the community education element of the scheme.[25] While some suggestions for change were made, the basic framework of the scheme was left intact, including the dependence on the existing national classification system. One issue raised by the Human Rights and Equal Opportunity Commission was the potential for cyber-racism and the current absence from the classification standards of racially offensive material. The review stressed the underlying policy of the scheme to align internet content regulation with content regulation of offline services, and firmly avoided any move away from the *National Classification Code* as the basis of online content regulation.[26]

8.15 If the take down notice scheme were more closely tied to complaints about invasion of privacy, it could provide an effective remedy not otherwise available for those with concerns about the unauthorised online publication of their personal information, including images. It would be necessary, if the take down notice scheme were extended, to link the complaint about the content with some test that the content be considered to cause substantial offence to a reasonable person—such as the ALRC is considering as one element of a statutory cause of action for invasion of privacy.[27] It is likely, however, that any expansion of the scheme to cover a wider range of content would be opposed by some, particularly on the ground that it undesirably restricts freedom of expression.

---

24 Australian Government Department of Communications Information Technology and the Arts, *Review of the Operation of Schedule 5 to the Broadcasting Services Act 1992: Report* (2004), 14.

25 Ibid, 13. There were, however, a number of submissions opposed to the continuation of the scheme on the grounds of limits to freedom of expression and information technology employment, and the costs of maintaining the scheme: 13–14.

26 Ibid, 37–38.

27 See, Proposal 5–2.

8.16 It should also be noted that, at present, a finding of a criminal offence against a person for publication of offensive material does not necessarily result in the ability to remove the material from the internet via a take down notice. The content must be the subject of an appropriate classification and be considered prohibited content. There are instances where the image itself may be innocuous, and although the taking and use of the image may have been considered a criminal offence, unless the image appears on a website in a context that falls within the guidelines of the *National Classification Code*, the image is unable forcibly to be removed. It seems appropriate that any image, which was taken or published in a manner later found to be the subject of criminal conduct, should be able to be destroyed and, if published, removed from publication, including online publication. The Standing Committee of Attorneys-General (SCAG) is currently considering gaps in the criminal law for the unauthorised taking of photographs and, through this process, could give this issue further consideration.[28]

Other options for reform

Civil litigation

8.17 Another way to address the issues arising from individuals acting in their non-commercial capacity—in particular, when individuals add content to websites—is to introduce into the *Privacy Act* a statutory cause of action. The OPC submitted that this 'may go some way to providing individuals with an avenue for redress in the event that their privacy was interfered with by an individual acting in a personal capacity'.[29]

8.18 Electronic Frontiers Australia supported the introduction of a cause of action for invasion of privacy as one alternative to expanding the scope of the *Privacy Act* to regulate individuals acting in a non-commercial capacity.[30] On the other hand, the Legal Aid Commission of NSW submitted that:

> Unfortunately litigation only further publicises the privacy breach. If the function of privacy legislation is to provide practical and privacy sensitive remedies in response to the invasive impact of new technologies, then there is no overwhelming reason to limit its scope to commercial and administrative activities. However, different compliance standards and different kinds of remedial action may be necessary if the Act was extended to cover the way individuals use personal information.

8.19 Electronic Frontiers Australia also suggested the introduction of legislation that grants 'individuals rights to control use of their image'.[31] The Arts Law Centre of Australia noted the interests of 'privacy versus freedom of expression' but submitted that:

> there should also be a consideration of how any further restrictions on creating art, photographs or films in public further privatises public space, and limits the capacity of artists to make art in a public context. This genre of art is important as it reflects, records and explores public places and spaces and those people who inhabit them.

---

28 The SCAG deliberations are discussed later in this chapter and in Ch 59.
29 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
30 Electronic Frontiers Australia Inc, *Submission PR 76,* 8 January 2007.
31 Ibid. Property-based schemes are discussed in Ch 7.

Criminal legislation

8.20 In certain situations, legislation that prohibits certain acts and practices of individuals may be an alternative to commencing a potentially expensive and privacy invasive civil action. For example, in August 2005, SCAG released a discussion paper on the unauthorised publication of photographs on the internet.[32] It noted that the small size of cameras and the advent of mobile telephone cameras made it easier to take photographs of others without their knowledge or consent.[33] It also noted that the unauthorised publication of photographs on the internet highlighted a tension between privacy and freedom of expression.[34] Several options for reform were suggested, including criminalising the unauthorised publication of photographs of children on the internet.[35]

8.21 Electronic Frontiers Australia submitted that another way to deal with the impact on privacy of some new and emerging technologies could be to make individuals subject to legislation that prohibits 'specified types of conduct in particular circumstances'.[36] Similarly, the Australian Privacy Foundation submitted that:

> objectionable practices by individuals such as voyeuristic photography, internet publication of unwelcome information about another individual etc are best dealt with by other civil law measures, including a tort of privacy, and criminal laws where appropriate …[37]

8.22 On the other hand, the Australian Press Council submitted that the proposals made in SCAG's discussion paper

> might result in repressive restrictions on taking photos in public places. The ability of photojournalists to record the culture and history of Australia is under threat from such proposals.[38]

ALRC's view

8.23 The ALRC agrees that it is not practical or desirable to expand the scope of the *Privacy Act* to regulate individuals acting in a non-commercial capacity. In reaching this view, the ALRC notes that much of the concern about individuals acting in a non-commercial capacity relates to information posted by individuals on websites. Once an individual posts information on a website, however, the information becomes a

'generally available publication' and is subject to limited protection by the *Privacy Act*.[39]

8.24 The ALRC's view is that there are other methods that could more appropriately deal with situations where an individual acting in a personal capacity interferes with another individual's privacy. In Chapter 5, the ALRC proposes that the *Privacy Act* be amended to include a statutory cause of action.[40] The proposed statutory cause of action may be used against an individual acting in a non-commercial capacity—such as an internet blogger who does not fall within the definition of a 'media organisation'—as well as against an agency or organisation.

8.25 In addition, the ALRC is interested in receiving further input on whether the take down notice scheme should be expanded beyond the existing definitions of prohibited content, and possibly allow for an additional circumstance where the content may constitute an invasion of an individual's privacy. Such a scheme would be useful where an individual refuses to remove from his or her website personal information about another person—for example, an amateur genealogist who has posted personal information on his 'family tree' website. Further, a take down notice scheme could provide a timely remedy and an option for individuals who do not have the means to commence a court action.

8.26 The ALRC notes, however, that even the implementation of the statutory cause of action for invasion of privacy and the take down notice scheme, will not address entirely the inherent difficulties in regulating the use and disclosure of personal information published on the internet. For example, while the *Privacy Act* has extraterritorial application, individuals, agencies and organisations that post information online may be based in other jurisdictions, which may present, in practice, enforcement difficulties.[41] In addition, information posted online can be copied onto an infinite number of other websites within minutes. It may be very time consuming and costly—if not impossible—to remove altogether privacy invasive information from the internet.[42]

8.27 It is necessary to educate individuals, therefore, about the impact on their privacy and that of others that may result from posting online personal information. While online education programs should not be directed only towards children and young people, the ALRC notes the importance of early education on the impact of the internet on privacy. In Chapter 59, the ALRC proposes that, to promote awareness of personal privacy and respect for the privacy of others, state and territory education departments should incorporate education about privacy, and in particular privacy in the online environment, into school curricula.[43]

---

39 The regulation of generally available publications is discussed in the next section of this chapter.

40 Proposal 5–1.

41 *Privacy Act 1988* (Cth) s 5B.

42 A Brown, 'They Know All About You', *Guardian Unlimited Technology* (online), 28 August 2006, <technology.guardian.co.uk>.

43 Proposal 59–4.

Question 8–1 Should the online content regulation scheme set out in the *Broadcasting Services Act 1992* (Cth), and in particular the ability to issue take down notices, be expanded beyond the *National Classification Code* and decisions of the Classification Board to cover a wider range of content that may constitute an invasion of an individual's privacy? If so, what criteria should be used to determine when a take down notice should be issued? What is the appropriate body to deal with a complaint and issue the take down notice?

Generally available publications

8.29 Personal information about a substantial number of people is available from public sources such as electoral rolls, court records, state registers of births, deaths and marriages, annual reports and newspapers. This information may be of interest to people for a multitude of reasons. For example, it may be of interest to: people engaged in direct marketing or fundraising; employers wishing to investigate potential employees; politicians wishing to know more about their constituents or vice versa; people wishing to use false identities to engage in illegal activities; or law enforcement officers investigating criminal offences.

8.30 In the past, individuals seeking to access generally available publications were usually required to attend the location where the information was stored, such as a court house, and to expend a considerable amount of time manually searching or copying records.[44] This meant that generally available publications were afforded a degree of de facto privacy protection. Developments in information and communications technologies, such as the creation of powerful computer databases and the internet, have greatly altered the way in which information is stored, accessed, combined, transferred and searched.[45] In particular, information can now be published in electronic form. While it is arguable that information in the public domain should be available in all formats, it can also be argued that privacy 'can be violated by altering levels of accessibility, by taking obscure facts and making them widely accessible'.[46]

8.31 The publication of publicly available information in electronic form increases the ability of third parties to combine disparate pieces of personal information about others.[47] Disparate pieces of information about a person may reveal little when viewed separately, but the aggregation of these pieces of information—for example, in the search results provided by an internet search engine in response to a search query about

a person's name—can provide a detailed profile of a person. Internet search engines and social networking sites may be used by third parties to obtain information about individuals for a number of purposes. For example, a recent United Kingdom study noted that one in five employers searched the internet to find information about job applicants.[48] In addition, personal information about an individual, which is obtained by another person conducting an internet search on that individual, can be used to conduct identity theft.[49] Another issue is that information aggregated from a variety of different publicly available sources may present an inaccurate portrait of an individual if, for example, inaccurate information was collected or errors occurred during the aggregation process.

Application of the *Privacy Act*

8.32 The privacy principles apply to personal information that an agency or organisation collects for the purpose of inclusion in a 'record' and a 'generally available publication'.[50] On the other hand, the privacy principles that deal with the handling of personal information subsequent to collection only apply to personal information that is held in a record.[51] A record is defined as a document, a database, or a photograph or other pictorial representation.[52] A book, magazine or other publication that is generally available to the public is not a record for the purposes of the *Privacy Act*.[53] In the internet context, guidance issued by the OPC indicates that websites that are not encrypted or not password protected are considered 'generally available'.[54]

8.33 There are other restrictions on the handling of personal information contained in a generally available publication. An agency or organisation that continues to hold personal information that has been made generally available in a record—for example, a master copy—will need to comply with the requirements in the privacy principles for the personal information that is held in a record.[55] Moreover, an agency or organisation that collects personal information *from* a generally available publication for inclusion

49 Identity theft is discussed in Ch 9.

50 *Privacy Act 1988* (Cth) s 14, IPPs 1–3 and s 16B(1).

51 Ibid s 14, IPPs 4–11 and s 16B(2). In the credit reporting context, only some categories of publicly available information are permitted to be included in credit information files: *Privacy Act 1988* (Cth) s 18E(1). In Ch 52, the ALRC proposes that the *Privacy (Credit Reporting Information) Regulations* should permit credit reporting information to include publicly available information: Proposal 52–6.

52 *Privacy Act 1988* (Cth) s 6(1). In Ch 3, the ALRC proposes that the definition of 'record' should be amended to include (a) a document and (b) information stored in electronic or other forms: Proposal 3–6.

53 Ibid s 6(1). In Ch 3, the ALRC proposes that the definition of a generally available publication should be amended to clarify that a publication is generally available whether or not a fee is charged for access to the publication: Proposal 3–9.

54 Office of the Federal Privacy Commissioner, *Privacy and Personal Information That is Publicly Available*, Information Sheet 17 (2003); Office of the Federal Privacy Commissioner, *Guidelines for Federal and ACT Government Websites* (2003) <www.privacy.gov.au/internet/web/> at 23 July 2007.

55 Office of the Federal Privacy Commissioner, *Privacy and Personal Information That is Publicly Available*, Information Sheet 17 (2003), 3.

in a record or another generally available publication will need to comply with the requirements in the relevant privacy principles.[56]

8.34 This section provides an overview of two sources of publicly available information—public registers and court records.

Public registers

8.35 In the late 19th century, governments began systematically to compile and retain records of their citizens. Today, records are kept 'for almost every occasion an individual comes into contact with the state bureaucracy'.[57] Legislation may require these records to be used to create public registers. For example, the *Commonwealth Electoral Act 1918* (Cth) requires the Australian Electoral Commission to construct and maintain a roll of people eligible to vote at federal, and, by agreement, most state and local government elections. Electoral rolls are available for public inspection without fee at offices of the Australian Electoral Commission.[58]

8.36 Public registers often promote important public interests. For example, a publicly available electoral roll facilitates the conduct of free and fair elections by 'enabling participants to verify the openness and accountability of the electoral process and object to the enrolment of any elector'.[59] There is, however, a tension between the public interests served by a public register of information and privacy of individuals included on the register. This is exacerbated when it is compulsory to provide the information that is included in the register.[60]

8.37 It has been argued that failure to protect adequately the privacy of personal information contained in public registers can have serious consequences. For example,

---

56 See the proposed 'Collection', 'Specific Notification' and 'Data Quality' principles, which are set out at the beginning of this Discussion Paper. In relation to the proposed 'Collection' principle, note in particular the requirements relating to: the collection of personal information about an individual only from that individual if it is reasonable and practicable to do so; and the additional requirements related to the collection of sensitive information. In relation to the proposed 'Specific Notification' principle, note in particular the requirement for an agency or organisation that collects personal information about an individual other than from the individual concerned to take reasonable steps to ensure that the individual has been made aware of the requirements in the proposed 'Specific Notification' principle. This requirement applies in circumstances where a reasonable person would expect to be notified.

58 *Commonwealth Electoral Act 1918* (Cth) s 90A.

59 Australian Electoral Commission, *How to View the Commonwealth Electoral Roll* <www.aec.gov.au/Enrolling_to_vote/About_Electoral_Roll/How_to_view_electoral_roll.htm> at 31 July 2007.

60 For example, it is compulsory for individuals who are entitled to have their names included on an electoral roll to enrol within 21 days of becoming so entitled: *Commonwealth Electoral Act 1918* (Cth) s 101.

individuals may choose to withdraw from public life in order to protect their privacy.[61] Concern has been expressed that the widespread dissemination of electors' personal information 'has the potential to discourage some electors from enrolling and exercising their democratic rights and duties'.[62] Research conducted for the OPC indicates that only 19% of survey participants believed that businesses should be allowed to use the electoral roll for marketing purposes.[63]

8.38 Legislation establishing a public register can also limit the use and disclosure of information acquired from the register. For example, s 177 of the *Corporations Act 2001* (Cth) prohibits any person from using information collected from a shareholder register to contact a shareholder.[64] Legislation may limit the use and disclosure of information acquired from a register that is published in electronic form. For example, the *Commonwealth Electoral Act 1918* (Cth) prohibits a person from using for commercial purposes electoral roll information provided by the Australian Electoral Commission (AEC) in tape or disk format.[65] In addition, a person cannot disclose electoral roll information provided by the AEC in tape or disk format unless the disclosure is in connection with an election or referendum or monitoring the accuracy of information contained in a roll or other prescribed purpose.[66]

Court records

8.39 The principle of open justice is an essential feature of the common law judicial tradition. It requires the administration of justice to be conducted in open court. The principle of open justice 'is an important safeguard against judicial bias, unfairness and incompetence, ensuring that judges are accountable in the performance of their duties'.[67] In 2006, the New Zealand Law Commission confirmed that the principle of open justice generally requires open access to court records.[68]

8.40 Court records often contain a vast amount of personal information about a number of people, including the parties, family members of the parties, and witnesses. For example, records of bankruptcy cases may include details of the financial circumstances of bankruptees; records of cases in which compensation is sought may include detailed information regarding the health of the plaintiff; records of family court proceedings may contain detailed information about family relationships; and records of criminal cases may include information about an offender's previous criminal history, social security status or mental health.

67 New Zealand Law Commission, *Access to Court Records*, Report 93 (2006), [2.2].

68 Ibid, [2.4].

8.41 Access to court records is regulated by legislation and rules of court.[69] In the Federal Court of Australia, a person is entitled to search and inspect certain documents, such as pleadings, judgments or orders, unless the court or a judicial officer has ordered that they are confidential.[70] A person who is not a party to the proceeding may only inspect certain documents, such as interrogatories or answers to interrogatories, with the leave of the court.[71] Leave will usually be granted, however, where a document has been admitted into evidence or read out in open court.[72]

8.42 A number of courts and tribunals have advised the Inquiry that they have developed internal policies and guidelines that relate to the online publication of judgments. This guidance is developed by each court and tribunal on a case-by-case basis and is directed towards the particular issues that arise from the online publication of judgments in each jurisdiction. For example, a court that deals mainly with family law matters may require different procedures about the redaction of certain personal information in judgments published online than a court that deals mainly with commercial matters.

8.43 In IP 31, the ALRC asked whether the *Privacy Act* needs to be amended in response to issues raised by the publication in electronic form of publicly available records such as public records, court records and media reports.

Submissions and consultations

Public registers

8.44 The Government of South Australia reiterated the issues associated with online publication of public registers and submitted that:

> It has often been difficult to establish the intended purpose of publicly available information if the legislation or policy that established its public nature was not specific.[73]

8.45 The Office of the Victorian Privacy Commissioner (OVPC) has issued guidelines to Victorian state agencies that collect personal information for inclusion on

69 See, eg, *High Court Rules 2004* (Cth) r 4.07.4; *Federal Court Rules 1979* (Cth) o 46 r 6; *Federal Magistrates Court Rules 2001* (Cth) r 2.08. In Ch 32, the ALRC discusses the partial exemption of federal courts from the operation of the *Privacy Act 1988* (Cth). In addition, the ALRC proposes that the *Privacy Act* be amended to remove the partial exemption that applies to the Australian Industrial Relations Commission, the Industrial Registrar and Deputy Industrial Registrars: Proposal 32–3. The ALRC also asks whether the *Privacy Act* should be amended to provide that federal tribunals that exercise quasi-judicial functions are exempt from some of the proposed UPPs in respect of their quasi-judicial functions: Question 32–1.

70 *Federal Court Rules 1979* (Cth) o 46 r 6(1), (2).

73 Government of South Australia, *Submission PR 187,* 12 February 2007.

public registers.[74] These guidelines outline circumstances where it is appropriate for an agency to give notice about online dissemination of personal information and provide 'an opportunity to suppress online dissemination of information'. The OVPC submitted that:

> There is merit in considering the introduction of public register principles or other more specific guidance for balancing the interests in privacy with the interests in favour of making records available to the public.[75]

8.46 The Law Council of Australia submitted that, in principle, if a record is available without restriction in hard copy, there should be 'no restriction upon making the record available electronically'. In circumstances where restrictions apply to access to hard copy records, however, similar restrictions should apply in the online environment.

> The restrictions that might be imposed will vary depending upon the circumstances, but could include … electronic restrictions upon downloading documents and, in other circumstances, be limited to requirements to obtain undertakings from those who access the electronic records.[76]

Court records

8.47 The OPC noted a number of issues associated with the online publication of court records. In particular, the OPC noted that the publication of such records could interfere with spent convictions laws, facilitate identity theft and lead to intimidation of those involved in court processes. The OPC, however, submitted that:

> [t]he Privacy Act is not the appropriate instrument for implementing changes to protect the personal information contained in court records … changes to court record publication are best dealt with through procedural directives or guidelines rather than through legislative intervention.[77]

8.48 The Legal Aid Commission of NSW submitted that:

> the right balance between access and disclosure of court records and judgements is not something that can be resolved by following a set of principles of general application. This is a further area where the Privacy Commissioner should be encouraged to prepare codes of practice or guidelines.[78]

Other generally available publications

8.49 One stakeholder submitted that the personal information contained in generally available publications 'promote[s] important public interests which outweigh any

privacy issues or arguments to amend the *Privacy Act*'.[79] The National Health and Medical Research Council submitted that:

> any amendment of the *Privacy Act* to provide added protection for publicly available records should not diminish access for quality assurance and research purposes to important health information held in such records.[80]

8.50 The Legal Aid Commission of NSW noted that the 'public domain is ill-equipped to deal with the ease with which information can be made available on-line' but submitted that 'privacy does not cease to be a relevant issue just because personal information can be found on the Internet'.[81] The Office of the Information Commissioner Northern Territory submitted that, while the *Privacy Act* does not need to be amended in response to these issues,

> it is important that agencies and organisations be aware of the potential for data manipulation when considering new forms of publication made possible by new technologies.[82]

8.51 The Government of South Australia submitted that 'there is a greater risk to the proliferation of privacy abuse in the electronic environment. However, the principles of regulation remain the same'.[83] The Australian Federal Police submitted that the publication in electronic form of publicly available information does not change

> fundamentally the privacy protections that are in place for the current publication of this information as the same restrictions will apply. There is a danger to over-emphasise the ubiquitousness of internet technology and the level of interest in these records.[84]

8.52 The Australian Privacy Foundation submitted that:

> The collection, use and disclosure principles should apply to publicly available information to the maximum extent possible, preferably by reference to 'reasonable expectations' and 'public interest' tests. Despite the difficulties of enforcement, the law should challenge the entrenched idea that once personal information is in the public domain it should be available for any use.[85]

Options for reform

8.53 There are various approaches that could be taken to regulate online access to personal information contained in generally available publications. For example, some Scandinavian countries allow a substantial amount of personal information to be

---

79 Confidential, *Submission PR 165,* 1 February 2007.
80 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

included in government records published on public websites.[86] At the other end of the spectrum, a Bill currently under consideration in New Zealand is intended to prevent access to births, deaths and marriages publications that were produced less than a certain number of years ago.[87]

8.54 A number of steps could be taken to protect personal information contained in generally available publications published in electronic form. Some jurisdictions have attempted to prohibit the collection of personal information contained in generally available publications. In Finland, one method to deal with the issues presented by significant amounts of online information has been to enact legislation that sets out the limited circumstances in which an employer can collect information about an employee or job applicant.[88] It may be very difficult, however, to enforce such a prohibition in the online context.

8.55 Another option is to encourage agencies and organisations to restrict the type and extent of personal information published on public websites. The type of information that is made available electronically could be limited to that which is necessary to promote the purpose of the public record.[89] Alternatively, unnecessary personal information could be removed from documents before they are published electronically. Another option is to restrict the use and disclosure of publicly available information in electronic form to that which is consistent with the public interest served by publishing the information.

ALRC's view

8.56 The ALRC agrees that the internet has changed the nature of the 'public domain'. In the ALRC's view, it is not appropriate to deal with the issues presented by the electronic publication of publicly available information by increasing the regulation of personal information held in a 'generally available publication'. There is a public interest in making certain types of information publicly available. In some circumstances, this public interest remains relevant for generally available publications published in an electronic form. In addition, it is difficult to enforce the use and disclosure of personal information in such publications. Electronic publication of generally available publications has increased, rather than decreased, these enforcement difficulties.

8.57 The ALRC notes that stakeholders' concerns about generally available publications are focused on circumstances when these publications are widely disseminated—in particular, when they are posted on the internet.

---

86 For a discussion of the significant number of Swedish government records that are published online, see E Addley, 'Sweden Tries to Lose Reputation as Snoopers' Paradise', *Guardian Unlimited Technology* (online), 19 June 2007, <technology.guardian.co.uk>.

87 See, eg, Births, Deaths, Marriages, and Relationships Registration Amendment Bill 2007 (NZ).

88 *Act on Data Protection in Working Life 2004* (Finland) s 4.

89 B Givens, *Public Records on the Internet: The Privacy Dilemma* (2002) Privacy Rights Clearinghouse <www.privacyrights.org/ar/onlinepubrecs.htm> at 31 July 2007.

8.58 As discussed above, there are inherent difficulties in regulating the use and disclosure of personal information published on the internet. Agencies and organisations should, therefore, be encouraged to restrict in the first place the type and extent of personal information that is published on the internet. In the case of public registers, the electronic publication of the register may be regulated by the legislative instrument that establishes the register—in the way that, for example, the *Commonwealth Electoral Act* regulates certain uses and disclosures of information collected from electronic versions of the electoral roll. In the ALRC's view, legislative instruments establishing public registers should set out clearly any restrictions on the use and disclosure of personal information contained on the register.

8.59 The ALRC notes that courts that publish judgments in the online environment have developed internal policies and guidelines that deal with particular issues that arise in the relevant jurisdiction. The ALRC also notes that SCAG is considering the issue of online publication of criminal records. In addition, the OPC should provide education and guidance to agencies and organisations directed towards restricting the type and extent of personal information that is published online. The ALRC notes that the OPC has issued an Information Sheet (Information Sheet 17) that focuses on the collection by organisations of personal information contained in generally available publications.[90] Information Sheet 17 also lists some tips for good privacy practice that apply to agencies and organisations required by law to make personal information publicly available.

8.60 This information sheet could be used as the basis for providing more detailed guidance to agencies and organisations that make personal information about individuals available in the online environment. The guidance should apply whether or not the agency or organisation is required by law to make the personal information publicly available. The guidance could provide detailed advice on issues outlined in Information Sheet 17—for example, factors that agencies and organisations should consider before publishing personal information in an electronic form, such as whether it is in the public interest to publish on a publicly accessible website personal information about an identified or reasonably identifiable individual.

8.61 The proposed guidance should also set out clearly the requirements with which both agencies and organisations must comply when collecting information from generally available publications for inclusion in a record (or another generally available publication). The ALRC notes that the definition of a 'record' includes a 'database'.[91] It is highly unlikely that personal information collected from generally available publications—for example, by an organisation for the purposes of direct marketing or data-matching—will *not* be included in some form of record (or another

90 Office of the Federal Privacy Commissioner, *Privacy and Personal Information That is Publicly Available*, Information Sheet 17 (2003).

91 *Privacy Act 1988* (Cth) s 6(1). The definition of a 'record' is discussed further in Ch 3.

generally available publication).[92] The proposed guidance should set out the steps that should be taken by an agency or organisation that collects personal information from generally available publications to meet the obligations in the proposed 'Collection', 'Specific Notification', 'Data Quality' and 'Direct Marketing' principles.[93]

8.62 Finally, the ALRC notes that both the Information Privacy Principles (IPPs) and National Privacy Principles (NPPs) regulate personal information that is collected for inclusion in a record or generally available publication, but the principles only apply to personal information that is held in a record. The way that this is achieved in the legislation, however, differs. IPPs 1, 2 and 3 refer to both a 'record' and a 'generally available publication' but IPPs 4–11 refer only to a 'record'. In relation to the NPPs, the application of the relevant principles to records and generally available publications is set out in s 16B. The ALRC's view is that the latter approach is preferable and notes that it will be necessary to make a consequential amendment to s 16B of the *Privacy Act* if the proposed Unified Privacy Principles are implemented.[94]

Proposal 8–1 The Office of the Privacy Commissioner should provide guidance that relates to generally available publications in an electronic form. This guidance should:

(a) apply whether or not the agency or organisation is required by law to make the personal information publicly available;

(b) set out certain factors that agencies and organisations should consider before publishing personal information in an electronic form (for example, whether it is in the public interest to publish on a publicly accessible website personal information about an identified or reasonably identifiable individual); and

(c) set out the requirements in the proposed Unified Privacy Principles with which agencies and organisations need to comply when collecting personal information from generally available publications for inclusion in a record or another generally available publication (for example, when a reasonable person would expect to be notified of the fact and circumstances of collection).

92 In Ch 6, the ALRC proposes that the OPC issue guidance on data-matching to organisations: Proposal 7–6.

93 The proposed 'Collection', 'Specific Notification' and 'Data Quality' principles apply to both agencies and organisations. The proposed 'Direct Marketing' principle only applies to organisations.

94 The proposed Unified Privacy Principles are discussed in Part D.

Introduction

9.1 This chapter discusses identity theft and privacy. It commences by defining identity theft and discussing existing responses to it in Australia and overseas. It then provides an overview of the ways in which privacy laws can assist in preventing identity theft and minimising the harm caused by it after it has occurred. Specific options for reform of privacy laws that may help to address the problem of identity theft are discussed in further detail throughout this Discussion Paper.

9.2 Identity theft has existed for centuries. It has been argued, however, that it is becoming more prevalent in today's society because of developments in technology.[1] For instance, developments in information and communications technology mean that agencies and organisations now store vast amounts of identifying information electronically. Any breach of the secure storage of this information can increase the risk of identity theft for the people to whom the stored identifying information relates. Further, electronic commerce and electronic government create impersonal transacting environments that are conducive to identity crime, and developments in computer

1 See, eg, N Dixon, *Identity Fraud: Research Brief No 2005/03* (2005) Parliament of Queensland—Parliamentary Library, 1; R Lozusic, *Fraud and Identity Theft: Briefing Paper 8/2003* (2003) Parliament of New South Wales—Parliamentary Library.

technology have greatly increased the ability of individuals to forge identifying documents.[2]

What is identity theft?

9.3 While there is widespread concern about identity theft and its impact on privacy, there is little consensus about the definition of the term 'identity theft'. Commentators, legislators and policy makers tend to use the terms 'identity crime', 'identity fraud' and 'identity theft' in differing ways and, at times, interchangeably.

9.4 In this Discussion Paper, 'identity crime' is used broadly to describe any offence committed using a fabricated, manipulated or stolen identity.[3] 'Identity fraud' is used to describe a type of identity crime—namely, the gaining of a benefit (or the avoidance of an obligation) through the use of a fabricated, manipulated or stolen identity. 'Identity theft' is used to describe the illicit assumption of a pre-existing identity of a living or deceased person, or of an artificial legal entity such as a corporation.[4]

9.5 Identity theft can be committed for a number of reasons. For example, as noted above, the assumption of another person's identity can facilitate the commission of identity crimes, including identity fraud, people smuggling and terrorism offences.[5] It can also enable a person to avoid detection in order to avoid meeting obligations, such as making child support payments. Alternatively, identity theft may be committed simply to distress or intimidate the person to whom the illicitly acquired identity information relates.[6]

9.6 There are many ways in which identifying information about another person can be surreptitiously acquired, including through the theft of a person's mail, wallet, purse or handbag, or through the retrieval of documents from a person's rubbish. The identifying information of another person can also be acquired through more sophisticated means, such as skimming the person's credit card or hacking into an electronic database containing identifying information about the person.[7] 'Phishing' is another method that is used to acquire information in the online environment. Phishing typically refers to the practice where an email purporting to be from a trusted entity directs a recipient to a website that closely resembles the website of that entity. The

'phisher' can then acquire any information the person enters on the 'fake' website, such as the person's name or online banking password.[8]

9.7 Identity theft can be a traumatic experience for the person whose identifying information is 'stolen'. A victim of identity theft may suffer direct financial loss as a result of the theft. In addition, he or she may incur costs when attempting to prevent the continued use of his or her identifying information. Further, a victim of identity theft is typically required to expend a large amount of time and effort countering the adverse effects of the theft. For example, he or she may be required to restore his or her credit rating, or correct errors in his or her criminal history.[9]

How prevalent is it?

9.8 There is very little information about the prevalence of identity theft in Australia. This is partly because it is not generally a criminal offence. Rather, it is the later use of the information for certain purposes that attracts criminal liability. This makes it difficult to locate information about rates of identity theft. In addition, not all instances of identity theft are reported to authorities or otherwise disclosed. Agencies and organisations in particular may be reluctant to report identity theft for fear that it will cause reputational damage or expose weaknesses in their security systems.[10]

9.9 In 2000, the House of Representatives Standing Committee on Economics, Finance and Public Administration recommended that Australian governments and industries work together to develop national statistics on the extent and cost of identity fraud.[11] In response to this recommendation, the Australian Transaction Reports and Analysis Centre's Steering Committee on Proof of Identity commissioned a report on the nature, cost and extent of identity fraud in Australia. This report found that the cost of identity fraud to Australia in 2001–02 was approximately $1.1 billion.[12] This estimate included the costs associated with preventing, detecting and responding to identity fraud, as well as losses directly incurred as a result of the fraud.[13] Unfortunately, given its focus on *identity fraud*, which includes fraud committed using fictitious identity information, this report does little to illuminate the extent or cost of *identity theft* in Australia.

9.10 In 2003, the Australian Institute of Criminology and PricewaterhouseCoopers released the results of a study of 155 serious fraud prosecutions completed in Australia and New Zealand in 1998 and 1999.[14] Stolen identities were used in approximately 13% of the cases studied.[15]

Criminalising identity theft

Federal legislation

9.11 Identity theft is not a federal offence in Australia. There are, however, numerous federal offence provisions that can be used to prosecute offenders who use illicitly acquired personal information when engaging in certain activities. These include offence provisions in the *Criminal Code* (Cth),[16] as well as in other pieces of federal legislation, such as the *Financial Transaction Reports Act 1988* (Cth)[17] and the *Migration Act 1958* (Cth).[18]

9.12 In 2000, the House of Representatives Standing Committee on Legal and Constitutional Affairs concluded that the offences to be inserted into the *Criminal Code* (Cth) by the *Criminal Code Amendment (Theft, Fraud, Bribery and Related Offences) Act 1999* (Cth) dealt adequately with criminal conduct related to identity fraud.[19]

9.13 Nevertheless, in 2004 a new part containing 'financial information offences' was inserted into Chapter 10 of the *Criminal Code*.[20] Accordingly, it is now a federal offence dishonestly to obtain or deal in personal financial information without the consent of the person to whom the information relates.[21] The definition of 'personal financial information' is broad and includes all information relating to a person that may be used, alone or in conjunction with other information, to access funds, credit or other financial benefits.[22]

9.14 The financial information offences in the *Criminal Code* were intended to address credit card skimming—the illicit capturing or copying of legitimate credit card

data[23]—and internet banking fraud.[24] They appear, however, to be broad enough to cover many instances of identity theft.

9.15 In April 2007, the Model Criminal Law Officers' Committee released a Discussion Paper on identity crime.[25] Using the broad term 'identity crime' to refer to practices including identity theft and identity fraud, the Committee recommended the creation of three identity crime model offences. It recommended a general identity crime offence of capturing, using or transferring another person's personal information with the intention of committing an indictable or serious offence. The Committee also recommended two specific offences that would prohibit, in certain circumstances, a person from providing to a third person the identification information of another person, or possessing equipment that could be used to create identification information.[26] At the time of writing in July 2007, the Committee is conducting consultations in preparation for its final report, which is to be published later in 2007.

State and territory legislation

9.16 It is not an offence to assume or adopt another person's identity in the majority of Australian states and territories. There are, however, numerous state and territory offences that can be used to prosecute offenders who use illicitly obtained identity information to commit criminal offences.[27]

9.17 In some circumstances, however, identity theft is a criminal offence in South Australia. Section 144B of the *Criminal Law Consolidation Act 1935* (SA) makes it an offence to assume the identity of another person (whether living or dead, real or fictional, natural or corporate) with the intent to commit or facilitate the commission of a 'serious criminal offence'.[28] Section 144C makes it an offence to use the 'personal identifying information' of a living or deceased person, or a body corporate, with the intent to commit or facilitate the commission of a serious criminal offence. In March 2007, similar offence provisions were enacted in Queensland.[29]

28 A 'serious criminal offence' is an indictable offence or an offence prescribed by regulation: see *Criminal Law Consolidation Act 1935* (SA) s 144A.

29 The *Criminal Code and Civil Liability Amendment Act 2007* (Qld) s 6 inserts a new section into the *Criminal Code Act 1899* (Qld), which in certain circumstances makes it an offence to obtain or deal with identification information: *Criminal Code Act 1899* (Qld) s 408D.

Other jurisdictions

9.18 In October 1998, the United States Congress passed the *Identity Theft and Assumption Deterrence Act of 1998*. This Act made it a federal offence, punishable by up to 15 years imprisonment or a fine of US$250,000, to

> knowingly transfer or use, without lawful authority, a means of identification of another person with the intent to commit, or to aid or abet, any unlawful activity that constitutes a violation of Federal law, or that constitutes a felony under any applicable state or local law'.[30]

9.19 The *Identity Theft Penalty Enhancement Act of 2004* (US) established penalties for the offence of aggravated identity theft. Identity theft is also an offence in the vast majority of states in the United States.[31]

9.20 In the United Kingdom it is also an offence, with some exceptions, to obtain, disclose or procure the disclosure of personal data without the consent of the data controller.[32] This offence provision could be used to prosecute those who engage in identity theft. The *Identity Cards Act 2006* (UK) makes it an offence to possess or control false identity documents, including genuine documents that belong to another person.[33]

Other responses to identity theft

9.21 It has been argued that criminalising identity theft may be ineffective because it is difficult to detect[34] and prosecute successfully.[35] Other responses to identity theft can be divided into responses aimed at preventing identity theft and responses aimed at remedying its adverse effects after it has occurred.

9.22 Initiatives aimed at preventing identity theft generally aim to:

- educate individuals about how to minimise the risk of identity theft;
- enhance the security features of identification documents so that they cannot be altered or forged; and

- strengthen the procedures used to authenticate the identity of individuals engaging in transactions with agencies or organisations.[36]

9.23 Initiatives aimed at minimising the harm of identity theft tend to focus on assisting victims of identity theft to remedy the adverse effects of the theft and to regain control over the use and disclosure of their personal information.

Identity theft and privacy laws

9.24 Identity theft represents a threat to privacy when it involves the theft or assumption of the identity of a living person. Privacy laws can assist in preventing identity theft and minimising the harm caused by it after it has occurred.

The Unified Privacy Principles

9.25 A number of the privacy principles in the *Privacy Act 1988* (Cth) are relevant to the problem of identity theft. Some of these principles, such as those requiring personal information to be stored securely and those restricting the circumstances in which personal information can be disclosed, may assist in preventing identity theft by preventing the widespread dissemination of personal information. Others, such as the principles requiring personal information contained in a record to be accurate, may assist in minimising the harm caused by identity theft after it has occurred. The privacy principles are discussed in detail in Part D.

Breach notification

9.26 It has been argued that one way of combating identity theft is to require agencies and organisations to notify individuals of any unintended or unauthorised disclosure of their personal information. This alerts individuals to the possibility that they may be at risk of identity theft and may assist them to prevent the theft of their personal information. Alternatively, it may assist them to detect promptly any theft of their personal information. In Issues Paper 31, *Review of Privacy* (IP 31), the ALRC asked whether agencies or organisations should be required to advise individuals of any misuse, loss or unauthorised access, modification or disclosure of personal information.[37] The question whether the *Privacy Act* should contain a breach notification requirement is discussed in Chapter 47. The ALRC proposes that the *Privacy Act* be amended to include a Part on data breach notification, which would

36 For example, the *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth), and the rules issued under s 229 of the Act, describe the customer identity verification procedures that must be followed by a reporting entity that delivers to a customer a service that is designated by the Act. See, eg, the *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth) pts 2, 7 and the *Anti-Money Laundering and Counter-Terrorism Financing Rules Instrument 2007 (No 1) 2007* (Cth) chs 4, 6–7.

37 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Questions 4–35 and 11–3.

require an agency or organisation to notify the OPC and affected individuals of a data breach in certain circumstances.[38]

Publicly available information in electronic form

9.27 Information stored in electronic form can be easily accessed, searched and aggregated. This is particularly so when it is available online. Online public records often contain a wealth of identifying information and there is concern that this information may be used to facilitate identity theft.[39] In IP 31, the ALRC asked whether the *Privacy Act* needed to be amended in response to issues raised by the publication in electronic form of publicly available records.[40] This issue is discussed in Chapter 8. A discussion of security in the online environment is contained in Chapter 6. The ALRC proposes that the OPC should provide guidance on generally available publications available in an electronic form.[41]

9.28 The ALRC also asks in Chapter 8 whether the online content regulation scheme set out in the *Broadcasting Services Act 1992* (Cth), and in particular the ability to issue take-down notices, should be expanded beyond the *National Classification Code* and decisions of the Classification Board to cover a wider range of content that may constitute an invasion of an individual's privacy. If so, the ALRC is interested in hearing views on the criteria that should be used to determine when a take-down notice should be issued, and the appropriate body to issue the take-down notice.[42]

Unique multi-purpose identifiers

9.29 The use of unique multi-purpose identifiers enhances the ability of agencies and organisations to compile and aggregate large amounts of personal information about individuals. For example, it has been noted that the most valuable piece of identifying information for identity thieves in the United States is the Social Security Number. Social Security Numbers are the key to assuming another person's identity because 'they are used to match consumers with their credit histories and many government benefits'.[43] In IP 31, the ALRC asked what role (if any) the *Privacy Act* should play in regulating the use of unique multi-purpose identifiers.[44] In Chapter 27, the ALRC proposes that, before an agency introduces any unique multi-purpose identifier, the Australian Government should consider, in consultation with the Privacy Commissioner, the need for a privacy impact assessment.[45]

Credit reporting

9.30 In Issues Paper 32, *Review of Privacy: Credit Reporting Provisions* (IP 32), the ALRC asked whether the credit reporting provisions of the *Privacy Act* should be amended to provide expressly for the problem of identity theft.[46] In the United States, the *Fair Credit Reporting Act 1970* (US) contains provisions designed to assist victims of identity theft. For example, this Act enables a victim of identity theft to require that a credit reporting agency insert a 'fraud alert' on a credit information file.[47] Further, in some parts of the United States, victims of identity theft can request a 'freeze' on their credit information files.[48] These and other ways in which the credit reporting provisions of the *Privacy Act* can address the problem of identity theft are discussed in Chapter 52. The ALRC proposes that the *Privacy (Credit Reporting Information) Regulations* should provide for the recording, on the initiative of the relevant individual, of information that the individual has been the subject of identity theft.[49]

9.31 In IP 32, the ALRC also noted that children and young people are a common target for identity theft as they often have unblemished or non-existent credit records.[50] The ALRC asked how the collection, use and disclosure of personal information relating to children and young people in credit information files and credit reports should be regulated.[51] This issue is also discussed in Chapter 52. The ALRC proposes that the *Privacy (Credit Reporting Information) Regulations* should prohibit the collection of credit reporting information about individuals the credit provider or credit reporting agency knows to be under the age of 18 years.[52]

---

46 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), Question 5–23.

47 A fraud alert is a statement that notifies prospective users of a credit report that the individual to whom it relates 'may be a victim of fraud, including identity theft': *Fair Credit Reporting Act 1970* 15 USC § 1681 (US) § 1681c–1.

48 See, eg, *California Civil Code* § 1785.11.2–1785.11.6. Placing a freeze on a credit information file prevents it from being accessed by potential creditors.

Introduction

10.1 Part C considers how the *Privacy Act 1988* (Cth) interacts with other federal, state and territory laws, and identifies areas of fragmentation and inconsistency in the regulation of personal information. A number of issues related to inconsistency and fragmentation are considered in other Parts of the Discussion Paper. For instance, the inconsistencies between the Information Privacy Principles (IPPs) and the National Privacy Principles (NPPs) are considered in Part D, the fragmentation that results from the various exemptions under the *Privacy Act* is outlined in Part E, inconsistency and

fragmentation in the regulation of health information is discussed in Part H, and the interaction of the *Privacy Act* and telecommunications legislation is considered in Part J.

The costs of inconsistency and fragmentation

10.2 Chapter 11 discusses some specific problems caused by inconsistency and fragmentation. These problems include impediments to information sharing, unjustified compliance burden, multiple privacy regulators and issues related to government contractors. The ALRC makes a number of proposals throughout this Discussion Paper directed to dealing with problems caused by inconsistency and fragmentation in privacy regulation. Perhaps the most significant of these proposals is the adoption of the Unified Privacy Principles (UPPs) at the federal, state and territory level.[1] The ALRC's view is that these proposals will deal with many of the problems identified in Chapter 11.

Sharing information

10.3 Inconsistent, fragmented and multi-layered privacy regulation can contribute to confusion about how to achieve compliance with privacy regulation and therefore a hesitance by organisations and agencies to share information.

10.4 In submissions to the Inquiry, a wide range of examples were provided where inconsistent, fragmented and multi-layered privacy laws have prevented or impeded information sharing. For example, the ALRC heard numerous examples of agencies and organisations using 'because of the *Privacy Act*' as an excuse for not providing information. Submissions also noted that inconsistent, fragmented and multi-layered privacy laws can act as a barrier to information sharing between federal, state and territory government agencies. This was identified as a particular issue in the areas of child protection, service provision to vulnerable persons, law enforcement and medical research.

10.5 The ALRC's view is that it is undesirable that inconsistency and fragmentation in privacy laws prevent appropriate information sharing. The ALRC therefore makes a number of proposals that are directed at encouraging agencies and organisations to design information-sharing schemes that are compliant with privacy requirements or, where necessary, seek suitable exemptions or changes to legislation to facilitate information-sharing projects. These proposals include the Office of the Privacy Commissioner (OPC) providing further guidance to agencies and organisations on privacy requirements affecting information sharing, and the establishment of an inter-agency working group to identify opportunities where it would be appropriate to share personal information among Australian Government agencies.

---

1 Proposal 4–4.

10.6 A number of the ALRC's proposals are directed at achieving greater transparency in information sharing arrangements. The ALRC proposes that agencies that are required or authorised by legislation or a public interest determination to share personal information should develop and publish documentation that addresses the sharing of personal information, and the development and publication of a framework relating to cross-border sharing of personal information within Australia by intelligence and law enforcement agencies.

Compliance burden and cost

10.7 The Terms of Reference for this Inquiry require the ALRC to consider 'the desirability of minimising the regulatory burden on business'. The ALRC received a large number of submissions that claimed that the proliferation and fragmentation of privacy laws have increased compliance burden and cost for both agencies and organisations. Others submitted, however, that there is little evidence of the existence or extent of any unwarranted compliance burden.

10.8 It was noted in submissions that inconsistency and fragmentation in privacy regulation are particularly problematic for organisations that operate in more than one Australian jurisdiction, and complicate the implementation of programs and services at a national level. While stakeholders focused on the financial costs of this complexity, costs can also include social costs, such as delays in the provision of health services.

10.9 The ALRC considers that the compliance burden caused by the *Privacy Act* is justified. Inconsistency and fragmentation in the regulation of personal information at the federal, state and territory level, however, create an unjustified additional compliance burden. The ALRC's proposals for reform, including those highlighted in this chapter, would help reduce compliance costs, including through the adoption of a single set of privacy principles at the federal, state and territory level and a redraft of the *Privacy Act* to minimise its complexity.

Multiple regulators

10.10 Some industries are required to comply with multiple layers of privacy regulation, which are overseen by more than one regulator. In submissions to the Inquiry, it was noted that the lack of consistency of federal and state and territory privacy regimes leads to confusion about where and how to complain in relation to a privacy matter. Other submissions identified advantages in having multiple privacy regulators.

10.11 The ALRC considers that it is preferable to have privacy regulators at the federal, state and territory level. This ensures that people in each jurisdiction have a regulator they can approach for advice and to make a complaint, and agencies and organisations have access to a regulator who is aware of their local circumstances and

can provide advice and training on implementing the legislation. Further, industry-specific regulators provide industry expertise that the OPC cannot provide.

10.12 There is evidence to suggest that multiple privacy regulators can create problems for individuals, agencies and organisations. In Chapters 45 and 64, the ALRC makes a number of proposals aimed at improving the operation of multiple privacy regulators. These proposals include: amending the *Privacy Act* to empower the Privacy Commissioner to delegate all or any of his or her complaint-handling powers; the development of memoranda of understanding between the OPC and other bodies with responsibility for privacy; and the development and publication of complaint-handling policies, enforcement guidelines and educational material that address the role and functions of the various bodies with responsibility for information privacy.

Government contractors

10.13 The *Privacy Act* imposes obligations on agencies entering into contracts to provide services to or on behalf of the agency. The Act requires an agency entering into a Commonwealth contract to take contractual measures to ensure that a contracted service provider or a subcontractor does not do an act or engage in a practice that would breach the IPPs.

10.14 Stakeholders submitted that these provisions remain appropriate and effective. An outstanding issue, however, is whether the definitions of 'contracted service provider' and 'state contract' under the *Privacy Act* are adequate, and whether they cover all the types of activities that organisations might perform on behalf of agencies. The ALRC is interested in views on this issue.

10.15 Some state and territory privacy regimes require organisations that provide contracted services to a state or territory government agency to be bound by the relevant state privacy principles for the purposes of the contract. Other state regimes provide that compliance with the state privacy regime is subject to outsourcing arrangements, or are silent on this issue.

10.16 There are concerns that state or territory government contractors, who are otherwise private sector organisations, may not be bound by the *Privacy Act* or equivalent standards when performing functions under state or territory contracts. In Chapter 11, the ALRC considers whether the *Privacy Act* should be amended to include a 'roll-back provision' to cover state contractors. In the ALRC's view, however, such a law would intrude too heavily on state and territory government business. Instead, the ALRC proposes that state and territory privacy legislation should include provisions relating to state and territory contractors.

Federal information laws

10.17 Chapter 12 considers how the *Privacy Act 1988* (Cth) interacts with a number of federal laws that regulate the handling of personal information.

Terms and definitions

10.18 Federal legislation other than the *Privacy Act* regulates the handling of personal information. Sometimes this legislation adopts different terms or definitions to those used in the *Privacy Act*. For example, the concept of 'personal information' is central to the regime established by the *Privacy Act*, but other federal legislation adopts different terms such as 'personal affairs' to describe similar information. The definitions of other terms used in the *Privacy Act* also sometimes differ from the same terms in other federal legislation.

10.19 In the ALRC's view, the inconsistent use of terms and definitions in privacy legislation contributes to the complexity of privacy law and may increase compliance burden and cost. The ALRC therefore proposes that the Australian Government should ensure the consistency of definitions and key terms in federal legislation that regulates the handling of personal information. The ALRC acknowledges that there will be occasions, however, when other policy considerations will justify the use of terms or definitions that differ from those used in the *Privacy Act*.

Freedom of Information Act 1982 (Cth)

10.20 The interrelationship between the *Freedom of Information Act 1982* (Cth) (FOI Act) and the *Privacy Act* is significant. The FOI Act and the *Privacy Act* both regulate the way in which information is handled in government, but the Acts have different objectives. Freedom of information legislation is mainly concerned with transparency in government and protects privacy only to the extent that non-disclosure is, on balance, in the public interest. In contrast, privacy legislation is focused primarily on data protection and provides for transparency only to the extent that it enhances the information privacy rights of individuals.

Disclosure of personal information

10.21 The FOI Act provides that every person has a legally enforceable right to obtain access to a document of an agency or an official document of a minister, other than an exempt document. Section 41(1) of the FOI Act provides that a document is an exempt document if its disclosure under the Act would involve the unreasonable disclosure of personal information about any person (including a deceased person). In the ALRC's view, the relationship between the FOI Act and the *Privacy Act* requires clarification. The proposed 'Use and Disclosure' principle sets out the appropriate test for when a disclosure of personal information will be reasonable.

Access and correction

10.22 Both the FOI Act and the IPPs enable individuals to access personal information about them and to amend or annotate that information if it is incorrect, incomplete, out-of-date or misleading. The rights provided by the *Privacy Act* are found in IPP 6 and IPP 7. The amendment rights in the FOI Act are located in Part V and are dependent on

a person having previously obtained lawful access under the Act to the relevant documents. A number of stakeholders submitted that the overlap has created confusion for both agencies and the public.

10.23 In Chapter 12, the ALRC considers various models for dealing with the overlap, and proposes that an individual's right to access or correct his or her own personal information held by an agency should be dealt with under a new Part in the *Privacy Act*. The proposed Part dealing with access and correction of personal information held by agencies retains the same requirements as IPP 6 and IPP 7 and sets out a simplified process for an individual to access and correct personal information about him or her, held by an agency.

Archives Act 1983 (Cth)

10.24 The *Archives Act 1983* (Cth) establishes the National Archives of Australia and provides for the preservation of the archival resources of the Commonwealth. It also creates an access regime whereby the public generally has a right of access to Commonwealth records that are more than 30 years old. The *Archives Act* provides some protection of information relating to the 'personal affairs' of any person, including a deceased person.

10.25 One submission to the Inquiry suggested that amending the 'personal affairs' exemption to apply to 'personal information' would protect privacy better, and harmonise the *Archives Act* with both the *Privacy Act* and the FOI Act.[2] There was strong opposition to this amendment from other stakeholders. It was noted that the reference to 'personal affairs' in the exemption is an appropriate recognition of the different age and sensitivity of the information covered by the Act, that such an amendment would needlessly restrict access to records, and would increase the workload of officers making access decisions under the Act. The ALRC concludes that, in the absence of any identifiable problem in this area, the benefits in changing the exemption to refer to 'personal information' do not outweigh the disadvantages of such an amendment.

A single information Act?

10.26 One option for consideration is whether, given the significant overlap between the FOI Act and the *Privacy Act*, the two Acts should be consolidated into a single Act. A number of overseas jurisdictions have combined freedom of information and privacy legislation. Another option would be to consolidate the FOI Act, the *Privacy Act* and the *Archives Act* into a single Act. An example of such legislation is the *Information Act 2002* (NT).

10.27 There was little support among stakeholders for combining the *Privacy Act*, FOI Act and *Archives Act*. Stakeholders noted that the three Acts have different purposes,

---

2 'Personal affairs' is generally considered to be a narrower concept than 'personal information'.

and that the ALRC should focus on the harmonisation of the Acts. In the ALRC's view, there is insufficient benefit in combining the Acts to outweigh the disadvantage in disturbing the current legislative framework.

A single regulator?

10.28 The ALRC has also considered the option of the same body administering the *Privacy Act* and the FOI Act. This is the case in the Northern Territory, and a number of overseas jurisdictions, for example, the Office of the Information and Privacy Commissioner for British Columbia, the Office of the Ontario Information and Privacy Commissioner, and the United Kingdom Information Commissioner's Office.

10.29 There was little support for this proposal. It was noted in submissions that the *Privacy Act* and the FOI Act have different focuses, and should be administered by two different bodies. Further, a number of stakeholders supported a separate body, such as a Freedom of Information Commissioner, to oversee freedom of information at the federal level.

10.30 The ALRC does not propose the establishment of a single body to administer the *Privacy Act* and the FOI Act. In the ALRC's view, however, the Australian Government should establish a statutory office of the FOI Commissioner to oversee the administration of the FOI Act and these functions should be conferred on the Commonwealth Ombudsman.

Secrecy provisions

10.31 Federal legislation contains a large number of secrecy provisions that impose duties on public servants not to disclose information that comes to them by virtue of their office. Secrecy provisions usually are based on the need to preserve the secrecy of government operations in order for government to function effectively. In *Review of Privacy* (IP 31), the ALRC asked whether the *Privacy Act,* rather than secrecy provisions in specific statutes, should regulate the disclosure of personal information by Australian Government agencies.

10.32 There was no support for having the *Privacy Act,* rather than secrecy provisions in specific statutes, regulate the disclosure of personal information by agencies. The ALRC considers that it is appropriate that specific statutes include secrecy provisions designed to protect information, because secrecy provisions do not relate solely to personal information; but also protect other information, for example, commercial information, security details and operational information.

Obligations of confidence

10.33 Part VIII of the *Privacy Act* was introduced to remedy the law of confidence in a number of respects, including to extend the right to enforce a duty to preserve confidentiality in respect of personal information to the subject of the information. In

IP 31, the ALRC asked whether the provisions in Part VIII of the *Privacy Act* are necessary, and whether the provisions are adequate and should be contained in the *Privacy Act* or elsewhere. The provisions have never been used. The ALRC proposes that the confidentiality provisions contained in Part VIII of the *Privacy Act* be repealed.

Required or authorised by or under law

10.34 Chapter 13 considers the meaning of the phrase 'required or authorised by or under law', and outlines a new exception for acts and practices that are '*specifically* authorised by or under law'. The chapter then considers a number of federal Acts that require or authorise acts and practices for the purposes of the *Privacy Act*. These laws include the *Census and Statistics Act 1905* (Cth), the *Corporations Act 2001* (Cth), the *Commonwealth Electoral Act 1918* (Cth) and the *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth). The interaction between these laws and the *Privacy Act* has been the subject of recent public debate.

The meaning of 'required or authorised by or under law'

10.35 An act or practice required or authorised by or under law is an exception (the 'required or authorised exception') to a number of the IPPs and the NPPs. The ALRC proposes that acts or practices that are required or authorised by or under law should be an exception to a number of the proposed UPPs.

10.36 In the ALRC's view, there is a public expectation that governments are able to make laws to facilitate the handling of information in certain appropriate and necessary ways. The required or authorised exception reflects this expectation. The ALRC has, however, identified two areas where an exception in relation to acts and practices that are 'specifically authorised' by or under law would be beneficial. An exception for acts and practices that are 'specifically authorised' would require the law expressly to authorise a defined class of acts and practices.

10.37 The scope of the required or authorised exception, however, requires clarification. Submissions noted that the ambiguity in the operation of this exception can create uncertainty for individuals, agencies, organisations and privacy regulators. The ALRC discusses various methods to clarify the scope of the exception, including clear references to the required or authorised exception in legislative provisions that intend to rely on the exception. The ALRC also considers the development and publication of a list of provisions in other legislation that requires or authorises certain acts or practices that would otherwise be regulated by the *Privacy Act*. This proposal raises a range of issues, including whether the list should have the force of law, whether it should be comprehensive or indicative and who should compile and maintain it.

Census and Statistics Act 1905 (Cth)

10.38 The Australian Bureau of Statistics (ABS) conducts a census of population and housing every five years in accordance with the *Census and Statistics Act 1905* (Cth).

The census is regarded as the most important source of statistical information in Australia. The information from the census is used to produce statistical data for use by governments, as well as academics, industry, businesses and private individuals.

10.39 Submissions raised a number of issues concerning two recent developments in relation to the census—the retention of name-identified information collected in the census for 99 years, and a proposal to enhance the value of the census by combining it with future censuses and possibly other datasets held by the ABS. The ALRC does not make a proposal in relation to these developments. In the ALRC's view, the *Privacy Act* and the *Census and Statistics Act* continue to provide adequate protection of personal information collected as part of the census.

Corporations Act 2001 (Cth)

10.40 Section 168 of the *Corporations Act 2001* (Cth) requires companies and registered schemes to maintain a register of members, and if relevant, a register of option holders and a register of debenture holders. The *Corporations Act* also requires companies to allow anyone to inspect these registers.

10.41 A number of issues were raised in submissions in relation to registers of members. The ALRC does not, however, make any proposals concerning the availability of registers of members. The ALRC notes the significant public interest in disclosure of who has control or an interest in a company. Further, the *Corporations Act*, and regulations made under it, provide significant protection of personal information held on a register of members.

Commonwealth Electoral Act 1918 (Cth)

10.42 Part VI of the *Commonwealth Electoral Act 1918* (Cth) provides for the establishment of an electoral roll. It is compulsory for all eligible persons in Australia to maintain continuous enrolment on the Commonwealth electoral roll for the purposes of federal elections and referendums. The names and addresses of all electors on the Commonwealth electoral roll are available for public inspection in various formats specified under the *Commonwealth Electoral Act*.

10.43 A range of issues raised in submissions related to the handling of personal information held on the electoral roll. In particular, the ALRC heard concerns about the use of old electoral rolls for unauthorised purposes, such as direct marketing. The ALRC proposes that, if the exemption under the *Privacy Act* that applies to registered political parties and political acts and practices is not removed, the *Commonwealth Electoral Act* should be amended. This amendment should provide that prescribed individuals, authorities and organisations to whom the Australian Electoral Commission must give information in relation to the electoral roll and certified lists of voters, must take reasonable steps to protect the information from misuse and loss and

from unauthorised access, modification or disclosure; and destroy or render the information non-identifiable if it is no longer needed for a permitted purpose.

10.44 The ALRC also proposes that the Australian Electoral Commission and state and territory electoral commissions, in consultation with the OPC, develop and publish protocols that address the collection, use, storage and destruction of personal information shared for the purpose of the continuous update of the electoral roll.

Anti-Money Laundering and Counter-Terrorism Financing Act 2006 (Cth)

10.45 The *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth) (AML/CTF Act) is intended to enable individual businesses to minimise money laundering and terrorism financing risks. The Act sets out the primary obligations of 'reporting entities' when providing 'designated services'. A 'reporting entity' is a financial institution, or other person who provides 'designated services'. A large number of 'designated services' are listed in the Act, including opening an account, making a loan, and supplying goods by way of hire purchase.

10.46 The Act requires a reporting entity to carry out a procedure to verify a customer's identity before providing a designated service to the customer. In addition, reporting entities must give the Australian Transaction Reports and Analysis Centre (AUSTRAC) reports about suspicious matters, and must have and comply with an anti-money laundering and counter-terrorism financing program. Part 11 of the Act provides that the Australian Taxation Office and certain other 'designated agencies' may access AUSTRAC information. 'Designated agencies' include a large number of Australian Government agencies as well as some state and territory agencies. The Act requires designated agencies, including state and territory agencies, to comply with the IPPs in respect of AUSTRAC information.

10.47 The AML/CTF Act is the result of an extensive consultation process and has been the subject of a number of recent inquiries. The ALRC, therefore, restricts its consideration of the Act to issues raised in submissions to this Inquiry. The ALRC proposes that a statutory review of the AML/CTF Act should consider a number of matters, including whether reporting entities and designated agencies are appropriately handling personal information under the legislation.

10.48 The ALRC also proposes that the AML/CTF Act should be amended to provide that state and territory agencies that access personal information provided to AUSTRAC under the Act be regulated under the *Privacy Act* in relation to the handling of that personal information, except where they are covered by obligations under a state or territory law that are, overall, at least the equivalent of the relevant obligations in the *Privacy Act.*

Interaction with state and territory laws

10.49 Chapter 14 considers how the *Privacy Act 1988* (Cth) interacts with state and territory privacy laws.

10.50 State and territory laws are sometimes inconsistent with the *Privacy Act* and with each other. Legislation regulates personal information at the federal level and in New South Wales, Victoria, Tasmania, the ACT and the Northern Territory. Queensland and South Australia have adopted administrative regimes for the management of personal information in their state public sectors. Western Australia does not have a legislative scheme to regulate personal information. State freedom of information legislation and public records legislation, however, provide some privacy protection.[3]

10.51 Further, legislation in New South Wales, Victoria and the ACT regulates health information in the public and private sectors. These Acts overlap substantially with the private sector provisions of the *Privacy Act*. Regulation of health information in other jurisdictions is restricted to public sector agencies or is the subject of codes and guidelines. Inconsistency and fragmentation in health privacy regulation is discussed in Part H.

Federal, state and territory regimes that regulate personal information

10.52 There is inconsistency in the coverage of the *Privacy Act* and the state and territory schemes. For example, state-owned corporations, ministers, universities and local governments are regulated under privacy regimes in some states and territories, but not others. The types of personal information regulated at the federal, state and territory level also differs. For example, employee records are excluded from the operation of the *Privacy Act*. Some state and territory privacy regimes, however, provide limited protection of employee records.

10.53 Although the IPPs, NPPs and privacy principles under state and territory privacy regimes are similar, they are not identical. The privacy regimes in some jurisdictions include privacy principles that are similar to the IPPs, while other jurisdictions have modelled their principles on the NPPs.

10.54 The nature and functions of privacy regulators vary across the jurisdictions. For example, the *Privacy Act* and other federal legislation provide the Privacy Commissioner with a number of powers and functions, including powers to investigate and conciliate complaints, and approve and monitor privacy codes and guidelines.

---

3 On 28 March 2007, the Information Privacy Bill 2007 (WA) was introduced into the Western Australian Parliament. The Bill proposes to regulate the handling of personal information in the state public sector and the handling of health information by the public and private sectors in Western Australia.

Although most states and territories have privacy regulators, their nature and functions vary widely. For example, the Privacy Committee of South Australia's powers and functions are limited compared to the federal, New South Wales and Victorian privacy commissioners.

10.55 The remedies available to individuals whose privacy rights are infringed can differ according to the jurisdiction in which the complaint is made. For example, the maximum amount of compensation that is payable for an interference with privacy differs across the states and territories.

10.56 As noted above, in Chapter 4 the ALRC proposes that the states and territories enact privacy laws that apply the proposed UPPs and the *Privacy (Health Information) Regulations* to regulate the public sector in that state or territory. In the ALRC's view, the adoption of the UPPs and the *Privacy (Health Information) Regulations* at the federal, state and territory level will go a long way to addressing inconsistency in the regulation of personal information.

Privacy rules, codes and guidelines

10.57 Various privacy rules, codes and guidelines regulate the handling of personal information in addition to the *Privacy Act* and state and territory legislation. Sometimes privacy rules, codes and guidelines are required by legislation. Sometimes, however, particular industries or sectors choose to develop guidelines.

10.58 A number of stakeholders noted that if rules, codes and guidelines are not aligned with the *Privacy Act*, they can contribute to inconsistency and fragmentation. On the other hand, it was also noted that additional privacy rules, codes and guidelines can clarify sector-specific issues and provide more detailed protection for personal information where appropriate.

10.59 In the ALRC's view, when agencies and organisations are developing privacy rules, codes and guidelines they should consult with the relevant body responsible for privacy for their industry or sector to ensure that the rules, codes or guidelines will interact and operate effectively with existing privacy laws.

Residential tenancy databases

10.60 Chapter 14 also discusses residential tenancy databases (RTDs). RTDs are electronic databases operated by private companies that contain information about tenants and their rental history. The purpose of such databases is to enable real estate agents to assess 'business risk' on behalf of the property owner. The listings on the database are based on information provided by real estate agents to the database operators. Listings are generally collected from across Australia and can be accessed nationally.

10.61 A number of inquiries have recognised the need for national consistency in the regulation of RTDs. As RTDs contain personal information, they are generally subject

to the private sector provisions of the *Privacy Act*. They are also regulated by legislation in some states and territories. While the states and territories can regulate the actions of the lessors and agents in their jurisdictions, they lack the power to regulate effectively the RTD operators based in other jurisdictions.

10.62 Submissions raised a number of concerns about the operation of RTDs, including that prospective tenants will often have little choice but to consent to a real estate agent passing information on to RTD operators, that information stored on RTDs is sometimes inaccurate, and that tenants sometimes have difficulties in finding out whether they are listed on RTDs. The ALRC also heard that inconsistent state and territory legislation in relation to RTDs causes a number of problems.

10.63 In the ALRC's view, the states and territories should enact legislation that addresses the relationship between the agent and the tenant, including issues such as informing the tenant of the use of RTDs and the collection of information; and the way that agents interact with RTDs, including such matters as controlling the information provided by agents to RTDs.

10.64 Further, the ALRC considers that all RTD operators should be regulated by the *Privacy Act*, regardless of whether they are small business operators or whether they gain consent for the collection or disclosure of an individual's personal information. The ALRC does not propose a binding code to regulate RTD operators, however, the OPC should continue to monitor the use and operation of RTDs in order to determine whether it should exercise its proposed power to impose a binding code on RTD operators.

Introduction

11.1 This chapter discusses some specific problems caused by inconsistency and fragmentation in privacy regulation in Australia. The chapter first considers how inconsistent and fragmented privacy laws can result in reluctance by organisations and agencies to share information. Secondly, the compliance burden and cost caused by inconsistent privacy requirements across jurisdictions and sectors is discussed. Thirdly, the chapter considers problems caused when particular agencies and organisations are required to comply with multiple layers of privacy regulation that is overseen by more than one regulator. Finally, the chapter outlines various issues related to government contractors.

Sharing information

11.2 In the Issues Paper *Review of Privacy* (IP 31), the ALRC asked whether the multi-layered regulation of personal information acts as a barrier to the sharing of information between agencies and organisations.[1]

11.3 Inconsistent, fragmented and multi-layered privacy regulation can contribute to confusion about how to achieve compliance with privacy regulation. This, in turn, can result in reluctance by agencies and organisations to share information.[2]

11.4 The Office of the Privacy Commissioner (OPC) submitted that some obstacles to appropriate information sharing between agencies and organisations may arise either from misapplication or a 'risk-averse' interpretation of privacy laws.[3] The ALRC heard numerous examples of agencies and organisations using 'because of the *Privacy Act*' as an excuse for not providing information.[4] In many cases, however, the *Privacy Act 1988* (Cth) would not have prohibited the sharing of the information. For example, a member of the public reported that:

> My daughter attends a childcare centre in my local area. One day, the carer commented on how well she was playing with a special friend. When I asked who the special friend was, I was advised that the name of the child, even the first name, couldn't be released to me due to the provisions of the *Privacy Act*. This is crazy.[5]

11.5 The complexity of privacy laws can act as a barrier to information sharing between federal, state and territory agencies,[6] and between agencies and organisations.[7] For example, the Office of the Victorian Privacy Commissioner (OVPC) submitted that information sharing can be problematic where federal agencies such as Centrelink, the Australian Taxation Office and the Electoral Commissioner want bulk access to state datasets because:

7 See, eg, Queensland Government, *Submission PR 242,* 15 March 2007; Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; Insolvency and Trustee Service Australia, *Submission PR 123,* 15 January 2007.

- some states have no privacy law and so provide the information;
- other states have privacy or other legislative provisions restricting disclosure to jurisdictions that do not have adequate privacy protection in place; and
- the Commonwealth can override privacy protection in state legislation to collect and use datasets in ways not authorised under or anticipated by state law.[8]

11.6 The Queensland Government noted that there is some evidence of inconsistency in privacy regulation affecting national schemes involving the participation of state and territory agencies.

> For example, Queensland Transport's participation in the National Exchange of Vehicle Driver Information System (NEVDIS). Queensland Transport has experienced resistance from counterpart agencies in other states with privacy legislation regarding sharing of information.[9]

11.7 A number of submissions noted that a failure to share information because of privacy concerns can impede investigations by law enforcement bodies,[10] result in decisions in family law matters being made without a complete picture of family circumstances,[11] and can have other grave consequences.[12]

11.8 The complexity of privacy laws are a particular issue in the context of service provision to vulnerable people.[13] The Community Services Ministers' Advisory Council (CSMAC) has noted that the range of differing privacy regimes across Australia creates problems for information exchange between jurisdictions, including in the critical area of child protection, where state and territory specific legislation applies. Issues also arise in relation to information exchange within jurisdictions, where some non-government welfare organisations are subject to the *Privacy Act*, and state and territory agencies must comply with state and territory regimes. CSMAC has noted that this inconsistency creates difficulties in relation to the development of

memoranda of understanding and other protocols governing the exchange of information.[14]

11.9 Real or perceived restrictions on information sharing by agencies can also impact on business. The Taskforce on Reducing Regulatory Burdens on Business noted that barriers to sharing data between different agencies can mean that businesses are often required to supply the same information to multiple agencies, which can contribute to compliance cost.[15]

ALRC's view

11.10 The ALRC's view is that inconsistency and fragmentation in privacy laws should not prevent appropriate information sharing. Information sharing opportunities, which are in the public interest and recognise privacy as a right to be protected, should be encouraged. Rather than preventing appropriate information sharing, privacy laws and regulators should encourage agencies and organisations to design information-sharing schemes that are compliant with privacy requirements or, where necessary, seek suitable exemptions or changes to legislation to facilitate information-sharing projects.

11.11 The ALRC makes a number of proposals in relation to information sharing throughout this Discussion Paper. Perhaps the most significant of these proposals is the adoption of the proposed Unified Privacy Principles (UPPs) at the federal, state and territory level.[16] It is the ALRC's view that many of the real and perceived impediments to information sharing would be removed if the federal public sector, the state and territory public sectors and the private sector were required to comply with the same set of privacy principles. Adoption of the same privacy principles would also simplify the task of developing information-sharing protocols and memoranda of understanding. Other relevant proposals include:

- insertion of an objects clause in the *Privacy Act*, which stipulates that one of the objects of the Act is 'appropriate information sharing';[17]
- redrafting the Act to achieve greater logical consistency, simplicity and clarity;[18]
- amending the 'Use and Disclosure' principle to permit the use and disclosure of a person's information for a secondary purpose where there is a threat to a person's life, health or safety that is serious (even if not necessarily imminent);[19]

18 Proposal 3–2.
19 Proposal 22–3.

- the inclusion of a new exception to allow the sharing of personal information (including sensitive information) for the purposes of non-medical research;[20] and

- the adoption of the *Privacy Act* provisions that allow public interest determinations and temporary public interest determinations in state and territory laws regulating the public sectors.[21]

Education

11.12 Submissions to the Inquiry have established that many agencies and organisations are not aware of, or do not understand, their obligations under the *Privacy Act* and other such laws. This can have a 'chilling effect' on information sharing. The NSW Independent Pricing and Regulatory Tribunal (IPART) identified similar issues in its report *Investigation into the Burden of Regulation in NSW and Improving Regulatory Efficiency*. IPART recommended that the NSW Government provide guidance to agencies on privacy requirements affecting information sharing between agencies.[22]

11.13 The ALRC proposes that the OPC provide further guidance to agencies and organisations on privacy requirements affecting information sharing. This guidance should explain how the privacy principles operate to allow or prevent the sharing of information in certain circumstances; when a public interest determination, temporary public interest determination or a code will be appropriate; when a privacy impact assessment should be prepared; and guidance on the development of memoranda of understanding and protocols in relation to information sharing schemes. This guidance could be prepared in consultation with other bodies with responsibility for information privacy, including state and territory privacy regulators and industry-specific dispute resolution schemes.

Proposal 11–1 The Office of the Privacy Commissioner should provide further guidance to agencies and organisations on privacy requirements affecting information sharing.

Guidelines and protocols

11.14 Legislation and public interest determinations that provide for information-sharing programs will not always document how agencies should implement those

20 See Proposal 58–2.
21 See Proposal 4–4.
22 Independent Pricing and Regulatory Tribunal of New South Wales, *Investigation into the Burden of Regulation in NSW and Improving Regulatory Efficiency: Other Industries—Final Report* (2006), 228.

programs and protect personal information. Agencies that are required or authorised by legislation or a public interest determination to share personal information should, therefore, develop and publish documentation that addresses the sharing of such information. This documentation may include guidance to assist officers to implement an information-sharing scheme and protocols that detail how an agency can share information in compliance with privacy requirements.

11.15 Agencies are sometimes required to prepare other documentation in relation to information sharing. This documentation could include ministerial agreements to share information or memoranda of understanding between agencies. In *Essentially Yours: The Protection of Human Genetic Information in Australia* (ALRC 96) the ALRC considered the legislative scheme establishing the National Criminal Investigation DNA Database, a national DNA database administered by the CrimTrac agency. The ALRC recommended that for the purpose of achieving greater transparency, the Commonwealth, States and Territories should publish all ministerial agreements for sharing genetic information required under the scheme,[23] as well as protocols for inter-jurisdictional matching.[24]

11.16 In the ALRC's view, other documents (including memoranda of understanding and ministerial agreements) should also be published for the purpose of achieving greater transparency. The ALRC notes that it will not always be appropriate to publish this documentation, particularly where publication may disclose commercial-in-confidence or sensitive information.

Proposal 11–2 Agencies that are required or authorised by legislation or a public interest determination to share personal information should develop and publish documentation that addresses the sharing of personal information; and where appropriate, publish other documents (including memoranda of understanding and ministerial agreements) relating to the sharing of personal information.

---

23 Some state crimes legislation provides for the responsible minister in that state to enter into an arrangement with an Australian Government minister or with CrimTrac to provide for the transmission of information recorded in a state DNA database system to form part of the National Criminal Investigation DNA Database: see, eg, *Crimes (Forensic Procedures) Act 2000* (NSW); *Crimes Act 1958* (Vic); *Criminal Law (Forensic Procedures) Act 2007* (SA). The Minister for Justice and Customs, Senator David Johnston, has recently announced that state and territory police ministers have signed a landmark agreement on the sharing of DNA information: D Johnston (Minister for Justice and Customs), 'National DNA Sharing Arrangement Signed' (Press Release, 28 June 2007).

24 Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), Rec 40–4.

Inter-agency working groups

11.17 Throughout this Inquiry, the ALRC has heard examples of agencies from various portfolios meeting to discuss information-sharing needs and how these can be accommodated under privacy legislation. In each of these cases, it appeared that a regular dialogue through an inter-agency working group facilitated information sharing while still allowing for the privacy of individuals to be accommodated.[25]

11.18 In its report, *Investigation into the Burden of Regulation in NSW and Improving Regulatory Efficiency*, IPART considered how regulation in NSW, including privacy regulation, has the potential to impede information sharing. IPART concluded that the NSW Government should

> [c]onvene an inter-agency working group of senior officers (including representatives from Privacy NSW) to identify further opportunities where it would be appropriate (ie, where it would provide net benefits to the community) to share or streamline information among government agencies. This may require an initial stock-take or inventory of current government information requirements.[26]

11.19 As noted above, the ALRC encourages information-sharing opportunities that are in the public interest and that lessen compliance burdens on agencies, businesses and the community. In the ALRC's view, the Australian Government should take the lead in identifying circumstances where it would be appropriate to share or streamline the sharing of personal information among Australian Government agencies. The ALRC, therefore, proposes that the Australian Government should convene an inter-agency working group of senior officers, which should include a representative from the OPC to ensure the privacy interests of individuals are represented.

Proposal 11–3 The Australian Government should convene an inter-agency working group of senior officers to identify circumstances where it would be appropriate to share or streamline the sharing of personal information among Australian Government agencies.

Information sharing by law enforcement and intelligence agencies

11.20 Government agencies across the world are increasingly searching for new ways to prevent and solve crime, particularly when associated with terrorism.[27] These new

---

26 Independent Pricing and Regulatory Tribunal of New South Wales, *Investigation into the Burden of Regulation in NSW and Improving Regulatory Efficiency: Other Industries—Final Report* (2006), 228.

27 See J Lye and T McNeilly, 'Current Privacy Issues in National Security' (Paper presented at Australian Institute of Administrative Law 2006 National Administrative Law Forum, Surfers Paradise, 22–23 June 2006).

methods include new forms of intelligence gathering and the sharing of personal information, often across state and territory borders.[28]

11.21 The exchange of personal information between Australian Government agencies and state and territory government agencies for law enforcement purposes is, in most instances, regulated by privacy legislation or administrative schemes.[29] There are, however, a number of exceptions and exemptions that apply to law enforcement and intelligence agencies. For example, the Information Privacy Principles (IPPs) do not apply to the acts and practices of certain Australian Government law enforcement and intelligence agencies such as the Australian Crime Commission (ACC), the Australian Security and Intelligence Organisation (ASIO) and the Australian Secret Intelligence Service (ASIS).[30] While some of these agencies are regulated by statutory guidelines that address the handling of personal information, the guidelines do not address interjurisdictional information sharing.[31]

11.22 Further, various provisions of the *Privacy Act* exempt agencies from the operation of privacy principles in relation to their disclosure of information in response to requests received from the ACC, ASIO or ASIS and in relation to their use and disclosure of information that originated with or has been received from the ACC, ASIO or ASIS.[32]

11.23 Outside these provisions, it is necessary for agencies that are not exempt under the Act to rely on a number of broad exceptions set out in the IPPs including where use or disclosure of personal information is required or authorised by or under law, where use or disclosure is reasonably necessary for the enforcement of the criminal law, and where there is a reasonable belief that use or disclosure if necessary to prevent or lessen a serious and imminent threat to life or health.[33]

11.24 State and territory privacy regimes often provide similar exemptions and exceptions in relation to state and territory law enforcement agencies. For example, under the *Privacy and Personal Information Protection Act 1998* (NSW), a NSW government agency is not required to comply with certain privacy principles if the handling of personal information is reasonably necessary for law enforcement purposes.[34]

---

28 See, eg, *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth); *Anti-Terrorism Act (No 2) 2005* (Cth); *Aviation Transport Security Act 2004* (Cth).

29 See discussion of state and territory privacy regimes in Ch 2.

30 See discussion in Ch 31.

31 These guidelines are discussed in Chs 31 and 34. These agencies are also subject to oversight by the Inspector General of Intelligence and Security or the Australian Commission for Law Enforcement Integrity.

32 See, eg, *Privacy Act 1988* (Cth) s 7.

33 The ALRC makes a number of proposals in relation to these exceptions in Part D.

34 *Privacy and Personal Information Protection Act 1998* (NSW) s 23. See also *Information Privacy Act 2000* (Vic) s 13.

11.25 In some jurisdictions, privacy regulators have developed codes and guidelines in relation to the handling of personal information by law enforcement agencies.[35] However, these documents do not deal with interjurisdictional information sharing. Further, law enforcement agencies in some jurisdictions are not subject to any privacy regulation.[36]

11.26 Should the Australian Government develop a framework for the sharing of personal information between Australian Government, and state and territory law enforcement and intelligence agencies? The United States Government recently released the *Guidelines to Ensure that the Information Privacy and Other Legal Rights of Americans are Protected in the Development and Use of the Information Sharing Environment* (the Guidelines).[37] The Guidelines reflect 'basic privacy protections', requiring agencies to: identify, among other things, any privacy-protected information to be shared; assess and document applicable legal and policy rules and restrictions; put in place accountability and audit mechanisms, implement data quality and, where appropriate, redress procedures; and appoint a Privacy Official to ensure compliance with the Guidelines.[38]

11.27 The ALRC acknowledges that the broader social interest in national security and law enforcement issues will often override privacy interests. In the ALRC's view, however, in the absence of comprehensive rules to deal with the sharing of personal information between federal, state and territory law enforcement and intelligence agencies, the Australian Government should develop a framework relating to interjurisdictional sharing of personal information within Australia by intelligence and law enforcement agencies. In the interest of transparency, this framework should be made available to the public.

