(d) the information relates to existing or anticipated legal proceedings between the organisation and the individual, and the information would not be accessible by the process of discovery in those proceedings;

(e) providing access would reveal the intentions of the organisation in relation to negotiations with the individual in such a way as to prejudice those negotiations;

(f) providing access would be unlawful;

62 Proposal 20–2.
63 Proposal 21–2.

(g) denying access is required or authorised by or under law;

(h) providing access would be likely to prejudice an investigation of possible unlawful activity;

(i) providing access would be likely to prejudice the:

(i) prevention, detection, investigation, prosecution or punishment of criminal offences, breaches of a law imposing a penalty or sanction or breaches of a prescribed law; or

(ii) enforcement of laws relating to the confiscation of the proceeds of crime; or

(iii) protection of the public revenue; or

(iv) prevention, detection, investigation or remedying of seriously improper conduct or prescribed conduct; or

(v) preparation for, or conduct of, proceedings before any court or tribunal, or implementation of its orders;

by or on behalf of an enforcement body; or

(j) an enforcement body performing a lawful security function asks the organisation not to provide access to the information on the basis that providing access would be likely to cause damage to the security of Australia.

9.2 However, where providing access would reveal evaluative information generated within the organisation in connection with a commercially sensitive decision-making process, the organisation may give the individual an explanation for the commercially sensitive decision rather than direct access to the information.

Note: An organisation breaches UPP 9.1 if it relies on UPP 9.2 to give an individual an explanation for a commercially sensitive decision in circumstances where UPP 9.2 does not apply.

9.3 If the organisation is not required to provide the individual with access to the information because of one or more of paragraphs UPP 9.1(a) to (j) (inclusive), the organisation must take reasonable steps to reach an appropriate compromise, involving the use of a mutually agreed intermediary, provided that the compromise would allow for sufficient access to meet the needs of both parties.

9.4 If an organisation charges for providing access to personal information, those charges:

(a) must not be excessive; and

(b) must not apply to lodging a request for access.

9.5 If an organisation holds personal information about an individual and the individual is able to establish that the information is, with reference to a purpose of collection permitted by the UPPs, not accurate, complete, up-to-date and relevant, the organisation must take reasonable steps to:

(a) correct the information so that it is accurate, complete, up-to-date and relevant; and

(b) notify any other entities to whom the personal information has already been disclosed prior to correction, if requested to do so by the individual and provided such notification would be practicable in the circumstances.

9.6 If the individual and the organisation disagree about whether the information is, with reference to a purpose of collection permitted by the UPPs, not accurate, complete, up-to-date and relevant, and the individual asks the organisation to associate with the information a statement claiming that the information is not accurate, complete, up-to-date or relevant, the organisation must take reasonable steps to do so.

9.7 An organisation must provide reasons for denial of access or a refusal to correct personal information.

Note: If an individual wishes to access, or have corrected, personal information that is held by an agency, the individual should follow the requirements set out in the relevant Part of this Act.

Summary of proposed 'Identifiers' principle 811

Introduction

Background

27.1 Individuals are expected or required to identify themselves in a number of different contexts. For example, information about a person's identity is often disclosed in social situations and is often required in economic transactions. The purposes of identification are manifold. For example, identification can enable interpersonal and business relationships to develop, and reduce the possibility of criminal behaviour.

27.2 The type and quantity of evidence required to establish or verify a person's identity varies according to the context in which the identification is sought. Evidence of identity can include an assertion of a person's name, the appearance or characteristics of a person, a person's knowledge (eg, a password) or the fact that a person is in possession of an object (such as a passport, birth certificate or card).[1] This chapter uses the term 'identifier' to refer to a number, symbol or other particular that uniquely identifies an individual for the purposes of an agency or organisation's operations. A more detailed discussion of the definition of 'identifier' appears below.

27.3 A number of objects that are given to individuals by organisations contain unique identifiers. Research conducted for the Office of the Privacy Commissioner (OPC) in 2004 reveals that the majority of Australians do not consider it an invasion of privacy to be asked to produce a document containing a unique identifier, such as a passport.[2] Unique identifiers may also consist of biometric information, however, such as a fingerprint or information derived from an iris scan.

27.4 This chapter examines a number of issues related to unique identifiers. It first considers whether the proposed Unified Privacy Principles (UPPs) should contain a separate principle to regulate identifiers and, if so, whether that principle should extend to the adoption, use and disclosure of identifiers by agencies. The chapter then discusses the content of the proposed 'Identifiers' principle and whether the definition of 'identifier' should be amended. The chapter also explores whether the *assignment* of identifiers should be regulated.[3] Finally, the chapter discusses the regulation of unique multi-purpose identifiers such as tax file numbers (TFNs).

Current coverage by IPPs and NPPs

27.5 The Organisation for Economic Co-operation and Development *Guidelines for the Protection of Privacy and Transborder Flows of Personal Data* (1980) (OECD

---

1 R Clarke, 'Human Identification in Information Systems: Management Challenges and Public Policy Issues' (1994) 7(4) *Information Technology & People* 6, 10.

2 Roy Morgan Research, *Community Attitudes Towards Privacy 2004 [prepared for Office of the Privacy Commissioner]* (2004), [6.1].

3 The process of 'assignment' involves an entity (such as an agency) choosing an identifier to apply to an individual.

Guidelines)[4] and the Information Privacy Principles (IPPs) do not contain a principle dealing explicitly with identifiers. On the other hand, the National Privacy Principles (NPPs) currently contain a principle (NPP 7) that deals specifically with identifiers.

27.6 NPP 7 defines an identifier as including 'a number assigned by an organisation to an individual to identify uniquely the individual for the purposes of the organisation's operations'. An example of an Australian Government identifier is an Australian Passport number. An individual's name and Australian Business Number (ABN) are explicitly excluded from being considered identifiers for the purposes of the NPPs.

27.7 NPP 7.1 provides that an organisation must not adopt as its own identifier an identifier that has been assigned by an agency (or an agency's agent or contracted service provider).[5] Thus, NPP 7.1

> prevents an organisation from acquiring a particular government assigned identifier from all the individuals with which it deals and using that identifier to organise personal information it holds and match it with other personal information organised by reference to the same identifier.[6]

27.8 The proposed UPPs retain the distinction that is used in the NPPs between 'assigning' and 'adopting' an identifier. An entity *assigns* an identifier when the entity itself chooses an identifier that it applies to an individual. On the other hand, an entity *adopts* an identifier when it opts to refer to an individual using an identifier that has already been assigned by another entity.

27.9 NPP 7.2 provides that an organisation must not use or disclose an identifier assigned to an individual by an agency, an agency's agent or contracted service provider unless the use or disclosure:

- is necessary for the organisation to fulfil its obligations to the agency;
- falls under specified exceptions listed in NPP 2.1(e)–(h);[7] or

---

4 Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980).

5 However, this prohibition does not apply to the adoption by a prescribed organisation of a prescribed identifier in prescribed circumstances: *Privacy Act 1988* (Cth) sch 3, NPP 7.1A. See also *Privacy (Private Sector) Regulations 2001* (Cth) reg 7; *Privacy Act 1988* (Cth) s 100(2).

6 Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), [380].

7 NPP 2.1(ea) deals specifically with an organisation's use and disclosure of genetic information that has been collected in the course of providing a health service to an individual. In Ch 56, the ALRC proposes that provisions that relate specifically to the handling of health information should be set out in the proposed *Privacy (Health Information) Regulations*: Proposal 56–2. The proposed 'Identifiers' principle, therefore, makes it clear that, in addition to the other exceptions (which are currently listed in NPP 2.1(e)–(h)), the use and disclosure of genetic information in certain circumstances remains an exception to the prohibition against using or disclosing identifiers.

- is by a prescribed organisation of a prescribed identifier in prescribed circumstances.[8]

27.10 The final report of the OPC review of the private sector provisions of the *Privacy Act* (OPC Review) stated:

> [NPP 7] seeks to ensure that the increasing use of Australian Government identifiers does not lead to a de-facto system of universal identity numbers, and to prevent any loss of privacy from the combination and re-combination of this data, including with other information.[9]

Separate principle to regulate identifiers?

Background

27.11 A threshold issue is whether it is necessary to retain a separate principle to regulate the use of identifiers. There is an argument that the collection, use and disclosure of identifiers could be accommodated within the privacy principles that deal with those aspects of the information cycle. For example, the proscription in NPP 7 against the adoption by an organisation of an identifier assigned by an agency could be accommodated within the privacy principle governing use of personal information.

Submissions and consultations

27.12 A small number of submissions to Issues Paper 31, *Review of Privacy* (IP 31) specifically addressed the question whether there should be a separate privacy principle to regulate the handling of identifiers.[10]

27.13 The Queensland Council for Civil Liberties supported retaining 'a clear principle prohibiting the development of a universal or approaching universal identifier.'[11] The OPC noted the current principle dealing with identifiers 'serves an important function in protecting information privacy'.

> A unique identifier can make it significantly easier to match or link personal information that has been collected in different contexts and for different purposes. Such linkages can facilitate a range of functions, such as more targeted (and potentially intrusive) direct marketing, through to data surveillance of how individuals go about their day to day lives.[12]

---

8 A number of regulations have been passed in this regard. See *Privacy (Private Sector) Regulations 2001* (Cth) regs 8, 9, 10, 11.

9 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 269.

10 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 4–26.

11 Queensland Council for Civil Liberties, *Submission PR 150,* 29 January 2007.

12 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

27.14 Similarly, the Northern Territory Information Commissioner was of the view that NPP 7 'currently performs a useful task in limiting the use of identifiers for data-matching and data-linkage'.[13]

27.15 Two stakeholders stated that a separate identifiers principle was not required. The Australian Government Department of Human Services submitted that a separate principle is not necessary.[14] The Insurance Council of Australia also submitted that a separate identifiers principle is not required, commenting that 'the current definition and exceptions related to identifiers are adequate'.[15]

ALRC's view

27.16 The ALRC did not receive any indication that the policy basis for the identifiers principle is no longer relevant. As discussed later in this chapter, several stakeholders were concerned that identifiers can be used to facilitate data-matching activities. Further, it has not been suggested that the dangers associated with the possible misuse of identifiers can be dealt with more effectively by incorporating the provisions relating to identifiers in other privacy principles, such as those dealing with collection, use and disclosure of personal information.

27.17 The ALRC is of the view, therefore, that the proposed UPPs should contain a separate principle that regulates identifiers. A further benefit of this approach is that the privacy principle dealing with identifiers can deal with issues unique to identifiers such as: the adoption of identifiers by agencies and organisations; the definition of the term; and the exceptions to the use and disclosure of identifiers by agencies and organisations.

Application of 'Identifiers' principle to agencies?

Background

27.18 Currently agencies are not subject to a provision regulating the adoption, use and disclosure of identifiers. In other words, the IPPs contain no provision comparable to NPP 7. In IP 31, the ALRC asked whether agencies should be subject to such a principle.[16] This question has, of course, particular pertinence in the event that the Australian Government adopts the ALRC's proposal to create a set of UPPs, applicable to both agencies and organisations.[17]

16 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 4–28.
17 Proposal 15–2.

27.19 In contrast, some state and territory legislation regulates the assignment, adoption, use and disclosure of identifiers by public sector bodies. Under that legislation, the assignment, adoption, use and disclosure of identifiers by public sector bodies is generally prohibited unless it is necessary for the body to carry out its functions efficiently.[18]

Submissions and consultations

27.20 A number of stakeholders supported making agencies subject to a privacy principle dealing with 'identifiers'.[19] One stakeholder provided qualified support to extending the identifiers principle to agencies, provided that this does not unduly hamper longitudinal research.[20] The predominant reason given for such reform is that it would provide further protection against the misuse of identifiers—something that can breach an individual's privacy rights and increase the risk of identity theft.[21] Other reasons include that it would promote regulatory consistency between agencies and organisations.[22]

27.21 Some stakeholders submitted that it would be preferable to regulate the assignment, collection, adoption, use and disclosure of identifiers by agencies on a case-by-case basis.[23] This could be carried out either in separate sectoral legislation or in guidelines issued by the OPC. An example of such legislation is that dealing with TFNs.

27.22 Some stakeholders were opposed to agencies being subjected to an 'identifiers' principle along the lines of the current NPP 7.[24] The Australian Government Department of Health and Ageing (DOHA), for instance, stated that this would 'create significant difficulty … particularly where responsibility for delivery of services is shared between two or more agencies'. The Department gave the following example:

> While Medicare Australia delivers Medicare Services on behalf of the Australian Government, the Department of Health and Ageing has responsibility for health policy and sometimes requires individual level information for those purposes. Information provided to the Department by Medicare Australia is de-identified, with all personal demographic details removed. Each record is identified only using a personal identification number allocated by Medicare Australia. The Department would be prevented from undertaking analysis for policy purposes using that number unless some exception was included in the principle. Even though the arrangements

are provided for by guidelines issued under the *National Health Act 1953*, there is no exception in NPP 7.[25]

ALRC's view

27.23 The ALRC shares the view of the majority of stakeholders who responded to this question that agencies should be subject to a privacy principle dealing with identifiers. The privacy and other risks associated with the adoption, use and disclosure of identifiers by organisations also apply in respect of agencies.

27.24 Moreover, the urgency of these risks has been heightened by two modern phenomena. First, technological developments—including the prevalence of electronic record-keeping, so-called 'smartcards' and digital communication—make it increasingly difficult to maintain the security of electronic databases.[26] Secondly, as discussed earlier in this chapter, the increasing demands from government and the private sector to create new forms of identifier have increased the number of identifiers in existence. For these reasons, and given the fact that governments in Australia are intimately involved in many of these developments, the ALRC is of the view that the adoption, use and disclosure of identifiers by agencies should be regulated.

27.25 The more complex question is how the handling of identifiers by agencies should be regulated. The ALRC acknowledges, for instance, that it is very useful for agencies to be able to use identifiers already assigned by other entities in research, and in the delivery and monitoring of services. It is also recognised that differing requirements in relation to the use of identifiers may be appropriate in differing circumstances.

27.26 However, the existing NPP 7 already provides a number of exceptions to the general prohibition against using an identifier assigned by an agency (or its agent or contracted service provider). First, the combination of NPPs 7.1A and 7.2(c) creates a mechanism for the Governor-General to make regulations to prescribe an organisation that may adopt, use or disclose a prescribed identifier in prescribed circumstances, provided certain conditions are met.[27] To date, five exceptions have been made by regulation using this mechanism.[28] For instance, the regulations provide that AvSuper is a prescribed organisation for the purposes of NPP 7.1A and:

---

25 Ibid.

26 See, eg, Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005), [3.40], [3.43]–[3.54]; Y Lim, *Cyberspace Law: Commentaries and Materials* (2002), 114. The impact of developments in technology on privacy is discussed in detail in Part B.

27 The mechanism itself for making such an exception to the prohibition against the adoption, use or disclosure of identifiers is set out in *Privacy Act 1988* (Cth) s 100.

28 See *Privacy (Private Sector) Regulations 2001* (Cth) regs 7–11.

(b) the payroll number assigned to an individual by Airservices Australia or the Civil Aviation Safety Authority is a prescribed identifier; and

(c) the prescribed circumstance is that the payroll number is adopted by AvSuper to provide a superannuation service to the individual.[29]

27.27 In addition to the mechanism in NPP 7.1A, use or disclosure of an identifier assigned by an agency is permitted:

- where the organisation reasonably believes the use or disclosure is necessary to lessen or prevent a serious and imminent threat to an individual's life, health or safety, or a serious threat to public health or public safety;[30]

- in the case of an individual's genetic information, where the organisation reasonably believes the use or disclosure to a genetic relative of the individual is necessary to lessen or prevent a serious (but not necessarily imminent) threat to the life, health or safety of a genetic relative of the individual;

- where the organisation has reason to suspect unlawful activity, and the use or disclosure is a necessary part of its reporting or investigation of the matter;

- where it is required or authorised by law; and

- where the organisation reasonably believes that the use or disclosure is reasonably necessary for certain specified functions of an enforcement body.[31]

27.28 The ALRC's view is that these exceptions, taken together, are sufficient to allow agencies to adopt, use and disclose identifiers in appropriate circumstances. Two of these are particularly significant: the regulation-making mechanism in NPPs 7.1A and 7.2(c); and the exception that permits adoption, use or disclosure as required or authorised by law. As explained in Part C, these exceptions allow any of the federal, state and territory parliaments, or a relevant minister, to consider whether the 'Identifiers' principle should be relaxed in a particular situation and, if so, to permit this to occur. If a proposed derogation from the identifiers principle in the *Privacy Act* is particularly significant, this is likely to occur, with full parliamentary scrutiny, by the adoption or amendment of primary legislation—that is, either the *Privacy Act* or another piece of sectoral legislation. On the other hand, if the derogation is deemed to be less significant, then this can occur through the more expedited process of subordinate legislation, which still involves accountability measures, such as those provided for under the *Legislative Instruments Act 2003* (Cth). These exceptions provide sufficient flexibility to overcome any unwarranted impediments to the use of

29 Ibid reg 7.
30 See Proposal 22–3 and accompanying text.
31 *Privacy Act 1988* (Cth) sch 3, NPP 7.2(b), which imports the exceptions to the use and disclosure prohibition in NPP 2.1(e)–(h).

identifiers by agencies, while at the same time providing appropriate protection for the privacy rights of individuals.

Proposal 27–1 The proposed Unified Privacy Principles (UPPs) should contain a principle called 'Identifiers' that applies to agencies and organisations. As a consequence, s 100(2) and (3) of the *Privacy Act* should be amended to apply also to agencies.

Definition of 'identifier'

Background

27.29 The definition in NPP 7 does not describe what an identifier is, only what it includes. The definition also excludes an individual's name or Australian Business Number (ABN). The question arises, therefore, as to whether the definition of 'identifier' should be amended.

27.30 In contrast, Victorian legislation defines a 'unique identifier' as 'an identifier (usually a number) assigned by an organisation to an individual uniquely to identify that individual for the purposes of the operations of the organisation but does not include an identifier that consists only of the individual's name'.[32] The OPC Guidelines to the NPPs set out a definition of 'identifier':

> A Commonwealth government identifier is a unique combination of letters and numbers, such as a Medicare number, which Commonwealth government agencies or contracted service providers allot to an individual. [33]

27.31 This section considers whether the current definition in NPP 7 should form the basis for the definition of an identifier in the 'Identifiers' principle in the proposed UPPs. The section first considers whether an individual's name and ABN should continue to be excluded expressly from the definition. The section then discusses whether the definition of 'identifier' should make clear that identifiers may comprise things other than numbers—in particular, biometric information that is not stored in an encrypted, numerical form. Finally, the section considers how to deal with identifiers that are not actually 'unique'.

Individual's name and ABN

27.32 NPP 7.3 excludes an individual's name and ABN from the definition of 'identifier'. As noted above, NPP 7 was introduced to prevent the adoption, use or disclosure of identifiers *assigned* to individuals. An individual's name is not assigned

32 See *Information Privacy Act 2000* (Vic) sch 1.
33 Office of the Federal Privacy Commissioner, *Guidelines to the National Privacy Principles* (2001), 55.

by an agency or an organisation. The ALRC did not receive any submissions that suggested that the definition of 'identifier' should be amended to include an individual's name. The ALRC is of the view that, for the avoidance of doubt, an individual's name should continue to be excluded from the statutory definition of 'identifier'.

27.33 The ALRC received limited feedback about whether it remains appropriate to exclude an individual's ABN from the definition of 'identifier'. NPP 7.3 provides that an ABN has the meaning given to it in the *A New Tax System (Australian Business Number) Act 1999* (Cth). This Act provides that an

> ***ABN (Australian Business Number)*** for an entity means the entity's ABN as shown in the Australian Business Register.[34]

27.34 The Supplementary Explanatory Memorandum to the Privacy Amendment (Private Sector) Bill 2000 (Cth) explains why an ABN was expressly excluded from the definition in NPP 7:

> Although an ABN is intended to be a unique business identifier, it may, to the extent that it is assigned to identify a sole trader, also fall within the scope of the definition of *identifier* in NPP 7.3.[35]

27.35 Further, the Revised Explanatory Memorandum to the Bill states:

> The restrictions on using identifiers assigned by agencies are not intended to apply within the context of the ABN scheme. For this reason an ABN is specifically excluded from the definition of 'identifier'.[36]

27.36 NPP 7 regulates the handling of identifiers assigned to individuals—not identifiers assigned to organisations. 'Individual' is defined in the *Privacy Act* to mean a natural person.[37] An 'organisation' includes an individual who acts in a business capacity, such as a sole trader.[38] The exclusion of an ABN from the definition of 'identifier' may be a problem if there is a tendency among organisations or agencies to use the ABN of a sole trader to identify an individual acting in a non-business capacity. The ALRC, however, has not received information about such practices. For the avoidance of doubt, the ALRC is of the view that an ABN should continue to be excluded expressly from the definition of 'identifier'.

Biometric information

27.37 As discussed in Chapter 7, biometric information relates to the physiological or behavioural characteristics of a person.[39] In Chapter 3, the ALRC proposes that the

---

34 *A New Tax System (Australian Business Number) Act 1999* (Cth).

38 Ibid ss 6C, 7B, 16E.
39 Organisation for Economic Co-operation and Development, *Biometric-Based Technologies* (2004), 4.

definition of 'sensitive information' should be amended to include biometric templates and biometric information collected for the purpose of inclusion in a biometric system.[40] The sensitive and permanent nature of biometric information means that it is usually advisable to store such information in an encrypted, numerical form.

27.38 The OPC, however, submitted that agencies are increasingly using unencrypted facial biometrics as identifiers.[41] For example, the Australian ePassport that was introduced in 2005 includes a digital photograph of the passport holder on a chip embedded in the centre page of the passport.[42] In addition, the Australian Government has announced that a digital photograph would be included on the surface of the proposed health benefits, veterans' and social services access card.[43]

27.39 The current definition of 'identifier' in NPP 7 does not specifically exclude biometric information. The Revised Explanatory Memorandum to the Privacy Amendment (Private Sector) Bill 2000 states that identifiers are 'not limited to letters and numbers' although an identifier 'will often contain either, or both'.[44] Biometric identifiers that are not stored in an encrypted form are, therefore, probably included in the current definition. Nonetheless, for the avoidance of doubt, the OPC submitted that the wording of the definition should be amended to clarify that this is the case.[45]

27.40 The definition of personal information in Ontario privacy legislation includes 'any identifiable number, symbol or other particular assigned to the individual'.[46] The OPC suggested that the definition of 'identifier' could be based on such a broadly drafted definition.

Unique

27.41 The current definition of 'identifier' requires that it 'identify uniquely the individual for the purposes of the organisation's operations'.[47] The Office of the Victorian Privacy Commissioner submitted that some identifiers issued by agencies are not in fact 'unique'.[48] For example, Medicare numbers are listed as an example of a unique identifier in Guidelines issued by the OPC.[49] In circumstances where two or more family members share a Medicare number, however, the number does not of

itself uniquely identify each of those family members.[50] An amendment to the definition may be required to ensure that such numbers are in fact captured by the 'Identifiers' principle in the proposed UPPs.

27.42 Secondly, while a biometric characteristic is generally unique to an individual, it is important to note that a number of factors may affect whether a biometric system can produce an exact match between a biometric sample and a stored template. For example, the quality of a collected sample such as a facial image may be affected by lighting conditions, camera distance and lens precision. The accuracy of the match may also be affected by 'the losses introduced by the extraction of biometric features such as face geometry, and the availability of comparative biometric data from the general population'.[51]

ALRC's view

27.43 The 'Identifiers' principle was intended to cover identifiers such as the Medicare number and information other than numbers or letters. The definition of 'identifier' in the 'Identifiers' principle in the proposed UPPs should, therefore, be drafted to avoid ambiguity about the inclusion of identifiers such as the Medicare number or an individual's biometric information.

27.44 The ALRC's view is that including the words 'a symbol or any other particular' in the definition of 'identifier' would be a useful way to ensure that biometric and other non-numerical identifiers are identifiers for the purposes of the 'Identifiers' principle in the proposed UPPs. In addition, the OPC should be empowered to make a determination that, where a number, symbol or any other particular does not of itself *uniquely* identify an individual, that number, symbol or particular is still an 'identifier' for the purposes of the 'Identifiers' principle in the proposed UPPs.

27.45 This power would deal with the possible ambiguities outlined above, however such a determination would rarely be required. The proposed definition of 'identifier' would not, therefore, place a significant burden on the OPC. Further, the definition of 'identifier' notes that a determination referred to in proposed UPP 10.4(b) is a legislative instrument for the purposes of s 5 of the *Legislative Instruments Act 2003* (Cth). The inclusion of this note clarifies that any determination made by the OPC may be disallowable by the Australian Parliament.

Proposal 27–2 The proposed 'Identifiers' principle should define 'identifier' inclusively to mean a number, symbol or any other particular that:

(a) uniquely identifies an individual for the purpose of an agency's or organisation's operations; or

50 Office of the Victorian Privacy Commissioner, *Submission PR 217,* 28 February 2007.
51 M Wagner, *Correspondence*, 16 April 2007.

(b) is determined to be an identifier by the Office of the Privacy Commissioner.

However, an individual's name or ABN, as defined in the *A New Tax System (Australian Business Number) Act 1999* (Cth), is not an 'identifier'.

Proposal 27–3 The proposed 'Identifiers' principle should contain a note stating that a determination referred to in the 'Identifiers' principle is a legislative instrument for the purposes of s 5 of the *Legislative Instruments Act 2003* (Cth).

Content of privacy principle dealing with identifiers

Data-matching

27.46 Data-matching is 'the large scale comparison of records or files … collected or held for different purposes, with a view to identifing matters of interest'.[52] The impact on privacy of data-matching is discussed in Chapter 6. In summary, privacy concerns about data-matching include: revealing previously unknown information about individuals without the knowledge or consent of those individuals; profiling of individuals; compiling data-sets without the knowledge of individuals who may then have difficulty accessing that information; accuracy of the matched data; and security of large amounts of data collected for the purposes of data-matching or data-mining.[53]

27.47 As explained in Chapter 7, data-matching is currently regulated to some extent by the principles that deal with identifiers and use and disclosure of personal information.[54] Agencies conducting data-matching programs are subject to guidelines issued by the Office of the Privacy Commissioner. In addition, the *Data-matching Program (Assistance and Tax) Act 1990* (Cth), and binding guidelines issued under that Act, regulate the use of TFNs to match data held by certain agencies, such as the Australian Taxation Office (ATO) and Centrelink.[55]

Submissions and consultations

27.48 In IP 31, the ALRC asked whether the identifiers principle should be redrafted to deal more generally with data-matching.[56] Submissions to IP 31 indicated strong

52 Office of the Federal Privacy Commissioner, *The Use of Data Matching in Commonwealth Administration—Guidelines* (1998), [14].
53 See Ch 7.
54 See the proposed 'Use and Disclosure' principle and the proposed 'Identifiers' principle.

support for greater regulation of data-matching. A number of submissions expressed concern about the extent to which agencies and organisations could use unique identifiers to facilitate data-matching processes.[57]

27.49 Several stakeholders pointed out, however, that data-matching programs are not conducted solely by use of identifiers. For example, the Office of the Victorian Privacy Commissioner noted that data-sets may be linked through the use of names and dates of birth.[58] Similarly, CSIRO submitted that 'two databases with sufficiently many data fields in common can be matched using well-developed data linkage techniques'.[59]

ALRC's view

27.50 The ALRC is of the view that data-matching is not inherently linked to the use of identifiers. While the proposed 'Identifiers' principle provides some regulation of data-matching, in that it prohibits the adoption of an individual's identifier unless for a specified purpose, data-sets can be linked by an agency's or organisation's use of information that will not be subject to this principle. Data-matching activities of agencies and organisations should, therefore, be subject to regulation in addition to this principle. In Chapter 7, the ALRC proposes that the OPC should issue guidelines that relate to the data-matching activities of organisations.[60]

Collection of identifiers

27.51 Submissions to the OPC Review expressed concern about the collection of identifiers by organisations seeking to establish evidence of identity. For example, individuals may be asked to present a Medicare card, an Australian passport or a document with a Centrelink reference number, and such documents may be photocopied by the organisation.[61] NPP 7 does not prohibit the collection of identifiers. The OPC stated that there does not appear to be a need specifically to prohibit the collection of Australian Government identifiers because the collection of identifiers into a record is regulated by NPP 1:

> [I]f an identifier is collected by an organisation, but cannot be lawfully used or disclosed pursuant to NPP 7.2, then the collection is not necessary for one of the organisation's functions or activities. As a consequence, the collection would be prohibited by NPP 1.1.[62]

Submissions and consultations

27.52 The ALRC received limited feedback on this issue. The OPC noted that it had received 'an increasing volume of enquiries regarding organisations collecting driver's licences, including the unique licence numbers'.[63] This indicates that individuals are concerned that organisations are collecting identifiers for inclusion in a record rather than merely sighting an identifier to verify the identity of an individual.

ALRC's view

27.53 The ALRC's view is that the arrangements for the collection and disposal of identifiers are adequate. Both the IPPs and NPPs currently provide that an agency or organisation should only collect personal information that is necessary for it to carry out its functions or activities.[64] This requirement will form part of the 'Collection' principle in the proposed UPPs.[65] In addition, the ALRC proposes in Chapter 18 that an agency or organisation must not collect personal information unless it reasonably believes the information is necessary for one or more of its functions or activities.[66] Where the collection of an identifier is not reasonably necessary for an agency or organisation to carry out its functions or activities, that collection will not be permitted and will constitute an 'interference with the privacy of an individual'.[67] The powers of the OPC to deal with interferences with privacy are discussed in Part F.

27.54 Once information has been collected for inclusion in a record, the 'Data Security' principle in the proposed UPPs provides that an agency or organisation should destroy information or render it non-identifiable if it is no longer needed for any purpose permitted by the UPPs.[68] In circumstances where an identifier is collected for a necessary purpose but it later becomes unnecessary to retain that identifier, the agency or organisation should destroy the identifier or render it non-identifiable in line with guidance issued by the OPC.[69]

Consent to the use and disclosure of identifiers

27.55 Some submissions to the OPC Review suggested that it would be beneficial to allow Australian Government identifiers to be used or disclosed in accordance with the relevant individual's consent.[70] This arguably would allow organisations to provide concessional services more efficiently. For example, an organisation may want to check with an agency to confirm that an individual is a customer of that agency and

68 Proposal 25–4. This formulation is based on NPP 4.2.
69 Proposals 25–5 and 25–6.
70 One submission to the Inquiry raised the general issue of whether an individual should be able to waive his or her right to privacy in particular cases: Confidential, *Submission PR 32,* 2 June 2006.

therefore entitled to a concession rate from the organisation. The organisation could collect an individual's Centrelink customer reference number and pass it to Centrelink to confirm the individual's eligibility for concessions. This practice, however, may be prohibited under NPP 7.[71] The OPC noted that, if this exception were allowed,

> some organisations may seek to make consent to the use and disclosure of identifiers a condition of providing a service, or a condition of providing a service at a concessional rate. The widespread collection of Australian Government identifiers may arise. This would be inconsistent with the policy intention of NPP 7, which is to ensure that Australian Government identifiers do not become de facto national identity numbers, allowing for easy aggregation of personal data across unrelated organisations.[72]

27.56 The OPC concluded that the regulation-making powers under NPP 7 and s 100 of the *Privacy Act* were sufficient. Concessional status of individuals can be checked without the risk that there will be widespread collection, use and disclosure of Australian Government identifiers.[73] The OPC recommended that the Australian Government should consider using the existing regulation-making mechanism under NPP 7 to address the issues identified in submissions regarding concessional entitlements.[74] Some states and territories provide for an exception to the use, disclosure or adoption of unique identifiers based on the individual's consent. Those jurisdictions, however, do not have comparable regulation-making powers.[75]

Submissions and consultations

27.57 Some submissions reiterated that allowing individuals to consent to the use or disclosure of their identifier in limited circumstances would assist in the provision of services to individuals. For example, the Australian Bankers' Association submitted that:

> If a bank were able to adopt and apply the Centrelink or other identifier of the customer this would facilitate identifying those customers who may wish to receive concessions on their transaction accounts.[76]

27.58 DOHA stated that organisations should be able to use an individual's identifier where the individual consents to that use and it would 'not adversely affect the individual's privacy'.[77]

76 Australian Bankers' Association Inc, *Submission PR 259,* 19 March 2007.
77 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007.

27.59 The OPC, on the other hand, expressed concern about the unintended effects on privacy that could result from including a broad consent exception to the identifiers principle:

> [T]he privacy risks of sharing unique identifiers are not always immediate. The risks accumulate as more organisations or agencies adopt the [identifier] for their own purposes, and as greater amounts of otherwise unrelated personal information become associated with that [identifier] … Accordingly, individuals may not always be aware of the potentially significant long term privacy risks when asked to consent to such handling, especially where they may be offered an immediate and tangible benefit or convenience.[78]

27.60 The OPC submitted that, where there is a strong public interest in an individual consenting to the handling of their identifier, such an exception should be subject to the 'process of Parliamentary scrutiny and express statement of intent for specific uses and disclosures'.[79] As discussed above, this process exists through the current exceptions to NPP 7.[80]

27.61 The Australian Government Department of Families, Community Services and Indigenous Affairs (FaCSIA) also supported a consent exception in circumstances where a person is entitled to claim concessional benefits from an organisation. FaCSIA noted that an organisation is able to confirm a person's concessional status when that person shows his or her concession card at the premises of an organisation. It is more difficult, however, for an organisation to determine an individual's concessional status when transactions occur over the telephone or internet. In particular, the inability for an individual to consent to the use of his or her Centrelink Customer Reference Number (CRN)

> is causing complications for Centrelink's Customer Confirmation eService (CCeS), which was set up to assist in the confirmation of the eligibility of customers to concessional entitlements from various state government and private sector organisations. Compelling customers to provide proof of their concession status other than through CCeS is an added burden for customers. [81]

27.62 FaCSIA submitted that the current exceptions to the identifiers principle did not adequately deal with this issue:

> The requirement for service providers to seek an amendment to the regulations is an additional and cumbersome regulatory burden. Many smaller service providers have instead opted to either deny an eligible customer of their right to a concession rate or grant a concession without undergoing a check. This is demonstrated by the fact that currently, only 33 organisations are prescribed by the *Privacy (Private Sector)*

> *Regulations 2001*, as being permitted to use Centrelink's customer reference number for the purposes of confirming an individual's concessional status.[82]

27.63 FaCSIA suggested that an alternative to an exception that would allow an individual to consent to any use of their identifier would be the inclusion of a specific exception that would allow an individual to consent to the use or disclosure of his or her CRN.[83]

ALRC's view

27.64 The ALRC notes that it would be convenient for an individual to be able to consent to the use or disclosure of his or her identifier in certain circumstances. The ALRC also notes that it may take some time and resources to develop regulations that provide for a consent exception to the prohibition on use or disclosure. On balance, however, the ALRC is of the view that a general exception that would allow individuals to consent to the use and disclosure of identifiers should not form part of the 'Identifiers' principle in the proposed UPPs as such an exception would be inconsistent with the function of the principle.[84]

27.65 Further, the current exceptions to the prohibition on use or disclosure of identifiers provide mechanisms to deal with the issues raised by stakeholders, such as the inconvenience faced by individuals seeking concessional status. Other legislation[85] or regulations issued under the *Privacy Act* can provide for circumstances where the Australian Parliament considers it appropriate for an individual to be able to consent to the use or disclosure of his or her identifier.

27.66 Prescribing specific identifiers as exceptions to the 'Identifiers' principle in the proposed UPPs does not accord with the high-level outcomes-based approach to privacy regulation that is proposed by the ALRC.[86] It is preferable for separate primary or subordinate legislation to be enacted to allow individuals to consent to the disclosure of, for example, an individual's CRN by any agency or organisation for the purpose of confirming that individual's concessional status with Centrelink.

Identifiers issued by state and territory agencies

27.67 NPP 7.1 currently prevents an organisation from adopting as its own identifier an identifer that has been assigned by an Australian Government agency; an agent of that agency acting in the capacity of an agent; or a contracted service provider of an Australian Government agent.

84 Consent is discussed further in Ch 16.
85 *Privacy Act 1988* (Cth) sch 3, NPP 7.2(b), NPP 2; see the proposed 'Identifiers' principle and the proposed 'Use and Disclosure' principle.
86 Proposal 15–1.

27.68 The OPC submitted that the definition of 'identifier' should be amended to include identifiers issued by state and territory agencies. The OPC noted that this would be in line with guidelines that it issued prior to the introduction of the NPPs.[87] The OPC also submitted that regulating the handling of all identifiers by organisations 'may be an appropriate response to emerging challenges posed by the risks of identity theft and fraud'.[88] Identity theft is discussed in Chapter 9.

ALRC's view

27.69 Identifers issued by state and territory agencies—for example, driver's licence numbers—do not fall within the current definition of 'identifier' in NPP 7. The ALRC is of the view that the 'Identifiers' principle in the proposed UPPs should regulate identifiers such as driver's licence numbers that are assigned by state and territory agencies and used by agencies and organisations. Such an amendment would not result in the regulation of acts and practices of state and territory agencies but rather the use by organisations and Australian Government agencies of identifiers allocated by state and territory agencies.

Proposal 27–4 The proposed 'Identifiers' principle should regulate the use by agencies and organisations of identifiers that are assigned by state and territory agencies.

Regulation of assignment of identifiers?

27.70 NPP 7 regulates the adoption, use and disclosure of identifiers by organisations. However, neither NPP 7 nor the IPPs regulate the *assignment* of identifiers by agencies or others. The process of 'assignment' involves an entity (such as an agency) choosing an identifier to apply to an individual. For example, an agency may assign an identifier, consisting of a combination of letters and numbers, to each individual to whom it provides a service. The agency would then, in its records, refer to each of those individuals by the identifier it has assigned. This should be distinguished from *adopting* an identifier, which involves an agency or organisation using an identifier that has already been assigned by another agency to refer to an individual.

27.71 Certain state and territory provisions go further than the NPPs and IPPs by regulating the assignment of identifiers—either by agencies, organisations or both.

---

87 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007. See also Office of the Privacy Commissioner, *National Principles for the Fair Handling of Personal Information* (1999); Office of the Privacy Commissioner, *Submission to the House of Representatives Standing Committee on Legal and Constitutional Affairs, Inquiry into the Privacy Amendment (Private Sector) Bill 2000*, May 2000.

88 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

There is, therefore, a gap in the federal privacy principles in that they do not regulate the assignment of identifiers.

27.72 For instance, Tasmanian and Northern Territory law both provide that certain bodies 'must not assign a unique identifier to an individual unless it is necessary for it to carry out any of its functions efficiently'.[89] Similarly, Victorian law provides that a public sector body

> must not assign unique identifiers to individuals unless the assignment of unique identifiers is necessary to enable the organisation to carry out any of its functions efficiently.[90]

27.73 The ALRC received only limited feedback on whether the privacy principles should also regulate the *assignment* of identifiers by agencies. Two stakeholders said simply that they were in favour of such a reform.[91]

27.74 In relation to organisations, Electronic Frontiers Australia stated that the privacy principles

> should be amended to cover creation of unique identifiers in much the same way as collection, that is, that unique identifiers not be permitted to be created except when necessary for a particular primary purpose (eg credit card numbers), and use and disclosure be restricted to purposes directly related to the primary purpose of creation.[92]

27.75 The ALRC does not feel that it has sufficient information to make a proposal. The Commission is therefore interested in further views on this issue.