11.28 This framework should be developed in consultation with relevant bodies including state and territory governments, intelligence agencies, law enforcement agencies, and various accountability bodies. These accountability bodies include the

37 United States Government Office of the Director of National Intelligence, *Guidelines to Ensure that the Information Privacy and Other Legal Rights of Americans are Protected in the Development and Use of the Information Sharing Environment* (2006). The 'Information Sharing Environment' has been described as 'the combination of policies, procedures, and technologies linking the resources (people, systems, databases, and information) of all federal executive branch entities to facilitate terrorism information sharing, access, and collaboration among users in order to combat terrorism more effectively': Program Manager—Information Sharing Environment, *Information Sharing Environment Privacy Guidelines—Frequently Asked Questions* (2006) Unites States Government Office of the Director of National Intelligence <www.ise.gov> at 31 July 2007.

38 Program Manager—Information Sharing Environment, *Information Sharing Environment Privacy Guidelines—Frequently Asked Questions* (2006) Unites States Government Office of the Director of National Intelligence <www.ise.gov> at 31 July 2007.

OPC, state and territory privacy commissioners and agencies with responsibility for privacy regulation; as well as bodies with responsibility for overseeing law enforcement and intelligence agencies, including the Australian Commission for Law Enforcement Integrity and the Inspector-General of Intelligence and Security, and federal, state and territory ombudsmen. The ALRC also proposes the development of memoranda of understanding to ensure that accountability bodies can oversee interjurisdictional information sharing within Australia by law enforcement and intelligence agencies.

Proposal 11–4 The Australian Government, in consultation with: state and territory governments, intelligence agencies, law enforcement agencies, and accountability bodies (including the Office of the Privacy Commissioner; the Inspector-General of Intelligence and Security; the Australian Commission for Law Enforcement Integrity; state and territory privacy commissioners and agencies with responsibility for privacy regulation; and federal, state and territory ombudsmen), should:

(a) develop and publish a framework relating to interjurisdictional sharing of personal information within Australia by intelligence and law enforcement agencies; and

(b) develop memoranda of understanding to ensure that accountability bodies can oversee interjurisdictional information sharing within Australia by law enforcement and intelligence agencies.

Compliance burden and cost

11.29 The Terms of Reference for this Inquiry require the ALRC to consider 'the desirability of minimising the regulatory burden on business'. Business has identified the pervasive nature of privacy requirements as an important contributor to the cumulative regulatory burden it faces.[39] The Australian Chamber of Commerce and Industry has reported that, in response to its 2004 Pre-Election Survey, 47.4% of Australian businesses polled considered that compliance with privacy requirements was a problem.[40]

11.30 The Taskforce on Reducing Regulatory Burdens on Business (the Regulatory Taskforce) heard that inconsistency in the areas of workplace surveillance, direct marketing and telemarketing laws, and having to supply information to multiple

39 See, eg, Regulation Taskforce 2006, *Rethinking Regulation: Report of the Taskforce on Reducing Regulatory Burdens on Business*, Report to the Prime Minister and the Treasurer (2006), 54.

40 Australian Chamber of Commerce and Industry, *Submission to the Taskforce on Reducing Regulatory Burdens on Business*, 1 November 2005, 5.

government agencies, contributed to compliance burdens and costs.[41] The OPC review of the private sector provisions of the *Privacy Act* (OPC Review) was told that the lack of a single, national and comprehensive regime makes compliance more difficult and that the complexity of federal privacy laws (including the *Privacy Act* and the *Telecommunications Act 1997* (Cth)) contributes to compliance costs.[42]

11.31 The Senate Legal and Constitutional References Committee inquiry into the *Privacy Act* (the Senate Committee privacy inquiry), however, heard conflicting views in relation to compliance burden and cost.[43] A number of submissions to the Committee's inquiry noted the considerable compliance costs associated with privacy regulation, including for small not for profit organisations.[44] It was argued in other submissions, however, that the benefits of privacy regulation to business and Australian society outweigh the costs of compliance.[45] The Australian Consumers Association submitted that it had little sympathy with complaints about compliance costs arising from privacy legislation, noting that there is no required reporting or mandatory recording under the schemes.[46]

11.32 The Regulatory Taskforce noted that achieving nationally consistent privacy laws is an important factor in reducing compliance costs for business.[47] The Regulatory Taskforce recommended that the Australian Government ask the Standing Committee of Attorneys-General (SCAG) to endorse national consistency in all privacy-related legislation based on the concept of minimum effective regulation.[48] In its response, the Australian Government stated that:

48 Ibid, rec 4.47.

> The Australian Government agrees to the recommendation and supports the goal of national consistency in privacy-related legislation. At the April 2006 meeting of the Standing Committee of Attorneys-General, Attorneys-General agreed to establish a working group to advise Ministers on options for improving consistency in privacy regulation, including workplace privacy.[49]

11.33 The recent Productivity Commission report, *Performance Benchmarking of Australian Business Regulation*, found that there is evidence that significant differences in compliance cost levels exist across jurisdictions. The Productivity Commission concluded that the benchmarking of regulatory burdens across jurisdictions could shed light on where and how such differences might be reduced and increase government accountability for the design, administration and enforcement of regulation.[50]

Do privacy laws cause an unjustified compliance burden?

11.34 In IP 31, the ALRC asked whether the multi-layered regulation of personal information causes an unjustified compliance burden.[51] The ALRC received a large number of submissions that claimed that the proliferation and fragmentation of privacy laws have increased compliance burden and cost for both agencies and organisations.[52] A number of submissions identified that state health privacy legislation and workplace surveillance laws are creating complexity and unjustified compliance costs.[53] It was also noted that compliance burden is a particular issue for small businesses that are required to comply with the *Privacy Act*.[54]

53 See, eg, Investment and Financial Services Association, *Submission PR 122,* 15 January 2007; Microsoft Australia, *Submission PR 113,* 15 January 2007; Cancer Council Victoria, *Consultation PC 75*, Melbourne, 5 February 2007. A Standing Committee of Attorneys-General working party is currently considering workplace privacy: see Chs 1 and 2.

54 Australian Chamber of Commerce and Industry, *Submission PR 219,* 7 March 2007; Australasian Compliance Institute, *Submission PR 102,* 15 January 2007. See also Ch 35.

11.35 The OVPC submitted that there is little evidence of the existence or extent of any compliance burden. It noted, however, that compliance burden is most likely to be a problem for organisations that do not have the resources to get advice and training about their privacy obligations, especially where they are working in an area that intersects with multiple privacy regimes. This often has an impact on service providers, especially where they receive joint Commonwealth-state funding.[55]

11.36 The OPC submitted that, in many areas, the compliance obligations are proportionate and appropriate to public expectations. It noted, for example, that the *Privacy Act* requires agencies and organisations to take actions that are 'reasonable' to fulfil obligations relating to notice requirements, data quality and data security. What is considered 'reasonable' is contextual, and may depend on the entity's size and activities. The OPC stated, however, that it recognised that compliance costs escalate where entities must comply with multiple layers of privacy regulation, and suggested that

> the solution may be to resolve questions of jurisdiction. For example, by clarifying that the Privacy Act 'covers the field' of the private sector to the exclusion of other jurisdictions' privacy legislation. In other cases, governments and regulators may work together to promote greater consistency between regulations and administrative procedures, without disrupting existing regulatory frameworks.[56]

11.37 Inconsistency and fragmentation in privacy regulation are a problem for organisations that operate in more than one Australian jurisdiction. For example, the OPC Review was told by one organisation that operates nationally that

> a single piece of personal information may be subject to two or more … legislative regimes at one time, creating conflicting obligations, different obligations or more onerous obligations in respect of the whole or parts of that same piece of information.[57]

11.38 The OPC Review also cited an instance where a national medication service operating via a call centre had to read different statements to obtain consent depending on the location of the individual (and the law that applied in that state or territory).[58] The Regulatory Taskforce also noted that this was an issue in the context of different laws relating to direct marketing.[59]

58 Ibid, 66.
59 Regulation Taskforce 2006, *Rethinking Regulation: Report of the Taskforce on Reducing Regulatory Burdens on Business*, Report to the Prime Minister and the Treasurer (2006), 54.

11.39 Submissions to this Inquiry noted that the main issues for national organisations are compliance burden and cost.[60] In particular, differences in rules governing acceptable calling times for telemarketers, and state and territory laws dealing with the privacy of employee records, were highlighted as particularly problematic.[61] Other submissions noted that state health privacy legislation is creating problems for national organisations.[62] The OPC submitted that in some cases these problems are

> an inevitable consequence of large-scale operations across a federal system, which national organisations are often better equipped to deal with due to their size. In particular sectors, including health, greater consistency in regulation would clarify obligations and may facilitate the implementation of interstate and national initiatives.[63]

11.40 Multi-layered regulation of personal information complicates the implementation of programs and services at a national level.[64] Submissions noted that this is particularly an issue in the health sector,[65] where it is creating a compliance burden and impacting on quality in the health care and health and medical research sectors.[66] The Australian Bureau of Statistics stated that complex and overlapping legal requirements across jurisdictions make it difficult to collect and use state and territory administrative data for statistical purposes.[67] The Australian Government Department of Human Services submitted that:

> Projects such as the Access Card need to navigate their way through complex and competing legislation covering federal and state public sector and in some instances the private sector. This in turn slows implementation and significant community benefits.[68]

Quantifying the compliance burden

11.41 In IP 31, the ALRC noted that it would be interested in receiving information that can quantify the compliance burden experienced due to problems associated with privacy regulation.[69] Stakeholders submitted that inconsistent privacy laws create a compliance burden in the following areas: monitoring changes to the law, staff training, changing internal policies and procedures, rewriting privacy policies and

---

consumer information, and lost business due to a consumer perception of a lack of service.[70] One submission noted that many of these costs are ongoing due to continuous changes in federal, state and territory legislation.[71]

11.42 Based on a survey it conducted for the OPC Review, the Australian Chamber of Commerce and Industry estimated that the legal costs for drafting a rudimentary privacy policy in 2007, tempered by the fact that the cost could vary considerably depending upon the characteristics of the business, were approximately $2500.

> Supporting documentation, in terms of reference material such as the Federal Privacy Handbook and the Privacy Toolkit would now cost an additional $1000. This represents a base cost of $3,500 for an individual business. Using the latest available data, when multiplied across the 1.8 million businesses with a turnover of less than $2 million, or by the 1.9 million businesses classified as small businesses, this results in an aggregate cost to the economy of $6.3 billion or $6.65 billion dollars, or roughly 0.7 per cent of gross domestic product.
>
> Ongoing costs would include implementation of the policy, staff training, updating of the policy and dealing with inevitable complaints (legitimate or otherwise), all of which would entail significant costs in terms of staff time and business resources.[72]

11.43 Submissions noted that compliance costs are often passed on to the consumer.[73] These costs are not always financial. For example, the National Health and Medical Research Council (NHMRC) submitted that the multi-layered level of privacy laws will sometimes prevent information exchange for the purpose of medical research. This can compromise clinical care, quality assurance and related activities because access to essential health information is impaired; significant research is not approved or submitted for approval; additional requirements are imposed on some research that reduce its scientific rigour; and excessive administrative effort and costs are incurred.[74]

ALRC's view

11.44 The ALRC's view is that some of the compliance burden imposed by the *Privacy Act* is justified. The *Privacy Act* was enacted to implement Australia's obligations relating to privacy under the *International Convention on Civil and Political Rights* as well as the Organisation for Economic Co-operation and Development *Guidelines on the Protection of Privacy and Transborder Flows of*

---

Personal Data.[75] It was, therefore, enacted to protect a fundamental human right—the right of an individual to privacy.

11.45 The compliance requirements under the Act are minimal when compared to comparable schemes in Europe that often include an expensive registration requirement. The *Privacy Act* does not have extensive reporting requirements such as under the *Corporations Act 2001* (Cth). Further, as noted by the OPC, the Act can take account of an agency or organisation's size and activities. The ALRC also notes that the OPC is available to provide guidance to agencies and organisations free of charge.

11.46 In Chapter 35, the ALRC proposes the removal of the small business exemption under the *Privacy Act*. Stakeholders have expressed concern about the compliance burden on small businesses. The ALRC therefore proposes that, before the removal of the exemption, the OPC should provide support to small businesses to assist them in understanding and fulfilling their obligations under the Act, including by establishing a national small business hotline; developing plain English educational materials; and developing and publishing templates for small businesses to assist in preparing Privacy Policies.

11.47 In the ALRC's view, however, inconsistency and fragmentation in the regulation of personal information at the federal, state and territory level does create an unjustified compliance burden. Time and money can be spent identifying sources of privacy obligations and complying with disparate law and inconsistent privacy standards in different jurisdictions. This problem is acute when implementing programs and services by agencies and organisations at a national level. The costs associated with this burden are both financial and social.

11.48 The ALRC makes a number of proposals throughout this Discussion Paper that are intended to minimise inconsistency and fragmentation, and streamline the regulation of personal information. For example, as outlined above, the ALRC proposes the amendment of the *Privacy Act* to clarify the scope of the Act in relation to the private sector; the adoption of a single set of privacy principles at the federal, state and territory level; and a redraft of the *Privacy Act* to minimise its complexity. The ALRC also makes a number of proposals to clarify the interaction of different laws that regulate the handling of personal information, particularly laws that regulate the health sector, credit reporting, and the telecommunications industry.[76]

11.49 The ALRC also proposes a greater emphasis on the OPC's educative role including by issuing guidance about the interaction of the *Privacy Act* with other federal, and state and territory laws that regulate the handling of personal information. Parts F and J also include a number of proposals directed to encouraging greater

---

75 See discussion in Ch 4.

76 See Part G (Credit Reporting Provisions), Part H (Health Services and Research) and Part J (Telecommunications).

cooperation between privacy regulators and other bodies with responsibility for privacy.

Multiple regulators

11.50 Some industries are required to comply with multiple layers of privacy regulation overseen by more than one regulator. This has been identified as an issue in the telecommunications industry[77] and the financial services sector. For example, bank customers with privacy complaints may choose to lodge a complaint with the Banking and Financial Services Ombudsman (BFSO) or the OPC. A financial services organisation has reported that multiple regulators can work well together when there is effective communication and coordination.[78]

11.51 In IP 31, the ALRC noted that industry ombudsmen and the OPC may take opposing views in relation to the same privacy complaint. Concerns were expressed to the OPC Review about the lack of clarity in the respective complaint handling responsibilities of the federal and NSW privacy commissioners,[79] and that consumers may not know which regulator to complain to or which law applies to their matter.[80]

Submissions and consultations

11.52 In IP 31, the ALRC asked whether the multi-layered regulation of personal information handling raises any issues in relation to the existence of multiple privacy regulators in particular industry sectors and across the states and territories.[81]

11.53 Stakeholders noted that the lack of consistency of federal and state and territory privacy regimes leads to confusion about where and how to complain,[82] and that it would be useful to have a 'one-stop shop' for complaint handling.[83]

11.54 A number of organisations reported that the existence of multiple regulators also increases the compliance cost to business by increasing the number of 'compliance

activities' required each year, duplicating effort, incurring additional expense in responding to privacy inquiries and in establishing procedures to respond to complaints, and slower resolution of issues.[84]

11.55 Privacy regulators also noted difficulties. The OVPC submitted that there will be cases where privacy regulators cannot agree on which privacy law applies.[85] The OPC noted that the existence of multiple regulatory bodies does not necessarily lead to negative outcomes. The OPC emphasised that lack of consistency in legislation is often the primary source of the problem, rather than the existence of more than one regulator.[86] The OPC observed, however, that the existence of multiple regulators at the federal, state and territory level raises three concerns.

> First, it can be difficult for individuals to understand their rights, and know how to enforce them. Second, organisations may bear increased compliance costs by having to obey multiple sets of regulations. Third, this may lead to unnecessary duplication of effort and resource expenditure by regulators.[87]

11.56 The OPC considered that the existence of multiple regulators in one sector presents the potential risks of forum shopping, inefficient use of resources, and inconsistent outcomes. The OPC was of the view, however, that these issues could be overcome by

> creating memoranda of understanding, harmonisation of complaint-handling procedures and legislative interpretation, and appropriate referral mechanisms. Where the source of these problems is inconsistent legislation, clarifying the scope of each regulator's jurisdiction could help to avoid such risks, provided this does not lead to gaps in regulatory coverage.[88]

11.57 The Australian Privacy Foundation submitted that having more than one regulator is important for 'peer review', which can contribute to the maintenance of high standards and a consumer focus. It noted, however, that it is essential that multiple privacy regulators establish a good working relationship.[89]

11.58 The need for regulators with expertise in certain industry sectors was noted in other submissions. For example, the NHMRC submitted that health privacy issues require the attention of regulators who are expert in privacy and also have specific expertise in the health services and health and medical research sectors.[90] The Australian Bankers' Association noted that the majority of the few privacy-related

complaints the BFSO receives are part of wider banking complaints. It is therefore convenient for the customer to have the dispute dealt with by the one body, particularly as the OPC would not have the power to determine the banking aspects of the dispute.[91]

ALRC's view

11.59 In the ALRC's view, there are a number of benefits in having multiple regulators that are responsible for privacy. It is preferable to have privacy regulators at the federal, state and territory level as it ensures that citizens in each jurisdiction have a regulator they can approach for advice and to make a complaint. Similarly, organisations that are subject to local privacy laws have access to a local regulator who is aware of their circumstances and can provide advice and training on implementing the legislation.[92]

11.60 Further, industry-specific regulators, such as the BFSO and the Telecommunications Industry Ombudsman, play an important role in the regulation of personal information handling as they provide industry expertise that the OPC does not possess. Industry-specific regulators also reduce the volume of privacy complaints that would otherwise be made to OPC, freeing the OPC's resources for other functions.

11.61 Another potential benefit is peer review and the promotion of high standards of performance. This will be facilitated by privacy regulators interpreting a single set of privacy principles, and transparency can be promoted by publishing their decisions and guidance on the operation of the principles.

11.62 The ALRC also accepts, however, that there is evidence to suggest that multiple privacy regulators can create confusion for individuals in making complaints, and for organisations and agencies in seeking advice. Further, it can create a compliance burden for businesses and result in the inefficient use of privacy regulators' resources.

11.63 The ALRC therefore makes a number of proposals that are aimed at improving the operation of multiple privacy regulators. These proposals are summarised in Chapter 10 and are aimed at achieving greater cooperation between privacy regulators.

11.64 Other relevant proposals include amending the *Privacy Act* to empower the Privacy Commissioner to delegate all or any of the powers in relation to complaint handling conferred on the Commissioner by the Act;[93] the development of memoranda of understanding between the OPC and other bodies with responsibility for privacy; and the development and publication of complaint-handling policies, enforcement

guidelines and educational material that addresses the role and functions of the various bodies with responsibility for information privacy.[94]

Government contractors

11.65 While information about federal, state and territory privacy regimes is publicly available, Australian Government, and state and territory agency contracts are not. This makes it difficult to detect whether contractual privacy provisions are inconsistent with the *Privacy Act*.[95] In IP 31, the ALRC asked whether privacy provisions in Australian Government, state or territory agency contracts contribute to inconsistency and fragmentation in privacy regulation.[96]

11.66 The OPC submitted that, in many cases, contractual privacy provisions are an appropriate way to incorporate higher privacy obligations than may otherwise apply, or to maintain privacy protections that already apply to personal information. For example, they may compel a contractor to undertake specific privacy-related activities, such as mandatory reporting of suspected privacy breaches, or to undertake staff training.[97]

11.67 The Department of Health and Ageing submitted that the standard provisions developed for inclusion in each of the Department's contracts require contractors and consultants to comply with relevant IPPs and National Privacy Principles (NPPs) or an approved privacy code in relation to their activities under the contract and to impose equivalent obligations on any subcontractor.[98]

11.68 The Australian Privacy Foundation submitted, however, that privacy clauses in contracts are often overly legalistic, claiming to cover all possibilities but too often failing to allocate clearly responsibility for breaches.[99] The National Association for Information Destruction submitted that Australian agencies have taken an inconsistent approach to documents containing information regulated by the Act.[100]

Commonwealth contracts

11.69 The *Privacy Act* imposes obligations on agencies entering into contracts to provide services to or on behalf of the agency. Section 95B requires an agency entering into a Commonwealth contract to take contractual measures to ensure that a contracted service provider for the contract or a subcontractor does not do an act or engage in a

99 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

100 National Association for Information Destruction, *Submission PR 133,* 19 January 2007.

practice that would breach the IPPs. The *Privacy Act* defines a 'contracted service provider' as 'an organisation that is or was a party to the government contract and that is or was responsible for the provision of services to an agency or a State or Territory authority under the government contract', or a subcontractor for the government contract.[101]

11.70 A small business that is also a contracted service provider will be subject to the *Privacy Act* in respect of the performance of that contract.[102] A state or territory authority contracting with an agency will not be covered by the Act. A 'State contract' is defined as a 'contract, to which a state or territory or state or territory authority is or was a party, under which services are to be, or were to be, provided to a state or territory authority'.[103] Section 16F of the *Privacy Act* provides that an organisation must not use or disclose personal information for direct marketing unless the use or disclosure is necessary to meet an obligation under the contract.

11.71 An act done or practice engaged in by a contracted service provider for the purposes of meeting an obligation under a contract will not breach an NPP or an approved privacy code if the act or practice is authorised by the contract. Therefore, the NPPs or a code can be varied by the contract and a breach of an NPP or code will not have occurred if the contractual obligations require the contracted service provider to do an act or practice that would be inconsistent with an NPP or an approved code to which it is bound.[104]

11.72 The Privacy Commissioner has jurisdiction to investigate directly the action of a contractor or subcontractor. Section 13A(1)(c) provides that a breach of a 'non-complying' privacy provision in a Commonwealth contract is an interference with privacy. The standards the Privacy Commissioner would apply in investigating a complaint are those set out in the contract.[105]

11.73 The obligations under s 95B extend to a contracted service provider who is not within Australia.[106] Although the Privacy Commissioner could take action overseas to

103 The Australian Government Solicitor has advised, however, that notwithstanding this exclusion, agencies need to be mindful of the obligation under IPP 4(b) to ensure that everything reasonable is done to prevent unauthorised use or disclosure of personal information when contracting with a state or territory authority: Australian Government Solicitor, *Outsourcing: Agency Obligations Under the Privacy Act*, Legal Briefing No 63 (2002), 4.

investigate complaints, enforcement of the provisions of the contract overseas may be difficult.[107]

Submissions and consultations

11.74 In IP 31, the ALRC asked whether the *Privacy Act* provisions relating to Commonwealth contractors are appropriate and effective.[108]

11.75 The OPC noted that the *Privacy Act* does not restrict Australian Government agencies from including contractual clauses that refine existing privacy obligations, or impose additional obligations on a contractor, which may be appropriate under certain circumstances. It submitted that, in this regard, the current provisions are appropriate and effective.[109] The OPC stated, however, that the definition of 'contracted service provider' in the Act could be reviewed to ensure that it is adequate to cover all the types of activities that private sector organisations might perform on behalf of agencies.[110]

11.76 A number of stakeholders considered that the provisions are unclear and require redrafting.[111] For example, the OVPC submitted that it is not clear whether contracted service providers are able to contract out of their obligations under the NPPs or a code. The OVPC suggested that the position under the *Information Privacy Act 2000* (Vic) may be clearer in this regard—organisations cannot contract out of their privacy obligations.[112] The OVPC also noted that difficulties have arisen in relation to the enforceability of provisions that purport to contractually bind a service provider to obligations under the *Information Privacy Act*.[113]

11.77 Electronic Frontiers Australia submitted that the *Privacy Act* should be amended to place obligations on organisations that engage contractors to ensure the contractor only uses or discloses personal information given to it for the purposes for which it is given and to keep it secure. Electronic Frontiers Australia also submitted that it would not support an exemption for Commonwealth contractors that are small businesses or small business operators.[114]

ALRC's view

11.78 In the ALRC's view, the *Privacy Act* provisions relating to Commonwealth contractors remain appropriate and effective. The ALRC notes the comments of stakeholders that the contracted service providers provisions are unclear. While the ALRC does not share this view, the redraft of the *Privacy Act* proposed in Chapter 3 may deal with these concerns.

11.79 Problems caused by government contractors being subject to two sets of privacy principles will be addressed by the proposed UPPs replacing the IPPs and NPPs. The operation of an exception to the UPPs or an exemption may, however, still result in an agency and organisation being subject to different privacy standards. The government contractor provisions of the *Privacy Act* should therefore be retained to ensure that organisations that contract with an Australian Government agency are subject to the same privacy principles as the agency itself.

11.80 Other *Privacy Act* provisions relating to government contractors should also be retained, including those relating to direct marketing and the disclosure of certain provisions of Commonwealth contracts. If the ALRC's proposal to remove the small business exemption is not implemented, a small business that is also a contracted service provider should continue to be subject to the *Privacy Act* in respect of the performance of that contract.[115]

11.81 The OPC has commented that the definition of 'contracted service provider' in the Act could be reviewed to ensure that it is adequate to cover all the types of activities that private sector organisations might perform on behalf of agencies. The ALRC did not receive any other submissions on this issue. The ALRC remains interested in views on what types of activities are not covered by the definition of 'contracted service provider', and whether the definition should be amended. The ALRC is also interested in whether the definition of 'State contract' under the Act is adequate.

Question 11–1 Are the definitions of 'contracted service provider' and 'State contract' under the *Privacy Act* adequate? For example, do they cover all the types of activities that organisations might perform on behalf of agencies?

National consistency issues

11.82 The OPC Review was told that contracted service providers can be required to comply with three sets of privacy principles—the NPPs which apply to them in their

115 See Ch 35.

capacity as private sector organisations, the IPPs which apply to them under contracts granted in accordance with s 95B of the *Privacy Act*, and any applicable state or territory privacy laws.[116] This may be an issue particularly for organisations that provide contracted services involving personal information to both Australian Government and state or territory agencies.

11.83 Telstra advised the OPC Review that the proliferation of state legislation and inconsistency between state and federal legislation can add costs to conducting business with government agencies.[117] The OPC recommended that the Australian Government consider reviewing the IPPs and the NPPs with a view to developing a single set of principles that would apply to both Australian Government agencies and private sector organisations. In its view, this would address the issues surrounding government contractors.[118]

11.84 Non-government agencies receiving program funding from the Australian Government and state or territory governments may be required to comply with state privacy regimes as well as the *Privacy Act*. The OPC has reported that a charity that administers an employment services and community services program may have to comply with the NPPs and the IPPs, department procedural requirements and state or territory law. The issue is further complicated by the fact that the organisation may need to collect health information, which is subject to state or territory health records legislation.[119]

11.85 In IP 31, the ALRC asked whether any issues arise for Commonwealth contractors that are subject to the NPPs and the IPPs. The ALRC also asked whether any issues arise for organisations that provide contracted services involving personal information to both Australian Government and state or territory agencies.[120]

11.86 National consistency issues were raised in a number of submissions.[121] For example, the Government of South Australia submitted that:

> a State/Territory privacy authority may approve a Memorandum of Understanding concerning information disclosure between government-based welfare agencies to apply to service delivery in a particular circumstance, or grant an exemption to the privacy principles for a specified research study, but this cannot be extended to NGOs

> bound by an alternative regime, though they may be partners in service delivery or hold a considerable volume of the relevant client information.[122]

11.87 A large number of stakeholders agreed that the development of a single set of principles that applied at the federal, state and territory level would deal with these issues.[123] For example, Telstra noted that contractors to state governments are not bound by privacy rules in some states, and submitted that such issues could be resolved through the introduction of a single set of privacy principles across all Australian jurisdictions.[124]

State and territory contractors

11.88 The privacy regimes in some states and territories include privacy principles that are similar to the IPPs, while other jurisdictions have modelled their principles on the NPPs. Although the privacy principles in the various state and territory regimes often resemble the IPPs and NPPs, they are not identical.

11.89 Some state and territory privacy regimes require organisations that provide contracted services to a state or territory government agency to be bound by the relevant state privacy principles for the purposes of the contract.[125] Other state regimes provide that compliance with the state privacy regime is subject to any outsourcing arrangements,[126] or are silent on this issue.[127]

Submissions and consultations

11.90 In IP 31, the ALRC asked whether there are concerns that organisations acting under a state or territory contract may not be required to adhere to the same privacy standards that are applicable to organisations under the *Privacy Act*.[128]

11.91 The OPC submitted that it has ongoing concerns that state or territory government contractors, who are otherwise organisations, may not be bound by the *Privacy Act* or equivalent standards when performing functions under state or territory contracts. The OPC noted that the absence of consistent regulation for state contractors and the possible imposition of different obligations can create gaps in privacy

protections and confusion about which body should regulate the privacy practices of state contractors.

> For example, in one instance, the Office had to decline to investigate a worker's compensation matter because it involved a state contractor, but no state privacy regime existed to deal with the matter. In other cases, both the Office and state privacy bodies have declined to investigate the practices of a state contractor.[129]

11.92 The OPC submitted that state and territory contractors should be covered by the *Privacy Act*, or at least equivalent legislation. The OPC noted that this could be achieved by all states and territories enacting privacy legislation which imposes protections on their agencies and contractors that are at least equivalent to the *Privacy Act*. The OPC submitted in the alternative that s 7B(5) of the *Privacy Act* could be amended to ensure that the NPPs apply to state contractors where no equivalent state or territory privacy laws exist.[130]

11.93 The OVPC submitted that the *Privacy Act* should be amended to recognise state privacy laws may apply to contracted service providers seeking to be covered by a voluntary federal code, and to import a requirement to consult with and seek the approval of the states before any code covering state contracts is approved.[131]

ALRC's view

11.94 The Explanatory Memorandum to the Privacy Amendment (Private Sector) Bill 2000 (Cth) states that it was the intention of the Australian Parliament that the acts and practices of state and territory contractors would 'not be covered by the Commonwealth's privacy scheme but rather the State or Territory's own privacy standards'.[132]

11.95 In the ALRC's view, organisations that contract with a state government should be regulated by privacy legislation. In its 1998 report, *Contracting Out of Government Services*, the Administrative Review Council concluded that

> the contracting out of government services should not result in a loss or diminution of government accountability or the ability of members of the public to seek redress where they have been affected by the actions of a contractor delivering a government service.[133]

11.96 The ALRC considered proposing that the *Privacy Act* should be amended to include a 'roll-back provision' to cover state contractors. The ALRC believes, however, that such a law would intrude too heavily on state and territory government

business. Instead, the ALRC proposes that state and territory privacy legislation should include provisions relating to state and territory contractors.[134]

11.97 In the ALRC's view, organisations would rarely seek to be covered by a code under the *Privacy Act* in relation to state contracts. The ALRC does not agree that the *Privacy Act* should be amended to include a requirement for the OPC to consult with and seek the approval of the states before any code is approved covering state contracts. This requirement will not be necessary if each state and territory introduces provisions to regulate government contractors in that jurisdiction. This issue could be addressed, however, in a memorandum of understanding between the OPC and state and territory privacy regulators.

Introduction

12.1 This chapter considers how the *Privacy Act 1988* (Cth) interacts with a number of federal laws that regulate the handling of personal information. The chapter first considers the use of inconsistent terms and definitions across federal information laws. The chapter next discusses the interaction between the *Privacy Act*, *Freedom of Information Act 1982* (Cth) (FOI Act) and the *Archives Act 1983* (Cth), and considers whether the three Acts should be combined in the one Act and administered by a single body. The chapter then examines how the *Privacy Act* interacts with secrecy provisions in federal legislation. The final section of the chapter considers whether the confidentiality provisions in Part VIII of the *Privacy Act* are still required.

Terms and definitions

12.2 Chapter 3 considers various definitions used in the *Privacy Act* including 'personal information', 'sensitive information', 'record' and 'generally available publication'. This section of the chapter is concerned with the consistent use of terms and definitions across federal information laws.

12.3 Federal legislation other than the *Privacy Act* regulates the handling of personal information. Sometimes this legislation adopts different terms or definitions to those used in the *Privacy Act*. For example, the concept of 'personal information' is central to the regime established by the *Privacy Act*, but other federal legislation adopts different terms such as 'personal affairs' to describe similar information.[1]

12.4 The definitions of other terms used in the *Privacy Act* sometimes differ from the same terms used in other federal legislation. For example, the definition of 'consent' under the *Spam Act 2003* (Cth) and the *Do Not Call Register Act 2006* (Cth) differs from the *Privacy Act* definition.

12.5 Terms and definitions also vary across federal, state and territory laws. For example, each of the state and territory regimes contain definitions of 'personal information' that are similar to the definition of the term under the *Privacy Act*, but not identical.[2]

12.6 In the Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether the inconsistent use of terms and definitions that regulate the handling of personal information create any difficulties.[3] Most submissions stated that federal, state and territory privacy legislation should use terms consistently.[4] A number of submissions noted that inconsistent definitions can add to the complexity of privacy laws and can lead to unjustified compliance burden and cost.[5]

12.7 The Office of the Privacy Commissioner (OPC) noted, however, that it is not aware of major difficulties in privacy regulation caused by multiple definitions for the same term and would be wary of unintended consequences arising from attempts to unify definitions inappropriately.[6]

12.8 In the ALRC's view, the inconsistent use of terms and definitions in privacy legislation contributes to the complexity of privacy law and may increase compliance burden and cost. The ALRC therefore proposes that the Australian Government should ensure the consistency of definitions and key terms (for example, 'personal

6 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

information', 'sensitive information' and 'health information') in federal legislation that regulates the handling of personal information.

12.9 There will be occasions, however, when other policy considerations will justify the use of terms or definitions that differ from those used in the *Privacy Act*. This is the case in relation to the use of different definitions of 'consent' under the *Privacy Act*, *Spam Act* and the *Do Not Call Register Act*. These issues are discussed further in Chapter 64. The use of inconsistent definitions across federal, state and territory legislation that regulates personal information specifically is discussed in Chapters 4 and 14.

Proposal 12–1 The Australian Government and state and territory governments should ensure the consistency of definitions and key terms (for example, 'personal information', 'sensitive information' and 'health information') in federal, state and territory legislation that regulates the handling of personal information.

Freedom of Information Act 1982 (Cth)

12.10 The interrelationship between the FOI Act and the *Privacy Act* is significant. The FOI Act and the *Privacy Act* both regulate the way in which information is handled in government, but have different objectives. Freedom of information legislation is concerned mainly with transparency in government and protects privacy only to the extent that non-disclosure is, on balance, in the public interest. In contrast, privacy legislation is primarily focused on data protection and provides for transparency only to the extent that it enhances the information privacy rights of individuals.[7] The *Privacy Act* and the FOI Act are designed to interact with each other. For example, the public sector exemptions under the *Privacy Act* largely mirror the exemptions under the FOI Act.[8]

Disclosure of personal information

12.11 The most obvious interaction between the two Acts is that disclosing an individual's personal information to another person under the FOI Act has the potential to interfere with that individual's privacy. The FOI Act provides that every person has a legally enforceable right to obtain access to a document of an agency or an official document of a Minister, other than an exempt document.[9]

12.12 Section 41(1) of the FOI Act provides that a document is an exempt document if its disclosure under the Act would involve the unreasonable disclosure of personal

8 See discussion in Ch 33.

9 *Freedom of Information Act 1982* (Cth) s 11.

information about any person (including a deceased person). The definition of 'personal information' in the FOI Act corresponds with that in the *Privacy Act*.[10] The exemption under s 41(1) is subject to an exception that a person cannot be denied access to a document on the basis that it contains his or her own information.[11] It does not prevent reliance, however, on the exemption where the information cannot be separated from personal information about another person.[12]

12.13 The exemption under s 41 has been the subject of criticism and commentary.[13] In *Open Government: A Review of the Federal Freedom of Information Act 1982* (ALRC 77), the ALRC and the Administrative Review Council (ARC) concluded that the provision should be amended to clarify the relationship between the FOI Act and the *Privacy Act*. To this end the review concluded that s 41 should be reworded to provide that a document is exempt if it contains personal information, the disclosure of which would constitute a breach of IPP 11; and the disclosure would not, on balance, be in the public interest.[14] The review also recommended that a Freedom of Information Commissioner[15] should issue guidelines to assist agencies to determine whether information is exempt under s 41.[16] These recommendations have not been implemented.[17]

Relationship with the 'Use and Disclosure' principle

12.14 In the ALRC's view, s 41 of the FOI Act should be amended to clarify the relationship between the FOI Act and the *Privacy Act*.[18] First, the section should provide that a document is exempt if it contains personal information and the disclosure of that information would constitute a breach of the proposed 'Use and Disclosure' principle of the proposed Unified Privacy Principles (UPPs). The 'Use and Disclosure' principle provides the appropriate test of what constitutes a reasonable disclosure of personal information. This amendment will also clarify that a document

18 The ALRC did not receive any submissions on this issue.

cannot be withheld on privacy grounds where its disclosure is consistent with the 'Use and Disclosure' principle.[19]

12.15 In the FOI context there is, however, an additional dimension which is not reflected in the exceptions to the 'Use and Disclosure' principle—the public interest. The word 'unreasonable' in s 41 of the FOI Act incorporates a public interest test.[20] Whether disclosure is 'unreasonable' depends on whether the public interest factors that favour disclosure outweigh the privacy interests of the third party. To reflect this, s 41 should be amended to require an agency to consider whether, in respect of a particular document, disclosure would be in the public interest notwithstanding that disclosure would breach the 'Use and Disclosure' principle. This amendment will ensure the correct balance between the public interest in disclosure of a document and an individual's right to privacy.

12.16 The 'Use and Disclosure' principle includes an exception for uses and disclosures that are 'required or authorised by or under law'. If the 'required or authorised by or under law' exception applied in relation to s 41, it could be argued that any disclosure of personal information pursuant to the FOI Act would not be a breach of the 'Use and Disclosure' principle because disclosure under the FOI Act is authorised by or under law. In deciding, for the purposes of s 41, whether disclosure would constitute a breach of the 'Use and Disclosure' principle, this exception should be ignored insofar as it relates to release of information under the FOI Act. This will avoid any circularity that may otherwise arise from having a direct reference to the 'Use and Disclosure' principle in the section.[21]

Deceased individuals

12.17 Section 41 of the FOI Act provides that a document is an exempt document if its disclosure would involve the unreasonable disclosure of personal information about any person, including a deceased person. The proposed 'Use and Disclosure' principle includes an exception where an individual consents to a use or disclosure of his or her personal information. This exception will not be applicable in the case of deceased individuals.[22] Where none of the other exceptions to the 'Use and Disclosure' principle apply, this may give rise to a situation in which the personal information of a deceased individual cannot be disclosed. To ensure that information is not unreasonably

21 See discussion in Ch 13.

22 The ALRC is not proposing that the *Privacy Act* be amended to provide for decisions to be made by third parties on behalf of deceased individuals. See discussion in Ch 3.

withheld in these circumstances, the ALRC proposes that where personal information is about a deceased individual, and the use or disclosure would otherwise require consent, an agency should be required to consider whether the proposed use or disclosure would involve an unreasonable use or disclosure of personal information about any person, including the deceased person.

Proposal 12–2 Section 41(1) of the *Freedom of Information Act 1982* (Cth) should be amended to provide that a document is exempt if it:

(a) contains personal information, and the disclosure of that information would constitute a breach of the proposed 'Use and Disclosure' principle and disclosure would not, on balance, be in the public interest; or

(b) contains personal information of a deceased individual, and the disclosure of that information would constitute a breach of the proposed 'Use and Disclosure' principle (but where the principle would require consent the agency must consider whether the proposed disclosure would involve the unreasonable disclosure of personal information about any individual including the deceased individual) and disclosure would not, on balance, be in the public interest.

Definition of 'personal information'

12.18 In Chapter 3, the ALRC proposes that the definition of 'personal information' should be amended to mean 'information or an opinion, whether true or not, and whether recorded in a material form or not, about an identified or reasonably identifiable individual'. In the ALRC's view, the definition of 'personal information' should not be limited, as it currently is, to information about an individual who can be identified 'from the information'. For example, if an agency has access to other information and is able to link that information with information it holds in such a way that an individual can be identified, that individual is 'reasonably identifiable' and the information should be 'personal information' for the purposes of the *Privacy Act.* This amendment will bring the definition into line with other jurisdictions and international instruments.

12.19 The ALRC notes that s 41 of the FOI Act originally referred to information relating to a person's 'personal affairs'. It was amended in 1991, however, to bring its terminology into line with that used in the *Privacy Act* so that it now refers to 'personal information'.[23] The ALRC can see no reason why information about a 'reasonably identifiable individual' should not be protected under the FOI Act. The ALRC has therefore proposed that the definition of 'personal information' in the FOI Act should be amended to bring it into line with the ALRC's proposed definition.

23 *Freedom of Information Amendment Act 1991* (Cth) s 29.

Proposal 12–3 'Personal information' should be defined in the *Freedom of Information Act 1982* (Cth) as 'information or an opinion, whether true or not, and whether recorded in a material form or not, about an identified or reasonably identifiable individual'.

Guidelines

12.20 Agencies will still have to consider various factors on a case by case basis to determine whether a document falls within the exemption under s 41 of the FOI Act. In the ALRC's view, the body that is primarily responsible for administration of the FOI Act should issue guidelines to assist agencies to determine when information will be exempt under s 41. Until a Freedom of Information Commissioner is established, the body that is primarily responsible for administration of the *Freedom of Information Act 1982* (Cth) is the Attorney-General's Department.[24] The guidelines should incorporate guidance issued by the Privacy Commissioner on the proposed 'Use and Disclosure' principle.

12.21 The FOI Act also should require the body that is primarily responsible for administration of the FOI Act to consult the Privacy Commissioner when developing guidelines on s 41. The two bodies should liaise closely about relevant developments in this area and the guidelines should be reviewed whenever necessary.

Proposal 12–4 The *Freedom of Information Act 1982* (Cth) should be amended to require that the body that is primarily responsible for administration of the Act is to:

(a) develop and publish guidelines on the interpretation and application of s 41;

(b) consult with the Office of the Privacy Commissioner before issuing guidelines on the interpretation and application of s 41.

Required or authorised by or under law

12.22 An agency may decide to release personal information pursuant to a freedom of information request (FOI request) in some circumstances. The current Information Privacy Principle 11 (IPP 11) and the proposed 'Use and Disclosure' principle impose a general obligation on agencies not to disclose personal information to persons or organisations other than the individual concerned or his or her agent, unless one of the stated exceptions apply. A release of personal information pursuant to an FOI request is unlikely to breach IPP 11 or the proposed 'Use and Disclosure' principle, as it would

24 The role of a FOI Commissioner is discussed below.

be considered to be 'authorised' under law.[25] As noted in ALRC 77, however, the meaning of 'authorised' in this context is not clear.

> On one view, any release of information pursuant to a request made under the FOI Act is an 'authorised' release of information. On another view, the FOI Act does not 'authorise' the release of information because s 14 of the Act makes it quite clear that nothing in the Act prevents the release quite apart from the Act of information that can be properly released.[26]

12.23 In ALRC 77, the ALRC and the ARC recommended that the *Privacy Act* be clarified to provide that a release of personal information under the FOI Act constitutes a release that is 'required or authorised by law' for the purpose of IPP 11(1)(d).[27] This recommendation has not been implemented.

12.24 The ALRC considers that, in the interest of certainty, this issue should be clarified in the FOI Act. The ALRC therefore proposes that the FOI Act be amended to provide that disclosure of personal information in accordance with the FOI Act is a disclosure that is required or authorised for the purposes of the proposed 'Use and Disclosure' principle. In the ALRC's view, this will eliminate any possible confusion about the meaning of the exception as it relates to a release of information under the FOI Act.

12.25 The requirement that the disclosure of personal information be 'in accordance with the Act' would include that the consultation requirements under s 27A of the Act have been complied with. Section 27A of the FOI Act provides that an agency must consult with a third party before releasing his or her personal information if the agency determines that the person might reasonably wish to contend that the information is exempt and it is 'reasonably practicable' to consult with him or her. If an agency releases information pursuant to an FOI request without having regard to the provisions of the Act relating to consultation it would be open to the Privacy Commissioner to find that the agency had breached the 'Use and Disclosure' principle and to make a declaration, including that the complainant is entitled to compensation for any loss or damage suffered by reason of the information being released.

Proposal 12–5 The *Freedom of Information Act 1982* (Cth) should be amended to provide that disclosure of personal information in accordance with the *Freedom of Information Act 1982* (Cth) is a disclosure that is required or authorised for the purposes of the proposed 'Use and Disclosure' principle under the *Privacy Act*.

---

25 *Privacy Act 1988* (Cth) s 14, IPP 11(1)(d). Australian Government Attorney-General's Department, *Freedom of Information Memorandum 93: FOI and the Privacy Act* (1992) states that disclosure required under the FOI Act comes within this exemption. See discussion in Ch 13 relating to provisions in federal legislation that require or authorise disclosure.

27 Ibid, [10.23]–[10.24] and Rec 65.

Access and correction

12.26 Both the FOI Act and the *Privacy Act* enable individuals to access their own personal information and to amend or annotate that information if it is incorrect, incomplete, out-of-date or misleading. The rights provided by the *Privacy Act* are found in IPP 6 and IPP 7. The amendment rights in the FOI Act are located in Part V and are dependent on a person having previously obtained lawful access under the Act to the relevant documents. Persons who fail to satisfy this requirement must use the procedures provided in the *Privacy Act*.[28]

12.27 Part V was included in the FOI Act before the introduction of the *Privacy Act*. In 1987, the Senate Standing Committee on Legal and Constitutional Affairs recommended that the amendment provisions be transferred from the FOI Act to privacy legislation 'should the latter be enacted'.[29] This did not happen when the *Privacy Act* was enacted in 1988.

12.28 The *Privacy Act* includes provisions to ensure that the access and amendment provisions under both Acts interact with each other.[30] The OPC has stated that as a result of the terms of IPPs 6 and 7, read in conjunction with s 34 of the *Privacy Act*, it will generally decline to investigate a complaint about access or amendment of public sector information if the complainant has not exhausted all FOI Act processes.[31] The OPC noted that this can result in complainant dissatisfaction and confusion, and unnecessary administrative costs and processes. Since 2001, the OPC has declined 17 complaints about access and seven complaints about amendment.[32]

12.29 Under IPP 7 an applicant may apply for amendment of personal information on the grounds that it is inaccurate or, given its purpose, irrelevant, misleading, incomplete or not up-to-date. The FOI Act does not include a reference to 'purpose'.[33] Further, the right to amend personal information under IPP 7 is broader than the corresponding right in the FOI Act. An application for amendment will need to be dealt with under the *Privacy Act* rather than the FOI Act where the amendment sought is on

32 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007. The OPC has declined these complaints under s 41(1)(f) of the *Privacy Act* on the grounds that the complaint would best be dealt with under another law.

33 M Paterson, *Freedom of Information and Privacy in Australia: Government and Information Access in the Modern State* (2005), [4.17].

the grounds that the information is irrelevant; where a person seeks deletion of personal information; or where a person seeks amendment of personal information in a record to which he or she has not been provided lawful access.[34]

12.30 An application to access and amend a document under the *Privacy Act* cannot be made before the period to appeal a decision made under the FOI Act to the Federal Court has expired or such an appeal has been determined.[35] Under the FOI Act, however, a person may also seek review by the Administrative Appeals Tribunal (AAT) of an agency's decision under the Act not to grant access and amendment of personal information.[36]

Submissions and consultations

12.31 In IP 31, the ALRC asked whether the overlap of the *Privacy Act* and FOI Act provisions relating to access and amendment of records gives rise to any difficulties.[37]

12.32 A number of stakeholders submitted that the overlap has created confusion for both agencies and the public.[38] It was argued in some submissions that access and amendment should continue to be provided primarily under the FOI Act.[39] The Governments of Victoria and Queensland noted that access and amendment rights are generally exercised under freedom of information legislation in their jurisdictions.[40] The Government of Victoria noted that:

> FOI laws would need to be retained under any harmonised scheme. That being so, it is on the whole simpler for those bodies to continue to apply FOI laws to requests by individuals for their personal or health information—that is, to maintain one statutory process for all access requests. This is the reason for the Victorian provisions, and it is suggested that this approach ought to be retained.[41]

12.33 The Office of the Information Commissioner Northern Territory stated that the FOI Act has an advantage because it deals with procedural matters in detail. The Office suggested that:

> One approach to avoid duplication would be to state in the privacy principles that requests for access or amendment in respect of government agencies must be made under the FOI Act to the extent that there is power to deal with the issues under that Act.[42]

12.34 The Office of the Information Commissioner Northern Territory also submitted, however, that there may be some argument for removing the amendment provisions from the FOI Act as they sit naturally within the realm of privacy protection, while the access provisions are based on much broader considerations. The Office also noted that simply deleting or transferring the FOI access provisions would not be an ideal solution because FOI access applications are frequently made up of a mix of personal and non-personal information. An applicant in this situation would therefore have to make two applications.[43]

12.35 The OPC and the Commonwealth Ombudsman submitted that there is an argument that IPP 6 and IPP 7 should be allowed to work to the full, rather than having their practical operation limited by the FOI Act.[44] The OPC noted that it may be contrary to the spirit of the *Privacy Act*, and inconsistent with the rights of access under NPP 6, if IPP 6 and IPP 7 continue to be subject to the FOI Act. The OPC suggested that it would be unnecessary to subject individuals to the FOI Act process, which is primarily designed for accessing the deliberative process of government, if a simpler process could be facilitated under the *Privacy Act*.

> Accordingly, the Office suggests that IPPs 6 and 7 could be amended to provide a further mechanism by which individuals can seek access to and correction of their personal information held by Australian and ACT government agencies, in addition to the FOI Act process. This would not mean creating provisions that are inconsistent with the FOI Act. Rather, it may involve amending the IPPs to require agencies to give access, subject to particular exceptions listed under IPP 6 (including relevant exemptions currently found in the FOI Act). This may also need to be considered if a single set of privacy principles were adopted.[45]

ALRC's view: Access and correction to be dealt with in the Privacy Act

12.36 In ALRC 77, the ALRC and the ARC considered the overlap of the *Privacy Act* and FOI Act provisions relating to access and amendment of records, and concluded that it did not give rise to any major difficulties.[46] Submissions to this Inquiry have noted, however, that the overlap can lead to confusion for agencies and the public.

43 Ibid.

44 Commonwealth Ombudsman, *Submission PR 202,* 21 February 2007. See Commonwealth Ombudsman, *Scrutinising Government: Administration of the Freedom of Information Act 1982 in Australian Government Agencies*, Report No 2 (2006), [4.14]–[4.15]; [7.5], [8.2].

45 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

46 Australian Law Reform Commission and Administrative Review Council, *Open Government: A Review of the Federal Freedom of Information Act 1982*, ALRC 77 (1995), [5.17].

12.37 The ALRC has considered various models for dealing with the overlap, including having access and amendment dealt with exclusively under the FOI Act. Some of the exemption categories in the FOI Act are broad, however, and are based on policy considerations other than privacy. Further, the access procedures under the FOI Act can be cumbersome. The Attorney-General's Department recently reported that 62% of requests for amendment of personal records took over 60 days to process.[47] It is the ALRC's view that individuals should have access to a simple and user-friendly process to access and correct their own personal information.

12.38 Another option is for access to personal information to be dealt with under the FOI Act, and amendment under the *Privacy Act*. In the ALRC's view, however, it would be confusing for agencies and the public to have access and amendment dealt with under more than one Act.

12.39 In the ALRC's view, an individual's right to access or amend his or her own personal information held by an agency should be dealt with under a new Part in the *Privacy Act*. The right to access and amend one's own personal information are fundamental privacy rights[48] and should be dealt with under privacy legislation and subject to oversight by the Privacy Commissioner. The ALRC notes that the majority of applications for access under the FOI Act relate to access to personal information. The *Freedom of Information Annual Report* states that in 2005–06, 85% of the 41,430 FOI requests received that year were for documents containing personal information. It is not clear from the report what percentage of these requests were from individuals seeking access to their own personal information. The remaining 15% of FOI requests were for documents concerning policy development and government decision making. The Report also notes that, in 2005–06, 1,414 FOI requests related to the amendment of personal records.[49]

12.40 The ALRC notes that the heading in IPP 7 refers to 'alteration', and Part V of the FOI Act refers to 'amendment' of personal information. NPP 6 and the proposed 'Access and Correction' principle, however, refer in the heading to 'correction' of personal information. In the interest of consistency with the proposed 'Access and Correction' principle, the new Part should refer to 'correction', rather than 'amendment'.[50]

---

47 Australian Government Attorney-General's Department, *Freedom of Information Annual Report 2005–2006* (2006), [1.32].

48 See, eg, European Commission Working Party on the Protection of Individuals With Regard to the Processing of Personal Data, *Working Document: Transfers of Personal Data to Third Countries: Applying Articles 25 and 26 of the EU Data Protection Directive*, 24 July 1998. See European Parliament, *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data*, Directive 95/46/EC (1995), art 12.

49 A request for personal information means a request for documents which contain information about a person: Australian Government Attorney-General's Department, *Freedom of Information Annual Report 2005–2006* (2006), [1.7]–[1.31].

50 For this reason, the rest of this section refers to 'correction' rather than 'amendment' of personal information.

12.41 The Office of the Information Commissioner Northern Territory submitted that FOI access applications are frequently made up of a mix of personal and non-personal information.[51] In the ALRC's view, this issue can be dealt with administratively by agencies and the AAT, for example, by designing forms to allow for applications relating to personal and non-personal information to be dealt with together.

12.42 In the interest of clarity, the ALRC proposes that the FOI Act be amended to provide that an individual's right to access or correct his or her own personal information is dealt with under the *Privacy Act*, and that Part V of the FOI Act should be repealed.

Proposal 12–6 The *Privacy Act* should be amended to provide a new Part dealing with access to, and correction of, personal information held by an agency.

Proposal 12–7 The *Freedom of Information Act 1982* (Cth) should be amended to:

(a) provide that an individual's right to access or correct his or her own personal information is dealt with under the *Privacy Act*; and

(b) repeal Part V of the Act.

ALRC's view: access

12.43 One issue is that, while the FOI Act[52] and IPP 6 provide a *right* for an individual to access personal information about him or her, NPP 6 and the proposed 'Access and Correction' principle create an obligation for organisations to provide access to personal information. The ALRC has not formed a strong view as to whether the provision dealing with access in the proposed Part dealing with access and correction of personal information held by agencies should be expressed as a right of an individual or an obligation of an agency. In the interest of consistency with the proposed 'Access and Correction' principle, however, the ALRC has proposed that the provision should be expressed as an obligation.

Advice that correction may be made

12.44 There is currently no obligation under the *Privacy Act* or the FOI Act to advise an individual that he or she may request the correction of his or her personal information where that individual has been given access to that information. Such an obligation exists under Information Privacy Principle 6 of the *Privacy Act 1993* (NZ). In the ALRC's view, it is appropriate that agencies should inform individuals of their

51 Office of the Victorian Privacy Commissioner, *Submission PR 217,* 28 February 2007.
52 *Freedom of Information Act 1982* (Cth) s 11.

right to seek correction of their personal information where that individual has been given access to that information.

Use of a mutually agreed intermediary

12.45 NPP 6.3 requires an organisation to consider whether, instead of refusing access, a compromise can be reached using a mutually agreed intermediary that would allow an individual some form of indirect access to his or her personal information, provided that such access serves the needs of both parties. In Chapter 26, the ALRC proposes that the proposed 'Access and Correction' principle provide that an organisation should take reasonable steps to reach a compromise that adequately meets the needs of both parties.[53] In the ALRC's view, this provision could be useful in the context of providing access to personal information held by an agency. It allows for a more flexible response, and balances the need to withhold access to personal information in appropriate circumstances with an individual's right to know what personal information is held about him or her.

Access other than under the Privacy Act

12.46 Section 14 of the FOI Act currently provides that:

> Nothing in this Act is intended to prevent or discourage Ministers and agencies from publishing or giving access to documents (including exempt documents), otherwise than as required by this Act, where they can properly do so or are required by law to do so.

12.47 It is the ALRC's view that this provision should be mirrored in the *Privacy Act*. Where appropriate, agencies should be able to provide an individual with access to their own personal information outside of the process outlined in the proposed Part dealing with access to, and correction of, personal information held by an agency.

Proposal 12–8 The proposed Part of the *Privacy Act* dealing with access to, and correction of, personal information held by an agency should provide that:

(a) if an agency holds personal information about an individual the agency must, if requested by the individual, provide the individual with access to the information, subject to a number of exceptions under the Part;

(b) where an individual is given access to personal information, the individual must be advised that he or she may request the correction of that information;

(c) where an agency is not required to provide the individual with access to personal information because of an exception, the agency must take reasonable steps to reach an appropriate compromise, involving the use of a mutually agreed intermediary, provided that the compromise would allow for sufficient access to meet the needs of both parties; and

53 See Proposal 26–2.

(d) nothing in the Part is intended to prevent or discourage agencies from publishing or giving access to personal information, otherwise than as required by the Part, where they can do so properly or are required to do so by law.

Exceptions

12.48 IPP 6 provides individuals with a right to access a record that contains personal information about them 'except to the extent that the record-keeper is required or authorised to refuse to provide the individual with access to that record under the applicable provisions of any law of the Commonwealth that provides for access by persons to documents'.[54] The effect of this provision is to subject the right to access personal information under the *Privacy Act* to the exemptions under the FOI Act.

12.49 A number of the exemptions under the FOI Act would clearly need to be reproduced in the proposed Part of the *Privacy Act* dealing with access to, and correction of, personal information held by an agency. These exemptions would include, for example, the exemptions relating to documents affecting national security, defence or international relations; documents affecting relations with states; Cabinet documents; Executive Council documents; documents affecting enforcement of law and protection of public safety; and documents subject to legal professional privilege.[55] Other exemptions, however, such as the 'internal working documents' exemption and 'documents concerning certain operations of agencies' may not be appropriate in the privacy context.[56] The ALRC is interested in stakeholder views on what exceptions should apply to the general provision granting an individual the right to access his or her own personal information.

Question 12–1 What exceptions should apply to the general provision granting an individual the right to access his or her own personal information held by an agency? For example, should the exceptions mirror the provisions in Part IV of the *Freedom of Information Act 1982* (Cth) or should another set of exceptions apply?

ALRC's view: correction

12.50 As noted above in relation to access, the ALRC has not formed a strong view on whether the provision dealing with correction in the proposed Part of the *Privacy Act* should be expressed as a right or an obligation. It is the ALRC's preliminary view,

54 *Privacy Act 1988* (Cth) s 14, IPP 6.
55 *Freedom of Information Act 1982* (Cth) ss 33, 33A, 34, 35, 37.
56 Ibid ss 36, 40.

however, is that in the interest of consistency with the proposed 'Access and Correction' principle, the provision should be expressed as an obligation.

12.51 The provision dealing with correction in the proposed Part of the *Privacy Act* maintains the same obligations that are provided for under IPP 7. For example, the provision retains the requirement that an agency take reasonable steps to ensure that personal information is relevant, up-to-date, complete and not misleading, having regard to the purpose for which the information was collected, or is to be used, and to any purpose that is directly related to that purpose. Further, IPP 7 and the FOI Act both provide for the annotation of a record following an unsuccessful application for correction.[57] In the ALRC's view, this requirement should be available under the Part dealing with access and correction of personal information held by agencies.

Lawful access before correction

12.52 One submission noted that, under IPP 7.2, where a person's record is exempt from access because of an exemption under the *Privacy Act* or the FOI Act, the data subject has no right to insist on correction if they find out by informal means, or reasonably suspect, that the non-accessible record is incorrect. It was submitted that this is an unsatisfactory state of affairs, which could be dealt with by ensuring the *Privacy Act* right of correction is not conditional on the right of access.[58] It was submitted that:

> Correction obligations should apply independently of rights of access—i.e. the right of individuals to seek correction should apply whether they have obtained access through formal processes (such as under the *Privacy* or FOI Acts) or have become aware of the information by other means.[59]

12.53 In the ALRC's view, IPP 7.2 does not require lawful access before an individual can seek correction of their own personal information.[60] Lawful access is, however, a requirement under s 48 of the FOI Act. In ALRC 77, the ALRC and ARC recommended that the requirement of lawful access should be removed from the FOI Act.[61] The ALRC noted that:

> Access as a prerequisite to seeking amendment or annotation under the FOI Act arises from the fact that amendment rights were first introduced in the FOI Act which deals primarily with access and were regarded as complementary to the right of access. It has been presumed that the only way an individual would know that information was

61 Australian Law Reform Commission and Administrative Review Council, *Open Government: A Review of the Federal Freedom of Information Act 1982*, ALRC 77 (1995), Rec 77.

> incomplete, incorrect, out of date or misleading would be if they had access to the document.[62]

12.54 The Freedom of Information (Open Government) Bill 2000 (Cth) included an amendment to remove the requirement for lawful access to amend and annotate records under the FOI Act. The Senate Legal and Constitutional Legislation Committee did not support this amendment.[63]

12.55 In the ALRC's view, the provision dealing with correction of personal information in the proposed Part of the *Privacy Act* should not provide that lawful access is a prerequisite to the correction of personal information. There may be situations in which a person is legitimately denied access to a document because it is exempt, but they are sufficiently aware of the contents of the document to know or suspect that it contains false information. The ALRC also notes that lawful access is not a requirement before exercising the rectification right under art 12(b) of the European Union *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data*.[64]

Correction by amendment, deletion or annotation

12.56 The OPC submitted that, in the interests of consistency, and in the spirit of both the *Privacy Act* and the FOI Act, it may also be appropriate to expand the amendment rights under the FOI Act to align with those currently under IPP 7.[65] In the ALRC's view, the proposed Part of the *Privacy Act* dealing with access and correction of personal information held by agencies should include the same obligations to make corrections, additions and deletions as are available under IPP 7. The ALRC notes that, in ALRC 77, it recommended that the FOI Act be amended to bring it in line with the *Privacy Act* in this regard.[66]

Making corrections and annotations available to subsequent users

12.57 In Chapter 26, the ALRC proposes that the 'Access and Correction' principle that relates to organisations should provide that, where an organisation has corrected personal information it holds about an individual, and the individual requests that the organisation notify any other entities to whom the personal information has already been disclosed before correction, the organisation must take reasonable steps to do so, provided such notification would be practicable in the circumstances. This requirement should also apply to agencies.

66 Australian Law Reform Commission and Administrative Review Council, *Open Government: A Review of the Federal Freedom of Information Act 1982*, ALRC 77 (1995), Rec 79.

12.58 One submission noted that the the *Privacy Act* should specify that an annotation should be made available to any subsequent user of the disputed personal information.[67] Information Privacy Principle 7(3) of the *Privacy Act 1993* (NZ) provides that where an agency has corrected or annotated personal information the agency shall, if reasonably practicable, inform each person, body or agency to whom the personal information has been disclosed of those steps. The ALRC does not propose that organisations should be obliged to ensure that an annotation is available to any subsequent user of the personal information. In the ALRC's view, this obligation is implicit in the requirement for an agency to take reasonable steps to annotate, on request, personal information.

Proposal 12–9 The proposed Part of the *Privacy Act* dealing with access to, and correction of, personal information held by an agency should provide that, if an agency holds personal information about an individual, the agency must:

(a) if requested by the individual, take such steps to correct (by way of making appropriate corrections, deletions or additions) the information as are, in the circumstances, reasonable to ensure that the information is, with reference to a purpose of collection permitted by the proposed Unified Privacy Principles, accurate, complete, up-to-date, relevant and not misleading;

(b) where the agency has taken the steps outlined in (a) above, if requested to do so by the individual, and provided such notification would be practicable in the circumstances, notify any other entities to whom the personal information has already been disclosed.

Proposal 12–10 The proposed Part of the *Privacy Act* dealing with access to, and correction of, personal information held by an agency should provide that where an agency decides not to correct the personal information of an individual, and the individual requests the agency to annotate the personal information with a statement by the individual claiming that the information is not accurate, complete, up-to-date, relevant, or is misleading, the agency must take reasonable steps to do so.

ALRC's view: procedure for providing access to, and correction of, personal information

12.59 The proposed Part of the *Privacy Act* dealing with access and correction should set out a procedure for an individual to apply to access and correct their own personal information. In the ALRC's view, this procedure should be similar to, but less onerous than, the process set out in the FOI Act.

---

67 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007.

12.60 The procedure should address a number of matters that are currently provided for under the FOI Act. These matters include: requirements for making an application for correction or annotation of personal information; time periods for processing a request to access or correct personal information; and the transfer of a request to access or correct personal information to another agency in certain circumstances (for example, when a document is not in the possession of an agency but is, to the knowledge of that agency, in the possession of another agency).

12.61 The Part should also set out: how personal information is to be made available to the individual (including by giving the individual a reasonable opportunity to inspect the records, or by providing a copy of the record, by giving a summary of the contents of the record, by providing oral information about the contents of the record); the deletion of exempted matter or irrelevant material; when a request for access to personal information may be refused by an agency (for example, when it would substantially and unreasonably divert the resources of the agency from its other operations, or in the case of a minister, would substantially and unreasonably interfere with the performance of the minister's functions); and how reasons for a decision to deny a request to access or correct personal information are to be provided.

Proposal 12–11 The proposed Part of the *Privacy Act* dealing with access to, and correction of, personal information held by an agency should set out a process for dealing with a request to access or correct personal information that addresses:

(a) the requirements for making an application for correction or annotation of personal information;

(b) time periods for processing a request to access or correct personal information;

(c) the transfer of a request to access or correct personal information to another agency in certain circumstances (for example, when a document is not in the possession of an agency but is, to the knowledge of that agency, in the possession of another agency);

(d) how personal information is to be made available to the individual (including by giving the individual a reasonable opportunity to inspect the records, or by providing a copy of the record, by giving a summary of the contents of the record, or by providing oral information about the contents of the record);

(e) how corrections are to be made (including by additions and deletions);

(f) the deletion of excepted matter or irrelevant material;

(g) the persons authorised to make a decision on behalf of an agency in relation to a request to access or correct personal information;

(h) when a request for access to personal information may be refused by an agency (for example, when it would substantially and unreasonably divert the resources of the agency from its other operations, or in the case of a minister, would substantially and unreasonably interfere with the performance of the minister's functions); and

(i) the provision of reasons for a decision to deny a request to access or correct personal information.

ALRC's view: review and complaints

12.62 The ALRC notes the OPC's comments that it will generally decline to investigate a complaint about access to, and correction of, personal information held by an agency if the complainant has not exhausted all FOI Act processes. An applicant will have to access the FOI Act process and then complain to the Privacy Commissioner if an applicant wishes to seek: correction on the grounds that the information is irrelevant; deletion of personal information; or correction of personal information in a record to which he or she has not been provided lawful access.

12.63 The ALRC also notes that, while the Privacy Commissioner has the power to order compensation under the *Privacy Act*,[68] the AAT does not have this power under the FOI Act. If an applicant wants compensation for a failure by an agency to provide access to, or correction of, personal information, the applicant will have to use the FOI Act to access and correct the personal information, and then the *Privacy Act* process to seek compensation.

12.64 The ALRC acknowledges that this process is necessary because of the interaction between the *Privacy Act* and the FOI Act. In the ALRC's view, however, this process is deficient and needlessly cumbersome. The proposed Part dealing with access to, and correction of, personal information held by agencies should provide for a simplified review and complaints mechanism.

12.65 In the ALRC's view, the Part should provide for the same review rights and complaints mechanism as under the FOI Act—internal review by an agency and review by the AAT.[69] The Part should also provide for a complaint to be made to the Commonwealth Ombudsman. The ALRC notes the extensive experience of the AAT and the Commonwealth Ombudsman in relation to access to, and correction of, personal information,and the operation of the exemptions under the FOI Act.

12.66 The Part should provide that the AAT may make an order for compensation for any loss or damage suffered as a result of the agency's decision not to grant access to, or correction of, personal information. The ALRC acknowledges that it is unusual to have the AAT make a primary decision in relation to compensation. The ALRC notes,

---

68 *Privacy Act 1988* (Cth) s 52.

69 Decisions of the AAT are reviewable by the Federal Court of Australia: *Administrative Appeals Tribunal Act 1975* (Cth) pt IVA.

however, that the AAT currently has the power under s 105.51(7)(b) of the *Criminal Code* (Cth) to compensate a person for his or her detention when the AAT has found a decision to make a preventative detention is void. The ALRC also notes the constitutional limits in relation to this power.[70]

12.67 The Privacy Commissioner should have an oversight and educational role in relation to access and correction. The *Privacy Act* currently provides for the Privacy Commissioner to have a number of oversight and education functions that would allow the Commissioner to undertake this role.[71] The Commissioner's oversight functions provide important tools to increase understanding of federal privacy law among individuals and agencies, and enable the Commissioner to be proactive in preventing non-compliance. In the ALRC's view this education and oversight role should include issuing guidelines on access to, and correction of, records containing personal information held by an agency.

Proposal 12–12 The proposed Part of the *Privacy Act* dealing with access to, and correction of, personal information held by an agency should provide for:

(a) internal review by an agency of a decision made under the Part;

(b) review by the Administrative Appeals Tribunal of a decision made under the Part (including the power to make an order for compensation); and

(c) complaints to the Commonwealth Ombudsman.

Proposal 12–13 The Office of the Privacy Commissioner should issue guidelines on access to, and correction of, records containing personal information held by an agency.

An exemption for complaint-handling files

12.68 The OPC submitted that the ALRC may wish to consider whether the Office's complaints files should be exempt from disclosure under the FOI Act. The OPC noted that such complaints deal with the issue of privacy itself, and that the Office of the NSW Privacy Commissioner's complaint-handling, investigative and reporting functions are exempt under the *Freedom of Information Act 1989* (NSW).[72]

12.69 The OPC noted that it is currently possible under the FOI Act to exempt, on a case by case basis, documents that may unreasonably disclose personal information.[73] The OPC submitted, however, that a 'cover-all' exemption would be consistent with

70 See discussion of *Brandy v Human Rights and Equal Opportunity Commission* (1995) 183 CLR 245 in Ch 43.

72 See, eg, *Freedom of Information Act 1989* (NSW) s 9 and sch 2.
73 *Freedom of Information Act 1982* (Cth) s 41(1).

public expectations of privacy, heighten the trust of complainants, and reinforce the OPC's commitment to leadership in good privacy practice.[74] The ALRC is interested in views on whether the complaint-handling, investigative and reporting functions of the OPC should be exempt under the FOI Act.

Question 12–2 Should the Office of the Privacy Commissioner's complaint-handling, investigative and reporting functions be exempt under the *Freedom of Information Act 1982* (Cth)?

Archives Act 1983 (Cth)

12.70 The *Archives Act 1983* (Cth) establishes the National Archives of Australia (National Archives) and provides for the preservation of the archival resources of the Commonwealth. It also creates an access regime whereby the public generally has a right of access to Commonwealth records that are more than 30 years old (the open access period).[75] The *Archives Act* provides some protection for information relating to the personal affairs of any person (including a deceased person).[76]

12.71 The *Privacy Act* provides that records containing personal information in the custody of the National Archives are subject to the operation of the *Privacy Act*. Two exceptions apply: when the records are in the open access period or where records are subject to arrangements with a person other than a Commonwealth institution providing for the extent to which the National Archives or other persons are to have access to them.[77] The *Archives Act* controls access to these categories of records.

12.72 While NPP 4 provides that an organisation must take reasonable steps to destroy or permanently de-identify personal information after a certain amount of time, there is no equivalent IPP to govern the retention of records by agencies.[78] Instead, the *Archives Act* regulates the retention of records. It prohibits the destruction of Commonwealth records without the permission of National Archives, subject to some exceptions.[79]

The 'personal affairs' exemption

12.73 Section 33(1)(g) of the *Archives Act* provides an exception to public access to records if the access would involve the unreasonable disclosure of information relating to the 'personal affairs of any person (including a deceased person)'. This is in contrast to s 41 of the FOI Act, which currently exempts a document if disclosure 'would

74 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
75 *Archives Act 1983* (Cth) s 31.
76 Ibid s 33. See discussion below.
77 See the definition of 'record' in *Privacy Act 1988* (Cth) ss 6. The second exception would relate to, eg, arrangements between individuals to have their personal collections held by National Archives, for example, the 'Whitlam collection' or the 'Fraser collection'.
78 See discussion in Ch 25.
79 See *Archives Act 1983* (Cth) ss 24–29.

involve the unreasonable disclosure of personal information about any person (including a deceased person)'.[80]

12.74 'Personal affairs' is generally considered to be a narrower concept than 'personal information'. In *Young v Wicks*, 'personal affairs' was interpreted as 'matters of private concern to a person'.[81] In *Colakovski v Australian Telecommunications Corporation*, however, the Federal Court held that the phrase was not confined to 'affairs that are private in the sense of secret to the person'.[82] Other interpretations of 'personal affairs' include 'the composite collection of activities personal to the individual concerned',[83] and that the term includes 'private behaviour, home life and personal family relationships'.[84]

12.75 What is critical to the definition of 'personal information' under the *Privacy Act*, however, is that information is capable of identifying an individual rather than its specific nature. Under the current definition of 'personal information',[85] if a person's identity is clear, or reasonably capable of being ascertained, then any information about them is covered, whether or not it is sensitive.[86]

Submissions and consultations

12.76 In IP 31, the ALRC asked whether s 33(1)(g) of the *Archives Act* should be amended to provide an exemption in relation to 'personal information' as defined in the *Privacy Act*. The ALRC received only a few submissions on this issue.

12.77 The OPC noted that the exemption could result in the unreasonable disclosure of personal information when that information does not meet the criteria of 'personal affairs'. The OPC submitted that amending the 'personal affairs' exemption to apply to 'personal information' would protect privacy better, and harmonise the *Archives Act* with both the *Privacy Act* and the FOI Act.[87] In the OPC's view

> changing the exemption would not defeat the public interest of allowing access to the national archives. Rather, it would provide greater scope to fairly consider whether a disclosure would be 'unreasonable' in the circumstances, and prevent the disclosure of personal information in circumstances that would otherwise be a breach of the IPPs.[88]

88 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

12.78 There was strong opposition to such an amendment from other stakeholders.[89] The National Archives noted that it had considered this issue and argued against the change when it was raised in the ALRC's review of the *Archives Act*.[90]

> Advice we received at the time was that 'personal information' is much wider than the meaning attributed to 'personal affairs' and a vast range of information about individuals which currently does not come within the definition of personal affairs would need to be considered for exemption if this change was made. It would in practice unnecessarily restrict access to records, undermining the intent of the *Archives Act*. In addition it would vastly increase the workload of decision-makers under the *Archives Act*.[91]

12.79 National Archives argued that the lack of uniformity with the FOI Act terminology has not caused any difficulty in the application of the *Archives Act* or FOI Act to date and is a sensible recognition of the different age of the information covered by the two pieces of legislation. National Archives stated that:

> 'personal affairs' is an appropriate description of the sort of information that needs to be exempted in archival records. While the release of much 'personal information' could not be argued to be unreasonable after 30 years, 'personal affairs' enables the exemption of information which is likely to retain sensitivity, i.e. information about family, marital, domestic and sexual relationships, health, adoption, illegitimacy, infidelity, etc.[92]

12.80 The Australian Privacy Foundation opposed any change to the exemption and claimed that the amendment of s 41 of the FOI Act from 'personal affairs' to 'personal information' has had the consequence of allowing agencies to claim the personal information exemption more often, in circumstances where the information in question is about the official business role of public servants.

> This has reduced accountability and discredits the privacy protection in the eyes of the public and the media. There may be a case for reintroducing a clear distinction between personal information and personal affairs in the context of disclosure limitations, while ensuring that individuals obtain the benefit of the wider definition in the context of other rights.[93]

ALRC's view

12.81 The ALRC does not make any proposal in relation to the 'personal affairs' exemption under the *Archives Act*. This position contrasts with that taken by the ALRC in *Australia's Federal Record: A Review of the Archives Act 1982* (ALRC 85). The ALRC's view, however, is that in the absence of any identifiable problem in this area,

---

89 Queensland Government, *Submission PR 242,* 15 March 2007; National Archives of Australia, *Submission PR 199,* 20 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

90 Australian Law Reform Commission, *Australia's Federal Record: A Review of Archives Act 1983*, ALRC 85 (1998).

91 National Archives of Australia, *Submission PR 199,* 20 February 2007.

92 Ibid.

93 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

the benefits in changing the exemption to refer to 'personal information' do not outweigh the disadvantages of such an amendment.

12.82 Strong arguments were put forward in submissions that opposed any change to the exemption. The ALRC is concerned that changing the exemption to refer to 'personal information' may have the affect of needlessly restricting access to records, and undermine the intent of the *Archives Act*. The ALRC is also conscious that such a change would increase the workload of decision makers under the *Archives Act*. The lack of uniformity with the FOI Act terminology has not caused any difficulty in the application of the *Archives Act* and FOI Act to date, and is an appropriate recognition of the different age and sensitivity of the information covered by the Acts.

The open access period

12.83 In IP 31, the ALRC asked whether the *Privacy Act* should apply to certain classes of records in the open access period for the purposes of the *Archives Act*. The OPC submitted that:

> there are instances where the protections under the *Archives Act* have not appeared to meet with individuals' expectations as to how their personal information will be protected. For example, the Office is aware of a case where an open access Commonwealth record, containing medical information, remained publicly accessible for some time. In this case, the individual and the NAA differed in their views as to whether the information might cause social stigma or be sensitive.[94]

12.84 The OPC suggested that one option would be to subject Commonwealth records in the open access period to coverage by IPP 11. Alternatively, the *Archives Act* could mirror the provisions of IPP 11. If exemptions that prevent disclosure under the *Archives Act* can afford an appropriate standard of protection, however, then extending the coverage of the *Privacy Act* may not be necessary.[95]

12.85 This view was opposed strongly in submissions from federal and state public records authorities.[96] National Archives argued that the exclusion of records in the open access period from the coverage of the *Privacy Act* is a recognition that the sensitivity of much personal information has diminished after 30 years.

> Decisions to release or restrict Commonwealth records from the public under the *Archives Act* are made by the National Archives, providing a safeguard against possible self-interest on the part of government agencies in inappropriately restricting access to information. These are important and valuable principles which should be preserved and which stand apart from the question of national consistency in the

94 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
95 Ibid.
96 Queensland Government, *Submission PR 242,* 15 March 2007; National Archives of Australia, *Submission PR 199,* 20 February 2007; Public Record Office Victoria, *Submission PR 72,* 3 January 2007.

> regulation of personal information, particularly if the latter increases costs and complicates the bureaucratic process.[97]

12.86 National Archives noted that extending the coverage of the *Privacy Act* to Commonwealth records in the open access period would limit public access to records, and would impose an unworkable burden on the administration of access by National Archives. The National Archives noted that it withholds information that retains sensitivity beyond the 30 year closed period.[98]

ALRC's view

12.87 The ALRC considered this issue in ALRC 85 and concluded that the application of the IPPs to records more than 30 years old would be needlessly restrictive. The ALRC stated that the exemption categories within the archives legislation continue to provide appropriate protection for personal information.[99]

12.88 The ALRC affirms that view. The access regime in the open access period must take into consideration the fact that sensitivities attaching to information may diminish after 30 years. Prohibiting the disclosure of all personal information, including names of individuals, would greatly restrict access to archival records. This does not mean, however, that privacy should be disregarded when making access decisions. Exemption categories within the archives legislation must include appropriate protection for personal information. In the ALRC's view, the proposed exemption in relation to 'personal information', and the guidelines developed in consultation with the OPC, will be sufficient to deal with this.

12.89 The open access period in each state and territory varies. For example, under the *Territory Records Act 2002* (ACT) a record of an agency is open to public access if 20 years has elapsed since the record came into existence. Under the federal *Archives Act, State Records Act 1998* (NSW) and the *Public Records Act 1973* (Vic), the open access period is 30 years, and under the *Archives Act 1983* (Tas) it is 25 years.[100] In the ALRC's view, in the interest of national consistency, the Australian Government and state and territory governments, in consultation with the Council of Australasian Archives and Records Authorities should consider reviewing the *Archives Act* and equivalent state and territory public records legislation to ensure that the 'open access period' under each Act is consistent.

A single information Act?

12.90 One option for consideration is whether, given the significant overlap between the FOI Act and the *Privacy Act*, the two Acts should be consolidated into a single Act. A number of overseas jurisdictions have combined freedom of information and privacy

---

97 National Archives of Australia, *Submission PR 199,* 20 February 2007.

98 Ibid.

99 Australian Law Reform Commission, *Australia's Federal Record: A Review of Archives Act 1983*, ALRC 85 (1998), [15.56].

100 See, eg, *Archives Act 1983* (Cth) s 31; *State Records Act 1989* (NSW) s 26; *Public Records Act 1973* (Vic) s 10; *Archives Act 1983* (Tas) s 15.

legislation.[101] The ALRC and the ARC considered this option in ALRC 77. The proposal was rejected on the basis that there was insufficient benefit in the proposal to outweigh the disadvantage in disturbing the existing legislative framework.[102]

12.91 Another option is to consolidate the FOI Act, the *Privacy Act* and the *Archives Act* into a single Act. An example of such an Act is the *Information Act 2002* (NT). The ALRC and the ARC also considered this option in ALRC 77. It was thought that this consolidation would address the overlap between the *Privacy Act* and FOI Act and bring together the major provisions dealing with access to government held information and records management. The option met with strong opposition in submissions to the ALRC and ARC review of the FOI Act and was ultimately rejected. The ALRC and ARC recommended, however, that the *Privacy Act*, FOI Act and *Archives Act* should be amended, where necessary, to provide a cohesive and consistent package of legislation on government records.[103]

Submissions and consultations

12.92 There was little support for combining the *Privacy Act*, FOI Act and *Archives Act*. Stakeholders noted that the three Acts have different purposes, and considered that the ALRC should focus on the harmonisation of the Acts.[104]

12.93 The Office of the Information Commissioner Northern Territory submitted that there is significant merit in dealing with issues relating to the collection and management of information by government within a coherent legislative scheme. The Office noted, however, that a fundamental problem with this proposal at the federal level is that the *Privacy Act* extends to both the public and private sectors, while the freedom of information and the archives regimes only extend to the former. The Office suggested that separate privacy legislation could be developed for the private sector, to facilitate a more 'broad brush' approach for government information management, but this would be at the expense of maintaining consistency in relation to privacy regulation.[105]

12.94 The Centre for Law and Genetics submitted that, while there was a very good case for bringing the *Privacy Act* and the FOI Act together, the *Archives Act* has a different and distinct function and should remain separate.[106]

ALRC's view

12.95 The ALRC accepts the concerns expressed in submissions and acknowledges that, despite their many common aspects, each Act has a distinct purpose that is understood by agencies and the public. After considering the views of various stakeholders, the ALRC affirms the view, expressed in ALRC 77, that there is insufficient benefit in the proposal to outweigh the disadvantage in disturbing the current legislative framework. In particular, the fact that the *Privacy Act* regulates both the public and private sectors detracts from the appeal of a single Act.

12.96 One option that may address the interaction of the three Acts is to clarify the objects of each Act. In Chapter 3, the ALRC proposes that the *Privacy Act* be amended to include an objects clause. In ALRC 77, the ALRC and the ARC recommended the amendment of the FOI Act's objects clause and, in ALRC 85, the ALRC proposed an amendment of the *Archives Act* to include an objects clause.[107]

A single regulator?

12.97 One issue for consideration is whether the same body should administer the *Privacy Act* and the FOI Act. This is the case in the Northern Territory,[108] and a number of overseas jurisdictions, for example, the Information and Privacy Commissioner for British Columbia, the Information and Privacy Commissioner Ontario, and the United Kingdom Information Commissioner.[109]

Submissions and consultations

12.98 There was little support for a single body to administer both the *Privacy Act* and the FOI Act. Submissions noted that the *Privacy Act* and the FOI Act have different focuses, and so should be administered by two different bodies.[110] The OPC submitted that

> While there are domestic and international precedents for the creation of one body to perform both functions, the Office is of the view that there may be more than one approach to addressing how these areas should be regulated. In short, these include:
>
> - The *Privacy Act* being the primary mechanism for individuals to access and correct their personal information held in Commonwealth records (regulated by the Privacy Commissioner), while the Commonwealth Ombudsman retains jurisdiction over complaints regarding FOI requests on administrative or policy processes.

> • The *Privacy Act* and the FOI Act remain as separate legislation, but are overseen by a single body, such as an Australian Information and Privacy Commissioner.
>
> • The status quo, with separate legislation and separate complaint mechanisms handled by the Privacy Commissioner and the Ombudsman.[111]

12.99 The Office of the Information Commissioner Northern Territory submitted that there are certain advantages in one regulator dealing with both privacy protection and FOI issues.

> It provides a broader perspective when considering issues about disclosure of personal information. Such issues frequently arise under both schemes … I do not believe that oversight of either scheme has been compromised in any way by the combination of the two in the Territory … Having said that, there is certainly an ample scale of work at the Commonwealth level to justify separate offices for oversight of privacy protection and freedom of information.[112]

12.100 A number of stakeholders supported a separate body, such as an Information Commissioner, to oversee freedom of information at the federal level. The Australian Privacy Foundation, for example, submitted that a Freedom of Information Commissioner (FOI Commissioner) is long overdue, as the FOI Act is no longer working as originally intended due to government neglect and outright resistance, and requires an independent champion.[113]

ALRC's views

12.101 The ALRC does not propose the establishment of a single body to administer the *Privacy Act* and the FOI Act. The ALRC notes that the combination of these roles in the Northern Territory and in a number of Canadian provinces appears to work effectively. There was, however, little support for this proposal among stakeholders. Further, the ALRC has made a number of proposals to enhance the role and functions of the Privacy Commissioner. These proposals include enhancing the Commissioner's auditing powers, and new powers in relation to data breach notification and privacy impact assessments. In the ALRC's view, in light of these enhanced powers and the workload that will result, the Privacy Commissioner's focus should continue to be the administration of the *Privacy Act*.

12.102 The Australian Government should, however, establish a body to oversee the administration of the FOI Act. In ALRC 77, the ALRC and the ARC recommended the establishment of a statutory office of FOI Commissioner. The existence of such a statutory office holder would lift the profile of freedom of information, both within

113 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007. See also, Public Record Office Victoria, *Submission PR 72,* 3 January 2007.

agencies and in the community and would assist applicants to use the FOI Act. It would also give agencies the incentive to accord freedom of information the higher priority required to ensure its effective and efficient administration The ALRC and ARC proposed that the FOI Commissioner's functions should include: auditing agencies' FOI performance, preparing an annual report on FOI, collecting statistics on FOI requests and decisions, publicising the FOI Act in the community, providing FOI training to agencies, and providing information, advice and assistance in respect of FOI requests.[114]

12.103 More recently, a report by the Commonwealth Ombudsman has recommended that the Government consider establishing a FOI Commissioner, possibly as a specialised and separately funded unit in the Office of the Commonwealth Ombudsman.[115] In ALRC 77, the ALRC opposed locating the FOI Commissioner within the Commonwealth Ombudsman's Office. The ALRC's main justification for this was that the Ombudsman's complaint resolution work could reduce the effectiveness of the proposed advice and assistance role of the FOI Commissioner because of a perceived conflict of interests.[116]

12.104 The ALRC notes, however, the broadening role of the Commonwealth Ombudsman since the release of ALRC 77, including its role as the Taxation Ombudsman providing assistance and advice to taxpayers, and its more recent role as Immigration Ombudsman. The Ombudsman also has a number of auditing roles under the *Crimes Act 1914* (Cth), *Telecommunications (Interception and Access) Act 1979* (Cth), the *Surveillance Devices Act 2004* (Cth) and the *Anti-Terrorism (No 2) Act 2005* (Cth).[117] More importantly, however, the ALRC notes that the Commonwealth Ombudsman already has a close involvement with freedom of information across all government agencies. In the ALRC's view, it would be appropriate to confer the functions of the FOI Commissioner on the Commonwealth Ombudsman.[118]

Secrecy provisions

12.105 Federal legislation contains a large number of secrecy provisions that impose duties on public servants not to disclose information that comes to them by virtue of their office. Secrecy provisions usually are based on the need to preserve the secrecy of government operations in order for government to function effectively.

12.106 The secrecy interests of government agencies and the privacy interests of individuals will sometimes be complementary. For example, both a government agency and the subject of a record that the agency keeps might have an interest in non-disclosure of that information to third parties. Those interests, however, may sometimes conflict. For example, a person may want to access his or her personal information to check that it has been recorded correctly and is not being disclosed without his or her consent; but to grant that access could intrude upon the secrecy interests of the agency.

12.107 There are a number of provisions in federal legislation that create general offences in relation to the unauthorised disclosure of official information.[119] There are also secrecy provisions in federal legislation that deal with unauthorised disclosure of information in specific circumstances.[120] Secrecy provisions in federal legislation are criminal offences that attract criminal penalties. The *Privacy Act*, however, operates as an administrative regime that allows for private remedies such as the award of compensation.[121]

12.108 An example of a secrecy provision is s 5 of the *Australian Prudential Regulation Authority Act 1998* (Cth). This provision states that a person who is or has been an 'officer', including an Australian Prudential Regulation Authority (APRA) member or an APRA staff member, commits an offence if he or she discloses to any person or to a court 'protected information' acquired in the course of his or her duties as an 'officer'. 'Protected information' includes information obtained under a 'prudential regulation framework law' and relating to the affairs of a number of classes of organisations, including a body regulated by APRA. The provision sets out a number of exceptions. For example, it is not an offence if the disclosure of the protected information is for the purposes of a prudential regulation framework law.

12.109 As noted above, the *Privacy Act* includes exceptions to some of the IPPs if acts or practices are required or authorised by or under law. Secrecy provisions that prevent disclosure of information will be consistent with IPP 6 as that principle provides an exception for record-keepers that are required or authorised by a federal

120 See, eg, *Inspector-General of Taxation Act 2002* (Cth) s 37(1); *Gene Technology Act 2000* (Cth) s 187(1); *Aged Care Act 1997* (Cth) s 86-2; *Australian Prudential Regulation Authority Act 1998* (Cth) ss 5, 56; *Australian Postal Corporation Act 1989* (Cth) s 90H; *Civil Aviation Act 1988* (Cth) s 32AP(1); *Australian Institute of Health and Welfare Act 1987* (Cth) s 29(1); *Disability Services Act 1986* (Cth) s 28(2); *Australian Security Intelligence Organisation Act 1979* (Cth) s 92. In 1995, the House of Representatives Standing Committee on Legal and Constitutional Affairs reported that there were more than 150 secrecy provision in federal legislation and more than 100 different statutes that contain such provisions: Parliament of Australia—House of Representatives Standing Committee on Legal and Constitutional Affairs, *In Confidence: A Report of the Inquiry into the Protection of Confidential Personal and Commercial Information Held by the Commonwealth* (1995), xxiv.

121 *Privacy Act 1988* (Cth) pt IIIA creates a range of credit reporting offences: see Ch 55. The ALRC proposes that the *Privacy Act* be amended to provide for civil penalties in limited circumstances: see Proposal 46–2.

law to refuse to provide an individual with access to a record.[122] Further, secrecy provisions that provide for disclosure of protected information in certain circumstances would be consistent with IPP 11, as the disclosure is required or authorised by or under law.[123] The exception under IPP 11(1)(e) in relation to law enforcement, the enforcement of a pecuniary penalty or the protection of the public revenue may also be relevant in some contexts.[124]

12.110 After the release of IP 31, the *Privacy Act* was amended to insert a new Part VIA, which commenced operation on 7 December 2006.[125] The object of the Part is to make special provision for the collection, use and disclosure of personal information in emergencies and disasters. Section 80P(1) provides that at any time when an emergency declaration is in force in relation to an emergency or disaster, an entity may collect, use or disclose personal information in certain circumstances. Section 80P(2) provides that an entity is not liable to any proceedings for contravening a secrecy provision in respect of a use or disclosure of personal information authorised by s 80P(1), unless the secrecy provision is a designated secrecy provision. Designated secrecy provisions include provisions under the *Australian Security Intelligence Organisation Act 1979* (Cth) and the *Intelligence Services Act 2001* (Cth).[126]

12.111 One issue for consideration is whether there is a need to clarify the relationship between the *Privacy Act* and other legislation containing secrecy provisions. Some secrecy provisions address the operation of the *Privacy Act*. For example, s 5 of the *Australian Prudential Regulation Authority Act* states that a disclosure of personal information under the provision is taken to be authorised by law for the purposes of IPP 11.[127] Other provisions, however, do not address this issue.[128]

12.112 A number of reviews have considered secrecy provisions in federal legislation. The House of Representatives Standing Committee on Legal and Constitutional Affairs considered these provisions in the report *In Confidence: A Report of the Inquiry into the Protection of Confidential Personal and Commercial Information held by the Commonwealth*. The Committee found that secrecy provisions had failed to meet adequately the need for flexible regulation of the transfer of information between Commonwealth agencies. The Committee considered that the transfer of personal information between Commonwealth agencies should be regulated

122 Ibid s 14, IPP 6.
123 Ibid s 14, IPP 11.1(d).
124 Taxation legislation includes a number of secrecy provisions which may be said to authorise disclosure of information for the protection of public revenue. See M McLennan, 'Negotiating Secrecy and Privacy Issues in Government (Pt I)' (2002) 8 *Privacy Law & Policy Reporter* 181; M McLennan, 'Negotiating Secrecy and Privacy Issues in Government (Pt II)' (2002) 8 *Privacy Law & Policy Reporter* 193.
125 *Privacy Legislation Amendment (Emergencies and Disasters) Act 2006* (Cth).
126 See *Privacy Act 1988* (Cth) s 80P(7).

128 See, eg, *Disability Services Act 1986* (Cth) s 28.

by the *Privacy Act*, rather than by the secrecy provisions in specific statutes.[129] The Committee also recommended that where federal legislation specifically addresses disclosure or protection of information, the IPPs should not be used to provide additional grounds for disclosure, and that this aspect of the relationship between the IPPs and secrecy provisions should be addressed in the *Privacy Act*.[130]

12.113 The ALRC considered secrecy provisions in its report *Keeping Secrets: The Protection of Classified and Security Sensitive Information* (ALRC 98). The ALRC made a number of recommendations, including that the Australian Government should undertake a review of federal secrecy provisions.[131]

12.114 In August 2006, the Treasury released a discussion paper *Review of Taxation Secrecy and Disclosure Provisions*.[132] The Discussion Paper proposed the standardisation and consolidation of the disparate rules under tax legislation that impose strict obligations on tax officers and others who receive tax information.[133] One issue considered by the review was the relationship between the secrecy and disclosure provisions under tax legislation and the *Privacy Act*.[134]

12.115 In January 2007, the Acting Treasurer, the Hon Peter Dutton MP, announced that the secrecy and disclosure provisions from 22 different taxation Acts would, as a result of the review, be standardised into a framework within a single piece of legislation. The standardised secrecy framework would maintain existing authorised disclosures, with the ATO also being able to release taxpayer information in limited circumstances, where the public interest benefits exceed the impact on taxpayer privacy. Newly authorised disclosures would include allowing the ATO to disclose more information to law enforcement agencies.[135]

Submissions and consultations

12.116 In IP 31, the ALRC asked whether the various secrecy provisions under federal legislation that prohibit individuals employed by the Commonwealth from disclosing information contribute to inconsistency and fragmentation in personal information privacy regulation. In particular, the ALRC asked whether the *Privacy Act,*

rather than secrecy provisions in specific statutes, should regulate the disclosure of personal information by Australian Government agencies.[136]

12.117 A number of government agencies noted that they are subject to secrecy provisions, and that the provisions work well.[137] There was no support for having the *Privacy Act,* rather than secrecy provisions in specific statutes, regulate the disclosure of personal information by Australian Government agencies.[138] The Australian Government Department of Employment and Workplace Relations noted that, to avoid confusion, where confidentiality or secrecy provisions are being drafted in new legislation, it may be good practice to deal with the interaction between those provisions and the *Privacy Act* in the legislation or its explanatory material.[139]

12.118 In particular, it was noted that the use of specific statutes allows secrecy provisions to be tailored to particular types of protected information and the situation of the agency.[140] It was also noted in submissions that secrecy provisions can apply to information that includes, but is not limited to, 'personal information', enabling a wider range of information to be protected.[141]

12.119 Protecting all personal information under the *Privacy Act* would not, in some circumstances, provide the level of protection that may be necessary.[142] Some stakeholders noted that providing offences in the *Privacy Act* could be seen as contrary to the 'light-touch' approach that has underpinned the regulation of privacy under the *Privacy Act* to date.[143] The OPC submitted that it was not appropriate for the Privacy Commissioner to administer and enforce secrecy laws.[144]

ALRC's view

12.120 The ALRC considers that information that is currently protected by various secrecy provisions in federal legislation should not be regulated by the *Privacy Act*. In the ALRC's view, it is appropriate that specific statutes include secrecy provisions designed to protect information. This ensures that an agency's secrecy responsibilities are tailored to the agency's circumstances and grouped with its other obligations.

12.121 Secrecy provisions do not relate solely to personal information. They also protect other information, for example, commercial information, security details and operational information. Secrecy provisions provide separate and specific standards of protection beyond those afforded by the privacy principles under the *Privacy Act*. Unlike the privacy principles, the level of protection afforded by secrecy provisions will often vary with the sensitivity of the information concerned.

12.122 In the ALRC's view, a privacy impact assessment should be prepared when a secrecy provision in new legislation may have a significant impact on the handling of personal information. In Chapter 44, the ALRC proposes that the *Privacy Act* be amended to empower the Privacy Commissioner to direct an agency or organisation to provide a privacy impact assessment to the Privacy Commissioner in relation to a new project or development that the Privacy Commissioner considers may have a significant impact on the handling of personal information.[145] Further, where a secrecy provision regulates personal information, that provision should address how the requirements under the provision interact with the privacy principles in the *Privacy Act*.

12.123 Secrecy provisions in federal legislation should be reviewed. The need for this review has been established by a number of inquiries. In ALRC 77, the ALRC recommended that 'a thorough review of all federal legislative provisions that prohibit disclosure by public servants of government held information should be conducted as soon as possible to ensure that they do not prevent the disclosure of information that would not be exempt under the FOI Act'.[146] In ALRC 98, the ALRC recommended a review of secrecy provisions to ensure that each provision is consistent with the *Australian Constitution* and to consider the lack of consistency in the fundamental principles and penalty structures in the provisions.[147] The ALRC affirms that the Australian Government should undertake a review of secrecy provisions in federal legislation. This review should consider, among other matters, how each of these provisions interacts with the *Privacy Act*.

Obligations of confidence

Common law and equitable duties of confidence

12.124 Legally enforceable obligations to maintain confidence may arise in contract and equity. These obligations are capable of applying to individuals, organisations, agencies and officers of agencies.[148] Relief is available against third party recipients of confidential information, and those who knowingly assist a confidant to breach his or her obligations.[149]

12.125 A contractual obligation of confidence can arise from express terms in a contract, but also by implication.[150] The nature of the obligation will depend on the terms of the contract. Threatened and actual breach of the contractual obligations to maintain confidence attracts the ordinary consequences of threatened and actual breach of contract, including remedies such as injunctions and damages.

12.126 The equitable obligation of confidence can arise where the formalities for contract formation are not present.[151] The obligation arises where information with the necessary quality of confidence about it is imparted in circumstances importing an obligation of confidence.[152] Circumstances importing an obligation of confidence will exist where the information is imparted on the understanding that it is to be treated by the confidant on a limited basis, or where the confidant ought to have realised that in all the circumstances.[153] Breach of the obligation occurs where there is an unauthorised *use*, not only where there is unauthorised *disclosure,* of the information.

12.127 Unlike the position in contract, where loss is the basis of a claim for damages, the plaintiff in a suit for breach of the equitable obligation does not need to show any damage.[154] Remedies for breach of the equitable obligation are equitable compensation or an account of profits, injunction and declaration. There may also be proprietary relief.[155]

Statutory protection of confidential information

12.128 Legally enforceable obligations of confidence may also arise under statute. The FOI Act, for example, addresses government confidentiality. Section 45 of the Act protects any document whose disclosure under the Act 'would constitute a breach of confidence'. Federal, state and territory legislation also include a number of confidentiality provisions.[156]

Part VIII of the *Privacy Act*

12.129 In the 1983 report *Privacy* (ALRC 22), the ALRC noted that the English and Scottish Law Commissioner had recommended the establishment of a statutory action for breach of confidence. The ALRC stated that there was little need for a legislative restatement of the circumstances in which a duty of confidence will arise, at least in relation to personal information.[157] The ALRC concluded, however, that the law of duty of confidence, to the extent that it protects privacy interests, should be remedied in three respects:

- where a person is under a duty to preserve confidentiality in respect of personal information, the right to enforce that duty should be extended to the record subject;
- it should be made clear that, as a general rule, personal information to which a duty of confidence applies should remain protected by that duty no matter into whose hands it might subsequently come; and
- the remedies available under common law and equity should be rationalised so that in each case both injunctions and damages on the same bases will be available to the person seeking to enforce the duty.[158]

12.130 The introduction of Part VIII of the *Privacy Act* implemented the ALRC's recommendations in relation to obligations of confidence 'to which an agency or a Commonwealth officer is subject, however the obligation arose' or 'that arises under or by virtue of the law in force in the Australian Capital Territory'.[159]

12.131 Part VIII of the *Privacy Act* applies only to situations where a person (a 'confidant') is subject to an obligation of confidence to another person (a 'confider') in respect of personal information. The obligation applies whether or not the information relates to the confider or to a third person.[160] It generally preserves all other laws, principles or rules 'under or by virtue of which an obligation of confidence exists',

except as expressly qualified, or by necessary implication. It also preserves laws, principles or rules that 'have the effect of prohibiting, or imposing a liability (including a criminal liability) on a person in respect of, a disclosure or use of information'.[161] Part VIII, therefore, allows for the fact that obligations of confidence may arise in various ways.

12.132 The operative provisions are ss 92 and 93. Section 92 essentially extends the obligation a confidant owes to a confider to a third party who acquires the information knowing, or being in a position where he or she ought reasonably to know, that the person from whom he or she acquired the information was subject to an obligation of confidence. Section 93 concerns relief for breach of the obligation. Without limiting any other right a confider has to relief in respect of a breach,[162] a confider under s 93(1) 'may recover damages from a confidant in respect of a breach of an obligation of confidence with respect to personal information'.[163]

12.133 Where the information the subject of the confidence is personal information relating to a third person, that person 'has the same rights against the confidant in respect of a breach or threatened breach of the obligation as the confider has'.[164] This is an important extension on the general law position.

12.134 Courts of the ACT are conferred jurisdiction regarding 'matters' arising under Part VIII, which is also said not to deprive 'a court of a State or of another Territory of any jurisdiction that it has'.[165] There are no known court decisions (reported or unreported) applying the confidentiality provisions.

Submissions and consultations

12.135 In IP 31, the ALRC asked whether the provisions in Part VIII of the *Privacy Act* are necessary, and whether the provisions are adequate and should be contained in the *Privacy Act* or elsewhere.[166]

12.136 The OPC submitted that it does not have any experience in the application of Part VIII because the provisions do not confer any powers on the Office to determine matters or provide a remedy.[167] The Australian Privacy Foundation submitted that neither the objectives of Part VIII, nor the circumstances in which they might apply, are clear.[168] The Centre for Law and Genetics submitted that if the provisions of the

162 Ibid s 93(2).
163 Since s 93(1) does not limit or restrict any other right that the confider has in respect of the breach, he or she will continue to have a claim to the remedy of equitable compensation where the obligation arises in the equity jurisdiction rather than, for example, in contract. The assessment of 'damages' under s 93(1) will not necessarily use the same criteria of quantum, causation, remoteness etc as those that apply to assessment of equitable compensation, or to assessment of damages in contract or for any other civil wrong.

Part do not appear to have been widely used they should be deleted.[169] Ian Turnbull submitted, however, that Part VIII is necessary and might be extended to cover private sector confidences such as health professionals.[170]

ALRC's view

12.137 The ALRC considers that the confidentiality provisions contained in Part VIII of the *Privacy Act* should be repealed. The ALRC notes that the provisions have never been used. It is hard to imagine when this action would be used in preference to making a complaint to the OPC about a breach of the IPPs (or the proposed UPPs) under the *Privacy Act*.

12.138 Part VIII represents an extension of the law of confidentiality in that it extends the right to enforce a duty of confidentiality to the record subject. This right is not provided for under Australian common law.[171]

12.139 As discussed in Chapter 5, the English courts have developed the action for breach of confidence so that it now covers the disclosure of information that the defendant knows, or ought to know, is private because such disclosure is a wrongful invasion of privacy.[172] The ALRC shares the view of the New South Wales Law Reform Commission (NSWLRC) that the common law of Australia is unlikely to, and should not, follow the English example of transforming breach of confidence in this way. The NSWLRC has listed three reasons why this is so:

> First, confidentiality and privacy are simply different concepts … While most confidential acts and information could arguably be described as private, not all private activity is necessarily confidential.
>
> Secondly, the doctrine of breach of confidence, developed primarily in the exclusive jurisdiction of equity, seems an unsuitable vehicle for the introduction and development of greater privacy protection … equitable intervention does not fasten on the intrinsic value of the information itself.
>
> Thirdly, although the legal notion of confidence is not necessarily restricted to the disclosure of 'information' in any technical sense, it is unclear to what extent breach of confidence would be useful beyond situations involving the unjustified publication of private information.[173]

12.140 The ALRC considers that rather than extending the law of confidentiality, it is more appropriate to enact a statutory cause of action for invasion of privacy. The cause of action will apply to both agencies and organisations, unlike Part VIII which only applies to agencies; will provide broader protection of privacy than that offered by

Introduction

13.1 An act or practice 'required or authorised by or under law' is an exception to a number of the limits on the handling of personal information under the *Privacy Act*. This chapter first considers what is meant by the phrase 'required or authorised by or under law', and outlines a new exception for acts and practices that are 'specifically authorised by or under law'. The chapter then considers a number of federal Acts that require or authorise acts and practices for the purposes of the *Privacy Act*. These laws include the *Census and Statistics Act 1905* (Cth), *Corporations Act 2001* (Cth), *Commonwealth Electoral Act 1918* (Cth) and the *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth) (AML/CTF Act). The interaction between these laws and the *Privacy Act* has been the subject of recent public debate.

'Required or authorised by or under law'

13.2 An act or practice required or authorised by or under law is an exception (the 'required or authorised exception') to a number of the Information Privacy Principles

(IPPs) and the National Privacy Principles (NPPs).[1] For example, IPP 11(1)(d) provides that a record-keeper may disclose personal information to a person, body or agency if the disclosure is required or authorised by or under law. NPP 2.1(g) similarly provides that an organisation may use or disclose personal information for a secondary purpose if the use or disclosure is required or authorised by or under law. The required or authorised exception also applies to other areas of the *Privacy Act*.[2]

13.3 The ALRC proposes that acts or practices that are required or authorised by or under law should be an exception to a number of the proposed Unified Privacy Principles (UPPs), including the 'Collection' principle, 'Specific Notification' principle, 'Use and Disclosure' principle, and 'Access and Correction' principle.

13.4 State and territory privacy laws include similar exceptions. For example, s 25 of the *Privacy and Personal Information Protection Act 1998* (NSW) provides that it is an exception to various Information Privacy Principles under that Act if an agency is 'lawfully authorised or required not to comply with the principle concerned', or 'non-compliance is otherwise permitted (or is necessarily implied or reasonably contemplated) under an Act or any other law'.[3]

Scope of the exception

'Required' by or under law

13.5 The Office of the Privacy Commissioner (OPC) states that the 'required' by or under law exception in the context of IPP 2 'is only appropriate in the rare case where the agency has no choice in whether or not it collects the information'.[4] This interpretation is consistent with interpretations of 'required' in the context of other laws.[5]

13.6 The Explanatory Memorandum to the Privacy Amendment (Private Sector) Bill 2000 (Cth) states that the exception is intended to cover situations where a law unambiguously requires a certain act or practice. It also suggests, however, that a law could require an act or practice by implication.

2 See, eg, Ibid ss 6D(7)(c), 18L.

3 See also Principle 9 in the *Health Records (Privacy and Access) Act 1997* (ACT) which provides an exception to the use of personal health information if the use is required or authorised by a law of the ACT, a law of the Commonwealth, or an order of a court of competent jurisdiction. Principle 2 (Use and Disclosure) of the *Health Records Act 2001* (Vic) provides an exception for uses and disclosures that are 'required, authorised or permitted, whether expressly or impliedly, by or under law (other than a prescribed law)'.

4 Office of the Federal Privacy Commissioner, *Plain English Guidelines to Information Privacy Principles 1–3: Advice to Agencies about Collecting Personal Information* (1994), 21. See also *Re VBN and Australian Prudential Regulation Authority* (2006) 92 ALD 475.

5 See, eg, *Chamberlain v Banks* (1985) 7 FCR 598 (*Administrative Decisions (Judicial Review) Act 1977* (Cth) s 5(1)(b)); *Department of Premier & Cabinet v Hulls* [1999] 3 VR 331 (*Freedom of Information Act 1982* (Vic) s 50(4)).

> There could be situations where the law requires some actions which, of necessity, involve particular uses or disclosures, but this sort of implied requirement would be conservatively interpreted.[6]

13.7 The OPC also suggests this interpretation of the exception in the context of IPP 10 (Limits on use of personal information). The OPC states that an agency may be required by law to use personal information for another purpose if the agency is governed by legislation that requires it to perform a specific function, and the only possible way the agency can perform that function is by using the particular information for a purpose different from that for which it was obtained.[7]

'Authorised' by or under law

13.8 While an agency or an organisation that is 'required' by law to engage in an act or practice has no choice in the matter, an agency that is 'authorised' by law has a discretion as to whether it will engage in an act or practice.[8]

13.9 In the opinion of the OPC, an act or practice is not 'authorised' solely because there is no law prohibiting it.[9] Further, the law that authorises an act or practice must provide a 'specific relevant discretion'. For example, a general provision that a statutory office holder or the head of an agency may do anything necessary or convenient to be done for or in connection with a function does not meet this criterion.[10]

13.10 A law can also impliedly 'authorise' an act or practice. The OPC has stated in the context of the required or authorised exception to IPP 10 and IPP 11:

> A use or disclosure may fall within 10.1(c) or 11.1(d) if the law requires or authorises a function or activity that clearly and directly entails the use or disclosure. Here, the use or disclosure is impliedly authorised by law because it is essential to effect a scheme the law lays down.[11]

'Law'

13.11 What kinds of laws can require or authorise acts or practices for the purposes of the exception? Only a few cases have considered what is meant by 'law' for the

purposes of the required or authorised exception. It has been held that 'law' in the context of the exception includes a federal Act[12] and court rules.[13]

13.12 The OPC's *Guidelines to the National Privacy Principles* provide that 'law' includes Commonwealth, state and territory legislation, as well as common law.[14] The OPC *Plain English Guidelines to the Information Privacy Principles* provide more detailed advice on the meaning of 'law'. The Guidelines provide that 'law' for the purposes of the required or authorised exception to IPP 10 and IPP 11 means Commonwealth acts and delegated legislation, and state and territory laws where the state has 'validly legislated to bind the Commonwealth'. The OPC also states that 'law' includes:

- documents with the force of Commonwealth law (a document may have the 'force of law' if it is an offence to breach its provisions, or it is possible for a penalty lawfully to be imposed if its provisions are breached, for example, industrial awards);
- disclosures to Commonwealth ministers; and
- Commonwealth parliamentary privilege.[15]

13.13 The OPC states that a number of laws are normally not accepted as 'law' for the purpose of the required or authorised exception, including:

- state law that does not validly bind the Commonwealth;
- Cabinet decisions;
- inter-agency agreements and contracts between an agency and other parties;
- common law; and
- requests for personal information from foreign governments.[16]

13.14 Common law, for these purposes, 'consists of broad statements of legal principle and is made by judges—as opposed to statute law which is legislation made by Parliament'. The Privacy Commissioner has occasionally accepted that a disclosure

13 *Re An Application by the NSW Bar Association* [2004] FMCA 52.

14 Office of the Federal Privacy Commissioner, *Guidelines to the National Privacy Principles* (2001), 41.

15 The OPC notes, however, that if the *Privacy Act* would prohibit the disclosure were it not for parliamentary privilege, it may be appropriate for the agency to approach its Minister with any concerns it has about disclosing the personal information: Office of the Federal Privacy Commissioner, *Plain English Guidelines to Information Privacy Principles 8–11: Advice to Agencies about Using and Disclosing Personal Information* (1996).

16 These requests will only fall within exceptions 10.1(c) or 11.1(d) of the *Privacy Act* if there is a Commonwealth law that requires or authorises the agency to provide personal information in those circumstances. Similarly, treaty obligations only fall within these exceptions if there is a Commonwealth law that enacts that obligation: Ibid.

is necessary to satisfy requirements imposed by the common law principle of natural justice.[17]

13.15 State and territory courts and tribunals have held that the meaning of 'law' in relation to similar exceptions under state and territory privacy laws includes a common law duty of care to warn;[18] a subpoena to disclose information to a court;[19] and a warrant to obtain records from a hospital under a state Act.[20] In its submission to the NSW Attorney General's Department review of the *Privacy and Personal Information Act 1998* (NSW), Privacy NSW stated that the scope of 'other law' in s 25 of the Act is unclear.[21]

Relationship between the *Privacy Act* and other federal laws

13.16 Federal legislation contains a number of provisions that authorise or require certain acts or practices for the purpose of the *Privacy Act*. Most of these provisions are related to the disclosure of personal information.[22] For example, s 42(1)(g) of the *Australian Passports Act 2005* (Cth) provides that the Minister performing functions under the Act may request certain persons to disclose personal information about a person to whom an Australian travel document has been issued. Section 42(3) then provides that, for the purposes of IPP 11(1)(d) and NPP 2.1(g), such a disclosure is required or authorised by law.

13.17 The interaction between these provisions and the *Privacy Act* is, however, not always clear. For example, some provisions under federal legislation authorise or require disclosure of information, but do not state that it is required or authorised for the purposes of the *Privacy Act*.[23] Other provisions, such as s 488B of the *Migration Act 1958* (Cth), provide that certain disclosures of information may occur 'even if the information is personal information (as defined in the *Privacy Act 1988*)'.[24]

'Specifically authorised'

13.18 While acts and practices that are 'required' by law will be relatively rare, the 'authorised' by or under law exception could except a wide range of acts and practices from the limits imposed by the *Privacy Act*. One issue for consideration is whether the 'authorised' by or under law exception should be narrowed. One option would be to

24 See also *Customs Act 1901* (Cth) ss 64ACA, 64ACB, 64AF and 273GAB.

provide a new exception to certain principles if an act or practice is 'specifically authorised'. The European Union Article 29 Data Protection Working Party has criticised the required or authorised exception under the *Privacy Act* as being imprecise:

> The wording 'authorised' as opposed to 'specifically authorised' which existed in the January 1999 edition of the National Principles can also be read to mean that all secondary purposes that are not forbidden are allowed. In the working party's view such a wide exemption would virtually devoid the purpose limitation principle of any value.[25]

13.19 The term 'specifically authorised' is used in a number of federal Acts. Section 51 of the *Trade Practices Act 1974* (Cth) provides that, in deciding whether a person has contravened Part IV of the Act (restrictive trade practices), anything specified in, or 'specifically authorised' by certain laws must be disregarded. Section 43A of the *Environment Protection and Biodiversity Conservation Act 1999* (Cth) refers to 'specific environmental authorisation'. The Federal Court of Australia considered the meaning of this phrase in *Minister for the Environment & Heritage v Greentree (No 2)*. In that case, Sackville J considered whether the respondents were specifically authorised to undertake certain activities on land that was 'declared Ramsar wetland'.

> The language of s 43A(1)(b) of the EPBC Act implies that there is a distinction between an action which is authorised under an Act and one which is specifically authorised … in my view [specifically authorised] does not mean that the authorisation must only relate to a single site or to a single activity on land. It is in my view enough that the authorisation covers a defined class of activities or identifiable land which includes the subject land.[26]

13.20 As noted above, a reference to 'authorised' has been interpreted as including law that impliedly authorises an act or practice in certain circumstances. A law that 'specifically authorised' an act or practice would only include a law that expressly authorises an act or practice. 'Specifically authorised' could also be confined to authorisations that relate to a defined class of acts and practices.

Submissions and consultations

13.21 In Issues Paper 31, *Review of Privacy* (IP 31), the ALRC asked whether any difficulties arise as a result of the interaction between the *Privacy Act* and provisions in other federal legislation that require or authorise acts or practices that would otherwise be regulated by the IPPs or the NPPs. The ALRC was also interested in how the interaction between the *Privacy Act* and these provisions should be clarified.[27]

13.22 The Australian Privacy Foundation suggested an alternative formulation of the required or authorised exception:

---

25 European Union Article 29 Data Protection Working Party, *Opinion 3/2001 on the Level of Protection of the Australian Privacy Amendment (Private Sector) Act 2000*, 5095/00/EN WP40 Final (2001), 4.

26 *Minister for the Environment & Heritage v Greentree (No 2)* [2004] FCA 741, [153].

27 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 7–5.

> We submit that a basic distinction should be made between other laws which expressly require particular uses and disclosures should form exceptions to the use and disclosure principles in the *Privacy Act*, but that where acts or practices are only 'authorised' then the use and disclosure principles in the *Privacy Act* should prevent use and disclosure unless another exception applies ie mere lawful authority (which is understood to include common law and contractual authorities) should not in itself be grounds for use and disclosure for secondary purposes without consent.[28]

13.23 Stakeholders submitted that legislation which intends to rely on the required or authorised exception should include clear references in the legislation.[29] The OPC submitted that

> legislation should expressly set out its intention to require or authorise a particular use or disclosure (such as by directly referring to the *Privacy Act*). This helps to avoid interpretations or implications that allow the personal information to be handled in ways that legislators did not intend.[30]

13.24 It was noted that ambiguity in legislation can cause uncertainty for agencies and individuals and, potentially, the OPC as to how information should be handled, and whether the relevant provision meets the requirements under the *Privacy Act*.[31]

13.25 The Office of the Information Commissioner Northern Territory and the Office of the Victorian Privacy Commissioner (OVPC) noted that legislation that predates the *Privacy Act* may continue to provide justification for what would otherwise constitute breaches of privacy principles. Both these submissions emphasised the importance of requiring any legislation that raises privacy issues to be reviewed at appropriate intervals to confirm that the Parliament continues to accept that it reflects an appropriate balance between privacy interests and other interests.[32]

13.26 One stakeholder submitted that the *Privacy Act* needs to be redrafted to clarify the meaning of particular terms referred to in the IPPs. This submission also questioned the OPC's interpretation that the required or authorised exception does not include acts or practices that are required or authorised by the common law.[33]

13.27 Noting the OPC's statement in the *Plain English Guidelines to the Information Privacy Principles* that the common law consists of 'broad statements of legal principle', it was submitted that the common law may prescribe an act or practice with considerable particularity.[34] It was also submitted that there is a strong case from the

34 Ibid.

perspective of federal and international comity for giving the term 'law' its widest possible meaning. It is not clear, for example, why the OPC would consider that a state law imposing a pecuniary penalty is any the less a 'law' for the purposes of the use and disclosure principles.[35]

13.28 The OPC suggested that a consolidated digest could be developed, listing all legislative provisions that require or authorise personal information to be handled in ways that the *Privacy Act* may otherwise prevent. It was submitted that this could clarify the scope of particular legal provisions and their relationship to the *Privacy Act*, keep track of the number and extent of lawful exceptions to the *Privacy Act*, and improve public confidence in legal transparency.[36] The OPC suggested that such a project may require the coordination of numerous agencies and organisations, such as the OPC and, possibly, the Australian Government Attorney-General's Department.[37]

ALRC's view

Scope of the required or authorised exception

13.29 In the ALRC's view, the *Privacy Act* should not fetter a government's discretion to require or authorise that personal information be handled in a particular way. There is a public expectation that governments are able to make laws to facilitate the handling of information in certain appropriate and necessary ways. The required or authorised exception reflects this expectation.[38] The scope of the exception does, however, require clarification. Submissions noted that the ambiguity in the operation of this exception can create uncertainty for individuals, agencies, organisations and privacy regulators.

13.30 While the scope of 'required' and 'authorised' appear to be well understood, the categories of laws that are 'law' for the purposes of the exception is less clear. In the ALRC's view, federal acts and delegated legislation are clearly 'law' for the purpose of the exception. These laws are subject to various accountability requirements including the scrutiny of Parliament and disallowance. These accountability requirements help to ensure that any reliance on the required or authorised exception is appropriate and justified.

13.31 'Law' should also include state and territory Acts and delegated legislation. These laws are also subject to accountability requirements. If state and territory laws were not considered law for the purposes of the exception, an organisation, for example, could find that they were subject to conflicting obligations under the *Privacy Act* and a state or territory Act or delegated legislation.

13.32 It is not clear to what extent a 'law' for the purposes of the required or authorised exception includes a common law or equitable duty. The ALRC and the Australian Health Ethics Committee (AHEC) of the National Health and Medical

35 Ibid.
36 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
37 Ibid.
38 Ibid.

Research Council considered this issue in *Essentially Yours: The Protection of Human Genetic Information in Australia* (ALRC 96). The ALRC and AHEC noted that:

> It appears to be accepted that 'law' may include the common law. However, it is not entirely clear whether NPP 2.1(d) permits a doctor to disclose confidential information where the disclosure is covered by the public interest exception to the common law duty of confidentiality. In an Attorney-General's Department information paper, the Government acknowledged that the health profession had a strong respect for the confidentiality of health information and maintained sound privacy practices. The paper stated that the 'legislation is not intended to interfere with those professional values and standards'.[39]

13.33 The ALRC and AHEC concluded that the application of the *Privacy Act* to the disclosure of health information by doctors and other health professionals, in circumstances that may not breach common law or ethical requirements of confidentiality, may require clarification.[40]

13.34 Further, it is unclear whether 'law' should include an order of a court or tribunal; documents that are given the force of law by an Act of Parliament, such as industrial awards; or statutory instruments such as Local Environmental Plans made under planning laws. The ALRC is interested in hearing stakeholder views on whether these laws should be regarded as a 'law' for the purposes of the required or authorised exception.

Question 13–1 Should the definition of a 'law' for the purposes of determining when an act or practice is required or specifically authorised by or under a law include:

(a) a common law or equitable duty;

(b) an order of a court or tribunal;

(c) documents that are given the force of law by an Act of Parliament, such as industrial awards; and

(d) statutory instruments such as a Local Environmental Plan made under a planning law?

Review of legislation

13.35 Submissions emphasised that legislation that raises privacy issues should be reviewed at appropriate intervals to confirm that Parliament continues to accept that it reflects an appropriate balance between privacy interests and other interests.

---

39 Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), [21.56].

40 Ibid, [21.56].

13.36 The ALRC notes that the Privacy Commissioner currently has various powers that would allow her to review legislation for these purposes. These powers include a power under s 27(1)(f) to provide, on request or on the Commissioner's own initiative, advice to a minister, agency or organisation on any matter relevant to the operation of the *Privacy Act*. In the ALRC's view, this power enables the Privacy Commissioner to monitor legislation that requires or authorises certain acts and practices for the purposes of the *Privacy Act*, and provide advice to the minister responsible for that legislation, if those acts and practices are no longer considered appropriate.

Clear references to exception in legislation

13.37 Another option is to amend legislation which is intended to rely on the required or authorised exception so that it includes clear reference to this in the legislation.[41]

13.38 In the ALRC's view, legislation should clearly set out whether it is intended to require or authorise an act or practice for the purposes of the *Privacy Act.* In the interest of clarity and transparency, these provisions should set out the type of information to be dealt with, the scope of the requirement or authorisation, and the extent to which the *Privacy Act* applies to the handling of that information.

13.39 It would be too onerous to amend all federal, state and territory legislation that may require or authorise an act or practice in relation to the handling of personal information. Federal, state and territory parliaments should, however, ensure that proposed laws that are intended to rely on the required or authorised exception include clear references to the exception. This task could be undertaken as part of a privacy impact assessment.[42]

A list of laws that require or authorise acts and practices

13.40 One option raised by the OPC is the compilation of a list of provisions in other legislation that require or authorise acts or practices that would otherwise be regulated by the *Privacy Act*. Such a list of laws would provide clarity for agencies, organisations, individuals and privacy regulators about whether certain laws met the criteria of the exception.

13.41 The list could act as a centralised resource for drafting and, potentially, the development of a standardised provision. The list could also serve an educative function in that it may prompt agencies to consider privacy implications when developing legislation.

13.42 This proposal raises a range of issues. A threshold question is whether the list should have the force of law. One option is to locate the list in a schedule to the *Privacy Act*. Including the list as a schedule to the Act would make it easy for people to find and would give the list authority. Updating the list, however, would require legislative amendment and be time consuming, affecting the currency of the list.

---

41 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

42 See Chs 4, 11 and 44.

Promulgating the list in regulations may be a more appropriate option. Regulations are used to give force of law to matters that are subject to frequent change.

13.43 A less formal method is for the list to published on the website of the Attorney-General's Department or the OPC. While this option provides for flexibility and accessibility, the list will not have the same legal authority as a schedule to the *Privacy Act*.

13.44 A further issue is whether the list should be comprehensive or indicative. The list could be restricted to the required or authorised exception to the proposed UPPs or cover the operation of the exception in the context of other provisions of the *Privacy Act*. Another question is whether the list should contain federal laws only, or whether it should also include state and territory laws, and common law duties. The list could be restricted to future provisions or extend to existing provisions. One concern is that the practice of identifying some provisions and not others could produce an interpretation that listing was a necessary precondition for the exception to operate.

13.45 Another issue for consideration is who should be responsible for the preparation of such a list. One option would be for the OPC to compile the list. It is, however, questionable whether the OPC would have the resources to undertake such a task. Another option would be to have the Australian Government Attorney-General's Department compile the list. Agency heads could supply to the Department a list of provisions in legislation they administer that require or authorise the handling of personal information. The ALRC is interested in comment on these issues.

Question 13–2 Should a list be compiled of laws that require or authorise acts or practices in relation to personal information that would otherwise be regulated by the *Privacy Act*? If so, should the list have the force of law? Should it be comprehensive or indicative? What body should be responsible for compiling and updating the list?

Specifically authorised

13.46 In the ALRC's view, the required or authorised exception is essential to grant governments the discretion to provide that personal information be handled in particular ways. The ALRC has, therefore, proposed that it remain as an exception to a number of the proposed UPPs.

13.47 The ALRC has, however, identified two areas where an exception in relation to acts and practices that are 'specifically authorised' by or under law would be beneficial. An exception for acts and practices that are 'specifically authorised' would require the law expressly to authorise a defined class of acts and practices. In the ALRC's view this exception would require the Australian Parliament and state and territory parliaments to have turned their mind to how the proposed law interacts with

the *Privacy Act*, and to the competing interests for and against the handling of personal information in a particular context.

13.48 The ALRC proposes the use of the specifically authorised exception in the context of the proposed 'Collection' and 'Specific notification' principles. NPP 10.1(b) currently provides that an organisation must not collect sensitive information about an individual unless the collection is required by law. In the ALRC's view, this exception is too narrow. The ALRC considered proposing an exception to the 'Collection' principle if an act or practice was 'authorised by law'. Such an exception would be too wide as it could include laws that impliedly authorise certain acts and practices. Therefore, in Chapter 19, the ALRC proposes that an agency or an organisation must not collect sensitive information unless the collection is required or specifically authorised by or under law.[43]

13.49 The ALRC also proposes a new 'Specific Notification' principle that requires agencies and organisations to take reasonable steps to inform an individual of certain matters, except to the extent that the agency is required or specifically authorised by or under law not to make the individual aware of one or more of these matters.[44] In the ALRC's view this solution strikes an appropriate balance between making agencies and organisations generally accountable for the personal information they collect and recognising that, in certain situations and where it is provided for expressly in a law, the requirements of accountability and transparency should be relaxed in favour of other considerations.

Census and Statistics Act 1905 (Cth)

13.50 The Australian Bureau of Statistics (ABS) conducts a census of population and housing every five years in accordance with the *Census and Statistics Act 1905* (Cth).[45] The census is regarded as the most important source of statistical information in Australia. The information from the census is used to produce statistical data for use by governments, as well as academics, industry, businesses and private individuals.

13.51 In the late 1970s, the ALRC conducted an inquiry into privacy issues and the census, culminating in the release in 1979 of the report *Privacy and the Census* (ALRC 12).[46] The report made a number of recommendations directed to the protection of personal information collected as part of the census.[47] A number of these recommendations have been implemented.[48]

---

43 See Ch 19 and proposed 'Collection' principle.
44 See Ch 20 and proposed 'Specific Notification' principle.
45 *Census and Statistics Act 1905* (Cth) s 8.
46 Australian Law Reform Commission, *Privacy and the Census*, ALRC 12 (1979).
47 Ibid, x–xvi.
48 See, eg, *Census Information Legislation Amendment Act 2000* (Cth).

13.52 The *Privacy Act* was enacted in 1988. The *Privacy Act* applies the IPPs to personal information collected as part of the census.[49] Under the *Privacy Act*, personal information collected by the ABS for a census is collected for a lawful purpose directly related to a function or activity of the ABS and is necessary and directly related to that purpose.[50] The *Census and Statistics Act* also contains a number of provisions, including secrecy provisions, directed to the protection of information collected as part of the census.[51] For example, s 19A provides that the Australian Statistician or an ABS officer must not at any time, during the period of 99 years from the day for a census, divulge or be required to divulge information contained in a census form to an agency, a court or a tribunal.[52]

13.53 Before the 2001 Census, all name-identified information from past census was destroyed on completion of statistical processing. In 2000, the Australian Government introduced legislation that provided for the retention of census data.[53] This legislation was put in place for the 2001 Census on a trial basis. The *Census Information Legislation Amendment Act 2006* (Cth) amended the *Census and Statistics Act* to ensure that, subject to the household's consent, name-identified information collected in the 2006 Census and all subsequent census would be stored by the National Archives of Australia to be preserved for release for future research after a closed access period of 99 years.[54]

13.54 Another recent development is the Census Data Enhancement (CDE) project.[55] The primary objective of the CDE project was to enhance the value of the census by combining it with future census and, possibly, other datasets held by the ABS. The central feature would have been the Statistical Longitudinal Census Dataset (SLCD) involving all respondents to the census. A Discussion Paper on the project was released in April 2005[56] and a privacy impact assessment (PIA) was prepared.[57] Although there

---

49 The ABS is an 'agency' for the purposes of the *Privacy Act*: *Privacy Act 1988* (Cth) s 6. For a discussion of how the IPPs apply to the census see Parliament of Australia—House of Representatives Legal and Constitutional Affairs Committee, *Saving Our Census and Preserving Our History* (1998), Ch 4.

50 *Privacy Act 1988* (Cth) s 14, IPP 1.1.

51 *Census and Statistics Act 1905* (Cth) ss 7, 8A, 13, 19, 19A, and 19B. Further, the *Statistics Determination 1983* (Cth) made by the Minister under *Census and Statistics Act 1905* (Cth) s 13 provides for the disclosure, with the approval in writing of the Statistician, of specified classes of information.

52 See Parliament of Australia—House of Representatives Legal and Constitutional Affairs Committee, *Saving Our Census and Preserving Our History* (1998), rec 1. See also Explanatory Memorandum, Census Information Legislation Amendment Bill 2006 (Cth).

53 *Census Information Legislation Amendment Act 2000* (Cth).

54 Explanatory Memorandum, Census Information Legislation Amendment Bill 2006 (Cth). In 2001, 52% of Australians gave consent to have their name-identified information released after 99 years. For 2006, the participation rate was 56.1%: Australian Bureau of Statistics, 'Retention Facts and Figures (the Census Time Capsule)' (Press Release, 27 June 2007).

55 Australian Bureau of Statistics, *Census of Population and Housing—Census Data Enhancement* <www.abs.gov.au> at 31 July 2007.

56 Australian Bureau of Statistics, *Enhancing the Population Census: Developing a Longitudinal View* (2005).

57 Pacific Privacy Consulting, *Census Enhancement Project: Privacy Impact Assessment Report for Australian Bureau of Statistics* (2005).

was some support for the project, a number of submissions and the PIA identified significant privacy-related concerns.[58] In particular, the PIA noted that the proposal

> will create a data resource so rich and valuable for administrative uses that the privacy and secrecy framework under which the ABS operates may come under great and possibly irresistible pressure, if not immediately, then at least in the medium to long term …
>
> Despite the rigour of the legislative protections, and the ABS track record both of procedural safeguards and of defence of the principle of confidentiality, there remains a residual privacy risk of future changes in legislation to allow administrative and other nonstatistical uses.[59]

13.55 On 18 August 2005, the ABS announced that it would not proceed with the SLCD as proposed and that the CDE proposal had been substantially modified.[60] The SLCD will now be based on a 5% sample of the population. In the ABS's view, the reduction of the dataset to a 5% sample will make the dataset unsuitable for administrative and other non-statistical uses.

Submissions and consultations

13.56 In IP 31, the ALRC asked whether personal information collected pursuant to the *Census and Statistics Act* was adequately protected.[61] The ABS submitted that the *Census and Statistics Act* adequately protects personal information collected under it.

> When the ABS publishes statistics, or releases information, it cannot do so in a manner that is likely to enable the identification of a particular person. In order to ensure the ABS complies with this requirement, the ABS has developed statistical methods to prevent the disclosure of identifiable information, while allowing sufficiently detailed information to be released to make the statistics useful.[62]

13.57 The OPC agreed that the legislative protections afforded by the *Privacy Act* and the secrecy provisions of the *Census and Statistics Act* provide a sound framework for the appropriate handling of personal information. The OPC noted, however, that it is aware of concerns held by some individuals in the community regarding the census, including about: the amount of detail collected for household surveys and whether some of the questions are unnecessarily intrusive; the powers of the ABS to compel individuals to disclose personal information; whether collectors can see the information; whether the personal information is handled securely while in transit; and

62 Australian Bureau of Statistics, *Submission PR 96,* 15 January 2007.

the degree to which personal information may be available to others. These concerns are generally most pronounced in the period leading up to the taking of the census.[63]

13.58 The Australian Privacy Foundation submitted that any further erosion of the confidentiality provisions of the *Census and Statistics Act* needs to be resisted firmly, not only because of the extraordinary sensitivity of much census information, but also because of the public interest in truthful and therefore reliable census responses.

> We consistently drew attention during the 1990s to the Bureau of Statistics as the one and only Commonwealth agency which could give unqualified assurances of confidentiality. Regrettably this is no longer the case since the introduction in 2005 of the Longitudinal Data Set (albeit on a sample basis), and in the last two censuses of the 'opt in' retention of forms by the Australian Archives, for access by researchers after 99 years.[64]

ALRC's view

13.59 The ALRC does not make a proposal in relation to the operation and administration of the *Census and Statistics Act*. The information contained in name-identified census records and released after 99 years is an invaluable source for historians, historical sociologists and other researchers; and is adequately protected under the current regime.

13.60 The ALRC notes that the collection and retention of name-identified information is only to occur with the consent of the individual.[65] This is consistent with the current IPPs and the proposed UPPs. Further, in the ALRC's view the sensitivity of much personal information has diminished after 99 years. The legislated closed period of 99 years is a recognition of this fact.

13.61 The retention of records by the National Archives of Australia for a period of 99 years is consistent with IPP 4 (Storage and security of personal information). The protection provided by the *Archives Act 1983* (Cth) is robust and beyond that accorded to other personal information.[66] During the time it is in the closed period, the retained name-identified information is expressly excluded from provisions for special access under s 56 of the *Archives Act* or by disclosure by National Archives of Australia staff, including to a court or tribunal.[67]

13.62 In relation to the SLCD, the ALRC acknowledges the serious concerns about the privacy risks associated with the development of a rich longitudinal dataset that related to the entire Australian population. The ALRC notes the concerns of stakeholders that

---

63 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007. See also Parliament of Australia—House of Representatives Legal and Constitutional Affairs Committee, *Saving Our Census and Preserving Our History* (1998), [4.10]–[4.14].

64 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

66 National Archives of Australia, *Submission PR 199,* 20 February 2007.

67 *Archives Act 1983* (Cth) ss 22B, 30A.

such a dataset might appear too attractive for future non-statistical or administrative uses. The ALRC notes, however, that the modified proposal for the SLCD to be based on a 5% sample of the population will make the dataset much less attractive for other uses, including administrative and other non-statistical uses.

13.63 The ALRC acknowledges the privacy concerns that some members of the public have in the period leading up to the taking of the census. The ALRC is, however, satisfied that the legislative framework within which the ABS operates and conducts the census is privacy protective. The ABS is subject to the *Privacy Act* as well as confidentiality provisions under the *Census and Statistics Act*. Names and addresses are not retained for longer than the period required for census processing, and are used only in relation to census processing and for ABS quality studies. Names and addresses are destroyed at the end of census processing.[68]

13.64 Further, various administrative arrangements for the collection of census data are designed to protect the privacy of individuals participating in the census. For example, householders who do not wish other members of the household to see their information may request a personal census form. Those who are concerned about the census collector seeing the form can ask for a privacy envelope or can complete the census form online using the eCensus. Householders who still have concerns can ask the census collector for a reply-paid 'mailback' envelope to post their completed form directly to the ABS.[69]

Corporations Act 2001 (Cth)

13.65 Section 168 of the *Corporations Act 2001* (Cth) requires companies and registered schemes to maintain a register of members and, if relevant, a register of option holders and a register of debenture holders. Section 169 of the Act requires a register of members to contain certain details, including the member's name and address, the date on which the member's name was entered on the register, as well as other details such as the shares held by each member.

13.66 Under s 173 of the *Corporations Act*, companies, registered schemes and persons who maintain registers on behalf of companies and registered schemes must allow anyone to inspect these registers.[70] Section 173 of the Act is an example of a provision that requires or authorises the disclosure of information for the purposes of the *Privacy Act*. It is unlikely therefore that compliance with the *Corporations Act* requirements would breach NPP 2.

13.67 Section 177 of the *Corporations Act* provides that it is a criminal offence if a person uses information about a person obtained from a register to contact or send material to the person or disclose information of that kind knowing that the information

69 See Australian Bureau of Statistics, *2006 Census: Privacy and Confidentiality* <www.abs.gov.au> at 31 July 2007.

70 *Corporations Act 2001* (Cth) s 173.

is likely to be used to contact or send material to the person. An exception to that rule is where the use of the information is connected with the membership, or approved by the company.

13.68 Link Market Service submitted that the provisions relating to access to registers under the *Corporations Act* are contrary to the NPPs.[71] It was noted that under the *Privacy Act*, a company that maintains a members register cannot provide personal information except for the primary purpose of managing a members register, and yet under the *Corporations Act* it is able to disclose information that would not usually be disclosed.

> Practically we cannot, for example, disclose information to a shareholder that calls in without providing their unique identifier (their Securityholder Reference Number) but can allow access to a register to a member of [the] public if they visit our offices to a view a register (in this process they can see a specific individual's holding balance).[72]

13.69 Particular concerns relating to mutual entities, such as credit unions, have also been raised. It has been argued that the personal information on a credit union's member register is more detailed and revealing than information on an ordinary company register,[73] and that access to this information will encourage misuse of this information.[74] Amendments have been made to the *Corporations Regulations 2001* (Cth) to deal with this issue.[75] Regulation 12.8.06 of the *Corporations Regulations* allows mutual entities to:

- have a separate register of 'member shares' being the shares which are issued by them to their customers;
- require the party seeking access to agree in writing that the information about members which is gained will be divulged only to certain named persons and used only for certain specified purposes; and
- refuse access if it is not satisfied that access is being sought by a member who intends to call a meeting of members, or for another purpose approved by the Australian Securities and Investments Commission (ASIC).

13.70 Further, the *Corporations Amendment Regulations 2007 (No 9)* (Cth) provide that when a person seeks access to a register of members of certain body corporates (a credit union, credit society and building society) and the person has given a statutory declaration in relation to the use of that information and paid the reasonable costs of contacting the members, or sending material to the members, the body corporate must

do everything that is reasonably possible to arrange for the members to be contacted, or for the material to be sent to the members, on the person's behalf by a third party service provider nominated by the body corporate.

Submissions and consultations

13.71 In IP 31, the ALRC asked whether it is appropriate that the disclosure of a shareholder's personal details in a register of members, register of debenture holders or a register of option holders under the *Corporations Act* is a disclosure of personal information that is permitted for the purposes of NPP 2.[76]

13.72 One stakeholder submitted that such disclosure is appropriate and clearly permitted for the purposes of NPP 2.

> The law imposes this obligation on companies for good reasons. The members and directors of a company have the considerable advantage of limited liability. That means that persons dealing with the company cannot generally proceed against its members or directors for debts owed to them by the company. There is a concomitant obligation that goes with that benefit, and that is that those members and directors must be prepared to disclose that they control or have an interest in the company.[77]

13.73 The submission noted that the *Corporations Act* imposes criminal penalties for inappropriate use of information held on a register. It was also observed that there are a number of legitimate reasons why someone might wish to obtain membership details. For example, a member or third party may seek to circulate material to members of the company raising issues about the performance of the company or its management; a member may seek to convene a general meeting of the members; and a member or third party may make a bid for securities held by the members of the company.[78] It was submitted that access to personal information for these reasons facilitates informed dealings by members, prospective members and other stakeholders, which is conducive to the good governance of a company.

> The law does not prohibit inspection of registers because some people might, conceivably, abuse the privilege. It leaves the privilege open to all, with sanctions for misuse. Transparency of ownership and accountability are, if you like, the 'costs' which necessarily go with the benefit of limited liability. These are some of the necessary consequences of choosing to do business by means of a company.[79]

13.74 The ALRC also heard a number of concerns about the disclosure of shareholder's personal details in a register of members. The OPC noted community concern regarding access to share registers, particularly where information derived from registers is used for purposes that shareholders may not expect. The OPC has received complaints and enquiries about share register information being used to make unsolicited purchase offers to individuals, including at opportunistic prices; concerns that shareholding registers may reveal information about the financial wealth of an

77 Confidential, *Submission PR 165,* 1 February 2007.
78 Ibid.
79 Ibid.

individual; and information being used for unsolicited direct marketing.[80] The OPC submitted that it may be appropriate to describe more carefully the range of permitted uses and disclosures of this data.[81]

13.75 A number of issues were raised in relation to personal information held on a credit union's member register. The National Credit Union Association (NCUA) stated that the majority of customers of credit unions are individuals, which is in contrast to listed companies, which will generally have a greater number of corporate shareholders. This has significant ramifications for a credit union, as disclosure of the shareholder register is a disclosure of a credit union's client base, which comprises mostly persons, not corporations.[82]

13.76 The NCUA also noted that credit unions are often structured to service particular groups of people, which are characterised by community, locality or some element of workplace or professional association or ethnic origin. In the view of NCUA, the fact that a person is on the shareholders' register of a credit union may indicate that person's racial or ethnic origin or professional association, which may amount to sensitive information. NCUA submitted that it should be of concern to government that any person may obtain the names, addresses and other details of police, military personnel, pilots and teachers who are members of specific industry-based credit unions.[83]

13.77 Abacus–Australian Mutuals (Abacus) welcomed the recognition of the different status of mutual member registers provided in the *Corporations Regulations*, but submitted that a 'clear mailing house' was required. Under the model, where lawful contact was to occur with members of a mutual this would be conducted at 'arm's length' with material managed by a professional mailing house or some other trusted third party, ensuring that member information is not required to be released to the applicant.[84]

13.78 Abacus observed an increased interest in the launching of takeovers and demutualisations of mutual entities. Rather than pursuing these as formal takeovers, third parties have, in some cases, sought to advance their proposals by direct lobbying of members (for example, seeking to have boards directed to take action or to replace directors with a pro-demutualisation board).[85]

83 National Credit Union Association Inc, *Submission PR 226,* 9 March 2007. See also Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

84 This submission was received prior to the promulgation of the *Corporations Amendment Regulations 2007 (No 9)* which provides for a mailing house option.

85 Abacus–Australian Mutuals, *Submission PR 174,* 6 February 2007.

13.79 Abacus also noted that ASIC has used its approval powers under the *Corporations Regulations* to authorise the release of mutual register information to third parties (in some instances, direct competitors) who are seeking to launch informal takeovers and demutualisations without imposing protections covering member information or ensuring strong disclosure rules were in place.[86]

13.80 One submission noted, however, that the content requirements for registers of members apply to companies which conduct a credit union business in the same way as they apply to all other companies. It was also noted that credit unions have the benefit of further controls on the use to which such information may be put. It was submitted that these further controls represent substantial advantages which are not enjoyed by companies generally and should promote the bona fide use of the registers of members of credit union companies.[87]

ALRC's view

13.81 The ALRC does not make a proposal in relation to the use and disclosure of personal information held on a register of members. In the ALRC's view, the *Corporations Act* provides significant protection of personal information held on a register. These protections strike the appropriate balance between the right of the public to know about, and use, information from the register, and the policy that shareholders should be free from undue intrusion from the use of such information. The ALRC also notes that the member registers of mutuals, such as credit unions, receive extra protection under the *Corporations Regulations* as amended by the *Corporations Amendment Regulations 2007 (No 9)*, which provide for the use of a mailing house when a third party seeks access to a credit union's register of members.

13.82 The *Privacy Act* also provides some protection for personal information held on a members register.[88] For example, the collection by an organisation of information from a register will be subject to NPP 1. Personal information included on a register is subject to the data quality requirements of NPP 3. The application of the *Privacy Act* to publicly available information is discussed further in Chapter 8.

Commonwealth Electoral Act 1918 (Cth)

13.83 The *Commonwealth Electoral Act 1918* (Cth) and the *Privacy Act* provide the legislative privacy framework governing the electoral roll. Part VI of the *Commonwealth Electoral Act* provides for the establishment of an electoral roll. Under s 101 of the Act it is compulsory for all eligible persons in Australia to maintain continuous enrolment on the Commonwealth electoral roll for the purposes of federal elections and referendums. The names and addresses of all electors on the Commonwealth electoral roll are available for public inspection in various formats specified under the *Commonwealth Electoral Act*.[89] The Act also requires the provision

86 Ibid.
87 Confidential, *Submission PR 165,* 1 February 2007.
88 *Privacy Act 1988* (Cth) s 16B.
89 *Commonwealth Electoral Act 1918* (Cth) ss 90, 90A.

of electoral roll information to a number of different individuals and organisations, including members of Parliament and political parties.[90]

13.84 Section 91A of the *Commonwealth Electoral Act* provides that a person or organisation that obtains information under s 90B must not use it except for a permitted purpose. The permitted purposes in relation to a political party include: any purpose in connection with an election or referendum, research regarding electoral matters, and monitoring the accuracy of information contained in a roll. Disclosure to political organisations for these permitted purposes would constitute a secondary purpose that is authorised by law for the purposes of the *Privacy Act*.[91]

13.85 One issue for consideration is whether the provisions under the *Commonwealth Electoral Act* and the *Privacy Act* provide adequate protection for personal information—particularly information provided to political organisations. Although the *Commonwealth Electoral Act* regulates what electoral roll information can be provided to individuals and organisations, and how they can use the information, it does not provide for other information privacy protection such as in relation to data security and retention. These issues are dealt with in the NPPs. The NPPs do not, however, apply to acts or practices carried out by political organisations and their contractors, subcontractors and volunteers in relation to electoral matters.[92] Issues related to the political exemption are discussed in detail in Chapter 37.[93] Privacy concerns related to developments in technology and the use of public registers such as the electoral roll are discussed in Chapter 8.

Submissions and consultations

13.86 It was submitted that protection consistent with the principles contained in the *Privacy Act* should be afforded to the handling of information from the electoral roll, particularly in regard to those bodies that may handle such information but which are not regulated under the *Privacy Act*.[94] The OPC submitted that consideration should be given to extending the types of protections that are afforded under the *Commonwealth Electoral Act*, including by introducing obligations to ensure that recipients handle information securely and dispose of it when it is no longer required for the purpose for which it was collected.[95]

13.87 A number of submissions noted that amendments to the *Commonwealth Electoral Act* have resulted in the electoral roll being used for a purpose other than the primary purpose for which the personal information was collected. In particular, it was

93 In Ch 37, the ALRC proposes substantial amendments to the political exemption. See Proposals 37–1, 37–2.
94 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
95 Ibid.

submitted that the electoral roll is now a resource for identity management.[96] This is particularly the case in relation to the new obligations under the AML/CTF Act.

13.88 The OPC reported concerns in the community about the use of information sourced from old electoral rolls, in particular for direct marketing. The OPC also noted concern about the alleged use of information on the electoral roll by debt collectors. In one case, a debt collector, acting on behalf of a psychiatrist, allegedly sent an account on the psychiatrist's letterhead to the debtor's work address. In another case, a debt collector allegedly sent letters of demand to all persons of the same name listed on the electoral roll in an attempt to recover a debt.[97]

13.89 There was, however, some support for greater access to the electoral roll. The Institute of Mercantile Agents submitted that:

> The current senseless banning of the release of Electoral Roll information is costing consumers over $4Billion in unlocated accounts—again the cost of those debts are passed on: those who pay, pay extra for those who don't! Despite holding an individual's consent to use electoral roll information. Such information should also be a privacy requirement of credit bureaux to assist in holding correct information.[98]

13.90 The OPC noted the range of agencies that are able to access the electoral roll. Under the *Electoral and Referendum Regulations 1940* (Cth), 22 Australian Government agencies are authorised to access information on the electoral roll for a range of regulatory, law enforcement and public revenue purposes.[99] In the OPC's view, given the mandatory nature of enrolment, it is appropriate that access to the electoral roll remain relatively narrow.[100]

13.91 Stakeholders also expressed concern about the use of information from other agencies to update the roll. Under s 92 of the *Commonwealth Electoral Act*, the Australian Electoral Commission has substantial powers to collect personal information from a range of Australian Government and state and territory agencies to maintain the integrity of the electoral roll. Updating the roll would include, for example, matching personal information from another source with the personal information held on the electoral roll. The OPC submitted that:

> In the context of the Electoral Roll, it may be appropriate that any data-matching only be pursued where appropriate regard for privacy issues has been given. In particular, the purpose of the data-matching should be narrowly defined as being to maintain the accuracy of the Electoral Roll. Further, formal protocols may be required to ensure that redundant or unmatched personal information is not retained.[101]

13.92 The OVPC noted that a tension arises when the Australian Electoral Commission demands bulk access to personal information held by state electoral

101 Ibid.

authorities in order to verify the identity of voters. The OVPC submitted that, in principle, state authorities are the 'best custodians' of these datasets.[102]

ALRC's view

13.93 The compulsory provision of information for the electoral roll requires that an appropriate balance be struck between the public interest in ensuring transparent electoral procedures and the public interest in protecting privacy. In the ALRC's view, the *Commonwealth Electoral Act* and the *Privacy Act* balance these interests appropriately.

13.94 The ALRC is concerned, however, that, due to the interaction between the *Commonwealth Electoral Act* and the exemptions under the *Privacy Act*, political organisations and their contractors, subcontractors and volunteers are not subject to any rules relating to secure storage and retention of personal information held on the electoral roll. The ALRC notes that the secure storage and destruction of this information is essential to guard against unauthorised use of old electoral rolls for purposes such as direct marketing.

13.95 This will no longer be an issue if the exemption under the *Privacy Act* that applies to registered political parties and political acts and practices is removed as proposed.[103] In the event that it is not, the ALRC proposes that the *Commonwealth Electoral Act* should be amended to provide that prescribed individuals, authorities and organisations to whom the Australian Electoral Commission must give information in relation to the electoral roll and certified lists of voters must take reasonable steps to:

- protect the information from misuse and loss and from unauthorised access, modification or disclosure; and
- destroy or render the information non-identifiable if it is no longer needed for a permitted purpose.

13.96 The primary purpose of collection of personal information for inclusion in the electoral roll is to produce and maintain an accurate record of those who are entitled to vote, thus minimising electoral fraud and promoting the participation of all eligible citizens in the democratic process.

13.97 The electoral roll is being used increasingly for purposes other that the primary purpose, such as for complying with obligations under the AML/CTF Act. The ALRC is, however, conscious that these secondary uses are required or authorised by law, and that there is a need for access to personal information in order to comply with statutory identity verification requirements.

13.98 In the ALRC's view, the OPC should continue to monitor the use of the electoral roll for other than electoral purposes. The ALRC proposes below that the

---

102 Office of the Victorian Privacy Commissioner, *Submission PR 217,* 28 February 2007.
103 See Ch 37.

seven year statutory review of the AML/CTF Act consider a variety of matters.[104] The ALRC considers that this review should also consider whether use of the electoral roll for the purposes of identity verification under the AML/CTF Act continues to be appropriate.

13.99 The ALRC acknowledges concerns in relation to data-matching to update the roll and the retention of redundant or unmatched personal information. In the ALRC's view, the Australian Electoral Commission and state and territory electoral commissions, in consultation with the OPC, should develop and publish protocols that address the collection, use, storage and destruction of personal information shared for the purposes of the continuous update of the electoral roll.

Proposal 13–1 If the exemption that applies to registered political parties and political acts and practices is not removed, the *Commonwealth Electoral Act 1918* (Cth) should be amended to provide that prescribed individuals, authorities and organisations to whom the Australian Electoral Commission must give information in relation to the electoral roll and certified lists of voters must take reasonable steps to:

(a) protect the information from misuse and loss and from unauthorised access, modification or disclosure; and

(b) destroy or render the information non-identifiable if it is no longer needed for a permitted purpose.

Proposal 13–2 The Australian Electoral Commission and state and territory electoral commissions, in consultation with the Office of the Privacy Commissioner, should develop and publish protocols that address the collection, use, storage and destruction of personal information shared for the purposes of the continuous update of the electoral roll.

Anti-Money Laundering and Counter-Terrorism Financing Act 2006 (Cth)

13.100 The AML/CTF Act received Royal Assent on 12 December 2006. It is intended to enable individual businesses to manage money laundering and terrorism financing risks. The Act sets out the primary obligations of 'reporting entities' when providing 'designated services'. A 'reporting entity' is a financial institution, or other person who provides 'designated services'.[105] A large number of 'designated services' are listed in the Act including opening an account, making a loan, and supplying goods by way of hire purchase.[106]

104 *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth) s 251.
105 Ibid s 5.
106 Ibid s 6.

13.101 The Act requires a reporting entity to carry out a procedure to verify a customer's identity before providing a designated service to the customer.[107] In addition, reporting entities must give the Australian Transaction Reports and Analysis Centre (AUSTRAC) reports about suspicious matters,[108] and must develop and comply with an anti-money laundering and counter-terrorism financing program.[109] The Act also imposes various record-keeping requirements on reporting entities.[110] For example, a reporting entity must make a record each time it provides a designated service and must retain the record for seven years.[111]

13.102 Part 11 of the Act relates to secrecy and access. Except as permitted by the Act, certain individuals including an AUSTRAC official, a customs officer or a police officer must not disclose information or documents obtained under the Act.[112] Further, a reporting entity must not disclose that it has reported, or is required to report, information to AUSTRAC; or that it has formed a suspicion about a transaction or matter. The Part also provides that the Australian Taxation Office and certain other 'designated agencies' may access AUSTRAC information. The term 'designated agencies' is defined in s 5 to include a large number of Australian Government agencies as well as some state and territory agencies. Designated agencies may access AUSTRAC information for the purposes of performing that agency's functions and exercising the agency's powers.[113] The Act requires designated agencies, including state and territory agencies, to comply with the IPPs in respect of the accessed AUSTRAC information.[114]

Background

13.103 The AML/CTF Act is the result of an extensive consultation process. On 16 December 2005, the Government released the exposure draft Anti-Money Laundering and Counter-Terrorism Financing Bill (the exposure Bill) along with draft Rules.[115] The Australian Government Attorney-General's Department received 120 submissions on the exposure Bill. The exposure Bill was referred to the Senate Legal and Constitutional Legislation Committee. The Committee reported on its inquiry on 13

107 Ibid pt 2.
108 Ibid pt 3.
109 Part A of an anti-money laundering and counter-terrorism financing program is a program that is designed to identify, mitigate and manage the risk a reporting entity may reasonably face when providing designated services in Australia that might involve or facilitate money laundering or financing of terrorism. Part B of an anti-money laundering and counter-terrorism financing program sets out the applicable customer identification procedures for customers of the reporting entity: Ibid s 80.

115 See Australian Government Attorney-General's Department, *Anti-money Laundering* <www.ag.gov.au> at 30 July 2007.

April 2006.[116] The Committee concluded that an independent privacy impact assessment of the Bill should be conducted. The Committee also recommended that the Bill should contain a statement that is reflective of the intention to allow federal, state and territory agencies to access and utilise AUSTRAC data for purposes that may not be related to anti-money laundering or counter-terrorism financing, such as detecting tax and social security fraud.[117]

13.104 The Australian Government Attorney-General's Department released a revised exposure draft Anti-Money Laundering and Counter-Terrorism Financing Bill 2006 (Cth) (revised AML/CTF Bill 2006) and draft Rules for a further period of consultation which ended on 4 August 2006.[118] The Department received a further 70 submissions on the revised AML/CTF Bill 2006. Submissions in response to the revised AML/CTF Bill 2006 raised a number of privacy issues.

13.105 In September 2006, an independent privacy impact assessment was conducted. The privacy impact assessment made 96 recommendations. Key recommendations were that:

- The scheme should be proportionate to the risk. It was suggested that some aspects of the proposal are overly intrusive into people's personal affairs compared with the current risks posed by money laundering and terrorism financing.
- The use of personal information should be limited to the stated objectives of the scheme. There were significant concerns about the collection, use, and disclosure of personal information for purposes which were deemed to be unrelated to the objectives of tackling money laundering and terrorism financing (eg, use by government agencies such as ASIC, Centrelink and the Australian Competition and Consumer Commission).
- The NPPs should be extended to all reporting entities. Many reporting entities and government agencies will not be subject to privacy obligations in the collection and use of personal information by virtue of legislative limitations. It was suggested that reporting entities under the Bill could be subject to the NPPs by amending the *Privacy Act* for the purposes of AML/CTF compliance. Where no or limited privacy obligations exist for government agencies, the Bill could also be amended to ensure that these agencies are subject to Commonwealth jurisdiction as a condition of receiving AUSTRAC information.[119]

119 Salinger & Co, *Privacy Impacts of the Anti-Money Laundering and Counter-Terrorism Financing Bill and Rules* (2006).

13.106 The Australian Government published a Privacy Impact Statement which responded to the PIA findings and recommendations. The Government adopted 30 of the 96 recommendations.[120]

13.107 The final version of the Anti-Money Laundering and Counter-terrorism Financing Bill 2006 (Cth) (AML/CTF Bill 2006) was introduced in the Parliament on 1 November 2006. The final version of the Bill required that designated agencies, including state and territory agencies, comply with the IPPs in respect of the accessed AUSTRAC information.

13.108 After its introduction, the AML/CTF Bill was referred to the Senate Legal and Constitutional Legislation Committee. Submissions to the Senate Committee continued to raise privacy issues. The Committee reported on its inquiry on 28 November 2006. The Committee recommended that the Australian Government consider amending the Bill to include further threshold value limits, to exclude low risk, low value services (such as the provision of travellers cheques and foreign currency transactions) from the definition of 'designated services' and that consideration be given to indexing these thresholds every five years. The Committee also recommended that the OPC conduct periodic audits of AUSTRAC's compliance with privacy obligations in its administration of the Bill.[121]

13.109 The *Anti-Money Laundering and Counter-Terrorism Financing (Transitional Provisions and Consequential Amendments) Act 2006* (Cth) was assented to on the same day as the AML/CTF Act. The *Anti-Money Laundering and Counter-Terrorism Financing (Transitional Provisions and Consequential Amendments) Act* introduced s 63(1A) into the *Privacy Act.* This provision has the effect of classifying a small business operator that is a reporting entity (a person who provides a designated service under the AML/CTF Act) to be an organisation for the purposes of the *Privacy Act*, ensuring that all reporting entities are subject to the *Privacy Act* in relation to their obligations to collect personal information under the AML/CTF Act.

Submissions and consultations

13.110 Submissions raised a number of issues in relation to the AML/CTF Act. The Australian Privacy Foundation submitted that privacy was not adequately protected under the anti-money laundering and counter-terrorism laws.

> The AML-CTF legislation, now passed, represents one of the most objectionable and disproportionate intrusion into financial privacy, as well as extending the existing

None of these recommendations have been implemented to date.

> system of highly subjective suspect transaction reports, which are exempt from access and correction rights.[122]

13.111 The OVPC submitted that there is a significant risk that the proposed measures will lead to pervasive monitoring of the financial affairs of ordinary citizens—not necessarily due to any suspicion that they are financiers of terrorism or money launderers, but simply by virtue of their engaging in what may be ordinary everyday transactions.[123]

13.112 The OPC also referred to its previous submissions in relation to the anti-money laundering and counter-terrorism laws. The key concerns raised in these submissions about the various iterations of the Bill included that:

- state and territory agencies may access information collected by AUSTRAC without being subject to the same accountability under the *Privacy Act* as Australian Government agencies;
- designated partner agencies have been granted access to AUSTRAC data using information for purposes outside of the intentions of anti-money laundering and counter-terrorism financing;
- the $10,000 mandatory reporting thresholds for reporting need to be reviewed to reflect price inflation and minimise the unnecessary collection of personal information; and
- the AML/CTF Act sits uncomfortably with the general privacy principle that individuals should be able to interact anonymously wherever practical.[124]

13.113 Concern was expressed in a number of submissions that designated agencies have been granted access to AUSTRAC data to use for purposes other than those of anti-money laundering and counter-terrorism.[125] Submissions also observed that the 'safeguard' under s 126(3) of the AML/CTF Act requiring state and territory government agencies recipients to agree to comply with the IPPs in the *Privacy Act* is of limited value, given the lack of enforceable remedies for any breaches, and an

inability to investigate those agencies.[126] It was also noted that the AML/CTF Act does not take into account existing state and territory privacy laws.[127]

13.114 Access and the limitations on that access to AUSTRAC information is controlled by an Instrument of Authorisation signed by the AUSTRAC Chief Executive Office under s 126(1) of the AML/CTF Act, together with a memorandum of understanding (MOU) between the AUSTRAC Chief Executive Officer and the chief executive of each of the 29 designated agencies with whom AUSTRAC has signed an MOU.