Question 27–1 Should the *Privacy Act* regulate the assignment of identifiers by agencies, organisations or both? If so, what requirements should apply and should these requirements be located in the proposed UPPs or elsewhere?

Unique multi-purpose identifiers

27.76 This section discusses unique identifiers assigned to individuals by governments for use by multiple government agencies and organisations (unique multi-purpose identifiers). The section commences by providing an overview of concerns that have been expressed about the impact on privacy of unique multi-purpose identifiers. It then

89 See *Personal Information Protection Act 2004* (Tas) sch 1, PIPP 7.1 (applicable to public and private sector organisations); *Information Act 2002* (NT) sch, IPP 7.1 (applicable to public sector organisations).

92 Electronic Frontiers Australia Inc, *Submission PR 76,* 8 January 2007.

examines the history of identification schemes in Australia before discussing the Australian Government's proposed health benefits, veterans' and social services access card.

Benefits and privacy concerns

27.77 Schemes involving unique multi-purpose identifiers can have a number of benefits. For example, they can increase administrative efficiency and enhance data accuracy.[93] However, unique multi-purpose identifiers also raise a number of privacy concerns. One such concern is that the introduction of a unique multi-purpose identifier changes fundamentally the relationship between the individual and government.[94] In liberal democratic societies governments are accountable to their citizens. It has been argued that the introduction of a unique multi-purpose identifier symbolically reverses this tradition, making citizens accountable to their governments.[95] This could then open the way for 'further extensions of government power and … further restrictions on the individual's sphere of independent action'.[96]

27.78 It is also argued that linking a unique multi-purpose identifier to a name limits the ability of individuals to use different names in different contexts.[97] At common law, there is nothing to prevent an individual from operating under various names provided that he or she does not use different names to engage in unlawful behaviour.[98] Aliases may be used by a variety of people, such as artists and intelligence operatives.[99]

27.79 Further, the introduction of unique multi-purpose identifiers increases the ability of the state to monitor the activities of its citizens. By recording unique multi-purpose identifiers during transactions, government agencies and organisations can compile substantial amounts of information about a person, including information about a person's financial circumstances, family composition, hobbies or health. This could then be used for a variety of purposes, such as to locate a person or to determine a person's interests for the purposes of direct marketing.

98 Ibid, Addendum, [22]. See also Ch 17.

99 R Clarke, 'Just Another Piece of Plastic for your Wallet: The "Australia Card" Scheme' (1987) 5 *Prometheus* 1, 40.

27.80 Different agencies or organisations could then combine the data collected about the transactions or activities of particular individuals to create a richer dataset. This process is known as 'data-matching'.[100] The use of a unique multi-purpose identifier facilitates greatly the data-matching process. The ability of a government to compile dossiers of personal information about individuals could have a 'chilling effect' on the activities of citizens, who no longer have a private sphere in which to relax, experiment or engage in creative pursuits.[101]

27.81 In addition, the unintended dissemination of either the identity information required to be provided by individuals in order to receive a unique multi-purpose identifier, or data generated by the use of the unique multi-purpose identifier, can erode the privacy of the individual to whom the information relates.[102] For example, such information could be stolen by a 'hacker'; accidentally disclosed through an administrative error; or deliberately sold by those with access to it, such as employees of agencies. This can increase the risk that the individual will subsequently become the victim of identity theft.[103]

27.82 Another privacy concern relates to the quality of the data involved in an identification scheme involving unique multi-purpose identifiers. Errors inputing data for the purposes of the scheme, or corruption of stored data, could adversely impact on the ability of individuals to access the services for which the unique multi-purpose identifier is required.

27.83 Finally, it has been argued that identity documents have had a long history of discriminatory uses for social control.[104] One commentator has noted that slaves in the United States were required to carry identification papers to travel, Nazis used identification cards to locate Jewish people during World War II, and the slaughter of Tutsis in Rwanda was aided by the fact that their identity cards revealed their ethnicity.[105]

History of identification schemes in Australia

Identification schemes in wartime

27.84 Several identification schemes have been implemented in wartime Australia. During World War I and World War II, all aliens (non-British subjects) were required

to register with local government officials.[106] After registration, they were required to notify officials if they changed their address[107] and to produce their certificates of registration on demand.[108] In 1942, all residents of 16 years of age or above (other than aliens and other specified groups, such as members of the Defence Force performing continuous full-time war service) were required to register with local government officials in order to obtain an identity card.[109] They were then required to produce their identity cards if requested to do so by specified people, such as constables on duty.[110]

The Australia Card

27.85 In September 1985, the Australian Government announced its intention to develop a national identification scheme—the 'Australia Card' scheme[111]—to combat tax fraud, social security fraud and illegal immigration.[112] In May 1986, a Joint Select Committee on an Australia Card delivered a report that strongly recommended against the introduction of the Australia Card, suggesting a number of alternative reforms such as the computerisation of all state and territory registries of births, deaths and marriages[113] and the introduction of an upgraded, high integrity tax file number scheme.[114]

27.86 In October 1986, the Australia Card Bill 1986 (Cth) was introduced into Parliament. On two occasions the Australia Card Bill was passed by the House of Representatives[115] only to be rejected by the Senate.[116] Under s 57 of the *Australian Constitution* this became a potential trigger for a double dissolution election. Accordingly, in May 1987, the Australian Government announced Australia's sixth double dissolution election.[117] On 11 July 1987, the Australian Labor Party was returned to office and the Australia Card Bill was reintroduced into Parliament for a third time. The Bill was ultimately laid aside after Opposition senators indicated that

they would disallow regulations that were required to bring crucial clauses of the Bill into effect.[118]

The Medicare card scheme

27.87 Medicare (formerly known as Medibank) commenced in 1975 to enable all eligible Australian residents to access affordable health care.[119] A unique number is allocated to most people enrolled to receive benefits under the Medicare scheme, although dependant children have the same number as one or more of their parents. On 30 June 2005, 20.5 million people were enrolled in the Medicare scheme.[120]

27.88 On 24 June 2004, the Minister for Health and Ageing, the Hon Tony Abbott MP, announced the introduction of a new Medicare smart card.[121] The card would contain the same information as a standard Medicare card, although it also had the capacity to store an optional photograph of the cardholder on the card's chip.[122] It was predicted that the card could later store patient information to facilitate patient identification in an emergency.[123] It could also later facilitate access to an electronic system of health information called Health*Connect.*[124] Some expressed concern that the card would include a Health*Connect* identification number that would be stored on the card and on the Health*Connect* database.[125]

27.89 The Medicare smart card was to be introduced on an 'opt-in' basis in Tasmania before being rolled out nationally.[126] There was limited take-up of the scheme, however, and it was terminated on 25 May 2006 in light of the Australian Government's decision to introduce the health benefits and social services access card.[127]

Other proposed identification schemes

27.90 After the bombings in London in July 2005, the Prime Minister of Australia stated that the introduction of a national identification scheme was an issue that should be 'back on the table'.[128] The introduction of such a scheme was discussed on a

number of occasions during 2005 and early 2006.[129] On 26 April 2006, however, the Prime Minister announced that the Australian Government did not intend to proceed with the introduction of a compulsory national identity card. It did intend, however, to introduce a new card that would be required to access health and welfare benefits (the access card).[130]

The proposed access card

Overview

27.91 The Human Services (Enhanced Service Delivery) Bill 2007 (Cth) was introduced into the House of Representatives on 7 February 2007. The Bill provided a framework for the introduction of the proposed access card scheme[131] and stated that the purpose of the scheme was to improve the delivery of Commonwealth services and reduce fraud, particularly in relation to identity theft.[132] Later legislation was intended to provide detail on aspects of the scheme such as information protection, uses of the card, and review and appeal processes.[133]

27.92 On 8 February 2007, the provisions of the Bill were referred for inquiry to the Senate Finance and Public Administration Committee (the Committee).[134] The Committee released its report on 15 March 2007.[135] The Committee endorsed the 'goals to streamline the delivery of Commonwealth benefits and reduce fraud'[136] but also noted that a number of privacy concerns related to the architecture of the proposed access card scheme were not dealt with by the Bill.[137] The Committee recommended that the Bill should be combined with the proposed second tranche of legislation that was intended to provide for privacy and other individual protections.[138]

27.93 On 15 March 2007, the Minister for Human Services, Senator Chris Ellison, agreed to consolidate the first and second tranches of access card legislation.[139] At the

time of writing in July 2007, the Australian Government is conducting consultations on an exposure draft of the consolidated legislation.[140] The following overview of the proposed access card scheme is based on information available at the time of writing.

27.94 The access card scheme is intended to enable consumers to access all health and social services with one card; access emergency relief payments through automatic teller machines and through Electronic Funds Transfer at Point of Sale (EFTPOS);[141] and reduce fraud in relation to Australian Government benefits.[142] It will also permit access card holders to use their cards for other lawful purposes.[143] The revised exposure draft Bill includes a provision stating that the access card is not to be used as a national identity card.[144]

27.95 The access card will replace up to 17 existing health care and social services cards and vouchers.[145] It will display the cardholder's name and photograph on its front, and the cardholder's signature and card number on its back.[146] Other personal information, such as the cardholder's photograph, date of birth, concession status, and details of the cardholder's children or dependants will be stored on a microchip embedded in the card.[147]

27.96 Registration for the card is intended to commence soon after the commencement of the access card legislation. The registration period will take approximately two years, after which a card will be required in order to access any health or social services benefits.[148] To register for an access card, each individual will be required to present substantial evidence of his or her identity.[149] The Australian Government has stated that the scanned images of proof of identity documents will not be stored after documents have been verified.[150] Information on the card and the chip will be stored on

a database called the Register.[151] The revised exposure draft Bill prevents the storage of certain information on the Register.[152] The Australian Government has stated that the Register will be maintained separately from existing agency databases.[153]

27.97 It is predicted that it will cost $1.09 billion over four years to establish the access card scheme and that use of the card could result in savings of between $1.6 and $3 billion dollars over 10 years.[154] The scheme will be administered by the Office of Access Card within the Australian Government Department of Human Services.[155]

The Access Card Consumer and Privacy Taskforce

27.98 On 24 May 2006, the then Minister for Human Services, the Hon Joe Hockey MP, announced the establishment of the Access Card Consumer and Privacy Taskforce (the Taskforce). The Taskforce provides independent advice to the Australian Government on a range of matters relating to the structure and operation of the Access Card scheme, including community views on the scheme and the impact of the scheme on privacy.[156]

27.99 On 15 June 2006, the Taskforce released a Discussion Paper on consumer and privacy aspects of the scheme.[157] In September 2006, the Taskforce issued a report to Government, *Issues and Recommendations in Relation to the Architecture Questions of the Access Card*.[158] In November 2006, the Minister for Human Services issued a report in response to the Taskforce's recommendations.[159] The Minister supported the majority of the Taskforce's recommendations but indicated that it would not reconsider the inclusion of a digitised signature and display of a card number on the surface of the card.[160] The Minister also disagreed with the Taskforce's recommendation that a card holder's biometric information should be stored on a card or in the Register only in the form of a template.[161] The exposure draft of the Bill that was released in December 2006 and the Bill that was introduced into Parliament in

February 2007 reflected the Minister's response to the Taskforce's recommendations.[162]

27.100 On 21 February 2007, the Taskforce released a Discussion Paper on voluntary medical and emergency information that could be included on the chip contained within the access card.[163] On 13 June 2007, the Taskforce released its report on voluntary medical and emergency information, which recommended the deferral of this aspect of the access card scheme.[164] The revised exposure draft of the Bill does not include provisions relating to the inclusion on the access card of voluntary medical and emergency information.

27.101 On 23 March 2007, the Taskforce released a Discussion Paper on the registration process for the access card.[165] A report on the registration process was presented to the Minister for Human Services on 23 July 2007.[166] On 26 June 2007 the Taskforce released a report on the access card review and appeals system.[167]

The Privacy Act *and the proposed access card scheme*

27.102 The revised exposure draft Bill contains a provision stating that the access card legislation will not affect the operation of the *Privacy Act*.[168] In addition, the exposure draft Bill creates strict liability and ordinary offences for a person who adopts, uses or discloses another person's access card number unless this adoption, use or disclosure is permitted by the Bill or NPP 7, the current 'Identifiers' principle.[169] The provision of the Bill that provides exceptions to the prohibition on adopting, using or disclosing a person's access number contains a specific note stating that the section is not intended to affect the operation of NPP 7.[170]

27.103 A number of concerns have been expressed about the impact of the access card scheme on privacy. Many are the same as those discussed above in relation to unique multi-purpose identifiers generally. For example, one concern is that agencies would be able to use the access card number to link information about individuals in order to build profiles of their activities.[171] Another is that information in the Register will be targeted by those wishing to acquire large amounts of personal information for

some kind of gain,[172] or accessed for illegitimate purposes by government employees.[173] Others have argued that the access card will become a national identification card if it is widely used as evidence of identity in the public and private sectors.[174] Some have argued that the access card scheme is the same as the failed Australia Card scheme.[175]

27.104 Concern has also been expressed about function creep in the context of the access card scheme.[176] Currently, the *Privacy Act* allows the use or disclosure of personal information if it is required or authorised by law.[177] Accordingly, function creep will occur if legislation introduced after the implementation of the access card scheme requires or authorises new uses of personal information collected for the scheme. For example, it has been argued that photographs of cardholders collected at the time of registration could later be used to identify people on Closed Circuit Television footage.[178] Function creep will also occur if legislation introduced after the implementation of the access card scheme requires or authorises new uses for the access card, or new uses of information derived from use of the access card.[179]

27.105 It is difficult to assess concerns about the impact of the access card scheme on privacy until the architecture of the card is finalised. The ALRC intends to monitor developments relating to the scheme and expects to gain further insight into issues relating to privacy in the context of the scheme from the reports of the Access Card Consumer and Privacy Taskforce, and the finalised access card legislation (provided the legislation is finalised before the ALRC submits its Final Report).

Regulation of unique multi-purpose identifiers and the access card

27.106 In IP 31, the ALRC asked what role the *Privacy Act* should play in the regulation of unique multi-purpose identifiers.[180] An issue here is whether unique multi-purpose identifiers are different to other identifiers.

27.107 The OPC suggested that the policy intent of NPP 7, that is, to prevent identifiers from becoming de facto national identity numbers, remains relevant for Australian Government schemes such as the proposed access card.[181] Similarly,

180 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 12–3.
181 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

Graham Greenleaf, Nigel Waters and Lee Bygrave of the Cyberspace Law and Policy Centre submitted that:

> The privacy principles in the Privacy Act, and methods for adjudication concerning breaches of them, should apply to any unique multi-purpose identifiers adopted in Australia. Any variations from the application of any of the principles should be defined by specific legislative provisions stating exceptions or variations, and not left to inference from the existence of a different set of principles. Such an approach will (i) ensure that variations are obvious; (ii) facilitate a consistent body of law emerging on both the core principles and the exceptions.[182]

27.108 The Australian Government Department of Human Services submitted that access card numbers would not be 'unique' as a number displayed on the surface of an access card would be re-issued each time that the card was re-issued.[183]

ALRC's view

27.109 The ALRC's view is that the proposed access card number is likely to fall within the definition of 'identifier' in the 'Identifiers' principle in the proposed UPPs. 'Unique' does not carry with it a requirement of permanence. The proposed 'Identifiers' principle requires only that an identifer uniquely identify the individual for the purposes of that agency's or organisation's operations.[184] It has not been suggested that the proposed access card numbers will identify more than one individual.

27.110 The 'Identifiers' principle in the proposed UPPs is intended to continue to regulate aspects of information handling that are not covered by specific legislative regimes establishing unique multi-purpose identifiers. Any exceptions to the 'Identifiers' principle in the proposed UPPs should be clearly set out in legislation establishing such schemes.

27.111 The ALRC also proposes that the OPC should be empowered to direct an agency or organisation to provide to the Privacy Commissioner a privacy impact assessment that relates to a new project or development that the Privacy Commissioner considers may have a significant impact on the handling of personal information. Further, the Privacy Commissioner should have the power to report to the relevant minister an agency or organisation's failure to comply with such a direction.[185] As discussed above, unique multi-purpose identifiers present significant privacy concerns. The ALRC proposes that any Australian Government agency that intends to introduce such an identifier should notify the OPC of this intention early in the process and, in conjunction with the OPC, consider the need for a privacy impact assessment.

184 Proposal 27–2.

185 Proposal 44–4.

Proposal 27–5 Before the introduction by agencies of any unique multi-purpose identifier, the Australian Government, in consultation with the Privacy Commissioner, should consider the need for a privacy impact assessment.

Regulation of Tax File Numbers

Background to the enhanced TFN scheme

27.112 In May 1988, following the demise of the Australia Card scheme, the Treasurer, the Hon Paul Keating MP, announced that the Australian Government intended to introduce an enhanced TFN scheme.[186] In 1988, legislation establishing such a scheme was passed.[187]

27.113 Before 1988, TFNs were simply numbers used by the ATO to match taxpayers' returns to the ATO's computer records.[188] No evidence of identity was required before a TFN was allocated to a taxpayer and there was no widespread use of TFNs by employers or employees.[189]

27.114 The enhanced TFN scheme was designed to reduce tax evasion by improving the ATO's ability to match information received from certain sources, such as financial institutions and employers, to individual tax returns.[190] Under the scheme, any person could apply to the Commissioner of Taxation for a TFN.[191] If satisfied of an applicant's identity, the Commissioner would provide the applicant with a unique TFN,[192] which could then be quoted when the applicant commenced employment or engaged in certain investment activities.

27.115 At the time the TFN scheme was introduced there were concerns that it would become a 'de facto national identification scheme',[193] and the legislation introducing the scheme contained provisions to safeguard against this. For example, it contained a provision making it an offence to require or request a TFN (including the

TFN of entities other than natural persons) in unauthorised circumstances.[194] In addition, the *Privacy Act*, which was passed around the same time as the legislation introducing the enhanced TFN scheme, contained provisions designed to protect the privacy of individuals under the new TFN scheme.

27.116 The TFN scheme has been expanded since it was introduced in 1988. For example, since 1991 individuals have been required to provide their TFNs in order to obtain any federal income support.[195] Centrelink is permitted to use TFNs to match records between the ATO and specified assistance agencies,[196] such as Centrelink and the Australian Government Department of Veterans' Affairs,[197] in order to 'detect where a person has provided inconsistent information to one or more agencies and is thereby receiving incorrect payments'.[198]

27.117 The TFN scheme provides an example of 'function creep' in the context of unique multi-purpose identifiers. Function creep occurs when personal information or a system is used in a manner that was unintended at the time the information was collected or the system devised.[199] One commentator has stated that function creep in the TFN scheme demonstrates 'how privacy promises made in law can be lost over a very short period of time'.[200]

Overview of TFN regulation

Legislation

27.118 The handling of TFNs is regulated under various federal Acts. For example, Part VA of the *Income Tax Assessment Act 1936* (Cth) includes provisions allowing the Commissioner of Taxation to supply correct TFNs to financial institutions if a person has quoted an incorrect TFN. The *Taxation Administration Act 1953* (Cth) prohibits requirements that TFNs are to be quoted or recorded.[201] Other pieces of legislation regulating TFNs include the *Superannuation Industry (Supervision) Act 1993* (Cth), *Income Tax (Deferred Interest Securities) (Tax File Number Withholding Tax) Act 1991* (Cth), and the *Social Security Act 1991* (Cth).[202]

---

194 *Taxation Administration Act 1953* (Cth) s 8WA. Section 8WB of the *Taxation Administration Act 1953* (Cth) makes it an offence to record, use or disclose a person's TFN in unauthorised circumstances.

195 Office of the Federal Privacy Commissioner, *Submission to the House of Representatives Standing Committee on Economics, Finance and Public Administration Review of the ANAO Audit Report No. 37 1998–99 on the Management of Tax File Numbers*, 1 November 1999, Attachment E.

201 Subject to exceptions: *Taxation Administration Act 1953* (Cth) pt III div 2 subdiv BA.

202 The regulation of TFNs is also discussed in Ch 12.

27.119 The *Data-matching Program (Assistance and Tax) Act 1990* (Cth) (*Data-matching Act*) regulates data-matching using TFNs. Data-matching involves bringing together data from different sources and comparing them. Much of the data-matching done by Australian Government agencies subject to the *Privacy Act* is to identify people for further action or investigation for overpayment or fraud.[203]

27.120 The *Data-matching Act* sets out a number of steps in a data-matching cycle including a time frame for completing data-matching, the purposes for which matched data can be used, and the destruction of data collected.[204] Section 12 of the Act requires the Privacy Commissioner to issue guidelines for the conduct of the data-matching program.

Data-matching guidelines

27.121 The *Data-matching Program (Assistance and Tax) Guidelines* came into effect in April 1997.[205] A breach of the Act or guidelines constitutes an interference with privacy under s 13 of the *Privacy Act*, and a person may complain to the Privacy Commissioner if he or she considers a breach may have occurred.[206] In the event of a complaint being made it is dealt with in accordance with the provisions of Part V of the *Privacy Act*.[207]

Tax File Number Guidelines

27.122 Section 17 of the *Privacy Act* enables the Privacy Commissioner to issue legally binding guidelines concerning the collection, storage, use and security of 'tax file number information'.[208] 'Tax file number information' is defined as 'information … that records the tax file number of a person in a manner connecting it with the person's identity'.[209] The Privacy Commissioner's guidelines are binding on all 'file number recipients'[210]—namely, people who are 'in possession or control of a record that contains tax file number information'.[211]

206 *Privacy Act 1988* (Cth) s 14.

207 Ibid s 14. Legislation and guidelines that regulate data-matching activities that do not include TFNs are discussed in Ch 7.

208 Interim guidelines set out in sch 2 of the *Privacy Act* applied until the Privacy Commissioner's guidelines issued under s 17 took effect: Ibid s 17(4).

209 Ibid s 6.

210 Ibid s 18.

211 Ibid s 11.

27.123 The Privacy Commissioner issued TFN guidelines in 1992.[212] These Guidelines provide that the TFN scheme is not to be used as a national identification scheme.[213] In no situation is it mandatory for an individual to disclose his or her TFN, although non-disclosure in certain situations may have adverse financial consequences. For example, if an individual chooses not to quote his or her TFN when commencing employment, he or she will be taxed at the maximum applicable tax rate.[214] TFNs can only be collected by certain persons and organisations[215] and must not be used to establish or confirm an individual's identity for a purpose not authorised by taxation, assistance agency or superannuation law.[216] In addition, TFNs are not to be used to match personal information about an individual except as authorised by taxation, assistance agency or superannuation law.[217]

27.124 The Guidelines also require file number recipients to take all reasonable steps to ensure that security safeguards and procedures are in place to prevent unauthorised access to, or modification, disclosure or loss of, TFN information.[218] Further, file number recipients may dispose of TFN information if it is no longer required for legal or administrative purposes.[219]

Fragmentation of regulation

27.125 In IP 31, the ALRC asked whether federal legislation relating to the handling of TFNs and data-matching should be consolidated in the *Privacy Act*.[220]

27.126 The OPC submitted that:

> As the Privacy Act focuses on the personal information of individuals, it would not seem a comfortable fit to import provisions that deal with corporations and entities … In absence of a clearly identified failure in the law, the Office sees no compelling reason to move the criminal offence provisions of the *Taxation Administration Act 1953* to the Privacy Act.
>
> In regard to data-matching provisions, the Office has no strong views on the merits of incorporating the protections of the *Data-matching Program (Assistance and Tax) Act 1990* into the Privacy Act.[221]

27.127 The Australian Privacy Foundation was of the view that

> The use of tax file numbers should be addressed partly in tax law and partly in revised provisions of the Privacy Act dealing generically with government identifiers …
>
> The specific Data-matching legislation seems to be well established and compliance does not seem to be a problem. There seems no reason to change this law, other than as one way of extending the scope …

27.128 It appears that the current arrangements are working satisfactorily. The ALRC's view is that there no compelling reason to consolidate the federal legislation relating to the handling of TFNs and data-matching of TFNs.

Effectiveness of current regulation

27.129 In IP 31, the ALRC asked whether the schemes that regulate TFNs remain appropriate and effective.[222]

27.130 The ATO stated that 'TFNs are effectively protected; indeed, according to the Issues Paper, less than 5% of the complaints received by the Privacy Commissioner in 2004–05 related to TFNs'.[223]

27.131 The OPC submitted that the *TFN Guidelines*[224] and criminal provisions dealing with unauthorised use and disclosure[225] result in 'an effective dual-layered privacy framework'. The OPC also suggested that it may be appropriate to conduct a review of the *TFN Guidelines*.

> Such a review would provide an opportunity to consult with stakeholders on matters where the Guidelines may be able to be improved. It would also be consistent with established good regulatory practice, which holds that regulatory instruments be reviewed at intervals of no more than 10 years.[226]

27.132 The Australian Privacy Foundation also favoured a review of the *TFN Guidelines*, noting the 'function creep' that has occurred since the introduction of the enhanced TFN scheme, along with 'subsequent developments in datamatching and identity management'.[227]

Treasury review

27.133 Reform to the regulation of taxpayer information, including TFNs, is the subject of a current Australian Government Treasury review into secrecy and

227 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

disclosure provisions in Australian taxation law.[228] In a Discussion Paper released in September 2006, the Treasury suggested that a standard definition of 'protected information' could be adopted in the taxation laws that deal with secrecy and disclosure of tax information.[229] This definition of 'protected information' may include TFNs in addition to details provided to the ATO on tax return forms and Business Activity Statements.[230]

27.134 The Treasury Discussion Paper also considers whether an individual should be allowed to consent to the disclosure to third parties of taxpayer information (which may include TFNs) by the ATO in some circumstances.[231] Further, the Discussion Paper canvasses whether additional disclosure of taxpayer information should be permitted for law enforcement purposes.[232]

Regulatory burden

27.135 A review of the *TFN Guidelines* could consider the regulatory burden imposed by current TFN regulation. The ATO submitted that if the ALRC found that the use of TFNs imposed a regulatory burden on businesses, the ATO could 'be involved in discussions to address this issue'. [233]

27.136 The ALRC received few submissions that addressed compliance burden in relation to TFNs. With respect to the disclosure of TFNs, Link Market Service noted that, in some circumstances, prohibiting a shareholder from providing consent to disclosure of their TFN can be time-consuming and resource intensive.

> When there are certain capital events in the life of a company, where the company's register is merged with another company's register or split into different registers TFNs cannot normally pass across to the new register. A registry provider such as Link will, on behalf of the company, send out TFN forms for shareholders to complete … This process takes time from the registry and shareholder perspective and costs the company, initiating the mail out, cost. When the registers merge or split there is no automatic transference of details and the whole exercise must be repeated. This can lead to shareholder complaints, specifically where the TFN form is not completed after the merge or split and the shareholder's dividend is subject to withholding tax as a result.[234]

27.137 The Mortgage and Finance Association of Australia noted that requirements to delete or physically remove TFNs from documents are 'costly, prone to error,

233 Australian Taxation Office, *Submission PR 168,* 15 February 2007.
234 Link Market Service, *Submission PR 2,* 24 February 2006.

inconvenient and unnecessary'. The Mortgage and Finance Association stated this is particularly so given that collection, use and disclosure of TFNs is strictly regulated.[235]

27.138 Any consideration of compliance burden in a review of the *TFN Guidelines* must be balanced against the reasons behind the privacy protections afforded to TFNs. The OPC noted that such protections were introduced

> to ensure that such numbers do not become de facto unique identifiers for use by all government agencies and the private sector … this remains relevant and appropriate, particularly given the increased ability of information technology to link records of information across disparate sources.[236]

ALRC's view

27.139 The ALRC is of the view that the *TFN Guidelines* should be subject to a review by the OPC, in consultation with the ATO and other relevant stakeholders. The review could consider: the policy intention behind the privacy protection of TFNs; the compliance burden that arises from TFN regulation; the Treasury review into secrecy and disclosure provisions in taxation law; and any relevant legislation that arises from the Treasury review.

27.140 Further, as discussed in Chapter 44, the *TFN Guidelines* should be renamed the *TFN Rules* to reflect that the guidelines are binding and that a breach constitutes an interference with privacy under s 13 of the *Privacy Act.*[237]

Proposal 27–6 The Office of the Privacy Commissioner, in consultation with the Australian Taxation Office and other relevant stakeholders, should review the *Tax File Number Guidelines* issued under s 17 of the *Privacy Act.*

Summary of proposed 'Identifiers' principle

27.141 In summary, the ALRC's view is that the tenth principle in the proposed UPPs should be called 'Identifiers'. It should appear as follows.

UPP 10. Identifiers

10.1 An organisation must not adopt as its own identifier of an individual an identifier of the individual that has been assigned by:

235 Mortgage and Finance Association of Australia, *Submission PR 231,* 9 March 2007.
236 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
237 *Privacy Act 1988* (Cth) s 13(b). See Proposal 44–2.

(a) an agency;

(b) an agent of an agency acting in its capacity as agent;

(c) a contracted service provider for a Commonwealth contract acting in its capacity as contracted service provider for that contract; or

(d) an Australian state or territory agency.

10.2 An agency must not adopt as its own identifier of an individual an identifier of the individual that has been assigned by:

(a) another agency;

(b) an agent of another agency acting in its capacity as agent;

(c) a contracted service provider for a Commonwealth contract acting in its capacity as contracted service provider for that contract; or

(d) an Australian state or territory agency.

10.3 The requirements in NPPs 10.1 and 10.2 do not apply to the adoption by a prescribed agency or organisation of a prescribed identifier in prescribed circumstances.

Note: There are prerequisites that must be satisfied before those matters are prescribed: see subsection 100(2), as proposed to be amended.

10.4 Where an identifier has been 'assigned' within the meaning of UPP 10.1 or 10.2, an agency or organisation must not use or disclose the identifier unless:

(a) the use or disclosure is necessary for the agency or organisation to fulfil its obligations to the agency that assigned the identifier;

(b) one or more of UPP 5.1(c) to (f) apply to the use or disclosure;

(c) the identifier is genetic information and the use or disclosure would be permitted by the proposed *Privacy (Health Information) Regulations*; or

(d) the use or disclosure is by a prescribed agency or organisation of a prescribed identifier in prescribed circumstances.

10.5 The term 'identifier', for the purposes of UPP 10, includes a number, symbol or any other particular that:

(a) uniquely identifies an individual for the purpose of an agency's or organisation's operations; or

(b) is determined to be an identifier by the Office of the Privacy Commissioner.

However, an individual's name or ABN, as defined in the *A New Tax System (Australian Business Number) Act 1999*, is not an 'identifier'.

Note: A determination referred to in the 'Identifiers' principle is a legislative instrument for the purposes of section 5 of the *Legislative Instruments Act 2003* (Cth).

Summary of proposed 'Transborder Data Flows' principle 862

Introduction

28.1 'Transborder data flow' refers to the movement of personal information (or data) across national borders.[1] While the focus of the *Privacy Act 1988* (Cth) was originally on personal information collected and handled within Australia, the increasing ease with which information can be transferred between countries has forced jurisdictions to recognise that efforts to protect personal information should be harmonised.[2]

1 Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980), Guideline 1.

2 South African Law Reform Commission, *Privacy and Data Protection*, Discussion Paper 109 (2005), vii.

> Modern business is increasingly borderless. The communications revolution and the reduction in international trade barriers has allowed business to globalise and for regions to specialise. The call centre answers the phone in India, the product is designed in Europe, made in China and it is all managed from the US. But these business units must share their information; information about employees, customers and suppliers.[3]

28.2 Overseas business processing centres are increasingly handling customer data in such sensitive areas as processing credit card applications and bills, mortgage applications, insurance claims and help desk services.[4] It is important for Australians to feel confident that if their personal information is transferred outside Australia, it will be protected to the same standard that they enjoy in Australia. A number of respondents to the ALRC's National Privacy Phone-In expressed concerns about Australian companies sending their personal information offshore, particularly to overseas call centres.

> If I deal with a company in Australia, I most certainly do not want that company passing my details overseas, where laws about privacy are even weaker. I also have a right to know when paying online whether my payment details are being sent overseas, as I view this as a huge security risk.[5]

28.3 Economic development is dependent on globalisation of information and electronic commerce. In the 1970s and 1980s, international bodies developed the first instruments to harmonise laws within economic communities and improve trade relationships. The 1980 Organisation for Economic Co-operation and Development (OECD) *Guidelines on the Protection of Privacy and Transborder Data Flows of Personal Data* (OECD Guidelines) was one of the first international instruments that attempted to address this issue.

28.4 The OECD Guidelines provide that, in developing laws and policies to protect privacy and individual liberties, member countries should not enact laws that unnecessarily create obstacles to transborder flows of personal data.[6] The privacy principles in the OECD Guidelines are the foundation for the Information Privacy Principles (IPPs) and the National Privacy Principles (NPPs) set out in the *Privacy Act*. NPP 9 governs transborder data flow out of Australia.[7]

5 *National Privacy Phone-In* June 2006, Comment No 433. On 1 and 2 June 2006, the ALRC invited members of the public to telephone the office to provide their views and experiences of privacy protection in Australia. In total, the ALRC received 1,343 responses by telephone and via the website.

6 Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980), Guideline 18.

7 The IPPs and OECD Guidelines do not contain a comparable transborder data principle to NPP 9. The transfer of personal information outside Australia by agencies is discussed below.

28.5 More recent examples of these instruments are the privacy principles adopted by the European Union (EU) under the 1995 European Union *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data*[8] (EU Directive) and the Asia-Pacific Economic Cooperation (APEC) Privacy Framework.[9] The Asia-Pacific Privacy Charter Council, a regional non-government expert group, has also done work on developing independent privacy standards for privacy protection in the Asia-Pacific region.[10] Australia's ability to meet the expectations of privacy protection demanded by the international community is important to ensure that Australian businesses are not disadvantaged in an international market.

28.6 This chapter first looks at regulation of transborder data flow under the *Privacy Act* via the extra-territorial operation of the Act, and the restrictions in NPP 9 on the transfer of personal information to countries with differing privacy regimes. It considers the adequacy of the protection offered under NPP 9, including whether the principle should be expanded to apply to agencies, and the difficulties that may be experienced by businesses in complying with its requirements. The chapter then considers the adequacy of the *Privacy Act* in the context of the EU Directive, the APEC Privacy Framework and the Asia-Pacific Privacy Charter.

Extra-territorial operation of the *Privacy Act*

28.7 Section 5B of the *Privacy Act* applies the Act (and approved privacy codes) to acts done, or practices engaged in, outside Australia by an organisation, if the act or practice relates to personal information about an Australian citizen or permanent resident and either the organisation:

- is linked to Australia by being a citizen; or a permanent resident; or an unincorporated association, trust, partnership or body corporate formed in Australia; or

- carried on a business in Australia and held or collected information in Australia either before or at the time of the act done or practice engaged in.

28.8 Section 5B(4) extends the enforcement powers of the Privacy Commissioner to overseas complaints that fall within the criteria in s 5B(1).[11] The purpose of s 5B is to stop organisations avoiding their obligations under the Act by transferring the handling of personal information to countries with lower privacy protection standards.[12] The

11 The enforcement powers of the Privacy Commissioner are considered in Ch 46.

12 J Douglas-Stewart, *Annotated National Privacy Principles* (2005), [1-460].

privacy laws of another country, however, will not be overridden by the *Privacy Act*. Where an act or practice is required by an applicable law of a foreign country, it will not be considered a breach of the *Privacy Act*.[13]

Agencies

28.9 Section 5B applies to organisations, but not to agencies. It is unclear whether, in the absence of an express statement, the *Privacy Act* operates extraterritorially in relation to the acts and practices of agencies. It could be argued that the IPPs apply to the records of Australian Government agencies wherever they might be.

28.10 The High Court has held, however, that in the absence of unambiguous language to the contrary, there is a common law presumption that courts do not read extra-territorial jurisdiction into legislation.[14] This presumption has been held to apply in the case of legislation that applies to agencies.[15] There are a number of examples of federal legislation that regulates the Australian Government public sector and expressly provides that the legislation is to have extraterritorial application.[16]

28.11 In the ALRC's view, agencies that operate outside Australia should be subject to the *Privacy Act*. Agencies often compel the collection of personal information and should therefore remain accountable for the handling of that information under the *Privacy Act*, whether they are located in Australia or offshore. Further, agencies should not be able to avoid their obligations under the Act by transferring the handling of personal information to entities operating in countries with lower privacy protection standards. The ALRC proposes that the *Privacy Act* be amended to clarify that it applies to the acts and practices of agencies that operate outside Australia.

Proposal 28–1 The *Privacy Act* should be amended to clarify that it applies to acts done, or practices engaged in, outside Australia by an agency.

Information held under the law of a foreign country

28.12 The *Privacy Act* provides that where overseas acts and practices are required by an applicable foreign law, they are generally not considered interferences with the

---

13 *Privacy Act 1988* (Cth) s 13D.

14 *Jumbunna Coal Mine NL v Victorian Coal Miners Association* (1908) 6 CLR 309.

15 In *Brannigan v Commonwealth*, the appellant worked for the Australian High Commission in London. She complained of breaches of the *Racial Discrimination Act 1975* (Cth), *Sex Discrimination Act 1984* (Cth) and the *Disability Discrimination Act 1992* (Cth) while she was working at the High Commission. The Federal Court of Australia held that it lacked jurisdiction to determine the matter because the Acts did not state expressly that they operated extraterritorially: *Brannigan v Commonwealth* (2000) 110 FCR 566.