13.115 AUSTRAC stated that online access is restricted to officials who need to access reports online. Access to suspect transaction reports is limited, and AUSTRAC maintains audit trails of access by its own staff, by the Australian Taxation Office and by designated agency officers. Other submissions noted, however, that it is not appropriate that obligations to protect personal information be left to the discretion of the AUSTRAC Chief Executive Officer, and that it would be more appropriate for Parliament to determine the appropriate safeguards that should apply.[128]

13.116 Submissions noted that the record-keeping provisions in the Act generally require reporting entities to retain information for up to seven years. The OPC and others have stated that any retention period should be determined with reference to the policy intent of NPP 4.2 which requires that personal information should be destroyed once it is no longer needed for any purposes for which it may be used or disclosed under NPP 2.[129]

13.117 A number of submissions from financial institutions and peak industry bodies noted that the AML/CTF Act requires a reporting entity to carry out a procedure to verify a customer's identity prior to providing a designated service, but does not

128 Ibid.

129 Office of the Privacy Commissioner, *Submission to the Senate Standing Committee on Legal and Constitutional Affairs Inquiry into the Anti-Money Laundering and Counter-Terrorism Financing Bill 2006 [Provisions] and Anti-Money Laundering and Counter-Terrorism Financing (Transitional Provisions and Consequential Amendments) Bill 2006 [Provisions]*, November 2006; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007 referring to Australian Privacy Foundation, *Submission to the Senate Standing Committee on Legal and Constitutional Affairs Inquiry into the Anti-Money Laundering and Counter-Terrorism Financing Bill 2006 [Provisions] and Anti-Money Laundering and Counter-Terrorism Financing (Transitional Provisions and Consequential Amendments) Bill 2006 [Provisions]*, 17 November 2006.

expand access to available databases for identity verification purposes.[130] Some submissions raised the issue of using credit reporting information for the purposes of identity verification. This issue is discussed in Chapter 53.

ALRC's view

13.118 There have been a number of recent inquiries that have considered the AML/CTF Act. The ALRC, therefore, restricts its consideration of the Act to issues raised in submissions to this Inquiry. The ALRC shares many of the concerns raised by stakeholders in relation to the AML/CTF Act. In particular, the ALRC is concerned about the pervasive nature of the monitoring that is to occur due to the mandatory reporting threshold remaining at $10,000. As suggested by the OPC, the threshold should be reviewed to reflect price inflation and minimise the unnecessary collection of personal information.

13.119 The provisions requiring reporting entities to retain information for seven years are inconsistent with NPP 4.2 which requires that personal information should be destroyed once it is no longer needed for any purpose for which it may be used or disclosed. The ALRC is conscious, however, that there may be circumstances where this information will need to be retained for seven years in order to assist an investigation into anti-money laundering or counter-terrorism financing.

13.120 Under s 251 of the AML/CTF Act, the Minister must cause a review to be conducted of the operation of the Act, the regulations and the AML/CTF Rules before the laws have been in operation for seven years. This review should consider whether reporting entities and designated agencies are handling personal information appropriately under the legislation.

13.121 The review should also examine whether the number and range of transactions for which identification is required should be more limited than currently provided for under the legislation; and whether it remains appropriate that reporting entities are required to retain information for seven years. The ALRC also proposes that the review of the AML/CTF Act consider whether it is appropriate that reporting entities are able to use the electoral roll for the purpose of identification verification.

13.122 The ALRC is concerned about the number of designated agencies that have been granted access to AUSTRAC data collected under the AML/CTF Act, and the limited protection offered by s 126(3) of the Act. In the ALRC's view, due to the amount of personal information that will be made available to the agencies, it is appropriate that these agencies should have to comply with the IPPs under the *Privacy Act* in relation to that information. While the agencies must agree to be bound by the IPPs, the Privacy Commissioner does not have the power to audit or enforce compliance with the IPPs by state and territory agencies.

---

130 ING Bank, *Submission PR 230,* 9 March 2007; Abacus–Australian Mutuals, *Submission PR 174,* 6 February 2007; Institute of Mercantile Agents, *Submission PR 101,* 15 January 2007.

13.123 The ALRC proposes that the AML/CTF Act should be amended to provide that state and territory agencies that access personal information provided to AUSTRAC be regulated under the *Privacy Act* in relation to the handling of that personal information, except where they are covered by obligations under a state or territory law that are, overall, at least the equivalent of all the relevant obligations in the *Privacy Act.*

13.124 The ALRC acknowledges that there may be some opposition to this proposal from state and territory governments.[131] The ALRC notes, however, that its proposal would extend the application of the *Privacy Act* to state and territory agencies only in relation to the information provided to AUSTRAC pursuant to the AML/CTF Act; and where the state and territory agencies are not covered by obligations under a state or territory law that are, overall, at least the equivalent of all the relevant obligations in the *Privacy Act.*[132] Further consultation with state and territory governments is required.

Proposal 13–3 The review of the *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth), the regulations and the Anti-Money Laundering and Counter-Terrorism Financing Rules under s 251 of the Act should consider, in particular, whether:

(a) reporting entities and designated agencies are appropriately handling personal information under the legislation;

(b) the number and range of transactions for which identification is required should be more limited than currently provided for under the legislation;

(c) it remains appropriate that reporting entities are required to retain information for seven years; and

(d) it is appropriate that reporting entities are able to use the electoral roll for the purpose of identification verification.

131 The Australian Parliament's power under the *Australian Constitution* to legislate in relation to the handling of personal information by state and territory public sectors is discussed in Ch 4.

132 In Ch 4, the ALRC proposes that states and territories should enact privacy laws to regulate that state or territory's public sector that apply the proposed Unified Privacy Principles and the proposed *Privacy (Health Information) Regulations* as in force under the *Privacy Act* from time to time. The ALRC has also proposed that the Australian Government should initiate a review in five years to consider whether the proposed Commonwealth-state cooperative scheme has been effective in achieving national consistency. This review should consider whether it would be more effective for the Australian Parliament to exercise its legislative power in relation to information privacy in the state and territory public sectors. See Proposals 4–4 and 4–5.

Proposal 13–4 The *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth) should be amended to provide that state and territory agencies that access personal information provided to the Australian Transaction Reports and Analysis Centre under the Act be regulated under the *Privacy Act* in relation to the handling of that personal information, except where they are covered by obligations under a state or territory law that are, overall, at least the equivalent of all the relevant obligations in the *Privacy Act.*

Introduction

14.1 This chapter considers how the *Privacy Act 1988* (Cth) interacts with state and territory privacy laws. The chapter first identifies a number of examples of inconsistency between the *Privacy Act* and privacy regimes that regulate state and territory public sectors. The chapter then examines inconsistency and fragmentation in privacy rules, codes and guidelines. The final section of the chapter considers the regulation of residential tenancy databases. A number of inquiries have now recognised the need for national consistency in the regulation of residential tenancy databases.

Interaction of federal, state and territory regimes

14.2 In the absence of a clear statement in the *Australian Constitution* about whether the regulation of personal information is the responsibility of the Australian Government or state and territory governments, the states and territories are able to enact privacy laws.[1] Further, s 3 of the *Privacy Act* states that the Australian Parliament does not intend to 'cover the field' in relation to the protection of personal information.[2] Chapter 2 provides an overview of state and territory privacy laws.

---

1 The Constitutional basis for enacting the *Privacy Act 1988* (Cth) was the Australian Government's power to make laws in relation to 'external affairs': *Privacy Act 1988* (Cth) Preamble; *Australian Constitution* s 51(xxix).

2 *Privacy Act 1988* (Cth) s 3 and the *Australian Constitution* are discussed in Ch 4.

14.3 State and territory laws are sometimes inconsistent with the *Privacy Act* and with each other. Legislation regulates personal information at the federal level and in New South Wales, Victoria, Tasmania, the ACT and the Northern Territory.[3] Queensland and South Australia have adopted administrative regimes for the management of personal information in their state public sectors.[4] Western Australia does not have a legislative scheme to regulate the handling of personal information; state freedom of information legislation and public records legislation provides some privacy protection.[5] On 28 March 2007, the Information Privacy Bill 2007 (WA) was introduced into the Western Australian Parliament. The Bill proposes to regulate the handling of personal information in the state public sector and the handling of health information by the public and private sectors in Western Australia.

14.4 Further, legislation in New South Wales, Victoria and the ACT regulates health information in the public and private sectors.[6] These Acts overlap substantially with the private sector provisions in the *Privacy Act*. Regulation of health information in other jurisdictions is restricted to public sector agencies or is the subject of non-legislative codes and guidelines.[7] Inconsistency and fragmentation in health privacy regulation is discussed in Part H.

Scope of federal, state and territory regimes

State-owned corporations

14.5 The *Privacy Act* exempts state and territory authorities from the operation of the *Privacy Act*[8] unless the states and territories request that such authorities be brought into the regime by regulation.[9] State instrumentalities are subject to the private sector provisions of the Act, unless they have been prescribed to fall outside the definition of 'organisation'.[10]

---

3 *Privacy Act 1988* (Cth); *Privacy and Personal Information Protection Act 1998* (NSW); *Health Records and Information Privacy Act 2002* (NSW); *Information Privacy Act 2000* (Vic); *Health Records Act 2001* (Vic); *Personal Information Protection Act 2004* (Tas); *Health Records (Privacy and Access) Act 1997* (ACT); *Information Act 2002* (NT).

4 Queensland Government, *Information Standard 42—Information Privacy* (2001); Queensland Government, *Information Standard 42A—Information Privacy for the Queensland Department of Health* (2001); South Australian Government Department of Premier and Cabinet, *PC012—Information Privacy Principles Instruction* (1992).

5 *Freedom of Information Act 1992* (WA); *State Records Act 2000* (WA).

6 *Health Records and Information Privacy Act 2002* (NSW); *Health Records Act 2001* (Vic); *Health Records (Privacy and Access) Act 1997* (ACT).

7 For further discussion see Ch 2 and Part H.

8 *Privacy Act 1988* (Cth) s 6C. The expression 'state or territory authority' includes persons and bodies which form part of state or territory governments and bodies established under state or territory laws or by the executive branches of state or territory governments.

9 Ibid s 6F.

10 Ibid ss 6C(4), 6F. An instrumentality of a state or territory includes a state or territory government business enterprise: see Commonwealth, *Parliamentary Debates*, House of Representatives, 12 April 2000, 15751 (D Williams—Attorney-General); M Paterson, *Freedom of Information and Privacy in Australia: Government and Information Access in the Modern State* (2005), [2.71].

14.6 While a number of state and territory privacy regimes regulate the handling of personal information by state-owned corporations,[11] they are not regulated in New South Wales. This is significant as state-owned corporations do not fall within the ambit of the private sector provisions of the *Privacy Act* unless they are prescribed by regulation.[12]

14.7 The exemptions under the *Privacy Act* relating to state and territory authorities and prescribed instrumentalities are discussed further in Chapter 34. In that chapter, the ALRC proposes that the *Privacy Act* be amended to apply to all state and territory incorporated bodies, including statutory corporations, except where they are covered by obligations under a state or territory law that are, overall, at least the equivalent of all the relevant obligations in the *Privacy Act.*

State contracted service providers

14.8 There is also confusion about whether contracted service providers to New South Wales government agencies are caught by the *Privacy Act* or the *Privacy and Personal Information Protection Act 1998* (NSW), or fall into an unregulated gap between the state and federal Acts.[13] In Chapter 11, the ALRC discusses various issues related to state contracted service providers. In Chapter 4, the ALRC proposes that state and territory legislation regulating the handling of personal information in that state or territory's public sector should include provisions relating to state and territory government contracts.

Ministers, local governments and universities

14.9 While legislation in some jurisdictions applies to ministers,[14] the *Privacy and Personal Information Protection Act 1998* (NSW) does not cover ministers and specifically authorises the disclosure of information to ministers and the Premier.[15] The handling of personal information by local governments is regulated under privacy regimes in some states and territories.[16] Local governments are not regulated, however, in Queensland[17] or South Australia.[18]

11 See, eg, *Information Privacy Act 2000* (Vic) s 3; Queensland Government, *Information Standard 42—Information Privacy* (2001), [1.1].

12 *Privacy Act 1988* (Cth) s 6C(1).

13 See Ibid s 7B(5); *Privacy and Personal Information Protection Act 1998* (NSW) s 4(4)(b); Privacy NSW, *Submission to the New South Wales Attorney General's Department Review of the Privacy and Personal Information Protection Act 1998*, 24 June 2004, 77.

14 See, eg, *Personal Information Protection Act 2004* (Tas) s 3.

15 *Privacy and Personal Information Protection Act 1998* (NSW) s 28(3).

16 For example, Ibid s 3; *Information Privacy Act 2000* (Vic) s 9(1)(d).

17 Queensland Government, *Information Standard 42—Information Privacy* (2001), [1.1] and *Financial Management Standard 1997* (Qld) s 5(2)(c).

18 South Australian Government Department of Premier and Cabinet, *PC012—Information Privacy Principles Instruction* (1992), 2(2) and *Public Sector Management Act 1995* (SA) s 3.

14.10 Further, universities are subject to personal information laws in some jurisdictions,[19] but not others.[20] Most universities are established under state or territory legislation and will therefore generally be exempt from the *Privacy Act*. If there is no privacy legislation in the jurisdiction in which they are established, then how they handle personal information may not be regulated. Universities handle substantial amounts of personal information.[21] Private universities and universities established under ACT legislation are covered by the *Privacy Act*, as are other private sector higher education providers. This creates further inconsistency in privacy regulation between bodies that substantially provide the same function.[22]

14.11 The ALRC proposes that the states and territories enact legislation that applies the proposed Unified Privacy Principles (UPPs) and the Privacy (Health Information) Regulations.[23] This legislation should include a definition of 'agency' that includes ministers, universities, and local governments. This will ensure that these individuals and agencies are subject to the same privacy principles.

Intergovernmental bodies

14.12 In its submission to the Inquiry, the OPC submitted that:

> The existing definition for 'agency' in the *Privacy Act* may benefit from additional clauses to clarify currently ambiguous areas of coverage. In particular, coverage of some public authorities created as collaborations between the Commonwealth and the States and Territories by the Council of Australian Governments (COAG) and other Ministerial Councils could be better provided for under the definition of agency in the *Privacy Act*.[24]

14.13 The ALRC notes that bodies established by cooperative arrangements, such as intergovernmental working groups and officer working groups that assist ministerial councils, may often have to share personal information. The application of privacy regulation to such entities will often be uncertain, as they may not fall within the *Privacy Act* definition of organisation or agency, though equally they may not be considered state and territory agencies for the purpose of privacy regulation in other jurisdictions.

14.14 To ensure the protection of personal information held by Australian Government agencies, the ALRC proposes that the *Privacy Act* be amended to provide that when an Australian Government agency is participating in an intergovernmental body or other arrangement involving state and territory agencies, the Australian Government agency should ensure that a memorandum of understanding is in place so that the

intergovernmental body and its members do not act, or engage in a practice, that would breach the Act.

Proposal 14–1 The *Privacy Act* should be amended to provide that when an Australian Government agency is participating in an intergovernmental body or other arrangement involving state and territory agencies, the Australian Government agency should ensure that a memorandum of understanding is in place so that the intergovernmental body and its members do not act, or engage in a practice, that would breach the Act.

Personal information regulated

14.15 Employee records are excluded from the operation of the *Privacy Act*.[25] Some state and territory privacy regimes provide limited protection for employee records.[26] The Personal Information Protection Principles under the *Personal Information Protection Act 2004* (Tas) provide the highest degree of protection of employee records, subject to a number of exceptions.[27] In Chapter 36, the ALRC proposes that the current exemption under the *Privacy Act* relating to employee records should be removed. It is the ALRC's view that state and territory legislation should include provisions that address the handling of employee records in that state or territory's public sector.

14.16 The *Privacy Act* provides limited protection for information held in public registers. Information Privacy Principle 1 places some restrictions on the collection of personal information in a generally available publication.[28] Similarly, the *Information Act 2002* (NT) provides limited protection for information held in public registers.[29] Other jurisdictions, however, provide greater protection. For example, public registers in Victoria are subject to the Information Privacy Principles under the *Information Privacy Act 2000* (Vic),[30] and the New South Wales legislation prohibits certain disclosures of personal information held in a public register.[31] The issue of publicly available information is discussed in Chapter 3 and Chapter 8.

Inconsistent principles

14.17 Although the Information Privacy Principles (IPPs) and the National Privacy Principles (NPPs) and privacy principles under state and territory privacy regimes are

25 *Privacy Act 1988* (Cth) s 7B(3).
26 See, eg, *Privacy and Personal Information Protection Act 1998* (NSW) s 4(3)(j); M Paterson, *Freedom of Information and Privacy in Australia: Government and Information Access in the Modern State* (2005).
27 *Personal Information Protection Act 2004* (Tas) s 10.
28 Similar protection is offered under the Queensland Government, *Information Standard 42—Information Privacy* (2001), [3.1.1].
29 *Information Act 2002* (NT) s 68.
30 *Information Privacy Act 2000* (Vic) s 16(4).
31 *Privacy and Personal Information Protection Act 1998* (NSW) pt 6.

similar, they are not identical. The privacy regimes in some jurisdictions include privacy principles that are similar to the IPPs, while other jurisdictions have modelled their principles on the NPPs.[32] As is noted in Chapter 15, there are significant differences between the IPPs and the NPPs.

14.18 Many of the differences between the IPPs and the NPPs are reproduced in the state and territory regimes. For example, like the NPPs, the Information Privacy Principles under the *Information Privacy Act 2000* (Vic) include principles relating to anonymity and transborder data flows.[33] The Information Standard that applies to the Queensland public sector does not provide for either of these principles,[34] but the Information Standard that applies to the Queensland Department of Health does.[35]

14.19 The adoption of the proposed UPPs and Privacy (Health Information) Regulations at the federal, state and territory level will deal with many of the problems caused by inconsistent privacy principles across the jurisdictions.

Regulators

14.20 The nature and functions of privacy regulators vary across the jurisdictions. The *Privacy Act* and other federal legislation provide the Privacy Commissioner with a number of powers and functions, including powers to investigate and conciliate complaints, and approve and monitor privacy codes and guidelines.[36] Most states and territories have privacy regulators, but their nature and functions vary widely. For example, New South Wales and Victoria have full-time privacy regulators with a similar range of powers and functions to those of the federal Privacy Commissioner.[37] The Privacy Committee of South Australia's powers and functions, however, are limited compared to the federal, New South Wales and Victorian privacy commissioners.[38] Some jurisdictions, such as Tasmania and the Northern Territory, have regulators with functions other than oversight of the regulation of personal information.[39]

14.21 In Chapter 4, the ALRC notes that the proposed state and territory privacy legislation regulating the public sector should accommodate existing complaint and enforcement mechanisms. It is the ALRC's view, however, that when the states and territories enact these laws they should consider the establishment of a privacy regulator with similar functions and powers as the Privacy Commissioner.

34 Queensland Government, *Information Standard 42—Information Privacy* (2001).
35 Queensland Government, *Information Standard 42A—Information Privacy for the Queensland Department of Health* (2001), [3.1.8], [3.1.9].
36 See Part F for a discussion of the powers and functions of the Privacy Commissioner.
37 See discussion in Ch 2.
38 If a person is dissatisfied with the Privacy Committee's response, however, they are referred to the South Australian Ombudsman: see discussion in Ch 2.
39 The Tasmanian Ombudsman regulates privacy in Tasmania. The Northern Territory Information Commissioner is also responsible for overseeing freedom of information and the regulation of public records in the Northern Territory: see discussion in Ch 2.

Remedies

14.22 The remedies available to individuals whose privacy rights are infringed can differ according to the jurisdiction in which the complaint is made. For example, the maximum amount of compensation that is payable for an interference with privacy differs across the states and territories. The *Privacy Act* does not specify a limit on the payment of compensation. In contrast, the New South Wales Administrative Decisions Tribunal can order the payment of compensation of up to $40,000,[40] the Victorian Civil and Administrative Tribunal can order compensation of up to $100,000[41] and the Northern Territory Information Commissioner can order compensation up to $60,000.[42] There is no specific provision for compensation under the *Personal Information Protection Act 2004* (Tas). The Tasmanian Ombudsman, however, can make any order that he or she considers appropriate on finding a contravention of a Personal Information Protection Principle.[43] There is no provision for compensation under the Queensland privacy scheme.

14.23 In Chapter 46, the ALRC examines various issues related to the enforcement of the *Privacy Act*, including the payment of compensation and whether certain interferences with privacy should attract a civil penalty. To ensure a level of consistency in the outcome of privacy regulation, the states and territories should consider the range of enforcement tools, and the level of penalties and compensation, available under the *Privacy Act* and other state and territory privacy laws when developing privacy legislation.

State and territory legislation adopting *Privacy Act* provisions

14.24 Some state and territory legislation adopts federal legislation as a law of that state or territory in order to achieve national uniformity. This state and territory legislation usually includes a provision that indicates that the *Privacy Act* applies in relation to the adopted federal legislation. For example, competition policy reform legislation in each state and territory provides that the 'Commonwealth administrative laws' (defined to include the *Privacy Act*) apply in that jurisdiction to any matter arising in relation to the *Competition Code* of that jurisdiction.[44]

14.25 Other state and territory legislation applies specific provisions of the *Privacy Act*. For example, the *Road Transport (Vehicle Registration) Regulation 1998* (NSW) requires that the New South Wales Roads and Traffic Authority must treat a request for information about the particulars of a registrable vehicle in accordance with the IPPs.[45]

40 *Privacy and Personal Information Protection Act 1998* (NSW) s 55(2)(a).
41 *Information Privacy Act 2000* (Vic) s 43.
42 *Information Act 2002* (NT) s 115.
43 *Personal Information Protection Act 2004* (Tas) s 22.
44 See, eg, *Competition Policy Reform (New South Wales) Act 1995* (NSW) s 30; *Competition Policy Reform (Tasmania) Act 1996* (Tas) s 30. See also, eg, *Agricultural and Veterinary Chemicals Act 1994* (Qld) s 16; *Water Efficiency Labelling and Standards Act 2005* (NSW) s 14.
45 *Road Transport (Vehicle Registration) Regulation 1998* (NSW) reg 15(7).

Stakeholders making submissions to this Inquiry did not identify any problems related to the adoption of *Privacy Act* provisions in state and territory laws.

Privacy rules, codes and guidelines

14.26 Various privacy rules, codes and guidelines regulate the handling of personal information, in addition to the *Privacy Act* and state and territory legislation.[46]

14.27 Part IIIAA of the *Privacy Act* allows private sector organisations and industries to develop and enforce their own privacy codes. Once a privacy code has been approved by the Privacy Commissioner, it replaces the NPPs for those organisations bound by the code. The *Privacy Act* requires that these codes contain standards equivalent to those in the NPPs, which would otherwise apply, or to a standard that secures individuals' privacy rights to a higher standard.[47]

14.28 A number of approved privacy codes provide higher standards than those provided in the NPPs. For example, the *Biometrics Institute Privacy Code* provides a number of 'Supplementary Biometrics Institute Privacy Principles' relating to protection, control and accountability.[48] There is no overlap with the NPPs, as a code replaces the NPPs for those organisations bound by it. However, an organisation may still be subject to other privacy regulation that is inconsistent with these codes. For example, an organisation that provides health services may engage in activities other than those dealt with under the *Biometrics Institute Privacy Code*, and is subject to the *Privacy Act* or a state or territory privacy regime in relation to these activities.

14.29 Federal legislation other than the *Privacy Act* also requires the development of privacy guidelines or codes. For example, under s 8A of the *Australian Security Intelligence Organisation Act 1979* (Cth), the Minister may give the Director-General written guidelines to be observed by the Australian Security Intelligence Organisation (ASIO). The Attorney-General has issued two sets of guidelines concerning ASIO's functions—one in relation to obtaining intelligence relevant to security,[49] and another in relation to politically motivated violence.[50] The former contains guidelines on the treatment of personal information.[51] These guidelines are discussed further in Chapter 31.

50 The guidelines in relation to politically motivated violence require that 'the collection of information concerning politically motivated violence be conducted with as little intrusion into privacy as is possible, consistent with the national interest': Australian Security Intelligence Organisation, *Attorney-General's Guidelines in relation to the Performance by the Australian Security Intelligence Organisation of its Functions relating to Politically Motivated Violence* <www.asio.gov.au/About/Content/AttorneyAccountability.aspx> at 31 July 2007, Guideline 3.2.

51 Ibid.

14.30 Some state regulatory regimes have adopted provisions from the *Privacy Act*. For example, the Victorian Essential Services Commission has developed *Guideline No 10 (Confidentiality and Informed Consent: Electricity and Gas)* (*Guideline No 10*). *Guideline No 10* requires Victorian electricity and gas retailers to comply with the NPPs whether or not they are 'organisations' under the *Privacy Act* and irrespective of when the personal information was collected. *Guideline No 10* also protects 'corporate customer information' as personal information. The Law Council of Australia has noted that this is a 'curious provision', given that the High Court of Australia has decided that corporations do not have a right to privacy at common law and that the *Privacy Act* protects the rights of individuals, not corporations.[52]

14.31 The Law Council has also noted that *Guideline No 10* requires retailers to apply the NPPs in a narrow way. For example, even if a retailer is providing the same customer with gas and electricity, *Guideline No 10* requires the retailer to handle separately customer information about the supply of each service. The Law Council argues that this is a much higher standard than the reasonable expectation test under NPP 2.1(a), and illustrates how the incorporation of NPP-like requirements into state legal regimes can lead to divergence over time.

14.32 Industry organisations have also developed guidelines. Some of these guidelines are not required by legislation. The Australian Direct Marketing Association (ADMA) has developed a *Direct Marketing Code of Practice* that binds ADMA members and all employees, agents, subcontractors and suppliers of ADMA members.[53] The Code includes a schedule that outlines principles to govern fair conduct relevant to consumer data protection.[54] The principles are based on the NPPs and deal with such matters as: limitations on the amount of information that companies can collect about individuals; informing consumers about who is collecting information, and how the company can be contacted; and the intended use of the personal information. Consumers must be given the opportunity to opt out of future direct marketing approaches and block transfer of their contact details to any other marketer.

Submissions and consultations

14.33 In the ALRC's Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether privacy rules, codes and guidelines developed under federal, state and territory legislation, or by organisations and industry groups, contribute to fragmentation and inconsistency in the regulation of personal information.[55]

---

53 Australian Direct Marketing Association, *Direct Marketing Code of Practice* (2001), [6]. For further discussion of the Code see Ch 1.

54 Ibid, sch E.

55 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 7–9.

14.34 A number of submissions noted that if rules, codes and guidelines are not aligned with the *Privacy Act*, they can contribute to inconsistency and fragmentation.[56] The Office of the Victorian Privacy Commissioner noted that codes, rules and guidelines can offer less protection than is available under privacy laws where they do not offer individuals a right of complaint or the ability to seek redress for harm suffered.[57] The Australian Retailers Association submitted that a central resource of information on regulatory instruments, including industry codes of practice, should be established and maintained by the OPC.[58]

14.35 Stakeholders also noted, however, that while it is important to limit unnecessary fragmentation of privacy law, additional privacy rules, codes and guidelines can clarify sector-specific issues and provide more detailed protection for personal information where appropriate.[59] The Australian Privacy Foundation submitted that the wide range of privacy rules, codes and guidelines contribute to fragmentation and inconsistency in the regulation of personal information, but noted that with a unified set of privacy principles and greater national consistency there would still be a valuable role for sector or activity specific guidelines and codes.[60]

ALRC's view

14.36 The ALRC acknowledges that privacy rules, codes and guidelines can be beneficial where there is a need for privacy rules to be crafted to the specific needs and practices of particular organisations or industry groups. These documents can, however, contribute to fragmentation and inconsistency of privacy regulation when they are not aligned with existing privacy laws.

14.37 In the ALRC's view, when agencies and organisations are developing privacy rules, codes and guidelines they should consult with the relevant body responsible for privacy for their industry or sector to ensure that the rules, codes or guidelines will interact and operate effectively with existing privacy laws. Further, agencies and organisations should ensure that the privacy rules, codes and guidelines outline who an individual can approach with a privacy issue or complaint.

Residential tenancy databases

14.38 Residential tenancy databases (RTDs) raise a range of issues. They are dealt with here because they are currently regulated by inconsistent and fragmented federal,

state and territory legislation. A number of inquiries have identified the need for national consistency in the regulation of RTDs.

14.39 RTDs are electronic databases operated by private companies that contain information about tenants and their rental history. The purpose of such databases is to enable real estate agents to assess 'business risk' on behalf of the property owner. The listings on the database are based on information provided by real estate agents to the database operators. Listings are generally collected from across Australia and can be accessed nationally.

14.40 A number of issues have been raised in relation to RTDs. For example, recent inquiries have heard that prospective tenants will often have little choice but to consent to a real estate agent passing information on to RTD operators,[61] that information stored on RTDs is sometimes inaccurate,[62] and that tenants sometimes have difficulties in finding out whether they are listed on RTDs.[63]

14.41 In April 2004, the Privacy Commissioner made four determinations concerning a residential tenancy database operator. These determinations included that the operator had breached a number of the NPPs by:

- using an agreement with its members that did not specify sufficiently the data quality standards required;
- failing to take sufficient steps to check listings by property managers and not requiring minimum identification requirement before listing;
- failing to advise tenants contemporaneously that they had been listed;
- using a 'pick list' method of reporting tenancy history, which relied on one category that was broadly defined and on descriptions that were brief, not consistently defined and not mutually exclusive;
- providing an inadequate dispute resolution process;
- failing to provide mechanisms to correct records where the individual concerned had established they were not accurate, complete and up-to-date or to associate a statement to this effect when there was a dispute about accuracy, completeness or currency;
- charging individuals an excessive amount of money for access via mail to their personal information;

- failing to take reasonable steps to make sure the personal information it collected, used and disclosed was up-to-date; and
- failing to take reasonable steps to destroy or de-identify personal information that was no longer needed for any purpose.[64]

14.42 RTDs contain personal information and so are generally subject to the private sector provisions of the *Privacy Act*. They are also regulated by legislation in some states and territories. The *Privacy Act* applies to RTD operators with an annual turnover of $3 million or less, despite the small business exemption, because they trade in personal information.[65] If an RTD operator that is a small business gains consent for the collection or disclosure of an individual's personal information, however, the *Privacy Act* will not apply.[66] Further, the *Privacy Act* does not contain provisions directed specifically at RTD operators. For example, unlike credit reporting agencies, there is no provision under the *Privacy Act* relating to time limits for the removal of default listings.[67]

14.43 While the states and territories can regulate the actions of the lessors and agents in their jurisdictions, they lack the power to regulate effectively RTD operators based in different jurisdictions.[68] Residential tenancy legislation in New South Wales, Queensland, and now the ACT regulates how real estate agents and lessors list tenants on RTDs.[69] This legislation, however, is incomplete and inconsistent. For example, while the *Property Stock and Business Agents Regulation 2003* (NSW) provides for the length of time information can be listed[70] and whether a listed person can access the listing information,[71] the *Residential Tenancies Act 1994* (Qld) does not. In South Australia and the Northern Territory some regulation is provided through fair trading legislation.[72] This is primarily consumer protection legislation, however, and does not specifically relate to RTDs.

14.44 A number of inquiries have now recognised the need for national consistency in the regulation of RTDs.[73] In August 2003, the Ministerial Council on Consumer

Affairs (MCCA) agreed with the Standing Committee of Attorneys-General (SCAG) to establish a joint Residential Tenancy Database Working Party. The Working Party released its *Report on Residential Tenancy Databases* on 27 September 2005. The Working Party found that ensuring national uniformity in the treatment of RTDs was essential. It stated, however, that it was inappropriate for the Australian Government to legislate for RTDs and their use by agents, given the existing state and territory responsibilities for agents and tenancy issues.[74]

14.45 The Working Party expressed the view that state and territory legislation should address the relationship between the agent and the tenant, including issues such as informing the tenant about the use of RTDs and the collection of information; and the way that agents interact with RTDs, including such matters as controlling the information provided by agents to RTDs. The Working Party recommended that the states and territories develop agreed uniform model legislation on the use of RTDs by landlords, agents and listing parties. In April 2006, SCAG agreed to the development of model uniform legislation for RTDs. The MCCA has primary responsibility for drafting the legislation.

14.46 The Working Party also concluded that, because the states and territories would generally not be able to regulate directly the operation of the RTDs or their interaction with agents, the *Privacy Act* should regulate this aspect of the operation of RTDs. The Working Party was concerned, however, that, because of the small business exemption, a tenant's consent to the collection or disclosure of their personal information also removes other privacy obligations from the RTD operator, such as those in relation to data quality. The Working Party recommended, therefore, that regulations should be made pursuant to s 6E of the *Privacy Act* to prescribe all RTDs as organisations for the purposes of the *Privacy Act*.

14.47 The Working Party also noted that the *Privacy Act* is not prescriptive and does not permit the OPC to direct RTD operators to comply with their obligations under the Act. The Working Party therefore recommended that the Australian Government consider the option of a binding code if RTD operators do not comply with the *Privacy Act*.[75]

Submissions and consultations

14.48 In IP 31, the ALRC asked how personal information held on residential tenancy databases should be regulated. The ALRC also asked whether residential tenancy

databases should be regulated under the *Privacy Act*, by a binding code, or in some other way.[76]

Are RTDs necessary?

14.49 The Real Estate Institute of Australia and the Institute of Mercantile Agents submitted that RTDs are an effective risk management tool. It was said that while the cost of access is minimal, failure to do so can be expensive in terms of potential litigation, professional negligence, property damage and loss of rent. The Real Estate Institute of Australia noted that a RTD listing should never be used in a threatening manner to ensure the performance of a tenant.[77]

14.50 The Tenants Union of Victoria submitted, however, that whether RTDs are an appropriate means of managing risk is contentious because of the potential for listing to restrict opportunities in the private rental market. It noted that damage or financial loss arising from leasing out residential property is a foreseeable business risk that should be ameliorated with insurance, because the consequences of restricted access to housing have a detrimental impact on both individual tenants and the community at large.[78]

Concerns about RTDs

14.51 A number of submissions raised concerns about the operation of RTDs. Some submissions noted that tenants are often given little choice when signing tenancy agreements and RTD users routinely extract 'consent' from tenancy applicants. Submissions also noted that information held on RTDs is sometimes inaccurate.[79] It was also noted that many tenants are unaware that they are listed on an RTD, and that some tenants may not discover they have been listed until months or sometimes years later.[80]

14.52 Stakeholders observed that RTDs can make it difficult for Australian households reliant on the private rental market to secure housing.[81] Anglicare Tasmania submitted that, with the chronic shortage of medium-term crisis accommodation and the long waiting lists for public housing, private rental housing is often the only option for vulnerable and low income households.[82]

80 Tenants Union of Victoria Ltd, *Submission PR 197,* 16 February 2007.

81 Ibid.

82 Anglicare Tasmania, *Submission PR 135,* 19 January 2007.

14.53 The ALRC heard that inconsistent state legislation in relation to RTDs causes a number of problems.[83] It was submitted, for example, that inconsistent state and territory laws have resulted in varying listing practices across Australia and that this can result in people being listed on an RTD for life.[84] It was also observed that state legislation does not directly regulate RTDs,[85] and that in some jurisdictions there is no body to complain to about RTD matters.[86]

How should RTDs be regulated?

14.54 A number of submissions endorsed uniform state and territory legislation to regulate the use of RTDs by landlords, agents and other listing parties.[87] Other submissions argued that all RTD operators should be brought under the *Privacy Act* and that the OPC should make a binding code in relation to them.[88] A number of submissions supported both state and territory legislation and a binding code under the *Privacy Act*.[89]

14.55 The OPC submitted that if the states and territories do not pass uniform legislation, the *Privacy Act* should be amended to define all RTD operators as 'organisations' for the purposes of the *Privacy Act*. The OPC submitted that a binding code in relation to RTDs may be appropriate, noting that the NPPs may not be specific enough to address particular concerns about RTDs, such as data retention periods.[90] The Tenants Union of NSW was concerned that a binding code under the *Privacy Act* may not make provision for dispute resolution by state and territory tenancy tribunals.

> These forums are relatively accessible, quick, affordable and experienced in housing matters, and could deal with RTD disputes and other disputes arising from a tenancy in the same proceedings. Whether RTD regulation is pursued through nationally uniform legislation by each State and Territory, or through a binding code under the *Privacy Act 1988*, we submit that it should provide dispute resolution through the State and Territory Tenancy Tribunals.[91]

91 Tenants Union of NSW Co-op Ltd, *Submission PR 169,* 5 February 2007.

14.56 The Real Estate Institute of Australia supported the establishment of state and territory legislation to deal with the tenant and agent relationship in relation to RTD, and bringing all RTD operators under the *Privacy Act*. The Institute did not, however, believe that the need for a binding code on RTD operators had yet been demonstrated, but may be supportive in the future if this is required.[92]

What rules should apply to the use and operation of RTDs?

14.57 Stakeholders noted that laws regulating the use and operation of RTDs should address a number of issues. It was submitted that these laws should include:

- requirements on users of RTDs to inform applicants that they use RTDs, that they have been listed on a RTD, how to contact the RTDs they use, and how to dispute a listing;
- an obligation on any user of a RTD to inform that tenant of the content of any listing found;
- a set of criteria that determines when a listing can be made;
- a requirement to give a tenant an opportunity to respond to or dispute a listing;
- a requirement that a listing specify the ground for the listing and, where the ground is that the person owes money, specify the amount of the debt;
- a provision noting a time period after the end of a tenancy after which a person may not be listed on a RTD;.
- a protocol for the removal of listings once the issue that initiates the listing has been resolved; and
- the expiration of a listing after a reasonable period of time.[93]

ALRC's view

14.58 A number of reviews have established the need for stronger and nationally consistent regulation of RTDs. The ALRC shares the concerns raised in these reviews and of those who made submissions to this Inquiry in relation to the collection, use and disclosure of personal information held on RTDs. The ALRC affirms the recommendations of the RTD Working Party that the states and territories should enact legislation that addresses the relationship between the agent and the tenant, including issues such as: informing the tenant about the use of RTDs and the collection of information; and the way that agents interact with RTDs, including such matters as controlling the information provided by agents to RTDs.

14.59 Further, the ALRC considers that all RTD operators should be regulated by the *Privacy Act*, irrespective of whether they are small business operators or whether they

---

93 Tenants Union of Victoria Ltd, *Submission PR 197,* 16 February 2007; Tenants Union of NSW Co-op Ltd, *Submission PR 169,* 5 February 2007; Anglicare Tasmania, *Submission PR 135,* 19 January 2007.

gain consent for the collection or disclosure of an individual's personal information. In Chapter 35, the ALRC proposes the removal of the exemption that applies to small businesses under the *Privacy Act*. The removal of this exemption should deal with this issue. If, however, the small business exemption is not removed, it is the ALRC's view that regulations should be made pursuant to s 6E of the *Privacy Act* to prescribe all RTDs as organisations for the purposes of the Act.

14.60 The ALRC notes that on 13 August 2007, the Attorney-General of Australia announced that regulations to extend the coverage of the *Privacy Act* to all RTDs were complete. The regulations will commence on 1 December 2007 to allow small business operators of RTDs sufficient time to comply with the requirements of the *Privacy Act*.[94]

14.61 The ALRC does not at this time propose the making of a binding code to regulate RTD operators. It is the ALRC's view that state and territory legislation regulating the use of RTDs and the regulation of RTD operators by the *Privacy Act* should deal with many of the issues identified in submissions. The ALRC has, however, proposed that the *Privacy Act* should be amended to empower the Privacy Commissioner to develop and impose a privacy code that applies to designated agencies and organisations (a 'binding code').[95] Following the implementation of this proposal, the OPC should monitor the use and operation of RTDs in order to determine whether it should exercise its powers to impose a binding code on RTD operators. The OPC could also request that RTD operators develop a privacy code to be approved by the Privacy Commissioner.[96]

14.62 The ALRC notes stakeholders' concerns that tenants with privacy complaints about the handling of personal information by RTD operators should be able to have those complaints dealt with by a state or territory tenancy tribunal or an equivalent body. These bodies are well suited to deal with privacy matters in the residential tenancy context—they are quick, accessible and affordable. In Chapter 45, the ALRC proposes that the *Privacy Act* be amended to empower the Privacy Commissioner to delegate to a state or territory authority all or any of his or her powers in relation to complaint handling. In the ALRC's view, it would be appropriate for the Privacy Commissioner to delegate his or her complaint-handling powers in relation to RTD operators to state and territory tenancy tribunals and equivalent bodies under this section.

Introduction to Part D

15.1 Part D of this Discussion Paper proposes reform to the privacy principles in the *Privacy Act 1988* (Cth). Currently, the Act contains two sets of privacy principles: the Information Privacy Principles (IPPs),[1] which apply predominantly to public sector 'agencies'; and the National Privacy Principles (NPPs),[2] which apply to private sector 'organisations'.[3] Both sets of privacy principles are directed only to personal

1 See *Privacy Act 1988* (Cth) s 14.
2 See Ibid sch 3.
3 The terms 'agency' and 'organisation' are defined, respectively, in Ibid ss 6(1) and 6C.

information. That is, they do not cover other areas of privacy such as bodily privacy, privacy from surveillance, or communications privacy.

15.2 In this Part, the ALRC proposes to reform the existing privacy principles in two ways: first, by consolidating the IPPs and NPPs; and secondly, by amending, where warranted, the substantive content of the privacy principles. This chapter concentrates on how the structure of the privacy principles should be reformed. It explains how the IPPs and NPPs currently operate. The chapter then presents the ALRC's views on how to bring together the NPPs and IPPs, by creating a single, unified set of privacy principles (the Unified Privacy Principles or UPPs), which will be of general application across the public and private sectors. The name used in this Discussion Paper to designate the consolidated privacy principles—the Unified Privacy Principles—is designed to reflect the fact that they are the product of unifying the IPPs and NPPs. It should be noted that, in the event that the ALRC's relevant proposals are adopted, it may be more appropriate to use a different term to describe the privacy principles in the Act.

15.3 The remaining chapters in Part D propose reform to the substantive content of the privacy principles in the *Privacy Act*. This analysis is made largely on the assumption that the ALRC's proposals in this chapter are adopted. Even if some or all of the proposals in this chapter are not adopted, however, the proposals in this Part remain applicable insofar as they suggest amendments that respond to problems identified in the Act's two sets of privacy principles, the IPPs and NPPs.

15.4 The ALRC analyses the privacy principles thematically. In relation to each theme of privacy, there is a brief explanation of how the IPPs and NPPs currently apply and a summary of any relevant issues relating to their operation. This is followed by the ALRC's proposals for how to reform the privacy principle in question. Finally, this chapter contains a summary of how the ALRC envisages the Unified Privacy Principles will appear, if the ALRC's proposals are adopted.

Development of current Australian privacy principles

OECD Guidelines

15.5 The preamble to the *Privacy Act* notes that Australia is a member of the Organisation for Economic Co-operation and Development (OECD); that the Council of the OECD has recommended that member countries take into account in their domestic legislation the privacy principles set out in the OECD *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980) (OECD Guidelines); and that Australia has expressed its intention to participate in the recommendation. The privacy principles in the OECD Guidelines are the foundation for the two sets of privacy principles in the *Privacy Act*: the IPPs and the NPPs.

15.6 The OECD Guidelines were designed to discourage the member countries of the OECD from introducing 'incompatible and conflicting laws for the defence of privacy

in the newly established databases of the interlinked information technologies'.[4] As such, the OECD Guidelines have influenced data protection laws in many jurisdictions.

15.7 The OECD Guidelines attempt to reconcile sometimes competing interests—that is, the goal of protecting privacy and individual liberties is balanced with the desire to advance the free flow of personal data.[5] The Guidelines were developed to harmonise national privacy legislation and, while upholding human rights, simultaneously to prevent interruptions in international flow of data.[6]

15.8 The OECD Guidelines apply to 'personal data, whether in the public or private sectors, which, because of the manner in which they are processed, or because of their nature or the context in which they are used, pose a danger to privacy and individual liberties'.[7] On one hand, they are 'minimum standards which are capable of being supplemented by additional measures for the protection of privacy and individual liberties'.[8] On the other hand, the Guidelines deter member countries from creating unnecessary obstacles to transborder flows of personal data in the name of the protection of privacy and individual liberties.[9]

15.9 Part Two of the OECD Guidelines sets out eight basic principles of national application: collection limitation; data quality; purpose specification; use limitation; security safeguards; openness; individual participation; and accountability.[10] These principles are covered explicitly in the IPPs, NPPs and proposed UPPs. Although there is no principle called 'Accountability', aspects of this principle are incorporated in other provisions in the Act, such as those dealing with investigations of complaints regarding privacy breaches.[11]

15.10 A critical question faced both by the drafters of the OECD Guidelines and member states seeking to implement the Guidelines is: what should be articulated in general privacy principles and what should be the content of detailed machinery provisions? The Explanatory Memorandum to the OECD Guidelines states:

> The choice of core principles and their appropriate level of detail presents difficulties. For instance, the extent to which data security questions … should be regarded as part of the privacy protection complex is debatable; opinions may differ with regard to time limits for the retention, or requirements for the erasure, of data and the same

> applies to requirements that data be relevant to specific purposes. In particular, it is difficult to draw a dividing line between the level of basic principles or objectives and lower level 'machinery' questions which should be left to domestic implementation.[12]

15.11 John Gaudin has expressed the view that the OECD Guidelines are grounded in the society, technology and culture of the 1970s and that the principles are insufficiently flexible to accommodate the extensive changes that have taken place since they were promulgated.[13] He has stated that the OECD Guidelines reflect assumptions about the future development of information technology, which are now seen to be limited.[14] Justice Michael Kirby, who chaired the OECD Expert Group on Privacy, has stated extra-judicially:

> There appears to be a need to review the 1980 OECD Guidelines, which are already showing signs of their age. Informed writers are already suggesting the necessity for privacy principles apt to contemporary technology. … Clearly the 'openness principle' of the OECD Guidelines was always one of the weakest. The advent and potential of the internet require that there be new attention to it.[15]

15.12 In addition to the OECD Guidelines, on 26 November 1992, the Council of the OECD adopted the *Guidelines for the Security of Information Systems*. These further Guidelines aimed 'to raise awareness of risks to information systems and of the safeguards available to meet those risks', and 'to create a framework to assist those responsible, in the public and private sectors, for the development and implementation of coherent measures, practices and procedures for the security of information systems'.[16] Due to the dramatic change in the information technology environment since 1992, those Guidelines were replaced by the OECD *Guidelines for the Security of Information Systems and Networks: Towards a Culture of Security*, which were adopted on 25 July 2002 (the OECD Security Guidelines).

15.13 The OECD Security Guidelines contain nine information systems security principles: awareness; responsibility; response; ethics; democracy; risk assessment; security design and implementation; security management; and reassessment. For example, the awareness principle provides that 'participants should be aware of the need for security of information systems and networks and what they can do to

enhance security'[17] and the response principle provides that 'participants should act in a timely and cooperative manner to prevent, detect and respond to security incidents'.[18]

Information Privacy Principles

15.14 Section 14 of the *Privacy Act* contains the 11 Information Privacy Principles or IPPs. The IPPs were included in 1988 in the original version of Act, and they have not been amended since that time. Until 2000, the IPPs were the only privacy principles in the Act.

15.15 The IPPs regulate the collection, storage, use and disclosure of an individual's personal information, and provide for individuals to access and correct their personal information. As noted above, the IPPs apply to personal information handled by Commonwealth and ACT government agencies.[19]

15.16 The Privacy Commissioner has issued a series of guidelines on the interpretation of the principles.[20] The guidelines note that:

> The IPPs set out minimum standards for agencies. Compliance with the IPPs is a legal obligation, but minimal compliance will not always be an appropriate approach for an agency to take. … Especially where sensitive information is concerned, or where mishandling of personal information may have serious consequences, more care to protect individuals' privacy may be appropriate than is required by the letter of the IPPs.[21]

National Privacy Principles

15.17 Schedule 3 to the *Privacy Act* contains 10 further privacy principles, the National Privacy Principles or NPPs. Schedule 3 was not part of the original Act; instead, it was introduced by the *Privacy Amendment (Private Sector) Act 2000* (Cth).

---

17 Organisation for Economic Co-operation and Development, *Guidelines for the Security of Information Systems and Networks: Towards a Culture of Security* (2002), Principle 1.

19 See *Privacy Act 1988* (Cth) ss 13(a), 16. The definition of 'agency' in *Privacy Act 1988* (Cth) s 6(1) includes: a Minister; a Department; a body established for a public purpose; a federal court; and the Australian Federal Police. This definition is discussed in greater detail in Ch 3.

20 See Office of the Federal Privacy Commissioner, *Plain English Guidelines to Information Privacy Principles 1–3: Advice to Agencies about Collecting Personal Information* (1994); Office of the Federal Privacy Commissioner, *Plain English Guidelines to Information Privacy Principles 4–7: Advice to Agencies about Storage and Security of Personal Information, and Access to and Correction of Personal Information* (1998); Office of the Federal Privacy Commissioner, *Plain English Guidelines to Information Privacy Principles 8–11: Advice to Agencies about Using and Disclosing Personal Information* (1996). The status of guidelines is discussed in Part F of this Discussion Paper.

21 Office of the Federal Privacy Commissioner, *Plain English Guidelines to Information Privacy Principles 4–7: Advice to Agencies about Storage and Security of Personal Information, and Access to and Correction of Personal Information* (1998).

15.18 The NPPs apply generally to private sector 'organisations', unless the organisation in question is subject to an approved privacy code.[22] The term 'organisation' is defined in s 6C as an individual, a body corporate, a partnership, any other unincorporated association or a trust. However, this definition is subject to a number of qualifications, exempting, among others, small business operators, political parties, government agencies, and state or territory authorities and prescribed instrumentalities.[23]

15.19 The NPPs regulate the following aspects of how personal information should be managed: how data are collected; how data are used and disclosed; data quality; data security; openness of data management policies; individuals' rights of access and correction; the use of identifiers; individuals' right to maintain their anonymity; transborder data flows; and how sensitive information should be treated.

15.20 The stated objectives of the NPP regime are:

> (a) to establish a single comprehensive national scheme providing, through codes adopted by private sector organisations and National Privacy Principles, for the appropriate collection, holding, use, correction, disclosure and transfer of personal information by those organisations; and
>
> (b) to do so in a way that:
>
> (i) meets international concerns and Australia's international obligations relating to privacy; and
>
> (ii) recognises individuals' interests in protecting their privacy; and
>
> (iii) recognises important human rights and social interests that compete with privacy, including the general desirability of a free flow of information (through the media and otherwise) and the right of business to achieve its objectives efficiently.[24]

Principles-based regulation of privacy

The differing types of regulation

15.21 The NPPs and IPPs—together referred to as the privacy principles—represent the main regulatory mechanism in the *Privacy Act*. Parliament deemed it preferable to regulate privacy using broad principles, as distinct from using a more conventional method of rules-based regulation. This part of the chapter is partly descriptive and partly analytical: it describes how principles-based regulation differs from rules-based regulation, and it analyses the strengths and limitations of each regulatory system.

---

22 *Privacy Act 1988* (Cth) s 16A. See also the relevant Second Reading Speech: Commonwealth, *Parliamentary Debates*, House of Representatives, 12 April 2000, 15749 (D Williams—Attorney-General), 15749–15750. Note that privacy codes are discussed in Part F of this Discussion Paper.

23 The definition of 'organisation' is discussed in greater detail in Ch 3. The private sector exemptions to the *Privacy Act* are discussed in Part E.

24 *Privacy Amendment (Private Sector) Act 2000* (Cth) s 3.

15.22 In order to understand what is principles-based regulation, it is necessary first to consider the differing ways in which government can regulate. Professor Julia Black posits the existence of three broad categories of regulatory method: 'bright line' rules; 'principles' and 'complex or detailed rules'.[25] Table 15.1 below provides hypothetical examples of each of these three types of regulatory method. The paragraphs immediately following it explain how these different forms of regulation operate.[26]

Table 15.1: Hypothetical examples of regulatory methods

Bright line rule	Principle	Complex/detailed rule
An organisation must not collect personal information relating to an individual's sexuality.	An organisation must not collect personal information unless it is necessary for one of its functions or activities.	An organisation [defined] must not collect [defined] personal information [defined] unless all of the following conditions are met: [list of conditions].

15.23 As Table 15.1 illustrates, a 'bright line' rule contains a single criterion of applicability. Such rules are clear and straightforward to apply but can fail to achieve their goal because there is considerable scope for manipulation or creative compliance. For instance, the rule may not be broad enough to capture all of the conduct that it is intended to proscribe, or an organisation may seek a loophole so as to comply with the letter, but not the spirit, of the rule.

15.24 A 'principle' articulates substantive objectives. Whether or not a principle is certain depends on whether there is general consensus about what is required to achieve compliance. While principles may appear simple to apply—in that they are concise and avoid arcane language—problems can arise in practice where, for instance, there is a dispute as to the meaning of the key terms. In the example from Table 15.1 above, reasonable minds may differ over what is necessary, in a particular context, for an organisation's functions or activities.

15.25 A complex or detailed rule can provide a higher degree of certainty because it expressly lists the relevant conditions to be taken into account. Applying such a rule is, however, complex and the creation of a list of conditions inevitably will leave gaps resulting in scope for manipulation or creative compliance.

---

25 J Black, *Principles Based Regulation: Risks, Challenges and Opportunities* (2007) London School of Economics and Political Science, 10. There are, of course, many other ways of differentiating between the various methods of regulation. See, eg, R Baldwin, *Rules and Government* (1995), 7–11.

26 This part of the chapter is adapted from J Black, *Principles Based Regulation: Risks, Challenges and Opportunities* (2007) London School of Economics and Political Science, 10.

What is principles-based regulation?

15.26 According to Black, principles are 'general rules … [that] are implicitly higher in the implicit or explicit hierarchy of norms than more detailed rules: they express the fundamental obligations that all should observe.' Black states that principles-based regulation avoids 'reliance on detailed, prescriptive rules and rel[ies] more on high-level, broadly stated rules or principles'.[27]

15.27 Part of the guiding purpose of a principles-based approach is to shift the regulatory focus from *process* to *outcomes*. The rationale for this is described as follows:

> regulators, instead of focussing on prescribing the processes or actions that firms must take, should step back and define the outcomes that they require firms to achieve. Firms and their management will then be free to find the most efficient way of achieving the outcome required.[28]

15.28 Thus, principles-based regulation seeks to provide an overarching framework that guides and assists regulated entities to develop an appreciation of the core goals of the regulatory scheme. A key advantage of principles-based regulation is its facilitation of regulatory flexibility through the statement of general principles that can be applied to new and changing situations. It has been said that such a regulatory framework is exhortatory in that it emphasises a 'do the right thing' approach and promotes compliance with the spirit of the law.[29]

Choice of regulatory mechanism: principles or rules?

15.29 According to Black, all forms of regulation are subject, to varying degrees, to the following problems:

- *Rules are just a 'best guess' as to the future*: The rule maker has to anticipate how the rule will be applied in the future. New situations may arise that were not expected/known about when the rule was written, and the rule may be interpreted and applied in ways that were not intended or anticipated by the writer.
- *Rules are never perfectly congruent with their purpose …* : Rules are inevitably either under-inclusive, failing to catch things that the rule maker might want to catch, and/or over-inclusive, catching things that the rule maker might not want to catch when applied to particular sets of circumstances …
- *Whether a rule is clear or certain depends on shared understandings*: Just looking at a rule does not tell us whether it is certain. … Whether or not a rule is 'certain' depends not so much on whether it is detailed or general,

> but whether all those applying the rule (regulator, regulated firm, court/tribunal) agree on what the rule means.
>
> - *How a rule affects behaviour does not depend solely on the rule*: … whether a rule has the desired effect on behaviour depends only partly on whether it is a precise, detailed rule or whether it is a principle. The firm's own attitude to regulation, the incentive structures for compliance and non-compliance, and the approach taken to enforcement, are also critical.[30]

15.30 Principles-based regulation attempts to solve these problems, largely by providing greater 'flexibility', thereby allowing for 'a greater degree of "future-proofing", enabling the regime to respond to new issues as they arise without having to create new rules'.[31] Future-proofing can be achieved by drafting purposive principles that both express the rationale for the rule and provide 'overarching requirements that can be applied flexibly to a rapidly changing industry'. Principles-based regulation also makes use of qualitative and often evaluative terms such as fair, reasonable and suitable.[32] This regulatory approach can facilitate compliance as it allows entities to honour the spirit of the law by developing policies or other mechanisms that simultaneously comply with the rule and meet the entity's needs.

15.31 By contrast, rules-based regulation is comparatively rigid. Detailed rules impose requirements that are not always appropriate for all entities regulated by the relevant scheme and, further, they do not always cover all of the entities or activities that are intended to be regulated.[33] Black states:

> Detailed rules, it is often claimed, provide certainty, a clear standard of behaviour and are easier to apply consistently and without retrospectivity. However, they can lead to gaps, inconsistencies, rigidity and are prone to 'creative compliance', to the need for constant adjustment to new situations and to the ratchet syndrome, as more rules are created to address new problems or close new gaps, creating more gaps and so on.[34]

15.32 On the other hand, a regulatory approach that is based on using prescriptive rules can provide greater clarity in the regulation, as it is easier for a regulated entity to determine what rules it must comply with and the minimum standards of compliance

expected.[35] This can, in turn, direct responsibility for the regulatory system away from the entities being regulated.[36]

15.33 Proponents of principles-based regulation argue that, contrary to the assertions of clarity and certainty, rules-based regulation 'can be a dead hand on technology and product innovation'.[37] For example, the Parliamentary Secretary to the Treasurer, the Hon Chris Pearce MP, has argued that rules-based regulation introduces 'unnecessary legal complexity' and encourages 'box-ticking' exercises, rather than complying with the spirit and intent of the law.[38]

15.34 The disadvantages of a principles-based system centre on problems of ambiguity, which can undermine the system's intended protections and accountability:

> Principles are criticised for not providing certainty; for creating an unpredictable regulatory regime in which regulators can act retrospectively; for allowing firms to 'backslide', and get away with the minimum level of conduct possible; and thus for providing inadequate protection to consumers or others.[39]

15.35 Principles-based regulation often deals with this lack of clarity and certainty by integrating principles with other forms of regulation. For instance, detailed rules can be used to supplement principles; official guidelines can be issued to explain the principles; and dialogue can be facilitated between the regulator and regulated entities.[40]

15.36 Further, depending on the features of the regulatory scheme, principles-based regulation may also provide greater clarity through the interpretation of the principles by a regulatory body and the enforcement of those interpretations across the regulated industry or group.[41] This leads to the development of a body of precedent that clarifies the principles and provides entities with further guidance.

15.37 The emphasis on outcomes in principles-based regulation allows regulated entities to work towards the effective implementation of the principles within their own organisational context without dwelling on the 'expensive legislative focus'.[42] Thus, in the privacy law context, the Privacy Commissioner, Karen Curtis, stated:

> By encouraging organisations to recognise the business advantages of good personal information handling practices and regulating their behaviour accordingly, government regulators can minimise regulatory intervention and red tape. This has been a common theme of our regulatory approach where a legislative framework is balanced by an emphasis on business privacy awareness and self-regulation. The idea is to inculcate the values and objectives of privacy law in business rather than just the superficial rules. When this happens organisations will be better equipped to deal with technological change because they will understand the ideas behind the laws—the principles—and will not become as confused by detailed technology-specific regulations. [43]

15.38 In this way, principles-based regulation aims to minimise the need for enforcement by 'encouraging organisations to understand the values behind the law and change their behaviour accordingly; not because they might get caught out by a regulator, but because they understand why the law is there and what its objectives are'.[44] This has been described as 'nurturing a culture of voluntary compliance with the law'.[45] Nevertheless, Black and others emphasise that breach of a principle should involve an element of fault and public sanction.[46]

15.39 Although rules-based and principles-based regulation are very different in their approach, in many instances the two systems can operate as a hybrid system, providing regulated entities with the benefits of both systems. In many established systems of regulation, high level principles that can be applied flexibly to new situations and promote a best practice approach to regulation are complemented by detailed rules providing clarity.

15.40 Currently, the IPPs and NPPs both represent hybrids, with each containing detailed rules and high level principles. For example, NPP 2 sets out relatively detailed rules related to the use and disclosure of personal information, whereas NPP 3 provides a broad, high level principle relating to data quality. An advantage of a hybrid system is that it seeks to take the advantages of both a principles- and a rules-based system in order to achieve regulatory clarity, enforceability and flexibility.[47]

Level of detail, guidance and protection

Background

15.41 In light of the above, it is necessary to consider how privacy should be regulated in the Act. This question was posed in the ALRC's Issues Paper, *Review of Privacy* (IP 31):

> Should federal privacy principles be prescriptive or should they provide high-level guidance only? Should they aim for a minimum or maximum level of protection of personal information or aim to adopt a best practice approach?[48]

15.42 An advantage of adopting high level principles is that they allow for greater flexibility, more easily accommodating unforeseen circumstances and a changing technological environment. For instance, the Asia-Pacific Economic Cooperation (APEC) Privacy Framework expresses the view that the high level nature of the OECD Guidelines 'makes them still relevant today'.[49]

15.43 A disadvantage of high level principles, however, is that they can fail to provide adequate guidance. This in turn may promote a proliferation of guidelines and information sheets, which may not be legally binding. In contrast, detailed rules provide more guidance, thereby promoting certainty and consistency in application.

15.44 Generally worded, high level principles are usually considered 'light-touch' regulation because it is thought to be more difficult to establish a breach of such principles than provisions imposing detailed and specific obligations. At the time of introducing the private sector provisions of the *Privacy Act,* the then Attorney-General expressed an intention to make the Act responsive to business and consumer needs.[50] This was to be achieved, in part, by adopting high level principles rather than prescriptive rules.[51]

15.45 Another issue is whether the privacy principles should contain a minimum, intermediate or maximum level of protection of personal information. Commentators have noted that there is a choice between two broad dynamics in modelling privacy principles in a globalised environment:

> On the one hand, countries [could] progressively fashion their privacy protection policies according to the highest standard, a 'trading up' or a 'race to the top'. Conversely, countries might consider that a less-regulated climate would attract global business that would want to circumvent the higher standards at work elsewhere. This competitive deregulation would lead to a race to the bottom, as

countries progressively weaken their standards to attract global investment in the information technology and services industries.[52]

Submissions and consultations

Level of detail

15.46 A very large number of stakeholders favoured privacy principles that provide high level guidance, as distinct from prescribing in detail what is and is not permissible.[53] Some stakeholders emphasised that this permits greater flexibility for agencies and organisations.[54] One stakeholder submitted that this should be recognised more explicitly in the *Privacy Act*.[55] The Australian Government Department of Employment and Workplace Relations also submitted that the use of language that is not overly prescriptive will make it easier to move to a set of Unified Privacy Principles, applicable to the public and private sectors.[56]

15.47 Some stakeholders submitted that, by emphasising the objectives of the law rather than its detail, principles-based regulation tends to promote technological neutrality and makes the law more resilient to change.[57] It was submitted that this also aids in ensuring the law is clear and easy to apply.[58]

58 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

15.48 It was argued that principles-based regulation is more appropriate in a co-regulatory environment.[59] The Office of the Privacy Commissioner (OPC) stated:

> Principle-based law is aimed at encouraging organisations to understand the values behind the law and change their behaviour accordingly; not just to prevent action from being taken against them by a regulator, but because they understand why the law is there, what its objectives are and that it may benefit its business outcomes.[60]

15.49 Some stakeholders suggested that a balance should be struck between high level guidance and the more detailed prescription associated with traditional legislative regulation.[61] Others suggested that it is necessary to adopt a more prescriptive approach. Professor William Caelli submitted:

> Privacy Principles MUST be prescriptive or else they will be largely ignored … There is no evidence that the private or public sector alike have embraced advanced information security systems WITHOUT legal obligation. This could also be clearly stated even for many matters of safety, eg, seat belts being made compulsory for inclusion in any manufactured or imported car, etc.[62]

15.50 Similarly, the National Health and Medical Research Council (NHMRC) submitted that the current high-level privacy principles have 'led to a proliferation of long, complex and often unclear guidelines and information sheets'. It argued that, at least in the health and research context, this can

> confuse stakeholders, leading many to adopt a highly conservative approach to compliance, with negative consequences for the clinical care of some individuals and for the conduct of some high quality health and medical research.[63]

15.51 On the other hand, the Northern Territory Information Commissioner submitted that some level of 'uncertainty' is the price that must be paid for allowing 'flexibility for agencies and organisations to protect privacy according to the particular context in which they operate'.[64]

15.52 The NHMRC further argued that more prescriptive privacy principles would 'aid understanding and compliance'. For instance, if further attention were paid in the principles to the consequences of a data breach, this would 'ensure that penalties are proportionate to the significance of the breach'.[65]

Minimum standards or maximum protection?

15.53 A number of stakeholders submitted that the privacy principles should continue to articulate minimum standards, as distinct from attempting to provide maximum privacy protection.[66] Some stakeholders linked this with the intention to adopt a 'light-touch' regulatory approach.[67] The Australian Bankers' Association argued that the current approach is working well and that those who favour more onerous regulation should first be required to 'establish the case for additional regulation and to demonstrate the benefits'.[68] It was also noted that, if more onerous obligations were imposed, this would strengthen arguments for retaining an exemption for small businesses in the *Privacy Act*.[69]

15.54 While acknowledging the importance of having privacy principles, a number of stakeholders noted that this does not preclude some aspects of privacy from being regulated in a more prescriptive manner, where this is required by the particular situation.[70] The OPC observed that the NPPs and IPPs were always intended to be 'minimum standards' that ought properly to be supplemented in appropriate circumstances.[71] Similarly, other stakeholders observed that the current approach whereby the IPPs and NPPs are supplemented by Codes of Practice and other guidance operates effectively.[72]

15.55 Some stakeholders argued that it is desirable to establish privacy principles that promote best practice.[73] Electronic Frontiers Australia, for instance, asserted that the

current approach is 'inadequate' in providing privacy protection.[74] The NHMRC argued, however, that this should still aim to balance 'the dual objectives of protecting individual privacy and promoting the public interest by enabling access to information for public benefit in appropriate circumstances'.[75]

ALRC's view

Level of detail

15.56 The fact that a very large number of stakeholders supported the use of high level principles in the *Privacy Act* reflects that this clearly remains the preferred system to regulate privacy when compared with more detailed, prescriptive legislation. Similarly, other jurisdictions continue to favour principles-based regulation to protect information privacy. For example, a 2006 report in the United Kingdom that focused on the impact of surveillance on privacy reached the following conclusion:

> We are not persuaded that, in searching for regulatory solutions to surveillance, the baby should be thrown out with the bath water; or, to change the liquid metaphor, that privacy principles and regimes are now, like King Canute, incapable of holding back a supposed flood of surveillance. The set of 'fair information' data protection principles is the only reasonably structured, systematic and practically oriented ethical framework currently available.[76]

15.57 The ALRC is also of the view that a principles-based approach should continue to be at heart of the *Privacy Act*, and that this should remain the starting point for the regulation of privacy. The ALRC favours such an approach because it is more flexible and adaptable to the multitude of circumstances in which agencies and organisations must take account of individuals' privacy rights. These features make the *Privacy Act* more resilient to change, especially in response to technological developments that impact on privacy.

15.58 However, as is noted above and is illustrated in greater detail in the following chapters in Part D, the IPPs and NPPs are not exclusively constituted by archetypal principles. Some of the provisions—such as IPP 9 and NPP 8—are relatively brief, expressing broad and general obligations or objectives to be achieved. On the other hand, principles such as IPP 5 and NPP 2 are more detailed, specifying with greater precision the obligations that apply in the relevant circumstances. In other words, the IPPs and NPPs represent a compromise. This means that, for certain provisions, it was deemed desirable to adapt the conventional principle structure, expressing the relevant obligations more prescriptively and in greater detail.

15.59 The ALRC believes that this compromise approach is desirable because, by eschewing a doctrinaire adherence to any particular regulatory theory, Parliament is

able to respond more flexibly to the needs of individuals, agencies and organisations at the various stages of the information cycle. The ALRC believes that relying solely on either rules- or principles-based regulation would not provide agencies and organisations with sufficient flexibility or security in their interpretation and implementation of privacy policies. Therefore, the ALRC is of the view that the continuation of a hybrid regulatory scheme will allow agencies and organisations to understand the purpose of the law and to drive organisational behaviour towards best practice. The overall regulatory structure should provide more detailed guidance and regulation where it is necessary to deal with particular issues.

15.60 Consequently, the ALRC's proposes that the obligations in the privacy principles generally should be expressed as high level principles. However, this should remain a broad objective, rather than a strict rule, in the drafting of the privacy principles. Care should also be taken, therefore, to ensure that the privacy principles are simple, clear and easy to understand and apply.

Minimum standards or maximum protection?

15.61 As explained above, the ALRC believes that privacy should generally be regulated in the *Privacy Act* by high level principles that set out the objectives to be achieved by agencies and organisations, usually without specifying in detail how this should be carried out. This approach is clearly inconsistent with legislation that seeks to articulate a detailed, prescriptive set of minimum *requirements* applicable to agencies and organisations. However, this does not answer the question whether the Act should set out minimum or maximum *standards*.

15.62 There is a longstanding policy position that the *Privacy Act* should be light-touch, in the sense that it should provide only such regulation as is required to protect individuals' privacy without unreasonably burdening the public or private sectors. The ALRC reiterates this position and, to further this goal, the ALRC believes the privacy principles should contain reasonable obligations that provide adequate protection of individuals' privacy rights and help to promote best practice, without creating an excessive compliance burden.

15.63 Moreover, formulating the privacy principles must involve a careful balance between competing considerations to determine how best to maximise public benefit. To this end, Professor Fred Cate has stated:

> Data protection is not an end in itself, but rather a tool for enhancing individual and societal welfare. To be effective, data protection must rest on the recognition that both information flows and individual privacy have value and are necessary in a democratic society and market economy. That value benefits individuals as well as society as a whole. Therefore, the goal of any privacy regime must be to balance the

> value of accessible personal information with the value of information privacy to maximize both individual and public benefits.[77]

15.64 The ALRC's preferred approach is to avoid trying to impose a 'one-size-fits-all' solution. In certain areas, it may be necessary to provide more detailed regulation that imposes either stricter or more lenient obligations.[78] As Black argues, 'the advantages and disadvantages of certain types of rules [are not] the same for all actors in the regulatory regime'.[79] Consequently, the ALRC is of the view that the optimum approach to the drafting of the privacy principles is to establish reasonable obligations on agencies and organisations. These obligations would generally apply to all agencies and organisations. In some situations, however, the obligations in the privacy principles will be displaced by more specific obligations that apply in a particular area—for instance, in credit reporting, health research and treatment, and in the telecommunications industry.[80]

Proposal 15–1 The privacy principles in the *Privacy Act* should be drafted to pursue, as much as practicable, the following objectives:

(a) the obligations in the privacy principles generally should be expressed as high level principles;

(b) the privacy principles should be simple, clear and easy to understand and apply; and

(c) the privacy principles should impose reasonable obligations on agencies and organisations.

Towards a single set of privacy principles

Background

15.65 A question arises as to whether it is preferable to maintain two separate sets of similar, but sometimes inconsistent, privacy principles, or to create a unified set of privacy principles (the Unified Privacy Principles or UPPs). The ALRC asked in IP 31 whether the IPPs and NPPs should be consolidated to create a single set of privacy principles applicable to both the public and private sectors and, if so, what model

80 For those more detailed requirements, see Parts G, H and J of this Discussion Paper.

should be used. A related question was asked as to whether any particular principles, or exceptions to principles, should apply only to either the public or private sector.[81]

15.66 As noted above, the OECD Guidelines apply to personal data in both the public and private sectors. Consequently, there is no reason to presume that it is necessary to establish two sets of privacy principles for the public and private sectors in order to implement the OECD Guidelines. Similarly, the principles in the APEC Privacy Framework and in the European Parliament's *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (1995) (EU Directive) also apply to both the public and private sectors.[82]

15.67 There is precedent in other jurisdictions for having a single set of principles applying both to the public and private sectors,[83] as well as for having separate principles or provisions regulating the public and private sectors.[84]

15.68 One problem with the current system is that there are circumstances when an organisation or agency is subject to both the IPPs and the NPPs. For example, an Australian Government contractor may be bound to under the Act to comply with the NPPs but may also be bound by contract to comply with the IPPs.[85] Some government business enterprises—such as Australia Post—are, for the purposes of the *Privacy Act*, both an agency in respect of their non-commercial activities, and an organisation in respect of their commercial activities.[86]

15.69 In determining the most appropriate 'model' for a unified set of privacy principles, it is necessary to consider a number of related questions—some of which are addressed in this Part, some of which are addressed elsewhere. Those questions include:

- What should be the general structure of a single set of privacy principles? This question is addressed earlier in this chapter.

- What should be the content of a single set of privacy principles? This question is addressed in the remaining chapters in this Part.

- In the event that a single set of privacy principles is adopted, is it necessary to create a further layer of more detailed regulation that would apply to certain spheres or activities? This general question is considered in Part F. In later chapters, this Discussion Paper addresses how this proposal might operate in certain specific areas—such as health and research,[87] credit reporting[88] and telecommunications.[89]

Previous privacy inquiries

15.70 The question whether to move to some form of unified privacy principles has been the subject of considerable debate in previous privacy inquiries.[90] In 2005, the OPC expressed its preference for a single set of principle principles:

> There seems no clear rationale for applying similar, but slightly different, privacy principles to public sector agencies and private sector organisations and certainly no clear rationale for applying both to an organisation at the same time. There is no clear policy reason why they are not consistent. The time may have come for a systematic examination of both the IPPs and the NPPs with a view to developing a single set of principles that would apply to both Australian Government agencies and private sector organisations.[91]

15.71 The OPC recommended that:

> The Australian Government should consider commissioning a systematic examination of both the IPPs and the NPPs with a view to developing a single set of principles that would apply to both Australian Government agencies and private sector organisations. This would address the issues surrounding Australian Government contractors.[92]

15.72 Submissions to the Senate Legal and Constitutional References Committee inquiry into the *Privacy Act 1988* (Cth) (Senate Committee privacy inquiry) and to the Taskforce on Reducing Regulatory Burdens on Business expressed concern about the inconsistency within the *Privacy Act* resulting from two sets of principles.[93] It was also

noted that two separate regimes caused particular difficulties in the health sector, where public and private health organisations often work closely together.[94]

15.73 The Senate Committee privacy inquiry ultimately recommended that the ALRC develop a single set of privacy principles:

> The committee recommends the development of a single set of privacy principles to replace both the National Privacy Principles and Information Privacy Principles, in order to achieve consistency of privacy regulation between the private and public sectors. These principles could be developed as part of the review by the Australian Law Reform Commission, as proposed in recommendations 1 and 2.[95]

Submissions and consultations

Support for single set of privacy principles

15.74 A very large number of stakeholders submitted that it would be desirable to consolidate the IPPs and NPPs to create a single set of privacy principles, which would be generally applicable to organisations and agencies.[96] The basis for supporting a move to the UPPs derives both from problems with having separate sets of privacy principles for the public and private sectors, as well as positive outcomes that could be achieved through a single set of principles.

15.75 Stakeholders were particularly concerned that maintaining separate sets of privacy principles—the NPPs and IPPs—creates complexity and confusion in a number of areas, including:

- for consumers, because the differential privacy standards can make it difficult for an individual to know what are their privacy rights in any given situation;[97]

- for staff of organisations and agencies, who are required to determine which privacy principles apply and when;[98]

- the often subtle differences in the requirements of the IPPs and NPPs, which can create conflicting or overlapping requirements;[99] and

- in public-private partnerships, or in respect of other entities that must comply with both the IPPs and NPPs.[100] In these situations, it can increase the cost of compliance because two compliance regimes need to be established and it is sometimes unclear precisely when the IPPs apply and when the NPPs apply.[101]

15.76 Positive reasons were also advanced for the establishment of the UPPs. For instance, it was submitted that this would help achieve the desirable goals of national consistency,[102] as well as consistency with a number of the key international instruments such as the EU Directive, the OECD Guidelines and the APEC Privacy Framework.[103] It was also submitted that this would simplify compliance requirements and, therefore, enhance administrative convenience.[104] Moreover, any compliance

burden associated with introducing the new UPPs would be offset by savings from no longer having to maintain two separate privacy regimes.[105] The OPC further submitted that the number of similarities between the IPPs and NPPs appear to make the task of rationalisation feasible.[106]

Opposition to single set of privacy principles

15.77 A significant, though smaller, number of stakeholders opposed moving to a single set of privacy principles.[107] The Australian Bankers' Association was concerned that moving now to a single set of privacy principles would be 'premature', given that the NPPs were only recently enacted.[108] It noted that many organisations have already 'invested significant amounts of time and money in developing their compliance arrangements to ensure their compliance with the Act' and that moving to a single set of principles would require further expenditure at a time when it appears that the NPPs are working satisfactorily.[109]

15.78 Some stakeholders focused on the fact that sometimes it is necessary to impose different requirements on organisations and agencies.[110] Specifically, there was concern that the objects and functions of agencies differ from those of organisations and so it is appropriate to impose differing privacy requirements on each.[111] For example, special principles may need to apply to the public sector because it can compel the production of personal information.[112] It was also suggested that it may be necessary to create a specific principle dealing with direct marketing that should apply only to the private sector—that is, it should not apply to agencies.[113]

15.79 Some alternatives were suggested to the establishment of the UPPs. For instance, the IPPs and NPPs could be amended, where appropriate, to enhance their consistency.[114] Another alternative would be to amend the *Privacy Act* to state that the

NPPs apply to all personal information provided by a government agency under a service contract.[115]

ALRC's view

15.80 The overwhelming majority of stakeholders who expressed a view on this issue were in favour of consolidating the IPPs and NPPs to create a single set of privacy principles that would be generally applicable to organisations and agencies. There was also a consensus among each of the various categories of stakeholder—that is, among organisations, agencies and others. The ALRC shares this view and believes that the IPPs and NPPs should be consolidated to establish the UPPs that would be generally applicable to agencies and organisations.

15.81 A large number of benefits would flow from such a reform. For instance, the move to a set of UPPs would foster national and international consistency in privacy regulation.

15.82 Such a reform would also clarify and simplify the obligations of agencies and organisations with respect to information privacy. This would be advantageous to individuals who interact with these entities, and also for the agencies and organisations themselves, as they would not have to differentiate between the overlapping requirements of the IPPs and NPPs. Where an organisation is acting as a contracted service provider or it is involved in a public-private partnership, it would significantly reduce the problems associated with the organisation having to comply with both the IPPs and NPPs. This simplification would be likely to offset costs associated with implementing a new regime for privacy regulation.

15.83 The ALRC does not believe, however, that the UPPs should apply rigidly to agencies and organisations. As explained in the remaining chapters in this Part, some privacy principles should incorporate provisions that apply exclusively to agencies or organisations, and indeed some principles in the UPPs should apply only to organisations.[116] Moreover, the ALRC is of the view that the UPPs should apply except to the extent that more specific primary or subordinate legislation covers a particular aspect of privacy or handling of personal information.

15.84 Adopting such an approach responds to a persistent concern among those opposed to a single set of privacy principles—namely, that this would not adequately address the fundamental differences between agencies and organisations. That is, the UPPs will be sufficiently flexible to differentiate, where appropriate, between the information privacy obligations that apply to agencies and organisations.

---

115 Australian Bankers' Association Inc, *Submission PR 259,* 19 March 2007.

116 See Chs 23, 26.

Proposal 15–2 The *Privacy Act* should be amended to consolidate the current Information Privacy Principles and National Privacy Principles into a single set of privacy principles—the Unified Privacy Principles (UPPs)—that would be generally applicable to agencies and organisations, subject to such exceptions as required.

Proposal 15–3 The proposed UPPs should apply to information privacy except to the extent that:

(a) the *Privacy Act* or another piece of Commonwealth primary legislation imposes different or more specific requirements in a particular context; or

(b) subordinate legislation under the *Privacy Act* imposes different or more specific requirements in a particular context.

Scope and structure of Unified Privacy Principles

Scope of Unified Privacy Principles

15.85 In considering the content of the privacy principles, the first question is: what should be the scope of the UPPs? In other words, should the scope of the UPPs match that of the IPPs, NPPs or both; or should the scope be narrower or broader?

15.86 Taken together, the IPPs and NPPs cover the following aspects of privacy in relation to personal information: collection; use and disclosure; data quality; data security; openness; access and correction; the use of identifiers; the principle of anonymity; the regulation of transborder data flows; and the special protections that should apply to particularly sensitive information.

15.87 The ALRC believes that, at a minimum, the UPPs should cover the same aspects of privacy as are currently covered by the IPPs and NPPs, when taken together. There are a number of reasons why the ALRC takes this view. First, this coverage is broadly consistent with the privacy regimes of other jurisdictions and at international law. Secondly, this will allow the *Privacy Act* to derogate, where appropriate, from the general provisions of the UPPs. The question whether the scope of the UPPs should be expanded to cover additional aspects of privacy is addressed in Chapter 29.

Structure of a single set of privacy principles

15.88 Assuming the IPPs and the NPPs are consolidated to create a single set of privacy principles (the UPPs), a question arises as to how the UPPs should be structured. Specifically, should the UPPs be based on the NPPs, the IPPs or neither?

15.89 A number of stakeholders have expressed the view that the NPPs—though capable of improvement—are superior to the IPPs and should form the model for any set of UPPs.[117] It was noted that this would reduce the cost of compliance for the private sector.[118]

15.90 The privacy statutes of Victoria, Tasmania and the Northern Territory are largely based on the NPPs—although they are not 'word for word' replicas.[119] In each case, the NPPs have been used as a basis for the principles that are to apply to public sector bodies—although the Tasmanian provisions also apply to 'any body, organisation or person who has entered into a personal information contract relating to personal information'.[120] On the other hand, the privacy legislation of New South Wales and the privacy schemes in Queensland and South Australia resemble more closely the IPPs.[121] It was noted, however, that South Australia's Department of Health and Department for Families and Communities have both adopted the NPPs, which 'demonstrat[es] the ability of the NPPs to be applied in a public sector setting'.[122]

15.91 Some stakeholders stated that, if there were to be one set of privacy principles, it would be preferable to develop a new set of principles rather than merely merging and modifying the existing NPPs and IPPs.[123] The OPC argued that the NPPs are

> concise and more user friendly … [than] the IPPs. This is due in part to the fact that the NPPs were developed with the consideration that they must cater to a wider range of organisations, from individual health providers to large corporations and therefore were required to be easier to apply in a variety of situations. Similarly, the drafting language of the NPPs utilises plain English in comparison to the earlier drafted IPPs.[124]

15.92 One key consideration in determining the model of privacy principles to be applied is the compliance burden and costs that will be imposed on agencies and organisations who have set up compliance systems in response to the requirements imposed by the IPPs and the NPPs. Departing radically from those principles would increase the consequential compliance burden imposed on those entities that are subject to the UPPs. The OPC concluded that the NPPs 'have worked well and

delivered to individuals protection of personal and sensitive information in Australia in those areas covered by the Act'.[125] However, as noted above, the Senate Committee privacy inquiry disagreed with the OPC's conclusion that the private sector provisions are 'working well'.[126]

ALRC's view

15.93 The ALRC's view is that the general structure of the NPPs has been largely effective. This is borne out by the response of stakeholders to this Inquiry, the majority of whom have indicated that they are generally satisfied with how the NPPs are structured. It is also noted that to adopt a radically different structure from the NPPs would involve a greater compliance burden, particularly on organisations that have to update their privacy protection regimes.

15.94 Consequently, assuming Proposal 15–2 is adopted, the ALRC believes that the NPPs should form the general template in drafting and structuring the UPPs. In making this proposal, two important points should be made. First, this proposal is not intended to impact on the *substantive content* of the UPPs; rather it is intended only to guide the *general form* or framework of the UPPs. Secondly, the ALRC does not propose that the statutory draftspersons should slavishly follow the NPP structure or wording where it is obvious that amendments can be made that would improve on the status quo. Instead, it would be entirely appropriate for the UPPs to depart from the general structure of the NPPs in such circumstances. This general approach is reflected in the way in which the proposed UPPs have been drafted by the ALRC in this Discussion Paper.[127]

Proposal 15–4 The National Privacy Principles should provide the general template in drafting and structuring the proposed UPPs.

ALRC's view 584

Introduction

16.1 This chapter considers the issue of consent as it applies to the privacy principles in the *Privacy Act 1988* (Cth). The fact that an individual has provided consent to the handling of his or her personal information can—in some circumstances under the National Privacy Principles (NPPs), Information Privacy Principles (IPPs) and proposed Unified Privacy Principles (UPPs)—provide lawful authority to the relevant agency or organisation to deal with the individual's personal information in that way.

16.2 This chapter focuses on three main questions. First, should the definition of 'consent' in the *Privacy Act* be amended? Secondly, should the Office of the Privacy Commissioner (OPC) provide further guidance as to the meaning of consent? Thirdly, should the proposed UPPs contain a separate principle that deals with the issue of consent?

16.3 The term 'consent' is defined in the *Privacy Act* to mean 'express consent or implied consent'.[1] In relation to implied consent, the OPC has noted that this can be inferred from an individual's 'failure to opt out provided that the option to opt out was clearly and prominently presented and easy to take up'.[2]

16.4 Whether an individual has given his or her consent can be critical in determining whether an agency or organisation should be permitted to use or disclose the

1 *Privacy Act 1988* (Cth) s 6(1).
2 Office of the Federal Privacy Commissioner, *Guidelines to the National Privacy Principles* (2001), 37.

individual's personal information. For example, NPP 2.1(b) provides that organisations may use or disclose personal information for a secondary purpose if the individual has consented to the use or disclosure. Similar provisions apply in the IPPs in respect of agencies.[3] The NPPs also contain exceptions relating to consent in respect of transborder data flows and the collection of sensitive information. That is, an organisation is permitted to transfer an individual's personal information to a foreign country if the individual consents to the transfer,[4] and the general prohibition on an organisation collecting sensitive information does not apply where the individual has consented.[5]

'Consent' and 'bundled consent' in the *Privacy Act*

Background

16.5 As noted above, there are exceptions to the use and disclosure restrictions under the IPPs and NPPs where the individual in question consents to the use or disclosure. Problems arise where an individual's capacity to give true consent—that is, to make an informed and free choice—is hampered. This issue is seen most commonly in the context of 'bundled consent'. Bundled consent refers to the practice of an agency or organisation 'bundling together', or consolidating, multiple requests for individuals' consent to a wide range of uses and disclosures of personal information, without giving individuals the option of selecting to which uses and disclosures they agree. Bundled consent is often sought as part of the terms and conditions of a product or service.[6]

16.6 Submissions from consumer groups to the OPC's review of the private sector provisions of the *Privacy Act* (OPC Review) were highly critical of the practice, stating, for example, that it undermines the requirement that consent be meaningful, informed and freely given.[7] Similar sentiments were expressed in some submissions to the Senate Legal and Constitutional References Committee inquiry into the *Privacy Act* (Senate Committee privacy inquiry). For example, one stakeholder stated that it was difficult for individuals to give free and informed consent when presented only with broad or vague statements concerning possible uses and disclosures, or when told that services would not be provided in the absence of consent.[8]

16.7 On the other hand, there may be legitimate circumstances in which organisations seek bundled consent from consumers.[9] Submissions from the business sector, and particularly the finance and telecommunications industries, to both the OPC Review

9 Note that concerns relating to bundled consent in the context of credit reporting and telecommunications are addressed respectively in Parts G and J of this Discussion Paper.

and the Senate Committee privacy inquiry emphasised the need to seek bundled consent in order to achieve business efficiency and to reduce costs to the consumer. For example, telecommunications organisations submitted that to obtain consent for each specific use of an individual's personal information would significantly increase the complexity and costs of compliance. These costs, they argued, would inevitably be passed on to the consumer.[10] Vodafone submitted to the OPC Review that unbundling consent would have negative outcomes for consumers and suppliers, by increasing the volume and frequency of communications.[11] Submissions from the finance industry emphasised that seeking a single consent for multiple uses of information—for example, in an application for finance—was necessary to ensure that the information could be used not only to process the application, but to manage the account, administer insurance claims, recover money owed and maintain the value of the asset.[12] In 2005, the OPC stated that it would develop guidelines on bundled consent.[13]

16.8 In the ALRC's Issues Paper, *Review of Privacy* (IP 31), the ALRC asked the following question:

> Are there particular issues or concerns arising from the practice of organisations seeking bundled consent to a number of uses and disclosures of personal information? If so, how are these concerns best addressed?[14]

Submissions and consultations

16.9 A large number of stakeholders expressed concern about the use of bundled consent. It was noted that this requires individuals to adopt an all or none approach—that is, they are unable to specify what particular uses or disclosures are and are not acceptable to them.[15] Some stakeholders argued simply that this area of law needs to be clarified.[16]

16.10 Several examples were given of problems arising from agencies or organisations using bundled consent. These include:

- internet sites often require bundled consent before one can enter the site;[17]

- a particular real estate agent is said to use a single form to request a prospective tenant's consent to the disclosure of personal information to the media, the landlord, residential tenancy databases and the local real estate industry body, even though each of these entities would use the information differently and for differing purposes;[18] and

- sometimes the language used in a bundled consent form is 'particularly inaccessible for people with literacy issues and those for whom English is a second language'.[19]

16.11 The OPC maintained that 'consent is a cornerstone of privacy' and involves two critical elements: (a) consent must be informed, so that an individual knows to what he or she is agreeing; and (b) a request for consent must give an individual 'real choice'.[20]

16.12 A critical stumbling block in relation to bundled consent is where a failure to provide consent leads to an agency or organisation withholding access to a good or service. A number of stakeholders expressed concern about this,[21] and some argued that it should be prohibited.[22] AAMI, for instance, suggested that this practice is unfair and punitive, and may be unlawful under the *Fair Trading Act 1999* (Vic).[23] The NSW Disability Discrimination Legal Centre was concerned that this could lead to individuals refusing to give consent (and thereby not accessing the relevant service) because they fear that this may allow their sensitive information to be used against them at some stage in the future.[24]

16.13 On the other hand, some stakeholders observed that sometimes an agency or organisation needs to use or disclose an individual's personal information to enable it to provide a particular service. If this is the case, it should be permitted to withhold the service unless consent is provided.[25] The OPC seems to have taken a middle line, suggesting that

> where an agency or organisation wants to use information for a purpose other than [the purpose] for which it was collected, then the individual's consent should be sought for the extended use of that information but it should not be made a condition of the original service.[26]

16.14 Some stakeholders submitted that bundling consent—though perhaps not ideal in a perfect world—is necessary for practical reasons. This may be because an organisation or agency has multiple interactions with an individual client and must therefore handle the individual's personal information many times.[27] It may also be due to the practical necessity of outsourcing parts of a business, which leads to a greater number of entities handling an individual's personal information.[28] It was also pointed out that bundled consent can help to cut red tape and allow an individual to access a service more quickly.[29]

16.15 The Australian Bankers' Association submitted that at the heart of the bundled consent issue was the need to strike an appropriate balance between responding to statutory use and disclosure obligations and respecting individuals' information privacy requirements. It suggested that, at least in relation to the activities of its members, bundled consent might present a more theoretical than practical problem to individuals.[30]

16.16 Some stakeholders that accepted the need for bundled consent, at least in some circumstances, made suggestions to reform the bundled consent process. These included:

- where an individual is requested to consent to multiple items, these items should be 'directly related (as in primary and secondary purposes)';[31]
- the OPC should provide guidance on how and when to seek bundled consent;[32]

- organisations should be encouraged to move consent clauses from the terms and conditions of service into application forms;[33]

- the categories of personal information and the purposes for which they will be used should be clear at the outset and, if an agency or organisation wishes to deviate from this, it must explain this to the individual and obtain the individual's consent;[34]

- it should be made clear to individuals what are the things to which they are consenting;[35]

- an agency or organisation should not use a bundled consent form for things that are not genuinely necessary for the entity's interaction with the individual—for instance, it is inappropriate to use a bundled consent in respect of direct marketing;[36] and

- bundled consent may not be appropriate in respect of sensitive information, such as health information.[37]

ALRC's view

Meaning of 'consent'

16.17 The issue of consent—and, in particular, what is required to demonstrate that consent has been obtained and when consent should be required from a data subject—remain vexed issues in the context of privacy regulation. This is notwithstanding that, as noted above, the OPC has provided guidance on this subject and recommendations have been made by the OPC and the Senate Committee privacy inquiries to clarify the rules on consent.

16.18 The dictionary meaning of consent is 'to give assent; agree; comply or yield'.[38] This necessarily implies an element of voluntariness; otherwise the concept is indistinguishable from passive acceptance.

16.19 The ALRC is of the view that the specific requirements of consent—particularly as regards the requisite level of voluntariness—are highly dependent on the context in which the personal information is collected, used or disclosed. In other words, what

38 *Macquarie Dictionary* (online ed, 2005).

may be required to obtain consent in one situation may differ, sometimes significantly, from what is required to obtain consent in another situation.

16.20 Take the following hypothetical example. An organisation has a large number of customers from a particular ethnic group. The organisation wishes to create a customer database using personal information about its customers, including their home addresses, and this database will help the organisation deliver a service to its customers. If the individual customers approve of this use of their home addresses, the information will likely be innocuous. If, however, the organisation intends to sell the contents of this database to another entity—perhaps one that is engaged in direct marketing or, more worryingly, a racist group that is looking to target members of that particular ethnic group—this same information would take on a different significance. In the latter circumstances, knowing precisely how his or her personal information is to be used or disclosed will have a critical impact on whether the individual consents to that use or disclosure.

16.21 The importance of context in any analysis of privacy, and particularly in maintaining control over personal information, was highlighted by Callinan J in *Australian Broadcasting Corporation v Lenah Game Meats*:

> Privacy is necessary for the formation of intimate relationships, allowing us to reveal parts of ourselves to friends, family members, and lovers that we withhold from the rest of the world. … In *The Unbearable Lightness of Being*, Milan Kundera describes how the police destroyed an important figure of the Prague Spring by recording his conversations with a friend and then broadcasting them as a radio serial. Reflecting on his novel in an essay on privacy, Kundera writes, 'Instantly Prochazka was discredited: because in private, a person says all sorts of things, slurs friends, uses coarse language, acts silly, tells dirty jokes, repeats himself, makes a companion laugh by shocking him with outrageous talk, floats heretical ideas he'd never admit in public, and so forth.'[39]

16.22 This emphasises that, in order to protect an individual's privacy, it is necessary to give careful consideration to context. This point is heightened when considering whether a person has consented to a particular use or disclosure. Clearly, an individual should not be expected to give consent to a data collector in respect of any use of his or her personal information that the data collector considers appropriate. Rather, consent should involve the individual being adequately informed, before giving consent, of the circumstances, nature and basis of the proposed use. Equally, however, the level of effort that a data collector should be expected to undertake to secure the consent of an individual also will depend on these contextual factors.

---

39 *Australian Broadcasting Corporation v Lenah Game Meats Pty Ltd* (2001) 208 CLR 199, [321], citing J Rosen, *The Unwanted Gaze: The Destruction of Privacy in America* (2000), 11.

16.23 The ALRC notes that there is a clear desire from a large number of stakeholders for greater clarity as to the meaning of 'consent' more generally. In approaching this issue in the context of the *Privacy Act*, the ALRC believes that the OPC's existing guidance on this issue provides a useful starting point.[40]

16.24 In articulating the general meaning of consent in privacy law, it is also useful to refer to other jurisdictions. For example, the *Model Code for the Protection of Personal Information*, which is set out in Canada's *Personal Information Protection and Electronic Documents Act 2000* (PIPED Act), states that, in obtaining consent, the reasonable expectations of the individual are relevant. The Model Code also states that generally organisations should seek express consent when the information is likely to be considered sensitive, and that implied consent would generally be appropriate when the information is less sensitive.[41] This reflects a contextual approach to the issue of consent in privacy law. The draft Asia-Pacific Privacy Charter is more prescriptive, stating that consent should be 'freely-given, informed, variable and revocable'. It states that consent is 'meaningless if people are not given full information, or have no option but to consent in order to obtain a benefit or service'.[42]

16.25 Taking account of how consent has been interpreted in Australia and overseas, the ALRC believes that there are four critical factors that apply in the privacy area when considering whether an individual consents to the handling of his or her personal information in a given situation:

- The context in which the consent is sought—this means considering how the consent is sought; the characteristics of the individual from whom consent is sought; the thing(s) to which the individual appears to be giving his or her consent; and any other relevant factors.

- Whether there is informed consent—this requires an analysis of the individual's likely level of understanding as to what he or she is consenting to, and the implications of giving and withholding his or her consent. As explained in the 2003 report, *Essentially Yours: The Protection of Human Genetic Information in Australia* (ALRC 96), it is critical for an individual to be 'given sufficient information to enable [him or her] to make an informed decision' as to whether to give consent.[43]

---

40 See Office of the Federal Privacy Commissioner, *Guidelines to the National Privacy Principles* (2001), 38. The relevant part of these Guidelines is extracted later in this chapter.

41 *Personal Information Protection and Electronic Documents Act 2000* SC 2000, c 5 (Canada) sch 1, Principle 4.36.

42 G Greenleaf and N Waters, *The Asia-Pacific Privacy Charter, Working Draft 1.0, 3 September 2003* (2003) WorldLII Privacy Law Resources <www.worldlii.org/int/other/PrivLRes/2003/1.html> at 31 July 2007, Principle 2.

43 Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), [28.27]

- Whether the consent is voluntary—this requires an analysis of whether the individual has a clear option not to consent, and whether receiving the opportunity not to consent, and withholding consent itself, involves no financial cost to, and little effort from, the individual.[44] In ALRC 96, emphasis was also placed on ensuring that an individual's consent is voluntarily given—that is, not coerced.[45]

- Whether the individual's option to consent to one purpose is freely available and not bundled with other purposes. In ALRC 96, it was stated that 'while the bundling of consents may not be in breach of the *Privacy Act*, the practice has the potential to undermine the voluntariness of the consent of an applicant for insurance'.[46] The ALRC reiterates this view and extends the application beyond the area of insurance contracts to any contractual arrangement. Bundling consent can often be contrary to the spirit of the privacy principles and, in any event, may not be good business practice—especially if it alienates a potential customer.[47] Nevertheless, the ALRC acknowledges that in certain circumstances, particularly where the personal information in question does not fall within the definition of 'sensitive information', it may be appropriate for an agency or organisation to use bundled consent. For example, it can obviate the need to contact a customer repeatedly about minor issues. As explained below, the ALRC proposes that the OPC provide further guidance on the issue of bundled consent and, in particular, when it should not be used.

Options for reform

16.26 There is a need to clarify the issue of consent as it applies to the privacy principles. In order to achieve this goal, there are four principal options for reform. First, the *Privacy Act* and other legislation could set out in detail what is required to obtain the requisite consent in the many contexts in which personal information may be used or disclosed for a secondary purpose. Secondly, the definition of 'consent' in s 6(1) of the *Privacy Act* could be amended to set out with greater precision what factors should be taken into account in obtaining an individual's consent. Thirdly, the OPC could provide more guidance on what constitutes consent for the purposes of the privacy principles in various different contexts. Fourthly, a number of the elements of the above three approaches could be combined.

16.27 The first option for reform would require several, differing statutory definitions of 'consent' to cover the various contexts in which this is an issue. This approach

---

44 See, eg, F Cate, 'The Failure of Fair Information Practice Principles' in J Winn (ed) *Consumer Protection in the Age of the 'Information Economy'* (to be published 2007) Ch 14, 25.

45 See Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), [28.34]–[28.37].

46 Ibid, [28.46].

47 Ibid, [28.46].

would require a very large number of prescriptive rules that attempt to cover the spectrum of situations in which an agency or organisation may seek consent to use or disclose personal information with the consent of the individual concerned. In relation to the areas covered, this would have the benefit of providing greater regulatory certainty and, in certain situations, it may be appropriate. However, the ALRC's view is that, if applied to all contexts in which personal information is used and disclosed, such an approach would be inconsistent with one of the aims of the *Privacy Act*: to create a regulatory regime that sets out broad, general rules, while minimising fragmentation of privacy law.[48] Moreover, such an approach may be doomed to fail because it would be very difficult, if not impossible, to cover every relevant context.

16.28 The second option is to retain a principles-based approach, but for the Act to state more explicitly, and in greater detail, what is meant by the term 'consent'. As noted above, this would involve amending the current statutory definition of consent.[49] It should be acknowledged that most comparable foreign jurisdictions do not provide a detailed statutory definition of consent in their privacy legislation. There are, however, some examples of statutory definitions of consent. Italian information privacy law contains a provision called 'consent' that states:

> 1. Processing of personal data by private entities or profit-seeking public bodies shall only be allowed if the data subject gives his/her express consent.
>
> 2. The data subject's consent may refer either to the process as a whole or to one or more of the operations thereof.
>
> 3. The data subject's consent shall only be deemed to be effective if it is given freely and specifically with regard to a clearly identified processing operation, if it is documented in writing, and if the data subject has been provided with the information referred to in Section 13.
>
> 4. Consent shall be given in writing of the processing concerns sensitive data.[50]

16.29 A similar definition of consent is provided in German privacy legislation, although it contains more onerous requirements in respect of consent relating to the use of personal information for 'scientific research'.[51]

16.30 The ALRC has given careful consideration to whether the *Privacy Act* should adopt such an approach. Specifically, the ALRC acknowledges that there would be some benefit in adopting a statutory definition of 'consent'. This definition could set out an objective test incorporating a non-exhaustive list of factors that an agency or organisation should point to when arguing that it has obtained the consent of an individual to a particular use or disclosure. Those factors could include those identified above as the four critical elements of consent—namely:

---

48 See, generally, Proposal 15–1 and Part C of this Discussion Paper.

49 The term 'consent' is currently defined to mean 'express consent or implied consent': *Privacy Act 1988* (Cth) s 6(1).

50 *Personal Data Protection Code 2003* (Italy) s 23.

51 *Federal Data Protection Act 1990* (Germany) s 4(a).

- the context in which consent is sought;
- whether there is informed consent;
- whether the consent is voluntary; and
- whether the individual's option to consent to one purpose is freely available and not bundled with other purposes.

16.31 Concern was raised in consultations, however, that a statutory definition of consent along these lines would either not provide substantive assistance in determining whether consent has been given in a particular situation, or it could be interpreted too restrictively, creating an undesirable constriction on the flow of information. It is worth noting that it tends to be civil law jurisdictions that possess a detailed statutory definition of consent. In these jurisdictions, such a process of codification may be more desirable given that there is less scope to develop the law through the process of statutory interpretation by courts and others. It was also suggested that there may be a number of situations where the consent exception, which is currently being relied on to permit use or disclosure, would no longer support a lawful use or disclosure of personal information. The ALRC notes that there has not been strong support for an expanded statutory definition of consent and that such a definition may cause more problems than it solves, particularly if it were to prevent the legitimate handling of personal information by an agency or organisation that has come to rely on the consent exception.

16.32 The third option for reform is for the OPC to provide more guidance on what constitutes consent for the purposes of the privacy principles, particularly for contexts in which there is currently confusion or disagreement as to what is required to obtain an individual's consent. It should be noted that the OPC has already provided some guidance in this area, which states that an organisation will be more likely to show that an individual has consented where:

> • it is likely that the individual received and read the information about the use or disclosure;
>
> • the chance to opt out of the offer is clearly stated and likely to be understood by the individual and the individual is likely to be aware of the implications of not opting out;
>
> • the opting in or opting out is freely available and not bundled with other purposes;
>
> • receiving the chance to opt out involves no financial cost to, and little effort from, the individual;
>
> • opting out involves little effort from, and no or virtually no cost to the individual;
>
> • the consequences of failing to opt out are harmless;

> • if the individual opts out later, the individual is fully restored, where possible and appropriate, to the circumstances they would have been in if they had opted out earlier.[52]

16.33 While this provides some assistance in determining how to approach the issue of consent, the ALRC is of the view that this guidance should be expanded, particularly to cover contentious areas and where there is currently confusion. One such area is bundled consent. Given concerns about when it is and is not appropriate for an agency or organisation to use the mechanism of bundled consent, the ALRC's view is that there would be considerable benefit in OPC guidance on this issue, to provide greater certainty for agencies and organisations and greater protection for individuals.

16.34 The fourth option for reform is to combine the earlier three options. For instance, OPC guidance on the issue of consent could incorporate the critical factors identified above, which are needed to obtain an individual's consent.

16.35 Moreover, if it becomes apparent that the OPC's guidance on this issue is not being heeded or that the consent exceptions in the privacy principles are being relied on inappropriately, then further legislative action may be warranted.[53] For example, if data collectors in a particular field of activity are wrongly claiming to have obtained consent to handle personal information, the ALRC believes that it would be appropriate to enact primary or subordinate legislation to specify what is required to obtain consent in the relevant field of activity.[54] For example, in certain areas—particularly in credit reporting, the telecommunications industry, and health care and research—the applicable subordinate legislation could be amended, if warranted, to provide more detailed rules as to what is required to secure the consent of an individual for the handling of the individual's personal information.

Conclusion

16.36 In conclusion, the ALRC is of the view that the most appropriate reform to deal with the issue of consent under the privacy principles is for the OPC to provide further guidance as to the meaning of consent, explaining how consent may be obtained in certain contexts that are of particular importance—such as, where an individual is entering a financial transaction with an organisation. This guidance should cover consent as it applies in various contexts and it should include advice on when it is and is not appropriate to use the mechanism of bundled consent.

---

52 Office of the Federal Privacy Commissioner, *Guidelines to the National Privacy Principles* (2001), 38.

53 Note, also, that the ALRC proposes that the OPC's powers to remedy non-compliance with the privacy principles should be strengthened: see Part F of this Discussion Paper.

54 See, eg, the detailed definition of 'consent' in the context of direct marketing under the *Spam Act 2003* (Cth) sch 2, cl 3.

Proposal 16–1 The Office of the Privacy Commissioner should provide further guidance about what is required of agencies and organisations to obtain an individual's consent for the purposes of the *Privacy Act*. This guidance should: (a) cover consent as it applies in various contexts; and (b) include advice on when it is and is not appropriate to use the mechanism of 'bundled consent'.

A separate privacy principle dealing with consent?

Background

16.37 As noted above, the IPPs and NPPs already deal with consent—especially in the principles dealing with use and disclosure of personal information. The question addressed in this part of the chapter is whether the proposed UPPs should contain a principle that deals separately with the issue of consent.[55]

16.38 While many jurisdictions do not deal separately with the concept of consent, some—like Canada and Germany[56]—elevate consent to a separate principle or provision. The Canadian *Model Code for the Protection of Personal Information* states:

> The knowledge and consent of the individual are required for the collection, use, or disclosure of personal information, except where inappropriate.[57]

16.39 However, s 7 of the PIPED Act specifies a number of circumstances in which personal information can be collected, used and disclosed without a person's consent or knowledge. The Model Code covers the form of the consent sought by the organisation, the manner in which organisations can seek consent and in which individuals can give consent, as well as the withdrawal of consent by an individual.[58] The United Kingdom's *Data Protection Act 1998* contains provisions setting out how the data protection principles should be interpreted.[59] For example, in relation to the first principle, personal data are not to be processed unless the data subject has given his or her consent to the processing.[60]

16.40 As noted above, the draft Asia-Pacific Privacy Charter also contains a separate consent principle, which states:

> For some Principles, individual consent justifies actions that would otherwise not comply with the Principle. Where consent is relied upon, it must be freely-given,

> informed, variable and revocable. Consent is meaningless if people are not given full information, or have no option but to consent in order to obtain a benefit or service.
>
> For Principles where consent normally applies, there are exceptional situations where consent may be insufficient justification.[61]

Submissions and consultations

16.41 There was general opposition to the addition of a discrete privacy principle dealing with consent.[62] There was concern that this could be too onerous if it imposed additional obligations to obtain consent.[63]

16.42 AAMI submitted that, while there is not currently a discrete consent principle, it already 'exists by the very nature of what an organisation needs to do to collect and manage personal information'. Therefore, a separate consent principle would 'add no value'.[64] Moreover, a number of stakeholders submitted that it would be preferable to rely on the consent provisions in the existing privacy principles and to modify those provisions as necessary.[65] It was suggested, for instance, that the consent aspect of the direct marketing provisions should be modified in line with federal legislation aimed at telemarketing and spam.[66]

ALRC's view

16.43 The ALRC notes that the vast majority of stakeholders that commented on this issue were opposed to a separate privacy principle dealing with consent. The ALRC agrees that it would be inappropriate to deal with consent as a discrete privacy principle.

16.44 As explained above, consent is already a critical element of a number of the existing privacy principles—especially those dealing with use and disclosure, transborder data flows and the collection of sensitive information. Although consent is not required for the collection of an individual's non-sensitive personal information, consent is often sought by agencies and organisations in any event.

16.45 In this way, the concept of consent, where appropriate, is built into the architecture of the privacy principles. It seems logical, therefore, to consider the issue

66 AAMI, *Submission PR 147,* 29 January 2007.

of consent as it arises in respect of these aspects of personal information handling, rather than approaching consent as if it were a freestanding principle that operates independently of the various parts of the information cycle.

16.46 Indeed, treating consent as a separate privacy principle may inappropriately elevate consent to being the overriding factor in permitting or restricting the handling of personal information. Professor Fred Cate has stated:

> Requiring choice may be contrary to other activities important to society, such as national security or law enforcement, or to other values, such as freedom of communication. This explains why so many laws that purport to invest individuals with control over information about them exempt so many activities: it simply is not feasible or desirable to provide for individual control …[67]

16.47 Moreover, the ALRC is of the view that the most pressing problem in relation to consent is not its status within other privacy principles, but rather its meaning in the Act and what agencies and organisations should do in order to obtain consent. As explained above, this problem can best be rectified by providing greater guidance as to the meaning of 'consent' and how this applies in particular contexts.

Summary of proposed 'Anonymity and Pseudonymity' principle 597

Introduction

17.1 This chapter concerns the principle of anonymity and pseudonymity. Currently, the *Privacy Act 1988* (Cth) provides a limited right for an individual to transact anonymously with organisations. This right is designed to give individuals, where appropriate, greater control over how much personal information they wish to reveal to organisations with which they transact. Where applicable, it also allows an individual to reveal often intimate, personal information while minimising the risk that this information will be traced back to the individual concerned.

17.2 This chapter focuses on two main issues. The first is whether the anonymity principle should be expanded to cover agencies as well as organisations. Secondly, the chapter considers what should be the content of this principle under the proposed Unified Privacy Principles (UPPs) and, especially, whether the principle should be expanded to cover pseudonymity.

17.3 The Information Privacy Principles (IPPs) do not contain an anonymity principle. On the other hand, the National Privacy Principles (NPPs) provide that wherever it is lawful and practicable, individuals must have the option of not identifying themselves when entering transactions with an organisation.[1]

17.4 The Revised Explanatory Memorandum to the Privacy Amendment (Private Sector) Bill 2000 states:

---

1 *Privacy Act 1988* (Cth) sch 3, NPP 8.

> Anonymity is an important dimension of privacy. In some circumstances, it will not be practicable to do business anonymously. In others, there will be legal obligations that require identification of the individual. Unless there is a good practical or legal reason to require identification, organisations should give people the option to operate anonymously. This principle is not intended to facilitate illegal activity.[2]

17.5 NPP 8, the 'Anonymity' principle, complements NPP 1, which prohibits an organisation from collecting information that is not necessary for its functions or activities. In particular, NPP 8 is intended to affect the design of new technologies that collect more information than is necessary when transacting with individuals.[3]

17.6 Some examples of where an individual may wish to transact anonymously with an organisation, and where it may be lawful and practicable to do so, include:

- making a telephone inquiry about a product or service;
- purchasing goods or services from an organisation that employs persons known personally to the individual; and
- using counselling services, especially where information is revealed about a third party.[4]

17.7 Examples of where the law may require an organisation to identify an individual with which it is dealing include where an individual wishes to open a bank account or where reporting requirements are imposed in relation to notifiable diseases.[5]

Expansion of anonymity principle

Expansion of anonymity principle to agencies?

17.8 As noted above, the IPPs do not contain an anonymity principle comparable to NPP 8. Neither is such a provision set out in the Organisation for Economic Co-operation and Development *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980) (OECD Guidelines), or in the privacy legislation of some jurisdictions, including New Zealand and the United Kingdom.[6]

17.9 On the other hand, German privacy law imposes obligations in relation to anonymity on both public and private sector bodies.[7] Similarly, Victorian, Tasmanian and Northern Territory privacy laws contain an anonymity principle that is applicable

to public sector bodies.[8] The question arises whether Australian Government agencies should be subject to an anonymity principle.[9]

Submissions and consultations

17.10 A large number of stakeholders submitted that Commonwealth agencies should be subject to an anonymity principle.[10] The Office of the Privacy Commissioner (OPC) submitted that 'requiring individuals to be identifiable when it is not necessary can serve to limit the choice and control individuals have over their personal information'.[11] The OPC also noted that it could see 'no compelling argument or policy reason for not extending the anonymity principle to agencies'.[12]

17.11 The Australian Government Department of Health and Ageing supported extending the anonymity principle to government agencies, provided that the principle is framed so as not to interfere unreasonably with an agency's accountability obligations.[13] One stakeholder expressed concern that an extended anonymity principle should not interfere with important functions of particular agencies. For example, such a principle could interfere with a school's duty of care, if it permitted parents of pupils to withhold, say, their home contact information.[14] Balanced against these concerns, however, it should be noted that the requirements in the anonymity principle are qualified, in the sense that they only apply to the extent that it is 'lawful and practicable'. There are likely to be many instances where these qualifications will operate to permit the agency to require individuals to identify themselves.[15]

17.12 Other stakeholders simply opposed, without detailed explanation, any extension of the anonymity principle to agencies.[16] The Australian Taxation Office submitted that a general principle would be inappropriate because:

> While it is possible for individuals to remain anonymous for some interactions, it would not be appropriate to provide a right to deal with regulatory agencies without

> identifying themselves. To correctly apply the law the Tax Office needs to know who it is dealing with and must be able to contact people in order to ensure they have met their obligations.[17]

The concept of 'pseudonymity'

17.13 There is a question whether the concept of anonymity is too limited and, in particular, whether the relevant privacy principle should be expanded specifically to include the concept of pseudonymity. If so, this would allow an individual to transact, subject to the relevant qualifications, pseudonymously with a data collector. That would usually involve the individual providing the data collector with some name, term or other combination of letters and/or numerals. Therefore, the individual may select a pseudonym that bears no relation to the individual's actual name, as occurs commonly with internet usernames. In this way, the data collector is able to address the individual specifically and to correspond with the individual without the individual being required to provide the data collector with his or her name or other identifying information.

17.14 A number of stakeholders submitted that the anonymity principle should be extended to make provision for individuals to transact with an agency or organisation pseudonymously, as well as anonymously, where appropriate.[18] For instance, it was submitted that the principle should 'impose an obligation on organisations to facilitate, where practicable and lawful, anonymous or pseudonymous transactions between individuals and third parties'.[19]

17.15 There is an example of this approach in the *Federal Data Protection Act 1990* (Germany), which contains a provision that deals with pseudonymisation. The term 'pseudonymisation' is defined as 'the replacement of the name and other identifying attributes with a code with a view to making it impossible or significantly more difficult to identify the data subject'.[20] In other words, the German provision differs from the IPPs and NPPs by including the additional concept of psuedonymisation, and imposes these obligations on public bodies.

ALRC's view

Expansion of anonymity principle to agencies?

17.16 A significant majority of stakeholders that commented on this issue favoured extending the principle dealing with anonymity so that it applies to agencies, in addition to organisations (which are already covered by NPP 8). Provided the resulting

20 *Federal Data Protection Act 1990* (Germany) s 3(6a).

privacy principle is appropriately worded, the ALRC is of the view that such an extension is desirable for a number of reasons.

17.17 First, giving an individual the option to transact anonymously, where appropriate, allows the individual to retain greater control over their privacy. There are also strong policy reasons to provide this option. For example, this option might encourage an individual (such as a person under the age of 18) to seek medical or other assistance from an agency in circumstances where, if the assistance was contingent on the individual identifying himself or herself, it would discourage the individual from seeking the assistance at all. Secondly, as the OPC stated, there seems no sound policy reason to limit the application of this principle to organisations, particularly given that other jurisdictions contain an anonymity principle that is applicable also to government bodies.

17.18 The ALRC proposes retaining the important qualifications of lawfulness and practicability, which are currently in NPP 8. The ALRC believes that they are appropriate limitations on an individual's right to transact anonymously or pseudonymously (as discussed below). That is, an agency or organisation would not be under an obligation to give the option to an individual to transact anonymously or pseudonymously if, in doing so, this would result in any of the following outcomes:

- the failure to collect the identifying information by the agency or organisation would itself be unlawful. For example, it would be unlawful if the agency or organisation would be unable to comply with a law requiring it to notify a law enforcement body of the transaction in question or to carry out its accountability obligations;

- the failure to collect the identifying information by the agency or organisation would result in the individual acting unlawfully. An example of this is where an individual wishes to transact anonymously to further a fraudulent conspiracy of which the individual is a part; or

- it would be impracticable for the agency or organisation. For example, it may place an unreasonable financial burden on its ability to provide a service to the individual.

17.19 To the extent that these qualifications are not already clear from the natural and ordinary meaning of the words of the relevant privacy principle, the ALRC believes that the OPC should provide guidance to assist agencies and organisations in discerning when it is and is not lawful and practicable to give individuals the option of transacting anonymously or pseudonymously.[21]

---

21 The ALRC's proposal to this effect is located at the end of this chapter.

The concept of 'pseudonymity'

17.20 The ALRC is of the view that the proposed UPPs should enable, where appropriate, an individual to transact pseudonymously, as well as anonymously, with an agency or organisation. Such a provision is particularly useful in the online environment. Often it is necessary for an agency or organisation that runs a website to have *some* means of differentiating between individuals but this does not necessarily mean the agency or organisation needs to know an individual's name or other identifying personal details. For instance, websites often require a 'username' and password for this purpose. Whether an individual chooses, as a username, his or her actual name or whether the individual chooses some other form of letters and/or numbers will often be immaterial to the agency or organisation. The ALRC believes that, subject to the qualifications of practicability and lawfulness, the privacy principles should reflect this.

17.21 The ALRC also believes that if the proposed UPPs provide an option for an individual to interact pseudonymously, it would allow the principle to operate more flexibly. This is because it would cover the situation, not currently dealt with explicitly by NPP 8, where it would be impracticable or unlawful for an individual to transact anonymously but where these barriers would be overcome if the individual were to transact pseudonymously with an agency or organisation. Furthermore, an extension of the principle to encompass pseudonymous transactions would encourage agencies and organisations to incorporate into their systems privacy enhancing technologies that facilitate pseudonymous interactions in an online environment.[22]

17.22 Finally, the ALRC believes that any extension of the principle to cover pseudonymous transactions would need to be worded carefully to minimise the risk of fraud or misleading practices. The ALRC is of the view that the situation of fraud is likely to be covered effectively by the qualifications already in NPP 8. The fact that organisations are only required to provide the option to transact anonymously (or pseudonymously, as proposed here) where it would be 'lawful and practicable' would mean that an organisation is not required to provide this option where there is a real risk of fraud.

17.23 However, it may nevertheless be misleading, even where not necessarily fraudulent, for an individual to provide a pseudonym—or particular types of pseudonym—in some circumstances. For example, it is likely to be misleading for an individual deliberately to choose, as a pseudonym, someone else's name in order to give the impression that he or she is actually that other person. Consequently, the ALRC proposes that the option to transact pseudonymously should be subject to a further limitation that does not apply to the right to transact anonymously—that is, it should be limited to situations where it would not be misleading.

---

22 See the detailed discussion on privacy and developing technology in Part B.

Application of the principle

17.24 One small, miscellaneous matter that was raised in submissions and consultations was over the wording of this privacy principle. Currently, NPP 8 requires organisations to provide the option of anonymity to individuals 'when entering transactions with an organisation'. The OPC submitted that this should be amended to make clear that where 'an individual has an existing relationship with an organisation, that individual is still entitled to transact anonymously', subject to the other relevant qualifications.[23]

17.25 The ALRC agrees that this clarification should be incorporated into the 'Anonymity and Pseudonymity' principle in the proposed UPPs. This can be achieved by replacing the words 'when entering transactions' in the current NPP 8 with the words 'when transacting'.

Proposal 17–1 The proposed Unified Privacy Principles should contain a principle called 'Anonymity and Pseudonymity' that sets out the requirements on agencies and organisations in respect of anonymous and pseudonymous transactions with individuals.

Proposal 17–2 The proposed 'Anonymity and Pseudonymity' principle should include a pseudonymity requirement that when an individual is transacting with an agency or organisation, the agency or organisation must give the individual the option of identifying himself or herself by a pseudonym. This requirement is limited to circumstances where providing this option is lawful, practicable and not misleading.

The option to transact anonymously or pseudonymously

17.26 As explained above, the ALRC proposes that agencies and organisations should only be required to provide the option to transact anonymously where two conditions are fulfilled: it must be 'lawful', and it must be 'practicable'.[24] The ALRC proposes an additional condition in respect of pseudonymous transactions—namely, that it is 'not misleading'. Where these conditions are satisfied, the following question arises: what should an agency or organisation do to ensure that individuals have the option to transact anonymously or pseudonymously?

17.27 In the ALRC's Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether the anonymity privacy principle should expressly require organisations to give

23 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
24 This reflects the conditions in *Privacy Act 1988* (Cth) sch 3, NPP 8.

an individual the option of remaining anonymous when entering into transactions with the data collector.[25] In other words, the ALRC solicited views on whether agencies or organisations should be required to ask individuals expressly whether they wish to transact anonymously or pseudonymously.

17.28 It should be noted, for example, that the wording of the Northern Territory's anonymity principle differs from that of NPP 8, in that it expressly identifies the obligation imposed on a data collector:

> A public sector organisation must give an individual entering transactions with the organisation the option of not identifying himself or herself unless it is required by law or it is not practicable that the individual is not identified.[26]

Submissions and consultations

17.29 A number of stakeholders supported amending the relevant privacy principle to impose a 'positive obligation' on agencies and organisations 'to ensure that the individual is provided with the choice as to whether or not to interact anonymously'.[27] The OPC submitted that this requirement would be beneficial because it would encourage agencies and organisations to consider 'whether they need to identify the individual (and thus collect their personal information) for each and every transaction'.[28] The Australian Privacy Foundation, and others, submitted that this is consistent with the 'touchstone' in this area—namely, that an entity should engage in only the 'minimum collection necessary for the purpose of the transaction'.[29] Assuming that the existing qualifications in NPP 8 are retained, AAMI supported a requirement on organisations to give individuals the *specific* option of remaining anonymous.[30]

17.30 Other stakeholders opposed the imposition of a requirement to give individuals the express option of remaining anonymous when entering into transactions with the data collector.[31] The Law Council of Australia argued that the requirement in NPP 1 that an organisation only collect relevant information provided sufficient protection for

---

25 See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 4–29. This Question was phrased with reference to organisations, as distinct from agencies, given that under the current *Privacy Act* only organisations are subject to an anonymity principle.

individuals.[32] AXA submitted that this would 'create unnecessary disputes about whether a particular transaction is one to which the right to anonymity applies'.[33] The National Australia Bank and MLC submitted that such a requirement would be unworkable for financial institutions.[34] Others were concerned that it would encourage 'fraud'[35] or be open to 'abuse'.[36] Similarly, the Australian Federal Police feared that any broadening of the anonymity principle could 'be exploited by individuals to commit crimes'.[37]

17.31 Some refinements to the content of the anonymity principle were also suggested. For example, it was submitted that the principle should be clarified to apply 'at the stage when an information system is being designed, not only "after the event" when a person wishes to enter a transaction with a data user'.[38] Another stakeholder argued that the principle should be structured so it is easier to apply 'in the modern computer age'.[39]

ALRC's view

17.32 The ALRC believes that it is preferable to require data collectors to give individuals the clear option of transacting anonymously or pseudonymously. It is first necessary to distinguish between an obligation to provide an *express* option to individuals and an obligation to provide a *clear* option. An express option would require a data collector to state explicitly that individuals may transact anonymously or pseudonymously. A clear option, however, is less prescriptive and merely requires that the data collector ensure that individuals are aware that they may transact anonymously or pseudonymously. As explained below, a requirement to provide individuals with a clear option would be less onerous and cumbersome, in most instances, than a requirement to provide an express option because it would allow agencies and organisations to comply with the proposed Anonymity and Pseudonymity principle in the *structure* of their information collecting systems.

17.33 In formulating this proposal, the ALRC has sought to balance competing considerations. On one hand, expressly inviting individuals to transact anonymously or pseudonymously—that is, what is referred to above as providing 'an express option'—would emphasise to individuals their right to withhold some of their personal information in certain transactions. As noted by stakeholders, it would also encourage

39 Centre for Law and Genetics, *Submission PR 127,* 16 January 2007.

agencies and organisations to design their information-collecting systems so as not to intrude unnecessarily on individuals' privacy. However, provided the option to transact anonymously or pseudonymously is clearly available, the ALRC believes that this goal will be achieved without necessarily asking individuals explicitly whether they wish to transact anonymously or pseudonymously.

17.34 A number of stakeholders stressed that a requirement to provide an express option, on some interpretations, could be quite onerous. For this reason, the ALRC proposes that the OPC should issue guidance clarifying what is involved in providing a clear option to transact anonymously or pseudonymously. For example, in many cases where asked to fill out a form either on paper or electronically, individuals are told which fields they must complete.[40] It would not be overly burdensome to alter the list of 'required fields' to take account of the proposed Anonymity and Pseudonymity principle. In the ALRC's view, this would provide an individual with a clear option to transact anonymously or pseudonymously without imposing unreasonable demands on the agency or organisation to alter radically its information-collecting systems.

17.35 Moreover, the requirement would remain subject to the 'practicability' qualification. This qualification allows an agency or organisation not to provide the option to transact anonymously or pseudonymously if the resulting change to its systems would cause unjustifiable hardship.

17.36 Finally, as explained above, this requirement would remain subject to the qualifications of lawfulness and practicability and, in the case of pseudonymous transactions, the additional 'not misleading' qualification. The ALRC believes that these would be sufficient to make sure that the option does not encourage fraud or other types of unlawful activity.

Proposal 17–3 The proposed 'Anonymity and Pseudonymity' principle should provide that, subject to the relevant qualifications in the principle, an agency or organisation is required to give individuals the clear option to transact anonymously or pseudonymously.

Proposal 17–4 The Office of the Privacy Commissioner should provide guidance to agencies and organisations on: (a) when it is and is not lawful and practicable to give individuals the option to transact anonymously or pseudonymously; (b) when it would be misleading for an individual to transact pseudonymously with an agency or organisation; and (c) what is involved in providing a clear option to transact anonymously or pseudonymously.

40 A 'field', on a form, is the space reserved for an individual to provide his or her response to a question that is asked on the form.

Summary of proposed 'Anonymity and Pseudonymity' principle

17.37 In summary, the ALRC's view is that the first principle in the proposed UPPs should be called 'Anonymity and Pseudonymity'. It should appear as follows.

UPP 1. Anonymity and Pseudonymity

Wherever it is lawful and practicable, individuals, when transacting with an agency or organisation, should have the clear option of either:

(a) not identifying themselves; or

(b) identifying themselves with a pseudonym, provided this would not be misleading.

Introduction

18.1 The privacy principles in the *Privacy Act 1988* (Cth) contain limitations on what personal information may lawfully be collected. Significantly, neither the Information Privacy Principles (IPPs) nor the National Privacy Principles (NPPs) require that an individual give his or her consent before an agency or organisation is permitted to collect the individual's personal information.[1] The current limitations on the collection of personal information are set out below.

18.2 This chapter considers the limitations that should apply to agencies and organisations that wish to collect personal information. It also analyses what is meant by the term 'collection' and, in particular, how the proposed Unified Privacy Principles (UPPs) should deal with unsolicited personal information that is received by agencies and organisations.

---

1 Note, however, that there is a general prohibition, subject to a finite list of exceptions, against the collection of sensitive information by organisations. One of these exceptions is where the individual consents to the collection. See Ch 19.

Current coverage by IPPs and NPPs

18.3 IPPs 1–3 deal with the collection of personal information by government agencies. IPP 1 provides that personal information shall not be collected for inclusion in a 'record' or in a 'generally available publication' unless: (a) the purpose for which the information is collected is lawful and directly related to a function or activity of the collector, and (b) the collection of the information is necessary for or directly related to that purpose. The Privacy Commissioner has expressed the view that 'purpose of collection' is to be interpreted narrowly, and that agencies should have a clear purpose for collecting each piece of personal information. It is not generally acceptable for an agency to collect information just because it may be useful in the future.[2] In addition, personal information is not to be collected by unlawful or unfair means.

18.4 IPPs 2 and 3 cover 'solicitation' of personal information. IPP 2 provides that where an agency solicits personal information directly from the individual concerned for inclusion in a record or a generally available publication, the agency must take reasonable steps to ensure that, before or soon after the information is collected, the individual is generally aware of:

- the purpose for which the information is being collected;
- if the collection is authorised or required by law—that fact; and
- to whom it is the agency's usual practice to disclose or pass on personal information of the kind collected.

18.5 The Explanatory Memorandum notes that there would be circumstances in which an agency would not need to take any steps to ensure that the individual was aware of the matters specified in IPP 2 when soliciting personal information from that person.[3]

18.6 IPP 3 provides that where an agency solicits personal information for inclusion in a record or in a generally available publication, it must take reasonable steps, having regard to the purpose for which the information is collected, to ensure that:

- the information is relevant to that purpose, up-to-date and complete; and
- the collection does not intrude unreasonably on the individual's personal affairs.

---

2 Office of the Federal Privacy Commissioner, *Plain English Guidelines to Information Privacy Principles 1–3: Advice to Agencies about Collecting Personal Information* (1994).

3 See Explanatory Memorandum, Privacy Bill 1988 (Cth), [61].

18.7 This principle is limited to personal information solicited from the individual and from third parties. It does not extend to information received without solicitation by the agency.[4]

18.8 NPP 1 provides that an organisation[5] may only collect personal information:

- that is necessary for one or more of its functions or activities;
- by lawful and fair means and not in an unreasonably intrusive manner;
- after taking reasonable steps to ensure the individual is aware of: the organisation's identity and contact details; the fact that he or she can access the information; the purposes of collection; the organisations to whom the organisation usually discloses information of that kind; any law requiring the particular information to be collected; and the main consequences for the individual if the information is not provided; and
- from that individual if it is reasonable and practicable to do so, or from someone else if it takes reasonable steps to ensure that the individual is aware of the matters listed above, except to the extent that making the individual aware would pose a serious threat to anyone's life or health.

18.9 Special rules apply to the collection of sensitive information in NPP 10. 'Sensitive information', which is defined in s 6(1) of the Act, is a subset of 'personal information', and it is dealt with separately in Chapter 19.

Collection from the individual

Background

18.10 NPP 1 obliges an organisation, where reasonable and practicable, to collect personal information about an individual *only* from that individual. IPPs 1–3 impose no equivalent requirement on agencies. In the ALRC's Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether this lacuna that applies to agencies should be closed.[6]

18.11 It should be noted that some other jurisdictions require public sector bodies, where reasonable, only to collect personal information from the individual concerned. In New South Wales, such an obligation applies to public sector agencies unless the individual concerned has authorised collection from someone else or, where the information relates to a person under 16 years, the information has been provided by a

4 Ibid, [63].
5 'Organisation' is defined in *Privacy Act 1988* (Cth) s 6C. The definition is discussed in Ch 3.
6 See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 4–3.

parent or guardian.[7] Privacy laws in Canada, New Zealand and Germany all require a government institution, where possible, to collect personal information that it intends to use for an administrative purpose directly from the individual to whom it relates except in certain specified circumstances.[8] Similarly, US law requires agencies to

> collect information to the greatest extent practicable directly from the subject individual when the information may result in adverse determinations about an individual's rights, benefits, and privileges under Federal programs.[9]

Submissions and consultations

18.12 A large number of stakeholders responding to this question argued that there was no reason to retain different rules for agencies and organisations in these circumstances.[10] There were, however, some who took the opposite view, arguing that there should not be a general requirement on agencies to collect personal information about an individual from the individual in question.[11]

18.13 One submission argued that two general benefits would flow from extending the requirement to agencies that, where reasonable and practicable, information about an individual should only be collected from that individual:

> This requirement contributes to the fairness and transparency of processing personal data by helping to ensure that the data subjects participate in that processing. The requirement may also promote accuracy, relevance etc of personal data.[12]

18.14 It was stated that this requirement should be based on NPP 1.4, but that the word 'only' in that provision should be deleted to accommodate collection from both an individual and a third party (where justified).[13]

18.15 A number of stakeholders expressed qualified support for a general requirement on agencies to collect personal information about an individual only from the

individual in question. Some emphasised that such a requirement should only apply where 'reasonable and practicable' and that collection should not be jeopardised when it is not reasonable or practicable to obtain the information from the individual.[14] The Australian Government Department of Human Services pointed out that it is sometimes necessary to collect personal information from third parties 'to prevent or lessen the instances of fraud and ensure the protection of public monies'.[15] Similarly, the Australian Competition and Consumer Commission (ACCC) submitted that it would deter people from making complaints and hamper the ACCC's investigations, if it were deemed reasonable and practical for the ACCC to seek customer details relating to one of its investigations only from the customer in question.[16]

18.16 Some stakeholders opposed any change. The Australian Federal Police (AFP) argued that law enforcement agencies routinely collect personal information from a range of sources, and that a 'reasonable and practicable test may not be sensitive enough to recognise this and may have significant operational impacts'.[17] The Australian Taxation Office made a similar point, arguing that while agencies should be encouraged to liaise with the individual about whom they are seeking personal information, it should not be 'mandatory' to do so.[18] The Australian Government Department of Families, Community Services and Indigenous Affairs (FaCSIA) submitted that such a requirement would hamper agencies' whole of government approach to service delivery because:

> Requiring each agency to separately collect information from the individual for the same programme would lead to a duplication of process and increase administrative inefficiency of government agencies.[19]

ALRC's view

18.17 In the ALRC's view, agencies and organisations should both be required, where reasonable and practicable, to collect personal information about an individual only from the individual concerned. As noted above, this requirement already applies to organisations; the ALRC proposes to extend the requirement to include agencies as well. Such an amendment would also bring agencies in line with similar requirements

in other jurisdictions within Australia and overseas. The ALRC observes that this reform received full or qualified support from the overwhelming majority of stakeholders that commented on this issue, including from a number of agencies, organisations and other entities.

18.18 One important qualification is that this requirement would only apply 'where reasonable and practicable'. This qualification is significant, particularly as it applies to agencies. Agencies—especially those that are empowered by law to obtain personal information coercively—would be able to exercise this qualification more readily than many organisations, which are less likely to be subject to such a law. This is an intended consequence, and one that should assuage some concerns expressed by agencies that such a reform could hamper their ability to perform their statutory duties.

18.19 Finally, the ALRC believes that there should be further guidance to clarify when it would *not* be reasonable and practicable to collect personal information from the individual concerned. Such guidance could be provided either in the *Privacy Act* itself or by the Office of the Privacy Commissioner (OPC). The first option would involve amending the collection principle, or some other provision in the Act, to set out a list of factors to take into account in determining whether it is reasonable and practicable to collect personal information from the individual concerned.

18.20 The second option would involve the OPC working with agencies and organisations to assist them in understanding when this requirement would be triggered, and when they need not collect personal information from the individual concerned. The ALRC prefers the second option—that the OPC provide guidance on this issue—because an amendment to the Act would be more prescriptive and rigid, and it would also conflict with the general aim to adopt principles as the main mode of privacy regulation.[20]

Proposal 18–1 (a) The proposed Unified Privacy Principles (UPPs) should contain a principle called 'Collection' that requires agencies and organisations, where reasonable and practicable, to collect personal information about an individual only from the individual concerned.

(b) The Office of the Privacy Commissioner should provide guidance to clarify when it would not be reasonable and practicable to collect such information from the individual concerned.

20 See Proposal 15–1 and accompanying text in Ch 15.

Unsolicited personal information

Background

18.21 Agencies and organisations sometimes receive unsolicited personal information. This occurs where personal information about an individual is received by an agency or organisation that has taken no active steps to collect that information. Differing obligations apply as between the IPPs and NPPs in respect of unsolicited information.

18.22 Where an agency receives unsolicited material—from sources such as a Ministerial letter or a tip-off from an informer—it must comply with IPP 1.[21] Sometimes unsolicited personal information received by an agency is particularly sensitive—for instance, in the area of community services, it may receive information relating to domestic violence or abuse. It has been noted that where such information remains on file, 'there is a danger that it will indirectly influence an agency official in their decisions about, or interactions with, the individual'.[22]

18.23 In contrast, the NPPs do not explicitly distinguish between the obligations on an organisation in respect of solicited and unsolicited information. As noted above, however, NPP 1 does separately address personal information obtained directly from the individual concerned, and information collected from 'someone else'.[23]

18.24 The ALRC asked in IP 31 what obligations, if any, should apply to an agency or organisation where it receives unsolicited information that it intends to include in a record or a generally available publication.[24]

Submissions and consultations

18.25 A number of stakeholders stated that, where an agency or organisation receives unsolicited personal information, this information should be covered by the privacy principles.[25] Some stakeholders suggested specific obligations that should apply in respect of unsolicited information:

- The 'accuracy of such information should be checked as soon as possible with the subject, where possible, unless the source is a publicly available source'.[26]

25 See, eg, G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007; Queensland Council for Civil Liberties, *Submission PR 150,* 29 January 2007; Office of the Information Commissioner (Northern Territory), *Submission PR 103,* 15 January 2007.

26 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007. A number of other stakeholders expressed similar views: see, eg, Queensland Council for Civil Liberties, *Submission PR 150,* 29 January 2007; AAMI, *Submission PR 147,* 29 January 2007; Institute of Mercantile Agents, *Submission PR 101,* 15 January 2007; W Caelli, *Submission PR 99,* 15 January 2007.

The OPC submitted that this was particularly important where the information may be used to deny an individual 'access to essential services'.[27]

- The individual should be given the opportunity to consent (or refuse) to his or her personal information being used in these circumstances.[28] One stakeholder argued that this would assist in achieving the purpose and object of the *Privacy Act*.[29]

- Unsolicited information that is 'irrelevant to the functions' of the entity that receives it should be destroyed.[30]

18.26 Others stated that such an obligation should not be imposed because the existing rules are sufficient in respect of unsolicited information.[31] For example, the Centre for Law and Genetics argued that the distinction between solicited and unsolicited information derives from paper-based record keeping and 'should not be maintained in a modern computer-data driven environment'. Therefore, where an organisation or agency proposes to keep or use unsolicited information, it should be subject to the usual privacy principles.[32]

18.27 Some stakeholders submitted that if obligations, such as those in NPP 1.3 and 1.5, were applied to all unsolicited information, it 'would impose a significant administrative burden on organisations'.[33] It is, therefore, necessary to distinguish between unsolicited information that is merely *received* and where it is actually *retained*, and that obligations should only apply where the information is retained by the organisation.[34]

18.28 It was also argued that such an obligation should not apply in respect of alternative dispute resolution (ADR) schemes.[35] The question whether such schemes

should be exempted from the operation of this and any other privacy principles is dealt with in Part E.

ALRC's view

18.29 The ALRC recognises that many agencies and organisations receive a large amount of unsolicited personal information. This is heightened in the digital age where information can be transmitted easily and quickly, sometimes in circumstances where the entity disclosing the information does not consider whether it falls within the definition of personal information.

18.30 In the ALRC's view, the fact that an agency or organisation has done nothing to cause personal information to be sent to it should not mean that such information falls outside the protection of the privacy principles. Indeed, as noted above, the current IPPs and NPPs already impose obligations in respect of unsolicited personal information. The main question is: what should those obligations be?

18.31 The ALRC acknowledges that it would be onerous to require organisations and agencies to comply, in respect of all unsolicited personal information that they receive, with all obligations under the IPPs and NPPs, when they have taken no active steps to collect it. For example, the cost of complying with the specific notification requirements alone could be significant.

18.32 The risk that personal information will be used or disclosed in violation of a person's right to privacy only becomes significant where, on receiving unsolicited personal information, the entity decides to retain it. Consequently, by making it clear that the collection principle applies where an entity collects *or* retains personal information that it has received from a third party, this will require the entity to consider whether it:

- can lawfully collect such information and, if so,
- wishes to retain such information.

18.33 If the answer to either of these questions is 'no', the entity should immediately destroy the information in question without using or disclosing it. If the answer to both of the above questions is 'yes', then the usual requirements with respect to personal information that is 'actively' collected should apply. Unless an exception applies, this would involve informing the individual concerned, for example, that the collection has taken place, that he or she may access the information to check its accuracy and so on. It would also mean that the spectrum of personal information that an agency or organisation may lawfully retain, use and disclose is not expanded merely because the entity has taken no steps to collect the information. This is because the threshold requirements—including that an agency or organisation is only permitted to collect

personal information that is 'necessary for one or more of its functions or activities'—would continue to apply if it wishes to retain the information after it has received it.

Proposal 18–2 The 'Collection' principle in the proposed UPPs should provide that, where an agency or organisation receives unsolicited personal information, it must either: (a) destroy the information immediately without using or disclosing it; or (b) comply with all relevant provisions in the UPPs that apply to the information in question, as if the agency or organisation had taken active steps to collect the information.

Other aspects of the 'Collection' principle

Location of notification requirements

18.34 As noted above, the collection principles in both the NPPs and IPPs provide that, in certain circumstances, agencies and organisations must notify an individual whose personal information has been, or is to be collected, of a number of matters. A question arises as to whether the proposed 'Collection' principle of the UPPs should set out the notification requirements that apply at or around the time the information is collected, or whether these requirements should be set out in another principle that relates more explicitly to notification.

18.35 This issue is dealt with in Chapter 20, where the ALRC proposes that the notification requirements that are currently located in the collection principles in the IPPs and NPPs should be moved to a separate privacy principle called 'Specific Notification'.[36]

Collection of sensitive information

18.36 Currently, the collection of sensitive information by organisations is covered in a separate privacy principle, NPP 10. Conversely, the collection of sensitive information by agencies is not dealt with explicitly in the IPPs.

18.37 A question arises as to whether the proposed 'Collection' principle in the UPPs should also deal with the collection of sensitive information, or whether sensitive information should continue to be dealt with separately. This question is addressed in Chapter 19, where the ALRC proposes that the provisions that relate to the collection of sensitive information should be contained in the 'Collection' principle.[37]

36 See Proposals 20–1 and 20–2.
37 See Proposal 19–1.

Limitation on collection: reasonable purposes?

18.38 A question arises as to whether the proposed 'Collection' principle in the UPPs should limit the ability of agencies and organisations to collect personal information to purposes that a reasonable person would consider appropriate in the circumstances. This would make clear it that an objective test applies in assessing what is an agency's or organisation's purpose in collecting personal information.

18.39 The Australian Privacy Foundation submitted to the Senate Legal and Constitutional References Committee inquiry into the *Privacy Act* (Senate Committee privacy inquiry) that the NPPs should provide that collection should be limited by such an objective test.[38] The OPC's review of the private sector provisions of the *Privacy Act* (OPC Review) rejected the adoption of an objective test to ascertain whether collection of personal information was necessary for an organisation's functions or activities. It stated that, while it would enable an individual to challenge the collection of personal information, it would be difficult to implement in practice and 'it is not likely that the benefits of doing so would outweigh the costs'.[39]

18.40 In its submission to this Inquiry, however, the OPC seems to have changed its position, suggesting that the collection principle 'could include' a requirement that 'the collection would be considered necessary and legitimate by a reasonable person'.[40] It went on to state:

> The legitimacy of collection might be strengthened by the introduction of a 'reasonable person test' to the collection principle … Such a measure may reduce the degree to which organisations employ advanced technologies to collect personal information for functions that may not ordinarily be considered legitimate when approached objectively.[41]

18.41 By way of comparison, some Canadian privacy law provides for an objective test in these circumstances. For instance, the federal legislation provides that an organisation may collect, use or disclose personal information 'only for purposes that a reasonable person would consider are appropriate in the circumstances'.[42] Similarly, Alberta's information privacy legislation states:

---

See also Australian Privacy Foundation, *Submission to the Senate Legal and Constitutional References Committee Inquiry into the Privacy Act 1988*, 1 March 2005.

39 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 91.

40 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

41 Ibid.

42 *Personal Information Protection and Electronic Documents Act 2000* SC 2000, c 5 (Canada) s 5(3). See also s 3.

> Where an organization collects personal information, it may do so only to the extent that is reasonable for meeting the purposes for which the information is collected.[43]

ALRC's view

18.42 The ALRC's view is that it would be desirable—largely to reduce any existing ambiguity—to amend this aspect of the collection principle, by making clear that it is necessary to consider objectively (rather than subjectively) what is 'necessary' for an agency's or organisation's functions or activities. There is a strong argument that this is already implicit in the existing NPP 1 and, in any event, it is certainly within the spirit of the privacy principles as a whole.

18.43 The benefit of such an amendment is that it would provide greater clarity where an agency or organisation claims to be collecting an individual's personal information for the legitimate purpose of providing a service to the individual, but where it is clear that the agency's or organisation's *real* purpose is an illegitimate one, like on-selling the data to a third party. In this situation, the collection principle would make it plain that the data collector cannot simply point to its subjective view as to its purpose; rather it would focus analysis onto what a reasonable person in the position of the agency or organisation would believe to be the agency's or organisation's purpose.

18.44 A further benefit of this proposed amendment is that it would create greater incentive for agencies and organisations to consider the potential impact of any new data collection prior to the collection itself. For example, where an organisation uses a biometrics system for the purposes of data collection, an objective test would encourage the organisation to give more careful consideration to whether the personal information it collects is genuinely necessary for its functions.

Proposal 18–3 The 'Collection' principle in the proposed UPPs should provide that an agency or organisation must not collect personal information unless it reasonably believes the information is necessary for one or more of its functions or activities.

Summary of proposed 'Collection' principle

18.45 In summary, the ALRC's view is that the second principle in the proposed UPPs should be called 'Collection'. It should appear as follows.

---

43 *Personal Information Protection Act 2003* RS (Alberta) c.P–6.5 s 11(2). In IP 31, the ALRC sought views on whether a similar test should be introduced in the *Privacy Act*: See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), [4.68], [11.127]. This issue, however, was not addressed in submissions and consultations, other than by the OPC.

UPP 2. Collection

2.1 An agency or organisation must not collect personal information unless it reasonably believes the information is necessary for one or more of its functions or activities.

2.2 An agency or organisation must collect personal information only by lawful and fair means and not in an unreasonably intrusive way.

2.3 If it is reasonable and practicable to do so, an agency or organisation must collect personal information about an individual only from that individual.

2.4 If an agency or organisation collects personal information about an individual from the individual or from someone else, it must comply with UPP 3.

2.5 If an agency or organisation receives unsolicited personal information about an individual from someone else, it must either:

(a) destroy the information immediately without using or disclosing it; or

(b) comply with all relevant provisions in the UPPs that apply to the information in question, as if the agency or organisation had actively collected the information.

2.6 In addition to the other requirements in UPP 2, an agency or organisation must not collect sensitive information about an individual unless:

(a) the individual has consented; or

(b) the collection is required or specifically authorised by or under law; or

(c) the collection is necessary to prevent or lessen a serious threat to the life or health of any individual, where the individual whom the information concerns is incapable of giving consent; or

(d) if the information is collected in the course of the activities of a non-profit organisation that has only racial, ethnic, political, religious, philosophical, professional, trade, or trade union aims—the following conditions are satisfied:

(i) the information relates solely to the members of the organisation or to individuals who have regular contact with it in connection with its activities; and

(ii) at or before the time of collecting the information, the organisation undertakes to the individual whom the information concerns that the organisation will not disclose the information without the individual's consent; or

(e) the collection is necessary for the establishment, exercise or defence of a legal or equitable claim.

Introduction

Background

19.1 This chapter concerns the collection of sensitive information. The *Privacy Act 1988* (Cth) distinguishes between 'personal information' and 'sensitive information'. Both terms are defined in s 6(1) of the *Privacy Act*, and these definitions are discussed in Chapter 3. Essentially, however, sensitive information is a subset of personal information. The National Privacy Principles (NPPs) provide additional restrictions on the collection of sensitive information by private sector organisations. However, the Information Privacy Principles (IPPs), which apply to government agencies, contain no equivalent restriction.

19.2 There is considerable, although not universal, international support for treating sensitive information separately. A number of other jurisdictions, such as Canada, provide for additional privacy protections in respect of sensitive information.[1] Moreover, the European Parliament's *Directive on the Protection of Individuals with*

1 *Personal Information Protection and Electronic Documents Act 2000* SC 2000, c 5 (Canada) sch 1, cl 4.3.

Regard to the Processing of Personal Data and on the Free Movement of Such Data (1995) (EU Directive) provides that member states should impose additional restrictions on the processing of sensitive personal information.[2] A Working Party on the Protection of Individuals with regard to the Processing of Personal Data, set up under art 29 of the EU Directive, highlighted the importance of providing additional protection to sensitive information, by stating that

> where 'sensitive' categories of data are involved … additional safeguards should be in place, such as a requirement that the data subject gives his/her explicit consent for the processing.[3]

19.3 This chapter focuses on two main issues. The first is whether the privacy principle dealing with sensitive information should be expanded to cover agencies as well as organisations. This question has particular significance if the ALRC's proposal to move to the Unified Privacy Principles (UPPs) is adopted.[4] Secondly, the chapter considers whether the *Privacy Act* should regulate other aspects of the handling of sensitive information in addition to collection. This could include the use, disclosure, storage, access, retention and disposal of sensitive information.

Current coverage by IPPs and NPPs

19.4 As noted above, the IPPs do not regulate the collection of sensitive information separately from other forms of personal information. Conversely, NPP 10 prohibits the collection of sensitive information, except in certain identified circumstances. NPP 10.1 provides that sensitive information can be collected only if:

- the individual has consented;
- the collection is required by law;[5]
- the collection is necessary to prevent or lessen a serious and imminent threat to the life or health of an individual and the individual is physically or legally incapable of giving or communicating consent to the collection; or
- the collection is necessary for the establishment, exercise or defence of a legal or equitable claim.

3 European Commission Working Party on the Protection of Individuals With Regard to the Processing of Personal Data, *Working Document: Transfers of Personal Data to Third Countries: Applying Articles 25 and 26 of the EU Data Protection Directive*, 24 July 1998.

4 See Proposal 15–2.

5 There is no general exception in NPP 10.1 where the collection is merely authorised, but not required, by law.

19.5 In addition, NPP 10.1 allows sensitive information to be collected in the course of the activities of a non-profit organisation.[6] This is permitted where: (a) the information relates solely to the members of the organisation or to individuals who have regular contact with it in connection with its activities; and (b) at or before the time of collection, the organisation undertakes to the individual that it will not disclose the information without the individual's consent.

19.6 NPPs 10.2, 10.3 and 10.4 regulates the collection of health information by organisations. Health information is a category of sensitive information. Issues concerning the collection of health information are discussed in Part H.

Expansion of sensitive information principle to agencies?

Background

19.7 The fact that the IPPs do not contain a principle dealing specifically with sensitive information is consistent with the Organisation for Economic Co-operation and Development's *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980) (OECD Guidelines), which also do not contain such a principle. Indeed, the Explanatory Memorandum to the OECD Guidelines states that 'it is probably not possible to identify a set of data which are universally regarded as being sensitive'.[7] On the other hand, as noted above, the EU Directive deals with 'special categories of data', which are defined as 'personal data revealing racial or ethnic origin, political opinions, religious or philosophical beliefs, trade-union membership, and the processing of data concerning health or sex life'.[8] Article 8 prohibits the processing of this kind of information without consent, except in specified circumstances. It also allows member states to prohibit the processing such data, even with the consent of the data subject.

19.8 In light of the above, it is necessary to consider whether agencies should also be subject to superadded restrictions in relation to the collection of sensitive information. This issue was identified in the ALRC's Issues Paper, *Review of Privacy* (IP 31).[9]

19.9 For the purpose of comparison, it should be noted that some other Australian jurisdictions regulate how government agencies should deal with sensitive information. For example, under Victorian, Tasmanian and Northern Territory privacy legislation,

---

6 Non-profit organisation means a non-profit organisation that has only racial, ethnic, political, religious, philosophical, professional, trade or trade union aims. See *Privacy Act 1988* (Cth) sch 3, NPP 10.5.

8 European Parliament, *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data*, Directive 95/46/EC (1995).

9 See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 4–32 and [4.181].

agencies are subject to restrictions in relation to the collection of sensitive information.[10]

Submissions and consultations

19.10 A number of stakeholders submitted that agencies, like organisations, should also be subject to a 'sensitive information' privacy principle.[11]

19.11 The Australian Government Department of Health and Ageing noted that the NPPs currently contain an exception to the prohibition on collecting sensitive information where it 'is required by law'. There is no exception, therefore, where the collection is merely authorised, but not required, by law. It submitted that the absence of an exception where the collection is authorised by law would 'impose significant limitations on agencies' by, for instance, preventing agencies from collecting sensitive information from third parties unless specifically required to do so. Therefore, the Department's preferred position is that there be an exception to the prohibition on collecting sensitive where the collection is required *or authorised* by law. It was noted that such an amendment would render the provision currently in NPP 10.2 redundant.[12]

ALRC's view

19.12 The ALRC shares the view of many stakeholders that the privacy principle dealing with sensitive information should be extended to cover agencies as well as organisations.

19.13 The term 'sensitive information' is defined in s 6(1) of the *Privacy Act* as a finite list of categories of personal information. These categories of information have been treated differently from other forms of personal information because, if misused, the information can be especially damaging to the individual concerned or those associated with the individual. As explained in Chapter 3, misuse of sensitive information—such as information about an individual's ethnic origin or religious beliefs—is especially dangerous because it can give rise to grave consequences, including discrimination and other forms of mistreatment.

19.14 Generally speaking, there is a correlation between the categories of sensitive information provided for in the *Privacy Act* and the grounds of discrimination provided for under federal and state legislation.[13] Similarly, Australia's international law obligations are triggered by an asylum seeker who has a well-founded fear of persecution by reason of his or her 'race, religion, nationality, membership of a

12 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007.

13 Compare *Privacy Act 1988* (Cth) s 6(1) with, eg, *Racial Discrimination Act 1975* (Cth); *Sex Discrimination Act 1984* (Cth); *Disability Discrimination Act 1992* (Cth).

particular social group or political opinion'.[14] The fact that three of these grounds—race, religion and political opinion—are also categories of 'sensitive information' in s 6(1) of the *Privacy Act* reflects the inherent dangers that may arise where personal information of this nature is misused.

19.15 There are, therefore, strong policy reasons to require agencies, and not just organisations, to abide by a privacy principle dealing with sensitive information. The ALRC is of the view that the risks associated with this information being subsequently misused are sufficiently serious that agencies should also be required to abide by the superadded requirements that apply to the collection of sensitive information.

19.16 Nevertheless, any such principle, especially if it is made applicable to agencies, must be structured in such a way as to allow for collection by agencies of sensitive information for legitimate reasons. The ALRC acknowledges the force of the submission made by the Australian Government Department of Health and Ageing that the provision that allows a data collector to collect sensitive information if the collection is required by law is too narrow.

19.17 Consistently with the discussion in Chapter 13, the ALRC is of the view that it would be appropriate to broaden this provision so that it applies where the collection of sensitive information is required or specifically authorised by or under law. In particular, this would encourage the Australian Parliament or relevant Minister to balance the competing interests for and against the collection of sensitive information in a particular context and, where appropriate, to pass primary or subordinate legislation permitting such collection, subject to whatever conditions are deemed appropriate.

19.18 A further miscellaneous question relates to the drafting of the proposed UPPs—that is, where should the provisions dealing with the collection of sensitive information be placed? In other words, should these provisions appear in a separate privacy principle, as is currently the case in NPP 10, or should they be located in the proposed 'Collection' principle, given that the provisions only relate to the *collection* of sensitive information, and not other aspects of the information cycle. This issue was not the subject of a question in IP 31, nor was it the subject of any significant feedback from stakeholders.

19.19 The ALRC's view is that it would be clearer to locate the provisions dealing with the collection of both forms of personal information—that is, sensitive and non-sensitive information—in a single privacy principle called 'Collection' in the proposed UPPs. There seems no reason in policy to deal with the collection of sensitive

14 See *Migration Act 1958* (Cth) s 36, incorporating the *Convention relating to the Status of Refugees*, 28 July 1951, [1954] ATS 5, (entered into force generally on 22 April 1954).

information in a separate privacy principle. Moreover, retaining a separate sensitive information principle can imply that there is a completely separate regime for all aspects of handling sensitive information. As explained below, however, the ALRC explicitly opposes such an approach.

Proposal 19–1 The proposed Unified Privacy Principles should set out the requirements on agencies and organisations in relation to the collection of personal information that is defined as 'sensitive information' for the purposes of the *Privacy Act*. These requirements should be located in the proposed 'Collection' principle.

Proposal 19–2 The proposed sensitive information provisions should contain an exception permitting the collection of sensitive information by an agency or organisation where the collection is required or specifically authorised by or under law.

Regulation of other aspects of sensitive information handling

Background

19.20 As noted above, the IPPs do not impose special restrictions on the collection of sensitive information; nor do they distinguish between the treatment of sensitive information and non-sensitive information in other stages of the information cycle such as use, disclosure, access, retention and disposal. Guidelines issued by the Office of the Privacy Commissioner (OPC) expressly acknowledge that where sensitive information is concerned, 'more care to protect individuals' privacy may be appropriate than is required by the letter of the IPPs'.[15]

19.21 NPP 10 imposes restrictions on the collection of sensitive information, and, as discussed in Chapter 22, NPP 2 distinguishes between sensitive and non-sensitive personal information in the context of use and disclosure. The NPPs, however, do not impose separate requirements for the handling of sensitive information in all aspects of the information cycle.

19.22 In this regard, it is relevant to note that some jurisdictions, like New Zealand, do not distinguish between the treatment of sensitive and non-sensitive personal information.[16] Equally, however, others like the United Kingdom and Germany, do set up separate regimes for sensitive and non-sensitive information.[17] New South Wales

15 Office of the Federal Privacy Commissioner, *Plain English Guidelines to Information Privacy Principles 4–7: Advice to Agencies about Storage and Security of Personal Information, and Access to and Correction of Personal Information* (1998), 1.

16 See *Privacy Act 1993* (NZ).

17 See *Data Protection Act 1998* (UK) sch 1, Principle 1; sch 3; *Federal Data Protection Act 1990* (Germany).

privacy law also distinguishes between the disclosure of sensitive and non-sensitive information.[18]

19.23 In this context, the ALRC asked in IP 31:

> Should federal privacy principles establish a separate regime for the public and private sectors regulating sensitive information in all aspects of the information cycle, including collection, use, disclosure, storage, access, retention and disposal? If so, what should that regime include?[19]

19.24 There appear to be three main options for reform, in addition to maintaining the status quo. These are to create a:

- privacy principle that obliges more care to be taken with respect to sensitive information, and also to amend other privacy principles by setting out how sensitive information should be dealt with as relevant to the principle in question;

- privacy principle that comprehensively covers the obligations that apply when handling sensitive information at any stage of the information cycle; or

- completely separate statutory regime for the handling of sensitive information that is outside of the privacy principles.[20]

Submissions and consultations

19.25 The starting point for a number of stakeholders was the community expectation that 'sensitive information will be afforded special privacy protections above and beyond ordinary, non-sensitive personal information'.[21] There is less consensus, however, on how this can best be achieved.

19.26 Some stakeholders submitted that the rules relating to sensitive information should be articulated with reference to all aspects of the information cycle, but did not specify a preferred model for achieving this.[22]

19.27 In terms of the model for reform, the OPC favoured a privacy principle that comprehensively covers the obligations that apply when handling personal information

---

18 *Privacy and Personal Information Protection Act 1998* (NSW) ss 18, 19.

19 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 4–32.

20 An example of such a regime is Part VIA of the *Privacy Act*, which deals with declared emergencies.

21 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007. See also Office of the Victorian Privacy Commissioner, *Submission PR 217,* 28 February 2007; AAMI, *Submission PR 147,* 29 January 2007.

22 AAMI, *Submission PR 147,* 29 January 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007; National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

at any stage of the information cycle. It submitted that amendments should be made to the other privacy principles to complement the sensitive information principle and to draw attention to the 'special nature of sensitive information' and the obligations that apply with respect to it.[23] Specifically, it submitted that the following consequential amendments should be made:

- The collection principle could consider requiring express/explicit consent, when dealing with sensitive information.
- With regard to use and disclosure, the circumstances of 'authorised' by law, could be strengthened. Specifically, to avoid a broad reading of this where sensitive information is at stake, the inclusion of 'clearly' or 'expressly' authorised could be considered.
- The security and data quality principles … could recognise the special character of sensitive information, through the inclusion of 'having regard to the sensitive nature of the information'.
- The security and data quality principles may also serve to clarify what obligations organisations/agencies are under when handling sensitive information.[24]

19.28 The Government of South Australia submitted that the relevant privacy principle could be supplemented by other law and guidance. It was suggested, for example, that public and private sector bodies should be required to comply with the *Australian (and International Standard) for Records Management*.[25]

19.29 On the other hand, a large number of stakeholders submitted that it would be preferable simply to maintain the status quo.[26] It was argued, for instance, that instituting a separate regime for handling sensitive information 'would unnecessarily complicate' this area.[27]

ALRC's view

19.30 The ALRC is of the view that, if the other proposals in this Discussion Paper are adopted, it would unnecessary to include any further provisions in the proposed UPPs to deal with sensitive information. The ALRC takes this view for the following reasons.