16 See *Public Service Act 1999* (Cth) s 5; *Occupational Health and Safety Act 1991* (Cth) s 13(2); *Ombudsman Act 1976* (Cth) s 3C; *Crimes Act 1914* (Cth) s 3A. See *McDonald v Bojkovic* [1987] VR 287.

privacy of an individual.[17] The purpose of s 13D was said to be to ensure that 'the extra-territorial operation of the Act does not require organisations to act in contravention of laws operating in the country in which the act or practice occurs'.[18]

28.13 These acts and practices may be interferences with privacy, however, if they breach the Tax File Number (TFN) guidelines, or involve an unauthorised requirement or request for disclosure of an individual's TFN; breach Part 2 of the *Data-matching Program (Assistance and Tax) Act 1990* (Cth) or the data-matching guidelines; constitute a breach of the guidelines under s 135AA of the *National Health Act 1953* (Cth); or constitute a credit reporting infringement by a credit reporting agency or a credit provider.[19]

28.14 In the ALRC's Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether there are any issues concerning overseas acts required by foreign law, and if so, how should they be dealt with.[20] This question elicited few comments from stakeholders. Civil Liberties Australia submitted that information about Australians should not be allowed to become the property of a foreign government, or be held under the laws of a foreign country.[21] The Office of the Privacy Commissioner (OPC) submitted that 'a note should be included under s 13D reminding organisations of their obligations in relation to transborder data flows of personal information under NPP 9'.[22]

28.15 The Office of the Victorian Privacy Commissioner (OVPC) noted the debate in Canada about whether medical information held in the United States might be subject to secret demands under the *Uniting and Strengthening America by Providing Appropriate Tools to Interact and Obstruct Terrorism Act 2001* (US) (*US Patriot Act*).[23]

28.16 In 2004, concerns were raised in Canada about whether organisations outside Canada, which were contracted to provide services to the federal and provincial governments, could be required to provide personal information about Canadian

21 Civil Liberties Australia, *Submission PR 98,* 15 January 2007.

22 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

23 Office of the Victorian Privacy Commissioner, *Submission PR 217,* 28 February 2007. Other examples include the handing over by Yahoo of a dissident journalist's email account details to the Chinese police in a matter that was the subject of investigation by the Hong Kong Privacy Commissioner; and the US Government mandating the transfer of passenger name records (PNRs) on all incoming international flight passengers. Issues were raised in relation to whether the release of PNRs was permitted under the EU Directive. The US and the EU have recently entered an agreement in relation to processing and transfer of PNRs. See *Agreement Between the United States of America and the European Union on the Processing and Transfer of Passenger Name Record (PNR) Data by Air Carriers to the United States Department of Homeland Security (DHS) 2007*.

citizens to the US authorities.[24] In response to these concerns, the Government of British Columbia amended the *Freedom of Information and Protection of Privacy Act 1996* (British Columbia) to provide that a government agency must ensure that personal information in its custody or under its control is stored only in Canada and accessed only in Canada, except in certain circumstances.[25] The Canadian Government, by contrast, did not adopt a legislative approach to this issue. It developed a strategy that involved raising awareness and providing guidance about privacy risks associated with contracting with organisations outside Canada.[26]

28.17 Should the *Privacy Act* limit the circumstances when personal information transferred outside Australia will become subject to a foreign law? One option would be to amend s 13D to provide for certain limits. Another option is that reflected in the Trade Practices Amendment (Privacy Protection for Off-shoring) Bill 2007.[27] The Bill seeks to amend the *Financial Management and Accountability Act 1997* (Cth) by introducing a new s 43A which requires an agency entering into a Commonwealth contract for the provision of services in Australia to take contractual measures to ensure that a contracted service provider cannot undertake work in relation to the contract in a country other than Australia that would involve use of 'personally identifiable information'.[28] The Bill reflects one method of protecting personal information from being collected and held under the law of a foreign country.

28.18 The ALRC does not propose that s 13D of the *Privacy Act* be amended to limit the circumstances in which personal information transferred outside Australia will become subject to foreign law. The ALRC believes that the policy justification for s 13D is sound—acts and practices that take place in a foreign country, and are required by the laws of that country, generally should not be considered a breach of the Act.[29]

---

24 See Treasury Board of Canada, *Privacy Matters: The Federal Strategy to Address Concerns About the US PATRIOT Act and Transborder Data Flows* (2006); Information and Privacy Commissioner for British Columbia, *Privacy and the USA Patriot Act: Implications for British Columbia Public Sector Outsourcing* (2004).

25 *Freedom of Information and Protection of Privacy Act 1996* RSBC c165 (British Columbia) s 30.1. The Act also provides that the relevant government Minister is to be informed when a government agency or contracted service provider receives a foreign demand for disclosure: *Freedom of Information and Protection of Privacy Act 1996* RSBC c165 (British Columbia) s 30.2.

26 Treasury Board of Canada, *Privacy Matters: The Federal Strategy to Address Concerns About the US PATRIOT Act and Transborder Data Flows* (2006), Ch 3.

27 The Trade Practices Amendment (Privacy Protection for Off-shoring) Bill 2007 was introduced by the Hon Anna Burke MP into the Australian Parliament House of Representatives on 18 June 2007.

28 'Personally identifiable information' has the meaning set out in s 65AAAB of the *Trade Practices Act 1974* (Cth). The Bill introduces a new 65AAAB of the *Trade Practices Act*. It defines 'personally identifiable information' as information including: name, postal address, financial information, medical records, date of birth, phone number, email address, Medicare number, mother's maiden name, driver's licence number and tax file number. The ALRC notes that most of this 'information' would be 'personal information' under the *Privacy Act*.

29 Trade Practices Amendment (Privacy Protection for Off-shoring) Bill 2007 sch 1, cl 1.

28.19 The ALRC proposes that the OPC develop and publish guidance on the proposed 'Transborder Data Flows' principle. This should set out the steps to be taken when personal information transferred outside Australia may become subject to foreign law, including laws such as the *USA Patriot Act*. The guidance should also provide advice to agencies when contracting government services to organisations outside Australia.

28.20 The ALRC does not consider that a note should be included under s 13D reminding organisations of their obligations under the proposed 'Transborder Data Flows' principle. Such obligations relate to whether personal information can be sent overseas, while s 13D concerns the handling of personal information *after* the information has been sent overseas. Moreover, once s 13D applies, the *Privacy Act* does not.

National Privacy Principle 9

28.21 NPP 9 dictates the circumstances in which an organisation may transfer personal information it holds in Australia to someone in a foreign country. As with the other private sector provisions, it was introduced in 2000 as part of the extension of privacy principles to the private sector.[30]

28.22 NPP 9 prohibits the transfer by an organisation of an individual's personal information to someone in a foreign country (other than that individual or organisation) unless a number of conditions are satisfied.[31]

28.23 The principle is largely modelled on arts 25 and 26 of the EU Directive, which aim to ensure continued protection of personal information when data are sent from their originating country.[32] Where one of the conditions in (a)–(f) is satisfied, the Australian organisation transferring the data is not liable for subsequent privacy breaches. It is important, therefore, that these conditions are sufficiently stringent to prevent transfers that create unwarranted privacy risks.[33]

28.24 NPP 9 is limited to 'foreign countries' rather than 'other jurisdictions'. It does not protect personal information that is transferred to a state or territory government that is not subject to privacy law, or a private sector organisation that is exempt from

the federal *Privacy Act*.[34] Where the transfer of personal information overseas is to the same organisation, not a third party, NPP 9 does not apply.

28.25 The *Privacy Act* was amended in 2004 to make it clear that the protection provided by NPP 9 applies equally to the personal information of Australian and non-Australian individuals.[35] This amendment was made by excluding NPP 9 from the citizenship and residency requirements of s 5B(1).

28.26 In IP 31, the ALRC asked whether NPP 9 provides adequate and appropriate protection for personal information transferred from Australia to a foreign country.[36] While some stakeholders submitted that NPP 9 provides adequate and appropriate protection,[37] others noted that NPP 9 is deficient in a number of respects, including: it does not address the transfer of personal information offshore by agencies; the perceived weakness of the tests for a 'reasonable belief' (NPP 9(a)) and the taking of 'reasonable steps' (NPP 9(f)); that organisations transferring data are not liable for any subsequent breaches; a lack of clarity as to how NPP 9 relates to other parts of the *Privacy Act*; and a lack of guidance for organisations as to what steps they must take to comply with NPP 9.[38] Each of these criticisms is dealt with in detail below.

Application of the 'Transborder Data Flows' principle to agencies

28.27 The *Privacy Act* does not regulate the transfer of personal information outside Australia by agencies. Some state and territory privacy legislation contains a transborder principle that regulates the public sector in that jurisdiction,[39] and a number of overseas jurisdictions impose obligations concerning transborder flows on both public and private sector bodies.[40]

Submissions and consultations

28.28 In IP 31, the ALRC asked whether the transfer of personal information offshore by agencies should be regulated by privacy principles.[41] A large number of stakeholders were in favour of extending NPP 9 to agencies.[42] For a number of

stakeholders, the key issue was that 'personal information should not be transferred to a foreign jurisdiction unless the foreign jurisdiction offers privacy protections substantially similar to Australian privacy standards'.[43]

28.29 Several stakeholders pointed to the fact that technological developments, in conjunction with increased transnational cooperation, make it more important to regulate how government entities transfer personal information overseas. The OPC, for instance, stated:

> As national governments increasingly interact and cooperate in a vast array of areas such as health, immigration, law enforcement, and business, increasing amounts of personal information may be exchanged as part of these processes.[44]

28.30 A number of stakeholders supported the existence of a privacy principle regulating agencies in relation to transborder data flows, provided certain conditions were met. For instance, it was submitted that there should be a condition for the transfer of personal information if required or authorised by another piece of legislation,[45] or for the purposes of mutual assistance between governments.[46] Some stakeholders submitted that the principle should apply both to transfers across national borders, and across federal, state and territory borders.[47]

28.31 Other stakeholders opposed the application of such a privacy principle to agencies. The Australian Federal Police (AFP) submitted that its existing practices adequately balance the need to protect individuals' privacy with the need to transfer information as quickly as is required in any given situation.[48] It was also concerned that such a principle would have the effect of 'impos[ing] Australian privacy law onto offshore recipients of personal information from Australian agencies'.[49] The Australian Taxation Office suggested that agencies should be required to enter contractual

arrangements obliging parties to whom they transfer information to respect the relevant privacy principles.[50]

ALRC's view

28.32 The *Privacy Act* should regulate the transfer of personal information outside Australia by agencies. Individuals should be assured that when an agency transfers personal information outside Australia their personal information will be protected to the same standard as under Australian privacy laws. The fact that agencies often have powers to compel the collection of personal information is a further reason for ensuring that personal information continues to be protected when it is transferred overseas. The ALRC also notes that the public sector in a number of Australian state and territory and overseas jurisdictions is regulated by a transborder data flow principle.[51]

28.33 The ALRC acknowledges, however, that a transborder data flow principle that applies to agencies will need to provide a condition for offshore transfers in certain circumstances, including transfers for the purpose of law enforcement, mutual assistance and extradition.[52] The *Personal Information Protection Act 2004* (Tas), *Information Act 2002* (NT) and the proposed Information Privacy Bill 2007 (WA) provide that a state or territory agency may transfer information outside that jurisdiction if the transfer is 'required or authorised by or under law'.[53] The *Privacy Act 1985* (Canada) provides that Canadian governmental bodies may not disclose the personal data of individuals without their consent, subject to a number of exceptions, including disclosures made

> under an agreement or arrangement between the Government of Canada or an institution thereof and … the government of a foreign state, an international organization of states or an international organization established by the governments of states, or any institution of any such government or organization, for the purpose of administering or enforcing any law or carrying out a lawful investigation.[54]

28.34 In the ALRC's view, the proposed 'Transborder Data Flows' principle should include a provision allowing an agency to transfer personal information outside Australia for law enforcement purposes. The condition should mirror the law enforcement exception under the proposed 'Use and Disclosure' principle. In the interest of clarity, the condition should also provide for the transfer of personal information for the purposes of extradition and mutual assistance.

28.35 The law enforcement condition proposed by the ALRC should not be worded as broadly as a 'required or authorised by or under law' condition under the proposed

54 *Privacy Act* RS 1985, c P-21 (Canada) s 8(2)(f).

'Transborder Data Flows' principle. The ALRC is concerned that such a condition might be too permissive in the context of transfer to overseas jurisdictions that may not have a similar level of privacy protection to Australia. Further, such a condition could be interpreted as permitting uses and disclosures that would be authorised under the 'Use and Disclosure' principle. This would allow an agency or organisation to transfer information overseas in a range of circumstances currently not provided for by NPP 9.[55]

28.36 The ALRC is interested in views from stakeholders on whether the proposed 'Transborder Data Flows' principle requires further amendment to accommodate other acts and practices involving the transfer of personal information outside Australia by agencies.

Proposal 28–2 The proposed Unified Privacy Principles (UPPs) should contain a principle called 'Transborder Data Flows' that applies to agencies and organisations.

Proposal 28–3 The proposed 'Transborder Data Flows' principle should provide that an agency or organisation in Australia or an external territory may transfer personal information about an individual to a recipient (other than the agency, organisation or the individual) who is outside Australia if the transfer is necessary for one or more of the following by or on behalf of an enforcement body:

(a) the prevention, detection, investigation, prosecution or punishment of criminal offences, breaches of a law imposing a penalty or sanction or breaches of a prescribed law;

(b) the enforcement of laws relating to the confiscation of the proceeds of crime;

(c) the protection of the public revenue;

(d) the prevention, detection, investigation or remedying of seriously improper conduct or proscribed conduct;

(e) the preparation for, or conduct of, proceedings before any court or tribunal, or implementation of the orders of a court or tribunal; or

(f) extradition and mutual assistance.

55 Office of the Federal Privacy Commissioner, *Plain English Guidelines to Information Privacy Principles 8–11: Advice to Agencies about Using and Disclosing Personal Information* (1996).

Definition of 'transfer'

28.37 The OPC submitted that it would be useful to distinguish the term 'transfer' from the terms 'use' and 'disclosure'. The OPC noted that the ordinary meaning given to the term 'transfer' is associated with information being sent somewhere. This may not be sufficient, however, to cover situations where personal information that is stored on a single server in one jurisdiction is available to be viewed and accessed in other jurisdictions.[56]

28.38 One option for dealing with this issue is to define 'transfer' in the Privacy Act as including the situation where personal information is stored in Australia in such a way that allows it to be accessed and viewed outside Australia. This definition would clearly capture the transfer of personal information on intranets and password-protected sections of websites. It also would include, however, uploading personal information on the internet. The ALRC is interested in hearing views on whether such a definition is appropriate.

28.39 Another issue is when an agency or organisation sends an email containing personal information by or to email systems that are hosted overseas.

> Imagine, for example, a situation where an Australia doctor emails some test results to an Australian patient. Imagine further that the patient is using Microsoft's Hotmail system. While the e-mail is sent from one Australian party to another, the e-mail including the sensitive personal information it contains, may be stored on a server overseas. Has the Australian doctor in this situation transferred personal information to someone in a foreign country? The answer would seem to be yes, as the information is placed on a server located in a foreign country.[57]

28.40 The Australian Government has dealt with this issue in the context of authorisations under the Integrated Public Number Database scheme.[58] Clause 4 of the *Telecommunications (Integrated Public Number Database Scheme—Conditions for Authorisations) Determination 2007 (No 1)* states that an authorisation is subject to a condition that prohibits the holder of an authorisation from transferring protected information to someone who is in a foreign country, subject to a number of exceptions. Clause 3(2) of the instrument provides that protected information is taken to be transferred to someone who is in a foreign country when 'it becomes accessible to the intended recipient of the information in the foreign country'. A note to cl 3 states that the clause

> is not intended to capture temporary offshoring of data such as when a document is emailed between 2 points within Australia but because of Internet routing it travels overseas on the way to its destination.

---

56 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

57 D Svantesson, *Protecting Privacy on the 'Borderless' Internet—Some Thought on Extraterritoriality and Transborder Data Flow* (2007) unpublished manuscript.

58 See discussion of the Integrated Public Number Database in Ch 63.

28.41 The ALRC is interested in views on whether the *Privacy Act* should provide that a 'transfer' excludes temporary transfer of data—such as when an email containing personal information is sent by or to an email system that is hosted overseas.[59]

Question 28–1 Should the *Privacy Act* provide that for the purposes of the proposed 'Transborder Data Flows' principle, a 'transfer':

(a) includes where personal information is stored in Australia in such a way that allows it to be accessed or viewed outside Australia; and

(b) excludes the temporary transfer of personal information, such as when information is emailed from one person located in Australia to another person also located in Australia, but, because of internet routing, the email travels (without being viewed) outside Australia on the way to its recipient in Australia?

'Someone' in a 'foreign country'

28.42 NPP 9 currently outlines when an organisation may transfer personal information about an individual to 'someone' who is in a 'foreign country'. A number of stakeholders submitted that NPP 9 should adopt the term 'person' as used in Note 3 to NPP 2 to clarify that the obligations under the Act with regard to disclosure of personal information outside of Australia apply to the release of personal information to organisations and government bodies as well as individuals.[60]

28.43 The OPC submitted, however, that rather than changing the term to 'person', a term such as 'recipient' would be preferable.[61] The OPC also submitted that consideration should be given to replacing the term 'foreign country' with 'outside Australia'. This will allow for a broader reading of what an overseas jurisdiction may include, for example, states and provinces and not only nation states.[62]

28.44 The ALRC proposes that NPP 9 should refer to the transfer of personal information to a 'recipient' rather than someone. This will make it clear that the principle applies to the overseas transfer of personal information to agencies, organisations and individuals. As discussed below, the note to the proposed 'Use and Disclosure' principle should also refer to 'recipient'. The ALRC also proposes that

---

59 Issues related to web-based applications are discussed in Ch 6.

60 Australian Bankers' Association Inc, *Submission PR 259,* 19 March 2007; G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Law Council of Australia, *Submission PR 177,* 8 February 2007; National Australia Bank and MLC Ltd, *Submission PR 148,* 29 January 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007; Electronic Frontiers Australia Inc, *Submission PR 76,* 8 January 2007.

61 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

62 Ibid.

NPP 9 be amended to refer to 'outside Australia' rather than to a 'foreign country'. 'Outside Australia' suggests a broader reading of what an overseas jurisdiction may be and also is consistent with language in overseas and state and territory transborder data principles.[63]

'Reasonably believes'

28.45 NPP 9(a) states that an organisation may transfer personal information to someone overseas where it 'reasonably believes' the recipient is subject to a law, binding scheme or contract that effectively upholds principles substantially similar to the NPPs. It has been argued that the requirement of a 'reasonable belief' is a weak test when compared to other models. In contrast, art 25 of the EU Directive provides that the country in question *must have* an adequate level of protection. Professor Graham Greenleaf has noted that NPP 9 only requires that an organisation reasonably believe that the foreign country has an arrangement that 'effectively upholds' privacy principles, not that there are enforcement mechanisms that are substantially similar to the *Privacy Act.*[64]

28.46 The OPC Guidelines to the NPPs state in relation to NPP 9:

> Given that transferring personal information overseas may remove it from the protection of Australian law, an organisation relying on NPP 9(a) and NPP 9(f) may need to be in a position to give evidence about the basis on which it decided that it has met the requirement of 'reasonable belief' or 'reasonable steps'.
>
> Getting a legal opinion would be a good way for an organisation to get such evidence.[65]

28.47 It is not clear what other action, if any, would be sufficient to satisfy the 'reasonable belief' requirement.

28.48 A number of submissions to the Inquiry noted that the concept of 'reasonable belief' is an ambiguous and weak test compared to the EU Directive requirement.[66] Other submissions argued that the 'reasonable belief' test should be retained and that the requirement under art 25 of the EU Directive is too onerous.[67] The OPC noted that it intends to develop information sheets outlining issues that should be addressed in

67 Australian Bankers' Association Inc, *Submission PR 259,* 19 March 2007.

contractual agreements and how to assess more easily whether a privacy regime is 'substantially similar'.[68]

28.49 The ALRC does not propose the amendment of the 'reasonable belief' test. It is the ALRC's view, however, that the Australian Government should develop and publish a list of laws and binding schemes that effectively uphold principles for fair handling of personal information that are substantially similar to the proposed Unified Privacy Principles (UPPs).[69] In the ALRC's view, this will go a long way to creating certainty about when the recipient of the personal information is subject to a law, binding scheme or contract that effectively upholds principles substantially similar to the NPPs.

28.50 The ALRC also proposes that the OPC should develop and publish guidance on the proposed 'Transborder Data Flows' principle. This should include guidance on what constitutes a 'reasonable belief'. Obtaining legal advice is one way this requirement could be satisfied.

Reasonable expectations of the individual

28.51 NPP 9(c) provides that an organisation may transfer personal information to someone overseas if the transfer is necessary for the performance of a contract between the individual and the organisation, or for the implementation of pre-contractual measures taken in response to the individual's request.

28.52 The OPC submitted that NPP 9(c) could be enhanced by an added specification that the transfer of personal information overseas should be 'within the reasonable expectations of the individual'. The OPC submitted that this would ensure that contracts or pre-contractual arrangements are clear about whether they may involve transfer of personal information overseas.[70]

28.53 The ALRC agrees that NPP 9(c) should be amended to provide that the transfer of personal information overseas should be within the reasonable expectations of the individual. Although an organisation or an agency may be acting on the request of an individual, the individual may not be aware that their request will require the transfer of their personal information outside Australia. In the ALRC's view, organisations and agencies should be required to specify in a contract or in pre-contractual arrangements that the fulfilment of the contract may require the overseas transfer of an individual's personal information.

69 This issue is discussed further below, in the context of the role of the OPC. See Proposal 28–8.

70 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

Interests and benefit of the individual

28.54 NPP 9(d) states that an organisation may transfer personal information to someone overseas if the transfer is necessary for the conclusion or performance of a contract concluded 'in the interest of the individual' between the organisation and a third party. NPP 9(e) provides that an organisation may transfer personal information to someone overseas if all of the following apply: the transfer is 'for the benefit of the individual'; it is impracticable to obtain the consent of the individual to that transfer; and if it were practicable to obtain such consent, the individual would be likely to give it.

28.55 It was submitted that these conditions are unclear, difficult to apply in practice,[71] and have led to 'an inconsistent approach with respect to transborder data flow that undermines consumer confidence'.[72] The OPC submitted that:

> Given that the reason for off-shoring the information might be based on organisational efficiency, judgements regarding the benefit to or interests of an individual may be difficult for an organisation to make.[73]

28.56 The ALRC does not propose the removal of the requirements in NPP 9(d) and (e) that a contract is in the 'interest of the individual' or that the transfer is for the 'benefit of the individual'. These requirements provide important protections for the data subject. The ALRC acknowledges, however, that these requirements involve subjective assessments. To assist agencies and organisations make these assessments, the ALRC proposes that the OPC develop and publish guidance on the proposed 'Transborder Data Flows' principle, which addresses when a transfer of personal information is for the benefit or in the interests of the individual concerned.

28.57 In the ALRC's view, where the reason for a transfer is organisational efficiency, the transfer should only take place if one of the other conditions in the proposed 'Transborder Data Flows' principle is satisfied. For example, the organisation or agency may need to take reasonable steps before the transfer has taken place to ensure that the information will not be handled by the recipient of the information inconsistently with the proposed UPPs.

'Reasonable steps'

28.58 Under NPP 9(f), personal information may be transferred to a foreign country where the organisation has taken 'reasonable steps' to ensure that the information transferred will not be held, used or disclosed by the recipient of the information inconsistently with the NPPs. This exception has been criticised as 'weak and imprecise' because it does not allow an individual recourse where an organisation has

---

71 Ibid; Telstra, *Submission PR 185,* 9 February 2007.
72 Telstra, *Submission PR 185,* 9 February 2007.
73 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

not adequately fulfilled the 'reasonable steps' requirement.[74] There is also an issue about the propriety of allowing, as a stand-alone exception, an organisation, without qualification, to transfer personal information about an individual and *then* to take reasonable steps to ensure that the recipient will not deal with it inconsistently with the NPPs.[75]

28.59 In IP 31, the ALRC noted that it may be preferable for NPP 9 to articulate the general principle that an organisation may transfer personal information if, *before* the transfer has taken place, it has taken reasonable steps to ensure that the recipient will not hold, use or disclose it inconsistently with the NPPs. An exception to that principle could be to allow the organisation to transfer the information and take the requisite reasonable steps after transfer only in exceptional circumstances or specified circumstances—such as an emergency or for a law enforcement purpose—or where it was not practicable to take such steps.[76]

28.60 Submissions were generally supportive of amending NPP 9(f) to require that 'reasonable steps' to be taken *before* personal information is transferred.[77] The OPC submitted that organisations may require further guidance on what constitutes 'reasonable steps' in this clause.

> The Office considers that when an organisation does not have an understanding of the privacy regime operating in the recipient's jurisdiction, a 'reasonable step' for the organisation is to ensure that privacy protections equivalent to the NPPs are in place through contracts. The Office suggests that it work with business to develop guidance material that explains what 'reasonable steps' might include.[78]

28.61 In the ALRC's view, NPP 9(f) provides little guarantee that personal information will be protected when it is transferred outside Australia. Once an organisation has transferred the information it has lost control over it. Allowing this stand-alone exception appears to go against the general spirit of NPP 9, which is to ensure that there are adequate protections *before* transfer takes place. The ALRC therefore proposes that *before* a transfer takes place, an agency or organisation must take reasonable steps to ensure that the information will not be handled by the recipient of the information inconsistently with the proposed UPPs. The ALRC also proposes

75 As well as under the *Privacy Act 1988* (Cth), this is also the position in relation to transfers of personal information outside of Victoria, Tasmania, and the Northern Territory: *Information Privacy Act 2000* (Vic) sch 1, IPP 9.1(f); *Health Records Act 2001* (Vic) sch 1, Health Privacy Principle 9.1(f); *Personal Information Protection Act 2004* (Tas) sch 1, Personal Information Protection Principle 9(d); *Information Act 2002* (NT) sch, IPP 9.1(g).

76 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), [13.24].

77 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007; Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Queensland Council for Civil Liberties, *Submission PR 150,* 29 January 2007.

78 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

that guidance on the proposed 'Transborder Data Flows' principle should include advice on what constitutes 'reasonable steps'.

28.62 Only one submission addressed the need for a provision dealing with exceptional or specified circumstances and did not specify what those circumstances should include.[79] The ALRC is interested in hearing from other stakeholders about this issue.

Accountability

28.63 Professor Greenleaf, Nigel Waters and Associate Professor Lee Bygrave submitted that the six conditions under NPP 9 will generally be sufficient to allow any legitimate transfer overseas of personal information, even when those transfers may harm the interests of the data subjects concerned. It was submitted that data exporters should remain liable for breaches of privacy by data importers under most circumstances.[80]

28.64 The Australian Government Department of Communications, Information Technology and the Arts (DCITA) noted the inherent difficulties in imposing legal responsibility upon an overseas recipient of personal information to use or disclose that information in a manner that is consistent with the NPPs. While contractual arrangements may assist in this regard, the OPC could still only take action against the Australian-based transferer of the information, should such information be used or disclosed inappropriately outside of Australia.[81]

28.65 One option for addressing these problems is to amend the *Privacy Act* to introduce an 'accountability' concept in the proposed 'Transborder Data Flows' principle. This could be achieved by providing that agencies and organisations will continue to be liable for any breaches of the proposed UPPs when an individual's personal information is transferred outside Australia.

28.66 As discussed below, the APEC Privacy Framework provides that, once an organisation has collected personal information, it remains accountable for the protection of that personal information even if the information changes hands or moves from one jurisdiction to another.[82] Similarly, Principle 12 of the Asia-Pacific Privacy Charter provides that an organisation must not transfer personal information to a place outside the jurisdiction in which it is located unless a number of conditions are met, including that the organisation has taken all reasonable steps to ensure that the personal information will be dealt with in accordance with the Asia-Pacific Privacy Charter

Principles in that place and the organisation continues to be liable for any breaches of the Principles.

28.67 Another example is Principle 4.1.3 of the *National Standard of Canada Model Code for the Protection of Personal Information* (Canada) (Model Code). That principle provides that an organisation is responsible for personal information in its possession or custody, including information that has been transferred overseas to a third party for processing.[83] Organisations, therefore, must use contractual or other means to provide a comparable level of protection while the information is being processed by a third party.[84]

28.68 There are several advantages to such an accountability principle. Placing liability on the agency or organisation transferring the personal information ensures that an individual has the ability to seek redress from someone in Australia if the recipient breaches the individual's privacy. Although this appears to be onerous, agencies and organisations can mitigate their liability in contractual arrangements with the recipient of the personal information. Further, the individual will be able to approach a local regulator, rather than have to seek protection under a foreign law, which may not provide the same level of protection as a local law.

28.69 To what extent should agencies and organisations remain liable when transferring personal information overseas? In the ALRC's view, an agency or organisation should not be liable for the handling of personal information after it has been transferred to another entity when the individual in question consents to the transfer. Where an individual has exercised choice over where his or her information will be transferred and the level of protection it will receive, the individual should bear the consequences of the transfer.

28.70 Agencies and organisations should not remain accountable when they reasonably believe that the recipient of the information is subject to a law, binding scheme or contract which effectively upholds privacy protections that are substantially similar to the proposed UPPs. In these circumstances, the personal information will receive similar protection to that under the *Privacy Act*. The individual can seek redress under a law, scheme or contract that is substantially similar to the proposed UPPs if the recipient of the personal information mishandles that information.

28.71 An agency should not be liable for the transfer of personal information if it is necessary for law enforcement purposes. In many cases, an agency will have no choice but to transfer information overseas, for example, for the purpose of a police investigation or the extradition of a person.

---

83 *Personal Information Protection and Electronic Documents Act 2000* SC 2000, c 5 (Canada) s 5.

84 D Solove, M Rotenberg and P Schwartz, *Information Privacy Law* (2nd ed, 2006), 923.

28.72 In conclusion, an agency or organisation should be permitted to transfer personal information to a recipient in Australia provided that: (1) the agency or organisation remains liable for any breach of the privacy principles; and (2) one of the following conditions is satisfied:

- the individual would reasonably expect the transfer, and the transfer is necessary for the performance of a contract between the individual and the agency or organisation;

- the individual would reasonably expect the transfer, and the transfer is necessary for the implementation of pre-contractual measures taken in response to the individual's request;

- the transfer is necessary for the conclusion or performance of a contract concluded in the interest of the individual between the agency or organisation and a third party;

- all of the following apply: the transfer is for the benefit of the individual; it is impracticable to obtain the consent of the individual to that transfer; and if it were practicable to obtain such consent, the individual would be likely to give it; or

- before the transfer has taken place, the agency or organisation has taken reasonable steps to ensure that the information will not be dealt with by the recipient of the information inconsistently with the proposed UPPs.

Proposal 28–4 Subject to Proposal 28–3, the proposed 'Transborder Data Flows' principle should provide that an agency or organisation in Australia or an external territory may transfer personal information about an individual to a recipient (other than the agency, organisation or the individual) who is outside Australia only if at least one of the following conditions is met:

(a) the agency or organisation reasonably believes that the recipient of the information is subject to a law, binding scheme or contract which effectively upholds privacy protections that are substantially similar to the proposed UPPs; or

(b) the individual consents to the transfer; or

(c) the agency or organisation continues to be liable for any breaches of the proposed UPPs; and

(i) the individual would reasonably expect the transfer, and the transfer is necessary for the performance of a contract between the individual and the agency or organisation;

(ii) the individual would reasonably expect the transfer, and the transfer is necessary for the implementation of pre-contractual measures taken in response to the individual's request;

(iii) the transfer is necessary for the conclusion or performance of a contract concluded in the interest of the individual between the agency or organisation and a third party;

(iv) all of the following apply: the transfer is for the benefit of the individual; it is impracticable to obtain the consent of the individual to that transfer; and if it were practicable to obtain such consent, the individual would be likely to give it; or

(v) before the transfer has taken place, the agency or organisation has taken reasonable steps to ensure that the information will not be dealt with by the recipient of the information inconsistently with the proposed UPPs.

Interaction with the 'Use and Disclosure' principle

28.73 Under the NPPs, an organisation that wants to transfer personal information outside Australia needs to determine whether the disclosure of that information to someone outside Australia will comply with NPP 2 (the Use and Disclosure principle). The organisation then needs to determine whether the transfer will satisfy at least one of the conditions set out under NPP 9. In the ALRC's view, this should continue to be the case under the proposed UPPs in relation to both agencies and organisations.

28.74 In the interest of clarity, the ALRC proposes that the proposed 'Use and Disclosure' principle should contain a note stating that agencies and organisations are subject to the requirements of the proposed 'Transborder Data Flows' principle when transferring personal information about an individual to a recipient who is outside Australia. The proposed 'Transborder Data Flows' principle should also contain a note stating that agencies and organisations are subject to the requirements of the proposed 'Use and Disclosure' principle when transferring personal information about an individual to a recipient who is outside Australia.

Proposal 28–5 The proposed 'Use and Disclosure' principle should contain a note stating that agencies and organisations are subject to the requirements of the proposed 'Transborder Data Flows' principle when transferring personal information about an individual to a recipient who is outside Australia.

Proposal 28–6 The proposed 'Transborder Data Flows' principle should contain a note stating that agencies and organisations are subject to the requirements of the proposed 'Use and Disclosure' principle when transferring personal information about an individual to a recipient who is outside Australia.

Related bodies corporate

28.75 NPP 9 does not prevent transfers of personal information outside Australia by an organisation to another part of the same organisation, or to the individual concerned.[85] As noted above, the *Privacy Act* operates extra-territorially in these circumstances by virtue of s 5B.

28.76 A company transferring personal information overseas to another related company, however, must comply with NPP 9. Section 13B(1) states that an act or practice is not an interference with the privacy of an individual if it involves a body corporate collecting or disclosing personal information (that is not sensitive information) from or to a related body corporate. A 'related body corporate' is a body corporate that is: a holding company of another body corporate; a subsidiary of another body corporate; or a subsidiary of a holding company of another body corporate; and the first mentioned body and the other body are related to each other.[86]

28.77 In submissions to the OPC's review of the private sector provisions of the *Privacy Act* (OPC Review), a number of stakeholders called for clarification of the interaction between NPP 9 and s 13B(1). They argued that it was unclear whether s 13B(1) made it possible for a body corporate in Australia to transfer personal information to a related body corporate located outside Australia without reference to NPP 9.[87]

28.78 In its final report, the OPC observed that s 13B relates to the purposes for which information can be disclosed, whereas NPP 9 is concerned with whether information can be sent overseas. While s 13B(1)(b) enables disclosure of information, compliance with NPP 9 is still required for transfers of information to a foreign country.

---

85 Office of the Federal Privacy Commissioner, *Guidelines to the National Privacy Principles* (2001), 58.

86 This definition is from the *Corporations Act 2001* (Cth) s 50, as referred to in s 6(8) of the *Privacy Act 1988* (Cth). For a general discussion of the exemption, see Ch 39.

87 See Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 77.

> If a company has an organisational link with Australia under section 5B, the extra-territorial provisions in the *Privacy Act* will apply. Therefore, if personal information is sent overseas to the same company, it will continue to be protected by the *Privacy Act* because the extra-territorial provisions apply. Section 5B does not appear to apply to related entities outside of Australia. As such, if information is sent to a related company, it may not be protected by the *Privacy Act*.[88]

28.79 The OPC took the view that, where information is transferred outside of Australia and the extraterritorial provisions do not apply, it is in the public interest for NPP 9 to apply. The OPC therefore did not recommend excluding related corporations from having to comply with NPP 9.[89]

28.80 In its submission to the Senate Legal and Constitutional References Committee inquiry into the *Privacy Act* (Senate Committee privacy inquiry), the Australian Privacy Foundation (APF) argued that s 13B was complex, difficult to understand and 'too generous in allowing exchanges of information between related companies which effectively avoid some of the NPP obligations'.[90] It stated further:

> If businesses choose for their own reasons to structure their affairs through separate incorporations, we do not see why this should give them any exemption from the normal application of the NPPs.[91]

28.81 The APF argued that the exemption under s 13B should be removed and that related companies should be treated as third parties.[92]

28.82 In IP 31, the ALRC asked whether the *Privacy Act* should be amended to clarify that NPP 9 applies when personal information is transferred outside Australia to a related body corporate.[93] A number of stakeholders submitted that the *Privacy Act* should be amended to clarify that, if an organisation transfers personal information to a related body corporate outside Australia, this transfer will be subject to NPP 9.[94]

28.83 Other stakeholders submitted, however, that NPP 9 should not apply when personal information is transferred outside Australia to a related body corporate.[95] For

example, Microsoft Australia submitted that transborder data flows to related bodies corporate that operate under a common set of internal polices, which require adherence to privacy notices and consent provided by individuals, should not be regulated in the same way as international transfers of personal information to unrelated third parties.[96]

28.84 In the ALRC's view, NPP 9 should apply to transborder transfers to related bodies corporate. If personal information is sent overseas to the same company, it will continue to be protected by the *Privacy Act* because the extra-territorial provisions apply. Section 5B does not apply, however, to related bodies corporate outside of Australia. As such, if personal information is sent to a related company, it may not be protected by the *Privacy Act*. Although many related companies are governed by a common set of internal policies, this may not always be the case. Further, the internal policies of a related company may not always provide the same level of protection as the *Privacy Act*. The ALRC agrees with the OPC that, where information is transferred outside of Australia and the extraterritorial provisions do not apply, it is in the public interest for NPP 9 to apply.

Proposal 28–7 Section 13B of the *Privacy Act* should be amended to clarify that, if an organisation transfers personal information to a related body corporate outside Australia, this transfer will be subject to the proposed 'Transborder Data Flows' principle.

The role of the Privacy Commissioner

List of overseas jurisdictions

28.85 The *Privacy Act* does not provide a definition of what constitutes a 'substantially similar' set of principles for the purposes of NPP 9(a).[97] The OPC Review noted that stakeholders had expressed frustration at the lack of guidance regarding the countries whose laws provide adequate protection equivalent to the NPPs.

> In this situation the onus is on the organisation to assess the regime of the country in which their trading partner resides. Many stakeholders, especially small businesses, have criticised the efficiency of this system arguing that they neither have the expertise or the resources to assess a foreign country's privacy laws.[98]

28.86 It was suggested that the OPC could publish a list of countries with substantially similar privacy laws. This would give organisations greater certainty about the countries to which they could transfer information safely. The OPC rejected this

96 Microsoft Australia, *Submission PR 113,* 15 January 2007.
97 J Douglas-Stewart, *Annotated National Privacy Principles* (2005), [2-5800].
98 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 78.

proposal on the basis that it was a complex task that would require considerable resources. The OPC also argued that such a task could affect its relationships with other countries and may be an inappropriate task for it to undertake.[99]

28.87 An alternative view is that, if assessment of a country's privacy compatibility is complex, a central body of experts should be tasked with assessing these regimes. As previously noted, the OPC has suggested that an organisation seek legal advice to ensure that it has evidence to meet the requirement of 'reasonable belief' or 'reasonable steps'.[100]

28.88 In its submission to the House of Representatives Committee on Legal and Constitutional Affairs inquiry into the Privacy Amendment (Private Sector) Bill 2000 (Cth), the European Commission made a similar point. It argued that 'it is our experience that it is difficult for the average operator to have substantial knowledge of the level of protection of personal data in third countries'.[101]

> Exonerating an operator of all responsibility under the Act simply by applying a reasonable belief test is likely to create uneven conditions for data transfers outside Australia. Also, the existence of a law, a contract or binding scheme is, in itself, an objective fact that can be ascertained, hence the reasonable belief test is somewhat unsettling. We believe that in this instance, the assistance of the Privacy Commissioner in indicating what third country regime can be considered as substantially similar to your domestic situation is advisable.[102]

28.89 In IP 31, the ALRC asked what role, if any, the OPC should play in identifying countries that have protection for personal information equivalent to the *Privacy Act*.[103] The vast majority of submissions in response to this question stated that the OPC should assist organisations with their decisions under NPP 9 by publishing and maintaining a list of countries that satisfy this provision.[104] Submissions noted that this would assist individuals to make choices about the handling of personal information, and businesses to make decisions about when alternative arrangements are needed to protect personal information.[105]

28.90 Submissions also noted that the OPC would be assisted in assessing overseas jurisdictions by the work of the European Union (EU) Article 29 Data Protection Working Party,[106] and could work with the Australian Government Department of Foreign Affairs and Trade.[107] The Law Council of Australia submitted that the OPC or a panel of experts should develop the list.[108] Another stakeholder noted that the best compromise would be to empower, but not require, the OPC to operate a 'whitelist' of countries with equivalent laws.[109]

28.91 It was submitted that publishing a list of countries with substantially similar privacy laws may not be an appropriate task for the OPC.[110] The OPC reiterated its view that such a task would be complex, require considerable resources, and could affect its relationships with other countries.[111] The OVPC submitted that these types of decisions are best left to governments acting with the advice of privacy commissioners.[112]

28.92 In the ALRC's view, the benefits of developing a list of laws and binding schemes that have equivalent *Privacy Act* protection for personal information far outweigh any disadvantages. Stakeholders have clearly identified the need for a list on a number of occasions.[113] Such a list would assist agencies and organisations to comply with the proposed 'Transborder Data Flows' principle. Further, it would assist individuals to make choices based on where their personal information may be transferred, and how it will be handled.

28.93 The ALRC accepts that this task would have considerable resource implications for the OPC. The ALRC therefore proposes that the Australian Government should develop and publish a list of laws and binding schemes that effectively uphold principles for fair handling of personal information that are substantially similar to the proposed UPPs. This may be a suitable task for the Australian Government Attorney-General's Department, in consultation with other Australian Government agencies such as the Department of Foreign Affairs and Trade and the OPC.[114]

114 The ALRC notes that Ernst & Young have compiled such a list: Ernst & Young, *Data Protection in the European Union and Other Selected Countries: A New Comparative Study* (2006).

Proposal 28–8 The Australian Government should develop and publish a list of laws and binding schemes that effectively uphold principles for fair handling of personal information that are substantially similar to the proposed UPPs.

Contractual arrangements

28.94 The final report of the OPC Review notes that:

> From submissions and the comments received during stakeholder workshops, it appears that organisations are fulfilling their NPP 9 obligations of ensuring that personal information is protected when it is transferred to regions without privacy regimes through contractual arrangements with their trading partners. While some submissions find this to be an effective solution, others are concerned about the costs associated with monitoring the compliance of their trading partners.[115]

28.95 For example, Telstra submitted to the OPC Review that it uses contractual provisions in its agreements with third party suppliers to manage the flow of personal information overseas, and imposes contractual obligations on overseas suppliers to ensure Telstra complies with its obligations under NPP 9. Some concerns were raised, however, regarding the additional cost of this method of ensuring compliance.[116]

28.96 The final report of the OPC Review notes that the OPC could provide greater guidance by publishing approved standard contractual provisions for use by Australian companies and international trading partners.

> These contractual provisions could provide for how the international company must protect information when the information collected in Australia is transferred to organisations overseas. The EU has issued contract provisions. Developing standard contractual provisions would have resource implications for the Office.[117]

28.97 Rather than publishing standard contractual provisions, the OPC recommended that it provide further guidance to assist organisations in complying with NPP 9. The OPC suggested issuing an information sheet outlining the issues that should be addressed as part of a contractual agreement and how to assess whether a privacy regime is substantially similar.[118]

118 Ibid, rec 18.

28.98 Some submissions to this Inquiry noted that it would be helpful if the OPC developed voluntary model contractual clauses in consultation with organisations as an aid to compliance with NPP 9, particularly for small to medium businesses.[119]

28.99 NPP 9 and the proposed 'Transborder Data Flows' principle anticipate that organisations will use contracts to protect personal information when it is transferred outside Australia. In the ALRC's view, the OPC should therefore develop and publish guidance about the issues that should be addressed as part of such a contractual agreement. This guidance will be particularly helpful for small businesses. The ALRC notes that the OVPC has published *Model Terms for Transborder Data Flows of Personal Information*. The guide includes model clauses for the transfer of personal information outside Victoria, together with commentary about the clauses.[120]

28.100 In other sections of this chapter, the ALRC proposes that guidance on the proposed 'Transborder Data Flows' principle also should address:

- when personal information may become available to a foreign government;
- contracting out government services to organisations outside Australia;
- when a transfer of personal information is 'for the benefit' or 'in the interests of' the individual concerned; and
- what constitute 'reasonable steps' to ensure the information it has transferred will not be held, used or disclosed by the recipient of the information inconsistently with the proposed UPPs.

Proposal 28–9 The Office of the Privacy Commissioner should develop and publish guidance on the proposed 'Transborder Data Flows' principle, including guidance on:

(a) when personal information may become available to a foreign government;

(b) outsourcing government services to organisations outside Australia;

(c) the issues that should be addressed as part of a contractual agreement with the overseas recipient of personal information;

(d) when a transfer of personal information is 'for the benefit' or 'in the interests of' the individual concerned; and

(e) what constitute 'reasonable steps' to ensure the information it has transferred will not be held, used or disclosed by the recipient of the information inconsistently with the proposed UPPs.

Cross-border enforcement

28.101 The ability to investigate breaches of local privacy laws in foreign countries poses particular challenges for privacy regulators.[121] The OECD identified considerable scope for a more global and systematic approach to cross-border privacy law enforcement cooperation.[122]

28.102 Cross-border cooperation of privacy regulators will be essential in enforcing the proposed 'Transborder Data Flows' principle. The ALRC notes that the OPC is already involved in a number of forums aimed at improving cooperative arrangements between privacy regulators in other jurisdictions. For example, the OPC is a member of the Asia Pacific Privacy Authorities Forum (APPA). APPA meets biannually and includes the federal, state and territory privacy regulators of Australia, New Zealand, Hong Kong and South Korea. APPA's objectives include: facilitating the sharing of knowledge and resources between privacy authorities within the region; fostering cooperation in privacy and data protection; promoting best practice amongst privacy authorities; and working to improve performance to achieve the objectives set out in privacy laws of each jurisdiction.[123]

28.103 The Australian Government, including the OPC, is also involved in the implementation of the APEC Privacy Framework. This will involve cooperation between regulators in APEC economies.[124]

28.104 The OPC has also entered into an agreement with the New Zealand Privacy Commissioner that allows for cooperation on privacy related issues. The Memorandum of Understanding covers the sharing of information related to surveys, research projects, promotional campaigns, education and training programs, and techniques in investigating privacy violations and regulatory strategies. Other areas addressed include cooperation on complaints with a cross-border element and the possible undertaking of joint investigations. The ALRC encourages the Australian Government

and the OPC to continue to seek opportunities for further cooperation with privacy regulators outside Australia.

Requirement of notice that personal information is being sent overseas

28.105 As noted above, a large number of respondents to the ALRC's National Privacy Phone-in expressed concerns about Australian companies sending their personal information overseas. The OPC Review also noted that, for many consumers, 'the transfer of personal information overseas brings with it a perceived loss of privacy and control'.[125]

28.106 In its submission to the OPC Review, Electronic Frontiers Australia expressed the view that

> the NPPs should be amended to require organisations to give individuals notice that their information will be sent to a foreign country and that the individual will be required to deal with call centres located in a foreign country.[126]

28.107 As part of this notice, Electronic Frontiers Australia argued that organisations also should be required to inform individuals of the means by which the Australian organisation has ensured that the individual's personal information will be adequately protected. Such notice would not be required if the overseas organisation is subject to substantially similar privacy laws or the individual has consented to the transfer.[127] This suggestion was not discussed further in either the OPC Review or the Senate Committee privacy inquiry.

28.108 In July 2006, United States (US) Senator Hillary Clinton put forward a similar proposal in her privacy Bill, known as the Privacy Rights and Oversight for Electronic Commercial Transactions Act of 2006.[128] Under cl 10(b)(1), a business may not disclose personal information regarding a US resident to any foreign branch, affiliate, subcontractor, or unaffiliated third party located in a foreign country unless the company notifies each individual concerned and the individual is given an explanation and the opportunity to opt out of having his or her information transferred. This clause is designed to stop perceived losses in consumer protection where companies send their data for processing in overseas jurisdictions.

> This would have two benefits: again, putting the control of information in your own hands, but also sending the message to other countries that if they want to continue

128 The text of the Bill may be viewed at <www.theorator.com/bills109/s3713.html> as at 31 July 2007. The Bill has been sent to the Senate Judiciary Committee for consideration.

> employing people in this very lucrative, rapidly growing area of information handling, they need to strengthen their own laws.[129]

28.109 This aspect of the Bill has been criticised as imposing an unnecessary burden on business. In the US context, the example was cited of a company with data processing centres in the US and Canada. If the US system broke down, for example, there would be delays involved in sending the data to the Canadian system for processing because of the requirement to inform consumers and allow them the opportunity to opt out.[130]

28.110 A similar Bill has been introduced by the Australian Labor Party.[131] The proposed new provisions would make it an offence if a corporation discloses 'personally identifiable information' to any branch, affiliate, subcontractor, or unaffiliated third party located in a country other than Australia unless: the corporation provides notice; and the consumer is given the opportunity, before the time that such information is initially disclosed, to object to the disclosure of such information. The Bill provides that, at the time of establishing a customer relationship with a consumer and not less than annually during the continuation of such relationship, a corporation must provide a clear and conspicuous disclosure to the consumer in writing or in electronic form of the corporation's policies and practices with respect to the transmission of personally identifiable information.[132]

Submissions and consultations

28.111 In IP 31, the ALRC asked whether organisations should be required to inform individuals that their personal information is to be transferred outside Australia, and if so, what form such notification should take.[133]

28.112 Most stakeholders agreed that individuals should be informed that their personal information is to be transferred outside Australia. Some submissions argued that there also should be a requirement to inform individuals of the jurisdiction to which their personal information is to be transferred, so that individuals can exercise informed choice or bring pressure for improvements in legislative protection.[134] Other stakeholders submitted that transfer of personal information should only occur with

consent,[135] and that general notification (for example, by a notice on the collecting organisation's website) is insufficient.[136]

28.113 The form in which the notice is given is relevant to the burden placed on business and government. There is an enormous cost difference depending on whether notice has to be given to each individual or whether it could be posted, for example, on a company's website. Some stakeholders submitted that a requirement to notify individuals of a decision to transfer personal information overseas, where this was not foreshadowed at the time of collection, would place an unnecessary burden on transborder data flows and create an unjustified compliance burden.[137] It was noted that, for large companies, the cost of complying with the requirement to give notice could run to millions of dollars. Some stakeholders suggested, however, that if an organisation intends to transfer the data at the time of collection, notification should be given at that point. If the organisation later decides to export the data, it should give notice at that time.[138]

28.114 The Finance Sector Union submitted that its research has shown that consumers believe their data should not be transferred or accessed from overseas without their written permission, and support a legislative regime that would require financial institutions to disclose whether they store customer information overseas. The Union also submitted that notification should include the legal basis on which personal information will be transferred.[139]

28.115 A number of submissions noted that the *Privacy Act* already provides adequate protection of personal information that is transferred overseas. It was noted that NPP 1.3 requires organisations to take reasonable steps to ensure that an individual is aware of the organisations or types of organisations to which personal information might be disclosed. This could include overseas organisations.[140]

28.116 The OPC stated that it would be clearer for individuals and organisations if notification of overseas transfers was an explicit requirement within the NPPs. This

could be done as part of the usual notice procedures. The OPC also noted that a requirement to provide notice to individuals should apply regardless of whether the overseas organisation is a related body corporate of its Australian parent or an agent or contractor of an Australian organisation. The OPC also submitted that, if an organisation has not previously needed to transfer personal information outside Australia but circumstances have changed since the information was collected, the organisation should notify affected customers.[141]

28.117 Some stakeholders also suggested that, in addition to providing notice of the transfer, organisations could provide further information about transfers of personal information outside Australia in their privacy policy or at the request of the individual.[142]

ALRC's view

28.118 In the ALRC's view, if personal information will, or may, be transferred outside Australia, agencies and organisations should be required to notify individuals. This would help individuals to exercise informed choice about how their personal information will be dealt with, and the level of privacy protection it will receive. In the ALRC's view, however, requiring notification or written consent each time an agency or organisation transfers an individual's personal information overseas would result in an unjustified compliance burden.

28.119 The proposed 'Specific Notification' principle would require an agency or organisation that collects personal information about an individual from the individual, to take reasonable steps to ensure that the individual is aware of a number of matters, including types of people, organisations, agencies or other entities to which the agency or organisation usually discloses personal information.[143] The requirement would extend to notifying an individual if his or her personal information might be transferred outside Australia.

28.120 Further, the ALRC proposes, in Chapter 21, that the proposed 'Openness' principle should require agencies and organisations to create a Privacy Policy that sets out their policies on the management of personal information.[144] In the ALRC's view, this Privacy Policy should set out whether personal information will be transferred outside Australia. If an agency or organisation's policy changes on transfer of personal information outside Australia, the Privacy Policy should be updated to reflect this.

143 Proposal 20–2.

144 Proposal 21–1.

Proposal 28–10 The Privacy Policy of an agency or organisation, referred to in the proposed 'Openness' principle, should set out whether personal information may be transferred outside Australia.

International privacy protection

28.121 In order to ensure that Australian organisations are not disadvantaged in the international market, Australia must be able to meet the international community's expectations of privacy protection. This section of the chapter considers the adequacy of Australia's privacy laws in relation to the EU Directive, and other international instruments such as the APEC Privacy Framework. It also considers various other international models of transborder data flow protection.

European Union Data Protection Directive

28.122 The EU Directive seeks to protect the privacy of individuals within the EU when information about them is transferred to countries outside the EU.[145] If the European Commission determines that a country does not provide 'adequate' data protection standards, this will lead to restrictions on the transfer of information to that jurisdiction.[146]

28.123 Article 25(1) of the EU Directive provides:

> The Member States shall provide that the transfer to a third country of personal data which are undergoing processing or are intended for processing after transfer may take place only if, without prejudice to compliance with the national provisions adopted pursuant to the other provisions of this Directive, the third country in question ensures an adequate level of protection.

28.124 Article 25(4) provides:

> Where the Commission finds … that a country does not ensure an adequate level of protection … Member States shall take the measures necessary to prevent any transfer of data of the same type to the third country in question.

28.125 Article 26 provides an exception to art 25, permitting transfers in certain circumstances to a third country, even where the third country has not ensured an adequate level of protection. The art 26 exception applies in similar (though not identical) circumstances to those referred to in NPP 9—that is, where:

- there is unambiguous consent from the data subject;

---

145 European Parliament, *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data*, Directive 95/46/EC (1995).

146 Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005), 9.

- the transfer is necessary for the performance, implementation or conclusion of certain contractual transactions;

- the transfer is in the public interest or the vital interests of the data subject; or

- the transfer is made from a public register.

28.126 Under art 26(2), a member state may also authorise transfers of personal data where a contract contains adequate safeguards protecting the 'privacy and fundamental rights and freedoms of individuals, and as regards the exercise of corresponding rights'.[147]

28.127 The decision about the adequacy of third party regimes is made by the Article 29 Data Protection Working Party of the European Commission (Working Party), which is comprised of representatives of supervisory authorities in EU member states and a representative of the European Commission. Those countries that have been declared 'adequate' are: Canada, Switzerland, Argentina, Guernsey and the Isle of Man. The US Department of Commerce's Safe Harbour Privacy Principles also have been given adequacy status.[148]

28.128 The Working Party has noted that 'adequate protection' does not necessarily mean equivalent protection, and that it is not necessary for third countries to adopt a single model of privacy protection. It has also stated that there may be adequate protection despite certain weaknesses in a particular system 'provided, of course, that such a system can be assessed as adequate overall—for example, because of compensating strengths in other areas'.[149]

28.129 If a third country is deemed not to have adequate protection, member states must take action to prevent any transfer of personal data to the country in question. This 'mandated approach' is stronger than that set out in the OECD Guidelines.[150]

28.130 Professors Colin Bennett and Charles Raab note that the implementation of arts 25 and 26 pose problems for businesses that rely on transborder flows of personal data. This matter also has major implications for credit-granting and financial institutions, hotel and airline reservations systems, the direct marketing sector, life and property insurance, the pharmaceutical industry, and for any online company that markets its products and services internationally.[151]

Adequacy of the Privacy Act

28.131 One of the main drivers behind the *Privacy Amendment (Private Sector) Act 2000* (Cth) was to facilitate trade with European countries by having the *Privacy Act* deemed adequate for the purposes of the EU Directive.[152] In March 2001, however, the Working Party released an opinion expressing concern that some sectors and activities are excluded from the protection of the *Privacy Act*, including small businesses and employee records.[153] The Working Party found that, without further safeguards, the Australian standards could not be deemed equivalent to the EU Directive. The Working Party also expressed concerns about Australia's regulation of sensitive information within the *Privacy Act* and the lack of correction rights, which existed for EU citizens under the Act.[154]

28.132 Further amendments were made to the *Privacy Act* in April 2004 as part of the process of moving towards adequacy.[155] Those amendments:

- clarified that the protection offered by NPP 9 applies equally to the personal information of Australians and non-Australians;
- removed nationality and residency limitations on the power of the Privacy Commissioner to investigate complaints regarding the correction of personal information; and
- gave businesses and industries more flexibility in developing privacy codes that cover otherwise exempt acts.[156]

28.133 The OPC Review noted that there are ongoing discussions with the European Commission regarding the small business and employee records exemptions from the *Privacy Act*.[157] In evidence to the Senate Committee privacy inquiry, the Australian Government Attorney-General's Department noted that the small business exemption was of concern to the European Commission and that it is probably the key outstanding issue between the EU and Australia.[158]

156 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 74.

157 Ibid, 74.

158 Commonwealth of Australia, *Parliamentary Debates*, Senate Legal and Constitutional References Committee, 19 May 2005, 63 (C Minihan). This was confirmed more recently in a consultation with the Chair of the Article 29 Working Party: P Schaar, *Consultation OSC 1*, London, 1 November 2006. The small business exemption is discussed further in Ch 35.

28.134 There is no equivalent in the EU Directive to the *Privacy Act* exemption for small businesses. The Senate Committee privacy inquiry questioned the need to retain the small business exemption, in part because it is preventing recognition of Australian privacy laws under the EU Directive.[159]

28.135 In evidence to the Senate Committee privacy inquiry, the Law Institute of Victoria stated:

> If we do not comply with the EU directive, Australian businesses are going to be impacted in terms of the extent to which they can work offshore and deal with other jurisdictions.[160]

28.136 This view was not shared by all stakeholders making submissions to the Senate Committee privacy inquiry. For example, the Australian Direct Marketing Association (ADMA) submitted that organisations had not been hindered in their ability to conduct business with EU business partners. Similarly, the OPC stated that, in practice, businesses simply included the relevant privacy standards in contracts.[161]

28.137 The OPC Review suggested that the fact that Australian privacy law has not been recognised as adequate by the EU has not inhibited trade. It stated that 'only a very small proportion of the submissions received from stakeholders and few of the comments made in consultation meetings indicate that the failure to achieve EU adequacy has impaired business and trade with European organisations'.[162]

28.138 Nevertheless, the Senate Committee privacy inquiry also considered it desirable for Australia's privacy laws to gain formal recognition as being adequate. The Senate Committee recommended that:

> The review by the Australian Law Reform Commission, as proposed at recommendations 1 and 2, examine measures that could be taken to assist recognition of Australia's privacy laws under the European Union Data Protection Directive.[163]

28.139 The EU and Australia are engaged in ongoing negotiations on the issue of the adequacy of Australia's privacy regime for the purpose of the EU Directive.

159 Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005), [7.32]–[7.34], rec 12.

160 Ibid, [4.127].

161 Ibid, [4.130]. See also A Beatty, A Smith and J Moore, *Consultation PC 7*, Sydney, 7 March 2006.

162 The Review concluded, however, that although there was no evidence of a push from business for the EU's recognition of adequacy, there may be long term benefits for Australia to continue to work towards this aim. The Review also supported continuing work within APEC to implement the APEC Privacy Framework (discussed below): Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 75.

163 Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005), rec 16.

The use of contracts for compliance with the EU Directive

28.140 Alongside legislation and self-regulatory arrangements, contracts have been recognised as a mechanism for enhancing privacy protection.[164] Article 26(2) of the EU Directive explicitly recognises that contracts may be one method of ensuring that personal data transferred from one country to another receive 'adequate protection'. A contract that would meet these criteria would have to bind the organisation receiving the data to meet the EU standards of information practices, such as the right to notice, consent, access and legal remedies.[165]

28.141 The OECD has identified the following as core elements of privacy protections that should be reflected in contractual provisions:

- substantive rules based on the principles in the OECD Guidelines, either by inclusion of the substantive rules in the contract or by reference to relevant laws, principles or guidelines;
- a means of ensuring accountability and verifying that the parties are complying with their privacy obligations;
- a complaints and investigations process, in the event that there is a breach of the privacy obligations; and
- a dispute resolution mechanism for affected parties.[166]

28.142 The Australian Bankers' Association and ADMA submitted to the OPC Review that it would be beneficial for standard contracts to be made readily available to organisations to assist them in transfering data to or from the EU or APEC regions.[167]

Is 'adequacy' necessary or desirable?

28.143 In IP 31, the ALRC asked whether adequacy of the *Privacy Act* under the EU Directive is necessary for the effective conduct of business with EU members, and desirable for the effective protection of personal information transferred into and out of Australia.[168]

167 Australian Bankers' Association, *Submission to Review of the Private Sector Provisions of the Privacy Act*, 22 December 2004; Australian Direct Marketing Association, *Submission to the Office of the Privacy Commissioner Review of the Private Sector Provisions of the Privacy Act 1988*, 22 December 2004.

168 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 13–5.

28.144 The ALRC noted that it was interested in what further measures are necessary to ensure the adequacy of Australia's privacy regime under the EU Directive, including whether the removal or amendment of the small business exemption and the employee records exemption would be desirable in this context. The ALRC also asked whether the availability of standard contractual clauses would be sufficient to meet the needs of Australian businesses in this regard.[169]

28.145 While some submissions noted that businesses seem to be able to carry out business internationally without Australia receiving an adequacy assessment,[170] others noted that, without an adequacy assessment, Australian organisations may be less competitive in the global market.[171] It also was submitted that it is desirable for Australian law at least to meet the EU standard of best practice,[172] and that adequacy for the purpose of the EU Directive has important symbolic significance, indicating that Australia takes privacy regulation seriously and seeks to promote best practice in this area.[173] The OVPC noted that the EU assessment of Australia's privacy laws is not limited to the federal regime but extends to each state and territory jurisdiction.[174]

28.146 The OPC submitted that, while adequacy is desirable in order to streamline trade, even in EU jurisdictions privacy protections may not always be implemented satisfactorily. The European Commission's *First Report on the Implementation of the Data Protection Directive* indicates that different jurisdictions have implemented the EU Directive in different ways and, as a result, unauthorised and possibly illegal transfers are being made to destinations, or recipients are not being guaranteed adequate protection.[175]

28.147 It was highlighted in one submission that there are a number of differences between NPP 9 and the EU Directive. For example, under NPP 9: consent for transfer does not have to be 'unambiguous'; organisations are allowed to make their own assessment of whether there is 'adequate protection' in the destination country; and the 'reasonable steps' test is much weaker than the nearest equivalent in art 26(2), in that it addresses only standards and not safeguards and the exercise of rights. It was also noted that there is no equivalent in NPP 9 to the public interest, legal claims, or vital interests derogations in art 26; and that NPP 9 does not provide any protection where

personal information is transferred to a state or territory government that is not subject to a privacy law.[176]

ALRC's view

28.148 The ALRC has been advised that the EU Directive can create problems for organisations that conduct business in Europe. It has been noted that the registration system in Europe is expensive, and that adequacy under the EU Directive nevertheless may still mean that organisations will be subject to additional requirements under privacy laws of individual European countries. The ALRC also notes that the European Commission's *First Report on the Implementation of the Data Protection Directive* found that the EU Directive has not guaranteed consistent privacy protection across Europe.[177]

28.149 The consensus view of submissions to this Inquiry suggests, however, that while a failure to achieve adequacy under the EU Directive is not preventing organisations from carrying out business internationally, an adequacy rating would help streamline trade between Australian businesses and Europe. The ALRC notes that the Australian Government apparently takes this view as it is continuing to work with the EU on the issue of the adequacy of Australia's privacy laws.

28.150 The ALRC makes a number of proposals in this Discussion Paper which may assist an adequacy finding under the EU Directive, including the: removal of the small business exemption and the employee records exemption; clarification of the 'required or authorised by or under law' exception; and development and publication of a list of laws and binding schemes that effectively uphold principles for fair handling of personal information that are substantially similar to the proposed UPPs.

Asia-Pacific Economic Cooperation Privacy Framework

28.151 The APEC Privacy Framework was endorsed by APEC Ministers in November 2004. The APEC Privacy Framework contains nine privacy principles recognising 'the importance of the development of effective privacy protections that avoid barriers to information flows, ensure continued trade, and economic growth in the APEC region'.[178]

28.152 As with the EU Directive, the APEC Privacy Framework aims to promote electronic commerce by harmonising members' data protection laws and facilitating information flow throughout the Asia-Pacific region.[179] Unlike the EU Directive,

179 Ibid, [5]–[6].

however, APEC members are not obliged to implement the APEC Privacy Framework in any particular way domestically.[180]

28.153 APEC commenced development of the APEC Privacy Framework in 2003, which largely is based on the OECD Principles. Australia played a key role in the development of the APEC Privacy Framework, leading the APEC working group in the drafting process.

28.154 As noted in Part D, the APEC principles are intended to apply to persons or organisations in both the public and private sectors who control the collection, holding, use, transfer or disclosure of personal information.[181] The principles cover: preventing harm; notice; collection limitation; use of personal information; choice; integrity of personal information; security safeguards; access and correction; and accountability.[182] The principles are intended to encourage the development of appropriate information privacy protections by members.[183]

28.155 One key area in which the APEC Privacy Framework takes a different approach to the EU Directive is in transborder data flows. Consultants to APEC, Malcolm Crompton and Peter Ford, have said:

> It is no longer accurate to describe data as 'flowing' at all … instead of point to point transfers, information is now commonly distributed among a number of data centres and is accessible globally over the Internet or over private networks.[184]

28.156 While the EU Directive is concerned with border controls and whether personal data are moving to a jurisdiction that has adequate protection, the APEC Privacy Framework holds the organisation sending the data accountable. Once an organisation has collected personal information, it remains accountable for the protection of those data even if they change hands or move from one jurisdiction to another.[185]

28.157 Principle 9 of the APEC Privacy Framework states that a personal information controller

> should be accountable for complying with measures that give effect to the Principles. When personal information is to be transferred to another person or organisation, whether domestically or internationally, the personal information controller should obtain the consent of the individual or exercise due diligence and take reasonable steps to ensure that the recipient person or organisation will protect the information consistently with these Principles.

180 M Crompton and P Ford, 'Implementing the APEC Privacy Framework: A New Approach' (2005) 5(15) *IAPP Privacy Advisor* 8, 8.

181 Asia-Pacific Economic Cooperation, *APEC Privacy Framework* (2005), [10].

182 See Ibid, [14]–[26].

183 Ibid, preamble.

184 M Crompton and P Ford, 'Implementing the APEC Privacy Framework: A New Approach' (2005) 5(15) *IAPP Privacy Advisor* 8, 8.

185 Ibid, 8.

28.158 Principle 9 is therefore similar to NPP 9 in that it also uses the term 'reasonable steps'. The reference to 'due diligence' may be perceived, however, as stronger than the requirement of 'reasonable belief' in NPP 9.

28.159 Given the vast differences between the member economies of APEC, the APEC Privacy Framework does not aspire to uniformity but strives to recognise cultural and other diversities within its membership.[186] The APEC Privacy Framework encourages cooperation between members on the regional enforcement of data protection norms and the development of agreements between nations for cooperative enforcement.[187] These cross-border arrangements may include mechanisms to:

- notify public authorities in other member states of investigations and assistance in investigations; and
- identify and prioritise cases for cooperation in severe cases of privacy infringement that may involve authorities in several countries.[188]

28.160 APEC members also have agreed to support the development and recognition of members' cross-border privacy rules (CBPRs) across the APEC region. The APEC Privacy Framework states that:

> Member Economies should endeavour to ensure that such cross-border privacy rules and recognition or acceptance mechanisms facilitate responsible and accountable cross-border data transfers and effective privacy protections without creating unnecessary barriers to cross-border information flows, including unnecessary administrative and bureaucratic burdens for businesses and consumers.[189]

28.161 The First Technical Assistance Seminar on International Implementation of the APEC Privacy Framework was held on 22–23 January 2007 in Canberra. Its focus was the development and use of CBPRs by business, and the development of a model for implementing CBPRs. The seminar concluded that a 'Choice of Approach' model supported by trustmarks would be the most appropriate model. The key feature of this model is that each economy chooses the entities and procedures that will be used within the economy to assess the compliance of an organisation's CBPRs with the APEC Privacy Framework.

28.162 Under the model, an organisation that wishes to be considered as having CBPRs that comply with the APEC Privacy Framework submits an application containing its self assessment to a 'designated review entity' (which could include a privacy regulator or a trustmark body). By a framework agreed between the relevant entities of the APEC economies, a process is established to publish a centralised,

189 Ibid, [48].

publicly available list of the organisations whose CBPRs are assessed by designated review entities as being in compliance with the APEC Privacy Framework. Under the agreed framework, a participating economy accepts the assessments made by the designated entity in another participating economy following the choice of approach to CBPRs in that economy. The agreed framework also provides for communication and information sharing between the designated entities in each economy to facilitate the resolution of disputes relating to consumer complaints on cross-border handling of personal information.

28.163 Discussion at this meeting emphasised that trust marks could play a significant role in a CBPR system to assist economies in reviewing and giving recognition to organisations' CBPRs. A trustmark is a label or visual representation showing participation in a trustmark scheme in which a third party guarantees to consumers an organisation's compliance with the requirements for participation in that scheme. Trustmarks can be used to demonstrate compliance with a host of different principles, including privacy principles.[190]

28.164 The Second Technical Assistance Seminar on International Implementation of the APEC Privacy Framework was held in Cairns on 25–26 June 2007. It looked at developing and refining aspects of the 'Choice of Approach' model, by considering the cross-border cooperation arrangements between various stakeholders, which will be a necessary part of a CBPR system, and the steps economies can begin taking to implement parts of the preferred implementation model. The development of a 'Pathfinder' (or pilot project), which would involve a number of economies participating in a trial of a CBPR system was discussed at the seminar.

28.165 As noted above, Australia has been instrumental in the development of the APEC Privacy Framework. In the final report of the OPC Review, the OPC was supportive of the APEC Privacy Framework and expressed the view that:

> The initiative has the potential to accelerate the development of information privacy schemes in the APEC region and to assist in the harmonisation of standards across national jurisdictions.[191]

28.166 There has been some criticism that the APEC Privacy Framework is too 'light touch' in its approach and does not provide sufficient privacy protection for individuals. Greenleaf argues that the APEC Privacy Framework has a bias towards the free flow of personal information and does not recognise that there can be legitimate privacy reasons for restricting data exports.[192] The requirement either of consent or that the discloser takes reasonable steps to protect the information is said to be 'a very soft

substitute for a Data Export Limitation principle' along the lines of that contained in the EU Directive.[193]

28.167 Greenleaf has also noted that, although the APEC Privacy Framework does not set any requirements of its own, it does not prevent its members having their own data export restriction rules. Such rules could be for domestic purposes or to meet the requirements of the EU Directive.[194]

Asia-Pacific Privacy Charter Initiative

28.168 The Asia-Pacific Privacy Charter Council, a regional non-government expert group, has developed independent privacy standards for privacy protection in the Asia-Pacific region.[195] The Council has drafted the Asia-Pacific Privacy Charter (APP Charter) with the aim of influencing the development of privacy laws in the region in accordance with the standards set out in the Charter.[196]

28.169 The APEC Privacy Framework and the APP Charter have a number of similarities, and both reflect many of the principles contained in other international and regional agreements, such as the OECD Guidelines and the EU Directive.[197] The APP Charter, as it stands, however, is intended to be a 'maximalist' or 'high watermark' draft, reflecting all the significant privacy principles from relevant international instruments.[198]

28.170 The APEC Privacy Framework does not have a principle that explicitly limits data flows to countries without similar privacy laws. In contrast, Principle 12 of the APP Charter contains a limitation similar to that under the EU Directive. Principle 12 states that an organisation must not transfer personal information to a place outside the jurisdiction in which it is located unless:

- there is in force in that jurisdiction a law embodying principles substantially similar to the APP Charter Principles;
- it is with the consent of the person concerned; or

198 Ibid, 1.

- the organisation has taken all reasonable steps to ensure that the personal information will be dealt with in accordance with the APP Charter Principles in that place and continues to be liable for any breaches of the Principles.

28.171 This model is stronger than NPP 9(a) in that it does not allow an organisation merely to have a 'reasonable belief' that the recipient is subject to similar laws. The APP Charter also places the responsibility on the organisation to take reasonable steps *before* the personal information is transferred—not after, as is the case in NPP 9(f). The inclusion of the statement that the organisation must continue to be liable for any breaches of the Principles is in keeping with the APEC Privacy Framework, whereby the transferor of the information remains accountable for ensuring compliance with privacy measures.

Submissions and consultations

28.172 In IP 31, the ALRC asked whether the APEC Privacy Framework, or other standards, such as the APP Charter, provide an appropriate model for the protection of personal information transferred between countries.[199]

28.173 A number of stakeholders supported the APEC Privacy Framework.[200] For example, the OPC submitted that it provides a positive step forward in addressing regional consistency regarding the handling of personal information. Specifically, the Framework may function as a starting point to assist member economies that currently do not have any privacy regime to develop privacy protections for individuals' personal information.[201]

28.174 Microsoft Australia submitted that it prefers the APEC Privacy Framework approach to transborder data flows to the regime set out in NPP 9.

> The free flow of data across national borders is now a prerequisite to global commerce and unnecessary impediments to those flows should be removed wherever possible … Microsoft also observes that it is not only business practice that is accelerating the movement of information flows between economies. Technology is also a significant contributor and importantly, a significant contributor to it being undertaken in a way that respects privacy policies and choices. For this reason, privacy law that focuses on outcomes not process will help reduce the inevitable procedural inconsistencies between the regulation of privacy in different countries but also facilitate the accelerated development of technologically based privacy protection rather than hinder it.[202]

201 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

202 Microsoft Australia, *Submission PR 113,* 15 January 2007.

28.175 The National Australia Bank and MLC submitted that the APEC Privacy Framework is an excellent start for the facilitation of information flows, but noted that it is only relevant to information flows between countries that are members of APEC.[203] There will still need to be models and frameworks, based on the requirements of NPP 9, which enable the flow of information to countries outside of APEC or any other member nation of differing charters or agreements.[204]

28.176 It was submitted, however, that the APEC Privacy Framework provides only a bare minimum of privacy protection and is aimed at those jurisdictions without an existing higher level.[205] Professor Greenleaf, Waters and Associate Professor Bygrave noted that the APEC Privacy Framework does not: forbid the transfer of personal information to countries without APEC-compliant laws; explicitly allow restrictions on transfer to countries without APEC-compliant laws; or allow transfers to countries that have APEC-compliant laws. It was also noted that the APEC Privacy Framework does not hold the data exporter 'accountable' in any meaningful sense, because it does not have any requirement of legal enforcement, and there is no guarantee of any legal remedy against the exporter, or the importer if it is in a jurisdiction without applicable privacy laws.[206] Some submissions noted that the APP Charter provides a more appropriate model for protecting privacy.[207]

ALRC's view

28.177 The APEC Privacy Framework is a significant development in addressing regional consistency in the handling of personal information. The ALRC notes that, in implementing the APEC Privacy Framework

> the means of giving effect to the Framework may differ between Member Economies, and it may be appropriate for individual economies to determine that different APEC Privacy Principles may call for different means of implementation. Whatever approach is adopted in a particular circumstance, the overall goal should be to develop compatibility of approaches in privacy protections in the APEC region that is respectful of requirements of individual economies.[208]

28.178 The involvement of Australia in the implementation of the APEC Privacy Framework will not require the lowering of any privacy protections under the *Privacy Act*. It may, however, provide new ways of encouraging compliance with local and international privacy standards. The ALRC notes that the Australian Government continues to play a key role in the implementation of the APEC Privacy Framework. The ALRC has borrowed elements from both the APEC Privacy Framework and the

APP Charter, as well as the NPPs and the EU Directive, in developing the proposed UPPs.[209]

Trustmarks

28.179 One feature of the APEC Privacy Framework that may have application in the Australian context is a trustmark scheme.[210] A number of countries already have adopted trustmark schemes, including privacy trustmark schemes. Some of these schemes are beginning to recognise each others' trustmarks and develop global trustmark principles.[211] Trustmark schemes vary in nature and structure. For example, in the US, trustmark bodies are private sector organisations,[212] whereas in Singapore, the National Trust Council's TrustSg is publicly supported by Singapore's Infocomm Development Authority.[213]

28.180 Trustmark bodies not only provide accreditation and allow the use of trustmarks, they also can provide advice to organisations and consumers about privacy laws and handle privacy complaints.[214] One advantage of adopting a trustmark scheme is that it can deal with low level privacy breaches and the provision of advice on privacy matters, leaving government regulators and law enforcement bodies to focus on serious and harmful privacy breaches.

28.181 One option would be the introduction of an Australian privacy trustmark scheme. An Australian privacy trustmark scheme could approve privacy policies for the purpose of the proposed 'Openness' principle in the UPPs. On approval an agency or organisation would be permitted to display a privacy trustmark. If an agency or organisation breaches an individual's privacy, a privacy trustmark body could provide an external dispute resolution scheme and could refer appropriate matters to the OPC. One enforcement option would be to prevent an agency or organisation displaying a trustmark. Once established, an Australian trustmark scheme could seek recognition by overseas trustmark schemes, and could be used to approve CBPRs for the purposes of the APEC Privacy Framework or other international privacy regimes.

28.182 Submissions from stakeholders did not raise the issue of trustmarks. The ALRC is interested in hearing views on the use of trustmarks to encourage compliance

with, and enforcement of, Australian and international privacy standards. Should they be provided for under the *Privacy Act*?

Question 28–2 Would the use of trustmarks be an effective method of promoting compliance with, and enforcement of, the *Privacy Act* and other international privacy regimes? If so, should they be provided for under the *Privacy Act*?