19.31 First, a number of the amendments proposed by the OPC would be, arguably, unnecessary if the UPPs are adopted in the manner proposed by the ALRC. That is:

---

23 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

24 Ibid.

25 Government of South Australia, *Submission PR 187,* 12 February 2007.

26 Australian Bankers' Association Inc, *Submission PR 259,* 19 March 2007; Australian Federal Police, *Submission PR 186,* 9 February 2007; Law Council of Australia, *Submission PR 177,* 8 February 2007; National Australia Bank and MLC Ltd, *Submission PR 148,* 29 January 2007; AXA, *Submission PR 119,* 15 January 2007; Insurance Council of Australia, *Submission PR 110,* 15 January 2007.

27 Australian Federal Police, *Submission PR 186,* 9 February 2007. See also Law Council of Australia, *Submission PR 177,* 8 February 2007.

- The OPC suggested a strengthening of the consent requirement in respect of the collection of sensitive information. However, ensuring that consent is 'genuine' or 'real' could be dealt with by Proposal 16–1. As explained in Chapter 16, the problems regarding consent may be solved more effectively by adopting a contextual approach to consent, and providing further guidance from the OPC about what is required to obtain consent in various situations.

- The OPC suggested that the exception to the secondary purpose use and disclosure prohibition where the use or disclosure is 'authorised by or under law' (NPP 2.1(g)) should be amended in respect of sensitive information to apply where the use or disclosure is *clearly or expressly* authorised by or under law. As noted in Chapter 22, the ALRC is interested in views about whether the equivalent provision in the proposed UPPs should apply where the use or disclosure is 'required or *specifically* authorised by or under law'.[28]

- It was suggested that the principles dealing with data quality and data security should be strengthened and clarified with respect to sensitive information. As explained in Chapter 25, the ALRC proposes some strengthening of the proposed 'Data Security' principle and also further guidance from the OPC on how to comply with these requirements. The ALRC believes that this, in combination with a relevance requirement in the proposed 'Data Quality' principle,[29] would be sufficient to deal with concerns relating to sensitive information.

19.32 Secondly, as discussed in Chapter 23, the ALRC proposes that the provision in NPP 2.1(c) that precludes sensitive information from being used in secondary purpose direct marketing should be retained in the proposed 'Direct Marketing' principle. This provides a measure of protection that is particularly important to stakeholders. It also shows that, to some extent, the UPPs will deal with sensitive information separately, outside the collection context.

19.33 Thirdly, the ALRC proposes in Part H that the provisions in the current NPPs that relate only to health information—which is a particularly important type of sensitive information—should be moved into the proposed *Privacy (Health Information) Regulations*, rather than being dealt with under the UPPs. These Regulations will set out rules that are tailored to this particular type of sensitive information.

19.34 Finally, the ALRC notes that a large number of stakeholders have indicated that they are against the establishment of a separate regime for the handling of sensitive

---

28 See Question 22–1.
29 See Proposal 24–2.

information. Such a regime could involve significant compliance costs, in circumstances where the most dangerous risks with respect to sensitive information are dealt with at the initial stage of collection.

Emergency situations

19.35 In IP 31, the ALRC solicited views as to whether the current exceptions to the prohibition on collection of sensitive information are adequate and appropriate.[30] For example, in the context of the disclosure principle in IPP 11 and the use and disclosure principle in NPP 2, the requirement that there be a 'serious *and* imminent' threat to the life or health of an individual poses difficulties in practice because often it may only be possible to establish a serious *or* imminent threat. Particularly in the case of disaster recovery, the threat may be serious but no longer 'imminent'. AAMI, for example, submitted that agencies should be able to collect sensitive information in emergency situations.[31]

19.36 Given that similar wording is used in one of the exceptions in NPP 10, there is a question whether the principle dealing with sensitive information should specifically allow for the collection of sensitive information in emergency situations, including disaster recovery, where the individual is not in a position to give consent. It should be noted, however, that after the release of IP 31, the *Privacy Act* was amended to insert a new Part VIA, which commenced operation on 7 December 2006.[32] Part VIA displaces some of the requirements in the IPPs and NPPs by providing a separate regime for the collection, use and disclosure of personal information where there is a connection to an emergency that has been the subject of a declaration by the Prime Minister or a Minister. It may be that the new Part VIA responds adequately to the concerns in relation to this aspect of the sensitive information principle. The Part VIA regime is considered in detail in Part E.

19.37 In comparison, German privacy law specifically allows for the collection by public bodies of 'special categories of personal data' where: it is 'urgently needed to protect an important public interest'; 'it is urgently necessary in order to avert serious prejudice to the public interest or to safeguard important public interest concerns'; or 'it is necessary on compelling grounds relating to … obligations of the Federal Government in the area of crisis management or … for humanitarian measures'.[33]

ALRC's view

19.38 The ALRC's view is that the exception in NPP 10.1(c) should be relaxed to some extent. For the reasons set out in Chapter 22, the requirement that the threat must

30 See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), [4.184].
31 AAMI, *Submission PR 147,* 29 January 2007.
32 *Privacy Legislation Amendment (Emergencies and Disasters) Act 2006* (Cth).
33 *Federal Data Protection Act 1990* (Germany) s 13.

be both serious *and* imminent is too difficult to satisfy and it can lead to personal information not being used or disclosed in circumstances where it should be.[34]

19.39 The ALRC believes that the exception should be triggered where a threat is merely serious, but not necessarily imminent. This would allow an agency or organisation to take preventative action to stop a threat from developing to a crisis. As a number of stakeholders have observed, at that point, it is often too late to take meaningful action. The ALRC also believes that this formulation strikes an appropriate balance between respecting the privacy rights of an individual and the public interest in averting threats to life, health and safety.

19.40 Moreover, it should be noted that NPP 10.1(c) imposes additional requirements before an organisation can avail itself of this exception to the prohibition against collecting sensitive information. That is, the individual concerned:

> (i) is physically or legally incapable of giving consent to the collection; or
>
> (ii) physically cannot communicate consent to the collection.[35]

19.41 In other words, this exception only applies where the individual is incapable of giving consent. As discussed in Part I, the term 'incapable' in this context includes the situations referred to in NPP 10.1(c)(i) and (ii). The ALRC believes that this condition should be retained in the relevant provision in the proposed UPPs.

Proposal 19–3 The proposed sensitive information provisions should contain an exception permitting the collection of sensitive information by an agency or organisation where the collection is necessary to lessen or prevent a serious threat to the life or health of any individual, where the individual whom the information concerns is incapable of giving consent.

Emergency situations not involving a serious threat to life or health

19.42 The Community Services Ministers' Advisory Council (CSMAC) raised concern about the provision of services to vulnerable people who are unable to provide informed consent.

> A person may have impaired competence (either short or long term) to provide informed consent and there is no alternative consent provider, such as a legal guardian or family member. This is a frequent dilemma for homeless services, where the capacity to provide informed consent may be limited by factors such as the use of substances or mental health problems. In such circumstances, there is a dilemma

34 See, in particular, Proposal 22–3 and accompanying text.
35 *Privacy Act 1988* (Cth) sch 3, NPP 10.1(c).

> about how to treat consent: a person might provide consent which is of dubious validity, or alternatively, may refuse consent but with a limited understanding of either the consent or the implications of their refusal, which may affect their treatment or access to services that they have requested.[36]

19.43 This is a particular problem where a service cannot be provided without the collection of relevant sensitive information. In accordance with Proposal 19–3 above, where the collection is necessary to lessen or prevent a serious threat to the life or health of any individual, collection should be allowed to occur without the consent of the individual concerned.

19.44 The CSMAC raised further questions about whether certain services fall within the definition of 'necessary to lessen or prevent a serious threat to life or health'. For example, those running accommodation services for homeless individuals will sometimes need access to information about the health of the individual before providing accommodation to an individual. The CSMAC queries whether a mere decline in health, or the dangers associated with sleeping rough, would be considered a 'serious threat to life or health', or whether a crisis event is required to trigger the exception. It notes that many err on the side of caution in making these interpretations, thus affecting the accessibility of services for vulnerable individuals.[37]

19.45 The ALRC agrees that there are valid arguments for extending the exception to the consent requirement for collection of sensitive information to circumstances beyond the need to 'lessen or prevent a serious threat to life or health of an individual'. One suggestion is to allow collection where it is necessary to provide an essential service for the benefit of the individual, and further limit the exception by requiring the collection to be reasonable in all the circumstances. Any extension of the existing exception may, however, have unintended consequences. The ALRC is, therefore, seeking stakeholder input before reaching a conclusion on this issue. The ALRC welcomes comments on the general concept of the extension of the exception, as well as suggestions for an appropriately framed exception.

Question 19–1 Should the proposed sensitive information provisions provide that sensitive information can be collected where all of the following conditions apply:

36 Community Services Ministers' Advisory Council, *Submission PR 47,* 28 July 2006.
37 Ibid.

(a) the individual is incapable of giving consent;

(b) the collection is necessary to provide an essential service for the benefit of the individual; and

(c) the collection would be reasonable in all the circumstances?

Research

19.46 In some state and territory privacy legislation, there is a research-related exception to the prohibition on collection of sensitive information by agencies, and this is broader than that provided for in NPP 10. For example, in Victoria and the Northern Territory, public sector bodies can collect sensitive information—not just health information—if:

- the collection is necessary for research, the compilation or analysis of statistics relevant to government funded targeted welfare or educational services, or relates to an individual's racial or ethnic origin and is for the purpose of providing government funded targeted welfare or educational services;[38]

- there is no other reasonably practicable alternative to collecting the information for that purpose; and

- it is impracticable for the organisation to seek the individual's consent to the collection.[39]

19.47 This raises the question whether the sensitive information privacy principle should permit the collection of non-health related sensitive information for certain purposes, including research and statistical purposes, and in what circumstances this should be permitted. This question is dealt with separately in Part H.

Introduction

20.1 The privacy principles in the *Privacy Act 1988* (Cth) provide that, in certain circumstances, agencies and organisations are required to notify an individual whose personal information has been, or is to be, collected, of a number of specific matters. This form of notification is referred to in this Discussion Paper as 'specific notification' because it is specific to the individual and the personal information in question. It may be contrasted with the 'openness' requirements on agencies and organisations.[1] Those are fulfilled by agencies and organisations making available their privacy policy, setting out their approach to handling personal information generally. In other words, it is not linked to any one individual's personal information.

1 The 'openness' requirements are discussed in Ch 21.

20.2 Currently, most of the requirements relating to notification are dealt with in the Information Privacy Principles (IPPs) and National Privacy Principles (NPPs) relating to the collection of personal information. That is, IPP 2 provides that where an agency solicits personal information directly from the individual concerned for inclusion in a record or in a generally available publication, it must take reasonable steps to ensure that, before or soon after the information is collected, the individual is generally aware of:

- the purpose for which the information is being collected;
- if the collection is authorised or required by law—that fact; and
- to whom it is the agency's usual practice to disclose or pass on personal information of the kind collected.

20.3 Similarly, NPP 1.3 provides that an organisation may only collect personal information from an individual after taking reasonable steps to ensure the individual is aware of: the organisation's identity and contact details; the fact that he or she can access the information; the purposes of collection; the organisations to whom the organisation usually discloses information of that kind; any law requiring the particular information to be collected; and the main consequences for the individual if the information is not provided.

20.4 This chapter is concerned with four main questions. First, should the requirements relating to specific notification be set out in a separate privacy principle? Secondly, what should be agencies' and organisations' specific notification requirements? Thirdly, what specific notification requirements should apply where personal information is received by an agency or organisation from a third party (a person other than the individual concerned)? Finally, how are agencies and organisations expected to fulfil these requirements?

Location of notification requirements: separate principle?

20.5 As noted above, the specific notification requirements are currently set out in the privacy principles that deal with the collection of personal information. A question arises as to whether the proposed Unified Privacy Principles (UPPs) should continue to set out the notification requirements that apply at or around the time the information is collected in the 'collection' privacy principle, or whether these requirements should be dealt with in a separate specific notification principle.

Submissions and consultations

20.6 A number of stakeholders submitted that notification requirements should be located in a separate privacy principle that deals with notification (or 'notice') and

openness.[2] One submission argued that this would facilitate 'a more pragmatic discussion of the desirable levels of awareness, and how and when these can be created'.[3]

20.7 The Office of the Privacy Commissioner (OPC) pointed to the fact that notification is treated as a separate privacy principle in, among other instruments, the Asia-Pacific Economic Cooperation *Privacy Framework* (2005),[4] and the European Parliament's *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (1995).[5]

20.8 The OPC suggested a joint 'notice and openness' privacy principle and that this should be listed before the 'collection' principle in the UPPs to encourage data collectors to consider their 'stated reasons' for collection, use and disclosure *before* collecting the personal information in question.[6]

ALRC's view

20.9 In the ALRC's view, the requirements on agencies and organisations to provide specific notification to an individual of particular matters relating to the collection or handling of personal information about the individual should be consolidated in a single, discrete privacy principle. This would clarify the present position under the IPPs and NPPs, where the requirements relating to specific notification are dealt with as issues subservient to the collection of personal information. As a consequential amendment, the 'Collection' principle in the proposed UPPs has been drafted to include a reference to the fact that agencies and organisations are required to comply with the relevant specific notification requirements when they collect personal information.[7]

20.10 The second issue that is raised here is whether the requirements relating to specific notification (that is, the matters currently dealt with in IPP 2 and NPP 1.3, and which are the subject of this chapter) should be dealt with in the same privacy principle as the requirements relating to openness (that is, the matters currently dealt with in

6 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007. A similar submission was made by G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

7 See UPP 2.4—the UPPs are set out at the beginning of this Discussion Paper.

IPP 5 and NPP 5, and which are the subject of Chapter 21). As noted below, some stakeholders have proposed such an arrangement.[8]

20.11 The ALRC believes that there is an important conceptual difference between the current openness principles (IPP 5 and NPP 5) and what are referred to in this Discussion Paper as the specific notification principles (IPP 2 and NPP 1.3). On one hand, the openness principles require individuals to be informed about the *general* practices of an agency or organisation in relation to the handling of personal information. As such, these requirements apply irrespective of whether the agency or organisation has actually collected personal information from a particular individual, or whether the agency or organisation simply might do so in the future. On the other hand, the specific notification principles apply when personal information has been, or will soon be, collected from a particular individual. Consequently, these principles require the agency or organisation to notify an individual about how it will handle certain, specified personal information relating to the individual.

20.12 In other words, the conceptual difference between the 'openness' principle and the provisions of IPP 2 and NPP 1.3 may be summarised as follows: the openness principle requires notification as to the general practices of an agency or organisation relating to the handling of *any* personal information, whereas IPP 2 and NPP 1.3 require notification as to how an agency or organisation will handle an individual's *particular* personal information. As set out in Chapter 21, the ALRC therefore believes that it is preferable to deal with specific notification in a privacy principle separate from the principle dealing with 'openness'.

Proposal 20–1 The proposed Unified Privacy Principles should contain a principle called 'Specific Notification' that sets out the requirements on agencies and organisations to provide specific notification to an individual of particular matters relating to the collection and handling of personal information about the individual.

Notification of collector's identity and individual's rights

20.13 IPPs 1–3, taken together, contain a significant gap relating to notification when compared with NPP 1. Where an organisation collects personal information about an individual, NPP 1 expressly requires the organisation to 'take reasonable steps' to ensure the individual is aware of: the collector's identity and contact details; the fact that the individual is able to gain access to the information; and the main consequences of not providing the information. The IPPs contain no equivalent requirement applicable to agencies.

8 See, eg, Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

20.14 In other jurisdictions, such as New Zealand, government bodies are required to make an individual aware of the collector's identity and contact details, as well as the fact that the individual can access the information. There are also significant consequences if a government body fails to provide the information.[9] In light of this gap, the ALRC asked whether these notification obligations, currently located in NPP 1, should be extended to agencies.[10]

Submissions and consultations

20.15 The majority of stakeholders who responded to this question supported such an amendment to bring the notification requirements of agencies in line with those that currently apply to organisations.[11]

20.16 One submission suggested that such a provision has become necessary because it is now more difficult for individuals to know which government agency they are dealing with, given the 'increasing use of campaign names and brands by the public sector and with ever-changing administrative arrangements and "portfolios"'.[12] The OPC also supported this reform. It argued, however, that any such requirements should be consolidated with the other notification requirements and placed in a separate privacy principle.[13]

20.17 There were, however, a small number of stakeholders that opposed this reform.[14] One stakeholder argued that it would place an unreasonable impediment on law enforcement agencies.[15]

ALRC's view

20.18 Provided the notification requirements are subject to appropriate qualifications, the ALRC can see no policy reason why agencies that collect personal information should not generally be subject to the same specific notification requirements that

apply to organisations. On the contrary, such notification requirements promote fairness and transparency. Moreover, insofar as specific notification brings the fact that a particular agency has collected information to the attention of the individual concerned, it can also promote accurate record-keeping because the individual would be more likely to access the information to check its accuracy.

20.19 The addition of such requirements would benefit individuals. As explained above, the provisions relating to openness serve a different purpose. Further, many individuals find general privacy notices confusing, too long and difficult to relate to their particular situation.[16] Professor Fred Cate criticised modern privacy notices, by stating:

> Notices are frequently meaningless because individuals do not see them or choose to ignore them, they are written in either vague or overly technical language, or they present no meaningful opportunity for individual choice.[17]

20.20 In contrast, where notification requirements are tailored to the specific personal information in question, they can be shorter, clearer and more easily related to the individual's own circumstances. Moreover, providing an individual with specific notification about matters relating to the collection of his or her personal information can be particularly useful and timely because this may be the most appropriate time for the individual to take any action to protect his or her privacy.

20.21 The main disadvantage of expanding the specific notification requirements applicable to agencies seems to be that notifying an individual of the relevant matters at the time of collecting his or her personal information could, in certain circumstances, undermine an agency's legitimate purpose in collecting the information in the first place. The example noted above from submissions and consultations is that, in a law enforcement context, notification of personal information collection may, for instance, 'tip off' a suspect that he or she is under surveillance, thereby frustrating the legitimate functions of the agency in question.

20.22 To some extent, the solution to this problem may already be provided for in NPP 1. That is, both NPP 1.3 (which applies to information collected from the individual in question) and NPP 1.5 (which applies to information collected from a third party) qualify the notification requirements by stating that an organisation must 'take reasonable steps' to notify the individual of the relevant matters. In such situations, it may be argued that 'reasonable steps' would equate to the agency doing nothing at all. As explained later in this chapter, however, there is some confusion regarding the meaning of the term 'reasonable steps'. Moreover, it is arguably disingenuous to say that an agency has fulfilled the 'reasonable steps' requirement to

make an individual aware of certain matters where the agency is avowedly seeking to *avoid* making the individual aware of those matters.

20.23 To avoid any potential ambiguity, therefore, the ALRC proposes two further measures to cover more directly the situation where an agency legitimately wishes not to make an individual aware of the specified matters at or around the time personal information is collected. First, the ALRC believes that the principle should contain a qualification stating that an agency is not required to comply with the relevant notification requirements if the collection is 'required or specifically authorised by or under law'. This solution strikes an appropriate balance between making agencies generally accountable for the personal information they collect and recognising that, in certain situations, the requirements of accountability and transparency should be relaxed in favour of another consideration that must take precedence.

20.24 Secondly, the ALRC proposes a further qualification that would be applicable both to agencies and organisations. That is, the ALRC believes that the specific notification requirements should apply only in circumstances where a reasonable person would expect to be notified. The addition of this objective test would permit a more common sense approach to be taken in deciding whether an agency or organisation is obliged to fulfil the specific notification obligations in a particular case. This is discussed in greater detail below.

20.25 If these proposals are adopted, a further consequential amendment would be needed to import into the UPPs a provision, which is also applicable to agencies, that is equivalent to the current NPP 1.5. NPP 1.5 provides that where an organisation collects personal information from someone other than the individual concerned, it must take reasonable steps to ensure that the individual is or has been made aware of the matters listed in NPP 1.3, except to the extent that making the individual aware of the matters would pose a serious threat to the life or health of any individual. Consistently with the approach taken in this chapter, including Proposal 20–5 below, this provision should apply to agencies as well as organisations, but agencies should retain an exception stating that the specific notification requirements would not apply to an agency if an agency is required or specifically authorised by or under law not to make the individual aware of such matters.

Notification of the fact and circumstances of collection

20.26 Neither the IPPs nor the NPPs require an agency or organisation to notify an individual that it has collected, or is about to collect, personal information about that individual. It is arguably implicit in the existing specific notification provisions that the agency or organisation needs to provide the individual with notice that his or her personal information has been collected.

20.27 On the other hand, given the growing ability for technology to facilitate the collection of personal information about an individual without the individual knowing that this has occurred, it may be desirable for agencies and organisations to be required to notify individuals of the fact and circumstance of the collection of their personal information.[18] It should be noted that although the ALRC's Issues Paper, *Review of Privacy* (IP 31) did not contain any question specifically directed to this issue, some stakeholders commented on the issue in consultations and submissions.

20.28 AAMI, for example, opposed the 'covert' collection of personal information, submitting that 'methods of collection need to be foreseeable'.[19] The Victorian Society for Computers and the Law (VSCL) noted that certain types of biometric information, such as iris scanning collected for the purposes of inclusion in a biometrics template, are likely to require the active cooperation of the individual in the process of collection. In comparison, biometrics such as facial and voice recognition may be collected without the knowledge or consent of the individual. In some circumstances, therefore, the consent (or, at least, the knowledge) of the relevant individual may be implied in the privacy principles governing collection.[20]

20.29 The VSCL also noted that rapid developments in technology—including in the field of biometrics systems—may result in the widespread availability of technologies that are capable of collecting personal information without the knowledge of the individual.[21] Other technologies, such as invisible data collecting devices on web pages or hidden radio frequency identification (RFID) tags, already may be collecting personal information without the knowledge or consent of the individual.

ALRC's view

20.30 The ALRC agrees with the VSCL's observation that emerging technologies make it possible to acquire various types of personal information without an individual's knowledge. The ALRC's view is that, subject to certain qualifications discussed below, agencies and organisations should be required to notify an individual that they have collected the individual's personal information and the circumstances in which this collection took place.

20.31 The ALRC believes that this would have a number of benefits. For example, it would better equip individuals to protect their personal information. By knowing that their personal information has been collected, they would be able to take action to safeguard that information—for example, by checking its accuracy. Another benefit is that it would help agencies and organisations to be more transparent in their data collection processes.

---

18 The impact of developing technologies on privacy is discussed in Part B.
19 AAMI, *Submission PR 147,* 29 January 2007.
20 Victorian Society for Computers and the Law Inc, *Submission PR 137,* 22 January 2007.
21 Ibid.

20.32 The main potential problem with adding a requirement to notify individuals of the fact and circumstances of collection seems to be that often individuals are already aware that their personal information is collected—indeed, they may have provided the information themselves. In these circumstances, arguably it would be both pointless for the individual and onerous on agencies and organisations to notify individuals that their personal information has been collected.

20.33 The ALRC believes, however, that the qualifications and exceptions to this requirement, which are built into the proposed 'Specific Notification' principle, adequately address these concerns. In particular, the ALRC proposes that agencies and organisations should be required to comply with the relevant specific notification obligations only in circumstances where a reasonable person would expect to be notified.[22] If an individual is already aware that his or her personal information has been collected, clearly it would not be necessary for the agency or organisation to notify him or her. A similar point has been made by Professor Fred Cate:

> If the collection from data subjects is not reasonably obvious, then there should be prominent notice of the fact. If data collection is reasonably obvious, additional notice requirements are superfluous.[23]

20.34 Consequently, subject to relevant qualifications and exceptions, the ALRC's view is that, where an agency or organisation collects personal information about an individual, it should be required to notify the individual of the fact and circumstances of that collection. This is set out in Proposal 20–2 below.

Standardising requirements of agencies and organisations

20.35 In IP 31, it was noted that the IPPs and NPPs do not uniformly require agencies and organisations that collect personal information about an individual to notify the individual in question about certain matters. In particular, the IPPs do not require an agency to notify an individual of the types of people, bodies or agencies to whom the agency usually discloses personal information. Further, neither the IPPs nor NPPs require an agency or organisation to notify an individual of the avenues of complaint available when personal information is collected.

20.36 The ALRC asked whether some or all of these obligations should be imposed on agencies and/or organisations.[24]

---

Submissions and consultations

20.37 A number of stakeholders who responded to this general question argued that agencies and organisations should be required to provide both categories of information listed above.[25]

20.38 There were, however, some who either opposed such notification requirements or expressed reservations. Some suggested that the existing notification requirements are adequate and there are few complaints relating to insufficient notification.[26] It was also submitted that such requirements would 'significantly add to the length of privacy notices', which does not benefit consumers.[27] Telstra argued that the cost of compliance would be undesirably onerous.[28]

20.39 While not expressing outright opposition to these extended notification requirements, some reservations were expressed, including that:

- where personal information is collected via a call centre, for practical reasons, notification should not have to be oral because this would be too time consuming;[29]

- such notification requirements should not apply where it is 'impracticable or inappropriate' to notify the individual;[30] and

- where notification would be to a large number of people, such as the individuals listed on a large public database, Veda Advantage submitted that data aggregation specialists should be allowed to use 'appropriate' notification methods that are widely publicised and available. These may include providing details on a searchable industry website or by other notice.[31]

Notification of entities to whom information usually disclosed

20.40 It should first be noted that, under NPP 1.3(d), an organisation is already obliged to notify an individual of the types of people, bodies or agencies to whom the

31 Veda Advantage, *Submission PR 163,* 31 January 2007.

organisation usually discloses such information. There are, therefore, three questions that arise. The first is whether agencies should also be subject to such a requirement. A number of stakeholders supported such an amendment.[32] None specifically opposed it.

20.41 The second question is whether any amendment should be made to the scope of this requirement. Specifically, NPP 1.3 only requires an organisation to ensure that an individual is aware of the 'organisations' to which it usually discloses information of that kind. However, 'organisation' currently has a restricted meaning for the purposes of the *Privacy Act*, excluding, for example, political parties and state or territory agencies. The OPC recommended in 2005 that the Australian Government consider amending NPP 1.3(d) to extend its coverage to disclosures generally, including to public sector agencies of the Australian Government, state or local governments, other bodies and private individuals.[33] The only stakeholder that commented specifically on this issue supported such an expansion.[34]

20.42 The third question assumes that such a requirement is adopted and asks: what level of specificity is required when providing this notification? Problems have arisen where this notification is too general, such as where an insurer notified an individual that it may disclose personal information to 'a Mediator, Solicitor, Complaints Resolution Tribunal or Court or to any other person necessary for claims determination purposes'.[35] It was submitted that such a description was too broad to be useful to an individual in determining whether to proceed with the transaction in question.[36] This led to the suggestion that data collectors should be permitted to give such descriptions, but they should also be required to answer any specific inquiry as to whether an entity actually received personal information.[37]

Notification of avenues of complaint

20.43 There is strong support for requiring agencies and organisations to make individuals aware of the avenues of complaint available when personal information is collected. The OPC's review of the private sector provisions of the *Privacy Act* (OPC Review) recommended that the Australian Government consider amending NPP 1.3

along these lines.[38] A number of stakeholders supported such a requirement.[39] In supporting such reform, the Australian Privacy Foundation stated that the principle should require notification of 'both internal and external dispute resolution options'.[40]

20.44 There was, however, some opposition. The Australian Bankers' Association submitted that the *Privacy Act* should not impose such an obligation on organisations, because banks and holders of Australian Financial Services Licences are already subject to similar requirements under the *Corporations Act 2001* (Cth) and/or the Code of Banking Practice.[41]

ALRC's view

Notification of entities to whom information usually disclosed

20.45 The ALRC's view is that, where an agency or organisation collects personal information about an individual, it should be required to notify the individual of the types of people, organisations, agencies or other entities to whom it usually discloses personal information. As already noted, NPP 1.3(d) already imposes a similar requirement on organisations. The ALRC notes that there was general support for the expansion of this general requirement to apply also to agencies.

20.46 Regarding the content of the requirement, NPP 1.3(d) only requires notification of the *organisations* to which the information is usually disclosed. The OPC Review recommended, however, that notification should extend to other bodies that do not fall within the definition of 'organisation'—most notably, agencies and state and territory bodies.[42] The OPC stated that a narrow interpretation of this requirement seems inconsistent with the policy intent of the legislation, given that the Explanatory Memorandum envisaged disclosure to state government licensing authorities, which do not fall within the definition of 'organisation'.[43]

20.47 There was no specific opposition to such an expansion. The ALRC supports such an amendment, particularly in light of the fact that it would appear to correlate better with the original intention of the provision. Moreover, it would be unlikely to cause a significant compliance burden, given that this obligation already seems to be operating adequately for organisations.

42 See Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 74.

43 See Ibid, 259; Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), [3.34].

20.48 The final question is: what level of specificity is required when providing this notification? The ALRC acknowledges the problems noted above, where notification has been too general to be of real assistance to individuals. Consistently with the desire to frame the UPPs using principles (as distinct from detailed, prescriptive provisions),[44] however, the ALRC does not believe that the relevant privacy principle should prescribe what level of detail is required in notification. Rather, the OPC should provide guidance to assist agencies and organisations to comply with the principle.

Notification of avenues of complaint

20.49 As noted above, there is strong support among stakeholders for requiring an agency or organisation to make an individual aware of the avenues of complaint available when it collects personal information about the individual. Such a requirement is desirable because it would assist individuals in enforcing their rights under the UPPs.

20.50 Moreover, such a requirement would impose little or no additional compliance burden on agencies and organisations, given that they are already required to notify individuals of various matters, and this requirement is merely explanatory of the existing options available to individuals who have a complaint. In other words, it does not require any new avenues of complaint to be made available.

Proposal 20–2 The proposed 'Specific Notification' principle should provide that, at or before the time (or, if that is not practicable, as soon as practicable after) an agency or organisation collects personal information about an individual from the individual, it must take reasonable steps to ensure that the individual is aware of the:

(a) fact and circumstances of collection (for example, how, when and from where the information was collected);

(b) identity and contact details of the agency or organisation;

(c) fact that the individual is able to gain access to the information;

(d) purposes for which the information is collected;

(e) main consequences of not providing the information;

(f) types of people, organisations, agencies or other entities to whom the agency or organisation usually discloses personal information; and

44 See Proposal 15–1.

(g) avenues of complaint available to the individual if he or she has a complaint about the collection or handling of his or her personal information.

This requirement should only apply: (1) in circumstances where a reasonable person would expect to be notified; (2) except to the extent that making the individual aware of the matters would pose a serious threat to the life or health of any individual; and (3) subject to any other relevant exceptions.

Proposal 20–3 The Office of the Privacy Commissioner should provide guidance to assist agencies and organisations in ensuring that individuals are properly informed of the persons to whom their personal information is likely to be disclosed.

Proposal 20–4 An agency should be required to notify an individual of the matters listed in the proposed 'Specific Notification' principle, except to the extent that the agency is required or specifically authorised by or under law not to make the individual aware of such matters.

Notification where information collected from a third party

Background

20.51 In IP 31, the ALRC asked whether the notification obligations imposed on organisations, agencies or both, at or soon after collection, should apply irrespective of the source of personal information.[45] This gave rise to two specific questions.

20.52 First, should an individual be notified of the source of personal information received by an agency or organisation, where that information was provided by a third party—that is, someone other than the individual in question? Neither the IPPs nor the NPPs impose such a requirement.

20.53 Secondly, which third parties should be covered by NPP 1.5 (or the equivalent of this provision in the proposed UPPs)? In 2005, the OPC recommended that consideration be given to amending NPP 1.5 to make it clear that an organisation's notification obligations under that principle apply when collecting personal information indirectly, from any source.[46] This recommendation arose because of some ambiguity in the wording of NPP 1.5, which imposes obligations on an organisation

when it collects information, not from the individual concerned, but from 'someone else'. There is uncertainty about whether 'someone else' applies to collection from some specific types of publicly available sources of information such as newspapers, books, and court reports.[47]

Submissions and consultations

Notification of source of information collected from a third party

20.54 Some stakeholders supported a requirement that individuals be notified of the source of personal information collected where that information was not collected directly from the individual.[48]

20.55 Others expressed some reservation about such an amendment. The Institute of Mercantile Agents argued that such a requirement could, in some circumstances, be dangerous in that this may put the source of the information at risk of 'domestic violence and other forms of repercussion'.[49] The National Health and Medical Research Council also expressed this concern, arguing that the notification requirement should be waived where there is a 'serious threat to the life or health of any individual'.[50] Similarly, the Office of the Information Commissioner Northern Territory stated that any such requirement should be 'subject to recognition that there will be circumstances in which the identity of the source should be protected'.[51]

20.56 United Medical Protection Ltd submitted that such a notification requirement is unnecessary because it 'will either occur as a matter of necessity or be obvious on its face'.[52]

Scope of third party notification obligations

20.57 A number of stakeholders submitted that agencies and organisations should be required to notify individuals of the collection of personal information irrespective of the source of personal information.[53] It was noted that the contrary position would

create 'a risk that the intention of ensuring individuals were aware who was collecting their information and its use could be circumvented by using third party information providers'.[54]

20.58 Some stakeholders argued that the notification obligations in NPP 1 should not arise:

- where the information in question is 'generally available', such as an address obtained from the telephone book;[55]
- where information is collected solely for the purposes of underwriting insurance, because to impose the NPP 1 obligations in these circumstances would be 'cumbersome, difficult and costly … with little or no benefit to the individual concerned';[56] and
- unless it is 'practicable and appropriate' to notify the individual concerned, bearing in mind that there are 'many circumstances', particularly in the area of health care and research, where it is not practicable or appropriate.[57]

20.59 Other stakeholders opposed any change to the current arrangements. The Institute of Mercantile Agents resisted this addition to an already 'excessive' compliance burden, arguing that it would cause 'delays and costs [that would be] on charged to … the consumer'.[58] The Australian Federal Police (AFP) stated that such an amendment would be unnecessary, assuming it applied to the AFP, given the high quality of its record-keeping methods.[59]

ALRC's view

Notification of source of information collected from a third party

20.60 The ALRC believes it is generally appropriate that, where an agency or organisation receives personal information about an individual from a source other than the individual, it should notify the individual of the source of that information.[60] This provides an important mechanism for an individual to retain some control over the quality, among other things, of personal information about the individual that is handled by agencies and organisations.

57 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

58 Institute of Mercantile Agents, *Submission PR 101,* 15 January 2007.

59 Australian Federal Police, *Submission PR 186,* 9 February 2007.

60 As explained later in this chapter, the ALRC believes that this general obligation should not apply where an agency or organisation has received unsolicited personal information and it chooses immediately to destroy it.

20.61 There is some precedent for this in other jurisdictions. For example, German law provides that a data subject should be provided with information about stored data concerning him or her, including any reference to the origin of the data.[61]

20.62 The second question is whether this requirement should be subject to any qualifications or exceptions. Currently, NPP 1.5 already provides that the existing notification requirements apply, 'except to the extent that making the individual aware of the [relevant] matters would pose a serious threat to the life or health of any individual'. The ALRC proposes that this exception be retained.[62]

20.63 Moreover, agencies (but not organisations) would also be subject to the additional exception in Proposal 20–4 below. That is, an agency would be required to notify an individual of the source of personal information received from a third party, except to the extent it is required or specifically authorised by or under law not to make the individual aware of such matters.

Scope of third party notification obligations

20.64 The ALRC agrees with the general proposition, expressed by a number of stakeholders, that the specific notification obligations should apply to a broad range of third parties that provide personal information to agencies and organisations. The alternative position would encourage those agencies and organisations that do not wish to comply with notification requirements to collect personal information as much as possible from third parties.

20.65 This would be undesirable for two main reasons. First, it would be likely to jeopardise the quality of the personal information collected because a source, other than the original source, is less likely to be able to keep the information accurate and up-to-date. Secondly, it detracts from the level of control that an individual can exert over his or her personal information, because the individual is less likely to know of the collection and the attendant rights that flow from this.

20.66 Therefore, the ALRC's view is that where an agency or organisation collects personal information from someone other than the individual concerned, and the individual requests that the agency or organisation inform him or her of the source of this information, the agency or organisation should be required take reasonable steps to ensure that the individual is or has been made aware of the source of the information.

20.67 Although this is the ALRC's general position, clearly it would be overly burdensome to require agencies and organisations to comply with all of the requirements in the privacy principles, and particularly the specific notification

---

61 See *Federal Data Protection Act 1990* (Germany) ss 19(1), 34(1).

62 See Proposals 20–2 and 20–5 and, generally, Ch 18.

requirements, in respect of *all* personal information that they receive. Take the following example. It is common for agencies and organisations to pay a fee to a business that provides press clippings in relation to issues that may be of interest or otherwise relevant to the agency or organisation. Those press clippings are likely to contain a considerable amount of personal information. After they are received, the press clippings are often logged and filed in a central database in case they become useful at a later data. In these circumstances, it would be a huge administrative and financial burden for an agency or organisation to comply with the notification and other requirements with respect to every piece of personal information contained in the press clippings.

20.68 The ALRC believes there is a threefold solution to this problem. First, the ALRC proposes that, where an agency or organisation receives unsolicited personal information, it should have a choice between either destroying the personal information, or retaining it but then complying with the requirements of the UPPs.[63] This would cover a considerable amount of the information in this area that ought not to import notification and other requirements.

20.69 Secondly, the ALRC shares the OPC's view that an agency or organisation should be required to comply with the specific notification requirements only in circumstances where a reasonable person would expect to be notified. The addition of an objective test along these lines would help remove ambiguity as to the obligations on an agency or organisation when it has merely received personal information from a public source, and notification would serve no useful purpose for the individual concerned. It would also mean that bodies involved in, for example, law enforcement would not be required to fulfil specific notification requirements if, in complying with these requirements, the body would undermine their lawful reason for collecting the personal information.

20.70 Thirdly, the OPC should provide guidance as to the circumstances in which it is necessary for an agency or organisation to notify an individual when it has received personal information about the individual from a third party. By using the mechanism of guidance—as distinct from a more prescriptive legislative solution—the UPPs will remain more flexible and better able to accommodate a wide range of circumstances.[64] The cost of such an approach is, undoubtedly, a loss of some measure of regulatory certainty. Nevertheless, the ALRC believes that, on balance, this is preferable to attempting to particularise in the *Privacy Act* the requirements relating to every conceivable source of personal information.

---

63 See Proposal 18–2.

64 See also Proposal 15–1.

Proposal 20–5 (a) The proposed 'Specific Notification' principle should provide that where an agency or organisation collects personal information from someone other than the individual concerned, it must take reasonable steps to ensure that the individual is or has been made aware of:

(i) the matters listed in Proposal 20–2; and

(ii) on request by the individual, the source of the information.

(b) This requirement should only apply:

(i) in circumstances where a reasonable person would expect to be notified;

(ii) except to the extent that making the individual aware of the matters would pose a serious threat to the life or health of any individual; and

(iii) in the case of an agency, except to the extent that it is required or specifically authorised by or under law not to make the individual aware of one or more of these matters.

Proposal 20–6 The Office of the Privacy Commissioner should provide guidance on the circumstances in which it is necessary for an agency or organisation to notify an individual when it has received personal information about the individual from a source other than the individual concerned.

Meaning of 'reasonable steps'

20.71 When an organisation collects personal information from the individual concerned or a third party, the organisation is required to take 'reasonable steps' to ensure that the individual from whom the organisation collects the information is aware of certain specified matters.[65] There is some uncertainty over what is meant by the term 'reasonable steps' and, especially, whether an organisation may legitimately conclude that, in certain circumstances, it would be reasonable to take no steps. For example, the OPC Review stated that it would be reasonable to take no steps to provide notice where significant cost or difficulty is involved in contacting a third party whose information

65 See *Privacy Act 1988* (Cth) sch 3, NPP 1.3 and NPP 1.5.

has been collected incidentally, or in many circumstances where the information is collected from a public source.[66]

20.72 Previously, it has been recommended that the legislation be amended to make clear that that there are situations in which the reasonable steps an organisation might take to provide notice to an individual may equate to no steps.[67] The ALRC asked whether such an amendment would be desirable.[68]

Submissions and consultations

20.73 A large number of stakeholders supported such an amendment.[69] Some provided examples to illustrate their view that it is sometimes reasonable to take no steps to inform the individual of the matters specified in NPP 1.3. These include the following:

- where an organisation receives information from a related body corporate, especially if the individual would reasonably expect the information to be disclosed in this way;[70]
- where an insurer collects information about the medical history of family members of an individual client;[71]
- disclosing to an individual that information about the individual has been collected as part of an alternative dispute resolution scheme may put at risk the safety of third parties;[72]
- in the context of 'family, social or medical history-taking';[73] and

- in the course of an investigation into possible wrongdoing (where this investigation is not covered by the law enforcement exception).[74]

20.74 While reiterating its view that such an amendment should be made, the OPC also stated that a 'reasonable person' test should be included to help an organisation (or agency) determine what steps should be taken to make individuals aware of matters relating to the collection of their personal information.[75]

20.75 One submission stated that the solution to this problem may be to require specific notification by the data collector, 'with a conditional exception where the data [collector] could establish that at least the typical data subject had been made aware by other means'. Moreover, it may be appropriate to apply differing requirements 'depending on how the data [are] collected, with the default position being that notice is required unless an exemption is provided'.[76]

20.76 Some stakeholders submitted that no amendment was needed to the 'reasonable steps' requirement. The Australian Privacy Foundation submitted that an amendment such as that proposed 'would invite self serving interpretation to avoid giving notice even where it was both reasonable and practicable'.[77] DLA Phillips Fox submitted that NPP 1.3 already sets out 'an objective test of what is reasonable in the circumstances'.[78]

20.77 Others suggested that the solution might be simply to make the OPC more involved in the specific notification process. Telstra suggested that the OPC should issue detailed guidelines on what steps are required to provide notification in various circumstances.[79] The Law Council of Australia suggested that the solution may be to make clear that, if a person relies on advice from the OPC that no steps are required, then this should be a full defence if a complaint is later made about the person.[80]

ALRC's view

20.78 As noted above, concerns about the ambiguous meaning of 'reasonable steps' (as the term is used in NPP 1.3 and 1.5) overlaps with the question, dealt with above, whether specific notification requirements should apply with respect to personal information collected by an agency or organisation from *any* source. Again, to some extent, the problem is a lack of definitive guidance on the meaning of the term

79 Telstra, *Submission PR 185,* 9 February 2007.

80 Law Council of Australia, *Submission PR 177,* 8 February 2007.

'reasonable steps'. For example, if there were an accumulated body of jurisprudence on this issue, this may provide greater confidence to agencies and organisations that collect personal information.

20.79 A number of stakeholders identified that real confusion is caused by the fact that the term 'reasonable steps' implies that at least some *active* steps must be taken by the data collector. This is despite the fact that, in certain circumstances, logic dictates that a data collector need not do anything to notify an individual. On the other hand, the fact that an agency or organisation need only take reasonable steps is, in most situations, an important and useful qualification to the specific notification obligations.

20.80 The ALRC is of the view that the best solution to this problem involves two limbs. First, the OPC should issue guidance on the meaning of the term 'reasonable steps' in this context. This would go a long way to removing the ambiguity.

20.81 Secondly, the ALRC believes that any remaining ambiguity in this area would be removed if Proposal 20–5 is adopted. That is, the ALRC believes that the 'Specific Notification' principle in the proposed UPPs should provide that, where an agency or organisation receives personal information from a third party, it need only comply with the relevant notification requirements in circumstances where a reasonable person would expect to be notified.

Proposal 20–7 The Office of the Privacy Commissioner should provide guidance on the meaning of the term 'reasonable steps' in the context of an agency's or organisation's obligations to fulfil its notification requirements under the proposed 'Specific Notification' principle.

Summary of proposed 'Specific Notification' principle

20.82 In summary, the ALRC's view is that the third principle in the proposed UPPs should be called 'Specific Notification'. It should appear as follows.

UPP 3. Specific Notification

3.1 At or before the time (or, if that is not practicable, as soon as practicable after) an agency or organisation collects personal information about an individual from the individual, it must take reasonable steps to ensure that the individual is aware of the:

(a) fact and circumstances of collection (for example, how, when and from where the information was collected);

(b) identity and contact details of the agency or organisation;

(c) fact that the individual is able to gain access to the information;

(d) purposes for which the information is collected;

(e) main consequences of not providing the information;

(f) types of people, organisations, agencies or other entities to whom the agency or organisation usually discloses personal information; and

(g) avenues of complaint available to the individual if he or she has a complaint about the collection or handling of his or her personal information.

3.2 Where an agency or organisation collects personal information from someone other than the individual concerned, it must take reasonable steps to ensure that the individual is or has been made aware of:

(a) the matters listed in UPP 3.1 above; and

(b) the source of the information, if requested by the individual.

3.3 An agency or organisation must comply with the obligations in UPPs 3.1 and 3.2:

(a) in circumstances where a reasonable person would expect to be notified; and

(b) except to the extent that:

(i) making the individual aware of these matters would pose a serious threat to the life or health of any individual;

(ii) in the case of an agency, the agency is required or specifically authorised by or under law not to make the individual aware of one or more of these matters.

Summary of proposed 'Openness' principle 664

Introduction

21.1 The *Privacy Act 1988* (Cth) requires agencies and organisations to make available a document that sets out their policies relating to the management of personal information. These are referred to as 'openness' requirements, and should be contrasted with the 'specific notification' requirements in the Act. As explained in Chapter 20, the specific notification requirements differ in that they oblige agencies and organisations to notify each individual whose personal information is collected of particular matters that are specific to the individual and the personal information in question.

21.2 This chapter covers the following main issues. First, it considers the structure of the 'Openness' principle in the proposed Unified Privacy Principles (UPPs). Secondly, the ALRC proposes a system whereby agencies and organisations create a 'Privacy Policy', setting out their polices on the management of personal information and how personal information is collected, held, used and disclosed. Thirdly, the chapter considers how Privacy Policies should be made available. Finally, the ALRC addresses the issue of 'short form' privacy notices.

Current coverage by IPPs and NPPs

21.3 The Information Privacy Principles (IPPs) and National Privacy Principles (NPPs) both set out openness requirements. IPP 5.1 provides that a record-keeper, in possession or control of records containing personal information, must take reasonable steps to enable any person to ascertain:

- whether the record-keeper has possession or control of any records that contain personal information; and
- if so, the nature of the information, the main purposes for which it is used and how to gain access to the record containing the information.

21.4 The record-keeper does not need to comply with IPP 5.1 if required or authorised so to act by a Commonwealth law that provides for access to documents.[1] A record-keeper is also required to maintain a record setting out: the nature of the records of personal information it keeps; the purpose for which each type of record is kept; the classes of individuals about whom records are kept; the period of retention; who is entitled to access and upon what conditions; and how persons can access the information. The record-keeper is to make the record setting out the above information available for public inspection, and is to give the Privacy Commissioner a copy of the record in June each year.[2]

21.5 NPP 5 provides that an organisation must set out in a document clearly expressed policies on its management of personal information. The organisation must make the document available to anyone who asks for it. On request, an organisation must take reasonable steps to let a person know, generally, what sort of personal information it holds, for what purposes, and how it collects, holds, uses and discloses that information.

Separate 'Openness' principle?

21.6 There are obvious parallels between the openness principles in the *Privacy Act*,[3] and the specific notification requirements in the privacy principles.[4] In particular, all of these provisions require notice to be given to individuals in relation to the information-handling practices of the relevant agency or organisation. The main difference between these principles is that the openness principles (IPP 5 and NPP 5) set out the requirements to provide notification of the *general* practices of an agency or organisation in its management of personal information, whereas IPP 2 and NPP 1.3

---

1 The two main pieces of Commonwealth legislation providing for access to documents are the *Freedom of Information Act 1982* (Cth) and the *Archives Act 1983* (Cth). Access to personal information is dealt with in Chs 12 (personal information held by agencies) and 26 (personal information held by organisations).

2 This is discussed further in Part F of this Discussion Paper.

3 See *Privacy Act 1988* (Cth) s 14, IPP 5; sch 3, NPP 5.

4 See Ibid s 14, IPP 2; sch 3, NPP 1.3

require an agency or organisation to notify an individual of how it will, or is likely to, deal with that individual's particular personal information.

21.7 The following question arises: should the requirements relating to openness be dealt with in the same privacy principle that sets out the specific notification requirements? As noted in Chapter 20, some stakeholders suggested linking the notification requirement into a single privacy principle covering all of the issues (though not necessarily all of the content) currently dealt with in IPPs 2 and 5 and NPPs 1.3 and 5.[5]

21.8 Some stakeholders specifically suggested an 'awareness principle', which would cover 'notification requirements at the time of collection and more general information provision'. It was stated that attention should be given to the respective roles of proactive notice and obligations to respond to inquiries.[6]

ALRC's view

21.9 The ALRC acknowledges that the current openness principles (IPP 5 and NPP 5) cover similar ground to the current, and proposed, specific notification principles (IPP 2 and NPP 1.3). Nevertheless, there are also conceptual differences between these principles.

21.10 As explained in Chapter 20, the openness principle requires notification of the general practices of an agency or organisation relating to the handling of *any* personal information, whereas IPP 2 and NPP 1.3 require notification of how an agency or organisation will handle an individual's *particular* personal information. Explanation as to how an agency or organisation will deal with particular personal information that it has already collected from an individual is of assistance to an individual in that, for example, it may encourage the individual to access this particular personal information to determine whether it is accurate.

21.11 Explanation as to how an agency or organisation deals with personal information generally will assist the individual in different ways. For example, it may help an individual decide, before any personal information collection has occurred, whether to transact with the relevant agency or organisation. Such an explanation is also useful for the regulatory system more generally. It would allow, for instance, the Office of the Privacy Commissioner (OPC) to monitor an agency's or organisation's

---

5 See, eg, Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

6 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

compliance with the *Privacy Act* and also to recommend changes to the personal information management practices of the agency or organisation.[7]

21.12 For these reasons, the ALRC's view is that the requirements on an agency or organisation to operate openly and transparently by providing general notice of how it manages personal information should be dealt with in a discrete principle in the proposed UPPs.[8]

Regulatory structure: 'Privacy Policies'

21.13 In structuring this privacy principle, it is necessary to determine how to ensure that agencies and organisations comply with the general goals of openness and transparency. The current regulatory mechanism applicable to *agencies* requires them to:

- maintain a record setting out a number of matters relating to the agency's handling of personal information;[9] and
- make the record available for inspection by the public and give a copy annually to the OPC, which uses this to create the Personal Information Digest.[10]

21.14 Strong concern has been expressed to the ALRC that this system is not operating effectively.[11] Some stakeholders suggested that the Personal Information Digest was of limited utility and the information could be better disseminated in other ways.[12] For example, the Australian Federal Police suggested that this information could be made available 'through self publishing on agency websites in line with guidelines issued by the Privacy Commissioner'.[13]

21.15 The present regulatory mechanism for ensuring transparency in the management of personal information by *organisations* requires them to:

- produce a document, available to anyone on request, which sets out the organisation's privacy policy;

---

7 This is discussed in greater detail in Part F, and especially Ch 42.
8 See Proposal 21–1 below.
9 See *Privacy Act 1988* (Cth) s 14, IPP 5.3.
10 See Ibid s 14, IPP 5.4. See also s 27(1)(g).
11 The concerns about the Personal Information Digest system are described in detail in Ch 44.
12 See Australian Federal Police, *Submission PR 186,* 9 February 2007; Australian Government Department of Human Services, *Submission PR 136,* 19 January 2007.
13 Australian Federal Police, *Submission PR 186,* 9 February 2007.

- take reasonable steps, on request, to inform a person, generally, what sort of personal information it holds, for what purposes, and how it collects, holds, uses and discloses that information.[14]

21.16 In summary, agencies and organisations are required to produce some kind of document setting out their personal information management practices. The matters that must be included in this document vary depending on whether the entity in question is bound by the IPPs or the NPPs. The additional requirement that applies to entities that are bound by the IPPs is that they must furnish a copy of this document to the OPC for inclusion in the Personal Information Digest. A question arises whether these requirements should be consolidated and simplified under the proposed UPPs.

ALRC's view

21.17 The ALRC's view is that the openness requirements, currently located in the IPPs and NPPs, should be consolidated and simplified in the proposed UPPs. The ALRC believes that an agency or organisation should be required to produce a document setting out how it manages personal information and how personal information is collected, held, used and disclosed by it. As noted earlier, this document is referred to in this Discussion Paper as a 'Privacy Policy'.

21.18 The creation of a Privacy Policy could serve a number of useful purposes, including to:

- encourage agencies and organisations to consider how the UPPs apply to their activities so that they can structure their operations to comply with the UPPs;

- allow an individual to become informed, even before he or she enters into a transaction with an agency or organisation, about the agency's or organisation's personal information-handling practices. This will help the individual to make a more informed choice on matters such as whether he or she wishes to transact with the agency or organisation in question; and

- aid in the process of auditing to be carried out by the OPC.[15]

21.19 As noted below, there is some precedent in New South Wales law for a regulatory mechanism along the lines of the ALRC's proposal.[16] The specific matters than an agency or organisation would be required to include in its Privacy Policy, and other associated issues, are discussed below. It should be noted, however, that this

---

14 See *Privacy Act 1988* (Cth) sch 3, NPP 5.

15 The OPC's audit function is discussed in Part F.

16 See *Privacy and Personal Information Protection Act 1998* (NSW) s 33, which requires New South Wales public sector agencies to create and implement 'Privacy Management Plans'.

proposal would ease the compliance burden on agencies because they would no longer be required to submit a document to the OPC for the purposes of the Personal Information Digest.

Proposal 21–1 The proposed Unified Privacy Principles should contain a principle called 'Openness' that sets out the requirements on an agency or organisation to operate openly and transparently by providing general notification in a Privacy Policy of how it manages personal information and how personal information is collected, held, used and disclosed by it.

Matters to be included in a Privacy Policy

21.20 The openness requirements applicable to agencies and organisations differ, in that NPP 5 imposes a general obligation on an organisation to maintain a document setting out its policies on the management of personal information, whereas IPP 5 takes a more prescriptive approach. As noted above, IPP 5 lists the specific matters that must be included in the record summarising how the agency manages personal information.

21.21 Assuming that the ALRC's proposal to require agencies and organisations to produce Privacy Policies is accepted, it is necessary to consider whether to set out general or prescriptive obligations. If a more prescriptive approach is preferred, a further question arises as to what matters the openness principle should specify as being necessary to reveal.[17]

Submissions and consultations

21.22 Given that IPP 5 is already prescriptive as to the matters that must be recorded by agencies, stakeholders generally focused on whether it is preferable to be more prescriptive as to the openness obligations applicable to *organisations*. The OPC submitted that 'the obligations imposed by NPP 5 require more specificity to remain relevant and effective', but this should not allow the principle to become too prescriptive because this would run contrary to the regulatory framework of the Act.[18] Some other stakeholders also noted that greater guidance could be provided in guidelines, as distinct from primary legislation.[19]

21.23 Some stakeholders supported more prescriptive requirements, and suggested that the following requirements should be incorporated:

---

17 See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 4–20.

18 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

19 Australian Bankers' Association Inc, *Submission PR 259,* 19 March 2007; National Australia Bank and MLC Ltd, *Submission PR 148,* 29 January 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007.

- The openness obligations on agencies and organisations should be to: (1) inform individuals how to access the agency's or organisation's information management policies; (2) provide a specific response to any request from an individual for the 'sort' of information held about the individual; and (3) comply with the requirements currently listed in NPP 5.2—that is, to let individuals know the sort of personal information an organisation or agency holds; the purposes for which it is held; and how it collects, holds, uses and discloses the information.[20]

- The OPC should be given the discretion to 'require organisations to publish further information about particular personal information handling projects'.[21]

- Agencies and organisations should make available the 'details of the information systems used to maintain relevant databases' as this would allow individuals to assess the security and other qualities of the information-handling system.[22]

- Customers should be notified of 'material changes to [the organisation's] privacy practices'. This obligation would apply, for instance, where an organisation wishes to use or disclose personal information already collected for an expanded or new secondary purpose.[23]

21.24 Other stakeholders opposed taking a prescriptive approach to the openness obligations. A number of stakeholders argued that the current obligations were sufficiently clear.[24] Some stakeholders argued that a prescriptive approach would hamper the ability of organisations to tailor privacy policies to customers' needs and it may contribute to overly long privacy notices.[25] AAMI stated that requiring organisations to submit their privacy documents to the OPC 'would be unlikely to add any real value'.[26]

21.25 DLA Phillips Fox argued that the less onerous requirements in NPP 5, as compared with IPP 5, reflect that personal information held in the private sector is

more likely to have been voluntarily provided by the individual concerned than that held by government agencies.[27] It was also submitted that NPP 5 and IPP 5 should not be compared in isolation from the other privacy principles. The National Australia Bank and MLC argued that the requirements in the related principle, NPP 1.3, are more onerous than the equivalent IPP 2.[28]

ALRC's view

21.26 The ALRC believes that an appropriate balance can be struck between the objective of providing greater clarity and certainty as to the openness requirements on agencies and organisations, and the competing objective of setting out obligations in a general way. That is, by stressing the goals to be achieved while allowing flexibility to agencies and organisations in how they achieve these goals.[29] The best way to achieve such a balance is to provide enough detail in the relevant privacy principle to ensure that the obligations are clear, and then for the OPC to provide guidance as to the more detailed requirements. This approach aims to reconcile the differing views of stakeholders on this issue.

21.27 As to the specific matters that should be listed in a Privacy Policy, there are some requirements that are common to the IPPs and NPPs. That is, both sets of privacy principles require disclosure of the sort of personal information that is held, and the purposes for which personal information is held.

21.28 There is then a divergence between the NPPs and the IPPs. NPP 5 simply requires disclosure of the organisation's policies on the management of personal information, and how the personal information is collected, held, used and disclosed. On the other hand, IPP 5 requires the following additional categories of information to be made available: (1) the classes of individuals about whom records are kept; (2) the period for which each type of record is kept; (3) the persons who can access personal information and the conditions under which they can access it; and (4) the steps an individual may take to gain access to personal information.

21.29 There seems general consensus that the categories of information required to be disclosed by *both* the IPPs and NPPs should be retained in the proposed UPPs. Additionally, the ALRC believes that the following items should also be included in a Privacy Policy:

- A summary of the avenues of complaint available to individuals in the event that they have a privacy complaint. Although the ALRC proposes that this should also be included in the specific notification obligations,[30] it would be of

---

27 DLA Phillips Fox, *Submission PR 111,* 15 January 2007. See also G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007.

29 See Proposal 15–1 and accompanying text.

30 See Proposal 20–3.

assistance to make this information available in the Privacy Policy as well, because the Privacy Policy is more likely to be generally available. As to the details of this requirement, the ALRC believes that an agency or organisation should generally nominate an internal dispute resolution contact and identify whether it is part of an external dispute resolution scheme (such as the Telecommunications Industry Ombudsman or Banking and Financial Services Ombudsman).[31] The ALRC believes, however, that these details should be provided in guidance from the OPC, rather than being incorporated in the proposed 'Openness' principle itself.

- The steps individuals may take to gain access to personal information held by the entity in question. This would be a minor addition to the Privacy Policy and would help individuals in exercising their access and correction rights.

- The remaining items listed in IPP 5.3 that are not explicitly listed in NPP 5—namely: (1) the types of individual about whom records are kept; (2) the period for which each type of record is kept; and (3) the persons, other than the individual, who can access personal information and the conditions under which they can access it. The consolidation of these requirements in the proposed UPPs would help to ensure that the privacy principles in the Act are generally applicable, and that individuals are able to inform themselves adequately about the personal information management practices of agencies and organisations. Moreover, the ALRC believes that, as organisations will have to inform themselves about these matters in order to comply with other privacy principles, it will not be unreasonably onerous for them to list this information in their Privacy Policy.

Proposal 21–2 The Privacy Policy in the proposed 'Openness' principle should set out an agency's or organisation's policies on the management of personal information, including how the personal information is collected, held, used and disclosed. This document should also include:

(a) what sort of personal information the agency or organisation holds;

(b) the purposes for which personal information is held;

(c) the avenues of complaint available to individuals in the event that they have a privacy complaint;

31 A similar obligation, in relation to internal dispute resolution, is provided for in *Privacy and Personal Information Protection Act 1998* (NSW) s 33(2)(c).

(d) the steps individuals may take to gain access to personal information about them held by the agency or organisation;

(e) the types of individuals about whom records are kept;

(f) the period for which each type of record is kept; and

(g) the persons, other than the individual, who can access personal information and the conditions under which they can access it.

Proposal 21–3 The Office of the Privacy Commissioner should issue guidance on how agencies and organisations can comply with their obligations in the proposed 'Openness' principle to produce and make available a Privacy Policy.

Availability of Privacy Policy

21.30 The NPPs and IPPs differ in that IPP 5 requires a record-keeper to take reasonable steps to enable an individual to ascertain specified matters irrespective of whether the individual has made a request, whereas the corresponding obligation in NPP 5 only applies to an organisation following a request by an individual. The ALRC asked whether the better model, in relation to this issue, is provided by NPP 5 or IPP 5.[32]

Submissions and consultations

21.31 Some stakeholders submitted that the requirements to make certain information available should apply irrespective of whether an individual has requested that information.[33] The Office of the Victorian Privacy Commissioner stated that general details about an organisation's information-handling practices should be readily available even without an individual making a request, but that more detailed information should be the subject of a request.[34] Another stakeholder submitted that, where a request is denied, this should be accompanied by reasons that can be evaluated by the OPC.[35]

32 See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 4–21.

33 Office of the Victorian Privacy Commissioner, *Submission PR 217,* 28 February 2007; W Caelli, *Submission PR 99,* 15 January 2007.

34 Office of the Victorian Privacy Commissioner, *Submission PR 217,* 28 February 2007.

35 W Caelli, *Submission PR 99,* 15 January 2007.

21.32 Other stakeholders suggested that an individual's request is the appropriate trigger for at least some notification requirements.[36] The OPC submitted that, if the notification requirements are otherwise enhanced, the provision of the specific 'sort' or 'types' of information held about an individual should be triggered by the individual's request.[37] AAMI argued that, provided individuals are made aware of their right to request the relevant information, it is more appropriate that an individual's request trigger this obligation.[38]

21.33 The Australian Bankers' Association was concerned about the amount of information that must already be made available to consumers. It argued that, if the obligations were triggered without an individual's request, customers could be over-burdened with paper information.[39] The Australian Government Department of Health and Ageing also favoured extending the request-based approach in the NPPs to agencies, arguing that this would be more cost effective and practically useful for individuals.[40]

ALRC's view

21.34 The ALRC's view is that agencies and organisations should be required to provide an individual with a physical or hard copy of its Privacy Policy only when an individual requests it. This is consistent with the view of a large number of stakeholders. To require the provision of a physical or hard copy without a request would overburden agencies and organisations. It would also be of limited assistance to individuals, who already receive a large amount of general disclosure information in their transactions with government and the private sector.

21.35 Consequently, the ALRC believes that the better approach is for agencies and organisations to make their Privacy Policy readily available electronically—for example, on their website, if they have one. If, however, this option is unavailable or, for any reason, an individual cannot or does not wish to obtain the Privacy Policy in an electronic form and requests a hard copy, the agency or organisation should provide one. If an individual requests a copy of an agency's or organisation's Privacy Policy, he or she should not be charged a fee for this information. This reflects the underlying

principle, discussed in Chapter 29, that an individual should not be unreasonably disadvantaged for seeking to assert or enjoy his or her privacy rights.

Proposal 21–4 An agency or organisation should take reasonable steps to make its Privacy Policy, as referred to in the proposed 'Openness' principle, available without charge to an individual: (a) electronically (for example, on its website, if it possesses one); and (b) in hard copy, on request.

Short form privacy notices

Background

21.36 A short form privacy notice is, simply, a summary of an agency's or organisation's practices for the management of personal information. By creating a short form privacy notice, an agency or organisation will not necessarily fulfil its obligations under the openness principle. They are useful, however, because they can help individuals quickly understand broadly how the agency or organisation in question handles personal information.

21.37 A question arises whether specific provision should be made in the *Privacy Act* for short form privacy notices.[41] The obligation under NPP 5 for an organisation to maintain a document setting out its policies on the management of personal information has been described as 'somewhat vague about what it requires organisations to do'.[42] There is a question whether the requirement should make clear whether short form privacy notices are included.

21.38 In 2005, the OPC recommended that the Australian Government consider amending NPP 5.1 to provide for short form privacy notices. This could also clarify the obligations on organisations to provide notice, and clarify the links between NPP 1.3, which imposes an obligation to take reasonable steps to ensure an individual is aware of specified matters at or before the time of collection of personal information, and NPP 5.1.[43]

21.39 The OPC said that short form notices 'would improve the quality of an organisation's communication with its customers', and further:

> A long privacy notice may not fulfil its purpose of informing a consumer because the consumer may be overwhelmed and confused … The Office's Community Attitudes Survey reports international research that shows that people do not necessarily read privacy notices, partly because they are too long and complex.

---

42 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 91.

43 Ibid, rec 19.

> Longer privacy notices have come about partly as a result of organisations' uncertainty as to the distinction between the primary and secondary purposes of collection and their attempt to avoid 'bundling' consent to a number of purposes of collection … There could be provision for short form notices, followed by a longer notice that includes all the information required by NPPs 1.3 and 1.5.[44]

21.40 The OPC indicated that it would encourage the development of short form privacy notices. It said it would play a more active role in assisting businesses develop their notices.[45]

Submissions and consultations

21.41 A number of stakeholders supported the privacy principles making provision for short form privacy notices.[46] The OPC noted:

> Providing greater detail at the point of collection may, in fact, be counter productive as research shows that many people do not read or do not understand lengthy privacy notices or policies.[47]

21.42 The OPC argued that such a requirement 'may not be overly burdensome and may in fact assist agencies and organisations in promoting consumer confidence'.[48] A number of stakeholders noted that they already provide short form privacy notices.[49]

21.43 Some stakeholders argued that providing short form privacy notices does not obviate the need also to provide more detailed information. In other words, 'layered' privacy notices—involving a series of privacy notices that provide differing levels of detail—can be helpful.[50] The OPC submitted that 'more detailed information regarding the personal information management policies of an organisation or agency' should be made available in a separate document to individuals on request.[51]

---

44 Ibid, 91–92.

45 Ibid, rec 20. In August 2006, the OPC launched its layered privacy policy notice. See Office of the Privacy Commissioner, 'Release of Privacy Impact Assessment Guide and Layered Privacy Policy' (Press Release, 29 August 2006) and Office of the Privacy Commissioner, *Privacy Policy* (2006).

46 See, eg, Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007; Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; Law Council of Australia, *Submission PR 177,* 8 February 2007; Queensland Council for Civil Liberties, *Submission PR 150,* 29 January 2007; National Australia Bank and MLC Ltd, *Submission PR 148,* 29 January 2007; Microsoft Australia, *Submission PR 113,* 15 January 2007.

48 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

49 AAMI, *Submission PR 147,* 29 January 2007; DLA Phillips Fox, *Submission PR 111,* 15 January 2007.

50 Office of the Victorian Privacy Commissioner, *Submission PR 217,* 28 February 2007; Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; National Australia Bank and MLC Ltd, *Submission PR 148,* 29 January 2007; Microsoft Australia, *Submission PR 113,* 15 January 2007.

51 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

21.44 On the other hand, while noting that short form privacy notices may be beneficial in certain circumstances, some stakeholders submitted that they should not be mandatory.[52]

ALRC's view

21.45 The ALRC agrees that short form privacy notices are of considerable assistance in communicating the basic outline of the personal information management practices of agencies and organisations. Any provision for, or encouragement of, short form privacy notices, however, should not be at the expense of an agency or organisation producing a detailed and comprehensive Privacy Policy, and also providing specific notification as discussed in Chapter 20.

21.46 The ALRC is, therefore, of the view that best practice by agencies and organisations is to create 'layered' privacy notices. This involves making at least two versions of a privacy notice available to individuals—a comprehensive and detailed explanation of the entity's privacy practices, and a more abbreviated summary. Both can be made available easily and cheaply in an electronic form, such as via an agency's or organisation's website.

21.47 On the other hand, given the desire to maintain a light-touch approach to the privacy principles,[53] the ALRC believes that it is more appropriate for the OPC to encourage and guide the adoption of short form privacy notices, rather than mandating them in the *Privacy Act*. This approach is consistent with the recommendation of the OPC review of the private sector provisions of the *Privacy Act*.[54]

Proposal 21–5 The Office of the Privacy Commissioner should continue to encourage and assist agencies and organisations to make available short form privacy notices summarising their personal information handling practices. Short form privacy notices should be seen as supplementing the more detailed information that is required to be made available to individuals under the *Privacy Act*.

Summary of proposed 'Openness' principle

21.48 In summary, the ALRC's view is that the fourth principle in the proposed UPPs should be called 'Openness'. It should appear as follows.

52 See, eg, Australian Bankers' Association Inc, *Submission PR 259,* 19 March 2007.
53 See Proposal 15–1.
54 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 20.

UPP 4. Openness

4.1 An agency or organisation must create a Privacy Policy that sets out the agency's or organisation's policies on the management of personal information, including how the personal information is collected, held, used and disclosed. This document should also include:

(a) what sort of personal information the agency or organisation holds;

(b) the purposes for which personal information is held;

(c) the avenues of complaint available to individuals in the event that they have a privacy complaint;

(d) the steps individuals may take to gain access to personal information about them held by the agency or organisation in question;

(e) the types of individual about whom records are kept;

(f) the period for which each type of record is kept; and

(g) the persons, other than the individual, who can access personal information and the conditions under which they can access it.

4.2 An agency or organisation should take reasonable steps to make its Privacy Policy available without charge to an individual:

(a) electronically, for example, on its website (if it possesses one); and

(b) in hard copy, on request.

Introduction

22.1 The *Privacy Act 1988* (Cth) provides that, if an agency or organisation has complied with all relevant obligations in collecting personal information and the information was collected for a lawful purpose, the agency or organisation is permitted to use or disclose the information for that lawful purpose of collection. The

Information Privacy Principles (IPPs) and National Privacy Principles (NPPs), however, generally prohibit the use or disclosure of personal information for a purpose other than the lawful purpose for which the information was collected.[1] Nevertheless, this general prohibition is subject to certain, limited exceptions, which allow agencies and organisations to use or disclose personal information they have lawfully collected for a secondary purpose in some situations.

22.2 The main aim of the use and disclosure principles (NPP 2 and IPPs 9–11) is to restrict use and disclosure of personal information for a secondary purpose of collection. Research conducted in 2001 on behalf of the Office of the Privacy Commissioner (OPC) indicated that Australians were worried about the use of personal information for a purpose other than its original purpose. Of 1,524 people interviewed, 68% stated that this was a concern to them, 41% stated it was a great concern and 23% recorded little or no concern.[2] Similarly, 35% of complaints to the OPC under the NPPs in the financial year ending 30 June 2006 related to the use or disclosure of personal information.[3] This represented the largest single category of complaint.

22.3 The OPC has reaffirmed the importance of maintaining a distinction between the primary and secondary purposes of collection, observing that this distinction allows an individual to 'maintain … knowledge and control over when personal information may be used and disclosed'.[4] It also dismissed the suggestion that the line between primary and secondary purpose is unclear:

> Determining the primary purpose of collection should always be possible. Where an organisation collects personal information directly from the individual the context in which the information is collected will help identify the primary purpose of collection. When personal information is collected indirectly, the organisation's use of the information soon after collection is a good indication of the primary purpose of collection.[5]

22.4 Given the main aim of these privacy principles is to restrict, by way of a general prohibition, the use and disclosure of personal information for a purpose other than the primary purpose of collection, the main focus of this chapter is to determine what should be the *character* and *scope* of the exceptions to this general prohibition.

22.5 This chapter covers the following main issues. First, it considers whether the use and disclosure provisions in the IPPs and NPP should be consolidated into a single use and disclosure principle in the proposed Unified Privacy Principles (UPPs). Next, the chapter addresses a number of exceptions to the general prohibition against using or disclosing personal information for a secondary purpose. The following exceptions are

---

1 This is referred to as use or disclosure for a 'secondary purpose'.

4 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

5 Ibid.

of particular significance: use or disclosure for a related secondary purpose; use or disclosure in the event of an emergency; and where use or disclosure is required or authorised by law. Finally, the chapter considers whether agencies and organisations should be required to create a log of all disclosures of personal information that they make.

Current coverage by IPPs and NPPs

22.6 IPPs 9–11 deal with use and disclosure of personal information by agencies. IPP 9 provides that personal information may be used only for relevant purposes. IPPs 10 and 11, respectively, impose limitations on the use and disclosure of personal information. For organisations, the rules on the use and disclosure of personal information are set out in a single privacy principle, NPP 2.

22.7 NPP 2 and IPPs 10 and 11 restrict the use and disclosure of personal information for a purpose other than the primary purpose of collection. NPP 2 expressly uses the language of 'primary purpose' and 'secondary purpose' of collection. 'Secondary purpose' is defined as any purpose other than the primary purpose of collection.[6] In contrast, the IPPs do not use the language of 'primary' and 'secondary' purpose; instead, IPP 10 provides that where personal information is obtained for a *particular purpose* there are constraints on its use for *any other purpose*. There is, however, no significant difference in the concepts addressed here. Therefore, for the sake of simplicity, this Discussion Paper will refer to 'primary' and 'secondary' purposes for both the IPPs and NPPs.

22.8 A critical difference between the IPPs and NPPs is that NPP 2 contains provisions that permit use *and* disclosure of personal information for a secondary purpose, whereas the IPPs only permit *use* for a secondary purpose—that is, there is no mechanism for disclosure for a secondary purpose under IPP 11. IPP 11, however, does permit disclosure to a third party where the individual concerned is reasonably likely to have been aware, or made aware under IPP 2, that information of that kind is usually passed to that third party.

22.9 There are some important similarities between NPP 2 and IPPs 10 and 11. For example, NPP 2.1(a) and IPP 10.1(e) provide exceptions where the secondary purpose is sufficiently related to the primary purpose. Secondary purpose use and disclosure are also permitted under the IPPs and NPPs where:

- the individual consents to the use or disclosure;
- it is required or authorised by law;

---

6 'Primary purpose' is not defined in the Act but appears to relate to the functions or activities of an organisation. See *Privacy Act 1988* (Cth) sch 3, NPP 1.1.

- it is reasonably necessary to enforce the criminal law or a law imposing a pecuniary penalty or to protect the public revenue; or

- there is a serious and imminent threat to the life or health of an individual.

22.10 The NPPs contain a greater number of exceptions to the general prohibition against secondary purpose use and disclosure than are set out in the IPPs. In particular, NPP 2 permits secondary purpose use or disclosure:

- for the safety of an individual, public health and public safety;

- in the preparation for, or conduct of, court or tribunal proceedings;

- for the prevention and investigation of 'seriously improper conduct';

- for direct marketing where specified criteria are met;[7]

- where the organisation reasonably believes that the use or disclosure is reasonably necessary for certain specified functions of an enforcement body; or

- of health information for research or statistics relevant to public health and safety where specified criteria are met.

22.11 In addition, unlike the IPPs, NPP 2 contains notes that indicate that NPP 2 is not intended to deter organisations from lawfully cooperating with law enforcement agencies and that an organisation is always entitled not to disclose personal information in the absence of a legal obligation to disclose it.[8]

Towards a single 'Use and Disclosure' principle

22.12 Before considering the exceptions to the use and disclosure principle, it is first necessary to address the broader issue of how to structure the use and disclosure provisions in the privacy principles. This requires the resolution of two questions.

22.13 First, should *agencies* be subject to a single privacy principle dealing with use and disclosure? As noted above, the IPPs contain separate 'use' and 'disclosure' principles. Sometimes there is only a fine distinction between disclosure and use, and so it might be more practical for the issues to be dealt with in a single principle. Moreover, the fact that the IPPs treat use and disclosure separately differs from the NPPs and the Organisation for Economic Co-operation and Development's *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980) (OECD

7 Direct marketing is dealt with separately in Ch 23.
8 See *Privacy Act 1988* (Cth) sch 3, NPP 2, Notes 1–3.

Guidelines), which each contain a single 'use and disclosure' principle.[9] In light of this, the ALRC asked, in Issues Paper, *Review of Privacy* (IP 31), whether it would be desirable for agencies to be subject to a single privacy principle dealing with use and disclosure.[10]

22.14 Secondly, insofar as the IPPs and NPPs impose differing use and disclosure requirements on agencies and organisations respectively, how should these differences be accommodated in a single privacy principle that applies both to agencies and organisations?

Submissions and consultations

22.15 The vast majority of stakeholders that commented on this issue argued that agencies should be subject to a single privacy principle dealing with use and disclosure. The OPC submitted that a single use and disclosure principle would

> assist in providing a consistent approach for the handling of personal information and may go some way to alleviating the confusion that surrounds the identification of whether certain activities and information handling practices are considered a 'use' or a 'disclosure' and which provisions and principles should apply.[11]

22.16 A number of other stakeholders expressed a similar view.[12] The National Health and Medical Research Council (NHMRC) noted that often 'whether an information transaction is a "use" or a "disclosure" is determined by corporate structures rather than by practical differences in information-handling practices'. Moreover, a single use and disclosure principle would not prevent stricter protections being imposed where appropriate:

> Where a higher degree of protection is required for a category of information transaction (e.g. in relation to disclosure for some purposes) it can still be provided within a single 'use and disclosure' principle.[13]

22.17 Some private sector stakeholders also favoured a single use and disclosure principle. It was submitted that where a private sector organisation must comply with the IPPs pursuant to a contract it has entered into with a public sector entity, it would

13 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

be 'useful' for the Act to deal 'consistently with the principles relating to all dealings with personal information, including use and disclosure'.[14]

22.18 A number of stakeholders submitted that, in the event that the IPPs and NPPs are consolidated into a single set of privacy principles (the UPPs),[15] the 'use and disclosure' principle should be modelled on NPP 2 (as distinct from IPPs 9–11).[16]

22.19 Some stakeholders preferred that agencies be subject to separate use and disclosure principles. The Australian Federal Police (AFP) took the view that the current structure of the IPPs is working adequately and does not need to be changed.[17] One stakeholder stated that there remains a qualitative difference between internal use of information and its disclosure, and it would be inappropriate to restrict an agency from using personal information only to the circumstances listed in IPP 11. This stakeholder submitted that, if a single use and disclosure principle were adopted, an agency should be allowed to use or disclose the information for a purpose that is directly related to the purpose for which the information was collected, as is currently permitted by IPP 10.1(e).[18]

22.20 The Australian Government Department of Human Services submitted that separate principles align better with 'secrecy provisions' in other legislation.[19] Professor William Caelli's basis for retaining separate use and disclosure principles was that 'disclosure alone could lead to … identity theft problems … as distinct from any threats possible under agency/organisational usage alone'.[20]

22.21 Finally, some stakeholders were ambivalent about whether agencies should be subject to a single use and disclosure principle. This was either because this issue distracted from the more important question of what should be the *nature* of an agency's use and disclosure obligations,[21] or because the competing arguments were difficult to resolve and so it was preferred that the question remain open.[22]

ALRC's view

22.22 The ALRC's view is that it is desirable to move to a single use and disclosure principle that applies to agencies and organisations. This would provide a number of benefits. First, it would assist in the process of consolidating the IPPs and NPPs into a

single set of privacy principles, the UPPs.[23] Secondly, it would help alleviate the problem that currently applies where organisations that are bound by the NPPs act as contracted service providers, and are contractually required to act consistently also with the IPPs.[24]

22.23 The ALRC accepts that there is a conceptual difference between 'use' and 'disclosure'. This is reflected in s 6(1) of the *Privacy Act*, which does not define the concept of disclosure, but does provide the following limited definition of 'use':

> ***use***, in relation to information, does not include mere disclosure of the information, but does include the inclusion of the information in a publication.

22.24 This difference is reflected in the dictionary definition of these terms. The *Macquarie Dictionary* defines 'use' to mean, relevantly: 'to employ for some purpose; put into service; turn to account'.[25] On the other hand, 'disclose' is defined to mean, relevantly: 'to cause to appear; allow to be seen; make known; reveal'.[26] Therefore, the conceptual difference between use and disclosure of personal information seems to lie in the fact that 'use' involves an active process of putting the information into service by the user, whereas 'disclosure' implies that the discloser merely acts as a conduit that enables information to be passed to another person.

22.25 Some stakeholders expressed concern that, if the rules dealing with use and disclosure of personal information by agencies were located in a single privacy principle, this would risk conflating the concepts of use and disclosure. The ALRC's view, however, is that such a reform could be carried out without creating any such conflation. For example, the fact that an individual, X, consented to the disclosure of his or her personal information to another person, Y, cannot logically mean that X also consented to the use of that information by a third person, Z, for an unrelated secondary purpose. This is how the NPPs, which deal with use and disclosure in a single privacy principle, already operate. In a practical sense, use and disclosure will often be dealt with identically; however, a single use and disclosure principle does not preclude use and disclosure being treated differently where appropriate.