Summary of proposed 'Transborder Data Flows' principle

28.183 In summary, the eleventh principle in the proposed UPPs should be called 'Transborder Data Flows'. It should appear as follows:

UPP 11. Transborder Data Flows

An agency or organisation in Australia or an external Territory may transfer personal information about an individual to a recipient (other than the agency, organisation or the individual) who is outside Australia only if:

(a) the agency or organisation reasonably believes that the recipient of the information is subject to a law, binding scheme or contract which effectively upholds principles for fair handling of the information that are substantially similar to the UPPs; or

(b) the individual consents to the transfer; or

(c) the transfer is necessary for one or more of the following by or on behalf of an enforcement body:

(i) the prevention, detection, investigation, prosecution or punishment of criminal offences, breaches of a law imposing a penalty or sanction or breaches of a prescribed law;

(ii) the enforcement of laws relating to the confiscation of the proceeds of crime;

(iii) the protection of the public revenue;

(iv) the prevention, detection, investigation or remedying of seriously improper conduct or prescribed conduct;

(v) the preparation for, or conduct of, proceedings before any court or tribunal, or implementation of the orders of a court or tribunal;

(vi) extradition and mutual assistance; or

(d) the agency of organisation continues to be liable for any breaches of the UPPs, and

(i) the individual would reasonably expect the transfer, and the transfer is necessary for the performance of a contract between the individual and the agency or organisation;

(ii) the individual would reasonably expect the transfer, and the transfer is necessary for the implementation of pre-contractual measures taken in response to the individual's request;

(iii) the transfer is necessary for the conclusion or performance of a contract concluded in the interest of the individual between the agency or organisation and a third party;

(iv) all of the following apply: the transfer is for the benefit of the individual, it is impracticable to obtain the consent of the individual to that transfer; and if it were practicable to obtain such consent, the individual would be likely to give it; or

(v) before the transfer has taken place, the agency or organisation has taken reasonable steps to ensure that the information will not be dealt with by the recipient of the information inconsistently with the UPPs.

Note: Agencies and organisations are also subject to the requirements of the 'Use and Disclosure' principle when transferring personal information about an individual to a recipient who is outside Australia.

Introduction

29.1 This chapter considers whether the *Privacy Act 1988* (Cth) should be amended to cover aspects of privacy that are not currently covered by the Information Privacy Principles (IPPs) or National Privacy Principles (NPPs).[1] Such new provisions could be located in the proposed Unified Privacy Principles (UPPs) or in other parts of the Act.

29.2 In the Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether agencies and organisations should be subject to any additional privacy principles and, if so, what should be the content of these principles.[2] The following potential new privacy principles were identified: (a) an 'accountability' principle; (b) a 'prevention of harm' principle; (c) a 'consent' principle;[3] and (d) a 'data breach notification' principle[4]. During consultations, other new privacy principles were also suggested,

1 The ALRC proposes that the IPPs and NPPs should be consolidated into a single set of privacy principles, the UPPs, which would be generally applicable to agencies and organisations: see Proposal 15–2.

2 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 4–35.

3 The question whether there should be a separate privacy principle dealing with consent is addressed in Ch 16.

4 That is, the ALRC asked whether there should be a new privacy principle requiring an entity that holds personal information to notify any individual whose personal information has been, or is reasonably believed to have been, accessed without authorisation: Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Questions 4–35 and 11–3(d). This issue is addressed in detail in Ch 47, where the

including a 'no disadvantage' principle. Some stakeholders supported the addition of one or more of these new privacy principles. Others, however, submitted simply that there should be no new privacy principles.[5]

29.3 This chapter considers whether the *Privacy Act* should impose requirements in relation to a number of the aspects of privacy listed above. If the answer to that threshold question is 'yes', the requirements could be implemented by:

- creating a new privacy principle to deal directly with the relevant aspect of privacy;
- amending the other, existing privacy principles to take account of the relevant aspect of privacy;
- locating the requirements elsewhere in the *Privacy Act*, or in a legislative instrument made pursuant to the Act, or in other sectoral legislation; or
- the Office of the Privacy Commissioner (OPC) or another entity issuing guidance to assist agencies and organisations to respond better to the relevant aspect of privacy.

Accountability principle

Background

29.4 Some have suggested that an 'accountability' privacy principle would be beneficial in establishing who is responsible for maintaining individuals' privacy rights. Such a provision exists in the Organisation for Economic Co-operation and Development's *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980) (OECD Guidelines), which provides that 'a data controller should be accountable for complying with measures which give effect to the [other] principles [in the OECD Guidelines]'.[6]

29.5 Another example is provided in the Asia-Pacific Economic Cooperation (APEC) Privacy Framework, which states:

> A personal information controller should be accountable for complying with measures that give effect to the Principles. When personal information is to be transferred to another person or organisation, whether domestically or internationally, the personal information controller should obtain the consent of the individual or exercise due

---

ALRC proposes an amendment to the *Privacy Act* to address data breach notification and explains why such a provision should not be located in the UPPs.

6 Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980), Guideline 14.

> diligence and take reasonable steps to ensure that the recipient person or organisation will protect the information consistently with these Principles.[7]

29.6 The Asia-Pacific Privacy Charter Council (the APPC Council), a regional expert group, has developed independent privacy standards for privacy protection in the Asia-Pacific region. One of the principal tasks of the APPC Council is to draft the Asia-Pacific Privacy Charter (APP Charter).[8] The draft APP Charter, which includes general privacy principles that are intended to be observed by both the public and private sectors, provides that a regulated entity should be 'accountable for its compliance with these Principles and must ensure that an identifiable person is responsible for ensuring that the organisation complies with each Principle'.[9]

29.7 Some overseas jurisdictions have adopted an accountability principle in their privacy law. Part I of the *Federal Data Protection Act 1990* (Germany) (FDP Act), which applies to both the public and private sectors, directly implements the Accountability Principle in the OECD Guidelines. It requires the appointment of a data protection officer who is responsible for ensuring that the Act and other provisions concerning data protection are observed.[10]

29.8 Canadian privacy law, in some ways, goes further than this. The *Personal Information Protection and Electronic Documents Act 2000* (Canada) (PIPED Act) applies to private sector organisations in respect of personal information that they collect, use or disclose in the course of commercial activities or certain personal information about employees of organisations.[11] Subject to certain provisions, the PIPED Act requires organisations to comply with the National Standard of Canada *Model Code for the Protection of Personal Information*, which is a schedule to the Act.[12] It includes an accountability principle that states in part:

> An organisation … shall designate an individual or individuals who are accountable for the organisation's compliance with the [principles] …
>
> An organisation is responsible for personal information in its possession or custody, including information that has been transferred to a third party for processing. The organisation shall use contractual or other means to provide a comparable level of protection while the information is being processed by a third party.[13]

11 *Personal Information Protection and Electronic Documents Act 2000* SC 2000, c 5 (Canada) s 4(1).

12 Ibid s 5.

13 See Ibid sch 1, Principle 4.1.

29.9 The accountability principle also requires an organisation to implement policies and procedures to: protect personal information; establish procedures to respond to complaints and inquiries; train staff about the organisation's policies; and prepare information to explain the organisation's policies and procedures.[14]

Submissions and consultations

29.10 Some stakeholders supported the inclusion of a specific privacy principle dealing with accountability.[15] The National Association for Information Destruction submitted that such a principle should 'require businesses to take responsibility for certain types of information at the end of its cycle'.[16] The New South Wales Disability Discrimination Legal Centre proposed that such a principle should make organisations accountable for their compliance with the privacy principles and that an 'identifiable person' within an organisation should be responsible for ensuring that organisation's compliance.[17]

29.11 Other stakeholders specifically opposed the addition of an accountability privacy principle.[18] While noting that such a principle was theoretically beneficial, one submission questioned the practical utility of the current models of accountability principle:

> At first sight the addition of an express accountability principle would be welcome. But the existing models seem to add little of substance. The OECD accountability principle (14) is nothing more than a 'motherhood' statement, while the APEC Framework Accountability principle (IX) seems to be more to do with onward transfer obligations that are arguably best covered in security and transborder data principles, and also seems confused about the role of consent.[19]

29.12 AAMI noted that there are already accountability requirements that apply to organisations, particularly those in the financial services and insurance industries. It submitted that any accountability principle should follow these existing frameworks, and state how many days an organisation has to report a breach to the regulator.[20]

ALRC's view

29.13 The ALRC does not believe that the proposed UPPs should contain a discrete accountability principle. The ALRC holds this view for two main reasons. First, there are better mechanisms for establishing accountability, including the following:

---

14 Ibid sch 1, Principle 4.1.4.

15 National Association for Information Destruction, *Submission PR 133,* 19 January 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007; NSW Disability Discrimination Legal Centre (Inc), *Submission PR 105,* 16 January 2007.

16 National Association for Information Destruction, *Submission PR 133,* 19 January 2007.

17 NSW Disability Discrimination Legal Centre (Inc), *Submission PR 105,* 16 January 2007.

18 Australian Federal Police, *Submission PR 186,* 9 February 2007; National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

19 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007.

20 AAMI, *Submission PR 147,* 29 January 2007.

- the *Privacy Act* already establishes that where an agency or organisation is in breach of the privacy principles,[21] this constitutes an interference with privacy, which triggers the availability of a number of avenues to enforce compliance;[22]

- the ALRC proposes to establish a statutory cause of action that would provide a new method for individuals to make people accountable for breaches of privacy rights;[23] and

- a number of other privacy principles—especially those dealing with openness and specific notification—require agencies and organisations to make their practices for managing personal information transparent, thereby fostering accountability.[24]

29.14 Secondly, the ALRC agrees with the position, adopted in a number of submissions, that an accountability principle may be of limited practical utility. The main problems with establishing effective accountability arise where an agency or organisation subcontracts the handling of personal information to another entity, or where personal information is transferred outside Australia. The ALRC's view is that these specific problems should be dealt with in those contexts—for example, by consolidating the IPPs and NPPs, and tightening the rules in respect of personal information that is handled by contractors.[25] Similarly, as explained in Chapter 28, the ALRC proposes that the UPPs should contain a 'Transborder Data Flows' principle, applicable to agencies and organisations, which would ensure that data collectors are more accountable for the personal information that they collect and transfer.

Prevention of harm principle

Background

29.15 There is a question whether the UPPs should contain a 'prevention of harm' principle. Such a provision would require data collectors 'to prevent tangible harms to individuals and to provide for appropriate recovery for those harms if they occur'.[26] In other words, it would require data collectors to take a prophylactic approach, focusing on obviating potential problems before they are realised.

---

21 See *Privacy Act 1988* (Cth) ss 13, 13A. Currently, these provisions establish that a breach of the IPPs or NPPs is an interference with privacy. The ALRC's view is that a breach of the proposed UPPs should also be considered an interference with privacy.

22 Compliance and enforcement of the requirements in the privacy principles is discussed in Part F.

23 See Ch 5.

24 See, especially, Chs 20 and 21.

25 See, especially, Proposals 15–2 and 25–2.

26 F Cate, 'The Failure of Fair Information Practice Principles' in J Winn (ed) *Consumer Protection in the Age of the 'Information Economy'* (to be published 2007) Ch 14, 28.

29.16 The APEC Privacy Framework contains such a principle. It states:

> Recognizing the interests of the individual to legitimate expectations of privacy, personal information protection should be designed to prevent the misuse of such information. Further, acknowledging the risk that harm may result from such misuse of personal information, specific obligations should take account of such risk, and remedial measures should be proportionate to the likelihood and severity of the harm threatened by the collection, use and transfer of personal information.[27]

29.17 A provision of the German FDP Act, entitled 'Data avoidance and data economy', states:

> The organisation and choice of data-processing systems shall be guided by the objective of collecting, processing and using as little personal data as possible. In particular, use shall be made of the possibilities of anonymisation and psuedonymisation where possible and where the effort entailed is proportionate to the interests to be protected.[28]

Submissions and consultations

29.18 Some stakeholders supported the inclusion of a specific privacy principle dealing with prevention of harm.[29] Veda Advantage submitted that this aligns with the overall 'purpose of regulating information flows, [which] is to protect individuals from harmful uses of information'.[30]

29.19 A number of stakeholders opposed a prevention of harm principle.[31] One submission argued that this is an unsuitable subject to be addressed in a privacy principle.

> The sentiment that privacy remedies should concentrate on preventing harm … is unexceptional but it is strange to elevate it to a privacy principle because it neither creates rights in individuals nor imposes obligations on information controllers. To treat it on a par with other Principles makes it easier to justify exempting whole sectors (eg small business in Australia's law) as not sufficiently dangerous, or only providing piecemeal remedies in 'dangerous' sectors (as in the USA).[32]

30 Veda Advantage, *Submission PR 163,* 31 January 2007.

31 Australian Federal Police, *Submission PR 186,* 9 February 2007; G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Law Council of Australia, *Submission PR 177,* 8 February 2007; AAMI, *Submission PR 147,* 29 January 2007; National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

32 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007, citing G Greenleaf, 'APEC's Privacy Framework Sets a New Low Standard for the Asia-Pacific' in A Kenyon and M Richardson (eds), *New Dimensions in Privacy Law: International and Comparative Perspectives* (2006) 91, 100.

29.20 The Law Council of Australia was concerned that such a principle would be too imprecise because it is difficult to discern a precise meaning of 'harm'.

> While financial harm and damage to reputation or character are concepts which are well understood, other concepts of harm which are raised within the privacy debate such as 'distress' and the knowledge that someone has their personal information are harder to place within a legislative context.[33]

29.21 While opposed to the addition of a prevention of harm principle, AAMI submitted that, if it were included, it should follow existing risk management frameworks.[34]

ALRC's view

29.22 The ALRC believes that the UPPs should not contain a discrete 'prevention of harm' principle. First, there does not appear to be a strong push among stakeholders to include such a principle. Indeed, the majority of stakeholders that commented on this issue were opposed to this reform.

29.23 Secondly, the ALRC believes that a number of the principles in the UPPs already incorporate a prevention of harm approach. In particular, the privacy principles dealing with data quality and data security impose specific obligations to ensure the integrity of personal information that is handled by agencies and organisations, and to guard against possible misuse and unauthorised disclosure.[35] Strengthening these provisions, as proposed by the ALRC, will reduce the risks associated with poor handling of personal information. Similarly, the proposed 'Anonymity and Pseudonymity' principle aims to reduce the threat of personal information being misused by directing agencies and organisations, where lawful and practicable, not to collect personal information in the first place.[36]

29.24 Thirdly, the ALRC is concerned that the obligations of a general prevention of harm principle will be undesirably vague. Professor Fred Cate has argued that privacy principles should 'target harmful uses of information, rather than mere possession'.[37] By concentrating on ways to prevent personal information being handled unfairly or otherwise inappropriately, this is precisely what the UPPs are intended to achieve.

No disadvantage principle

Background

29.25 During the ALRC's submission and consultation process, it was suggested that consideration be given to the inclusion or incorporation of a 'no disadvantage' principle or provision. This would involve amending the *Privacy Act* to include a provision prohibiting agencies and organisations from unfairly disadvantaging an individual on the basis that he or she is seeking to assert or otherwise enjoy his or her privacy rights.

29.26 It may be argued, for instance, that an individual wishing to remain anonymous when transacting with an organisation should not be treated unfavourably because of this. Examples of unfavourable treatment may include the organisation charging a fee that would only apply to individuals who seek to transact anonymously, or withholding a product or service until the individual decides he or she no longer wishes to transact anonymously.

29.27 The *Privacy Act* does not currently contain an express, generally applicable 'no disadvantage' provision. There is no such provision in any other Australian jurisdiction. Nor is there such a provision in the OECD Guidelines or in the privacy legislation of the common law jurisdictions, such as the United Kingdom, Canada and the United States, with which Australia is most commonly compared. On the other hand, the draft APP Charter contains a 'non-discrimination' principle that states:

> People should not be denied goods or services or offered them on unreasonably disadvantageous terms (including higher cost) in order to enjoy the rights described in this Charter.
>
> The provision of reasonable facilities for the exercise of privacy rights should be a normal operating cost.[38]

29.28 A similar provision is included in the Australian Privacy Charter.[39] The principle is said to be directed towards practices such as the following:

> Customers should not have to pay for the exercise of line-blocking or call-blocking facilities to prevent the display of the caller's telephone number. Similarly, this principle has application to customer loyalty schemes which allow organisations to develop extensive databases on a consumer's spending patterns by only allowing discounts if consumers identify themselves in transactions.[40]

39 Australian Privacy Foundation, *Australian Privacy Charter* <www.privacy.org.au/About/PrivacyCharter.html> at 31 July 2007, Principle 18.

40 T Dixon, 'Privacy Charter Sets New Benchmark in Privacy Protection' (1995) 2 *Privacy Law and Policy Reporter* 41, 43.

29.29 While the *Privacy Act* does not currently contain a specific 'no disadvantage' provision, on one view, the NPPs already contain some provisions that are directed towards a similar policy goal. In particular, NPP 6.4 states:

> If an organisation charges for providing access to personal information, those charges:
>
> (a) must not be excessive; and
>
> (b) must not apply to lodging a request for access.

29.30 This provision aims to ensure that the access and correction rights provided for in NPP 6 are not undermined by organisations charging fees that make it prohibitively expensive to enjoy those rights. Similarly, a number of the NPPs require an organisation to take 'reasonable steps' to protect individuals' privacy rights.[41] Such a requirement is designed to promote substantive, rather than merely formal, enjoyment of privacy rights.

Submissions and consultations

29.31 Some stakeholders supported the addition of a no disadvantage principle.[42] The Australian Privacy Foundation submitted that this would 'ensure that data users do not use pricing or other sanctions to deter individuals from exercising their privacy rights'.[43] It was submitted that such a principle would offer additional protections to individuals beyond the pricing limitations included in some privacy principles.[44]

29.32 It was recognised, however, that a no disadvantage principle could hamper technological developments that involve data collection and it may not readily 'accommodate traditional privacy rights'. Consequently, 'such a principle would need to [be] designed carefully to avoid becoming a constraint on innovation'.[45]

ALRC's view

29.33 While supporting the general objective of a 'no disadvantage' principle—that individuals should not be unfairly disadvantaged by seeking to assert their privacy rights—the ALRC does not believe that a separate no disadvantage principle in the UPPs is the most appropriate vehicle to achieve this. Rather, the ALRC's view is that this requirement should be incorporated, where appropriate, into some of the other privacy principles and in guidance from the OPC.

---

45 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007.

29.34 Some privacy principles already include a 'no disadvantage' element. As noted above, NPP 6.4 prohibits an organisation from charging excessive fees in respect of access to, and correction of, personal information held by the organisation. The ALRC proposes to retain this provision in the proposed UPPs because it is a practical way in which individuals can be protected from being disadvantaged for asserting their rights under the *Privacy Act*.[46]

29.35 One important way in which the 'no disadvantage' objective can be incorporated into the operation of the privacy principles more generally is through careful interpretation of the requirement on agencies and organisations to take 'reasonable steps' to protect individuals' information privacy in particular respects. For example, the ALRC proposes that agencies and organisations should be required to take reasonable steps to destroy or render non-identifiable personal information that they no longer need.[47] The ALRC believes that this requirement should be interpreted to mean that costs associated with destroying or rendering the information non-identifiable should be treated as normal operating costs of the agency or organisation in question, and not a cost imposed on the individual involved.

29.36 The ALRC also proposes that if an individual requests access to an agency's or organisation's Privacy Policy, the proposed 'Openness' principle provides that the agency or organisation must take reasonable steps to make this available without charging the individual for it.[48]

29.37 Similarly, the proposed UPPs state that, wherever it is lawful and practicable, agencies and organisations must give individuals the clear option of transacting anonymously or pseudonymously.[49] The fact that this obligation only applies when *practicable* is a significant qualification. The ALRC believes, however, that this requirement cannot logically be interpreted as allowing agencies and organisations to put unreasonable impediments or disincentives in the way of individuals exercising this option. For example, it would not be reasonable for individuals to be charged a punitive fee for choosing to remain anonymous in their transactions with an agency or organisation.[50]

---

46 See Ch 26.

47 See Ch 25. Note also that a similar obligation already applies to organisations: *Privacy Act 1988* (Cth) sch 3, NPP 4.2.

48 See Ch 21.

49 See Ch 17.

50 An example of this arises, in the specific context of telecommunications, in relation to the practice of charging individuals who wish to obtain a 'silent' telephone number. See Proposal 63–11.

Introduction

30.1 The application of the *Privacy Act 1988* (Cth) is limited by a number of exemptions and exceptions. This Discussion Paper distinguishes between exemptions, partial exemptions and exceptions to the requirements set out in the *Privacy Act*.[1] An *exemption* applies where a specified entity or a class of entity is not required to comply with the privacy principles that would otherwise be applicable to it. For example, a

1 Compare B Stewart, 'The New Privacy Laws: Exemptions and Exceptions to Privacy' (Paper presented at The New Privacy Laws: A Symposium on Preparing Privacy Laws for the 21st Century, Sydney, 19 February 1997).

'small business operator' is exempt from the requirement to comply with the rules in the *Privacy Act*. A *partial exemption* applies where a specified entity or a class of entity is required to comply with either: (1) only some, but not all, of the privacy principles; or (2) some or all of the privacy principles, but only in relation to certain of its activities. For example, the federal courts are *partially exempt* as they are only required to comply with the *Privacy Act* in relation to their administrative activities. An *exception* applies where a requirement in the privacy principles does not apply to any entity in a specified situation or in respect of certain conduct. For example, there is an exception to the prohibition against an organisation using or disclosing personal information for a secondary purpose where the individual in question has given his or her consent.[2]

30.2 This chapter provides an overview of the exemption provisions under the *Privacy Act*, outlines the exemptions under international instruments and considers issues concerning the existing exemptions from the Act. The remaining chapters in Part E examine specific exemptions from the *Privacy Act* in the public and private sectors, and considers whether new exemptions should be added to the Act. Exceptions to the privacy principles are discussed in Part D.

Exemptions under the *Privacy Act*

30.3 There are a number of ways in which entities can be exempt, either completely or partially, from the *Privacy Act*. Entities may be exempt from the Information Privacy Principles (IPPs), the National Privacy Principles (NPPs) (or an approved privacy code),[3] the tax file number provisions or the credit reporting provisions of the Act.

30.4 Broadly speaking, the IPPs apply to acts and practices of Australian Government agencies and the NPPs apply to acts and practices of private sector organisations.[4] Entities that fall within the definition of an 'agency' therefore will be bound by the IPPs, and those that fall within the definition of an 'organisation' will be bound by the NPPs.

30.5 Where entities fall within the definition of an 'agency' or an 'organisation', their acts and practices may still be exempt from the *Privacy Act* if those acts or practices are excluded from the definition of an 'act or practice' to which the Act applies. Under s 7 of the Act, a reference to an 'act or practice' is generally a reference to an act done, or a practice engaged in, by: an agency, a file number recipient, a credit reporting agency or a credit provider. The section, however, excludes a wide range of activities of certain specified entities. For example, while federal courts fall within the definition

---

2 *Privacy Act 1988* (Cth) sch 3, NPP 2.1(b).

3 Where the Privacy Commissioner has approved a privacy code for a particular organisation or industry, it replaces the NPPs for those organisations that are bound by the code. To the extent that an organisation is not bound by such a code, it is bound by the NPPs: Ibid s 16A(2).

4 Ibid ss 16, 16A.

of an 'agency' under the Act, their acts and practices are only covered by the IPPs if they relate to administrative matters.[5] Any activity of the courts that relates to non-administrative matters falls outside the definition of 'act or practice' and, therefore, is exempt from the *Privacy Act*.

30.6 Part IIIA of the Act regulates the handling of credit information about individuals by credit reporting agencies and credit providers. Individuals and entities are exempt from the credit reporting provisions where they fall outside the definition of a 'credit reporting agency' or a 'credit provider', or where their acts and practices are excluded by s 7 of the Act. Credit reporting is discussed in Part G.

Public sector exemptions

30.7 The *Privacy Act* prohibits an agency from engaging in an act or practice that breaches the IPPs.[6] Agencies are not subject to the private sector provisions of the Act unless they have been prescribed by regulation.[7] An agency may also be subject to the tax file number provisions and the credit reporting provisions of the Act in some circumstances.[8]

30.8 Agencies include: Australian Government ministers and departments; bodies and tribunals established under Commonwealth and ACT laws; Australian Government statutory office holders and administrative appointees; federal courts; and the Australian Federal Police. The definition of agency excludes incorporated companies, societies and associations even if they are established under Commonwealth law.[9]

30.9 The definition of agency excludes an organisation within the meaning of the *Conciliation and Arbitration Act 1904* (Cth) (now repealed)[10] and a branch of such an organisation.[11] This refers to federally registrable employer and employee associations and federally registrable enterprise associations.[12] In Chapter 3, the ALRC proposes that the *Privacy Act* be amended to achieve greater logical consistency, simplicity and clarity.[13] Since the *Conciliation and Arbitration Act* has been repealed, this provision should be updated as part of the proposed amendment of the Act.

30.10 Any act or practice engaged in by, or information disclosed to, a person in the course of employment by or in the service of an agency is treated as having been done

12 *Workplace Relations Act 1996* (Cth) sch 2, cl 18.
13 Proposal 3–2.

by, engaged in by or disclosed to the agency.[14] A person is not, however, to be regarded as an agency merely because he or she is the holder of, or performs the duties of: a judge or magistrate; a member of a prescribed Commonwealth tribunal; a prescribed office under the *Privacy Act* or the *Freedom of Information Act 1982* (Cth) (FOI Act);[15] or an office established under a Commonwealth or ACT law for the purposes of an agency.[16]

30.11 Chapters 31–34 discuss agencies that are completely or partially exempt from the *Privacy Act*—namely, defence and intelligence agencies, federal courts and tribunals, agencies listed under the FOI Act— and other public sector exemptions.

Private sector exemptions

30.12 The NPPs bind entities that fall within the definition of an 'organisation'. An 'organisation' is defined as an individual, a body corporate,[17] a partnership,[18] any other unincorporated association[19] or a trust[20] that is not exempt from the operation of the *Privacy Act*.[21] Certain entities are specifically excluded from the definition of 'organisation' and are therefore exempt from the Act. These exempt entities include small business operators, registered political parties, agencies, state and territory authorities, and prescribed state and territory instrumentalities.[22]

30.13 Certain acts and practices of organisations are also exempt from the operation of the *Privacy Act*. There are four ways in which an act or practice may be exempted from the Act. An act or practice may be excluded from:

---

14 *Privacy Act 1988* (Cth) s 8.

15 No such offices have been prescribed under either Act.

16 *Privacy Act 1988* (Cth) s 6(5).

17 A body corporate is any entity that has a legal personality under Australian law or the law of another country: Office of the Federal Privacy Commissioner, *Coverage of and Exemptions from the Private Sector Provisions (Updated with Minor Amendments 6/9/02)*, Information Sheet 12 (2001), 4.

18 Any act or practice engaged in by one of the partners in a partnership is deemed to be an act or practice of the organisation. Obligations under the *Privacy Act 1988* (Cth) are imposed on each partner but may be discharged by any of the partners: Office of the Federal Privacy Commissioner, *Coverage of and Exemptions from the Private Sector Provisions (Updated with Minor Amendments 6/9/02)*, Information Sheet 12 (2001), 5.

19 An unincorporated association includes a cooperative. The *Privacy Act 1988* (Cth) also covers acts or practices engaged in by an individual in his or her capacity as a member of the cooperative's committee of management. The *Privacy Act* imposes obligations on each member of the committee of management but may be discharged by any of the members of that committee: Office of the Federal Privacy Commissioner, *Coverage of and Exemptions from the Private Sector Provisions (Updated with Minor Amendments 6/9/02)*, Information Sheet 12 (2001), 5.

20 An act or practice engaged in by a trustee is taken to have been engaged in by the trust. Obligations under the *Privacy Act 1988* (Cth) are imposed on each trustee but may be discharged by any of the trustees: Office of the Federal Privacy Commissioner, *Coverage of and Exemptions from the Private Sector Provisions (Updated with Minor Amendments 6/9/02)*, Information Sheet 12 (2001), 5.

21 *Privacy Act 1988* (Cth) s 6C.

22 Ibid s 6C.

- what constitutes a breach of the NPPs or an approved privacy code;
- what constitutes an interference with the privacy of an individual;
- the definition of an act or practice; or
- the operation of the Act.

30.14 Chapters 35–39 examine current exemptions from the *Privacy Act* that apply to organisations, including the small business exemption, the employee records exemption, the media exemption, the political exemption and other private sector exemptions. Chapter 40 considers whether new exemptions should be introduced.

Exemptions under international instruments

OECD Guidelines

30.15 The *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* issued by the Organisation for Economic Co-operation and Development (OECD Guidelines) do not refer to exemptions.[23] They do, however, provide expressly for the possibility of excluding personal data from the application of the Guidelines that 'obviously do not contain any risk to privacy and individual liberties'.[24]

30.16 In addition, the Guidelines recognise that there may be exceptions to the privacy principles. OECD Guideline 4 provides two general criteria to guide national policies in limiting the application of the Guidelines: exceptions should be as few as possible, and they should be made known to the public.[25] Acceptable bases for exceptions set out in the OECD Guidelines include national sovereignty, national security, public policy and the financial interests of the state.[26] Importantly, the OECD Guidelines state that exceptions should be limited to those that are necessary in a democratic society.[27]

30.17 The Memorandum to the OECD Guidelines acknowledges that opinions may vary on the question of exceptions. It recognises that member countries may apply the Guidelines differently to particular kinds of personal data or in particular contexts, for example, credit reporting, criminal investigation and banking.[28]

---

23 Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980).
24 Ibid, Guideline 3(b).
25 Ibid, Guideline 4.
26 Ibid; European Parliament, *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data*, Directive 95/46/EC (1995), Guideline 4; Memorandum, [46].
27 Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980), Memorandum, [47].
28 Ibid, Memorandum, [19(g)], [47].

30.18 The OECD Guidelines also recognise that the application of the Guidelines is subject to various constitutional limitations in federal countries and therefore there are no requirements to apply the Guidelines beyond the limits of constitutional competence.[29]

EU Directive

30.19 The *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (EU Directive) issued by the European Parliament contains a number of specific exemptions from, and exceptions to, the principles.[30] Exemptions under the EU Directive include the processing of data by: a natural person in the course of a purely personal or household activity;[31] and political parties in compiling data on individuals' political opinions in the course of electoral activities.[32]

30.20 Examples of exceptions to the privacy principles in the EU Directive include processing of data: necessary for the prevention, investigation, detection and prosecution of criminal offences;[33] concerning public security, defence, state security (including the economic well-being of the state when the processing operation relates to state security matters) and the activities of the state in areas of criminal law;[34] and for journalistic purposes or the purpose of artistic or literary expression if they are necessary to reconcile the right to privacy with the rules governing freedom of expression.[35]

APEC Privacy Framework

30.21 Under the Asia-Pacific Economic Cooperation (APEC) Privacy Framework, exceptions to privacy principles are to be 'limited and proportional to meeting the objectives to which the exceptions relate', and they are to be made known to the public or in accordance with law.[36]

30.22 The APEC Privacy Framework defines 'personal information controller' to exclude an individual who deals with personal information in connection with his or her personal, family or household affairs.[37] Like the EU Directive, the APEC Privacy Framework is not intended to impede governmental activities authorised by law to protect national security, public safety, national sovereignty and other public policy

interests.[38] Unlike the EU Directive, the APEC Privacy Framework does not contain exceptions for journalistic, literary or artistic expression, or an exemption for political parties in respect of their political or electoral activities.

Should there be any exemptions from the *Privacy Act*?

30.23 Before examining whether the existing exemptions from the *Privacy Act* are appropriate, the threshold question is whether the Act should contain any exemptions at all. Roger Clarke has suggested that there should be no exemptions from the privacy principles. In his view, privacy principles should be universal statements that convey the idea that the principles are paramount. The manner in which they are formulated and applied in practice should involve careful balancing between privacy and other interests so that the principles are not infringed. He argues that powerful interests are protected through large numbers of vague and extensible exemptions, and that privacy protection is entirely lost once a class of organisation or activity is exempted from the privacy principles.[39]

30.24 Blair Stewart, of the Office of the Privacy Commissioner, New Zealand, has taken a different view.[40] He conceded that well-drafted exceptions to specific privacy principles are preferable to excluding an entire class of entities or information. Stewart argued, however, that some types of entities and information should be excluded from the coverage of privacy principles so that the principles remain 'workable, general and not overly complex'—for example, it might be better not to apply some principles to intelligence agencies than to have exceptions for national security throughout the principles.[41]

41 Ibid, 10.

30.25 Privacy legislation in some overseas jurisdictions contains full or partial exemptions relating to, for example, personal information handled by: individuals for the purposes of their personal, family or household affairs;[42] intelligence agencies;[43] and news media in relation to journalism or news activities.[44]

Submissions and consultations

30.26 In the Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether it is appropriate for certain entities to be exempt, either completely or partially, from the operation of the *Privacy Act*.[45] A number of stakeholders submitted that there should be few, if any, blanket exemptions from the *Privacy Act*.[46]

30.27 The Office of the Victoria Privacy Commissioner stated that:

> In principle, organisations should not be completely exempt from having to comply with privacy obligations. Instead, policy makers should identify what practices (eg judicial activities) or principles should be adjusted or exempted/excepted. Some principles should apply across all organisations, such as the obligations to take reasonable steps to secure data and make sure it is accurate, complete and up to date.
>
> The privacy legislation should only be subject to such reasonable limits, to take up the wording in the Victorian Charter of Human Rights and Responsibilities Act 2006, as can be demonstrably justified in a free and democratic society.[47]

30.28 It was suggested in one submission that 'the exemptions and exceptions lead to an inequitable situation where privacy rights afforded depend on who is being dealt with'.[48] Another view was that 'if government agencies are allowed exemptions the Privacy Act as a whole is weakened'.[49]

30.29 It was also submitted that the only exemptions that are justifiable are exemptions for individuals handling personal information solely for non-business purposes, or entities that are subject to equivalent privacy laws—such as state and

territory authorities.[50] Several stakeholders expressed support for exempting defence and intelligence agencies from the *Privacy Act*.[51]

30.30 In contrast, a few stakeholders specifically stated that it is appropriate to have exemptions from the *Privacy Act*.[52] While both the Australian Broadcasting Corporation (ABC) and SBS submitted that there should be few blanket exemptions from the *Privacy Act*, they suggested that the EU Directive and other international instruments illustrate a number of clear policy reasons why certain exemptions should be maintained. The ABC submitted that many, if not all, of the exemptions under the Act are based on similar policy concerns to those reflected in international instruments.[53] SBS stated that the justification for exemptions that are common to all international instruments is the need to balance privacy rights against a public interest purpose, such as matters essential to law and governance and freedom of expression.[54]

30.31 The ABC and SBS also submitted that, in the interest of certainty, exemptions are preferable to exceptions to specific privacy principles.[55] The ABC stated that:

> It should be recognised that while some blanket exemptions for whole classes of agencies and organisations may be described as undesirable and a blunt instrument for dealing with the potential for overreach in the operation of privacy principles … other more targeted exemptions, such as exemptions for specified acts or operations, can reflect a careful balancing of privacy and other interests.[56]

30.32 SBS suggested that a universal statement of principles would be unworkable, as it would result in uncertainty and extensive litigation before the application of the principles could be understood.[57]

30.33 The Real Estate Institute of Australia took the view that:

> To subject all entities to overly rigorous privacy protection without regard for relative risk or particular circumstance would simply result in an unnecessary and disproportionate compliance burden which would be passed on to consumers in terms of increased prices for affected goods and services. Further, it is likely that there would be some instances where the imposition of privacy requirements may impinge

> on the ability of certain persons, organizations or agencies to carry out activities which are in the national interest.[58]

30.34 The Fundraising Institute–Australia Ltd expressed a contrary view, submitting that the exemption for commercial entities, such as small businesses, undermines public confidence that the *Privacy Act* will adequately protect personal information.[59]

ALRC's view

30.35 Privacy interests in some cases may be outweighed by other public interests, such as national security, the administration of justice and the free flow of information to the public by the media. The purpose of having exemption provisions is to balance the need to protect privacy against these other interests. The need for balance between these different interests is reflected in international instruments.

30.36 The ALRC acknowledges that a blanket exemption from privacy legislation can be a blunt instrument, in that it exempts all activities of a specified entity or class of entities, regardless of whether the particular activity relates to the conflicting public interest. There are some entities, such as defence and intelligence agencies, however, whose principal function is in direct conflict with a number of the privacy principles. Other entities, such as royal commissions, inquire into matters of public interest and, therefore, should have their own information-handling standards tailored to their special role. Courts have an adjudicative function that also requires special rules regarding information handling, in order to balance privacy interests with the principle of open justice. In all three examples, exemptions from the *Privacy Act* are appropriate provided that there are other information-handling standards, such as ministerial privacy guidelines, that apply to the exempted entity.

30.37 In addition, entities that are subject to obligations that are, overall, at least the equivalent of all the relevant obligations in the *Privacy Act*, should be exempt from the Act—as the need to comply with two equivalent regimes would unnecessarily add to the compliance burden for such entities. Accordingly, in Chapter 34, the ALRC proposes that, before states and territories enact legislation applying the proposed Unified Privacy Principles and the proposed *Privacy (Health Information) Regulations*, the Act be amended to apply to state and territory incorporated bodies—except where they are covered by obligations under a state or territory law that are, overall, at least the equivalent of all the relevant obligations in the *Privacy Act*.[60]

60 Proposal 34–3.

The number and scope of exemptions

The number of exemptions

30.38 The *Privacy Act* has been criticised for the large number of exemptions it contains.[61] In the public sector, there are three classes of agencies—federal courts, ministers and royal commissions—and more than 20 specific, named agencies that are partially or completely exempt from the Act. In the private sector, in addition to the four exempt classes of entities—namely, small business operators, registered political parties, state and territory authorities, and prescribed state and territory instrumentalities—there are eight categories of organisations that are exempt from the Act.[62]

30.39 The OECD Guidelines state that there should be 'as few as possible' exceptions to the privacy principles.[63] Similarly, under the APEC Privacy Framework, exceptions to the principles are to be 'limited and proportional to meeting the objectives to which the exceptions relate'.[64]

30.40 One commentator has expressed the view that keeping exemptions to a minimum, and limiting them to particular provisions of the law whenever possible, are important to ensure that privacy protection applies as widely as possible throughout the community.[65] Another commentator argues that the effect of the large number of private sector exemptions in the *Privacy Act* is to legitimise the data processing practices of certain organisations, thus failing adequately to protect the privacy of individuals.[66]

30.41 Privacy legislation in some jurisdictions contains significantly fewer exemptions than the *Privacy Act*. For example, there are four exemptions in the United Kingdom,[67]

66 H Lloyd, 'Are Privacy Laws More Concerned with Legitimising the Data Processing Practices of Organisations than with Safeguarding the Privacy of Individuals?' (2002) 9 *Privacy Law & Policy Reporter* 81.

67 *Data Protection Act 1998* (UK) ss 30(2) (personal data in respect of which the data controller is a proprietor of, or a teacher at, a school, or education authority in Scotland), 30(3) (personal data processed by government departments, local authorities, voluntary organisations or other bodies in the context of carrying out social work), 31 (personal data processed for the purposes of discharging functions relating

15 in New Zealand[68] and three in Hong Kong.[69] Although there are some exemptions common to both Australia and comparable jurisdictions—such as exemptions relating to personal use, national security, defence and journalism—a number of exemptions from the *Privacy Act* are not provided for in other jurisdictions. For example, unlike the *Privacy Act*, legislation in the United Kingdom, Canada and Hong Kong does not contain exemptions for specified government bodies such as defence agencies and Auditors-General.[70] In the United Kingdom, Canada and New Zealand, there is no exemption that applies to small businesses, employee records, registered political parties, or political acts and practices.[71]

The scope of the exemptions

30.42 In relation to the public sector, the acts and practices of some agencies—namely, the Australian Crime Commission, royal commissions and the intelligence agencies—are completely exempt from the *Privacy Act*.[72] The intelligence agencies are defined as the Australian Secret Intelligence Service (ASIS), the Australian Security Intelligence Organisation (ASIO) and the Office of National Assessments (ONA).[73]

30.43 In relation to the private sector, certain entities are specifically excluded from the definition of 'organisation' and therefore are exempt from compliance with the NPPs, unless they fall within one of the conditions under which the exemption does not apply. These entities include small business operators, registered political parties, state

to regulatory activity), 36 (personal data processed by individuals for domestic purposes). Note that although Schedule 7 to the Act is entitled 'Miscellaneous Exemptions', the provisions in that schedule are exceptions to specific data protection principles, rather than exemptions.

68 *Privacy Act 1993* (NZ) ss 2(1) (the term 'agency' does not include: the Sovereign; the Governor-General or the Administrator of the Government; the House of Representatives; a member of Parliament in his or her official capacity; the Parliamentary Service Commission; the Parliamentary Service (with certain exceptions); in relation to its judicial functions, a court; in relation to its judicial functions, a tribunal; an Ombudsman; a royal commission; a commission of inquiry appointed under the *Commissions of Inquiry Act 1908* (NZ); a commission, board, court or committee of inquiry appointed by statute to inquire into a specified matter; or in relation to its news activities, any news medium), 56 (personal information held by individuals for the purposes of their personal, family, or household affairs), 57 (information held by intelligence organisations).

69 *Personal Data (Privacy) Ordinance* (Hong Kong) ss 52 (personal data held by individuals for the purposes of their personal, family or household affairs), 57 (personal data held by or on behalf of the government for the purposes of safeguarding security, defence or international relations in respect of Hong Kong), 61 (personal data held by a data user whose business consists of a news activity and solely for the purpose of that activity). Note that although Part VIII of the Ordnance is entitled 'Exemptions', some of the provisions in that part are exceptions to the data protection principles, rather than exemptions: see, eg, *Personal Data (Privacy) Ordinance* (Hong Kong) ss 53 (employment—staff planning), 60 (legal professional privilege), 62 (statistics and research).

70 *Data Protection Act 1998* (UK); *Privacy Act* RS 1985, c P-21 (Canada); *Personal Information Protection and Electronic Documents Act 2000* SC 2000, c 5 (Canada); *Personal Data (Privacy) Ordinance* (Hong Kong).

71 *Data Protection Act 1998* (UK); *Personal Information Protection and Electronic Documents Act 2000* SC 2000, c 5 (Canada); *Privacy Act 1993* (NZ).

72 *Privacy Act 1988* (Cth) s 7(1)(a)(i)(B), (iv), (v), (2)(a), (c). The acts and practices of the Integrity Commissioner will also be exempt from the *Privacy Act* upon commencement of the *Law Enforcement Integrity Commissioner (Consequential Amendments) Act 2006* (Cth) sch 1, item 50.

73 *Privacy Act 1988* (Cth) s 6(1).

and territory authorities, and prescribed state and territory instrumentalities.[74] As a result, a large number of entities are exempt from the *Privacy Act*. The Australian Government Department of Employment, Workplace Relations and Small Business has estimated that approximately 94% of businesses may be exempt from the private sector provisions of the Act.[75]

30.44 Professor Graham Greenleaf and Nigel Waters have suggested that blanket exemptions for whole classes of agencies and organisations are undesirable.[76] Roger Clarke has argued that any form of exemption is a very blunt instrument because 'it creates a void within which uncontrolled abuses can occur'.[77]

30.45 It has also been suggested that some of the exemption provisions are expressed too broadly.[78] For example, acts and practices of a media organisation done 'in the course of journalism' are exempt from the Act.[79] A 'media organisation' is an organisation that collects, prepares or disseminates materials having the character of news, current affairs, information or documentaries to the public; or commentary or opinion on, or analysis of, these materials.[80] The terms 'in the course of journalism', 'news', 'current affairs' and 'documentary' are not defined. One commentator has argued that the lack of definitions and the inclusion of 'information' separately from news, current affairs and documentaries allow any organisation aiming to publish material to take advantage of the exemption.[81]

Submissions and consultations

The number of exemptions

30.46 Several stakeholders expressed concern that there are too many exemptions from the *Privacy Act*.[82] The Office of the Privacy Commissioner (OPC) submitted that exemptions under the *Privacy Act* should be minimised in order to achieve uniformity and consistency of application of privacy legislation, and that a clear public interest for the exemptions should exist to support their creation or continuation. The OPC suggested that 'existing exemptions contained in the *Privacy Act* have developed over time and in some instances may require review to assess their continuing suitability'.[83]

30.47 The Centre for Law and Genetics also considered the substantial number of exemptions as a matter of concern.

> This growth of exemptions, if unchecked, has the potential to undermine the operation of the principles contained in the legislation and compromise the privacy rights of individuals.[84]

30.48 Similarly, the Legal Aid Commission of New South Wales submitted that 'the Act would be more effective if there were fewer exemptions, but a more flexible approach to applying the principles to different circumstances'.[85]

The scope of the exemptions

30.49 A number of stakeholders suggested that exemptions should be justified and limited to the extent possible[86] and emphasised the need for a clear rationale for each exemption.[87]

30.50 The Social Security Appeals Tribunal stated that 'agencies should not be excluded from the operation of the *Privacy Act* by genus'.[88] By contrast, the OPC emphasised the need to ensure the consistent coverage of entities that have a similar nature and function:

> A review of exemptions to the Privacy Act should also address irregularity of exemption coverage; that is where a specific entity is exempted from coverage of the Privacy Act while other entities of a similar nature and function are not. An example of this might be the coverage of tribunals by the Privacy Act, some of which are

> covered by the Act and others of which are partially exempted. The Office believes consistent application of exemptions will foster greater clarity as to the intentions and coverage of exemptions.[89]

30.51 Some stakeholders submitted that it is preferable for exemptions to be targeted at either: specified acts and practices;[90] particular types of information; or specific information handling purposes.[91] One submission suggested that entities should apply for exemption from the *Privacy Act* on a case-by-case basis, and that any exemption should be limited in time and circumstances.[92] Both the OPC and the Commonwealth Ombudsman considered that exempt entities should be encouraged to adopt information-handling standards that are similar to those contained in the *Privacy Act*.[93]

30.52 The Australian Federal Police and the Insurance Council of Australia submitted that current exemptions are appropriate.[94]

ALRC's view

30.53 There are considerably more exemptions from the *Privacy Act* than from privacy legislation in other comparable jurisdictions. More importantly, some of the exemptions either do not appear to be justified or are too broad. For example, the justification for the exemption that applies to some of the agencies listed under the FOI Act is unclear.[95] Similarly, there does not appear to be any sound policy basis for leaving unprotected the personal information contained in employee records.[96]

30.54 Even where an exemption is justified, sometimes its scope is too wide. For instance, media organisations are exempt in relation to activities done 'in the course of journalism', provided that they are publicly committed to certain privacy standards. The term 'journalism' and other key terms, however, are not defined. In addition, 'media organisation' is defined to mean an organisation whose activities consist of collecting, preparing or disseminating news, current affairs, information or documentary (and related commentary, opinion and analysis) to the public. Arguably, the use of the word 'information' separately from 'news', 'current affairs' and 'documentary' leaves the exemption too wide. The lack of criteria for media privacy standards also means that public commitment to any privacy statement—even one that

95 See Ch 33.
96 See Ch 36.

has little substance—may allow an individual or organisation to take advantage of the exemption.[97]

30.55 Consistent with international standards, the ALRC considers that exemptions should be limited to the extent possible and justified on sound policy grounds. The ALRC agrees with the OPC and the Commonwealth Ombudsman that, even when partial or full exemptions from the *Privacy Act* are justified, the exempt entities should be encouraged to adopt information-handling practices that are, to the extent possible, consistent with the privacy principles. In the remaining chapters in Part E, the ALRC makes a number of proposals for reform that are intended to give effect to this policy position.

Complexity of the exemption provisions

30.56 Some commentators have argued that the exemption provisions in the *Privacy Act* are overly complex.[98] Such complexity makes it difficult to determine the extent to which individuals and entities are exempt from the Act.

30.57 Certain agencies are, in effect, completely exempt from the operation of the *Privacy Act*, but this is not readily apparent from the structure of the provisions. For example, while intelligence agencies fall within the definition of an 'agency', acts done, or practices engaged in, by them are not included in the acts or practices to which the Act generally applies.[99] In addition, s 7(2) of the *Privacy Act* provides that provisions in the Act *except* in respect of the IPPs, the NPPs, an approved privacy code and some of the Privacy Commissioner's functions *do not* apply to these agencies. Arguably, this exemption could be simplified by stating that intelligence agencies are completely exempt from the operation of the Act.

30.58 The acts and practices of a number of agencies and organisations initially fall outside the acts or practices to which the Act applies, but the extent of the exemption is then modified either within the same section or through another section. Further, the scope of some exemptions must be ascertained by reference to other legislation.

30.59 For example, the agencies listed under Schedule 2 Part II Division 1 of the FOI Act fall within the definition of an 'agency'. Section 7(1)(a)(i)(C) of the Act, however, appears to exempt their acts and practices completely. Section 7(1)(c) then provides that these acts and practices fall within the acts or practices to which the Act applies *except* in relation to records for which the agencies are exempt from the operation of the FOI Act. Further, s 7(2) of the *Privacy Act* provides that the provisions of the

99 *Privacy Act 1988* (Cth) ss 6(1), 7(1)(a)(i)(B).

Privacy Act, except in respect of the IPPs, the NPPs, an approved privacy code and some of the Privacy Commissioner's functions, apply to these agencies. Finally, s 7A provides that, notwithstanding s 7(1)(a)(i), 7(1)(c) and 7(2), acts and practices done in relation to documents in relation to these agencies' commercial activities, or the commercial activities of another entity, are treated as acts and practices of an organisation.

30.60 The ambiguity of some of the exemption provisions has also given rise to criticism.[100] For example, small businesses are defined as businesses with an annual turnover of $3 million or less. It has been argued, however, that it is difficult for individuals to know the turnover of a business and, therefore, whether the business is exempt.[101]

Submissions and consultations

30.61 A number of stakeholders commented on the complexity of the exemption provisions of the *Privacy Act*,[102] and the need for a clear statement of the exemptions and their scope.[103] The Legal Aid Commission of New South Wales submitted that that the complexity of the existing exemptions

> introduce[s] a degree of uncertainty for people seeking remedial action under the Act. This can make it more difficult for legal aid organizations to provide advice on privacy remedies. This is contrary to the purpose of the legislation to provide clearly understandable standards which both sides to a transaction can use to negotiate fair use of personal information.[104]

30.62 Stakeholders expressed particular concern about the complexity of the exemptions provided for in s 7 of the *Privacy Act*.[105] For example, the OPC suggested that s 7 be redrafted because 'it is a very complex and difficult section to understand and apply', which makes it difficult for many entities to understand which aspects of

105 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; Legal Aid Commission of New South Wales, *Submission PR 107,* 15 January 2007.

their activities are covered by the Act.[106] In contrast, while the ABC acknowledged that the 'carving out and partial reapplication' under s 7 is relatively complex, it suggested that the section has the advantage of indicating the relationship between these exemptions and those applying under the FOI Act.[107]

30.63 ASIO supported the simplification of the exemption provisions that apply to ASIO and other intelligence agencies, provided that it does not alter the scope of the exemption.[108]

ALRC's view

30.64 The ALRC agrees that the exemption provisions are overly complex. In particular, the exemption and the circumstances in which it does not apply under s 7 of the Act are unnecessarily complicated. Simplifying the exemption provisions would assist individuals and entities in understanding their rights and obligations under the *Privacy Act*.

30.65 In Chapter 3, the ALRC proposes that the Australian Government redraft the *Privacy Act* to achieve greater consistency, simplicity and clarity. This would include the redrafting of the exemption provisions to enhance their accessibility. Specific proposals for reform are also contained in the following chapters of Part E.

Location of the exemption provisions

30.66 The exemptions from the *Privacy Act* are contained in a number of provisions throughout the Act, including ss 6C–7C, 12A, 12B, 13A–13D and 16E. It can be argued that setting out the exemptions together in one part of the Act would make the exemption provisions more accessible. For example, exemptions under the FOI Act are set out in a schedule to that Act. This has the advantage of clarity as well as reinforcing the message that exemptions are not the primary focus of the legislation.

30.67 One stakeholder submitted that exceptions to the principles are preferable to exemptions, because the variety of ways in which an entity can be exempt from the *Privacy Act* makes it difficult for individuals to determine if an entity has breached its privacy obligations.[109]

30.68 Some overseas jurisdictions—such as the United Kingdom, New Zealand and Hong Kong—set out most of their exemption provisions in a specific part of the

109 Australian Privacy Foundation, *Consultation PC 4*, Sydney, 27 February 2006.

legislation.[110] Other jurisdictions, like the United States and Canada, group exemption provisions together in one section or consecutive sections.[111]

Submissions and consultations

30.69 In IP 31, the ALRC asked where exemption provisions should be located.[112] Of the few stakeholders who commented on this issue, most supported simplifying the exemptions by setting them out in a schedule to the Act.[113]

30.70 The OPC suggested a two-pronged approach. Where exemptions exist for certain categories of entities, the exemptions should be grouped together in one part of the Act. Where exemptions exist for specific, named entities, they should be listed in a schedule to the *Privacy Act*. This listing should distinguish between entities with a full exemption and those with partial exemptions.[114]

30.71 Another suggestion is for exempt entities to be listed in subordinate legislation, rather than in the *Privacy Act* itself. The Real Estate Institute of Australia submitted that both exempt entities and those entities specifically made subject to the *Privacy Act* should be listed in subordinate legislation on the basis that 'regular legislative reviews and changing community concerns are likely to result in ongoing changes to the status of [these] entities'. It stated that this would 'aid the modification of the Act over time, in recognition of the need for the *Privacy Act* to stay abreast of technological, social and political developments'.[115]

30.72 One submission suggested that exemptions should, where possible, be located within the privacy principles to which they relate.

> This approach (i) will help avoid a plain reading of a principle creating misleading expectations of coverage, and (ii) help avoid organisations being able to claim that they 'comply' with a principle, when in fact an exemption located elsewhere means the exact opposite outcome.[116]

116 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007.

30.73 Telstra and the ABC submitted that the exemptions should remain where they are. While acknowledging that locating the exemptions in one part of the Act would make them more accessible, the ABC observed that stakeholders are now familiar with the layout of the Act.[117] Telstra stated that the cost of complying with amendments to the *Privacy Act* would far outweigh any benefit that would result from a more consistent layout of the Act.[118]

ALRC's view

30.74 Submissions indicated support for grouping the exemption provisions together, either in one part of the *Privacy Act* or in a schedule to the Act. The ALRC agrees with the two-pronged approach suggested by the OPC. Where exemptions for certain categories of entities or types of acts and practices exist, they should be grouped together in a separate part of the Act. Where exemptions for specific, named entities exist, they should be set out in a schedule to the Act. The schedule should set out clearly the scope of any such exemption. This approach would enhance the accessibility and clarity of the exemption provisions. The alternative approach of locating partial or full exemptions within specific privacy principles has the potential to render the principles overly complex and unwieldy.

30.75 Privacy legislation in some overseas jurisdictions groups exemptions under a separate part of the legislation—for example, Part IV of the *Data Protection Act 1998* (UK) and Part VIII of the *Data Protection (Privacy) Ordinance* (Hong Kong). The categories of entities or types of acts and practices that should be grouped together in a part of the *Privacy Act* include: federal courts; the exemption relating to personal use; the media exemption; and exemptions applying to related bodies corporate, change in partnership, and an act or practice that is required by foreign law.

30.76 In the interest of clarity, specific, named entities that are exempt from the *Privacy Act*—such as ASIO, the Australian Crime Commission and the Integrity Commissioner—should be set out in a schedule to the Act. This is consistent with the approach in the FOI Act. In relation to specific agencies that are exempt from both the *Privacy Act* and the FOI Act, they should be specified in the schedule to the *Privacy Act* instead of by reference to their exempt status under the FOI Act. This would avoid the need to refer to other legislation when determining the exempt status of particular agencies under the *Privacy Act*.

Proposal 30–1 The *Privacy Act* should be amended to group together in a separate part of the Act exemptions for certain categories of entities or types of acts and practices.

117 Australian Broadcasting Corporation, *Submission PR 94,* 15 January 2007.
118 Telstra, *Submission PR 185,* 9 February 2007.

Proposal 30–2 The *Privacy Act* should be amended to set out in a schedule to the Act exemptions for specific, named entities. The schedule should distinguish between entities that are completely exempt and those that are partially exempt from the *Privacy Act*. For those entities that are partially exempt, the schedule should specify those acts and practices that are exempt.

Introduction

31.1 The Australian intelligence community (AIC) comprises six Australian Government intelligence agencies—the Australian Security Intelligence Organisation (ASIO), the Australian Secret Intelligence Service (ASIS), the Office of National Assessments (ONA), the Defence Intelligence Organisation (DIO), the Defence Signals Directorate (DSD) and the Defence Imagery and Geospatial Organisation (DIGO). Collectively, these agencies (AIC agencies) work together to meet Australia's intelligence needs.[1]

31.2 Three of the AIC agencies are responsible for collecting intelligence outside Australia: ASIS is responsible for human intelligence obtained through interaction with people; the DSD for signals intelligence obtained by intercepting electronic

1 Office of National Assessments, *The Australian Intelligence Community: Agencies, Functions, Accountability and Oversight* (2006), 4.

communications—such as telephones, faxes and emails; and the DIGO for imagery and geospatial intelligence obtained from imaging satellites and other sources.[2]

31.3 The ONA and the DIO are responsible for foreign intelligence assessment. Their functions are to analyse and assess intelligence as well as information from other sources—such as the media, the internet and diplomatic reporting—to form a picture of an issue or occurrence.[3] In this chapter, ASIS, the DIGO, the DSD, the DIO and the ONA—that is, all the AIC agencies except ASIO—are collectively referred to as 'the foreign intelligence agencies'.

31.4 ASIO, as a security intelligence agency, mainly focuses on the domestic security of Australia. Unlike the foreign intelligence agencies—which have either an intelligence collection or assessment role but not both—ASIO has both an intelligence collection and an assessment role.[4]

31.5 Currently, the AIC agencies are either partially or completely exempt from the *Privacy Act 1988* (Cth). This chapter examines whether they should continue to be exempt.

The exempt agencies

Intelligence agencies

31.6 Under the *Privacy Act*, intelligence agencies are defined to mean ASIO, ASIS and the ONA.[5] Acts and practices of these agencies are completely exempt from the operation of the *Privacy Act*.[6] A record that has originated with, or has been received from, an intelligence agency is also excluded from the operation of the Act.[7] Accordingly, agencies and organisations receiving a record from an intelligence agency are exempt from the operation of the *Privacy Act* in relation to that record. In addition, disclosure of personal information to ASIO or ASIS is not covered by the Act.[8]

31.7 ASIO's main role is to gather information and produce intelligence, enabling it to warn the government about risks to national security. It also provides security assessments, gives protective security advice and collects foreign intelligence in Australia.[9] The *Australian Security Organisation Act 1979* (Cth) (ASIO Act) defines 'security' as the protection of Australia and its people from espionage, sabotage, politically motivated violence, the promotion of communal violence, attacks on

Australia's defence system and acts of foreign interference.[10] ASIO falls within the portfolio responsibilities of the Attorney-General of Australia.

31.8 ASIS is Australia's overseas intelligence collection agency. Its role is to collect and distribute foreign intelligence that may impact on Australian interests, undertake counter-intelligence activities and liaise with overseas intelligence and security agencies.[11] ASIS is responsible to the Australian Government through the Minister for Foreign Affairs.[12] Under the *Intelligence Services Act 2001* (Cth), the Director-General of ASIS is directly responsible to the Minister.[13]

31.9 The ONA was established by the *Office of National Assessments Act 1977* (Cth) as an independent agency accountable to the Prime Minister. It produces assessments and reports on international political, strategic and economic matters in order to assist the Prime Minister, ministers and departments in the formation of policy and plans.[14] The Director-General of ONA is an independent statutory office holder, and as such is not subject to external direction on the content of assessments by the ONA.[15]

Defence agencies

31.10 The Defence Intelligence Group in the Department of Defence consists of three units: the DSD, the DIGO and the DIO. They are exempt from the operation of the *Privacy Act* where their acts and practices relate to their activities.[16] Records that have originated with, or have been received from, these agencies are also excluded from the operation of the Act.[17] Accordingly, agencies and organisations receiving a record from these agencies are exempt from the operation of the *Privacy Act* in relation to that record. Furthermore, disclosure of personal information to the DSD is not covered by the Act.[18]

31.11 The functions of the DSD and the DIGO, and certain limits on their activities, are set out in the *Intelligence Services Act*. The DSD is the national authority on security of information on communications and information systems across government. Its principle functions are to collect and communicate foreign signals

18 Ibid s 7(1A)(c).

intelligence, and provide advice to the Australian Government on the security of information kept in electronic form.[19]

31.12 The DIGO provides intelligence information derived from imagery and other sources in support of Australia's defence and national interests.[20] It is responsible for providing imagery and geospatial intelligence to help meet Australia's foreign intelligence requirements, supporting the operations of the Australian Defence Force, and supporting the national security function of Australian Government and state and territory authorities.[21]

31.13 The DIO provides intelligence assessments based on information from other Australian and foreign intelligence agencies to support the Department of Defence, the planning and conduct of defence force operations, and wider government decision making.[22] There is no legislation specific to the DIO, although some of its activities are covered under the *Intelligence Services Act*.[23]

Inspector-General of Intelligence and Security

31.14 The Inspector-General of Intelligence and Security (IGIS) is an independent statutory office within the Prime Minister's portfolio. The IGIS was set up under the *Inspector-General of Intelligence and Security Act 1986* (Cth) (IGIS Act) to ensure that certain intelligence and security agencies conduct their activities within the law, behave with propriety, comply with ministerial guidelines and directions, and have regard to human rights. He or she regularly monitors the activities of AIC agencies, conducts inquiries, investigates complaints about these agencies, makes recommendations to the government and provides annual reports to the Australian Parliament.[24]

31.15 The IGIS, as an agency listed in Schedule 2 Part I Division 1 of the *Freedom of Information Act 1982* (Cth), is exempt from compliance with the Information Privacy Principles (IPPs).[25] He or she is, however, subject to other provisions of the Act, such as the tax file number provisions. In addition, as an exempt agency under the *Freedom of Information Act*, the IGIS is not required under that Act to provide access to information.

Rationale for the exemption of the AIC agencies

31.16 The IGIS has stated that one of the reasons why the Australian intelligence agencies should be exempt or partially exempt from the provisions of the *Privacy Act* is that 'it is necessary for the agencies to protect their sources, capabilities and methods if they are to function effectively'.[26] Other reasons for the exemption include that: there are already adequate privacy requirements on the AIC agencies contained in legislation, ministerial directions and guidelines; there are robust accountability and oversight mechanisms over the agencies; and the exemption is consistent with international standards. These reasons are discussed below.

Privacy requirements

Legislation

31.17 AIC agencies may only collect intelligence on Australians under warrant or authorisation by a responsible minister. As discussed below, the *Intelligence Services Act* sets out the circumstances in which the responsible minister may authorise intelligence activity by the three foreign intelligence collection agencies—ASIS, the DSD or the DIGO—against an Australian person.

31.18 Section 8 of the *Intelligence Services Act* provides that the responsible minister must issue a direction requiring ASIS, the DSD or the DIGO to obtain an authorisation under s 9 from the minister before undertaking intelligence activity on an Australian person. Section 32B of the IGIS Act requires the minister to give a copy of any such direction to the IGIS as soon as practicable after it is given. The validity of a ministerial authorisation given under s 9 is limited to no more than six months, and may only be renewed if the relevant minister is satisfied that it is necessary for the authorisation to continue to have effect.[27] A copy of the authorisation must be kept by the agency and made available for inspection on request by the IGIS.[28]

31.19 The agency heads of ASIS, the DIGO and the DSD must give to the responsible minister a written report in respect of intelligence activities carried out by the agency in reliance on a ministerial authorisation. The report must be provided to the minister within three months from the day on which the authorisation ceased to have effect.[29]

31.20 The *Intelligence Services Act* also sets out limits on the functions of ASIS, the DSD and the DIGO, which are only to be performed in the interests of Australia's national security, foreign relations and national economic well-being, and 'to the extent

28 Ibid s 9(5).

29 Ibid s 10A.

that those matters are affected by the capabilities, intentions or activities of people or organisations outside Australia'.[30] These three agencies are prohibited from undertaking any activity that is unnecessary for the proper performance of their functions, or not authorised or required by or under another Act.[31]

31.21 Generally, ASIO may only collect information relevant to security under warrant.[32] In addition, only the Director-General of Security or an ASIO officer authorised by the Director-General, can communicate intelligence on behalf of ASIO. It is an offence for an ASIO employee or agent to convey information acquired in the course of his or her duties outside ASIO without the authority of the Director-General of Security. The Director-General of Security may authorise an ASIO officer to communicate information to authorities of any other country approved by the Director-General.[33] Section 20 of the ASIO Act places a special responsibility upon the Director-General of Security to take all reasonable steps to ensure that the work of ASIO is limited to what is necessary for the purposes of the discharge of ASIO's functions.

Privacy rules and guidelines

Attorney-General's guidelines issued under the Australian Security Intelligence Organisation Act 1979 (Cth)

31.22 Under s 8A of the ASIO Act, the Attorney-General may give the Director-General of Security guidelines to be observed by ASIO in the performance of its functions or the exercise of its powers. The Attorney-General has issued two sets of guidelines concerning ASIO's functions—one in relation to obtaining intelligence relevant to security,[34] and another in relation to politically motivated violence (referred to collectively as the 'Attorney-General's Guidelines').[35] Both sets of guidelines contain privacy standards for the treatment of personal information.

31.23 The Attorney-General's Guidelines require that the collection of information 'be conducted with as little intrusion into privacy as is possible, consistent with the national interest'.[36] They provide that the degree of intrusion into individual privacy

should be proportional to the gravity of the threat to security.[37] In deciding whether to conduct an investigation relating to politically motivated violence and the investigatory methods to be employed, the Director-General of Security is required to consider all of the circumstances, including the privacy implications of any proposed investigation.[38]

31.24 In addition, the Attorney-General's guidelines in relation to obtaining intelligence relevant to security provide that:

- the initiation and continuation of an ASIO investigation requires authorisation by the Director-General of Security or an ASIO senior executive officer;[39]
- ASIO must periodically review their investigations;[40]
- where an investigation concludes that a subject's activities are not relevant to security, the records of that investigation must be destroyed pursuant to disposal schedules agreed to between ASIO and the Australian Archives;[41]
- requests by ASIO for access to personal information held by Australian Government agencies should be 'limited to that which is reasonably necessary for the purposes of approved investigations';[42] and
- records must be kept of all: ASIO's requests for access to personal information; personal information received in response to such requests; and personal information communicated to a person or agency by ASIO incidental to the

obtaining of intelligence, including 'to whom the material was communicated, by whom and for what purpose'.[43] The records are to be open to inspection by the IGIS and, where appropriate, subject to an authorised disposal schedule under the *Archives Act 1983* (Cth).[44]

31.25 The IGIS has oversight responsibility to ensure that ASIO complies with the Attorney-General's Guidelines in conducting its activities. During 2005–06, the IGIS reported that his office inspected records associated with a wide range of ASIO activities, including warrant operations and authorisations of investigation. The IGIS has inspected every authorisation that was issued during the reporting period. His inspections showed that most requests for authorisation were 'completed to a high standard'. In relation to the requirement under the Attorney-General's Guidelines that ASIO periodically review authorities to investigate, the IGIS reported that compliance with this requirement was generally good. He noted several instances where reviews had not been completed within a reasonable timeframe and also some minor procedural defects, but did not consider that there were any systemic concerns.[45]

31.26 The ALRC has been advised that the Attorney-General's Guidelines are currently being updated.

Privacy rules issued under the Intelligence Services Act 2001 (Cth)

31.27 Under s 15 of the *Intelligence Services Act*, the responsible minister is required to make written rules regulating the communication and retention by the DIGO, the DSD and ASIS of intelligence information concerning Australians. Before making the rules, the responsible minister must consult with the head of the relevant agency as well as the IGIS and the Attorney-General.

31.28 The current privacy rules for ASIS, the DSD and the DIGO are broadly consistent with each other.[46] The rules provide for the circumstances in which the agency may communicate and retain intelligence information concerning an Australian person. In addition, they provide that where the agency has communicated intelligence information concerning an Australian person contrary to the rules or because it had wrongly presumed that a person was not an Australian person, the agency shall immediately consult with or inform the IGIS of the measures taken to protect the

45 Australian Government Inspector-General of Intelligence and Security, *Annual Report 2005–2006* (2006), 30.

46 R Hill, *Defence Imagery and Geospatial Organisation Privacy Rules* (2005) Australian Government Department of Defence <www.defence.gov.au/digo/pdf/DIGOprivacyrules.pdf> at 31 July 2007; P Reith, *Defence Signals Directorate: Privacy Safeguards* (2001) Australian Government Defence Signals Directorate <www.dsd.gov.au/about_dsd/privacy_safeguards.html> at 31 July 2007; A Downer, *Australian Secret Intelligence Service: Rules to Protect the Privacy of Australians* (2001) Australian Secret Intelligence Service <www.asis.gov.au/rules_to_privacy.html> at 31 July 2007.

privacy of the Australian person.[47] The rules, however, do not require the agency to observe particular standards when engaging in other information-handling practices that are dealt with in the Information Privacy Principles (IPPs), such as accuracy, storage and security of personal information.

31.29 In his annual report for 2005–2006, the IGIS reported that his inspection work showed that compliance by ASIS and the DSD with the *Intelligence Services Act* and the associated privacy rules has been 'sound'.[48] He stated that his office undertook on-going monitoring of ASIS's compliance with privacy rules. He also regularly reviewed reports containing secret intelligence information to ensure that the information was collected in accordance with the requirements of the *Intelligence Service Act* and the privacy rules. The IGIS reported that 'the internal resources and training made available to ASIS staff on privacy issues are good, and that the obligations imposed by the privacy rules are taken very seriously'.[49] The IGIS stated that:

> I am pleased to say that I have seen no abuses in the material we have access to, rather there is a deepening understanding of the principles upon which the privacy rules are based and a continuing commitment by ASIS staff to do the right thing.[50]

31.30 In relation to the DSD, the IGIS reported that a fully staffed Office of Compliance section within the DSD monitors that the requirements of the privacy rules are being met, and his office fulfils a similar function independently of the DSD. He stated that there is a regular dialogue between the DSD and his office on privacy issues due to the inherently complex nature of the DSD's collection activities. The IGIS is, however, satisfied that

> the incidence of Australian persons being identified in DSD reporting is extremely low relative to the number of reports DSD disseminates. In some cases this occurs because DSD is not aware that the person holds Australian citizenship or permanent residency (commonly having dual nationality). As soon as DSD become aware of their status corrective action is taken.[51]

31.31 The IGIS further reported that the DSD has continued its sustained effort to train all staff in the requirements imposed by the *Intelligence Service Act*, and that his office has delivered 11 presentations to DSD staff on the role of his office and the principles underpinning the application of the privacy rules.[52]

49 Ibid, 38–39.

50 Ibid, 39.

51 Ibid, 45.

52 Ibid, 46.

31.32 During 2005–2006, the IGIS visited DIGO headquarters periodically and 'closely examined all tasking requests DIGO receives which might impact upon Australian persons or interests'. He reported that the adoption of new privacy rules by the DIGO on 2 December 2005 presented some unique challenges, due to the DIGO's predominantly image-based reporting. The IGIS stated, however, that his office would continue to work with the DIGO to address these issues. The IGIS was satisfied that all necessary approvals and authorisations were obtained under the relevant privacy rules.[53]

Administrative privacy guidelines

31.33 Unlike ASIS, the DSD and the DIGO, the ONA and the DIO are not required by legislation to have privacy rules or guidelines in place. A review of the *Intelligence Services Act* in 2005–06 coordinated by the Australian Government Department of the Prime Minister and Cabinet resulted in a government decision that the ONA and the DIO should be subject to privacy guidelines consistent with the requirements placed on ASIS, the DSD and the DIGO. The ONA and the DIO have since developed and implemented privacy guidelines that are broadly consistent with those in use elsewhere in the AIC. Both sets of guidelines have been in effect since December 2005.[54]

31.34 The purpose of the guidelines is to ensure that in the agencies' external communications, the privacy of Australians is preserved as far as is consistent with the proper performance of the agencies' functions.[55] The guidelines for the ONA and the DIO constitute a direction to all agency staff by the responsible Minister.[56] Copies of the guidelines are annexed to the IGIS's Annual Report for 2005–06, but are not currently available on the website of the ONA or the DIO.[57]

31.35 In his annual report for 2005–06, the IGIS reported that he was consulted by the ONA and the DIO in the development of the privacy guidelines. He has also worked with both agencies during the implementation of the guidelines to ensure that the guidelines were applied in a manner consistent with use elsewhere in the AIC. The IGIS reported that both the ONA and the DIO embarked on an organisation-wide program to educate analysts on applying the guidelines and reporting on compliance with the guidelines. The IGIS was satisfied with both the implementation of the guidelines and the level of awareness of the guidelines among analysts.[58]

31.36 During the reporting period 2005–06, the IGIS conducted one inspection of the use of the guidelines by the ONA and another by the DIO, and was 'pleased with the overall quality and level of detail contained in the documentation'. The IGIS stated that

he intended to conduct inspections relating to the use of the privacy guidelines by the DIO and the ONA every three months.[59]

31.37 The IGIS stated that he would continue to monitor compliance with the privacy rules and guidelines by the foreign intelligence agencies.[60]

Protective Security Manual

31.38 In addition to privacy rules and guidelines that apply to the individual agencies, all the AIC agencies are required to comply with the *Protective Security Manual*. The *Protective Security Manual* is a policy document produced and periodically revised by the Australian Government Attorney-General's Department on behalf of the Protective Security Policy Committee.

> It is the principal means for disseminating Australian Government protective security policies, principles, standards and procedures, to be followed by all Australian Government agencies for the protection of official resources.[61]

31.39 The *Protective Security Manual* sets out guidelines and minimum standards in relation to protective security for Australian Government agencies and officers, as well as for contractors and their employees who perform services for the Australian Government. Of particular relevance is Part C of the *Protective Security Manual*, which provides 'guidance on the classification system and the protective standards required to protect both electronic- and paper-based security classified information'.[62] This part sets out minimum standards addressing the use, access, copying, storage, security and disposal of classified information.

31.40 Although the *Protective Security Manual*—as it applies to the AIC agencies—addresses some of the privacy issues that are not dealt with under the AIC agencies' privacy rules or guidelines, the privacy protections under the *Protective Security Manual* guidelines are restricted to security classified information and do not deal with other matters under the IPPs, such as the accuracy of personal information.

31.41 The DSD also publishes an unclassified version of the *Australian Government Information Technology Security Manual* (ACSI 33).[63] This document provides guidance to Australian Government agencies on the protection of their electronic information systems.

63 Defence Signals Directorate, *Australian Government Information Technology Security Manual (ACSI 33)* (2004).

31.42 In its report, *Keeping Secrets: The Protection of Classified and Security Sensitive Information* (ALRC 98), the ALRC recommended that a revised *Protective Security Manual* be placed in the public domain, with any sensitive security information removed.[64] In September 2005, the Attorney-General's Department released a revised *Protective Security Manual*. The availability of the manual, however, remains restricted to Australian Government agencies. The ALRC continues to be of the view that the *Protective Security Manual* should be a publicly available document, as recommended in ALRC 98.

Secrecy provisions

31.43 Sections 39, 39A and 40 of the *Intelligence Services Act* prohibit the communication of any information or matter that was prepared by or on behalf of ASIS, the DIGO or the DSD in connection with their functions.[65] These provisions apply to a person who: is a current or former staff member of ASIS, the DIGO or the DSD; has entered into a contract, agreement or arrangement with one of these agencies; or has been an employee or agent of a person who has entered into a contract, agreement or arrangement with one of these agencies.

31.44 Similarly, it is an offence for an ASIO employee or agent to convey information acquired in the course of his or her duties outside ASIO without the authority of the Director-General of Security.[66]

Accountability and oversight mechanisms

31.45 Whether AIC agencies should continue to be exempt from the operation of the *Privacy Act* depends, in part, on whether current accountability principles and oversight mechanisms adequately address privacy issues.

Inspector-General of Intelligence and Security

31.46 As discussed above, the IGIS is an independent statutory officer who is responsible for ensuring that the AIC agencies conduct their activities legally, behave with propriety, comply with any directions and guidelines from the responsible minister, and have regard for human rights, including privacy. To ensure the independence of the office, the IGIS is appointed by the Governor-General for a fixed term of five years and can only be dismissed on limited grounds.[67] An IGIS cannot be appointed more than twice.[68]

31.47 The IGIS conducts inquiries, investigates complaints, makes recommendations to government and provides annual reports to the Australian Parliament. Sections 8 and 11 of the IGIS Act allows the IGIS to undertake inquiries in response to a complaint, at

the request of the responsible minister or on the IGIS's own initiative, into a number of matters relating to the operations of the AIC agencies, including their compliance with the law, ministerial directions and guidelines, propriety and human rights standards.[69] The IGIS is directly accountable to the Prime Minister.

31.48 When exercising its inquiry function, the IGIS has significant powers that are similar to those of a Royal Commission. The IGIS has powers to obtain information, require persons to answer questions and produce documents, take sworn evidence and enter the premises of any AIC agency.[70] Under s 20 of the IGIS Act, the IGIS may obtain documents with a national security classification for the purposes of an inquiry but must make arrangements with the head of the relevant agency for the protection of those documents while they remain in the IGIS's possession, and for their return.