Proposal 22–1 The proposed Unified Privacy Principles should contain a principle called 'Use and Disclosure' that sets out the requirements on agencies and organisations in respect of the use or disclosure of personal information for a purpose other than the primary purpose of collecting the information.

---

23 See Proposal 15–2.
24 See the further discussion on contracted service providers in Part C.
25 *Macquarie Dictionary* (online ed, 2005).
26 Ibid. Note that the noun 'disclosure' is defined solely with reference to the verb 'disclose'.

Use and disclosure of personal information for a related secondary purpose

Background

22.26 As noted above, under both the IPPs and NPPs, the general prohibition against the use or disclosure of personal information for a secondary purpose does not apply where that secondary purpose has the requisite connection with the primary purpose of collection. NPP 2.1(a) allows use or disclosure of personal information for a secondary purpose if the:

- individual would reasonably expect the organisation to use the information for the secondary purpose; and

- secondary purpose is related to the primary purpose of collection,[27] or, if the information in question is 'sensitive information', the secondary purpose is *directly* related to the primary purpose. The stricter test that applies in respect of sensitive information provides an added degree of protection.[28]

22.27 The IPPs also contain an exception in respect of related secondary *use* of personal information; however, there is no such exception in respect of the *disclosure* of personal information for a secondary purpose. The exception is provided in IPP 10.1(e), which requires that the secondary purpose must be 'directly related' to the primary purpose. IPP 10, however, does not impose the additional 'reasonable expectation' test that is provided in NPP 2.1(a).

22.28 In IP 31, the ALRC asked, in relation to NPP 2.1(a) and IPP 10(e), whether there should be:

- a 'direct' relationship between the secondary and primary purposes of collection before an *organisation* can use or disclose non-sensitive personal information for a secondary purpose;[29] and

- an additional requirement on an *agency* that the individual concerned would reasonably expect the agency to use the information for that other purpose.[30]

---

27 According to the OPC, this means that 'the secondary purpose must be something that arises in the context of the primary purpose': Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

28 Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), [342].

30 See Ibid, Question 4–9.

Submissions and consultations

Connection between primary and secondary purpose: direct or indirect?

22.29 A number of stakeholders supported amending the related secondary purpose exception to bring it in line with IPP 10(e) for agencies and organisations. This would require a 'direct' relationship between the secondary and primary purposes of collection in order for an agency or organisation to avail itself of this exception by using or disclosing personal information (sensitive or non-sensitive) for a secondary purpose.[31] Some stakeholders noted that this would provide greater clarity to those subject to the principle, particularly given that it can be difficult to determine whether particular information is or is not 'sensitive'.[32] On the other hand, the Office of the Information Commissioner Northern Territory submitted that a better way to achieve clarity might be to provide examples (in the Act or by way of OPC guidance) illustrating where a relationship is direct and where it is indirect.[33]

22.30 One submission argued that a requirement of a 'direct' relationship was easier to apply than the equivalent provisions in the European Parliament's *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (1995) (EU Directive) and the Asia-Pacific Economic Cooperation (APEC) Privacy Framework, which require that the primary and secondary purposes to be 'compatible'.[34]

22.31 On the other hand, a number of stakeholders opposed amending the exception to require a 'direct' relationship between the secondary and primary purpose of collection for all categories of personal information. ANZ, for example, submitted that this would 'result in organisations requiring consent for the most obvious uses, that while not directly related, are expected by the customer'. It gave the following example:

> [T]he information provided in an application form for a credit card may be interpreted as being provided for the purpose of the application and the ongoing provision of the product, once approved, may be interpreted as a secondary purpose. However, the customer would expect the information collected on the application form to be used for the ongoing provision of the product for which they applied.[35]

34 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007. One stakeholder, however, suggested that the primary and secondary purposes should be 'consistent': Confidential, *Submission PR 143,* 24 January 2007.

35 ANZ, *Submission PR 173,* 6 February 2007.

22.32 The Commonwealth Scientific and Industrial Research Organisation (CSIRO) was also concerned that such an amendment 'would introduce further restrictions on public health research'. It stated:

> A too-restrictive requirement for a 'direct' relationship between the secondary and primary purpose could seriously limit the utility of a valuable resource. If existing datasets cannot be used for a new purpose because of this criterion, a new dataset may need to be created. In this situation the total cost of data collection would increase, the total burden of survey and study participation would increase and there will be a delay in realising the potential benefits of research.[36]

22.33 Veda Advantage argued that the appropriate criterion in determining whether a secondary use or disclosure should be permitted ought to be whether this would 'pose a significant risk of harm' to the individual in question.[37]

Reasonable expectation of use or disclosure

22.34 A number of stakeholders supported extending to agencies the requirement, already applicable to organisations, that the individual concerned would reasonably expect the agency to use or disclose the personal information for the secondary purpose in question.[38]

22.35 The OPC suggested that the reasonable expectation requirement is meant to be understood in a common sense way and is not overly onerous, pointing out that if an entity is unsure what would be the reasonable expectation of an individual in particular circumstances, it could simply seek the individual's consent.[39] The NHMRC supported such a requirement provided that the test is objective, rather than subjective.[40] On the other hand, there was some concern that a 'reasonable expectation' requirement is 'too vague and open to severe abuse'—particularly, by those engaging in data-mining—and this requirement should be clarified.[41]

22.36 Some stakeholders, however, opposed this condition being extended to agencies, arguing that the current provisions are adequate.[42] The Australian Government Department of Families, Community Services and Indigenous Affairs (FaCSIA) submitted that such a requirement would restrict how an agency uses personal

information and 'could ultimately limit the extent to which an agency could assist individuals'. It gave the following example:

> FaCSIA administers a wide range of programmes to assist individuals. Any particular individual may be benefiting from a multiple number of programmes administered by FaCSIA. Where information about an individual is collected for the purposes of providing a particular programme, FaCSIA considers it important to retain the discretion to use such information for other reasonable purposes, such as to identify and notify the individual of another programme which the individual may benefit from.[43]

22.37 This view was challenged, however, by the OPC, which argued that the reform discussed here would not greatly change the status quo:

> The general policy concept behind IPP 10.1 is that people usually give personal information to an agency with a specific purpose in mind, such as receiving a benefit payment or a tax refund and they should be able to expect the information to be used for that purpose only… [The OPC] believes that IPP 10.1 already includes the concept of reasonable expectation and the addition of such provisions for agencies through the adoption of a single set of privacy principles would not represent an extra burden for agencies.[44]

ALRC's view

Connection between primary and secondary purpose: direct or indirect?

22.38 There was considerable disagreement among stakeholders as to whether the 'related purpose' exception in the use and disclosure principle should require a *direct* relationship between the secondary purpose and primary purpose in respect of both sensitive and non-sensitive personal information.

22.39 While acknowledging that such an amendment may provide some added protection against use and disclosure of an individual's personal information that is beyond the individual's reasonable expectation, the ALRC believes that the disadvantages of such an approach outweigh the potential benefits. The ALRC is concerned about two problems in particular.

22.40 First, such an approach could be very onerous on data collectors, effectively requiring them to seek consent whenever they wish to use or disclose an individual's personal information for a purpose that is not precisely 'on all fours' with the original purpose of collection. This problem is particularly prevalent where an individual is a customer of a large organisation that handles the individual's personal information for multiple products or services. As a corollary, there is little, if any, real benefit for the individual in being asked repeatedly to consent to particular uses and disclosures of his

---

43 Australian Government Department of Families Community Services and Indigenous Affairs, *Submission PR 162,* 31 January 2007.

44 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

or her personal information. Indeed, such a requirement might encourage organisations to seek 'bundled' consent, something that the ALRC is attempting to avoid.[45]

22.41 Secondly, there is also a concern that a direct relationship test may hamper legitimate scientific and other research. This concern is likely to be addressed, at least in part, by the more detailed provisions proposed by the ALRC to deal with the secondary use and disclosure of personal information in the health and research contexts.[46] The ALRC acknowledges, however, that such provisions will not necessarily cover all aspects of legitimate research and, if the related secondary purpose exception is too narrow, it could hamper some research carried out, especially by private sector organisations.

22.42 In conclusion, the ALRC's view is that the related secondary purpose exception in the 'Use and Disclosure' principle of the proposed UPPs should import, as its first limb, the equivalent provision in NPP 2.1(a)(i). That is, in order to avail itself of this exception, an agency or organisation should be required to show that the secondary purpose is related to the primary purpose of collection for all personal information other than sensitive information, for which a direct relationship should continue to be required.

Reasonable expectation of use or disclosure

22.43 The term 'reasonable expectation' imports an objective test of what a hypothetical reasonable individual would expect in the relevant circumstances. A significant majority of stakeholders supported, as a condition to the exercise of this exception by agencies and organisations, that the individual concerned would reasonably expect the agency or organisation to use the information for the secondary purpose in question. The ALRC agrees with the argument of the OPC and others that such a condition is a small but important protection against the misuse of an individual's personal information. The ALRC believes that such a requirement provides an added protection for individuals to require agencies, as well as organisations, only to use and disclose personal information for appropriate purposes.

22.44 This condition is not particularly onerous, given that it is an objective test that does not require an agency or organisation to consult the individual on each proposed secondary use or disclosure of the individual's personal information. It is unlikely to hamper an agency or organisation in providing a service to an individual because it is strongly arguable, as the OPC submitted, that such a requirement is already implied in IPP 10.1(e). If a primary purpose is related to a secondary purpose, it is likely that an individual would reasonably expect the data collector to use or disclose his or her personal information for that secondary purpose. In this way, one of the main effects of the additional reasonable expectation requirement is to remove any potential ambiguity as to the scope of the secondary use and disclosure exception.

---

45 The issue of 'bundled consent' is discussed in Ch 16. See, especially, Proposal 16–1.

46 See Part H.

Proposal 22–2 The proposed 'Use and Disclosure' principle should contain an exception permitting an agency or organisation to use or disclose an individual's personal information for a purpose (the secondary purpose) other than the primary purpose of collection if the:

(a) secondary purpose is related to the primary purpose and, if the personal information is sensitive information, directly related to the primary purpose of collection; and

(b) individual would reasonably expect the agency or organisation to use or disclose the information for the secondary purpose.

Emergencies, disasters and threats to life or health

Background

22.45 Particular issues are raised when it is necessary to handle personal information after, or during, an emergency, disaster or some other kind of threat to a person's life or health. Under the *Privacy Act*, there are currently four alternative regimes for handling personal information in such situations:

- under the IPPs, if the personal information is to be handled by an agency;
- under the NPPs or an approved privacy code, if the personal information is to be handled by an organisation;
- subject to the rules on collection, use and disclosure in Part VIA of the Act, if there is the requisite connection to an emergency that has been the subject of a ministerial declaration;[47] or
- without reference to any of the above rules, if the act or practice is the subject of a temporary public interest determination made by the Privacy Commissioner in conformity with Division 2 of Part VI of the Act.[48]

22.46 This part of the chapter considers the handling of personal information under the privacy principles. As noted above, Part VIA provides a separate regime for the handling of personal information in the event of a declared emergency. Part VIA was recently introduced into the Act, commencing operation on 7 December 2006—after

47 The Part VIA regime is discussed in Ch 40.
48 Temporary public interest determinations are discussed in Ch 44.

the release of IP 31.[49] It does not alter the IPPs or NPPs themselves; rather, it displaces some of the requirements in the IPPs and NPPs by providing a separate regime for the collection, use and disclosure of personal information where there is the requisite connection to an emergency that has been the subject of a declaration by the Prime Minister or a Minister. Given that some of the problems with the IPPs and NPPs in this area may have been obviated by the introduction of Part VIA, this part of the chapter considers the following question: what reforms are needed to the privacy principles to deal with personal information handling in emergency situations that are not subject to the Part VIA regime?

22.47 Both the IPPs and NPPs provide for personal information to be used and disclosed, subject to conditions, in certain emergency situations. For agencies, IPPs 10 and 11 permit a record-keeper to use or disclose personal information for a secondary purpose provided he or she reasonably believes this is necessary to prevent or lessen a serious and imminent threat to a person's life or health.[50]

22.48 NPP 2 contains two similar exceptions that permit an organisation to use or disclose personal information for a secondary purpose where:

- the organisation reasonably believes the use or disclosure is necessary to lessen or prevent a serious and imminent threat to an individual's life, health or safety, or a serious threat to public health or public safety; or

- in the case of an individual's genetic information, the organisation reasonably believes the use or disclosure to a genetic relative of the individual is necessary to lessen or prevent a serious (but not necessarily imminent) threat to the life, health or safety of a genetic relative of the individual.[51]

22.49 Stakeholders identified several practical problems arising from the operation of these provisions. These concerns led the ALRC to ask in IP 31 whether agencies and organisations should be permitted to use or disclose personal information 'where there is a reasonable belief that disclosure is necessary to prevent a serious and/or imminent threat to an individual's safety or welfare, or a serious threat to public health, public safety or public welfare'. The ALRC also asked how the use and disclosure principle should deal with 'times of emergency'.[52]

Submissions and consultations

22.50 Both the IPPs and NPPs permit disclosure in the event of certain 'serious and imminent' threats. In relation to the IPPs, the Community Services Ministers' Advisory Council expressed concern that the desire by agencies to protect individuals' privacy

---

49 *Privacy Legislation Amendment (Emergencies and Disasters) Act 2006* (Cth).
50 *Privacy Act 1988* (Cth) s 14, IPP 10.1(b), 11.1(c).
51 The operation of this exception is considered in Part H.
52 See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 4–7.

can make them unwilling to disclose personal information, and this can, at times, hamper the protection and care of vulnerable people. The Council argued it was too difficult to establish that a threat to a person's life or health was both 'serious and imminent' in order to justify a disclosure, stating:

> Other legislation, such as in the child welfare arena, enables the sharing of information when there is 'reasonable suspicion' or concern of abuse and risk. This is a lower threshold, often more appropriate in the case of vulnerable people, and more fitting with the concepts of early intervention and practice.[53]

22.51 In relation to the NPPs, concern was expressed, before Part VIA of the Act was introduced, that NPP 2 does not cater adequately for the disclosure of personal information by organisations to government agencies and other relevant bodies to deal with emergencies and disaster recoveries where the relevant threat is not both 'serious' *and* 'imminent'. For example, after an offshore natural disaster has occurred, a threat to a person's safety may no longer be 'imminent'. However, for identification purposes and to provide information to family members, the Australian Government Department of Foreign Affairs and Trade (DFAT) may need to ascertain—for example, from an airline or travel agent—whether a particular individual was in the affected location at the time of the disaster.[54] If the situation in question is covered by Part VIA of the Act, this problem no longer exists. A question remains, however, as to whether the privacy principles should also be amended to make it easier to share personal information in an emergency situation that is not covered by Part VIA.

22.52 A large number of stakeholders submitted that there should be a dilution of the requirement that a threat be *both* imminent *and* serious before personal information can be used or disclosed under the IPPs and NPPs. Reasons for this include that the current provision:

- operates as a barrier to stop agencies from doing what is necessary to meet 'a credible threat';[55]
- discourages officers from the Australian Government Department of Immigration and Citizenship from sharing information with officers of the Family Court of Australia in respect of a child under the Court's jurisdiction who may be likely to be abducted;[56]

56 Confidential, *Submission PR 214,* 27 February 2007.

- encourages differing interpretations and 'erring on the side of caution, or non-disclosure, in order to protect perceived agency or professional interests (which does not necessarily support the safety of the individuals concerned)';[57] and

- creates a 'catch 22' situation because sometimes a proper assessment of whether a threat is serious and imminent can only be made after the relevant person is aware of the personal information in question.[58]

22.53 Some stakeholders suggested alternative formulations of the threat level requirement. Two stakeholders submitted that the threat level should be 'serious *or* imminent', as distinct from 'serious *and* imminent'.[59]

22.54 A number of stakeholders submitted that the test should simply be whether the threat is 'serious'—that is, the requirement that the threat also be 'imminent' should be removed.[60] The NHMRC stated that 'the requirement for a threat to be imminent creates additional interpretive uncertainty'.[61] The Government of South Australia submitted that the requirement of imminence 'may fuel escalation of a crisis' and 'can also be difficult to establish because the information about the extent and nature of a threat is held by another party'.[62] It was also noted that removing the 'imminent' element of the exception would enhance consistency across legislation dealing with privacy, secrecy and confidentiality.[63]

22.55 Some stakeholders preferred a different formulation altogether, with some suggesting that the exception should apply where the threat level is 'significant', the definition of which may involve a balancing process between the public interest and privacy implications of disclosure.[64]

22.56 Other stakeholders proposed greater specificity in the wording of the exception, enabling disclosure where the person reasonably believes it is necessary to protect a child from abuse or neglect.[65]

22.57 The OPC favoured the retention of the condition that a relevant threat be both serious and imminent. It submitted that:

> Should the gravity of the threat not involve a measure of imminence, then the individual should retain the usual level of privacy protection as other mechanisms may be available to provide for the disclosure of the information. For example, an agency or organisation could seek the individual's consent before disclosure of personal information occurs (should none of the other exceptions apply).[66]

22.58 The OPC further argued that the advent of Part VIA and the public interest determination provisions adequately address the concerns of DFAT and others about sharing information in emergency situations.[67]

ALRC's view

22.59 The ALRC shares the view of a large number of stakeholders that the current exceptions in respect of emergency situations are too narrow. The main problem seems to relate to the exception where the data collector reasonably believes that secondary use or disclosure 'is necessary to lessen or prevent … a serious and imminent threat to an individual's life, health or safety'.[68] There is considerable concern that the requirement that the threat must be both serious *and* imminent is too difficult to satisfy and that it can lead to personal information not being used or disclosed in circumstances where it should be. The ALRC agrees that this test is too difficult to satisfy and that it should be relaxed.

22.60 Three main alternative terms were suggested by stakeholders. The first suggestion was that the conjunctive *and* in the term 'serious and imminent' should be replaced by the disjunctive *or*. This would allow secondary use or disclosure where the relevant threat is either serious or imminent. The ALRC believes, however, that where a threat is merely imminent, but not serious, this is not enough to displace the presumptive position that an individual's personal information will not be used or disclosed for a secondary purpose.

22.61 The ALRC believes that any analysis of whether a threat is 'serious' must involve consideration of the gravity of the potential outcome as well as the relative likelihood. Take, as a hypothetical example, the threat to an individual sitting under a tree that he or she will be struck by a falling tree branch. One could sensibly argue that the threat is imminent in that a breach could fall at any time. Assessing whether the threat is serious with reference to the potential outcome may lead one to the conclusion

---

66 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

67 Ibid.

68 See *Privacy Act 1988* (Cth) sch 3, NPP 2.1(e)(i). Note that the use and disclosure principles in the IPPs contain provisions that are substantively similar. The difference is that they relate only to threats to an individual's 'life or health' without mentioning the additional category of 'safety': see IPPs 10.1(b) and 11.1(c).

that the threat is indeed serious because, if a heavy branch landed on the individual's head, it could injure or kill him or her. To end the analysis here, however, would be premature because, in the ordinary course of events, it is very unlikely that a branch would fall on the individual at precisely the time he or she is sitting under the tree. In other words, if a threat carries a potentially grave outcome but is highly unlikely to occur, it is not 'serious', in the sense that it should not cause us to alter one's course of conduct in any meaningful way.

22.62 In summary, therefore, the ALRC's view is that there should not be an exception to the general prohibition against secondary purpose use or disclosure to cover threats that the vast majority of people consider to be tolerable. It would be a significant dilution of an individual's privacy rights if the exception were to apply to imminent, but non-serious, threats.

22.63 Some stakeholders suggested replacing the term 'serious and imminent' with 'significant'. The problem with this suggestion is that the term 'significant' does not have a particular meaning in this context and would need to be explained further. Such an amendment could cause further ambiguity.

22.64 The third, and most popular, suggestion was to delete the words 'and imminent', thereby making the exception applicable where the relevant threat is serious, but not necessarily imminent. The ALRC prefers this approach because it would allow an agency or organisation to take preventative action to stop a threat from developing to a point where the danger, which one is seeking to avoid, is likely to eventuate. As a number of stakeholders have observed, at this point it is often too late to take meaningful preventative action. Unlike the first option noted above, the ALRC believes that this formulation strikes an appropriate balance between respecting the privacy rights of an individual and the public interest in averting threats to people's life, health and safety.

22.65 Finally, the ALRC notes that the threat categories in NPP 2.1(e)(i) of 'life, health or safety' were not the subject of detailed comment by stakeholders. Neither were the threat categories in NPP 2.1(e)(ii)—namely, 'public health or public safety'—which currently operate only in relation to 'a serious threat'. The ALRC's view is that these categories remain appropriate.

Proposal 22–3 The proposed 'Use and Disclosure' principle should contain an exception permitting an agency or organisation to use or disclose an individual's personal information for a purpose (the secondary purpose) other than the primary purpose of collection if the agency or organisation reasonably believes that the use or disclosure for the secondary purpose is necessary to lessen or prevent a serious threat to: (a) an individual's life, health or safety; or (b) public health or public safety.

Missing persons

Background

22.66 Concern has been expressed that the IPPs and NPPs do not cover adequately the disclosure of personal information to law enforcement authorities, and the use of the information by them, when undertaking functions that may not involve a criminal offence or breach of the law but are nevertheless in the public interest.[69] The archetypal example of this is missing person investigations by the police and others. The AFP observed that currently the Act 'arguably … denies a missing person the knowledge or right to know that their relatives and friends are looking for them'.[70]

22.67 IPP 11 has been seen as particularly problematic because it does not contain a note equivalent to that under NPP 2.1, which states that the principle is not intended to deter organisations from lawfully cooperating with agencies performing law enforcement functions. In contrast, Tasmanian privacy legislation expressly allows the use and disclosure of personal information where the secondary purpose is the investigation of missing persons by a law enforcement agency.[71]

22.68 The OPC's review of the private sector provisions of the *Privacy Act* (OPC Review) identified problems in applying the NPPs in this area.[72] For example, the AFP noted the reluctance of some organisations to provide personal information due to: ignorance of the fact that the NPPs permitted them to do so for law enforcement purposes; concerns about disclosures being detrimental to commercial interests; the costs of complying with a request for information; and concerns about litigation by those to whom the information relates. The OPC stated that it would work with the law enforcement community, private sector bodies and community representatives to develop practical guidance to assist private sector organisations in understanding their obligations under the *Privacy Act*.[73]

22.69 In its submission to the Senate Legal and Constitutional References Committee inquiry into the *Privacy Act* (Senate Committee privacy inquiry), the AFP noted that, while education may have a role to play in raising awareness, it was unlikely to offer a complete solution. It submitted that a possible solution might be to give it the power to issue a notice to produce.[74] The Senate Committee privacy inquiry supported the OPC's recommendation to develop practical guidance in this area, but considered that

the Australian Government should also consider additional mechanisms to resolve the issue.[75]

22.70 The ALRC asked in IP 31 whether the privacy principles should be amended expressly to allow agencies and organisations to use or disclose personal information to assist in the investigation of missing persons.[76]

Submissions and consultations

22.71 A number of stakeholders made the general submission that the *Privacy Act* should be amended so as better to assist the police in locating missing persons.[77] CrimTrac submitted that it is sometimes necessary for police to share information such as criminal records to assist in searching for missing persons.[78]

22.72 The AFP suggested the solution to this problem could involve the following steps: (a) permitting disclosure under the IPPs in respect of 'serious *or* imminent' threats; (b) re-wording IPPs 10 and 11 'using NPP 2.1(h) as the starting point'; and (c) codifying Public Interest Determinations 3A, 4 and 5.[79] These permit the AFP to disclose, respectively: serious misconduct; certain information in relation to insurance claims or civil litigation; and certain information for research purposes.

22.73 Major Kathy Smith of the Salvation Army Family Tracing Service (South Australia) submitted that the *Privacy Act* should be amended to allow the Service to be 'given information or confirmation of the whereabouts of the person we are looking for', given its role in reuniting family members who have become separated.[80] In relation to organisations being able to access personal information for the purposes of locating missing persons, the Office of the Information Commissioner Northern Territory stated:

> There is justification for allowing organisations and agencies to assist law enforcement bodies in searches for missing persons. However, I would have some concern with a blanket unconditional approval for assistance to private sector organisations.[81]

22.74 The Institute of Mercantile Agents suggested a more extensive amendment to permit all private and public sector entities that deal with missing persons to 'have regulated and audited access to locator information'. In particular, it believes that its members should have access to such locator information because 'the costs of missing

81 Office of the Information Commissioner (Northern Territory), *Submission PR 103,* 15 January 2007.

persons not meeting their obligations' amounts to at least four billion dollars annually.[82]

22.75 On the other hand, some stakeholders resisted any change to the privacy principles in respect of missing persons, noting that sometimes a missing person has committed no offence and does not wish to be located.[83] The OPC stated that the power to issue public interest determinations adequately covers the situation of missing persons.[84]

ALRC's view

22.76 The ALRC's view is that a number of amendments proposed elsewhere in this Discussion Paper would assist in alleviating the problems in relation to missing persons. First, in the context of missing persons, the threat to an individual will often be serious but it may be difficult to prove that it is also imminent. Proposal 22–3 would allow for the secondary use or disclosure of personal information where it is necessary to lessen or prevent a serious threat to an individual's life, health or safety. This means that an agency or organisation would no longer be required to show that the threat is both serious *and* imminent.

22.77 Secondly, as set out in the proposed UPPs, the ALRC believes that the exception in current NPP 2.1(h) should apply also to agencies.[85] This provides a broader scope to use or disclose personal information for a secondary purpose in the law enforcement area than is currently provided under the IPPs. Both of these proposed amendments respond to suggestions made by the AFP, which is one of the most important bodies involved in searching for missing persons.

22.78 The ALRC does not believe, however, that it is desirable to create further specific exceptions in respect of missing persons. As a number of stakeholders pointed out, sometimes a missing person has committed no offence and does not wish to be located. There are also situations where a person, deemed missing, may be seeking to hide themselves, not from the lawful authorities, but from other individuals who wish to do them harm. An example of such a situation is where a person is fleeing domestic violence. To provide a more general exception in respect of missing persons would risk endangering the privacy and other rights of these people.

82 Institute of Mercantile Agents, *Submission PR 101,* 15 January 2007.

83 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; Australian Taxation Office, *Submission PR 168,* 15 February 2007; Office of the Information Commissioner (Northern Territory), *Submission PR 103,* 15 January 2007.

84 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007. The Privacy Commissioner can make a temporary public interest determination where an urgent decision needs to be made that the Commissioner believes may be breach the IPPs or NPPs. Such a determination effectively gives immunity to the agency or organisation subject to the determination in respect of the breach. See *Privacy Act 1988* (Cth) pt VI, div 2. Public interest determinations are discussed in detail in Ch 44.

85 See the UPPs, which are set out at the beginning of this Discussion Paper.

22.79 Finally, where an agency or organisation has a legitimate reason to search for a missing person, it may often be able to avail itself of one of the other exceptions in the use and disclosure principle, or it may seek a public interest determination.[86]

Disclosure of 'incidents' by insured professionals to insurers

22.80 In IP 31, the ALRC asked whether the exceptions in NPP 2 are adequate to cover: (a) disclosures by a professional of a client's personal information pursuant to an indemnity insurance contract where the provision of professional services has led to an adverse outcome; and (b) on-disclosures by insurers to members of their 'cases committees', often comprising experts in the relevant profession, who advise insurers about making provision for possible future claims.[87]

22.81 For example, a doctor may need to disclose the existence of an incident to his or her insurer so that the insurer can assess the legal risk and make financial provision for a possible future claim. The incident may or may not mature into a legal claim. While disclosure of the doctor's personal information to the insurer occurs with consent, the legality of the disclosure of the patient's personal information is less clear.

22.82 If an organisation seeks to rely on NPP 2.1(a) and the disclosure involves sensitive information, such as health information, this requires that the purpose of advising in relation to indemnity be 'directly related' to the primary purpose of collection of the patient's information—that being the care and treatment of the patient. It is unlikely that a 'direct' relation could be made out. In addition, NPP 2.1(a) requires that the individual would reasonably expect the doctor to disclose his or her personal information to the doctor's insurer following an incident. Many patients may not have considered this. Such disclosure would, however, be lawful if: (a) the patient were required to consent to possible disclosures to insurers and their case committees as a condition to obtaining the health service;[88] or (b) if the common law or legislation authorised the disclosure of a client's personal information to an insurer prior to any claim being made.

22.83 The ALRC asked whether there should be an express secondary use exception in NPP 2 to allow for disclosures of incidents to insurers, or whether the issue should be dealt with by way of a public interest determination.[89]

Submissions and consultations

22.84 UNITED Medical Protection submitted that NPP 2.1(g) already provides for disclosure of incidents by professionals to their professional indemnity insurers.[90]

---

86 Public interest determinations are discussed in Ch 44.
87 See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), [4.84].
88 'Bundled' consent is discussed in detail in Ch 16.
89 See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), [4.84]–[4.86].
90 UNITED Medical Protection, *Submission PR 118,* 15 January 2007.

NPP 2.1(g) permits secondary use or disclosure where it is 'required or authorised by law'. Its relevance here is that a prospective insured is legally required to inform an insurer of facts and circumstances that might give rise to a claim when applying for insurance.[91] UNITED Medical Protection noted that this can also be

> a contractual necessity, which is in the interests of both the professional and patient in the event of a claim being made against the professional. The last thing a patient would want in the event of a claim is for the professional to be un-insured for the claim.[92]

22.85 UNITED Medical Protection submitted that disclosure in these circumstances would satisfy both limbs of current NPP 2.1(a). First, notifying a professional indemnity insurer or lawyer of an adverse incident or threatened litigation is a directly related secondary purpose. Secondly, it was submitted that 'patients these days are aware of their entitlement to commence legal proceedings for damages in the case of perceived medical negligence and that the doctor will be covered by his or her professional indemnity insurance'.[93]

22.86 Nevertheless, some stakeholders submitted that further clarification is warranted. UNITED Medical Protection submitted that the situation where professionals make disclosures to their professional indemnity insurer should be dealt with either by way of an exception in the use and disclosure principle or by adopting a public interest determination.[94] Similarly, the Australian Bankers' Association suggested that the best solution would be to provide an express secondary use and disclosure exemption 'to allow for disclosure of incidents to insurers' and to facilitate the provision of information to alternative dispute resolution schemes.[95]

ALRC's view

22.87 The ALRC's view is that the existing exceptions to the secondary use and disclosure prohibition are sufficient to cover this situation and no new exception needs to be added. Both of the exceptions noted above are reproduced, in like form, in the 'Use and Disclosure' principle in the proposed UPPs.

22.88 In relation to the exception where the secondary use or disclosure is required or authorised by law, the ALRC agrees that s 21 of the *Insurance Contracts Act 1984* (Cth) would permit disclosure to insurers in a number of relevant circumstances. To the extent that this provision does not cover the full spectrum of disclosures that can

---

91 See *Insurance Contracts Act 1984* (Cth) s 21.
92 UNITED Medical Protection, *Submission PR 118,* 15 January 2007.
93 Ibid.
94 Ibid.
95 Australian Bankers' Association Inc, *Submission PR 259,* 19 March 2007. See also National Australia Bank and MLC Ltd, *Submission PR 148,* 29 January 2007.

legitimately be made to insurers, however, the ALRC believes that the related use or disclosure exception—currently set out in NPP 2.1(a)—is sufficient.

22.89 On the related use exception, the ALRC believes that the requirement can be satisfied in these circumstances. In the health context, the OPC has already issued guidance that states, relevantly:

> Directly related secondary purposes may include many activities or processes necessary to the functioning of the health sector.
>
> Where the use or disclosure of de-identified data will not suffice, and provided it is within the reasonable expectations of the individual, no extra steps need be taken when using or disclosing relevant personal information in circumstances, such as: …
>
> - billing or debt-recovery;
> - an organisation's management, funding, service-monitoring, complaint-handling, planning, evaluation and accreditation activities—for example, activities to assess the cost effectiveness of a particular treatment or service;
> - disclosure to a medical expert (only for medico-legal opinion), insurer, medical defence organisation, or lawyer, solely for the purpose of addressing liability indemnity arrangements, for example in reporting an adverse incident;
> - disclosure to a lawyer for the defence of anticipated or existing legal proceedings; [and]
> - an organisation's quality assurance or clinical audit activities, where they evaluate and seek to improve the delivery of a particular treatment or service … .[96]

22.90 This makes clear that disclosures of incidents to insurers, in all appropriate circumstances, are covered in the 'directly related' limb of the exception. Furthermore, the ALRC agrees with the submission of UNITED Medical Protection that it would fall within the reasonable expectation of an individual for secondary disclosure to occur in these circumstances.

22.91 In light of the above, the ALRC is of the view that it is unnecessary to include an additional exception in the use and disclosure principle to allow for disclosures of incidents to insurers. Nor is it presently necessary to deal with this issue by way of a public interest determination.

Use and disclosure in other contexts

Where required or authorised by or under law

22.92 Currently, NPP 2.1(g) and IPPs 10.1(c) and 11.1(d) permit use or disclosure for a secondary purpose where this is 'required or authorised by or under law'. Consistently with the discussion in Chapter 13, the ALRC is interested in the views of

---

96 Office of the Federal Privacy Commissioner, *Guidelines on Privacy in the Private Health Sector* (2001).

stakeholders on the question whether this exception should be narrowed to allow secondary purpose use or disclosure where this 'is required or *specifically* authorised by or under law'. Such a provision would require legislative consideration of whether the particular type of secondary use or disclosure in question ought to be permitted before an agency or organisation would be able to take advantage of this exception.

22.93 Arguably, such an amendment might bring the relevant exception more in line with its intended operation. The relevant Explanatory Memorandum accompanying the introduction of NPP 2.1(g) states:

> The sub-principle is intended to cover situations where a law unambiguously requires or authorises the use or disclosure of personal information. There could be situations where the law requires some actions which, of necessity, involve particular uses or disclosures, but this sort of implied requirement would be conservatively interpreted. The reference to 'authorised' encompasses circumstances where the law permits, but does not require, use or disclosure.[97]

22.94 The OPC, for example, suggested that this exception should be narrowed with respect to the use or disclosure of sensitive information. It submitted that 'to avoid a broad reading of this [exception] where sensitive information is at stake, the inclusion of "clearly" or "expressly" authorised could be considered'.[98]

22.95 The ALRC is aware that such an amendment could possibly have unintended consequences in certain areas. For example, such an amendment may serve as an impediment on agencies that are presently relying on the current, broadly worded exception to carry out their statutory functions, such as to monitor service delivery. Therefore, the ALRC is soliciting views on whether such an amendment is appropriate and desirable.

Question 22–1 Should the proposed 'Use and Disclosure' principle contain an exception allowing an agency or organisation to use or disclose personal information for a purpose other than the primary purpose of collection where this is 'required or *specifically* authorised by or under law' instead of simply 'required or authorised by or under law'?

Due diligence

22.96 An issue raised in the OPC Review was whether the practice of due diligence on the sale and purchase of a business raises any particular concerns in the application of

97 Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), [336].
98 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

the privacy principles.[99] The issue of due diligence in the context of mergers and acquisitions has also been raised in this Inquiry.[100] A prospective purchaser of a business undertakes a process of due diligence to assess the value of the business' assets and liabilities. This process may involve the collection and disclosure of personal information about employees, customers, trading partners and business associates.

22.97 In 2002, the OPC issued an information sheet in relation to the obligations of buyers and sellers under the *Privacy Act*.[101] The OPC reported that it had not received a complaint about a breach of privacy during a due diligence exercise. It stated that it is not practical to require an organisation in the process of due diligence to gain the consent of everyone whose personal information is transferred and it recommended that the Australian Government should consider amending the NPPs to take into account the practice of due diligence.[102] New Zealand law, for instance, allows disclosure of information where 'it is necessary to facilitate the sale or other disposition of a business as a going concern'.[103]

22.98 The ALRC solicited views as to whether such amendment is necessary, and if so, what form it might take. It is also asked for views about whether there is a need to amend Information Sheet 16 in this regard.[104] Only the Queensland Council for Civil Liberties made a submission on this issue. It argued that if 'a flexible and pragmatic approach' is taken to the application of the privacy principles, no privacy issues would arise in relation to due diligence. However, it was open to the possibility of amending the Act if there is a 'serious concern' about this.[105]

ALRC's view

22.99 The ALRC believes that the use and disclosure principle clearly was not intended to impede genuine due diligence, provided it is carried out lawfully. Consequently, the ALRC shares the view of the Queensland Council for Civil Liberties that, provided the use and disclosure principle is interpreted purposively, there is no need to create a new exception dealing with the use and disclosure of personal information in the course of due diligence.

22.100 The fact that few stakeholders have identified a problem in this area seems to indicate that the privacy principles are being applied appropriately. Moreover, the

ALRC is of the view that the guidance already provided by the OPC, especially in Information Sheet 16, is sufficient.

Research, health care and disclosure on compassionate grounds

22.101 A number of the exceptions in the current use and disclosure principle in NPP 2 deal with research and health care. These will be dealt with in Part H of this Discussion Paper, with a view to moving these provisions out of the 'Use and Disclosure' principle in the proposed UPPs and into more specific subordinate legislation.

22.102 Specifically, the following exceptions to NPP 2 will be considered as follows:

- The exception in NPP 2.1(d) dealing with health information to be used or disclosed for the secondary purpose of research, or the compilation or analysis of statistics, relevant to public health or public safety will be dealt with in Part H.

- The exception in NPP 2.1(ea) dealing with genetic information obtained in the course of providing a health service will be dealt with in Part H.

- The provisions in NPP 2.4–2.6 dealing with the disclosure of health information by a health service will be dealt with in Parts H and I.

22.103 There is also an issue about individuals being able to obtain information about family members and friends in an emergency, where this does not fall within the Part VIA regime. The OPC Review suggested that NPP 2 could be amended to deal with emergencies by allowing for disclosure based on compassionate grounds to a person 'responsible' for the individual where the individual is unable to consent to the disclosure and it is not contrary to any wish expressed by the individual.[106]

22.104 Under NPP 2.5, a person 'responsible' for the individual includes various specified family members as well as a person nominated by the individual to be contacted in times of emergency. The OPC recommended that the definition should be extended to include a person nominated by the family to act on its behalf.[107] A number of stakeholders agreed with this suggestion.[108] This issue is dealt with in Part H.

Logging disclosures

Background

22.105 In Question 4–10 of IP 31, the ALRC asked whether agencies or organisations should be required to record their use or disclosure of personal information when this occurs for a purpose other than the primary purpose of collection. This invited reconsideration of one of the issues previously considered by the ALRC in its 1983 report, *Privacy* (ALRC 22). In that report, the ALRC did not recommend that record-keepers be obliged to keep a log of all uses and disclosures of personal information because the administrative costs would be too high. Instead, it suggested that the Human Rights Commission (as it was then called) should encourage record-keepers to adopt the practice of logging disclosures, at least those disclosures that would represent an especially objectionable interference with individual privacy.[109]

22.106 Under NPP 2, an organisation is only required to make a written note of its use or disclosure of personal information where it relates to a specified law enforcement purpose.[110] NPP 2 has been criticised on the basis that it does not require organisations to record their use and disclosure of personal information in times of emergencies 'to ensure that a trace of the activities of privacy-abusers is retained'.[111]

22.107 Similarly, IPPs 10 and 11 require an agency to make a written note of its use and disclosure of information only where it is for the enforcement of the criminal law or of a law imposing a pecuniary penalty, or for the purpose of the protection of the public revenue. In 1995, the House of Representatives Standing Committee on Legal and Constitutional Affairs recommended that every agency should keep a record of authorised disclosures of confidential third party information for the purpose of checking the legitimacy of access to such information. It recommended that the record should include the names of individuals and organisations about whom information is disclosed, the names of the individuals and organisations to whom that disclosure is made, and the date of the disclosure.[112]

Submissions and consultations

22.108 A number of stakeholders suggested that agencies and organisations should be required to record when they have used or disclosed personal information for a secondary purpose. Some suggested that this requirement should apply to all secondary

purpose use or disclosure.[113] Others stated that the requirement should only apply where there is not a direct link between the primary and secondary purpose.[114] The Queensland Government submitted that a more general requirement may result in an 'undue administrative burden'.[115]

22.109 The NHMRC agreed that such recording represented good practice, but submitted that a 'requirement will impose significant burdens and costs'. It advocated 'an educative approach that highlights the various ways in which information transactions can be recorded and the benefits of doing so where practicable'.[116]

22.110 Some stakeholders were opposed to any such recording requirement. It was submitted that the existing requirements are 'an unmanageable burden' and that any extension would be 'potentially onerous',[117] and would increase the cost of compliance.[118] UNITED Medical Protection stated that such a requirement would place particular burden on medical practices because considerable time and cost would be required to create the logging system and then to carry out the logging process.[119]

22.111 This assertion was queried, however, with respect to electronic data,[120] and it was noted that such a requirement already applies to South Australian government agencies under the Adequate Records Management Standard.[121] It was suggested that if the requirement 'were limited to a high, policy level' addressing information handling practices, this would reduce the regulatory burden.[122]

22.112 The AFP argued that a recording requirement would not 'enhance the current accountability framework' and may lead to duplication.[123] Similarly, UNITED Medical Protection argued that a better way to protect privacy is through appropriate limitations on use and disclosure.[124]

22.113 In terms of how a recording obligation might operate in practice, the following suggestions were made:

- the requirement should be for any form of record that allows: reconstruction in the event of an inquiry or challenge; notification of third parties where information is later corrected; and notification of individuals following a security breach;[125]

- individuals should be able to access the logs that relate to themselves;[126]

- there should be no recording requirement where the individual has consented to the use or disclosure,[127] or where he or she is already aware of the use or disclosure;[128] and

- the recording requirement should be framed so as not to impact adversely on the privacy of third parties—for example, by collecting the personal information of a third party.[129]

ALRC's view

22.114 The ALRC does not believe that it is desirable to require agencies and organisations to record their use or disclosure of personal information when this occurs for a purpose other than the primary purpose of collection. While such a requirement may be a benefit to individuals in helping them, for example, to trace how their personal information is used and disclosed after it has been collected, the ALRC's view is that, on balance, the disadvantages of such a requirement would outweigh the benefits.

22.115 First, as was pointed out by a number of stakeholders, such a requirement will in many cases be very onerous for agencies and organisations, and particularly for those that handle large amounts of personal information. It would also be of limited benefit to individuals. To the extent that such a provision is likely to be useful to individuals, it would duplicate requirements in the privacy principles dealing with data quality and data security.[130]

22.116 Secondly, the ALRC's proposal to insert provisions that oblige agencies and organisations to provide notification where personal information has been compromised—a phenomenon referred to commonly as a 'data breach'—is likely to deal more effectively with errors in the handling of personal information. As explained

129 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
130 See Chs 24 and 25 respectively.

in detail in Chapter 47, the ALRC proposes that agencies and organisations should be required to report to the OPC and the individual concerned any data breach that results in a real risk of serious harm to the individual. This provision would be of greater utility than a general requirement to log all uses and disclosures of personal information because it focuses attention only on where some error has occurred in the handling of personal information.

22.117 Thirdly, as noted above, such a requirement already exists when an agency or organisation uses or discloses personal information under the relevant law enforcement exception.[131] The ALRC proposes that an equivalent provision be preserved in the proposed UPPs, and believes that this adequately addresses this issue.

Summary of proposed 'Use and Disclosure' principle

22.118 In summary, the ALRC's view is that the fifth principle in the proposed UPPs should be called 'Use and Disclosure'. It should appear as follows.

UPP 5. Use and Disclosure

5.1 An agency or organisation must not use or disclose personal information about an individual for a purpose (the ***secondary purpose***) other than the primary purpose of collection unless:

(a) both of the following apply:

(i) the secondary purpose is related to the primary purpose of collection and, if the personal information is sensitive information, directly related to the primary purpose of collection; and

(ii) the individual would reasonably expect the agency or organisation to use or disclose the information for the secondary purpose; or

(b) the individual has consented to the use or disclosure; or

(c) the agency or organisation reasonably believes that the use or disclosure is necessary to lessen or prevent a serious threat to:

(i) an individual's life, health or safety; or

131 See *Privacy Act 1988* (Cth) s 14, IPP 10.1(d), IPP 11.1(e); sch 3, NPP 2.1(h).

(ii) public health or public safety; or

(d) the agency or organisation has reason to suspect that unlawful activity has been, is being or may be engaged in, and uses or discloses the personal information as a necessary part of its investigation of the matter or in reporting its concerns to relevant persons or authorities; or

(e) the use or disclosure is required or authorised by or under law; or

(f) the agency or organisation reasonably believes that the use or disclosure is necessary for one or more of the following by or on behalf of an enforcement body:

(i) the prevention, detection, investigation, prosecution or punishment of criminal offences, breaches of a law imposing a penalty or sanction or breaches of a prescribed law;

(ii) the enforcement of laws relating to the confiscation of the proceeds of crime;

(iii) the protection of the public revenue;

(iv) the prevention, detection, investigation or remedying of seriously improper conduct or prescribed conduct;

(v) the preparation for, or conduct of, proceedings before any court or tribunal, or implementation of the orders of a court or tribunal.

5.2 UPP 5.1 operates in respect of personal information that an organisation that is a body corporate has collected from a related body corporate as if the organisation's primary purpose of collection of the information were the primary purpose for which the related body corporate collected the information.

Note: Agencies and organisations are also subject to the requirements of the 'Transborder Data Flows' principle when transferring personal information about an individual to a recipient who is outside Australia.

Summary of proposed 'Direct Marketing' principle 716

Introduction

23.1 'Direct marketing' involves the promotion and sale of goods and services directly to consumers. Direct marketers compile lists of individuals' names and contact details from many sources, including publicly available sources such as the electoral roll, the telephone directory and land title registers. An individual may not always know that his or her personal information has been collected for the primary purpose of direct marketing.

23.2 The rules in the *Privacy Act 1988* (Cth) on direct marketing differ between organisations and agencies. The Information Privacy Principles (IPPs) do not contain any provisions dealing with direct marketing. In contrast, the National Privacy Principles (NPPs) limit the use and disclosure of personal information for the

secondary purpose of direct marketing. Under NPP 2.1(c), secondary purpose direct marketing is permitted only if all of the following conditions are met:

- the information in question is not 'sensitive information';
- it is impracticable to seek the individual's consent before using the information;
- the organisation will not charge the individual for giving effect to a request by the individual not to receive direct marketing communications;
- the individual has not requested the organisation to refrain from providing direct marketing communications;
- in each direct marketing communication with the individual, the organisation draws to the individual's attention, or prominently displays a notice, that the individual may express a wish not to receive any further direct marketing communications; and
- each written direct marketing communication to the individual sets out the organisation's business address and telephone number and, if the communication is made by electronic means, a number or address at which the organisation can be directly contacted electronically.

23.3 Issues arising from the practice of direct marketing and the application of the principles dealing with direct marketing were considered by the Office of the Privacy Commissioner's review of the private sector provisions of the *Privacy Act* (OPC Review).[1] These included whether:

- the *Privacy Act* should contain the assumption that personal information may be used for direct marketing;
- NPP 2.1(c) protects personal information adequately and, in particular, whether individuals should be given the opportunity to 'opt in' to direct marketing instead of having the choice to 'opt out'. If an 'opt-out' model is preferred, there was a question whether the Act should require organisations to comply with the 'opt-out' request within a specified time; and
- organisations should be required to advise individuals from where they acquired their personal information.

1 See Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 94–103.

23.4 This chapter covers the following main issues. First, it considers what should be the scope of the privacy principle dealing with direct marketing. Secondly, it considers how this principle in the *Privacy Act* should relate to other sectoral legislation that deals with particular types or aspects of direct marketing. Thirdly, it addresses the content of this principle and, in particular, whether an 'opt-in' or an 'opt-out' model should be accepted.

Direct marketing generally

23.5 Before the release of the ALRC's Issues Paper, *Review of Privacy* (IP 31), direct marketing was identified as a concern by a number of stakeholders. This was highlighted during the National Privacy Phone-In conducted by the ALRC on 1 and 2 June 2006 (the ALRC Phone-In), where 73% of calls identified as an issue of concern the receipt of unsolicited communication by way of phone, mail, fax, email and SMS. A number of the early submissions received by the ALRC also identified the practice of direct marketing as an area of concern.[2]

23.6 In IP 31, the ALRC asked the general question whether the privacy principles should permit non-sensitive personal information to be used for the secondary purpose of direct marketing and, if so, what should be the criteria for such use.[3]

Submissions and consultations

23.7 As well as those who expressed concerns about direct marketing generally,[4] a number of stakeholders observed that direct marketing serves some useful purposes and is important for the economy.[5] For example, the Australian Bankers' Association (ABA) submitted that it is essential for a long term, ongoing relationship between a business and its customer for the business to be able to stay in communication with its customer—and this is often facilitated by direct marketing.[6] Similarly, Australia Post submitted that if the Act were amended to

> inhibit the ability of a business to contact an unidentifiable party, there may be a significant decline in direct marking activities across Australia. This may give rise to

6 Australian Bankers' Association Inc, *Submission PR 259,* 19 March 2007.

> potentially serious economic consequences for both small and large businesses, and in particular, direct marketing organisations.[7]

23.8 It was also submitted that there are pragmatic reasons why those engaged in direct marketing do not wish to communicate with those who do not want to receive direct marketing communications. The Mailing House stated that the industry 'do[es] not wish to irritate the pubic, abuse the concept of privacy or incur expense on material that has little chance of influencing a response'.[8] Some stakeholders submitted that the existing direct marketing provisions were already too strict. For example, the Australian Health Insurance Association submitted:

> NPP 2.1 prevents health funds marketing other suitable products to members unless the individual's consent has been obtained 'before that particular use'. The requirements are impractical and inappropriate and should be changed to enable funds to engage in sensible direct marketing of their products in the best interests of their members. Reasonable information given by the fund and consent given by the member at the time of joining plus an opt-out provision, should be sufficient.[9]

ALRC's view

23.9 The issue of direct marketing has been, and continues to be, the subject of a very strong response from stakeholders and the community generally. On one hand, there is a strong push from consumers and consumer advocates to tighten the rules on direct marketing to make it more difficult for companies engaged in direct marketing to communicate with people in this way. This draws on the conceptualisation of privacy as including, at least, 'the right to be let alone'.[10]

23.10 On the other hand, business groups and others have emphasised the importance of direct marketing for the economy generally. They have also stressed that, if direct marketing is carried out appropriately, it can be of considerable assistance to consumers that receive direct marketing communications.

23.11 The ALRC's view is that it is possible to balance these competing positions by recognising both that some forms of direct marketing can be pernicious and can erode individuals' privacy rights but that, if undertaken appropriately, direct marketing also can be beneficial. The ALRC believes, therefore, that the optimum approach is to develop a regulatory regime that effectively balances these competing considerations.

8 The Mailing House, *Submission PR 64,* 1 December 2006.

9 Australian Health Insurance Association, *Submission PR 161,* 31 January 2007.

10 See S Warren and L Brandeis, 'The Right to Privacy' (1890) 4 *Harvard Law Review* 193, 193. Note, however, that the definition of the 'right to privacy' should not be reduced only to the right to be left undisturbed. As explained in Chapter 1, the modern conceptualisation of privacy involves many other elements.

Scope of direct marketing privacy principle

Background

23.12 Before considering precisely how direct marketing should be regulated, it is necessary to consider the scope of the relevant privacy principle. This leads to two main questions. First, should this privacy principle apply without reference to whether the personal information in question was collected for the primary or secondary purpose of direct marketing?

23.13 As noted above, the *Privacy Act* currently deals with the issue of direct marketing as part of the use and disclosure principle in NPP 2. NPP 2 regulates how personal information may be used for a secondary purpose.[11] Therefore, given its location, the direct marketing requirements in NPP 2.1(c) operate only where the personal information in question was not collected for the *primary* purpose of direct marketing. The question, therefore, is whether the privacy principle should be extended to cover primary and secondary purpose direct marketing.

23.14 Secondly, assuming that the *Privacy Act* is amended to provide a single set of privacy principles applicable to the public and private sectors,[12] should the direct marketing privacy principle apply to agencies as well as organisations? This issue is of particular significance in light of the fact that the IPPs do not contain any provisions dealing with direct marketing by agencies.

Submissions and consultations

Extension to primary purpose direct marketing?

23.15 The Law Council of Australia submitted that there should be a separate privacy principle dealing with direct marketing, and that it should apply irrespective of whether the relevant personal information was collected for the primary purpose or a secondary purpose of direct marketing.[13] This is because the current provisions permit personal information that is collected for the primary purpose of direct marketing to be used 'almost without restraint'.[14] The Law Council submitted that:

> There appears to be no valid policy reason why an organisation which collects information for the primary purpose of direct marketing should be free to use that information in a way which organisations which collect it in the context of a relationship with the individual are not free to use it. Indeed, from a policy perspective you might expect fewer, not more, constraints on an organisation with which an individual has chosen to deal as opposed to an organisation which has no

11 The operation of NPP 2 is considered in greater detail in Ch 22.
12 See Proposal 15–2.
13 Law Council of Australia, *Submission PR 177,* 8 February 2007.
14 Ibid. See also Obesity Prevention Policy Coalition and Young Media Australia, *Submission PR 144,* 25 January 2007.

> relationship with an individual but buys their information for the purpose of marketing to them.[15]

23.16 On the other hand, the Australian Direct Marketing Association (ADMA) submitted that an organisation should be required to make clear what is their primary purpose of collection and that, even where its primary purpose for contacting an individual is to engage in direct marketing, the organisation should provide an opportunity to opt out.[16]

Application of direct marketing principle to agencies?

23.17 In IP 31, the ALRC did not ask specifically whether agencies should be subject to a principle that restricts their ability to engage in direct marketing. Nevertheless, two submissions commented on this issue, arguing that the direct marketing provisions should be extended to cover agencies.[17] It was submitted that:

> Given that there are other means by which governments routinely communicate the availability of services (such as general advertising), it is difficult to see why government agencies should not have to respect a clearly expressed preference of individuals not to be contacted.[18]

23.18 Such a requirement could still be subject to certain exceptions, such as in respect of 'public health and safety campaigns'.[19]

ALRC's view

Extension to primary purpose direct marketing?

23.19 As noted above, the direct marketing provisions are currently dealt with as part of the use and disclosure principle in NPP 2. NPP 2 creates a general prohibition against the use or disclosure of personal information for a secondary purpose of collection, and then lists a number of exceptions to this general rule—one of which is for direct marketing, provided certain conditions are met.

23.20 The ALRC notes that there is currently considerable ambiguity as to whether organisations, which collect personal information that they later intend to use for direct marketing, have merely collected this information for the secondary purpose of direct marketing. There may also be some deliberate or unintended obfuscation. For example, where individuals are asked to provide personal information to make them eligible to win a prize, the individuals might assume that the primary purpose of the collection is to make them eligible for the prize, whereas the primary purpose of the organisation collecting this information may in fact be to create a database from which to carry out

direct marketing.[20] This problem would be eliminated by making the direct marketing rules apply irrespective of whether the personal information in question was collected for the primary purpose of direct marketing or whether it was a secondary purpose.

23.21 The ALRC believes that the concerns expressed by stakeholders regarding the direct marketing activities of some organisations are unlikely to be addressed adequately if the relevant privacy principle only covers secondary purpose direct marketing. Consequently, the ALRC's view is that the Act should cover direct marketing undertaken by an organisation that has collected the individual's personal information for the primary purpose *or* a secondary purpose of direct marketing.

23.22 If this reform is adopted, the rationale for locating the direct marketing provisions in the general use and disclosure privacy principle is severely undermined. Moreover, given that direct marketing is relevant to other aspects of the information cycle—most notably, the collection of personal and sensitive information and the maintenance of data quality and data security—the ALRC believes that it is most logical to create a discrete privacy principle to regulate direct marketing.

Application of direct marketing principle to agencies?

23.23 If the direct marketing principle—in its current form or as proposed by the ALRC—is made applicable to agencies, this could have a significant impact on the way that government agencies communicate with individuals. Such a principle would have to be very carefully expressed so as not to preclude the legitimate communication of important information by agencies.

23.24 Given that IP 31 did not ask whether the direct marketing provisions in the privacy principles should apply to agencies, and given that few submissions have by addressed this issue, it would be premature for the ALRC to express a firm opinion on the desirability of such a reform. The ALRC remains interested in views on whether agencies should be subject to a privacy principle dealing with direct marketing and, if so, what should be the content of such a principle.

Proposal 23–1 The proposed Unified Privacy Principles should regulate direct marketing by organisations in a discrete privacy principle, separate from the 'Use and Disclosure' privacy principle. This principle should be called 'Direct Marketing' and it should apply irrespective of whether the organisation has collected the individual's personal information for the primary purpose or a secondary purpose of direct marketing.

---

20 See Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 95.

Question 23–1 Should agencies be subject to the proposed 'Direct Marketing' principle? If so, should any exceptions or exemptions apply specifically to agencies?

Relationship between privacy principles and other legislation

Background

23.25 This part of the chapter considers how the privacy principle dealing with direct marketing should relate to sectoral legislation that deals with particular types or aspects of direct marketing. For example, some aspects of telemarketing are regulated by the *Do Not Call Register Act 2006* (Cth), and some aspects of email marketing are covered by the *Spam Act 2003* (Cth). This raises the question whether the regulation of direct marketing should be dealt with by a 'one size fits all' model in the privacy principles, or by sectoral legislation tailored to particular types of direct marketing, or a combination of both.

23.26 There are, in essence, three main options for reform. First, the proposed Unified Privacy Principles (UPPs) could refrain from dealing with direct marketing given that it is being regulated elsewhere. Secondly, the sectoral legislation that deals with specific types of direct marketing could be repealed, with the UPPs providing the sole form of regulation in respect of all forms of direct marketing. Thirdly, the UPPs could regulate direct marketing except to the extent that more specific sectoral legislation covers a particular aspect or type of direct marketing. The sectoral legislation could either provide more or less stringent privacy protection to this aspect or type of direct marketing.

Submissions and consultations

23.27 In the submission and consultation process, some stakeholders stated that it is unclear how the provisions in the NPPs dealing with direct marketing relate to the more specific sectoral legislation noted above, such as the *Do Not Call Register Act* and the *Spam Act*.[21] A number of suggestions were made to clarify the relationship between the direct marketing provisions in the privacy principles and similar provisions in other legislation.

23.28 The vast majority of stakeholders proceeded from the assumption that it is better to regulate direct marketing both by the privacy principles in the *Privacy Act* and sectoral legislation. It was submitted that the privacy principles should set minimum standards that apply generally, except where other more specific legislation applies.[22]

---

21 See, eg, AAMI, *Submission PR 147,* 29 January 2007.

22 Queensland Council for Civil Liberties, *Submission PR 150,* 29 January 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007.

23.29 A number of stakeholders submitted that such sectoral legislation should be 'consistent' with the *Privacy Act*.[23] Some refined this proposition to mean that the *Privacy Act* should contain minimum standards and, where sectoral legislation applies, that sectoral legislation should only impose stricter standards than those contained in the privacy principles on the use and disclosure of personal information for direct marketing.[24]

23.30 The Australian Privacy Foundation observed that such sectoral legislation would be unnecessary if the use and disclosure principle functioned properly and if there were adequate sanctions and active enforcement.[25] It was also submitted, however, that, given the broad exemptions provided for in the *Do Not Call Register Act* and the *Spam Act*, it will remain necessary for the *Privacy Act* also to cover direct marketing.[26]

ALRC's view

23.31 Consistently with the majority of stakeholders who commented on this issue, the ALRC's view is that the proposed 'Direct Marketing' principle should set out general requirements with respect to direct marketing, but these requirements should be able to be displaced by more specific legislation that deals with a particular type or aspect of direct marketing. This would allow, for example, the direct marketing principle in the *Privacy Act* to operate alongside the more specific provisions in the *Do Not Call Register Act* and the *Spam Act*.

23.32 The ALRC believes this approach is preferable to the other main options for regulating direct marketing. Imposing a blanket rule for all types and aspects of direct marketing is too rigid. For example, there is a strong view in the community that some forms of direct marketing are, or have the capacity to be, more intrusive than others. Clearly, those forms of direct marketing should be subject to regulation that differs from the rules applicable to less intrusive forms of direct marketing. Indeed, this explains the advent of sectoral legislation such as the *Do Not Call Register Act* and the *Spam Act*. Similarly, relying on such sectoral legislation to the exclusion of the *Privacy Act* is problematic, because it leaves loopholes that could encourage other types of direct marketing that may also be intrusive.

23.33 On the other hand, making clear that the direct marketing principle in the *Privacy Act* sets out the general requirements in this area, and that these general

requirements may be displaced by other requirements in certain contexts where Parliament deems it appropriate, allows for a regime that is more responsive to the specific needs of consumers and business.

23.34 Finally, the ALRC does not believe that the requirements of the proposed 'Direct Marketing' principle should only be able to be displaced by *more* onerous requirements in sectoral legislation. While such an approach may be superficially appealing to those opposed to direct marketing, it would limit Parliament's options when considering whether to pass sectoral legislation dealing with specific aspects of direct marketing. This, in turn, would ultimately undermine the responsiveness of the regime to the specific needs of a particular aspect or type of direct marketing.

Proposal 23–2 The proposed 'Direct Marketing' principle should set out the generally applicable requirements for organisations engaged in the practice of direct marketing. These requirements should be displaced, however, to the extent that more specific sectoral legislation regulates a particular aspect or type of direct marketing.

Opt-in or opt-out requirement?

Background

23.35 The Senate Legal and Constitutional References Committee inquiry into the *Privacy Act* (Senate Committee privacy inquiry) recommended that the ALRC consider the possibility of an 'opt-in' regime for direct marketing in line with the *Spam Act*.[27] The OPC recommended that the Australian Government consider amending the *Privacy Act* to provide that consumers have a general right to opt out of direct marketing approaches at any time, and also to impose an obligation on organisations to comply with opt-out requests within a specified time after receipt.[28]

23.36 Some overseas privacy legislation, such as that in force in Hong Kong, provides for an 'opt-out' model.[29] A similar approach is taken in the European Parliament's *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free movement of Such Data* (1995) (EU Directive).[30] A Working Party on the Protection of Individuals with regard to the Processing of Personal Data, set up under art 29 of the EU Directive, commented that 'where data are transferred for

the purposes of direct marketing, the data subject should be able to "opt-out" from having his/her data used for such purposes at any stage'.[31]

23.37 There is a question whether the relevant privacy principle should adopt an opt-in regime, an opt-out regime, or neither. In other words, should organisations engaged in direct marketing be required to allow individuals to opt out of receiving direct marketing communications; should organisations only be permitted to engage in direct marketing if the individual in question has explicitly opted in to receiving such communications; or should neither of these requirements apply?

23.38 Assuming that either an opt-in or an opt-out model is adopted, a related question is whether direct marketers should be required to comply within a set timeframe. That is, when a person expresses their intention to opt out (or to refuse to opt in) to receiving direct marketing communications, should the organisation be required to comply with this request to be removed from a direct marketing list within a period specified in the privacy principle?

Submissions and consultations

23.39 A large number of stakeholders submitted that the direct marketing privacy principle should provide individuals with a general right to opt out of direct marketing communications at any time.[32] A number of stakeholders also suggested that organisations engaged in direct marketing should be obliged to comply with a request to be removed from a direct marketing list within a specified period.[33] One stakeholder suggested that, consistently with the *Spam Act*, this period should be within five business days of an individual's request.[34]

23.40 There was also some opposition to including a specific opt-out requirement in the relevant privacy principle. A number of stakeholders submitted that, where a

One stakeholder submitted that organisations should be encouraged, rather than required, to do this: Veda Advantage, *Submission PR 163,* 31 January 2007.

34 Law Council of Australia, *Submission PR 177,* 8 February 2007.

business already has an opt-out policy for direct marketing, this is sufficient.[35] The ABA submitted that it might not be desirable to include a legislative requirement to provide such an opt-out mechanism, without first carefully analysing the benefits and disadvantages that this might have. It suggested, as an alternative, a requirement that an organisation notify 'the individual that personal information is being collected for the primary purpose of direct marketing and that it may also be disclosed to other organisations for that purpose'.[36]

23.41 At the other end of the spectrum, some stakeholders submitted that direct marketing should be permitted only if the individual has opted in to receiving such communications.[37] This could still be subject to exceptions that apply, for instance, to charitable organisations.[38] This was opposed by other stakeholders. For example, the Mailing House stated that 'any move to introduce an "opt in" rather than the existing "opt out" regime will have a huge adverse impact on business'.[39]

ALRC's view

23.42 There was relatively little support for adopting the most restrictive regulatory regime in the privacy principles for those engaged in direct marketing—an opt-in model. The ALRC believes that the fact that the *Spam Act* incorporates at least a modified form of opt-in model does not mean that this is necessarily appropriate for *all* forms of direct marketing in *all* contexts.[40] This view is consistent with the ALRC's earlier proposal that the privacy principle dealing with direct marketing should be of general application but, where different requirements are necessitated in certain specific contexts, separate sectoral legislation should be enacted to displace any of the general provisions in the relevant *Privacy Act* privacy principle.[41] It is entirely appropriate for such sectoral legislation to impose a different level of restriction—that is, more or less onerous—on those engaged in direct marketing.

23.43 As outlined above, the vast majority of stakeholders preferred that the *Privacy Act* adopt an opt-out model to regulate direct marketing. This support was expressed by a broad range of stakeholders, including individuals, some entities directly or indirectly involved in direct marketing, the OPC and privacy advocates. Nevertheless, some concern was expressed that an opt-out model would be too restrictive on businesses that use direct marketing to communicate with existing or potential customers.

23.44 It should be noted, however, that the bulk of submissions from the business community to the OPC Review were in favour of an opt-out model to regulate direct

marketing.[42] Moreover, concerns about an opt-out model may be overstated, given that NPP 2 already essentially provides for an opt-out model in respect of secondary purpose direct marketing, by providing that:

- an organisation engaged in secondary purpose direct marketing is prohibited from using or disclosing an individual's personal information if he or she has requested not to receive direct marketing communications from the organisation;[43] and

- in each direct marketing communication, an organisation must give the individual recipient the option of not receiving further direct marketing communications.[44]

23.45 As explained in the OPC Review, a *general* right to opt out of direct marketing would merely extend the existing opt-out model to apply to use and disclosure of personal information carried out for the *primary* purpose of direct marketing.[45] The ALRC favours this approach for two main reasons. First, it would increase individuals' control over their personal information without the significant compliance costs associated with a completely new collection and notification regime.[46]

23.46 Secondly, as noted above, one of the problems with the Act dealing with direct marketing in NPP 2.1(c) is that this principle only covers personal information collected for a *secondary* purpose of direct marketing. Proposal 23–1 above attempts to solve this problem by making the direct marketing rules apply irrespective of whether carrying out direct marketing is the collector's primary or secondary purpose.

23.47 There was a range of views on whether organisations engaged in direct marketing should be required to comply with a request not to receive direct marketing communications within a specified period. Some stakeholders clearly preferred either that no amount of days be specified, or that the obligation only be to comply within a 'reasonable' time.

23.48 There was also no consensus among those who specified a timeframe. One view was that any such timeframe should be consistent with the *Spam Act*, which provides for five business days within which to action the request.[47] On the other hand, in the OPC Review, the OPC described as 'consistent' with its own position the view

expressed by the Australian Direct Marketing Association that the period should be 45 days.[48]

23.49 The ALRC's view is that, in order to make the opt-out model effective, it should provide that organisations must act on a request by an individual not to receive any further direct marketing communications within a reasonable period of time.

23.50 The ALRC acknowledges that the period of five business days, as provided for in the *Spam Act*, was based on a period that Parliament considered to be 'reasonable' in the context of communication by email.[49] This was the subject of a review by the Australian Government Department of Communications, Information Technology and the Arts, which found that this period was appropriate and ought not be amended.[50] The ALRC believes, however, that such a period may be too short, in light of the fact that a large proportion of direct marketing does not occur electronically, and so other factors (such as the delivery time of the postal service) need to be taken into account.

23.51 Moreover, in light of the wide variation in the timeframes suggested by stakeholders, the ALRC's present view is that the Act should not specify an amount of days within which to act on any request not to receive direct marketing communications. Rather, the organisation should comply within a reasonable time. The term 'reasonable' should be interpreted with reference to all relevant factors, including how the direct marketing communications are transmitted and the length of time it takes to amend an organisation's database.

Proposal 23–3 The proposed 'Direct Marketing' principle should require organisations to present individuals with a simple means to opt out of receiving direct marketing communications.

Proposal 23–4 The proposed 'Direct Marketing' principle should provide that an organisation involved in direct marketing must comply, within a reasonable time, with an individual's request not to receive direct marketing communications.

Other possible requirements

Original source of personal information

23.52 A number of other possible amendments to the rules on direct marketing have been suggested. The OPC Review recommended that the Australian Government consider amending the *Privacy Act* to require organisations to take reasonable steps, on request, to advise an individual from where it acquired the individual's personal information.[51]

23.53 In its submission to the OPC Review, ADMA stated that the rationale behind such a provision is that 'informing individuals of the source of the data being used gives them more control over their personal information and reduces the number of repeat complaints about unsolicited marketing'.[52]

Submissions and consultations

23.54 A large number of stakeholders submitted that the Act should require organisations to take reasonable steps, on request, to advise an individual from where it acquired the individual's personal information.[53] This requirement would help an individual to take steps to have their contact details removed from a 'master list' that may be used by many other organisations involved in direct marketing.[54]

23.55 One individual explained the rationale as follows:

> Some marketing organisation has gotten my details for on-selling, but I can't get at the 'source'. I can only tell marketers who contact me directly to remove my name from their individual lists. I want for the 'source' to be obliged to tell me on a regular basis … what details they have on me, and give me the chance to have my details removed from their master list.[55]

23.56 ADMA agreed that this information should be provided by organisations making an unsolicited approach to individuals, but stated that the requirement should be stated in OPC guidelines, rather than in the Act, because it was concerned that

55 Ibid.

'small organisations and charities do not have the technical capability to comply with such a requirement'.[56]

Particularly vulnerable individuals

23.57 Concerns have been raised about the practice of sending direct marketing communications to vulnerable people in the community. For example, direct marketing may pose a particular risk to children, young people and adults with a decision-making disability because their cognitive faculties may be less developed than other people, thus making it more likely that they will be manipulated by direct marketing. The Obesity Prevention Policy Coalition and Young Media Australia submitted that 'direct marketing of unhealthy food and beverages to children and young people may influence them to consume unhealthy foods, and contribute to them becoming overweight or obese'. Moreover, they submitted that 'children are more susceptible to commercial manipulation than adults'.[57]

23.58 These problems are exacerbated by factors including that children and young people often 'lack the cognitive capacity and maturity' to give informed consent, and also that new technologies (such as the internet, email and SMS) are increasingly being used in direct marketing to children. For this reason, it was submitted that organisations should be prohibited from engaging in direct marketing with a child under 14 years, unless a parent has provided 'express and verifiable consent'.[58]

23.59 Similarly, direct marketing can be insensitive where an error in a personal information database causes direct marketing communications to be sent, for instance, to a grieving friend or relative of a deceased individual. One individual stated that it can be traumatic to receive direct marketing communications addressed to her late husband, and this should be rectified by requiring organisations involved in direct marketing to update their databases regularly.[59] The ALRC Phone-In also received a number of calls stating that direct marketing can be frightening for older people.

23.60 The question arises whether reform is desirable to address these issues. If so, should the reform be carried out at the level of the privacy principles or in guidance issued by the OPC?

ALRC's view

23.61 As noted above, a very large number of submissions to this Inquiry were in favour of requiring organisations involved in direct marketing to take reasonable steps, on request, to advise an individual from where it acquired the individual's personal information.

---

56 Australian Direct Marketing Association, *Submission PR 298,* 29 June 2007.
57 Obesity Prevention Policy Coalition and Young Media Australia, *Submission PR 144,* 25 January 2007.
58 Ibid.
59 A Baxter, *Submission PR 74,* 5 January 2007.

23.62 Such a requirement would be particularly useful where an individual's personal information has been disclosed by an organisation to another organisation and it has then been used to carry out direct marketing. In such a situation, the individual could follow a 'chain' of disclosure to the original source and, if he or she wished, the individual could then take action to have his or her name removed from the list. This would facilitate individuals being able to assert substantive, as distinct from merely formal, privacy rights with respect to direct marketing.

23.63 Such a requirement would have the further benefit of encouraging organisations to consider whether they have a legitimate basis for collecting the personal information in the first place. For example, an organisation may be more likely to consider whether it would contravene the collection principle for it to collect personal information about an individual (X) from a third person (Y) where the organisation knows, or reasonably suspects, that X did not willingly provide the personal information to Y.

23.64 For these reasons, the ALRC believes it would be desirable to require organisations involved in direct marketing to take reasonable steps, on request, to advise an individual from where it acquired the individual's personal information.

23.65 The second question is whether reform is needed to address the particular needs of vulnerable individuals. The ALRC recognises that children, young people and adults with a decision-making disability can be particularly at risk from direct marketing. To the extent that such individuals have diminished capacity to exercise independent judgment in respect of the matters raised in direct marketing communications to him or her, organisations should be discouraged from making the communication in the first place. Nevertheless, the ALRC's view is that a change to the relevant privacy principle would likely be a blunt instrument to achieve such a result, and it may have undesirable consequences in denying such a person's ability to make decisions as to his or her own privacy. Instead, the ALRC proposes that the OPC issue guidance to help organisations better understand how to communicate fairly by way of direct marketing to such individuals, and when it is inappropriate to do so. In particular, this guidance should help to clarify organisations' obligations in dealing with particularly vulnerable people, such as elderly individuals and individuals aged 14 and under.[60]

23.66 Where communication by direct marketing can itself be traumatic—for example, as in the situation described above, communication addressed to a deceased individual and received by that individual's grieving friend or relative—the ALRC believes that the issue relates most directly to the data quality principle. As set out in Chapter 24, the ALRC proposes that all personal information that is collected, used or disclosed by an organisation should be 'accurate, complete, up-to-date and relevant'. The ALRC's view is that the OPC should issue guidance to organisations engaged in

---

60 Dealing with individuals aged 14 and under is discussed in greater detail in Ch 60.

direct marketing to highlight these obligations and assist them with information on how best to fulfil them.

Proposal 23–5 The proposed 'Direct Marketing' principle should provide that an organisation involved in direct marketing must, when requested by an individual to whom it has sent direct marketing communications, take reasonable steps to advise the individual from where it acquired the individual's personal information.

Proposal 23–6 The Office of the Privacy Commissioner should issue guidance to organisations involved in direct marketing, which should:

(a) highlight their obligation to maintain the quality of any database they hold containing personal information and assists them in achieving this requirement; and

(b) clarify their obligations under the *Privacy Act* in dealing with particularly vulnerable people, such as elderly individuals and individuals aged 14 and under.

Summary of proposed 'Direct Marketing' principle

23.67 In summary, the ALRC's view is that the sixth principle in the proposed UPPs should be called 'Direct Marketing'. It should appear as follows.

UPP 6. Direct Marketing (only applicable to organisations)

6.1 An organisation must not use or disclose personal information about an individual for the primary purpose or a secondary purpose of direct marketing unless all of the following conditions are met:

(a) the individual has consented, or both of the following apply:

(i) the information is not sensitive information; and

(ii) it is impracticable for the organisation to seek the individual's consent before that particular use or disclosure; and

(b) the organisation will not charge the individual for giving effect to a request by the individual to the organisation not to receive direct marketing communications; and

(c) the individual has not made a request to the organisation not to receive direct marketing communications, and the individual has not withdrawn any consent he or she may have provided to the organisation to receive direct marketing communications; and

(d) in each direct marketing communication with the individual, the organisation draws to the individual's attention, or prominently displays a notice, that he or she may express a wish not to receive any further direct marketing communications; and

(e) each written direct marketing communication by the organisation with the individual (up to and including the communication that involves the use) sets out the organisation's business address and telephone number and, if the communication with the individual is made by fax, telex or other electronic means, a number or address at which the organisation can be contacted directly electronically.

6.2 In the event that an individual makes a request of the organisation not to receive any further direct marketing communications, the organisation must comply with this requirement within a reasonable period of time.

6.3 An organisation must take reasonable steps, when requested by an individual to whom it has sent direct marketing communications, to advise the individual from where it acquired the individual's personal information

Summary of proposed 'Data Quality' principle 727

Introduction

24.1 The *Privacy Act 1988* (Cth) contains provisions that are designed to ensure that, where an agency or organisation handles personal information, it takes reasonable steps to ensure that the information is of a sufficiently high 'quality'. These are commonly known as 'data quality' requirements. Ensuring that personal information that is collected, used and disclosed is, among other things, accurate has long been seen as a fundamental obligation of data collectors operating under the *Privacy Act*.[1]

24.2 The National Privacy Principles (NPPs) require an organisation to take reasonable steps to make sure that the personal information it collects, uses or discloses is accurate, complete and up-to-date.[2] A similar provision is contained in the Organisation for Economic Co-operation and Development's *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980) (OECD Guidelines).[3]

---

1 See, eg, Commonwealth, *Parliamentary Debates*, House of Representatives, 1 November 1988, 2117 (L Bowen–Attorney-General), 2117; Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), 141.

2 *Privacy Act 1988* (Cth) sch 3, NPP 3.

3 See Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980), Guideline 8.

24.3 By contrast, the Information Privacy Principles (IPPs) do not contain a 'stand-alone' data quality principle. Aspects of the data quality principle can be found in IPPs 3 and 8. IPP 3 provides that, where personal information is solicited by the collector, the collector must take reasonable steps to ensure the information is relevant to the purpose of collection, up-to-date and complete. IPP 8 provides that, before a data collector proposes to use personal information, it should take reasonable steps to ensure the information is accurate, up-to-date and complete.

24.4 In other words, there appears to be a gap in the IPPs in that they do not impose data quality requirements at the time of disclosure. This differs from some overseas legislation. For example, US privacy legislation requires government agencies to ensure that, before disclosing a record about an individual to any person other than an agency, they make reasonable efforts to ensure that such records are 'accurate, complete, timely and relevant for agency purposes'.[4]

24.5 This chapter considers three main questions. First, should the proposed Unified Privacy Principles (UPPs) contain a single data quality principle that covers both agencies and organisations?[5] Secondly, assuming that such a principle is adopted, what should be the scope of the proposed 'Data Quality' principle? Thirdly, is it necessary to clarify any of the provisions relating to data quality that the ALRC proposes to retain?

Application of data quality principle to agencies

24.6 As noted above, agencies and organisations are currently subject to similar, but subtly differing, requirements in relation to data quality. In Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether agencies should be subject to a stand-alone data quality principle that extends to the collection, use and disclosure of personal information.[6]

Submissions and consultations

24.7 A number of stakeholders submitted that agencies should be subject to the same stand-alone data quality principle as organisations.[7] Reasons advanced in favour of this argument include that this would provide a 'clear and unambiguous' framework 'promot[ing] better compliance, as well as greater public confidence in the agencies'.[8]

---

4 *Privacy Act 1974* 5 USC § 552a (US). There is an exception to this requirement. See also G Greenleaf and N Waters, *The Asia-Pacific Privacy Charter, Working Draft 1.0, 3 September 2003* (2003) WorldLII Privacy Law Resources <www.worldlii.org/int/other/PrivLRes/2003/1.html> at 31 July 2007, Principle 10.

5 The ALRC proposes to consolidate the IPPs and NPPs to create a single set of privacy principles, the UPPs, that would be generally applicable to agencies and organisations: see Proposal 15–2.

6 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 4–16.

7 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007; Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007; CrimTrac, *Submission PR 158,* 31 January 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007.

8 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

It was also suggested that this would help provide a more consistent approach to maintaining data quality as between organisations and agencies.[9]

24.8 Some stakeholders submitted that it was unnecessary to make agencies subject to a discrete data quality principle.[10] The Australia Federal Police simply stated that 'IPP 8 is sufficient'.[11]

ALRC's view

24.9 The majority of stakeholders that commented on this issue supported moving to a single privacy principle dealing with data quality. This principle should be applicable to agencies and organisations. The ALRC supports this reform and notes that this is consistent with Proposal 15–2 to move to a single set of privacy principles, the UPPs.

24.10 The ALRC believes this reform would also be beneficial in consolidating and simplifying the existing provisions of the IPPs and NPPs that deal with data quality. As noted above, NPP 3 deals with the issue of data quality identically in respect of all of the most important stages of the information cycle—namely, collection, use and disclosure. On the other hand, the IPPs cover these stages only partially and there are some subtle differences between the obligations at different stages. This can cause confusion and can undermine the integrity of information management systems.

24.11 The ALRC believes, therefore, that consolidating the data quality obligations applicable to agencies and organisations in a single privacy principle will encourage better handling of personal information by agencies and organisations.

Proposal 24–1 The proposed Unified Privacy Principles (UPPs) should contain a principle called 'Data Quality' that applies to agencies and organisations.