31.49 The IGIS has conducted several inquiries into the activities of AIC agencies, including inquiries into the: intelligence activities in relation to the Tampa incident; terrorist attacks in Bali in October 2002; allegations that the DSD intercepted communications of the Hon Laurie Brereton MP; and concerns raised about the DIO by Lieutenant Colonel Lance Collins.[71]

Ministerial oversight

31.50 The heads of the AIC agencies are responsible to their respective ministers in accordance with normal governance arrangements. The IGIS also assists ministers in their oversight of the AIC agencies by conducting inquiries into the agencies at the request of the ministers.[72]

31.51 In addition, the AIC agencies are guided by the National Security Committee, which sets broad policy and priorities for the agencies. The Committee is supported by the Secretaries Committee on National Security (SCNS), a committee of senior officials chaired by the Secretary of the Australian Government Department of the

71 Australian Government Inspector-General of Intelligence and Security, *Annual Report 2001–2002* (2002), Annex 2; Australian Government Inspector-General of Intelligence and Security, *Annual Report 2002–2003* (2003), Annex 2, 3; Australian Government Inspector-General of Intelligence and Security, *Annual Report 2003–2004* (2004), Annex 3, 4. See also Office of National Assessments, *The Australian Intelligence Community: Agencies, Functions, Accountability and Oversight* (2006), 15. On 6 December 2000, Lieutenant Colonel Lance Collins of the Australian Defence Force wrote to the Minister for Defence expressing concerns that: the DIO acted in mid-1998 to quash early warning, included in an assessment prepared by him, of problems developing in East Timor; the DIO's assessments concerning East Timor were pro-Indonesia; and the DIO cut access to an intelligence database without warning. The IGIS was asked by the Minister for Defence to investigate, report and make recommendations about Collins' allegations. The IGIS found that Collins' view was sincerely held but unfounded: Australian Government Inspector-General of Intelligence and Security, *Annual Report 2003–2004* (2004), Annex 3.

72 Office of National Assessments, *The Australian Intelligence Community: Agencies, Functions, Accountability and Oversight* (2006).

Prime Minister and Cabinet and attended by the secretaries of the National Security Committee's portfolio departments and the Directors-General of the ONA and ASIO. The SCNS advises the National Security Committee on national security policy, coordinates implementation of policies and programmes relevant to national security, and guides departments and agencies involved in intelligence and security.[73]

Parliamentary oversight

31.52 Under s 29 of the *Intelligence Services Act*, the oversight responsibilities of the Parliamentary Joint Committee on Intelligence and Security (PJCIS) include:

- reviewing the administration and expenditure of AIC agencies;
- reviewing any matter in relation to the AIC agencies referred to the Committee by the responsible minister or a resolution of either House of the Parliament; and
- reporting the Committee's comments and recommendations to each House of the Parliament and to the responsible minister.[74]

31.53 The AIC agencies are also subject to scrutiny by Senate legislation committees on their finance and administration, particularly their budget allocations. In addition, the IGIS is accountable to the Senate Finance and Public Administration Committee.[75]

31.54 ASIO produces an unclassified annual report for tabling in Parliament. It also provides a classified annual report to the Attorney-General, the Prime Minister and the Leader of the Opposition on its activities.[76] In the annual reports of the Department of Defence and the IGIS, broad references are made to the activities of the DIGO, DSD and the DIO. The heads of ASIS and the ONA must provide the responsible minister with a report on their operations at least annually.[77] Although these annual reports are not made public, both ASIS and the ONA do produce unclassified budget documents.[78]

Royal Commissions and other inquiries

31.55 AIC agencies have been the subject of several Royal Commissions and a number of other inquiries. The Hon Justice Robert Hope conducted two Royal Commissions into the AIC during the 1970s and 1980s, which broadly established the AIC's current structure, functions and processes. In March 1995, the Hon Gordon Samuels QC and Michael Codd concluded a Royal Commission that inquired into the

---

73 Ibid, 14.

74 The Committee also has responsibilities for reviewing the operation, effectiveness and implications of: certain amendments to anti-terrorism legislation; and ASIO's questioning and detention powers under Division 3 of Part III of the ASIO Act: *Intelligence Services Act 2001* (Cth) s 29(1)(ba), (bb).

effectiveness of ASIS's organisation, management, control and accountability arrangements, protection of sources and resolution of grievances and complaints.[79]

31.56 The Parliamentary Joint Committee on ASIO, ASIS and DSD (now the PJCIS) conducted a number of inquiries into intelligence issues, including: an inquiry into the intelligence on Iraqi's weapons of mass destruction;[80] reviews of intelligence services legislation;[81] an assessment of the government's proposed amendment of the ASIO Act;[82] and an examination of the nature, scope and appropriateness of ASIO's public reporting activities.[83]

31.57 In 2004, the Prime Minister appointed Philip Flood to conduct an inquiry into the effectiveness of the intelligence community's current oversight and accountability mechanisms, and the delivery of high quality and independent intelligence advice to the government. In the 2004 *Report of the Inquiry into Australian Intelligence Agencies* (Flood Report),[84] it was acknowledged that all elements of government, including the AIC, should be accountable. The Report stated, however, that different accountability and oversight mechanisms for intelligence agencies are justified because of the need for parts of the intelligence function to remain secret. The Flood Report stated that purpose-specific institutions and systems are needed to deal with the tension between accountability and secrecy.[85] The Report found that accountability arrangements for the intelligence agencies were working effectively and that the *Intelligence Services Act* has worked well in practice.[86]

31.58 The Flood Report did, however, recommend some changes to the accountability arrangements in the AIC, including that: the mandate of the Parliamentary Joint Committee on ASIO, ASIS and DSD (now the PJCIS) be extended to cover all AIC agencies; the functions and ministerial accountabilities of the DIGO be formalised in

86 Ibid, 57.

legislation by amendments to the *Intelligence Services Act*; and the mandate of the IGIS be extended to allow the IGIS to initiate inquiries into matters relating to the ONA and the DIO without ministerial referral.[87] All of these recommendations have been implemented.

31.59 In *Open Government: A Review of the Federal Freedom of Information Act 1982* (ALRC 77), the ALRC and the Administrative Review Council (ARC) were also of the view that scrutiny by the IGIS and the Parliamentary Committee on ASIO of the internal processes and methods of intelligence agencies is adequate.[88] They therefore recommended that intelligence agencies remain exempt from the operation of the *Freedom of Information Act*.[89]

Other accountability mechanisms

Commonwealth Ombudsman

31.60 The Commonwealth Ombudsman is an independent statutory office established by the *Ombudsman Act 1976* (Cth). The Act provides that the Ombudsman is to investigate the administrative actions of Australian Government departments and prescribed authorities in response to complaints or on the Ombudsman's own motion. The Act also permits the Ombudsman, in some circumstances, to decline to investigate; for example, where a matter has not yet been put to the relevant agency. The *Ombudsman Act* enables the Ombudsman to report in a number of ways following an investigation, although it requires the investigation itself to be conducted in private and with fairness to anyone likely to be criticised.

31.61 The Australian Government Attorney-General's Department and the Departments of Defence, Foreign Affairs and Trade, and the Prime Minister and Cabinet are within the Ombudsman's jurisdiction. ASIO and the IGIS, however, are excluded. The foreign intelligence agencies fall within the Ombudsman's jurisdiction but, in practice, people seeking to make complaints about them are referred to the IGIS.[90] The Ombudsman is also appointed as the Defence Force Ombudsman under the *Ombudsman Act*.[91]

31.62 The Act provides the Ombudsman with an extensive range of powers to investigate, including a power to require the production of information or documents.[92] This power is limited, however, by s 9(3), which provides that the Attorney-General may issue a certificate certifying that the disclosure to the Ombudsman of certain information or documents would be contrary to the public interest for a number of

reasons—including that it would prejudice the security, defence or international relations of the Australian Government.

Security Appeals Division of the Administrative Appeals Tribunal

31.63 The Security Appeals Division of the Administrative Appeals Tribunal (AAT) deals with three types of matters, namely, applications for review of:

- adverse or qualified security assessments undertaken by ASIO;
- decisions of the Australian Archives under the *Archives Act 1983* (Cth) in respect of access to a record of ASIO; and
- preventative detentions orders issued or extended under the *Criminal Code*. [93]

31.64 The AAT, however, does not have power to review security assessments conducted by agencies other than ASIO.

31.65 Under the ASIO Act, a security assessment cannot be made in respect of a person who is not: an Australian citizen; the holder of a valid permanent visa; or the holder of a special category or special purpose visa.[94] During review by the AAT, ASIO is required to provide applicants with access to personal information held about the individual provided the disclosure of such information is not likely to prejudice security.[95]

Australian National Audit Office

31.66 The Australian National Audit Office (ANAO) is a specialist public sector agency responsible for auditing the activities of most Australian Government public sector entities. The Auditor-General has broad information-gathering powers and authority to access Australian Government premises.[96] The scope of its audit program includes all of the AIC agencies.[97] The ANAO undertakes annual audits of the financial statements of ASIO, ASIS and the ONA. It also conducts audits of the Department of Defence that broadly consider the financial operations of the DIO, the DSD and the DIGO. In addition, the ANAO undertakes occasional performance audits

of programmes relevant to the intelligence agencies, normally as part of broader cross-government work on security issues.[98]

Opposition briefing

31.67 Section 21 of the ASIO Act requires that the Director-General of Security brief the Leader of the Opposition for the purpose of keeping him or her informed on matters relating to security. Similarly, the Director-General of ASIS must consult regularly with the Leader of the Opposition in the House of Representatives for the purpose of keeping him or her informed on matters relating to ASIS.[99]

International instruments

31.68 A number of international instruments recognise the need to balance the interests of national security and defence with the interests of privacy or data protection. The *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* issued by the Organisation for Economic Co-operation and Development (OECD Guidelines) provides that acceptable bases for exceptions in the Guidelines include national sovereignty and national security.[100]

31.69 The *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (EU Directive) issued by the European Parliament contains exemptions concerning public security, defence and state security.[101]

31.70 Similarly, the *Asia-Pacific Economic Cooperation Privacy Framework* (APEC Privacy Framework) states that it is not intended to impede governmental activities authorised by law to protect national security, public safety, national sovereignty and other public policy interests. It does, however, provide that exceptions to the principles—including those relating to national sovereignty, national security, public safety and public policy—should be limited and proportional to meeting the objectives to which the exceptions relate, and made known to the public or in accordance with law.[102]

Issues concerning the exemption of the IGIS

31.71 As discussed above, agencies listed under Schedule 2 Part I of the *Freedom of Information Act*—of which the IGIS is one—are exempt from compliance with the IPPs. No policy justification has been given for the IGIS's exemption from the *Privacy*

102 Asia-Pacific Economic Cooperation, *APEC Privacy Framework* (2005), [13].

Act. Therefore, the exemption appears to derive from the fact that the IGIS is listed under Schedule 2 Part I of the *Freedom of Information Act*.

31.72 In their 1994 inquiry into the *Freedom of Information Act*, the ALRC and ARC commented that decisions to exempt particular agencies from the *Freedom of Information Act* have tended to be selective.[103] However, in view of the fact that if the IGIS and other intelligence agencies were subject to the Act the vast majority of its documents would be exempt, the ALRC and ARC recommended that the IGIS and other intelligence agencies should remain in Part I of the Act as exempt agencies.[104]

31.73 Currently, there are no privacy rules or guidelines that apply to the IGIS. The IGIS is, however, required to comply with the *Protective Security Manual* and is subject to secrecy provisions. Part C of the *Protective Security Manual* sets out minimum standards addressing the use, access, copying, storage, security and disposal of classified information. The privacy protections under the *Protective Security Manual*, however, are restricted to security classified information and do not deal with other matters under the IPPs, such as the accuracy of personal information. In relation to secrecy, under the IGIS Act, the IGIS or a staff member is prohibited from making a record, or divulging or communicating any information acquired by reason of the person holding or acting in that office.[105]

31.74 The IGIS is directly accountable to the Prime Minister and must provide the Prime Minister with a report on the IGIS's activities annually. The Prime Minister may make deletions from the IGIS's annual report before tabling it in Parliament, if he or she considers that the deletion is necessary 'to avoid prejudice to security, the defence of Australia, Australian's relations with other countries or the privacy of individuals'. A full copy of the report is provided to the Leader of the Opposition, who must treat as secret any part of the report that is not tabled in Parliament.[106]

31.75 In Canada and New Zealand, bodies overseeing the work of security and intelligence agencies are subject to privacy legislation, but may refuse to disclose personal information under certain circumstances. In Canada, the Office of the Inspector General of the Canadian Security Intelligence Service and the Security Intelligence Review Committee are subject to federal privacy legislation.[107] They may, however, refuse to disclose any personal information requested if the information was obtained or prepared by any government institution that is a specified investigative

107 *Privacy Act* RS 1985, c P-21 (Canada) s 3 (definition of 'government institution').

body in the course of lawful investigations relating to activities suspected of constituting threats to the security of Canada.[108]

31.76 Similarly, in New Zealand, the Inspector-General of Intelligence and Security and the Intelligence and Security Committee are covered by the *Privacy Act 1993* (NZ). They may, however, refuse to disclose any information if the disclosure would be likely to prejudice the security or defence of New Zealand or the international relations of the Government of New Zealand, or the entrusting of information to the Government of New Zealand on a basis of confidence by foreign governments, their agencies or any international organisation.[109]

31.77 In contrast, in the United Kingdom, personal data are exempt from any of the data protection principles and other provisions of the *Data Protection Act 1998* (UK) if the exemption from that provision is required for the purpose of safeguarding national security.[110]

Submissions and consultations

AIC agencies

31.78 In the Issues Paper *Review of Privacy* (IP 31), the ALRC asked whether the AIC agencies should be exempt, either completely or partially, from the *Privacy Act*; and if so, what is the policy justification for the exemption.[111] A number of submissions considered that the current exemption is appropriate,[112] provided that there is oversight by a body with sufficient power and authority over the practices of the AIC agencies.[113]

31.79 Submissions from the Office of the Privacy Commissioner (OPC) and the AIC agencies supported the view that some of the Information Privacy Principles (IPPs) are incompatible with the functions of the AIC agencies.[114] In a joint submission, the foreign intelligence agencies stated that:

114 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; Australian Security Intelligence Organisation, *Submission PR 180,* 9 February 2007; Australian Government Office of National Assessments, *About Us* <www.ona.gov.au/aboutus.htm> at 31 July 2007.

> The collection and communication of information or opinions about people and entities and their activities is a core element of the business of intelligence. At times, and in line with strict statutory provisions…, this may involve the collection and/or communication of information about Australian persons or entities. This information is collected for specific purposes relevant to the intelligence requirements of government.
>
> There may be security and other factors which constrain intelligence agencies from informing the individual concerned about the information collected ([IPP] 2) or obtaining their consent before disclosing that information to another agency ([IPP] 11, paragraph 1(b)). Disclosure can prejudice collection methods, reveal to individuals and organisations that they are of interest to the collection agencies and also enable intelligence targets to employ defensive security measures that would hinder the collection of intelligence. A strict compliance with the *Privacy Act* would, therefore, unduly constrain the ability of intelligence agencies to carry out their functions.[115]

31.80 ASIO submitted that requiring it to comply with the requirements of the *Privacy Act*—and, in particular, the principles in relation to collection (IPPs 2 and 3), access (IPP 6) and consent (IPP 10)—would be inconsistent with the requirement of security:

> They would significantly undermine ASIO's investigations by alerting persons of security interest of the fact of, and scope of, covert investigations. The requirements of the Privacy Act present a risk of disclosure of ASIO's methods, capabilities and sources to persons of security interest. Further, the requirements would undermine ASIO's domestic and international liaison relationships as partner agencies would be likely to withhold the sharing of intelligence where there is a requirement for ASIO to disclose this information to persons of security interest.[116]

31.81 The OPC and the AIC agencies also expressed the view that there are currently adequate privacy requirements on the AIC agencies, including legislative requirements, ministerial directions and secrecy provisions.[117] In addition, the foreign intelligence agencies submitted that:

> As a matter of practice, intelligence agencies have invested in resources to ensure that the rules are adhered to. Individual agencies also conduct internal audits to monitor the use of the relevant privacy guidelines and to ensure that appropriate care is being taken to protect information pertaining to Australian persons, in accordance with legislative and administrative requirements.[118]

31.82 Furthermore, submissions from ASIO and the foreign intelligence agencies stated that the AIC agencies are already subject to robust accountability and oversight

mechanisms, including through the IGIS and the PJCIS.[119] By contrast, the Queensland Council of Civil Liberties expressed concern that there is a danger that intelligence agencies may regard themselves as exempt from control and supervision, and suggested that other mechanisms should be sought to ensure that these agencies are accountable.[120]

31.83 The OPC noted that there may be difficulties if the Privacy Commissioner were empowered to investigate or audit the activities of AIC agencies:

> it may be difficult for the Privacy Commissioner to investigate or audit the activities of AIC agencies without the appropriate powers, infrastructure or security clearances to conduct such investigations. It appears that the IGIS has been developed as a specialist monitoring and review body for these agencies given the different nature of their work.[121]

31.84 In addition, ASIO suggested that the current exemption that applies to it is consistent with international standards under the OECD Guidelines, the EU Directive and the APEC Privacy Framework.[122]

31.85 The Centre for Law and Genetics submitted that 'it is not unreasonable that these agencies be exempt', but the exemption should only apply when an officer of an AIC agency is acting in the public interest, and not when he or she is seeking out information for private purposes. It also suggested that, as a matter of good practice, any access to personal information by these agencies should be recorded to enable access to be tracked and later audited.[123]

31.86 On the other hand, a few stakeholders suggested that, although there is a legitimate public interest in exempting the AIC agencies from compliance with the *Privacy Act*, these agencies should not be completely exempt from the Act.[124] For example, the Australian Privacy Foundation stated that 'no agency, however important the public policy purpose it is performing, should be exempt from the obligation to comply with fundamental human rights and administrative law principles'. It submitted that:

> there is no justification for these agencies not to be subject to all of the principles in respect of administrative and employment information, or for them to be exempt

> from, for example, the security and quality principles, even for the personal information they collect operationally.[125]

31.87 Similarly, the Commonwealth Ombudsman submitted that the public interest justification for the exemption might not necessarily extend to staff or contractor records.[126]

31.88 The Australian Privacy Foundation, Professor Graeme Greenleaf, Nigel Waters and Associate Professor Lee Bygrave submitted that:

> The fact that access, correction and review and complaint rights might need to be qualified for operational data does not justify lifting the obligation to keep information secure, maintain data quality and delete information once no longer required. The reasonable steps qualification to these principles should adequately deal with the special circumstances of these agencies.
>
> Similarly there is no reason why the use and disclosure principles should not apply, with a specific exception similar to that provided in the context of access in NPP 6.1(k) in addition to the normal range of required by law and 'prejudice to law enforcement' exceptions.[127]

Inspector-General of Intelligence and Security

31.89 In IP 31, the ALRC asked whether the agencies specified in Schedule 2 Part I Division 1 of the *Freedom of Information Act*—including the IGIS—should be exempt from the *Privacy Act*; and if so, what is the policy justification for the exemption.[128]

31.90 To date, no stakeholders have specifically commented on the exemption that applies to the IGIS in submissions and consultations. Several stakeholders suggested, however, that the exemption of any Australian Government agencies, including those specified in Schedule 2 Part I Division 1 of the *Freedom of Information Act*, should be justified and limited to the extent possible.[129] Greenleaf, Waters and Bygrave submitted that any difficulties that compliance with privacy principles might cause for such agencies should be dealt with by means of selective exceptions to particular principles.[130]

130 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007.

Other defence and intelligence agencies

31.91 In IP 31, the ALRC also asked whether any other defence and intelligence agencies should be exempt from the *Privacy Act*.[131] Except the foreign intelligence agencies, no other stakeholders have commented on this issue. The foreign intelligence agencies noted that the Defence Security Authority, which is a member of the Intelligence and Security Group, is not exempt from the *Privacy Act*. They did not see any reason, however, for the Defence Security Authority to be exempt from the Act.[132]

ALRC's view

31.92 Only a small number of submissions commented on the exemption that applies to the AIC agencies. Those who have commented acknowledged the need to balance the interests of individual privacy with the interests of national security and defence. This is consistent with international standards, which provide for exceptions or exemptions to privacy principles for the purposes of national security and defence.

31.93 The central function of AIC agencies is the covert collection and assessment of intelligence information—that is, information 'obtained without the authority of the government or group that "owns" the information'.[133] Given the inherently covert nature of much of the work of these agencies, many of the requirements under the privacy principles would be incompatible with their functions—especially those relating to the collection, use and disclosure of personal information, and specific notification to the individual concerned about the information collected.

31.94 Although the AIC agencies are partially or completely exempt from the *Privacy Act*, each of these agencies has privacy rules or guidelines in place. Compliance with these rules and guidelines are overseen by the IGIS, who has reported his overall satisfaction with their implementation and compliance by the AIC agencies.

31.95 While compliance with the privacy rules and guidelines by the AIC agencies appears to be adequate, the ALRC considers that there is room for extending the ambit of the privacy rules and guidelines, and improving the relevant legislative arrangements and the accessibility of the rules and guidelines.

31.96 First, the governing legislation, and privacy rules and guidelines that apply to the AIC agencies only cover collection, communication and retention of intelligence information. The *Protective Security Manual* does contain minimum standards

---

131 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 5–2.

132 Australian Government Office of National Assessments, *About Us* <www.ona.gov.au/aboutus.htm> at 31 July 2007. The Defence Security Authority is responsible for the development of security policy, security training and awareness across the Department of Defence and the Australian Defence Force, security performance assessment programs, serious and complex security investigations, and processing of the majority of the Defence's security clearances.

133 Office of National Assessments, *The Australian Intelligence Community: Agencies, Functions, Accountability and Oversight* (2006), 3.

concerning the use, access, copying, storage, security and disposal of classified information. It only applies to security classified information, however, and does not deal with other matters under the IPPs. Therefore, the ALRC is of the view that the privacy rules and guidelines should be updated to include rules dealing with the incorrect use and disclosure of personal information, the accuracy of records, and the storage and security of personal information.

31.97 Secondly, under the ASIO Act and the *Intelligence Services Act*, the responsible ministers for ASIO, ASIS, the DSD and the DIGO are required to make written rules regulating the communication and retention of intelligence information concerning Australian persons. Although the ONA and the DIO have implemented administratively privacy guidelines, they are not subject to the same requirement legislatively as other AIC agencies. The ALRC considers this anomaly should be corrected by an amendment to the *Intelligence Services Act* and the *Office of National Assessments Act*.

31.98 Furthermore, although some of responsible ministers for the AIC agencies are required to consult with the IGIS and the Attorney-General in making privacy rules, none of them are required to consult with the OPC in making such rules. The ALRC's view is that it would be desirable for all ministers with responsibility for the AIC agencies to consult with the OPC before making privacy rules.

31.99 Finally, although all privacy rules and guidelines applicable to the AIC agencies are currently available electronically on the IGIS's website, and some of them are available on the relevant agency's website, those applicable to the ONA and the DIO are not currently available on their website. The ALRC is of the view that all privacy rules and guidelines should be published on the relevant agency's website.

31.100 A few stakeholders have suggested that the AIC agencies should be subject to exceptions to specific privacy principles, rather than exemption from the *Privacy Act*. However, all the AIC agencies are already subject to privacy rules or guidelines. The ALRC is also proposing extending the ambit of these rules and guidelines to further enhance privacy protection. In addition, the internal processes and methods of the AIC agencies are subject to a number of oversight and accountability mechanisms, including the IGIS, the PJCIS and other bodies. In particular, the IGIS has reported that he conducted regular inspections of the AIC agencies and actively monitored their adherence to privacy rules and guidelines. In this regard, it should be noted that the OPC would have difficulties investigating or auditing the activities of the AIC agencies, given the nature of their work. For these reasons, the ALRC does not consider it necessary to alter the scope of the exemption that applies to the AIC agencies under the *Privacy Act*.

31.101 In relation to the IGIS, much of the personal information being handled would have originated with, or have been received from, an AIC agency. Although these

records are excluded from the operation of the *Privacy Act*, other records held by the IGIS may also contain security sensitive information—for example, such information may be contained in the IGIS's internal working documents that relate to the work of the AIC agencies. Accordingly, the ALRC is of the view that some exemption from the *Privacy Act* should continue to apply to the IGIS.

31.102 There is, however, no policy justification for the exemption to extend to the IGIS's administrative records. Unlike the AIC agencies, the IGIS is not bound by ministerial privacy rules or guidelines and its operations are not subject to oversight other than by the Prime Minister. The ALRC proposes, therefore, that the IGIS be brought under the *Privacy Act* in respect of his or her office's administrative operations, such as the handling of employee records. In addition, the IGIS, in consultation with the Privacy Commissioner, should develop and publish information-handling guidelines. This would ensure that the privacy of personal information handled by the IGIS in respect of his or her office's non-administrative operations is also protected adequately.

Proposal 31–1 The privacy rules and guidelines, which relate to the handling of intelligence information concerning Australian persons by the Australian Security Intelligence Organisation, Australian Security Intelligence Service, Defence Imagery and Geospatial Organisation, Defence Intelligence Organisation, Defence Signals Directorate and Office of National Assessments, should be amended to include consistent rules and guidelines relating to:

(a) incidents involving the incorrect use and disclosure of personal information (including a requirement to contact the Inspector-General of Intelligence and Security and advise of the incident and measures taken to protect the privacy of the Australian person);

(b) the accuracy of personal information; and

(c) the storage and security of personal information.

Proposal 31–2 Section 15 of the *Intelligence Services Act 2001* (Cth) should be amended to provide that:

(a) the responsible minister in relation to the Defence Intelligence Organisation is required to make written rules regulating the communication and retention by the Defence Intelligence Organisation of intelligence information concerning Australian persons; and

(b) before making rules to protect the privacy of Australian persons, the ministers responsible for the Australian Security Intelligence Service, the Defence Imagery and Geospatial Organisation, the Defence Signals Directorate and the Defence Intelligence Organisation should consult with the Office of the Privacy Commissioner.

Proposal 31–3 The *Office of National Assessments Act 1977* (Cth) should be amended to provide that:

(a) the responsible minister in relation to the Office of National Assessments (ONA) is required to make written rules regulating the communication and retention by the ONA of intelligence information concerning Australian persons; and

(b) before making rules to protect the privacy of Australian persons, the minister responsible for the ONA should consult with the Office of the Privacy Commissioner.

Proposal 31–4 Section 8A of the *Australian Security and Intelligence Organisation Act 1979* (Cth) should be amended to provide that, before making rules to protect the privacy of Australian persons, the responsible minister should consult with the Office of the Privacy Commissioner.

Proposal 31–5 The privacy rules and guidelines referred to in Proposal 31–1 should be made available electronically to the public; for example, on the websites of those agencies.

Proposal 31–6 The *Privacy Act* should be amended to apply to the Inspector-General of Intelligence and Security (IGIS) in respect of the administrative operations of that office.

Proposal 31–7 The Inspector-General of Intelligence and Security, in consultation with the Office of the Privacy Commissioner, should develop and publish information-handling guidelines to ensure that the personal information handled by IGIS is protected adequately.

32. Federal Courts and Tribunals

ALRC's view 951

Introduction

32.1 Federal courts are currently exempt from the operation of the *Privacy Act 1988* (Cth) in respect of matters of an administrative nature. The Australian Industrial Relations Commission (AIRC), and the Industrial Registrar and Deputy Industrial Registrars are also similarly exempt. Other federal tribunals, on the other hand, are not exempt. This chapter examines whether these agencies should be exempt from the operation of the Act.

Federal courts

Scope of the current exemption

32.2 Federal courts—including the High Court of Australia, the Federal Court of Australia, the Federal Magistrates Court of Australia and the Family Court of Australia[1]—fall within the definition of 'agency' in the *Privacy Act*.[2] They are covered by the Act, however, in respect of those of their acts and practices that relate to matters

1 The Industrial Relations Court of Australia is also a federal court. As a consequence of the *Workplace Relations and Other Legislation Amendment Act 1996* (Cth), however, the court's jurisdiction has been transferred to other courts. Despite the transfer of jurisdiction, the Industrial Relations Court continues to exist at law until the last of its judges resigns or retires from office: Federal Court of Australia, *Industrial Relations Court of Australia* <www.fedcourt.gov.au> at 1 August 2007.

2 *Privacy Act 1988* (Cth) s 6(1).

'of an administrative nature'. Therefore, acts and practices of the federal courts in relation to their administrative records—including personnel records, operations and financial records, freedom of information records, complaint files and mailing lists—are covered by the *Privacy Act*.[3] Acts and practices in relation to the courts' judicial records, including court lists, judgments and other documents kept by the courts in relation to proceedings, are exempt.[4]

32.3 The partial exemption of federal courts from the operation of the *Privacy Act* was said to be based on two principles: the doctrine of the separation of powers, which is embodied in the structure of the *Australian Constitution*; and the common law principle of open justice. The separation of powers requires that different institutions exercise the legislative, judicial and executive powers of the Commonwealth, and that no one institution should exercise the power or functions of the others.[5] The principle of open justice requires that, subject to limited exceptions to protect the administration of justice, court proceedings should be open to the public.[6] Public access to court proceedings is vital to maintaining public confidence in the administration of justice.[7] Privacy issues arise, however, because personal information may be produced in court as a result of coercive powers and may be information that would not otherwise have entered the public arena.[8]

32.4 Certain information about matters before a court will generally be in the public arena and therefore often available to non-parties, such as court lists and judgments. Court lists may include file numbers enabling linkage to other information held in the justice system. Court lists can be highly prejudicial to individuals because they record court appearances rather than outcomes.[9] Court judgments containing sensitive personal information may be recorded in law reports and computerised legal databases and become available to the public.[10] Other case information, such as correspondence

4 *Privacy Act 1988* (Cth) s 7(1)(a)(ii); *I v Commonwealth Agency* [2005] PrivCmrA 6. In *Re Bienstein and Family Court of Australia* [2006] AATA 385, the Administrative Appeals Tribunal (AAT) held that the organisation of court lists and the allocation of judicial officers to particular cases are not matters of an administrative nature, but 'matters affecting litigants and the public, and are intimately related to the independent and impartial administration of justice': *Re Bienstein and Family Court of Australia* [2006] AATA 385, [8].

10 In *Le and Secretary, Department of Education, Science and Training* (2006) 90 ALD 83, the AAT considered how much personal information the Tribunal may publish in its decisions. Deputy President Forgie decided that, pursuant to IPP 11, the Tribunal was required or authorised by law to disclose as much personal information as is necessary to meet the requirements of s 43(2B) of the *Administrative Appeals Tribunal Act 1975* (Cth), including the obligation to conduct its proceedings and decision making in public, or to disclose the intellectual processes it followed in reaching a decision.

between the courts and the parties, is generally not in the public arena but is kept on file in court registries.

Matters of an administrative nature

32.5 The *Privacy Act* does not define 'a matter of an administrative nature'. The definition of 'administration' in the *Macquarie Dictionary* suggests that 'administrative' means relating to 'the management or direction of any office or employment'.[11] In administrative law, it has been held that the expression 'decision of an administrative character' is 'incapable of precise definition' and is to be 'determined progressively in each case as particular questions arise'.[12]

32.6 Given that a comprehensive definition of 'administrative' is not possible, the courts have taken the approach of defining 'administrative' by distinguishing it from legislative and judicial actions.[13] The distinction between administrative, legislative and judicial actions, however, is also difficult. In *Evans v Friemann*, Fox ACJ stated that 'it has … proved very difficult, virtually impossible to arrive at criteria which will distinguish in all cases' the administrative, the legislative and the judicial.[14] In addition, it was said that the concepts at times overlap or merge into one another.[15] Nevertheless, a general categorisation is that:

> Legislative acts usually involve the formulation of new rules of law having general application. Judicial acts generally entail determinations of questions of law and fact in relation to disputes susceptible of determination by reference to established rules or principles … Ministerial acts usually involve the performance of a public duty, but in circumstances where little or no discretion is legally permissible.[16]

32.7 One approach to distinguishing between judicial and administrative functions is to differentiate between what is 'truly ancillary to an adjudication by the court', which is incidental to the exercise of judicial power; and other functions that are not truly ancillary, which are administrative.[17]

> In the judicial sphere, there are many incidental functions, essentially of an administrative nature, and even of a legislative nature which are regarded as being within the judicial power of the Commonwealth, because they are incidental to, or incidents of, the exercise of judicial power.[18]

---

11 *Macquarie Dictionary* (online ed, 2005).

18 *Evans v Friemann* (1981) 35 ALR 428, 433.

32.8 A function that is 'truly ancillary to an adjudication by the court'

> must be truly subservient to adjudication. They must be undertaken pursuant to a direction by the court for the purpose of either quantifying and giving effect to an adjudication already made by the court, or of providing material upon the basis of which an adjudication by the court is to be made.[19]

32.9 In the context of freedom of information applications, case law suggests that documents that relate to matters of a non-administrative nature include: 'documents of the court which relate to the determination of particular matters, such as draft judgments, pleadings, documents returned under summons',[20] unrevised and unpublished transcripts of proceedings,[21] and notes relating to the provision of conciliation counselling by an officer of the court.[22]

Submissions and consultations

32.10 In the Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether federal courts should remain exempt from the operation of the *Privacy Act*.[23] Some stakeholders considered the partial exemption that applies to federal courts appropriate.[24] It was submitted that the exemption reflects an appropriate balance between openness and the privacy needs of individuals.[25] The Centre for Law and Genetics stated that, while the lack of national consistency is problematic, it should be left to other legislation to impose restrictions on access to court documents and hearings.[26]

32.11 One stakeholder submitted that responsibility for matters relating to the exercise of the courts' jurisdiction 'is most appropriately vested in individual courts rather than through a national privacy regime'. It was submitted that this is 'a more nuanced, effective mechanism for protecting individuals' privacy than through the operation of national privacy laws that attach only to the nebulous concept of "administrative acts"'. In addition, it was submitted that:

> exposing [federal] courts to administrative review in respect of matters related to the progression, listing, management and hearing of, and records of decisions in cases under the control of judicial officers of the Court is inconsistent with the separation of the judicial and executive arms of government.[27]

26 Centre for Law and Genetics, *Submission PR 127,* 16 January 2007.
27 Confidential, *Submission PR 214,* 27 February 2007.

32.12 It was also noted that:

> Federal courts can, and do, utilise their rule-making powers to promulgate rules to protect individuals' privacy that are appropriate for their particular court (for example, rules governing access to court files).[28]

32.13 Some stakeholders submitted that the *Privacy Act* is not necessarily the appropriate instrument for resolving privacy concerns in relation to court records or proceedings.[29] The OPC noted that, while there are some privacy concerns about the publication of court records, especially in electronic format, the *Privacy Act* is not the appropriate instrument for 'implementing changes to protect the personal information contained in court records'. Instead, the OPC suggested that 'changes to court record publication are best dealt with through procedural directives or guidelines rather than through legislative intervention'.[30]

32.14 The Legal Aid Commission of New South Wales submitted that the *Privacy Act* 'is not necessarily the appropriate vehicle for resolving concerns about the way trials are conducted'. It stated, however, that:

> there is a privacy interest in limiting the availability of personal information in court records and judgments. Legal Aid NSW is aware of instances where spent convictions found in judgment databases have been used to harass the individuals concerned.[31]

32.15 Similarly, the Mental Health Legal Centre expressed concern about instances where personal information was disclosed in courts, including where: psychiatric reports have been read in open court by a magistrate; and details of a woman's identity and mental health information were released to the press in the Victorian Coroners Court.[32]

32.16 One stakeholder supported a total exemption of federal courts from the operation of the *Privacy Act*

> on the basis that the Courts themselves, either individually or collectively, would maintain a regime for protecting individuals' privacy as well as access to their records in appropriate cases through rules of court. This would provide federal courts with the flexibility to amend the rules to maintain the balance with the increasing take up by courts of technology, such as online filing, access through the internet to individual court records etc. Were it considered necessary to establish a common statutory framework for the regulation of information privacy in federal courts, appropriate provisions could be inserted directly into the relevant Acts of Parliament.[33]

32 Mental Health Legal Centre Inc, *Submission PR 184,* 1 February 2007.
33 Confidential, *Submission PR 214,* 27 February 2007.

32.17 Some stakeholders submitted that the distinction between administrative and non-administrative matters lacks both clarity and precision.[34] One stakeholder stated that the distinction is 'extremely difficult to apply in practice', as some functions of the courts are neither clearly judicial nor administrative in nature, which is compounded by the fact that some functions overlap or merge into another.

> To achieve a sensible and more workable test it needs to be made to relate explicitly to the control of proceedings and steps in relation to proceedings … under the control of judicial officers.[35]

Options for reform

32.18 Given the difficulty in distinguishing between the judicial and administrative functions of courts, there are some options for reform that could be considered.

32.19 One option is to couch the exemption in positive terms, that is, exempting federal courts from the operation of the *Privacy Act* in respect of their judicial functions. This is the approach taken in New Zealand, New South Wales and the Northern Territory.[36] This approach, however, may limit the scope of the exemption where the function is not strictly judicial but is 'truly ancillary to an adjudication by the court'.[37]

32.20 Another option is to exempt federal courts in respect of their judicial and quasi-judicial functions. This is the approach used in Victoria and Tasmania.[38] The term 'quasi-judicial function', however, is also imprecise and may not be significantly different from a function that is 'truly ancillary to an adjudication by the court'.

32.21 A third option is either to define the word 'administrative' or the word 'judicial'. For example, the *Privacy and Personal Information Protection Act 1998* (NSW) relevantly provides that the 'judicial functions of a court' means:

> the functions of the court … as relate to the hearing or determination of proceedings before it, and includes:
>
> (a) in relation to a Magistrate—such of the functions of the Magistrate as relate to the conduct of committal proceedings, and
>
> (b) in relation to a coroner—such of the functions of the coroner as relate to the conduct of inquests and inquiries under the *Coroners Act 1980*.

ALRC's view

32.22 In the ALRC's view, federal courts should continue to be exempt in respect of matters of a non-administrative nature. The principal function of federal courts is to

---

35 Confidential, *Submission PR 214,* 27 February 2007.
36 *Privacy Act 1993* (NZ) s 32(1) (definition of 'agency'); *Privacy and Personal Information Protection Act 1998* (NSW) s 6; *Information Act 2002* (NT) ss 4 (definition of 'tribunal'), 5(5)(a).
37 *Kotsis v Kotsis* (1970) 122 CLR 69, 92.
38 *Information Privacy Act 2000* (Vic) s 10; *Personal Information Protection Act 2004* (Tas) s 7(a), (b).

hear and determine disputes, exercising the judicial power of the Commonwealth under Chapter III of the *Australian Constitution*. The partial exemption of federal courts from the *Privacy Act* is based on the separation of powers that is embodied in the *Australian Constitution*. It was intended to avoid interference with the independence of the judiciary and to foster the proper administration of justice. Exposing federal courts to administrative review of their judicial functions is inconsistent with the separation of judicial and executive arms of government.

32.23 In addition, there needs to be an appropriate balance between the interests of privacy and the principle of open justice. To achieve this balance, the ALRC considers that, in the exercise of their judicial functions, it is appropriate for federal courts to deal with the handling of personal information in their own procedural rules.

32.24 In respect of their administrative functions, courts should continue to be bound by the *Privacy Act*. While the ALRC acknowledges the inherent difficulty in distinguishing between judicial and administrative matters, it is not a reason for exempting federals court entirely from the operation of the Act. Given that the partial exemption of the courts is based in part on the separation of powers, there is no justification for exempting the courts in respect of their administrative operations.