Scope of data quality principle

Background

24.12 In IP 31, the ALRC asked what should be the scope of the data quality principle.[12] A specific issue was whether it is desirable to extend the reach of NPP 3 to apply expressly to personal information that an organisation controls, which may not

9 Centre for Law and Genetics, *Submission PR 127,* 16 January 2007.
10 Queensland Government, *Submission PR 242,* 15 March 2007; Australian Federal Police, *Submission PR 186,* 9 February 2007; AXA, *Submission PR 119,* 15 January 2007.

necessarily be information that the organisation has in its direct possession. Unlike NPP 3, IPP 8 imposes express obligations in relation to data quality on a record-keeper who has 'possession or control' of a document.[13]

24.13 Another issue was whether the data quality principle should include the requirement that the information be relevant; a requirement not currently included in NPP 3. This differs from the OECD Guidelines,[14] the European Parliament's *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (1995) (EU Directive),[15] and some state and territory legislation, such as the *Personal Information Protection Act 2004* (Tas).[16] For example, a Working Party on the Protection of Individuals with regard to the Processing of Personal Data, set up under art 29 of the EU Directive, summarised as a core principle in the EU Directive that

> data should be accurate and, where necessary, kept up to date. The data should be adequate, relevant and not excessive in relation to the purposes for which they are transferred or further processed.[17]

24.14 In contrast, NPP 1 (the collection principle) provides that, at the stage of collection, personal information must be necessary for one or more of the organisation's functions or activities. The IPPs contain an express provision stating that, at the time of collection, personal information must be relevant to the purpose of collection.[18] There is also a stand-alone IPP requiring that personal information be used only for relevant purposes.[19]

Submissions and consultations

Possession or control

24.15 A number of stakeholders submitted that the data quality principle should apply to personal information that is in the 'possession or control' of agencies and organisations.[20] The Office of the Victorian Privacy Commissioner noted that this

---

13 Similarly, *Privacy Act 1988* (Cth) s 18G, imposes obligations relating to data quality on a credit reporting agency in 'possession or control' of a credit information file, and on a credit provider or credit reporting agency in 'possession or control' of a credit report.

obligation applies under Victorian privacy law.[21] Some organisations noted that, as a matter of good business practice, they commit to ensuring that information held about their customers is accurate, complete and up-to-date.[22]

24.16 On the other hand, some stakeholders argued that it would be problematic to extend the principle to personal information in the *control*, but not necessarily the possession, of the data collector. Some argued that this would create additional 'complexity and uncertainty'.[23] Where an organisation (X) outsources its activities to another organisation (Y), it may become unclear as to whether the data in question remain under X's control.[24] Professor William Caelli rejected this argument, however, stating that X remains 'responsible' for the integrity of the data even if it chooses to outsource the collection (or other handling) of the data to Y.[25]

24.17 The Australian Government Department of Health and Ageing argued that the critical factor should not be whether the data are in the control of the agency or organisation, but whether the data are to be used or disclosed.[26] A similar point was made by the Office of the Privacy Commissioner (OPC), which argued that the obligation should only apply to persons that are collecting, using or disclosing data, as distinct from merely controlling data. To impose the data quality requirements on all entities that control personal information would extend the requirement to entities that merely hold a copy of the information in question on behalf of someone else.[27]

Criteria in the data quality principle

24.18 All the stakeholders who commented on this issue submitted that the data quality principle should include the requirement that the information be relevant to a permitted purpose of collection, use or disclosure.[28]

24.19 Other stakeholders suggested refinements to the scope and criteria of the data quality principle. AXA suggested that the principle should apply with reference to the purpose for which the information is held. For example, if it is necessary to hold certain information as a historical record, the requirement that data be kept 'up-to-date' should not apply.[29] A number of stakeholders stressed the importance of retaining the

qualification in NPP 3 that states that a data collector need only take 'reasonable steps' to maintain data quality.[30] The OPC emphasised that the data quality principle should not be interpreted as a requirement for a data collector 'constantly [to] contact individuals to ensure information is accurate'.[31]

ALRC's view

Possession or control

24.20 As noted above, the data quality obligations in NPP 3 apply only when the data collector collects, uses or discloses personal information. There was considerable disagreement among stakeholders as to whether these requirements should apply also when a data collector merely controls the information.

24.21 The ALRC shares the concern of a number of stakeholders that such an extension would impose the data quality requirements to a broader class of persons than is reasonable or necessary to protect individuals' information privacy. For example, where an organisation maintains a database containing personal information on behalf of another organisation, it would be very onerous—and often unreasonable—to expect the second organisation to maintain the data quality of the personal information in the database. The ALRC, therefore, believes that extending the data quality principle in this way would impose an unjustified compliance burden on agencies and organisations.

Additional criterion: relevance

24.22 The ALRC shares the view of stakeholders that the 'Data Quality' principle in the proposed UPPs should require that, where an agency or organisation collects, uses or discloses personal information, the information should be relevant to the purpose for which it was collected or a permitted secondary purpose. This complements the requirement in NPP 1.1 that personal information collected by an organisation should be 'necessary for one or more of its functions or activities'.[32] If the purpose of collection is not necessary for one or more of the data collector's functions or activities, the requirement in NPP 1.1 cannot be satisfied. It is logical, therefore, to include a corresponding obligation to limit the use and disclosure of personal information to that which is relevant to a purpose permitted under the privacy principles.

24.23 Moreover, the ARLC believes that the fact that an agency or organisation has legitimately collected personal information for a permitted purpose should not mean that it is necessarily allowed to use or disclose *all* of that information, in the event that

---

30 See, eg, G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Queensland Council for Civil Liberties, *Submission PR 150,* 29 January 2007; Institute of Mercantile Agents, *Submission PR 101,* 15 January 2007.

31 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

32 The ALRC's view is that this requirement should be retained, in a modified form, in the proposed UPPs: see Proposal 18–3. See also the similar provision in *Privacy Act 1988* (Cth) s 14, IPP 1.1(b).

its proposed use or disclosure is permitted under the privacy principles. Rather, the agency or organisation should be allowed to use or disclose only so much of the personal information it holds as is relevant to a purpose permitted by the privacy principles.

24.24 This is illustrated by the following hypothetical example. Imagine that a company, X, lawfully collected personal information about an individual, Y, including her address, job description, marital status, physical disabilities and financial position. This was necessary for the purpose of providing Y with financial advice. Some time later, X wishes to disclose Y's personal information to another company, Z, for the purpose of buying shares on Y's behalf—this being a related secondary purpose that Y would reasonably expect. Common sense dictates that X should not be permitted to disclose to Z *all* the personal information it holds on Y. Instead, X should be allowed to disclose only such personal information about X as is relevant to the permitted secondary purpose of obtaining the shares.

24.25 It is arguable that such a requirement is already implicit in the NPPs. However, given that the IPPs expressly mention relevance, but the NPPs do not, it is desirable to avoid all doubt by adding the criterion of relevance to the 'Data Quality' principle in the proposed UPPs.

Reference to permitted purpose

24.26 A number of stakeholders identified that the criteria by which the data quality principle operates—in NPP 3, these criteria are that the personal information must be 'accurate, complete and up-to-date'—are not self-evidently clear. For example, on one view, a document that contains personal information about an individual in 1990 might no longer be 'accurate' or 'up-to-date' in 2007. Nevertheless, there might be a valid reason not to update the document if it is necessary to maintain a historical record.

24.27 The ALRC agrees that the above criteria may be ambiguous and that it would be desirable to make clear that they should be understood with reference to the purpose for which the personal information was collected, or another purpose permitted under the privacy principles. This is consistent with the OECD Guidelines, which provide that:

> Personal data should be relevant to the purposes for which they are to be used, and, to the extent necessary for those purposes, should be accurate, complete and kept up-to-date.[33]

33 Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980), Guideline 8.

Proposal 24–2 The proposed 'Data Quality' principle should require an agency or organisation to take reasonable steps to make sure that the personal information it collects, uses or discloses is, with reference to a purpose of collection permitted by the proposed UPPs, accurate, complete, up-to-date and relevant.

Clarification of data quality principle

24.28 One issue raised in the OPC's review of the private sector provisions of the *Privacy Act* (OPC Review) concerned the interpretation of NPP 3. Some organisations consider that their obligations under NPP 3 to keep personal information up-to-date and accurate are absolute, and could be used to justify intruding upon an individual's privacy.[34] The OPC stated that it is not 'reasonable' to take steps to ensure data accuracy where this has no privacy benefit for the individual. It said that legislative amendment of NPP 3 was unnecessary but indicated that it would issue further guidance to organisations about their obligations under NPP 3 to ensure a proportional approach is taken to compliance.[35]

24.29 Canadian privacy legislation, for example, is clear that the obligation to maintain data quality is qualified.[36] Similarly, the Data Quality Principle in the OECD Guidelines qualifies the requirement that personal data be accurate, complete and up-to-date, by stating that the requirement only arises to the extent necessary for the purposes for which the data are to be used.

24.30 The ALRC asked in Question 4–15 of IP 31 whether guidance by the OPC is an appropriate and effective response to this issue, or whether it would be more appropriate to amend the relevant privacy principle.

Submissions and consultations

24.31 A large number of stakeholders suggested that the data quality principle does not require expansion to set out in greater detail what is required; instead, guidance from the OPC would be sufficient.[37] Concern was expressed that legislative

amendment may lead to further confusion.[38] It was also suggested that the current provision allows a more flexible response to new technologies.[39] While supporting the provision of 'regular and detailed' guidance by the OPC, based on the guidelines provided by the National Institute of Science and Technology in the United States, one submission argued that this obligation on the OPC should be stated in the data quality principle.[40] The Centre for Law and Genetics submitted that explicit guidance in the principle would remove doubt on this issue.[41]

ALRC's view

24.32 A very large number of stakeholders submitted that it was unnecessary to amend the relevant privacy principle to make clear that there is no absolute obligation to ensure that personal information is up-to-date and accurate; only one submission favoured such an amendment to the privacy principle. This indicates a general consensus that there is not widespread concern that the data quality principle is ambiguous or unclear in this way.

24.33 The ALRC shares the view that it is unnecessary to include a provision in the proposed 'Data Quality' principle explicitly stating that the obligations are not absolute. As noted by some stakeholders, such an amendment runs the risk of causing more confusion than it resolves. In coming to this view, it is noted that the OPC has already undertaken to provide further guidance on this issue and the ALRC is of the opinion that this guidance would constitute a sufficient response.

Summary of proposed 'Data Quality' principle

24.34 In summary, the ALRC's view is that the seventh principle in the proposed UPPs should be called 'Data Quality'. It should appear as follows.

Introduction

25.1 The *Privacy Act 1988* (Cth) requires that agencies and organisations take reasonable steps to maintain the security of personal information that they hold. This is commonly referred to as 'data security' and it involves protecting personal information in two main ways: preventing misuse and loss; and destroying or permanently de-

identifying personal information that is no longer needed for a purpose permitted by the privacy principles.[1]

25.2 In order to comply with their data security obligations, agencies and organisations must institute measures that deal with matters including: how and where personal information is physically stored; the security of electronic records; staff access to records; the transfer of personal information; and the destruction of personal information.[2]

25.3 The privacy laws of a number of other jurisdictions also contain provisions relating to data security that apply both to public and private sector entities. For example, United Kingdom data protection law states:

> Appropriate technical and organisational measures shall be taken against unauthorised or unlawful processing of personal data and against accidental loss or destruction of, or damage to, personal data.[3]

25.4 Similarly, Part I of the *Federal Data Protection Act 1990* (Germany), which applies to both the public and private sectors, contains technical and organisational requirements to combat unauthorised access to personal data.[4] This is a manifestation of the Security Safeguards Principle in the Organisation for Economic Co-operation and Development's *Guidelines for the Security of Information Systems and Networks: Towards a Culture of Security* (2002) (OECD Guidelines). It also responds to the European Parliament's *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (EU Directive), which provides that

> technical and organisational security measures should be taken by the data controller that are appropriate to the risks presented by the processing. Any person acting under the authority of the data controller, including a processor, must not process data except on instructions from the controller.[5]

25.5 This chapter covers the following main issues. First, it considers whether the proposed Unified Privacy Principles (UPPs) should contain a single data security principle that covers both agencies and organisations.[6] Secondly, the chapter addresses how agencies and organisations should fulfil their data security obligations. Thirdly,

---

1 It should be noted that the ALRC proposes that, where the *Privacy Act* uses the term 'de-identify', this should be amended to read 'render non-identifiable': see Ch 3. For the purposes of this chapter, this change in terminology is adopted only in the relevant proposals and in the 'Data Security' principle in the proposed Unified Privacy Principles. To avoid confusion and for ease of reference the text of this chapter generally continues to use the term 'de-identify'.

2 See J Douglas-Stewart, *Annotated National Privacy Principles* (2005), [2–3010].

3 *Data Protection Act 1998* (UK) s 5, Principle 7.

4 *Federal Data Protection Act 1990* (Germany) s 9, Annex.

5 See European Parliament, *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data*, Directive 95/46/EC (1995), art 17.

6 The ALRC proposes to consolidate the IPPs and NPPs to create a single set of privacy principles, the UPPs, which would be generally applicable to agencies and organisations: see Proposal 15–2.

the chapter considers the content and application of the requirement to destroy or permanently de-identify personal information held by agencies and organisations.

Current coverage by IPPs and NPPs

25.6 The Information Privacy Principles (IPPs) and National Privacy Principles (NPPs) both contain provisions dealing with data security. IPP 4 provides that a record-keeper, who has possession or control of a record that contains personal information, must ensure that:

- the record is protected, by such security safeguards as it is reasonable in the circumstances to take, against loss, unauthorised access, use, modification or disclosure, and against other misuse; and

- if it is necessary for the record to be given to a person in connection with the provision of a service to the record-keeper, everything reasonably within the power of the record-keeper is done to prevent unauthorised use or disclosure of the information contained in the record.

25.7 An agency can breach the principle if it fails to have reasonable security safeguards in place, even if no loss or unauthorised access or disclosure takes place.[7]

25.8 NPP 4 provides that an organisation must take reasonable steps to protect the personal information it holds from misuse, loss, unauthorised access, modification or disclosure. In addition, an organisation must take reasonable steps to destroy or permanently de-identify personal information if it is no longer needed for any purpose for which the information may be used or disclosed under NPP 2. The OPC has provided guidance on an organisation's obligations in relation to physical security, computer and network security, communications security and personnel security.[8]

Towards a single data security principle

25.9 As noted above, agencies and organisations are subject to data security requirements under the IPPs and NPPs respectively. However, those principles differ subtly. There is a question whether these differences should be reconciled with a view to creating a single data security principle that is applicable to agencies and organisations.

---

7 See Office of the Federal Privacy Commissioner, *Plain English Guidelines to Information Privacy Principles 4–7: Advice to Agencies about Storage and Security of Personal Information, and Access to and Correction of Personal Information* (1998).

8 See Office of the Federal Privacy Commissioner, *Security and Personal Information*, Information Sheet 6 (2001).

25.10 Although this question was not asked explicitly in the ALRC's Issues Paper, *Review of Privacy* (IP 31), it was implied in the questions dealing with specific aspects of the data security principles in IPP 4 and NPP 4.[9] Moreover, any answer to this general question has ramifications for the ALRC's proposal to adopt a single set of privacy principles, the UPPs, covering both agencies and organisations.[10]

25.11 Consequently, while most stakeholders did not state their views on whether IPP 4 and NPP 4 should be consolidated,[11] it should be noted that a consistent theme in submissions and consultations was the importance of creating clear and broadly applicable data security provisions, particularly given the risks posed by identity theft, among other problems.[12]

ALRC's view

25.12 The ALRC's view is that there should be a single data security principle that is applicable to agencies and organisations. Such a reform is consistent with Proposal 15–2 to adopt a single set of privacy principles that binds agencies and organisations.

25.13 The ALRC also believes that this would be beneficial in consolidating and simplifying the existing provisions of the IPPs and NPPs that deal with data security. As discussed later in this chapter, there are a number of gaps and inconsistencies as between the IPPs and NPPs. Provided the UPP dealing with data security is sufficiently flexible to accommodate the differences between the operation of the public and private sectors, the ALRC can see no good policy reason to maintain two separate principles dealing with data security.

Proposal 25–1 The proposed Unified Privacy Principles (UPPs) should contain a principle called 'Data Security' that applies to agencies and organisations.

---

9 See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Questions 4–17, 4–18 and 4–19.

10 See Proposal 15–2.

11 It should be noted, however, that the OPC specifically submitted that such a consolidation should occur: Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

12 See, eg, National Association for Information Destruction, *Submission PR 133,* 19 January 2007; W Caelli, *Submission PR 99,* 15 January 2007. Note, also, that identity theft is discussed in greater detail in Ch 9.

Protection of personal information

Background

Disclosure of personal information to contractors

25.14 Unlike NPP 4, IPP 4 expressly obliges a record-keeper to take reasonable steps to prevent unauthorised use or disclosure of personal information contained in a record where it is necessary for the record to be given 'to a person in connection with the provision of a service to the record-keeper'.[13] There is a question whether the data security privacy principle should require organisations, as well as agencies, to ensure the protection of personal information they disclose to contractors.[14]

25.15 One advantage of making specific provision in this area is that it would overcome some of the problems that arise where an organisation engages in outsourcing—for example, where an organisation subcontracts to an entity that is not covered by the *Privacy Act*. The Office of the Privacy Commissioner (OPC) responded to the problem of outsourcing by issuing guidance, stating that 'where there is a particularly close relationship between an organisation and a contractor it may mean that the actions of the contractor could be treated as having been done by the organisation'.[15] In the specific context of an organisation that contracts with an entity that is subject to the small business exemption, the OPC stated:

> If an organisation is contracting with a business that is not covered by the *Privacy Act* it would be advisable to encourage the contractor to opt in to being covered… One way of doing this would be to make opting in a condition of the contract.
>
> Another less effective option would be for the organisation to have terms and conditions in the contract. These would bind the contractor to taking steps necessary to protect the personal information it holds that would be equivalent to the steps required by the NPPs.[16]

25.16 In 2005, the OPC recommended that the Australian Government consider amending NPP 4 to require organisations to ensure the protection of personal information they disclose to contractors.[17] German privacy law, for example, has a provision imposing a number of obligations on public and private bodies that

---

13 *Privacy Act 1988* (Cth) s 18G imposes similar security obligations on credit reporting agencies and credit providers in respect of credit files and reports given to persons in connection with the provision of a service to those agencies or providers. Credit reporting is dealt with in detail in Part G.

14 See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 4–17.

15 Office of the Federal Privacy Commissioner, *Contractors*, Information Sheet 8 (2001).

16 Ibid. Note, however, that the ALRC proposes to remove the small business exemption from the Act: see Ch 35.

17 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 54. See also rec 56, which states that the OPC should issue guidelines to clarify that businesses, which give personal information to contractors, should impose contractual obligations on any contractors to take reasonable steps to protect the information.

commission agents to collect, process or use personal data. In particular, responsibility for compliance with data protection provisions rests with the principal body.[18]

The 'reasonable steps' requirement

25.17 A further question arises as to what an organisation should be required to do to satisfy the requirement that it has taken 'reasonable steps' in ensuring data security. This question arises in two related contexts. First, under NPP 4.1, an organisation is obliged to take 'reasonable steps to protect the personal information it holds from misuse, loss, unauthorised access, modification or disclosure'. Secondly, IPP 4(a) imposes a similar requirement on agencies to ensure that a record containing personal information is protected 'by such security safeguards as is reasonable in the circumstance'.

25.18 The issue boils down to the following question: is it necessary to provide further explanation about what is involved in the requirement to take 'reasonable steps' in these contexts and, if so, should this be set out in the relevant privacy principle or elsewhere?

Submissions and consultations

Disclosure of personal information to contractors

25.19 A large number of stakeholders supported amending the data security principle to clarify that organisations, as well as agencies, must take reasonable steps to ensure that personal information they disclose to contractors is protected.[19] While stating its general position that the *Privacy Act* already provides that the organisation *and* any contractor is each separately responsible for meeting obligations under the Act, the OPC noted some situations where the first organisation (as distinct from the contractor) should be solely responsible:

- where the service organisation is behind the scenes, and its role in relation to the handling of personal information is constrained by a contract, it may be confusing and costly without any increase in privacy protection, for it to provide a separate notice to individuals
- if the service organisation is a small business operator, and therefore outside the Privacy Act's jurisdiction, individuals may have no choice about whether their information is provided to a service organisation, and no redress to either party

---

19 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007; Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007; NSW Disability Discrimination Legal Centre (Inc), *Submission PR 105,* 16 January 2007; K Pospisek, *Submission PR 104,* 15 January 2007; Office of the Information Commissioner (Northern Territory), *Submission PR 103,* 15 January 2007; W Caelli, *Submission PR 99,* 15 January 2007.

- some organisations prefer to 'brand' all activities even those they contract out so that they present one face to the customer.[20]

25.20 The OPC suggested the enactment of provisions equivalent to ss 12 and 95B of the *Privacy Act* to ensure that: (1) an organisation 'has obligations in relation to personal information over which it wishes to retain control regardless of where it is held'; and (2) 'both parties continue to have obligations when handling the information'.[21]

25.21 The Australian Bankers' Association argued, however, that amending the data security principle is unnecessary in light of the OPC's Information Sheet 8 (discussed above), because it already provides guidance to an organisation on how to protect the security of personal information handled by a contractor.[22] On the other hand, a number of stakeholders have specifically complained about the lack of clarity as to what is required by the current requirement to 'take reasonable steps' to protect personal information, where there is only limited guidance from the OPC.[23]

25.22 Other stakeholders submitted that the existing provisions of the *Privacy Act* were sufficient to protect personal information that is handled by third parties pursuant to outsourcing arrangements.[24] Some stakeholders noted that they already use contracts to require contractors to abide by the privacy policies of the head organisation.[25] AAMI stated that, if a data breach affecting a customer is caused by a contractor, the customer may complain using AAMI's internal dispute resolution process.[26]

25.23 Finally, some stakeholders proposed particular data security principle models. One suggestion was an amalgam of the relevant principles in the Asia-Pacific Privacy Charter and the Asia-Pacific Economic Cooperation (APEC) Privacy Framework.[27] Microsoft Australia suggested that organisations should be required to 'develop, implement and maintain an information security program that contains appropriate administrative, technical and physical safeguards'. It submitted that a suitable model would be the United States *Gramm-Leach-Bliley Act 1999* (US).[28]

The 'reasonable steps' requirement

25.24 A large number of stakeholders supported the provision of further guidance as to the meaning of 'reasonable steps'. Several suggestions were made, including:

- Organisations could comply with an obligation to take responsible steps to ensure that personal information they disclose to contractors is protected by including appropriate terms in the contract between the organisation and its contractor.[29]

- The term 'reasonable' should be judged against a number of factors. Professor William Caelli suggested that those factors should be 'the current and likely threat situation' and 'the known vulnerability' of the communication medium.[30] In addition to these factors, Microsoft Australia added: the relative 'sensitivity' of the information; the current state of the art; and the cost of implementing the relevant measures.[31]

- An organisation should educate its staff and contractors appropriately in how to protect data security.[32] The New South Wales Disability Discrimination Legal Centre added that measures need to be taken to ensure that *former* staff also maintain confidentiality of personal information.[33]

25.25 The National Association for Information Destruction, Australian Members and Stakeholders Working Group (NAIDWG), submitted that Australia is '"out of step" with comparable international jurisdictions' because it provides insufficient guidance and, as a result, Australia possesses 'the weakest form of regulatory control for secure document destruction'.[34] It noted that § 682.3 of the *Fair Trade and Accurate Credit Transactions Act 2003* (US) imposes a 'reasonable measures' standard, which provides a number of examples of how to comply. They include:

> (1) Implementing and monitoring compliance with policies and procedures that require the burning, pulverizing, or shredding of papers containing consumer information so that the information cannot practicably be read or reconstructed.
>
> (2) Implementing and monitoring compliance with policies and procedures that require the destruction or erasure of electronic media containing consumer information so that the information cannot practicably be read or reconstructed.
>
> (3) After due diligence, entering into and monitoring compliance with a contract with another party engaged in the business of record destruction …

ALRC's view

Disclosure of personal information to contractors

25.26 The vast majority of stakeholders that commented on this issue were in favour of requiring agencies and organisations to take reasonable steps to ensure the protection of personal information they disclose to contractors. This would involve extending the requirement in IPP 4(a) that applies to agencies, so that it is also applicable to organisations.

25.27 The ALRC's view is that such an extension is desirable for three main reasons. First, the wording of NPP 4.1 has been widely criticised as ambiguous. It should be noted that one stakeholder submitted that NPP 4, when combined with the OPC's guidance in Information Sheet 8, is sufficiently clear as to the requirements on an agency in respect of personal information that is disclosed to contractors. This position is undermined, however, by the fact that, since it issued Information Sheet 8, the OPC has recommended that consideration be given to amending the data security principle to require organisations to protect the personal information they disclose to contractors.[35]

25.28 Secondly, this reform would give clearer effect to the intended operation of NPP 4.1, as evidenced by Information Sheet 8, and bring the 'Data Security' principle in the proposed UPPs into line with IPP 4(b). In this way, it would not constitute a significant compliance burden for organisations, and particularly for those that are already contractually required to comply with the IPPs.

25.29 Thirdly, this amendment is consistent with the ALRC's view that a number of exemptions should be removed from the *Privacy Act*, including the small business exemption.[36] Clarifying that agencies and organisations must take reasonable steps to ensure that contractors protect personal information reflects that there are very few situations, if any, when contractors should be permitted to operate without reference to individuals' information privacy.

The 'reasonable steps' requirement

25.30 A related question arises as to the meaning of the term 'reasonable steps' in this context. The ALRC received a number of suggestions about how agencies and organisations should be required to satisfy this requirement. As a general proposition, the ALRC believes that the term 'reasonable steps' should not be expanded upon in the proposed UPPs, which are intended to be simple, high-level and of general

---

35 See Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 54.

36 See Part E.

application.[37] Moreover, further statutory elucidation is unnecessary given other requirements in the proposed UPPs—for example, the requirement for an agency or organisation to create a Privacy Policy that outlines how it proposes to handle personal information consistently with the *Privacy Act*.[38]

25.31 Instead, the ALRC believes that the OPC should provide guidance on the meaning of the term 'reasonable steps' in this context. That guidance could usefully include the following matters:

- An agency or organisation should frame its contract with a contracted service provider in such a way as to require the contracted service provider to handle any personal information disclosed to it in a manner that is consistent with the proposed UPPs.

- The OPC should provide guidance as to the impediments and assistance that can be obtained from new technology to ensure protection of personal information.[39]

- An agency or organisation should be encouraged to train its staff adequately on the steps they should take to protect personal information in the possession or control of the agency or organisation.

Proposal 25–2 The proposed 'Data Security' principle should require an agency or organisation to take reasonable steps to ensure that personal information it discloses to a person pursuant to a contract, or otherwise in connection with the provision of a service to the agency or organisation, is protected from being used or disclosed by that person otherwise than in accordance with the UPPs.

Proposal 25–3 The Office of the Privacy Commissioner should provide guidance about the meaning of the term 'reasonable steps' in the context of the proposed 'Data Security' principle. Matters that could be dealt with in this guidance include:

(a) the inclusion of contractual provisions binding a contracted service provider of an agency or organisation to handle personal information consistently with the UPPs;

(b) technological developments in this area and particularly in relation to relevant encryption standards; and

37 See Proposal 15–1 and accompanying text.
38 See Ch 21.
39 The impact of developing technologies on privacy is discussed in detail in Part B.

(c) the importance of training staff adequately as to the steps they should take to protect personal information.

Destruction versus retention of personal information

25.32 Sometimes privacy law requires an agency or organisation that has collected personal information to destroy, delete or de-identify that information after a set period or in certain circumstances. This requirement may arise where, for example, an organisation has collected personal information for the specific purpose of identifying an individual. When the identification process has been completed, the organisation may no longer have a lawful purpose to hold the personal information and, as a result, the destruction or de-identification of the information may be the most effective means of protecting the individual against a subsequent misuse or unauthorised disclosure.

25.33 Section 18F of the *Privacy Act* provides an example of a legislative requirement to delete personal information in the specific context of credit reporting. German privacy law also requires private sector bodies to erase any data concerning 'racial or ethnic origin, political opinions, religious or philosophical beliefs, trade union membership, health or sexual life, criminal or administrative offences' where the data controller cannot prove that the data are correct.[40] The obligation is not dependent on a request being made by the individual concerned.

25.34 Conversely, sometimes privacy law imposes the opposite obligation—that is, an agency or organisation that has collected personal information may be obliged to *retain* that information for a minimum period or in certain circumstances. Arguably, this can give an individual more control over his or her personal information if the information is held in a central repository to which the individual has a right of access.

25.35 The requirement to retain personal information arises frequently in the context of health care and research. This is because retention of the data facilitates future care and research, given that there is often a long period between when the data are collected and when they may be of use.[41] For example, the 'data security and data retention' principle in Victorian health privacy law limits the circumstances in which a health service provider can delete information, and sets out certain procedures to be followed where deletion is allowed.[42] There is no equivalent provision in NPP 4 or

---

40 *Federal Data Protection Act 1990* (Germany) s 35(2).

41 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007; CSIRO, *Submission PR 176,* 6 February 2007; National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

42 See *Health Records Act 2001* (Vic) sch 1, Health Privacy Principles 4.2, 4.3. These procedures involve the making of a written note of the person to whom the deleted information related, the period covered by the information and the date of deletion. This is discussed further in Part H.

IPP 4. In Victoria, deletion of health information relating to an individual is not permitted even if it is later found or claimed to be inaccurate, unless:

> (a) the deletion is permitted, authorised or required by the regulations or any other law; or
>
> (b) the deletion is not contrary to the regulations or any law and occurs:
>
> (i) in the case of health information collected while the individual was a child, after the individual attains the age of 25 years; or
>
> (ii) in any case, more than 7 years after the last occasion on which a health service was provided to the individual by the provider—
>
> whichever is the later.[43]

25.36 Other examples of where there is a need to preserve, rather than destroy, personal information is under general archives legislation[44] and, more specifically, in the child welfare area. This is particularly important because it allows adults to access their life histories from government agencies.[45]

25.37 The above illustrates that the differing requirements—that is, either to retain certain data or to destroy, delete or de-identify those data—depend largely on the type of information in question and the context in which it is collected.

25.38 Controversy often arises where an agency or organisation wishes to retain personal information for a longer period than is thought by some other people to be necessary. For example, some people have criticised the United States corporation that runs the search engine, Google, for having a policy of retaining for 18 months personal information that may be used to link individuals with search terms they have used in the Google search engine.[46] The company global privacy counsel, Peter Fleischer, has been cited as justifying this policy on the ground that it is necessary

> to keep information about searchers and their online explorations to protect its system against attacks; expose online scams and hackers; to improve the algorithm on which searches are based and to meet requirements by law enforcement.[47]

ALRC's view

25.39 The ALRC believes that the area of data security illustrates how it is sometimes necessary to provide differing requirements in different circumstances. As noted above, the ALRC's general position is that an individual's privacy is better protected if personal information held by an agency or organisation about the individual is

47 Ibid.

destroyed or permanently de-identified when it is no longer needed for a permitted purpose of collection. There are, however, some situations—for example, in the areas of research and health care—where the optimum means of protecting an individual's privacy and other rights is to require an agency or organisation that holds personal information to *retain* that information for a minimum period of time.

25.40 The ALRC believes that the proposed 'Data Security' principle should continue to provide, as a general rule, that personal information held by an agency or organisation should be destroyed or permanently de-identified when no longer needed. This general rule should be able to be displaced, however, where more specific legislation applies to certain types of personal information or certain activities involving the handling of personal information.

25.41 This position reflects the view expressed by the ALRC in Chapter 15 that the proposed UPPs should set out the generally applicable requirements as to information privacy, but that it is appropriate to derogate from these general requirements in relation to particular aspects of privacy or in particular contexts.[48]

Extension of destruction and de-identification requirements to agencies

Background

25.42 As noted above, the NPPs impose a requirement to destroy or de-identify personal information in certain circumstances. This is consistent with the OECD Guidelines.[49] No equivalent obligation applies to agencies under the IPPs.

25.43 In contrast, a number of other jurisdictions impose such a requirement on government agencies. For example, Canadian government institutions must dispose of personal information in their control in accordance with the regulations and by rules promulgated by the designated minister.[50] German privacy law also requires public bodies to erase personal data in certain circumstances.[51]

25.44 Similarly, some state and territory laws require government bodies to destroy or permanently de-identify personal information when it is no longer needed.[52] For example, New South Wales government bodies must not keep personal information for any longer than is reasonably necessary for the purposes for which the information

may be lawfully used, and the information must be disposed of securely and in accordance with the requirements for the retention and disposal of personal information.[53]

25.45 In IP 31, the ALRC asked whether this obligation in NPP 4.2 should be extended to agencies—that is, whether agencies should be required to destroy or permanently de-identify personal information, especially when it is no longer needed.[54]

Submissions and consultations

25.46 A very large number of stakeholders submitted that agencies should be obliged to destroy or permanently de-identify personal information when it is no longer needed. This position was supported both by government stakeholders,[55] and also non-government stakeholders.[56] The importance of destruction and de-identification was emphasised in a number of submissions. For example, one submission stated:

> The single greatest protection for personal information against unexpected and unwelcome secondary uses, and 'function creep' is to delete or de-identify it. If it no longer exists in identifiable form, it can no longer pose a risk to privacy.[57]

25.47 The Australian Government Department of Health and Ageing (DOHA) submitted that such a principle would be 'consistent with the objectives of a general set of overarching principles governing the life cycle of personal information'.[58] The OPC also noted that such a requirement already applies under some state and territory law to state and territory government bodies, and there 'appears to be no solid policy reasons why this cannot be extended to Commonwealth agencies'.[59]

25.48 Guidance was, however, sought as to when an agency or organisation no longer 'needs' to retain the personal information in question.[60] DOHA submitted that this should be defined to permit both primary and secondary uses.[61]

61 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007.

25.49 Other stakeholders resisted a general data destruction or de-identification principle applicable to agencies. Some stakeholders noted that the disposal obligations should depend on the context—for example, the nature of the information, why it is held, etc. The Australian Federal Police (AFP), for example, submitted that 'these obligations are best located in the legislation that regulates … particular types of personal information'. It noted that disposal obligations already apply to the AFP in a number of statutes, such as in relation to fingerprints and DNA in the *Crimes Act 1914* (Cth).[62]

25.50 The National Health and Medical Research Council (NHMRC) submitted that a general data destruction requirement would need to be subject to some exceptions in relation to health and genetic information, to take into account of the peculiar needs in those areas.[63] One solution to this problem would be to make the destruction or de-identification obligation only applicable where the agency is 'under no legal obligation to continue to retain the information'.[64]

25.51 Some stakeholders argued that the *Archives Act 1983* (Cth) already deals adequately with the destruction of records, including those containing personal information.[65] The National Archives of Australia submitted that the *Archives Act*

> is part of a cohesive management regime that ensures that records are kept for as long as they are required for business and accountability purposes, and to ensure that records of archival value are generally available to the public once they are 30 years old.[66]

25.52 It should be noted, however, that the Department of Health and Ageing seemed to see no conflict between a destruction or de-identification requirement in the privacy principles and the *Archives Act* requirements.[67]

ALRC's view

25.53 The ALRC's view is that the general requirement to destroy or permanently de-identify personal information that is no longer needed should apply both to agencies and organisations. This reform, which would represent an extension of the requirement in NPP 4.2 to include agencies, was strongly supported by a significant majority of the stakeholders that commented on this issue. There seems to be no strong policy reason to differentiate in this area between agencies and organisations, particularly given that

63 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.
64 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007. A similar point was made by Victorian Society for Computers and the Law Inc, *Submission PR 137,* 22 January 2007.
65 Confidential, *Submission PR 165,* 1 February 2007; Australian Government Department of Human Services, *Submission PR 136,* 19 January 2007.
66 National Archives of Australia, *Submission PR 199,* 20 February 2007.
67 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007.

some state and territory agencies are already subject to such provisions under state and territory law.[68]

25.54 The ALRC believes that such a reform would promote privacy protection, given that the most effective means of protecting an individual's information privacy rights is to limit access to the individual's personal information. If that information is destroyed or permanently de-identified, the information self-evidently cannot be accessed or misused.

25.55 A number of concerns were raised in relation to this reform. First, it was suggested that guidance would need to be given about when agencies and organisations no longer 'need' to retain personal information. The ALRC believes that, by adopting the substance of NPP 4.2, it will be clear that an agency or organisation would no longer 'need' the personal information, within the meaning of the data security principle, if it is no longer necessary for a purpose permitted by the proposed UPPs.

25.56 Secondly, there was concern that there may be tension between this requirement in the proposed UPPs and requirements relating to the retention or destruction of personal information in other legislation.[69] The ALRC believes, however, that differing requirements relating to destruction in the *Privacy Act* and elsewhere can be accommodated within the proposed framework. As explained above, the proposed UPPs should set out the generally applicable requirements as to information privacy, but these general requirements may be displaced by other requirements in legislation dealing with specific aspects of information handling or particular contexts.

25.57 Thirdly, as noted above, some stakeholders suggested that the destruction or de-identification obligation should only apply where the agency or organisation is under no legal obligation to retain the information. The ALRC believes, however, that such a qualification to the general principle is unnecessary because, if an agency or organisation is legally required to retain personal information, this clearly indicates that it still 'needs' it for a permitted purpose.

25.58 Finally, as noted earlier, in the proposal below and in the proposed 'Data Security' principle, the ALRC avoids using the term 'de-identify' and instead uses the term 'render non-identifiable'. This change in terminology reflects the position discussed in Chapter 3 and later in this chapter.

---

68 See, eg, *Privacy and Personal Information Protection Act 1998* (NSW) s 12.

69 See the above submissions relating to the *Archives Act 1983* (Cth).

Proposal 25–4 The proposed 'Data Security' principle should require an agency or organisation to take reasonable steps to destroy or render non-identifiable personal information if it is no longer needed for any purpose permitted by the UPPs.

When is destruction or deletion appropriate?

Background

25.59 Where an agency or organisation holds personal information about an individual, but it has no lawful reason under the *Privacy Act* or other legislation to continue to hold the information, a question arises as to what is the most appropriate course of action. There are many situations in which this may arise. For example, an agency or organisation might hold personal information about an individual that is incorrect, or it might have collected personal information without lawful authority. In such situations, should the information be deleted or otherwise destroyed? Is it more appropriate to keep some kind of record of the information but take steps to de-identify or 'mask' the information and prevent adverse consequences for the individual? Does the answer depend on the error involved and the particular information-handling context?

25.60 In IP 31, the ALRC asked whether the privacy principles should regulate the deletion of personal information—or any particular types of personal information—by organisations and agencies, or whether this is best left to OPC guidance.[70] Regulation could involve legislative prohibition or authorisation of deletion in certain circumstances.

25.61 Guidelines issued by the OPC about the IPPs provide that, where possible, an agency should generally retain old personal information, while clearly marking it as no longer current, and new information should record the date and reason the old information is superseded. The Guidelines state that:

> There may however be some particularly sensitive cases in which the mere existence of the earlier incorrect information could be detrimental. In such cases, deletion may be the only appropriate option. It is essential if information is deleted that a notation is made of the reason for the deletion and the officer responsible for the decision.[71]

71 Office of the Federal Privacy Commissioner, *Plain English Guidelines to Information Privacy Principles 4–7: Advice to Agencies about Storage and Security of Personal Information, and Access to and Correction of Personal Information* (1998).

Submissions and consultations

25.62 A number of stakeholders were comfortable with a privacy principle that carried an obligation either to destroy or permanently de-identify personal data.[72] Such a principle, it was argued, provides flexibility in how to deal with personal information that can no longer be held lawfully by an agency or organisation. Some stakeholders stated that, while it may not always be appropriate to delete such personal information, guidance from the OPC would assist agencies and organisations in knowing how to dispose of, or otherwise deal with, such information.[73]

25.63 Some stakeholders expressed concern about the appropriateness of deleting, as distinct from annotating, incorrect records of personal information.[74] The Public Record Office of Victoria noted that, even where a record contains incorrect personal information, the best course may be to amend the record so as to leave the original incorrect data intact. This is because the incorrect data can provide 'important evidence' and may be 'of value to an individual who has a legitimate grievance against a government agency'.[75] This is not always so, however. In a case brought under the *Freedom of Information Act 1991* (SA) involving a request to amend a record containing incorrect personal information, Judge Anderson explained his decision to black out, rather than merely annotate, the relevant information:

> I recognise that the effect of this direction is to disrupt the historical integrity of the [record]. However, that is as it must be for I am unable to see that it was the intention of Parliament to preserve the historical integrity of incorrect factual assertions and any opinion based thereon.[76]

25.64 Agencies and organisations are sometimes under explicit legal obligations to retain personal information and it was feared that these obligations could conflict with a privacy principle requiring them to delete personal information in certain circumstances.[77] It was also noted that personal information often needs to be retained

because there is a chance that it will be required at a future date for, among other things, litigation purposes.[78] This can require an agency or organisation to keep the information in question for at least as long as the relevant statute of limitations.[79]

25.65 Nevertheless, it was submitted that such concerns should not permit agencies to retain personal information 'just in case'; rather, any claimed need to retain personal information 'should be addressed through specific legal requirements, which can be debated and justified as clear exceptions to a general presumption of disposal'.[80]

ALRC's view

25.66 The ALRC's view is that the OPC should provide guidance as to when it is appropriate to destroy or de-identify (in other words, render non-identifiable) personal information that is no longer needed for a purpose permitted by the UPPs. While there are undoubtedly situations where destruction of personal information would be inappropriate—for example, if the personal information may later be needed for the purposes of litigation—these situations can best be dealt with in guidance from the OPC.

25.67 As noted by a large number of stakeholders, this approach would retain a desirable level of flexibility in the proposed 'Data Security' principle. Moreover, as noted earlier in this chapter, a common sense approach to this privacy principle dictates that, where an agency or organisation is under a legal obligation to retain personal information, then this clearly indicates that it still 'needs' the information for a permitted purpose under the proposed UPPs, and so it would not be required to dispose of the information.

Proposal 25–5 The Office of the Privacy Commissioner should provide guidance about when it is appropriate for an agency or organisation to destroy or render non-identifiable personal information that is no longer needed for a purpose permitted under the UPPs. This guidance should cover, among other things:

(a) personal information that forms part of a historical record;

78 National Archives of Australia, *Submission PR 199,* 20 February 2007; Australian Taxation Office, *Submission PR 168,* 15 February 2007; AAMI, *Submission PR 147,* 29 January 2007; Confidential, *Submission PR 143,* 24 January 2007; Public Record Office Victoria, *Submission PR 72,* 3 January 2007.

79 AAMI, *Submission PR 147,* 29 January 2007.

80 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007. See also Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

(b) personal information, or a record of personal information, that may need to be preserved, in some form, for the purpose of future dispute resolution; and

(c) the interaction between the UPPs and legislative records retention requirements.

General right to destruction of personal information?

25.68 The ALRC asked whether an individual should have the right to request an agency or organisation to destroy personal information that relates to him or her and, if so, in what circumstances or upon what conditions.[81] Any such request would have to be considered with reference to any applicable legal obligations to retain the personal information.

Submissions and consultations

25.69 A number of stakeholders opposed amending the privacy principles to give individuals the right to request agencies and organisations to destroy their personal information. Some were concerned that such a requirement would be a blunt instrument, because it would not allow agencies and organisations to deal with the information otherwise than by destruction, even if some other method would be more appropriate.[82] The Australian Bankers' Association noted, for example, that sometimes it is necessary to retain personal information 'to maintain the banking service for customer' or to enforce the customer's contractual obligations.[83] It was also suggested that, in relation to agencies delivering government services, such a provision would 'compromise … public accountability'.[84]

25.70 Moreover, some stakeholders suggested that individuals' rights of access and correction (provided in IPPs 6–7 and NPP 6) adequately address the underlying problem, without providing a right of individuals to request the destruction of their personal information.[85]

25.71 It was also suggested that such a reform could place unreasonable burdens on organisations and agencies. Some stakeholders submitted that any right to have one's

82 See, eg, Australian Bankers' Association Inc, *Submission PR 259,* 19 March 2007; Australian Taxation Office, *Submission PR 168,* 15 February 2007; UNITED Medical Protection, *Submission PR 118,* 15 January 2007.

83 Australian Bankers' Association Inc, *Submission PR 259,* 19 March 2007.

84 Australian Government Department of Human Services, *Submission PR 136,* 19 January 2007.

85 Australian Bankers' Association Inc, *Submission PR 259,* 19 March 2007; UNITED Medical Protection, *Submission PR 118,* 15 January 2007. The right to access and correction is dealt with in Ch 12 (in relation to personal information held by agencies) and Ch 26 (in relation to personal information held by organisations).

personal information destroyed should not be located in general privacy legislation, but rather in the relevant statute that permitted the collection, use or disclosure of the information in the first place.[86] The AFP noted that this was the case for some other federal legislation, including: the *Australian Federal Police Act 1979* (Cth) and the *Crimes Act*, in relation to fingerprints, forensic material, and evidence seized on arrest or by search warrant; and the *Telecommunications (Interception & Access) Act 1979* (Cth) and the *Surveillance Devices Act 2004* (Cth), in relation to intercepted communications.

25.72 Some stakeholders, though not opposed to the addition of a general right of individuals to request the destruction of personal information, submitted that such a right would need to be subject to certain qualifications. DOHA argued that the right would need to be 'subject to operational requirements', such as an agency's need to retain personal information following the provision of a service in order to consider a future application for a related service.[87] It was also suggested that the right should be subject to other statutory requirements.[88] The NHMRC submitted that the deletion of health and genetic information

> is best covered by regulations or guidelines rather than by the IPPs or NPPs, so that amendment or updating is easier if required, and difficult issues such as balancing the rights of the individual who requests deletion of their information with the rights of their genetic relatives to access the information for their own health benefit in the future can be addressed in detail.[89]

ALRC's view

25.73 The ALRC does not support giving an individual the general right to require an agency or organisation to destroy personal information it holds about the individual. None of the submissions received by the ALRC were strongly in favour of such an amendment, and a large number of submissions opposed it. This indicates that there is not a strong movement for change in this area.

25.74 Moreover, the ALRC believes that there are a number of important factors that weigh against such a change. First, the ALRC believes that such an amendment would promote undesirable rigidity in data security issues, by encouraging personal information to be destroyed even where another method of dealing with the information would be more appropriate in the circumstances.

25.75 Take the following hypothetical example. Company X, lawfully collects personal information about an individual, Y, including the details of various products

---

86 Australian Federal Police, *Submission PR 186,* 9 February 2007; Insolvency and Trustee Service Australia, *Submission PR 123,* 15 January 2007.

87 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007.

88 CSIRO, *Submission PR 176,* 6 February 2007; AXA, *Submission PR 119,* 15 January 2007.

89 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

purchased by Y. After the transaction is complete, Y may want X to remove all of Y's personal information from X's database. If the information is destroyed, however, this could make it difficult for X to analyse its sales data and liaise with product manufacturers. On the other hand, if the personal information is permanently de-identified, this may satisfy the legitimate interests of both the individual and the company, by allowing X to retain some data relating to product sales that would be useful to its business without identifying Y as the purchaser.

25.76 Secondly, it is important for the 'Data Security' principle to be sufficiently flexible to accommodate the various retention and destruction requirements that apply in other legislation to specific categories of personal information, and in particular situations. Therefore, such an amendment may hinder the ability of the *Privacy Act* to operate harmoniously with other legislation because it may conflict with other retention and destruction obligations. Archives legislation is one such example.

Meaning of 'destroy or permanently de-identify'

25.77 Assuming that an agency or organisation is subject to a requirement to destroy or permanently de-identify personal information, a related question is: how is it expected to fulfil this requirement? More specifically, should there be guidance (either in law or from the OPC) as to what an entity needs to do to destroy or permanently de-identify personal information and, if so, what should be required?

25.78 Although no specific question was directed to this issue in IP 31, a number of stakeholders considered this issue, and a number of stakeholders requested guidance in this area.

Submissions and consultations

25.79 Commenting on the IPPs, the OPC suggested that agencies should be obliged to institute 'an appropriate disposal regime … to ensure that the information is destroyed or de-identified in a secure manner'.[90] It gave the example of the disposal authority regime under the *Archives Act 1983* (Cth).

25.80 Another stakeholder suggested that destruction of data should be 'complete and non-reversible and … be readily demonstrated to be so'.[91] This is particularly important for digital records because some systems only allow for 'simple "deletion", which may keep such data on record but simply tag it as "deleted"'.[92] A similar point was made by the Commonwealth Scientific and Industrial Research Organisation (CSIRO), which noted that

> many large organisations have automated computer backup systems—and with some current backup technologies it is very difficult to remove particular files without

90 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
91 W Caelli, *Submission PR 99,* 15 January 2007.
92 Ibid.

> going through the complicated, time-consuming and risky process of restoring, deleting the files from the restored copy, re-doing the backup then destroying all the data on the original backup.[93]

25.81 According to the Victorian Society for Computers and the Law, this causes the following problem:

> [E]specially in the case of larger organisations, it may be practically impossible to guarantee the complete destruction of particular information, or if it is possible, the destruction process may be unreasonably costly and burdensome. The practical effect is that organisations requested to delete information may be encouraged to disregard such requests, to make only cursory and incomplete attempts to delete information, or to pass on the costs of deletion to consumers.[94]

25.82 The CSIRO also expressed concern about the 'confusion and lack of clarity' over the meaning of the term 'de-identification', stating:

> Sometimes it appears to mean simply that nominated identifiers such as name, address, date of birth and Medicare number have been removed from the data. At other times its use appears to imply that individuals represented in a data set cannot be identified from the data—though in turn it is completely unclear what this means. Of course simply removing nominated identifiers is often insufficient to ensure that individuals represented in a data set cannot be identified—it can be a straightforward matter to match some of the available data fields with the corresponding fields from external data sets, and thereby obtain enough information to determine individuals' names either uniquely or with a low uncertainty.[95]

25.83 The CSIRO suggested the *Health Insurance Portability and Accountability Act of 1996* (US) is 'a very good starting point' in providing guidance on the meaning of these terms.[96] It was also suggested that reference should be made in the Act to 'an accepted industry standard for secure document destruction'.[97] The Centre for Law and Genetics suggested that, following data destruction or de-identification, there should be a requirement that the entity create a record 'so that there is an audit trail that can be checked if required at some future date'.[98]

ALRC's view

25.84 The ALRC acknowledges that there is considerable confusion as to what agencies and organisations need to do in order to destroy or permanently de-identify personal information, within the meaning of the privacy principles. There is particular

98 Centre for Law and Genetics, *Submission PR 127,* 16 January 2007.

confusion in relation to digital or electronic records of personal information, given that multiple back-up copies are often automatically made of such records.

25.85 The ALRC's view is that two steps should be taken to alleviate this confusion. First, the term 'permanently de-identify' should not be used in the UPPs, because it is at least arguable that such an obligation to 'permanently de-identify' personal information does not require taking action to preclude the possibility of re-identification at a later date.[99] The ALRC believes that any ambiguity would be removed by using the alternative term 'render non-identifiable', because this makes it clear that agencies and organisations are obliged to take steps to prevent future re-identification of data.

25.86 Take the following hypothetical example. A bank holds copies of various documents, such as the title deed, of an individual (X), who has a mortgage with the bank. After X discharged the mortgage, the bank no longer has a lawful purpose for holding these documents within the meaning of the privacy principles, and so it is required to destroy or permanently de-identify personal information contained in these documents. If the bank merely cuts out X's name wherever it appears and burns these bits of paper, arguably the documents have been permanently de-identified because it is impossible to re-insert the name at a later date. This will not necessarily preclude the documents from later being re-identified, however, if a person is able to match the data in these documents with other publicly available data, such as government land title information. On the other hand, an obligation to render the information in question non-identifiable would require the bank to take additional steps to ensure that the information in the documents cannot be easily matched with other available data to allow the documents to be re-identified.[100]

25.87 Secondly, the ALRC agrees with a number of stakeholders that further guidance should be made available as to what is required to destroy or render non-identifiable personal information. This could be provided in the *Privacy Act* itself or in guidance issued by the OPC. The problem with expanding the data security privacy principle to provide greater legislative direction is that it would undermine the objective of adopting technology neutral privacy principles that are high-level and brief.[101] Consequently, the ALRC believes that this guidance should be provided by the OPC, which can tailor its advice by taking into account the features of particular technologies that cause data security concerns. As explained in Chapter 29, this guidance should also make clear that any costs incurred in fulfilling this requirement should be treated by agencies and organisations as normal operating costs and should not be passed on to the individual concerned.

---

99 This issue is also discussed in Ch 3.
100 The issue of de-identification is considered in the specific context of research in Ch 58.
101 See Proposal 15–1.

Proposal 25–6 The Office of the Privacy Commissioner should provide guidance about what is required of an agency or organisation to destroy or render non-identifiable personal information, particularly when that information is held or stored in an electronic form.

Summary of proposed 'Data Security' principle

25.88 In summary, the ALRC's view is that the eighth principle in the proposed UPPs should be called 'Data Security'. It should appear as follows.

UPP 8. Data Security

An agency or organisation must take reasonable steps to:

(a) protect the personal information it holds from misuse and loss and from unauthorised access, modification or disclosure;

(b) destroy or render non-identifiable personal information if it is no longer needed for any purpose permitted by the UPPs; and

(c) ensure that personal information it discloses to a person pursuant to a contract, or otherwise in connection with the provision of a service to the agency or organisation, is protected from being used or disclosed by that person otherwise than in accordance with the UPPs.

Introduction

26.1 Australian law sets out rights and obligations in relation to individuals' access to, and correction of, personal information held by agencies and organisations. For personal information held by agencies, these rights and obligations are set out in a combination of the Information Privacy Principles (IPPs) of the *Privacy Act 1988* (Cth) and also the *Freedom of Information Act 1982* (Cth) (FOI Act). In contrast, the provisions dealing with access and correction of personal information held by organisations are set out exclusively in the National Privacy Principles (NPPs).

26.2 These provisions generally reflect the 'Individual Participation Principle' in the Organisation for Economic Co-operation and Development's *Guidelines on the*

Protection of Privacy and Transborder Flows of Personal Data (1980) (OECD Guidelines).[1] They also respond to 'a core principle' in the European Parliament's *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (1995) (EU Directive)—namely, that

> the data subject should have a right to obtain a copy of all data relating to him/her that are processed, and a right to rectification of those data where they are shown to be inaccurate. In certain situations he/she should also be able to object to the processing of the data relating to him/her.[2]

26.3 This chapter concentrates on the regime for access to, and correction of, personal information held by *organisations*.[3] This chapter considers the following main questions. What should be the scope of the access and correction privacy principle? What limitations should apply to an individual's general access and correction rights? Where personal information held by an organisation is shown to be incorrect, should the organisation be required to notify any third parties to whom the information has been disclosed?

Current coverage by IPPs and NPPs

26.4 As noted above, the provisions dealing with access and correction in respect of personal information held by agencies are set out in a combination of the FOI Act and IPPs 6 and 7. IPP 6 provides that an individual is entitled to access a record containing his or her personal information, where it is in the possession or control of a record-keeper, except to the extent that the record-keeper is required or authorised to refuse access under Commonwealth law.

26.5 IPP 7 provides that a record-keeper, who has possession or control of a record containing personal information, must take reasonable steps (by way of making appropriate corrections, deletions and additions) to ensure the record is accurate and is relevant, up-to-date, complete and not misleading. Where the record-keeper is not willing to amend the record in accordance with a request by the individual concerned—and in the absence of a decision or recommendation under applicable Commonwealth law that the record should be amended—the record-keeper, if requested by the individual concerned, is to take reasonable steps to attach to the record any statement by the individual of the correction, deletion or addition sought.

See European Parliament, *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data*, Directive 95/46/EC (1995), art 12.

3 The provisions that should apply in respect of personal information held by *agencies* are addressed in Ch 12.

26.6 For personal information held by organisations, NPP 6.1 sets out the general requirement that, if an organisation holds personal information about an individual, it must provide the individual with access to the information on request. It then lists a number of situations where access can be denied or limited.

26.7 Where an organisation is not required to provide access under NPP 6.1, the organisation must, if reasonable, consider whether the use of mutually agreed intermediaries would allow sufficient access to meet the needs of both parties.[4] NPP 6.2 provides that an organisation may give an individual an explanation for refusing to grant access to personal information, where providing access would reveal evaluative information generated within the organisation in connection with a commercially sensitive decision-making process.

26.8 NPP 6.5 provides that, if an individual is able to establish that personal information held by an organisation about the individual is not accurate, complete and up-to-date, the organisation must take reasonable steps to correct the information. If the individual and the organisation disagree about the accuracy of the information and the individual asks the organisation to append a statement claiming the information is not accurate, complete or up-to-date, the organisation must take reasonable steps to comply with the request.[5] Finally, NPP 6.7 provides that an organisation must provide reasons for denial of access or a refusal to correct personal information.

Scope of proposed 'Access and Correction' principle

Should the principle cover agencies and organisations?

26.9 In Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether 'the overlap of the *Privacy Act* and *Freedom of Information Act 1982* (Cth) provisions relating to access and amendment of records give rise to any difficulties'.[6] The responses by stakeholders to this question are summarised in Chapter 12. That chapter also addresses the related question whether the 'Access and Correction' principle in the proposed Unified Privacy Principles (UPPs) should cover agencies or organisations, or both?[7]

26.10 Chapter 12 sets out the ALRC's view that the rules relating to access and correction in respect of personal information held by agencies should be set out in a separate Part of the *Privacy Act*, as distinct from in the UPPs or in the FOI Act. Consequently, the ALRC believes that the proposed 'Access and Correction' principle

---

4 *Privacy Act 1988* (Cth) sch 3, NPP 6.3. Compare also s 18H, which provides that, in certain circumstances, an individual's rights of access to credit information files and credit reports may be exercised by another person authorised in writing by the individual.

5 Ibid sch 3, NPP 6.6.

6 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 7–6(a).

7 Note that the ALRC proposes to bring together the IPPs and NPPs to form the UPPs: see Proposal 15–2.

in the UPPs should deal predominantly with personal information held by organisations but, for clarity, it should also contain a note stating that the requirements on agencies in respect of access and correction are set out in the relevant Part of the *Privacy Act*.

Level of detail in the principle

26.11 NPP 6 is an example of a 'hybrid principle' in that it contains some general, high-level provisions and also some relatively prescriptive provisions.[8] It first sets out the general rule that an organisation must provide an individual with access to personal information it holds about the individual. After this, NPP 6 contains an exhaustive list of exceptions, qualifications and derogations from this general right, as well as a number of more detailed provisions that further explain the parameters of this right.

26.12 NPP 6 is, therefore, a relatively lengthy principle. The ALRC proposes that the NPPs should provide the general template in drafting and structuring the proposed UPPs,[9] which would mean that, if the structure of NPP 6 were replicated in the equivalent principle in the UPPs, the proposed 'Access and Correction' principle would remain relatively lengthy.

26.13 One option would be to move some of the detailed provisions in the proposed 'Access and Correction' principle into another part of the *Privacy Act* or into subordinate legislation. The ALRC believes, however, that the benefits of this approach would be outweighed by the disadvantages. In particular, if these provisions were moved out of the UPPs, this would require them to be re-drafted significantly so that they operate as conventional statutory provisions, as distinct from principles. Inevitably, this would make them more prescriptive and less high-level.

Proposal 26–1 The proposed Unified Privacy Principles (UPPs) should contain a principle called 'Access and Correction' that:

(a) sets out the requirements that apply to organisations in respect of personal information that is held by organisations; and

(b) contains a note stating that the provisions dealing with access to, and correction of, personal information held by agencies are located in a separate Part of the *Privacy Act*.

8 For discussion of the overall structure of the privacy principles, see Ch 15.
9 Proposal 15–4.

Access by intermediaries

26.14 Where an organisation has lawfully denied a request for access, NPP 6.3 requires the organisation nevertheless to consider whether it would be acceptable to provide access to a mutually agreed third party intermediary.

26.15 In 2005, the Office of the Privacy Commission (OPC) noted concern that the obligation in NPP 6.3 for an organisation merely to 'consider' the use of intermediaries, where the organisation is not required to provide access, is inadequate.[10] There is a question, therefore, whether this obligation should be strengthened.[11]

Submissions and consultations

26.16 A number of stakeholders submitted that NPP 6.3 should be amended to provide individuals with the right to have a mutually agreed intermediary access the information in question in appropriate circumstances.[12] The OPC stated that this would be more consistent with the overall intent of the principle, which is to provide individuals with the right to access their personal information.[13] It was submitted that the requirement merely to consider a request for access by an intermediary is too limited, and it was observed that there are no similar provisions in other privacy legislation.[14]

26.17 Legal Aid Queensland submitted that such an amendment may help in protecting the access rights of people with a diminished decision-making capacity.[15] The OPC also submitted that if an individual is denied access, the agency or organisation should be required to advise the individual that they may be able to gain access through the use of an intermediary.[16]

ALRC's view

26.18 Where a request for access to personal information is legitimately refused, provision for the use of a mutually agreed intermediary is important because it allows for a more flexible response. It balances the need to withhold access to personal information in appropriate circumstances with an individual's right to know what

16 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

personal information is held about him or her. The objective behind this provision was explained in the explanatory material accompanying its introduction:

> [NPP 6.3] is not intended to provide a mechanism to reduce access if access would otherwise be required. There will be some cases—investigations of fraud or theft for example—where no form of access is appropriate. In other cases, it should be considered as an alternative to complete denial of access. For example, in the health context, an intermediary could usefully explain the contents of the health record to the individual as an alternative to denying access to the health information altogether.[17]

26.19 In other words, NPP 6.3 requires an organisation to consider whether a compromise can be reached that would allow an individual some form of indirect access to his or her personal information, provided that such access serves the needs of both parties. The ALRC's view is that this is a very useful provision. The question, therefore, is whether the requirement on an organisation merely to consider such a compromise provides sufficient impetus for an organisation to reach such a compromise.

26.20 The ALRC believes that it would be preferable to make some small amendments to the wording of this provision to clarify that an organisation should take reasonable steps to reach a compromise that adequately meets the needs of both parties. A requirement simply to consider such action would allow unscrupulous organisations to comply with the letter of the relevant privacy principle—by briefly contemplating and then immediately rejecting such a course of action—but ignoring the spirit of the provision, which is to allow for a more flexible approach where a blanket denial of access to personal information would be an unnecessarily blunt instrument.

26.21 The requirement to take reasonable steps should not be interpreted as requiring an organisation always to reach a compromise, or even always to try to do so. There are circumstances where a compromise, or even negotiations preliminary to such a compromise, would be inappropriate because it would undermine the organisation's legitimate reason for denying the request for access in the first place.

26.22 For example, if an individual's request for access were denied under NPP 6.1(a) on the basis that, if the individual accessed the personal information in question, it would endanger the life of a witness in criminal proceedings, it is likely to be entirely appropriate for the relevant organisation not to take any active steps to reach a compromise with the individual. Consequently, the ALRC believes that the OPC should also provide guidance as to the meaning of 'reasonable steps' in this context.

---

17 Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), [376]. See also Office of the Federal Privacy Commissioner, *Access and the Use of Intermediaries*, Information Sheet 5 (2001).

Proposal 26–2 (a) The proposed 'Access and Correction' principle should provide that, where an organisation is not required to provide an individual with access to his or her personal information because of an exception to the general provision granting a right of access, the organisation must take reasonable steps to reach an appropriate compromise, involving the use of a mutually agreed intermediary, that would allow for sufficient access to meet the needs of both parties.

(b) The Office of the Privacy Commissioner should provide guidance about the meaning of 'reasonable steps' in this context, making clear, for instance, that an organisation need not take any steps where this would undermine a lawful reason for denying a request for access in the first place.

Barriers to access: fees and timeframe

26.23 The OECD Guidelines state that where an individual is entitled to access personal information about him or her, this should include the right to have it communicated:

- within a reasonable time;
- at a charge, if any, that is not excessive;
- in a reasonable manner; and
- in a form that is readily intelligible to him …[18]

26.24 These requirements have been partially incorporated in NPP 6.4, which provides that if an organisation charges for providing access to personal information, the charges must not be excessive and must not apply to lodging a request for access. Concern has been expressed that, because there is no maximum fee or schedule of fees in the *Privacy Act* for accessing personal information, a wide variety of fees may be charged. In 2005, the OPC recommended guidance be issued to the private sector regarding appropriate fee structures.[19]

18 Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980), Guideline 13(b).

19 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 31. See also rec 29, which provides that the Australian Government should consider adopting the Australian Health Ministers' Advisory Council Code as a schedule to the *Privacy Act*, which will address the issues of intermediaries and access fees. This is discussed further in Part H.

26.25 Moreover, NPP 6 does not provide that access to personal information should be provided within a reasonable time and in a reasonable manner.[20] This contrasts with the OECD Guidelines, which contains these general provisions. Victorian privacy law sets out specifically the timeframe within which a request for access to, or correction of, personal information must be acted upon.[21]

26.26 A number of stakeholders noted that the obligations relating to fees and timeliness of service require clarification.[22] The OPC noted the difficulties in providing statutory guidance as to fees for access, and also noted that it had undertaken to provide guidance on this issue. It also stated that the privacy principle dealing with access should require agencies and organisations to provide the requested information within a 'reasonable time'.[23]

ALRC's view

26.27 The proposed 'Access and Correction' principle should require that, where an individual has a right to access personal information, the organisation should provide access within a reasonable time. Such a requirement is consistent with the OECD Guidelines, which the *Privacy Act* attempts to implement.[24] It is also consistent with the general objective behind the privacy principles to give legislative voice to information privacy rights in a way that is meaningful but not overly prescriptive.[25]

26.28 The ALRC also believes that such a requirement would not be overly onerous on organisations because it is strongly arguable that such a requirement is already implicit in NPP 6. Making this requirement explicit in the UPPs should not, therefore, require a change in practice for the vast majority of organisations that are already subject to NPP 6. For the avoidance of confusion, however, the ALRC proposes that the OPC should update its guidance relating to timeliness of service, taking account of the new explicit requirement to respond within a reasonable time.

26.29 On the other hand, the ALRC's view is that it is not desirable to provide further legislative guidance as to fees for accessing personal information. Such a provision reflects the objective that the privacy principles should be high-level and should not be overly prescriptive.[26] Moreover, it should be noted that the ALRC did not receive an indication of strong concern about the operation of this provision in submissions and consultations. The ALRC also observes that that OPC has already undertaken to

provide further guidance on this issue—a response that the ALRC believes is appropriate.

Proposal 26–3 The proposed 'Access and Correction' principle should provide that an organisation must respond within a reasonable time to a request from an individual for access to personal information held by the organisation. The Office of the Privacy Commissioner should provide guidance about the meaning of 'reasonable time' in this context.

Right to correction of personal information

Background

26.30 A number of issues have been raised about the right to have corrected any incorrect personal information held by an organisation. The IPPs and NPPs deal with this issue differently. IPP 7 states that, in the event that there is a disagreement about correction, the record-keeper should 'attach' to the record, on request, any statement provided by the individual of the correction sought. On the other hand, NPP 6 requires the organisation, on request, to 'associate' with the information a statement that it is not accurate, complete or up-to-date.

26.31 This begs the question: which approach is more appropriate? For example, Jeremy Douglas-Stewart states:

> It may be appropriate not to attach a statement where, for example, the relevant personal information is held in electronic format in template documents that have no capacity for attachments or where the statement is very lengthy.[27]

26.32 There was also concern that the requirement in NPP 6 that an individual must establish the inaccuracy of personal information as a prerequisite to correction by the organisation is too onerous.[28] In 2005, the OPC recommended guidance on what an individual needs to do in order to establish inaccuracy.[29]

---

27 See J Douglas-Stewart, *Annotated National Privacy Principles* (2005), [2–4810]. See also *Privacy Act 1988* (Cth) s 18J, which requires a credit reporting agency or credit provider to take reasonable steps to include in a credit file or report a statement provided by the individual of an amendment sought but not made within 30 days after being requested to do so.

28 There is no equivalent requirement under the IPPs.

29 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 32. Compare *Federal Data Protection Act 1990* (Germany) s 35(2), which contains a reverse onus of proof in that it requires a private sector body to erase certain categories of personal data where it cannot prove that they are correct.

Submissions and consultations

26.33 The Australian Privacy Foundation submitted that where the information in question is disputed, the data collector should make an annotation that is 'available to any subsequent user of the disputed information'.[30] It further submitted that the privacy principles should make clear that 'correction can take the form of amendment, deletion or addition, as appropriate in the circumstances'.[31]

26.34 The OPC submitted that the relevant provision could be amended to provide that an individual need only 'raise reasonable grounds for the organisation to believe that the information is in need of correction'.[32]

ALRC's view

26.35 Where an individual and organisation disagree as to whether the personal information held by the organisation should be corrected, the organisation is still obliged to take some action to note the individual's claim. In these circumstances, the Act provides:

> If the individual and the organisation disagree about whether the information is accurate, complete and up-to-date, and the individual asks the organisation to *associate with the information* a statement claiming that the information is not accurate, complete or up-to-date, the organisation must take reasonable steps to do so.[33]

26.36 The corresponding obligation in IPP 7.3 requires an agency to 'take such steps (if any) as are reasonable in the circumstances to *attach to any record* any statement provided by that individual of the correction, deletion or addition sought' (emphasis added). The question, therefore, is whether the obligation should be to make an attachment to the relevant record, or whether it is preferable to oblige the organisation to 'associate' with the record the views of the individual concerned.

26.37 The ALRC's view is that the wording in NPP 6.6 ('associate' rather than 'attach') is preferable because it is more technologically neutral, allowing a more flexible approach for organisations that record personal information electronically.[34] This is more likely to achieve the main objective of the relevant provision, which is to ensure that the opinion of the individual concerned is easily accessible when the organisation seeks to use or disclose the relevant personal information.

26.38 The second question noted above is whether an individual should have to establish that personal information held by the organisation is incorrect before the

33 *Privacy Act 1988* (Cth) sch 3, NPP 6.6 (emphasis added).
34 Proposal 7–1.

organisation is obliged to correct the information. Only the OPC commented on this issue, recommending that this provision be amended to require the individual only to 'raise reasonable grounds for the organisation to believe that the information is in need of correction'.

26.39 The ALRC's view is that a case for amendment has not been made out. In a practical sense, clearly the individual will need to take steps to show the organisation that the relevant personal information is in need of correction. By focussing attention on the term 'establish', there is a risk that any amendment may imply that there is an onus of proof that either the individual or the organisation bears in these circumstances. This is not so. In the event of a disagreement between the organisation and individual concerned, both parties should simply be encouraged to take steps to show that the relevant information is or is not in need of correction. There is an impetus on organisations to take this approach seriously in order to comply with their obligations under the 'Data Quality' principle.

Incorrect information: notification of third parties

Background

26.40 Where an agency or organisation has corrected personal information that it holds about an individual, neither the IPPs nor NPPs oblige it to notify any third parties to whom it disclosed the inaccurate information. Similarly, the IPPs and NPPs do not require an agency or organisation to alert third parties where it has refused to make a correction pursuant to an individual's request.[35]

26.41 In its 2005 review, the OPC recommended that

> the Australian Government should consider amending NPP 6 to provide that when an individual's personal information is corrected in response to a request from the individual, the organisation should be obliged to notify third parties, where practicable, that they have received the inaccurate information.[36]

26.42 If the OPC's recommendation were adopted, it would require organisations to notify third parties of the fact that they have received incorrect information, but it would not require organisations to take the positive step of passing on corrected information to those third parties. In contrast, the United States Federal Trade Commission, in identifying core principles of data protection, has stated that 'to be meaningful, access must encompass … the means by which corrections and/or consumer objections can be added to the data file and sent to all data recipients'.[37]

---

35 This was the subject of criticism in submissions to the OPC Review: see Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 116, 117.

36 Ibid, rec 28.

37 United States Government Federal Trade Commission, *Privacy Online: A Report to Congress* (1998), 9.

Moreover, the EU Directive states that member states must guarantee that every data subject has the right to require the data controller to notify

> third parties to whom the data have been disclosed of any rectification, erasure or blocking out [that has been carried out where the data are incomplete or inaccurate] unless this proves impossible or involves a disproportionate effort.[38]

26.43 Canadian privacy law requires organisations, where appropriate, to transmit to third parties corrected personal information, or to notify those parties of an unresolved challenge concerning the accuracy of the personal information.[39] It also states that, in certain circumstances, where a government entity has disclosed personal information to third parties, it must notify them of any correction made to that information, or of any notation where the correction is not made. Where the disclosure is to a government institution, the institution must make the correction or notation on any copy of the information under its control.[40] Similarly, New South Wales privacy law provides that if personal information is amended by an agency, the individual to whom the information relates is entitled, if reasonably practicable, to have recipients of that information notified of the amendments.[41]

26.44 In Germany, public and private bodies must notify third parties of 'the correction of incorrect data, the blocking of disputed data and the erasure or blocking of data due to inadmissible storage' if this does not involve 'disproportionate effort' and 'legitimate interests of the data subject do not stand in the way'.[42]

26.45 In light of the above, the ALRC asked in IP 31:

> Should the *Privacy Act* be amended to impose an obligation on both agencies and organisations to notify third parties, where practicable, that they have received inaccurate information and to pass on any corrected information? Should an obligation to notify third parties apply where agencies or organisations have refused to make a correction?[43]

Submissions and consultations

26.46 A large number of stakeholders submitted that data collectors should be required to give appropriate notification to any third parties to whom they have disclosed personal information that has subsequently been shown to be inaccurate.[44]

26.47 Some limitations were also suggested. For example, it was submitted that the obligation should only be triggered at the request of the individual concerned.[45] The Australian Taxation Office suggested that any such obligation should not be mandatory.[46] AAMI suggested that any requirement to notify third parties should only apply where the inaccuracy is 'material',[47] which would be in line with the relevant Hong Kong provision.[48] The Law Council of Australia also noted that it would be necessary to clarify the rights and obligations of third parties that have received incorrect personal information.[49]

26.48 The OPC and others proposed a more general limitation to the requirement to notify third parties—that is, this requirement should only apply 'where reasonable and/or practicable'.[50] The OPC explained that such a limitation is important because 'requiring agencies and organisations to pass this information on as a matter of course may result in unintended consequences'. It gave the following example:

> [I]f the personal information had been collected and used by a third-party organisation for a single purpose and is no longer needed by that organisation (and therefore had been destroyed or de-identified), requiring a mandatory disclosure of the new, corrected information may result in the third-party organisation unnecessarily collecting information it had no purpose to collect or no longer needed to collect.[51]

26.49 A number of stakeholders also supported a requirement that data collectors notify third parties where they have refused to make a correction.[52] The National Health and Medical Research Council, however, saw such a requirement as unnecessary.[53]

26.50 A smaller, but still significant, number of stakeholders argued that no general notification requirement should be introduced in these circumstances.[54] It was submitted that the case for such an amendment has not been made, nor even that this currently represents a major problem.[55] The Australian Government Department of Health and Ageing submitted that where personal information needs to be corrected 'to enable a specific service to be delivered, an obligation to do this should be set out in legislation or in contract'.[56] It was also noted that the cost of complying with such an obligation could be very onerous.[57]

ALRC's view

26.51 As a general proposition, the ALRC believes that, where an organisations has disclosed personal information to a third party, and the organisation later corrects that information in its own record, the organisation should be required to notify the third party of this correction. Such a provision was strongly supported by stakeholders and it would have a number of benefits. One obvious benefit is that it would reduce the risk that any entities to whom the incorrect personal information is disclosed will use or disclose the information inappropriately as a result of the error. Secondly, it would obviate the need for individuals to try to 'trace' where their personal information has gone in the event that it contains an error.

26.52 A number of stakeholders were concerned that such a requirement would be problematic if it were articulated in absolute terms. First, if an organisation were required to fulfil this notification obligation in every conceivable situation, it could cause enormous cost to the organisation while bringing little benefit to the individual concerned. Secondly, if the entities to which the organisation disclosed the incorrect personal information have already destroyed the personal information, it may cause more harm than it solves to disclose this personal information again.

26.53 Consequently, the ALRC's view is that any notification obligation would need to be carefully drafted in order to ensure that this obligation is neither too onerous on organisations nor likely to be counter-productive. To this end, the ALRC proposes that two important qualifications should be added to this general requirement: (1) the organisation should only be required to take 'reasonable steps' to notify any third parties; and (2) the requirement should only apply to the extent that notification would

be practicable in the circumstances. These qualifications would ensure that the notification obligation is appropriately balanced and they would alleviate the concern that this new provision would lead to an unreasonable cost burden or to unintended outcomes.

Proposal 26–4 The proposed 'Access and Correction' principle should provide that where, in accordance with this principle, an organisation has corrected personal information it holds about an individual, and the individual requests that the organisation notify any other entities to whom the personal information has already been disclosed prior to correction, the organisation must take reasonable steps to do so, provided such notification would be practicable in the circumstances.

Consequential amendments

26.54 The ALRC proposes two consequential amendments to the proposed 'Access and Correction' principle, when compared to NPP 6. First, where an individual requests an organisation to correct personal information that it holds about him or her, the individual must establish that the personal information is not 'accurate, complete and up-to-date'.[58] Although it is not stated explicitly in the explanatory material that accompanied the introduction of the NPPs in the *Privacy Act*, it seems likely that these criteria were chosen to mirror those in the Data Quality principle (NPP 3).

26.55 Consequently, there is a strong argument that the criteria in this part of the proposed 'Access and Correction' principle should be updated to reflect those in the 'Data Quality' principle in the UPPs.[59] This involves two amendments to this privacy principle: (1) adding the additional category of 'relevance'; and (2) making clear that these criteria should be interpreted with reference to a purpose of collection permitted by the UPPs.

26.56 Secondly, NPP 6.1 provides that an organisation is not required to provide access to personal information it holds about an individual to the extent that:

> (a) in the case of personal information other than health information—providing access would pose a serious and imminent threat to the life or health of any individual; or
>
> (b) in the case of health information—providing access would pose a serious threat to the life or health of any individual …

58 *Privacy Act 1988* (Cth) sch 3, NPP 6.5–6.6.
59 See Ch 24.

26.57 As explained in detail in Chapter 22, the ALRC believes that an exception that is triggered by a 'serious and imminent threat to the life or health of any individual' is too difficult to establish. The ALRC's view is that this exception should apply where the relevant threat is serious, but not necessarily imminent, because it would allow an organisation to take preventative action to stop a threat from developing to a point where the danger, which one is seeking to avoid, is likely to eventuate.

26.58 Consequently, the ALRC proposes to consolidate the two exceptions in NPP 6.1(a) and (b) into a single exception in the UPPs, which applies where providing access to the personal information in question would be reasonably likely to pose a serious threat to the life or health of any individual. This strikes an appropriate balance between allowing individuals to access their personal information, but preventing access where this threatens any person's life or health. Moreover, as discussed earlier in this chapter, if access is refused under this proposed exception, an individual may be entitled to gain indirect access to the information through a mutually agreed intermediary.

Proposal 26–5 The proposed 'Access and Correction' principle should provide that, where an organisation holds personal information about an individual that the individual wishes to have corrected or annotated, the individual should seek to establish that the personal information held by the organisation is, with reference to a purpose of collection permitted by the UPPs, not accurate, complete, up-to-date and relevant.

Proposal 26–6 The proposed 'Access and Correction' principle should provide that, where an organisation holds personal information about an individual, it is not required to provide access to that information to the individual to the extent that providing access would be reasonably likely to pose a serious threat to the life or health of any individual.

Notification of access rights

26.59 It has been noted that, unlike access to government records and the Individual Participation Principle in the OECD Guidelines, the NPPs contain no formal mechanisms to facilitate access to personal information held by organisations. Although the OPC provides guidance and information sheets on the topic,[60] it is up to each organisation to develop access procedures. In its submission to this Inquiry, the OPC stated that this discrepancy would be obviated if data collectors were required to include this in their personal information management policies.[61]

60 Office of the Federal Privacy Commissioner, *Guidelines to the National Privacy Principles* (2001); Office of the Federal Privacy Commissioner, *Access and Correction*, Information Sheet 4 (2001).

61 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

26.60 The ALRC's view is that the proposed 'Specific Notification' and 'Openness' principles will adequately cover this issue. That is, the ALRC proposes that, at or around the time of collection of personal information, agencies and organisations should be required to notify individuals that they are able to gain access to the information collected.[62] The ALRC also proposes that agencies and organisations should be required to list in their Privacy Policies the steps individuals may take to gain access to personal information about them that is held by an agency or organisation.[63] If these proposals are adopted, it would be unnecessary for the proposed 'Access and Correction' principle to include a requirement that agencies and organisations notify individuals of their rights under this principle.

Summary of proposed 'Access and Correction' principle

26.61 In summary, the ALRC's view is that the ninth principle in the proposed UPPs should be called 'Access and Correction'. It should appear as follows.

UPP 9. Access and Correction (only applicable to organisations)

9.1 If an organisation holds personal information about an individual and the individual requests access to the information, it must respond within a reasonable time and provide the individual with access to the information, except to the extent that:

(a) providing access would be reasonably likely to pose a serious threat to the life or health of any individual;

(b) providing access would have an unreasonable impact upon the privacy of other individuals;

(c) the request for access is frivolous or vexatious;