32.25 The current approach in the *Privacy Act*—exempting federal courts 'except in respect of a matter of an administrative nature'—has one particular advantage, in that it mirrors the approach taken under the *Freedom of Information Act 1982* (Cth) (FOI Act). The FOI Act provides that it 'does not apply to any request for access to a document of the court unless the document relates to matters of an administrative nature'.[39] Although the term 'administrative' is imprecise, it has been judicially considered in relation to the FOI Act and, therefore, the current approach to the exemption is preferable to other approaches discussed above.[40]

Non-party access to court records

Public access to court records

32.26 Court records may contain sensitive personal information such as criminal history, psychiatric and psychological reports, and other medical records. Information on court records in relation to certain types of proceedings may also be particularly sensitive, for example, in family law, bankruptcy and criminal proceedings. In addition, children are considered to be particularly vulnerable and therefore the identification of children in court records raises specific privacy concerns.[41]

---

39 *Freedom of Information Act 1982* (Cth) s 5.

40 See, eg, *Re Altman and the Family Court of Australia* (1992) 27 ALD 369; *Loughnan (Principal Registrar, Family Court of Australia) v Altman* (1992) 111 ALR 445; *Re O'Sullivan and the Family Court of Australia* (1997) 47 ALD 765.

41 The identification of children in court records is discussed in Ch 60.

32.27 Although exempt from the *Privacy Act*, access to documents on file in court registries is regulated by other statutes or rules of court.[42] In the High Court, any person may inspect and take a copy of any document filed in the registry except: affidavits and exhibits to affidavits that have not been received in evidence in court; and documents that contain identifying information about a person where the disclosure of the identity of that person is prohibited by an Act, an order of the court or otherwise.[43]

32.28 In the Federal Court, a person can search and inspect documents specified in the *Federal Court Rules 1979* (Cth)—such as applications, pleadings, judgments, orders and submissions—unless the court or a judge has ordered that the document is confidential.[44] A person who is not a party to the proceeding may only inspect certain other documents with the leave of the court.[45] Leave will usually be granted, however, where a document has been admitted into evidence or read out in open court.[46]

32.29 In the Federal Magistrates Court, only specified persons may search or inspect the court's records without leave granted by the court or the registrar. Records relating to a family law or child support proceeding may only be searched or inspected by the Attorney-General, and other records related to a particular proceeding may only be searched or inspected by the parties, their lawyers or a child representative in the proceedings. Leave to search or inspect a record may only be granted to a person if he or she can demonstrate a 'proper interest'.[47]

32.30 In the Family Court, only specified persons may search, inspect or copy the court's records relating to a case without the permission of the court. The specified persons include: the Attorney-General, the parties and their lawyers, and independent children's lawyers. Permission to search, inspect or copy a court record may be granted to a person with a 'proper interest' in the case or the information in that particular court record.[48]

32.31 Access to court records may be affected by the *National Security Information (Criminal and Civil Proceedings) Act 2004* (Cth). The Act enables information to be introduced during federal criminal and civil proceedings in an edited and summarised form to facilitate the hearing of a case without prejudicing national security and the right of the defendant to a fair trial. A court exercising federal jurisdiction must hold closed hearings in certain circumstances,[49] and must not make a record of the hearing

available to, or allow the record to be accessed by, anyone except specified persons or entities.[50] The specified persons and entities include: the court hearing the appeal or reviewing the lower court's decision; the prosecutor in a criminal proceeding; the defendant's legal representative; an unrepresented party or a party's legal representative—provided that he or she has been given a security clearance at an appropriate level; and if the Attorney-General intervenes, the Attorney-General and his or her legal representatives.[51]

Media access to court records

32.32 Media reports are how most members of the public are made aware of court proceedings. Such reports necessarily depend on journalists having access to proceedings, either directly by being permitted to be present at the proceedings or indirectly by being allowed access to court records.

32.33 In *Raybos Australia Pty Ltd v Jones*, Kirby P stated that:

> The principles which support and justify the open doors of our courts likewise require that what passes in court should be capable of being reported. The entitlement to report to the public at large what is seen and heard in open court is a corollary of the access to the court of those members of the public who choose to attend … the principles which support open courts apply with special force to the open reporting of criminal trials and, by analogy contempt proceedings … [52]

32.34 Some legislation, however, recognises that certain proceedings may contain particularly sensitive information and should be subject to restricted media reporting. For example, s 121 of the *Family Law Act 1975* (Cth) makes it an offence, except in limited circumstances, to publish proceedings that identify persons or witnesses involved in family law proceedings. Section 91X of the *Migration Act 1958* (Cth) provides that the High Court, the Federal Court and the Federal Magistrates Court must not publish a person's name where the person has applied for a protection visa or a protection-related visa, or had such a visa cancelled.

Research access to court records

32.35 Research access may be considered an aspect of open justice because 'research offers a more considered and sustained evaluation of the way courts operate'.[53] Currently, none of the federal court rules specifically addresses the issue of researchers' access to court records. Researchers who seek access to court records that are not publicly accessible will be required to seek leave of the court, and in some

cases show that they have a proper interest in searching court records and inspecting court documents.[54]

32.36 The Family Court has a detailed policy in relation to the granting of research access to court records. The policy contains a number of requirements, including: the preservation of confidentiality of information; obtaining informed consent from study participants; restriction of access to medical or other treatment records, or other client data collection systems, to qualified clinical investigators; and clearance from an appropriate and credible ethics committee for certain types of studies. Applications for research access are considered by the Family Court's Research Committee, which makes recommendations to the Chief Justice and the Chief Executive Officer of the Family Court on whether access to the court's resources should be granted.

32.37 In its discussion paper on access to court records, the County Court of Victoria proposed a detailed process for approval of academic or commercial research utilising court records.[55] In its report on access to court records, the New Zealand Law Commission recommended that there be a single entry point for all requests for access to court records by researchers, and that the process and criteria for considering all research proposals be articulated fully and published.[56]

Harmonisation of court rules

32.38 In recent years, there has been some progress in the harmonisation of court rules in different areas of Australian law. The Council of Chief Justices and the Australian Institute of Judicial Administration have formed a Harmonisation of Rules of Court Committee. The Committee has harmonised rules of court in the area of corporations procedure, subpoenas, discovery of documents, and service of process outside the jurisdiction.[57] In 2001, the Federal Court and the Federal Magistrates Court completed a joint project to develop harmonised rules for bankruptcy proceedings.[58]

32.39 There are two ways in which court rules can be harmonised:

- vertical harmonisation, that is, harmonisation of the rules and procedures of courts within the same hierarchy, and
- horizontal harmonisation, that is, harmonisation of the rules and procedures of courts in different hierarchies, but which deal with the same subject matter, for example, federal, State and Territory courts when dealing with corporations matters.[59]

---

54 See, eg, *Federal Magistrates Court Rules 2001* (Cth) r 2.08(2).

55 County Court of Victoria, *Discussion Paper: Access to Court Records* (2005), [28]. The Court stated that it would consider feedback on the discussion paper from court users and the general public in preparing its draft policy on access to court records: County Court of Victoria, *2005–06 Annual Report* (2006), 8.

56 New Zealand Law Commission, *Access to Court Records*, Report 93 (2006), [8.40], rec R27.

57 Australian Government Attorney-General's Department, *Federal Civil Justice System Strategy Paper* (2003), 67.

58 Federal Magistrates Court of Australia, *Annual Report 2005–2006* (2006), 13, 18.

59 Australian Government Attorney-General's Department, *Federal Civil Justice System Strategy Paper* (2003), 66.

32.40 The purpose of harmonising court rules is 'to simplify legal procedures by removing unnecessary differences between courts'. The benefits of harmonisation are said to be: promoting a more efficient and less costly process for parties by removing the need for parties and practitioners to familiarise themselves with various procedural rules in different jurisdictions; and enhancing access to the courts by reducing complexity, inconvenience and expense.[60]

32.41 On the other hand, 'it can be argued that inappropriate harmonisation can discourage development of the law by stifling innovation and social experimentation'. Particular concerns have been expressed about the potential of vertical harmonisation to increase the cost of litigation in lower courts by introducing more complex rules. It has been said that some differences in court procedures could be of benefit to court users, particularly where lower courts may have simpler procedures specifically designed for less complex proceedings.[61]

32.42 In its 2003 strategy paper on the federal civil justice system, the Attorney-General's Department recommended 'that the courts continue to develop, where appropriate, uniform procedures for those areas of law in which the same jurisdiction can be exercised in more than one court'.[62]

32.43 The ALRC reviewed the issue of non-party access to court records as part of its inquiry into the protection of classified and security sensitive information. In its report, *Keeping Secrets: The Protection of Classified and Security Sensitive Information* (ALRC 98), the ALRC identified a number of inconsistencies across state and federal court legislation and rules concerning public access to evidence and other court documents, including: the types of document that may be accessed; when public access can be presumed; whether leave of the court is required for access; and the release of transcripts to non-parties.[63] The ALRC recommended that the Standing Committee of Attorneys-General (SCAG) order a review of federal, state and territory legislation and court and tribunal rules relating to non-party access to evidence and other documents produced in relation to proceedings, with a view to developing and promulgating a clear and consistent national policy.[64]

Options for reform

32.44 There are a number of ways in which non-party access to court records could be standardised. One option is to grant different levels of access for different types of information on court records. In its discussion paper, *Review of the Policy on Access to*

---

60 Ibid, 66–67.
61 Ibid, 67.
62 Ibid, rec 4.

64 Ibid, Rec 7–1. This recommendation has not yet been implemented.

Court Information,[65] the Attorney General's Department of New South Wales proposed a system whereby court information is classified as either open to public access or restricted public access.[66] Restricted access information, such as social security and tax file numbers and driver's licence and motor vehicle registration numbers, would be subject to legislative prohibition against media publication.[67] Restricted access information would also be subject to the provisions of the *Privacy and Personal Information Protection Act 1998* (NSW).[68]

32.45 A variation of this first approach is the recommendation in the report on access to court records prepared by the New Zealand Law Commission.[69] The New Zealand Law Commission recommended the enactment of a Court Information Act based on a presumption of open court records limited only by principled reasons for denying access,[70] including the protection of sensitive, private or personal information.[71]

32.46 Another option is to determine the level of access to court records by reference to the nature of the proceedings. In its discussion paper, *Access to Court Records*, the County Court of Victoria proposed that: non-party access to civil files generally be available unless the court orders otherwise; limited access to parties to criminal or appeal files, before and after the trial, at the discretion of the registrar on a case by case basis; and no access to criminal or appeal files by non-parties without an order of the court.[72]

32.47 A third option to regulate access to court records is to remove certain identifying information from the records before publication. In its report on privacy and public access to electronic case files, the Committee on Court Administration and Case Management (a committee of the Judicial Conference of the United States) recommended that civil and bankruptcy case files be made available electronically to the same extent they are available at the courthouse, provided that certain 'personal data identifiers' are modified or partially redacted.[73] In September 2003, the Judicial Conference further permitted remote public access to electronic criminal case files

73 Social security cases are to be excluded, however, from electronic access: Judicial Conference of the United States—Committee on Court Administration and Case Management, *Report of the Judicial Conference Committee on Court Administration and Case Management on Privacy and Public Access to Electronic Case Files* <www.privacy.uscourts.gov/Policy.htm> at 14 August 2007.

(with certain exceptions) if specified personal identifiers were edited.[74] Electronic access to court records is discussed further in Chapter 4.

Submissions and consultations

32.48 Some stakeholders were of the view that one set of principles for access to court records would be problematic.[75] One stakeholder submitted that 'any attempt to standardise arrangements for access to court records for the purposes of consistency, runs the risk of failing to take into account the nature and function of specialist courts and tribunals'. It was submitted that the principles related to accessing the files of specialist courts are influenced by public policy considerations different to those involved in accessing the files of courts that have broad jurisdiction, and that uniformity should not be achieved at the expense of the interests of persons involved or affected by litigation.[76]

32.49 The Legal Aid Commission of New South Wales submitted that:

> the right balance between access and disclosure of court records and judgements is not something that can be resolved by following a set of principles of general application. This is a further area where the Privacy Commissioner should be encouraged to prepare codes of practice or guidelines.[77]

32.50 In contrast, the OPC submitted that a coordinated approach between federal and state and territory courts would provide a more consistent framework for the electronic publication of court records. It suggested that, since the *Privacy Act* does not cover state and territory courts, the matter should be referred to SCAG, as recommended in ALRC 98.[78]

32.51 The Family Law Council suggested that police officers should have access to the Family Court's database so that officers could deal with cases of family violence that arise in the family law context—for example, where police are sent to recover a child from a parent who has wrongfully retained the child without much information about the circumstances surrounding the recovery orders issued by local magistrates. Another example is

> where the court has ordered that a supervisor be present when a parent spends time with a child. Without access to information on the child related orders, police might attend a scene and remove the person responsible for supervising a parent spending time with a child without also removing the child as happened last year in Queensland. At the moment, police must rely on seeing the physical orders when they attend the scene.[79]

32.52 In relation to research access to court records, it was suggested in one submission that, although there is 'justifiable community interest' in the work of federal courts, access to court files by researchers should be regulated by the individual courts.[80]

ALRC's view

32.53 Since federal courts have differing jurisdictions, different considerations apply in relation to the levels of access to their records. For example, the Federal Court and the Federal Magistrates Court have broad jurisdiction, covering a wide range of matters. In contrast, the sensitive nature of the jurisdiction of the Family Court requires specific restrictions on access. It would be inappropriate to have one set of access rules for all federal courts. There is, however, merit in having the same access rules for courts in different hierarchies that deal with similar types of cases.

32.54 Currently, state and territory courts are excluded from the definition of 'organisation' and are not covered by the *Privacy Act*.[81] In the ALRC's view, a coordinated approach by federal, state and territory courts and tribunals would provide more consistency in respect of non-party access to court and tribunal records. The ALRC reaffirms its recommendation made in ALRC 98, that SCAG order a review of court and tribunal rules in relation to non-party access to court records, with a view to promoting a national and consistent policy.[82]

32.55 In relation to access by police officers to the Family Court's database in particular types of matters, the ALRC understands that the police are already allowed to do so under the *Family Law Rules 2004* (Cth). As mentioned above, under rule 24.13 of the *Family Law Rules*, with the permission of the court, a person is allowed to search, inspect or copy a document forming part of the court record if he or she can demonstrate a 'proper interest' in the case or the information in the court record. Police officers should not have any difficulty in demonstrating a proper interest in the course of carrying out of their law enforcement functions.

32.56 As for research access to court records, the ALRC considers that the principle of open justice is designed to promote research, given that research contributes to the understanding and improvement of the court system. Therefore, provided there are

sufficient safeguards in place to ensure the proper handling of personal information, research should be encouraged. The Family Court already has such a policy, but it is not available on the court's website. Other federal courts have not published a written policy in relation to access to court records for research purposes. The ALRC proposes that federal courts that do not have such a policy should develop and publish one. Such policies should address issues concerning the privacy of court users, such as confidentiality, the need for informed consent by participants, restricted access to sensitive information, and approval by ethics committees where appropriate.

Proposal 32–1 Federal courts that do not have a policy on granting access for research purposes to court records containing personal information should develop and publish such policies.

Party and witness access to court records

32.57 Case files are accessible by parties and their legal representatives. One commentator has asked whether this right should extend to witnesses, on the basis that they are identified in the record and have the right to know what information is held about them.[83]

32.58 Another issue is whether parties should have the right to correct or annotate inaccurate or irrelevant material on the record. It has been argued that, since both freedom of information and privacy legislation gives individuals the right to correct information held about them in public records, the same rule should apply to court records.[84]

Submissions and consultations

32.59 One stakeholder submitted that witnesses should not be able to access court files because 'there is a real risk that the evidence and testimony of that witness may be affected by perusing the court file before giving his or her evidence', and where access to court records are restricted,

> the information held on the court file, even if inaccurate, is not publicly available and is therefore unlikely to be able to be accessed by or used by someone in a position to adversely affect the witnesses' interests. [85]

32.60 It was also submitted that allowing parties to correct or annotate inaccurate or irrelevant information on the court record 'may contaminate the court record, which is

83 C Puplick, 'How Far Should the Courts be Exempted from Privacy Regulation?' (2002) 40(5) *Law Society Journal* 52, 55.
84 Ibid, 55.
85 Confidential, *Submission PR 214,* 27 February 2007.

meant to accurately reflect the material before the court rather than commentaries upon the evidence', and would represent a significant 'interference with the role and powers of Courts on appeal where additional evidence may be permitted, but only in limited circumstances'.

> Permitting annotations elevates the purpose of the court record from documents gathered to serve only the dispute resolution process to become an independent source of information which has intrinsic value in its own right. Treating court records in this way may lead to parties preparing documentation and presenting information in a form not only designed to facilitate the resolution of a dispute, but also with one eye to the court record itself forming a lasting repository of information. If this were the case issues the subject of judicial management or decision could be fought and refought by those dissatisfied with the outcome of proceedings and manifestly unable to move on in their lives. It is hard to see how this would be desirable.[86]

ALRC's view

32.61 The ALRC does not consider that parties and witnesses to proceedings should have the right to change or annotate court records. The purpose of court records is to reflect accurately the materials before the court for the purposes of the court's adjudicative functions. The nature of proceedings and the material collected in an adversarial system are inherently contentious. Allowing parties or witnesses to change or annotate court records would be a significant interference with the court's role as the arbiter of disputes. In addition, court records ought to reflect accurately the materials and evidence on which a court's decision is based, especially for the purposes of review on appeal.

32.62 Allowing witnesses to access court files during proceedings runs the risk that the evidence and testimony of witnesses may be affected before they give evidence. Witnesses are often ordered, at the discretion of the judge, to stay out of court in order to avoid the possibility that the testimony of a witness changes according to what has been seen and heard in court.[87] Similar considerations should apply in relation to court records.

Federal tribunals

Industrial tribunals

32.63 Agencies listed in Schedule 1 of the FOI Act are exempt from the *Privacy Act* except in relation to administrative matters.[88] These agencies include the AIRC, and the Industrial Registrar and Deputy Industrial Registrars. Another agency listed in

86 Ibid.

87 *R v Bassett* [1952] VLR 535; *R v Tait* [1963] VR 520, 523; *Moore v Registrar of Lambeth County Court* [1969] 1 All ER 782, 783; *R v Lister* [1981] 1 NSWLR 110, 114.

88 *Privacy Act 1988* (Cth) s 7(1)(a)(i)(A), (b).

Schedule 1 of the FOI Act is the Australian Fair Pay Commission (AFPC). The AFPC is not a tribunal.[89] The exemption that applies to the AFPC is considered in Chapter 33.

32.64 The AIRC is an independent, national industrial tribunal established under the *Workplace Relations Act 1996* (Cth). The functions of the AIRC include: assisting employers and employees in resolving industrial disputes; handling certain termination of employment claims; rationalising and simplifying awards; and dealing with applications about industrial action.[90] The Industrial Registrar and Deputy Registrars provide administrative support to the AIRC. They also have responsibilities relating to the registration of unions and employer associations and their financial accountability.[91]

32.65 In performing its functions, the AIRC has certain powers, including the power to: inform itself in any manner it thinks appropriate; take evidence on oath or affirmation; conduct proceedings in private; summons any person to be present before the AIRC; compel the production of documents and other things; direct a person to attend a conference; and make interim and final decisions.[92]

Other federal tribunals

32.66 Other than the AIRC, no federal tribunals are exempt from the operation of the *Privacy Act*. Some examples of federal tribunals include: the Administrative Appeals Tribunal (AAT); the Migration Review Tribunal (MRT); the Refugee Review Tribunal (RRT); and the Social Security Appeals Tribunal (SSAT).

32.67 The AAT provides independent review of a wide range of administrative decisions made by the Australian Government and some non-government bodies. The AAT has jurisdiction to review decisions made under more than 400 separate Acts and legislative instruments, including decisions in the areas of social security, taxation, veterans' affairs and workers' compensation, bankruptcy, civil aviation, corporations law, customs, freedom of information, immigration and citizenship, industry assistance and security assessments undertaken by the Australian Security Intelligence Organisation.[93]

---

89 The AFPC is an independent, statutory body that is responsible for setting and adjusting federal minimum wages to promote the economic prosperity of the people of Australia: *Workplace Relations Act 1996* (Cth) s 23.

90 Ibid s 62; Australian Industrial Relations Commission, *About the Commission* <www.airc.gov.au> at 5 August 2007.

91 Australian Industrial Relations Commission, *About the Commission* <www.airc.gov.au> at 5 August 2007.

92 *Workplace Relations Act 1996* (Cth) ss 111, 115.

93 Administrative Appeals Tribunal, *About the AAT* <www.aat.gov.au/AboutTheAAT.htm> at 12 August 2007.

32.68 The AAT is generally required to hold hearings in public except where the AAT is satisfied that, by reason of the confidential nature of any evidence or matter or for any other reason, it is desirable for the hearing to be held in private.[94] The AAT may give directions prohibiting or restricting the: publication of the names and addresses of witnesses; publication of matters contained in documents lodged with, or received in evidence by, the AAT; and the disclosure to some or all of the parties of evidence given before the AAT, or of the content of a document lodged with, or received in evidence by, the AAT.[95] In addition, application for a review of a security assessment made to the Security Appeals Division of the AAT must be held in private.[96] The AAT also may restrict the publication of evidence and findings in the hearing of such an application.[97] The AAT is required to give reasons either orally or in writing for its decision, except in limited circumstances.[98]

32.69 Members and staff of the AAT are subject to a number of provisions prohibiting the disclosure of information in particular circumstances. These confidentiality obligations are found in the *Administrative Appeals Tribunal Act 1975* (Cth) and in other Acts and legislative instruments that confer jurisdiction on the AAT.[99]

32.70 The MRT is a merits review body established under the *Migration Act 1958* (Cth). The MRT provides a final, independent, merits review of visa and visa-related decisions made by the Minister for Immigration and Citizenship or, more typically, by officers of the Department of Immigration and Citizenship, acting as delegates of the Minister.[100] The MRT must conduct hearings in public, unless the tribunal considers that it is in the public interest to take evidence in private.[101] Examples of matters where an MRT review may be conducted in private include cases that involve allegations of children at risk of domestic violence, or sensitive information about the health of an individual.[102]

32.71 The RRT was also established under the *Migration Act*. It is an independent merits review tribunal, responsible for reviewing decisions made by the Department of Immigration and Citizenship to refuse or cancel protection visas to non-citizens in Australia. The RRT also has the power, in respect of certain 'transitory persons', to conduct an assessment of whether a person falls within the legal meaning of 'refugee'.[103] Unlike a court, the RRT is not adversarial. The Department is not usually

represented at RRT hearings. The RRT is inquisitorial in nature and can obtain whatever information it considers necessary to conduct the review. All reviews before the RRT must be conducted in private.[104]

32.72 Both the MRT and RRT are subject to the same confidentiality requirements under the *Migration Act*. Sections 377 and 439 of the Act prohibit members and officers of the tribunals and interpreters from recording, communicating or divulging any information or documents about a person obtained in the course of exercising a function or duty under the Act, unless it is necessary for the performance of that function or duty or for the purposes of the Act. In addition, both tribunals have the power to restrict publication of information if it is in the public interest to do so.[105]

32.73 The SSAT is a statutory body established under the *Social Security (Administration) Act 1999* (Cth). It falls within the portfolio of the Minister for Families, Community Services and Indigenous Affairs. The role of the SSAT is to conduct merits review of administrative decisions made under social security law, family assistance law, child support law and various other pieces of legislation. It is the first level of external review of decisions made by Centrelink about social security, family assistance, education or training payments. It is also the first level of external review of most decisions made by the Child Support Agency.[106]

32.74 The SSAT must hear reviews in private, and directions may be given as to the persons who may be present at any hearing of a review. In giving such directions, the wishes of the parties and the need to protect their privacy must be considered.[107] The Executive Director of the SSAT may make an order directing a person who is present at the hearing not to disclose information obtained in the course of the hearing.[108] When the SSAT makes its decision on a review, it must prepare a written statement setting out the decision, the reasons for the decision and the findings on any material questions of fact, and refer to evidence and other materials on which the findings of fact were based.[109] A copy of the statement must be given to the parties to the review.[110] Members of the tribunals and interpreters are prohibited from recording, communicating or divulging any information or documents about a person obtained in the course of exercising a function or duty under the Act, unless it is necessary for the performance of that function or duty or for the purposes of the Act.[111]

Application of the IPPs to federal tribunals

32.75 Federal tribunals are currently able to rely on the exceptions to Information Privacy Principles (IPPs) 10 and 11 to use and disclose personal information in the course of exercising their functions.[112] IPPs 10 and 11 relevantly provide that an agency may use or disclose personal information where the:

- individual is aware, or reasonably likely to be aware, that information of that type is usually passed to a person, body or agency: IPP 11.1(a);
- individual has consented to the use or disclosure: IPPs 10.1(a), 11.1(b);
- record-keeper believes on reasonable grounds that the use or disclosure is necessary to prevent or lessen a serious and imminent threat to the life or health of the individual or other persons: IPPs 10.1(b), 11.1(c);
- use or disclosure is required or authorised by or under law: IPPs 10.1(c), 11.1(d);
- use or disclosure is reasonably necessary for enforcement of the criminal law or a law imposing a pecuniary penalty, or for the protection of the public revenue: IPPs 10.1(a), 11.1(e); or
- use of the information is directly related to the purpose for which it was obtained: IPP 10.1(e).

32.76 In addition, these tribunals' constituent Acts authorise the use and disclosure of personal information in certain situations.

Other jurisdictions

32.77 Some state privacy legislation provides that tribunals are exempt in relation to their judicial, quasi-judicial or decision-making functions. In New South Wales, tribunals are exempt from the operation of the *Privacy and Personal Information Protection Act 1998* (NSW) in respect of their judicial functions.[113] In Victoria and Tasmania, tribunals are exempt from state privacy legislation in respect of their judicial and quasi-judicial functions.[114] In the Northern Territory, tribunals are exempt from the operation of the *Information Act 2002* (NT) in relation to their decision-making functions.[115]

114 *Information Privacy Act 2000* (Vic) s 10; *Personal Information Protection Act 2004* (Tas) s 7(a), (b).

115 *Information Act 2002* (NT) s 5(5)(a). A tribunal is defined as a body other than a court established by or under an Act that has judicial or quasi-judicial functions: *Information Act 2002* (NT) s 4.

Submissions and consultations

Industrial tribunals

32.78 In IP 31, the ALRC asked whether the AIRC, and the Industrial Registrar and Deputy Registrars should be exempt from the operation of the *Privacy Act*.[116] The President of the AIRC, the Hon Justice GM Giudice, submitted that the AIRC should remain exempt from the operation of the *Privacy Act* for two main reasons: the AIRC is obliged to act judicially; and, subject to some exceptions, its hearings and decisions are open to public scrutiny. His Honour stated that the policy issues that apply to the courts also apply to bodies that are required to act judicially, and therefore the AIRC should be in the same position as the courts.[117]

32.79 The Australian Government Department of Employment and Industrial Relations (DEWR) submitted that, on public interest grounds, the industrial tribunals should remain exempt in relation to non-administrative matters. DEWR suggested that:

> These organisations are not exempt in relation to their administrative activities, only in connection with their official functions. In this regard, these standard setting, conciliation and quasi-judicial tribunals are treated in the same fashion as federal courts … and DEWR is not aware of any compelling arguments to remove the exemption.[118]

32.80 While not commenting on whether the current partial exemptions that apply to industrial tribunals are appropriate, the OPC suggested that 'entities with like functions should be treated consistently under the *Privacy Act*'. The OPC also suggested that 'where exemptions apply it would be worthwhile introducing good privacy practices so that individuals understand how their personal information will be handled'.[119]

32.81 One individual submitted that there is no valid reason why there should be an exemption for agencies in the area of industry and workplace.[120]

Other federal tribunals

32.82 In IP 31, the ALRC asked whether any other federal tribunals should be exempt from the operation of the *Privacy Act*.[121] Other than the four federal tribunals that made submissions on this issue, the ALRC has received few responses to this question.[122] Of

120 K Handscombe, *Submission PR 89,* 15 January 2007.
121 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006) [5.69], Question 5–3.
122 The President of the AIRC also made a submission in relation to the current exemption from the operation of the *Privacy Act* that applies to the AIRC: Justice G Giudice, *Submission PR 91,* 15 January 2007 This issue is discussed in the following section.

the four tribunals—the AAT, MRT, RRT and SSAT—only the AAT submitted that it should be partially exempt from the operation of the *Privacy Act*.

Current legislative framework and application of the IPPs to federal tribunals

32.83 All four tribunals submitted that their legislative framework provides an appropriate level of safeguards for their handling of personal information, including requirements under different pieces of legislation,[123] and confidentiality obligations on tribunal staff prohibiting disclosure of information in particular circumstances.[124]

32.84 The tribunals also considered that the current exceptions to IPP 11 allow them to use personal information in the performance of their functions.[125] For example, the AAT submitted that:

> In disclosing personal information, the Tribunal generally relies on the following two exceptions to the basic rule set out in IPP 11 that personal information should not be disclosed:
>
> (a) individuals are reasonably likely to have been aware, or made aware, that the information is usually disclosed; and
>
> (d) the disclosure is required or authorised by law.

32.85 The AAT submitted, however, that:

> The precise scope of what the *Administrative Appeals Tribunal Act 1975* and the principle of open justice require or authorise in relation to the disclosure of information in the context of Tribunal proceedings is not entirely clear. [126]

32.86 The AAT also suggested that the application of IPP 7 in relation to its decisions may require consideration.

> The Tribunal recognises that, occasionally, there may be errors in relation to personal information recorded in decisions. The Administrative Appeals Tribunal Act 1975 provides for the alteration of the text of a decision in two circumstances:
>
> - where there is an obvious error in the text of a decision: s 43AA; and
> - where the Tribunal makes a confidentiality order in relation to certain information contained in the decision: s 35(2).
>
> Beyond these circumstances, however, the Tribunal does not alter the text of a decision that has been published.

126 Administrative Appeals Tribunal, *Submission PR 201,* 20 February 2007.

> If it is alleged that an error in relation to the Tribunal's treatment of personal information amounts to an error of law, an appeal must be lodged in the Federal Court. There may be circumstances, however, in which the error is not relevant to the ultimate decision. It may be that a statement could be prepared which is appended to the decision. The precise circumstances in which this should occur and how it should be dealt with would need to be considered carefully.[127]

Openness of proceedings and decisions

32.87 Tribunals indicated in submissions that not all their proceedings are open to the public. The AAT and MRT are generally required by legislation to conduct hearings in public,[128] while the RRT and SSAT are required to conduct hearings in private.[129] The AAT submitted further that:

> it would be helpful in this context if the operation of the principle of open justice were given clearer expression in the legislative framework within which the Tribunal operates. Clarification of the Tribunal's powers in relation to the granting of access to documents and the publication of information would assist the Tribunal, parties, their representatives and the public to understand the way in which the Tribunal operates and exercises its powers.[130]

Exemptions for individual tribunals from the Privacy Act?

32.88 The AAT submitted that 'in the interests of consistency, it would be appropriate to treat the [AAT] in the same way as the federal courts'. In addition, the AAT stated that the principle of open justice applies to the AAT as it does to federal courts. It considered, however, that personal information about its personnel should continue to be dealt with in accordance with the *Privacy Act*.[131]

32.89 The MRT, RRT and SSAT submitted that they should not be exempt, either completely or partially, from the operation of the *Privacy Act*.[132] In a joint submission, the RRT and MRT submitted that they did not consider that there is a need for them to be exempt because IPP 11(1)(d) recognises adequately their need to disclose personal information for the purposes of their review functions. They stated that the provisions of their own governing legislation,

> in conjunction with the *Privacy Act*, operate effectively to ensure a balance between use and disclosure of personal information where required for review process and adequate protection of personal information.[133]

32.90 The SSAT did not consider that it should be exempt from the *Privacy Act*, provided that IPPs 10 and 11 remain essentially the same, so as to enable the use and disclosure of personal information by the SSAT.[134]

Exemption for 'federal tribunals' as a class of agencies from the Privacy Act?

32.91 The AAT and SSAT submitted that it may not be appropriate to exempt all federal tribunals.[135] The SSAT stated that agencies, and in particular, federal tribunals, should not be exempt from the operation of the *Privacy Act* by genus, particularly given the different objects and purposes of the FOI Act and *Privacy Act*. The SSAT submitted that:

> given the very diverse and particular natures of these tribunals' jurisdictions, the SSAT is of the view that a global response is not appropriate … It may be, in a particular case, that a particular tribunal, or particular acts or practices of a particular tribunal, should be exempt from the operation of the *Privacy Act*.[136]

32.92 Similarly, the AAT stated that exempting all federal tribunals from the *Privacy Act* in respect of their non-administrative activities may not be appropriate, because some of them are required to hold hearings in private.[137]

32.93 In contrast, the MRT and RRT stated that, although they do not consider that there is a need for them to be exempt from the operation of the *Privacy Act*, they anticipate that 'consideration may be given by the ALRC to the degree to which there should be consistency in coverage in respect to all federal tribunals'.[138]

32.94 The OPC noted that some tribunals, such as the AAT, have been the subject of complaints by individuals to the OPC.

> A number of the complaints have involved the AAT publishing its decisions. As with the exempt tribunals, the AAT has lawful authority to publish their findings … the Office would suggest that entities with like functions be treated consistently under the *Privacy Act*.[139]

Exemption from the FOI Act

32.95 The AAT and SSAT submitted that they should be exempt from the FOI Act.[140] The AAT stated that it would be appropriate for it to be exempt from the FOI Act, in the same way as the courts, because

> access to documents relating to applications under the *[Administrative Appeals Tribunal] Act* should be dealt with in accordance with policies and practices developed by the Tribunal in the context of the operation of the principle of open justice, meeting the requirements of procedural fairness and providing appropriate protection of personal information.[141]

32.96 The SSAT submitted that it should be exempt from the FOI Act in respect of its review functions

> to ensure that persons are precluded from requesting access to documents provided to the SSAT for the purposes of carrying out its review function. Many of these documents arguably do not squarely come within the current FOI exemptions in Part IV of the FOI Act, and likewise may not be protected from disclosure by the confidentiality provisions in our own legislation. Given the sensitive and personal nature of our hearings … and the fact that the SSAT's hearings are legislatively required to be held 'in private', this seems to the SSAT to be desirable and appropriate.[142]

ALRC's view

32.97 The partial exemption of federal courts from the operation of the *Privacy Act* is based partly on the need to balance the principle of open justice with the interests of privacy. The principle of open justice, however, does not apply equally to all federal tribunals. The extent to which the principle applies to a particular tribunal depends on the nature of the tribunal's jurisdiction and the tribunal's operating environment. The principle of open justice also does not always apply equally to all proceedings before a particular tribunal. For example, some tribunals are generally required to hold hearings in public, but are required to hold particular types of hearings in private. They may also have a discretion as to whether to hold hearings in public or in private.

32.98 The partial exemption of federal courts is also based in part on the separation of powers in Chapter III of the *Australian Constitution*. This rationale does not apply to federal tribunals, which exercise executive rather than judicial power. Nevertheless, tribunals have adjudicative functions that are similar to the judicial functions of courts.[143] The functions of a tribunal generally include: evaluating evidence;

conducting hearings; defining or determining any legal rights; and in the context of administrative review, not confining its evidence to that used by the decision maker.[144] On this basis, there is arguably a case for partially exempting federal tribunals from the *Privacy Act* in respect of their adjudicative functions.

32.99 Different tribunals are established, however, for different purposes. Some tribunals, such as the AAT, are generalist tribunals that adjudicate over a wide range of disputes. Other tribunals, such as the MRT and RRT, are specialist tribunals that hear a limited range of disputes. The jurisdictions of tribunals also differ in terms of the sensitivity of the subject matter. Some matters are particularly sensitive, such as the review of decisions by the RRT concerning protection visas for non-citizens.

32.100 To date, only two federal tribunals, the AAT and the AIRC, submitted that they should be exempt from the operation of the *Privacy Act*. Other federal tribunals that made submissions did not indicate that an exemption is necessary. The ALRC is interested in further views on whether federal tribunals should be exempt in respect of their adjudicative functions.

Exemption from the FOI Act

32.101 The AAT submitted that it should be exempt from the FOI Act in respect of non-administrative matters, on the basis that it is subject to the principle of open justice. The SSAT submitted that it should be exempt from that Act because of the sensitive and personal nature of its hearings, which are to be held in private.

32.102 IPPs 6 and 7 provide that the rights to access, or require the correction or amendment of, records held by agencies are subject to other applicable Commonwealth law, such as the FOI Act. Therefore, access and correction of records containing personal information about an individual are currently dealt with under the FOI Act. In Chapter 12, the ALRC proposes that an individual's right to access or correct his or her own personal information be dealt with in a new Part of the *Privacy Act* instead of under the FOI Act.[145]

32.103 It is beyond the ALRC's current Terms of Reference to inquire into access by persons other than the individual concerned to evidence and other documents produced in relation to tribunal proceedings under the FOI Act. Therefore, the ALRC does not propose to consider whether federal tribunals should be exempt from the operation of the FOI Act. As stated above, however, the ALRC reaffirms its recommendation in ALRC 98 that SCAG order a review of court and tribunal rules in relation to non-party access to court records, with a view to promoting a national and consistent policy.[146]

145 Proposals 12–6, 12–7.

146 Australian Law Reform Commission, *Keeping Secrets: The Protection of Classified and Security Sensitive Information*, ALRC 98 (2004), Rec 7–1.

32.104 As for an individual's right of access and correction in relation to his or her own personal information, the ALRC's preliminary view is that there may be some circumstances in which it is not appropriate for an individual to correct certain records, for example, written decisions by a federal tribunal. There may also be situations where access to a tribunal's records should not be granted because it might involve, for example, an unreasonable disclosure of personal information about another individual.

32.105 In Chapter 12, the ALRC invites submissions on what exceptions should apply to the general provision granting an individual the right to access his or her own personal information under the *Privacy Act*.[147] As part of that general question, the ALRC is interested in views on whether any exceptions should apply when granting an individual the right to access his or her own personal information held by a federal tribunal.

Question 32–1 Should the *Privacy Act* be amended to provide that federal tribunals are exempt from the operation of the Act in respect of their adjudicative functions? If so, what should be the scope of 'adjudicative functions'?

147 Question 12–1.

33. Exempt Agencies under the *Freedom of Information Act 1982* (Cth)

ALRC's view 971

Introduction

33.1 Currently, a number of agencies are exempt from the requirements to comply with the *Privacy Act 1988* (Cth). The Act achieves this by reference to their exempt status under the *Freedom of Information Act 1982* (Cth) (FOI Act).[1] This chapter describes the functions of these agencies and considers whether they should remain exempt from the operation of the *Privacy Act*.

1 *Privacy Act 1988* (Cth) ss 7(1)(a)(i)(A)–(C), (b), (c). See also *Privacy Act 1988* (Cth) s 7A.

33.2 It should be noted that all Australian Government agencies, including the agencies discussed in this chapter, are required to comply with the *Protective Security Manual* (PSM 2005).[2] PSM 2005 is a policy document that sets out guidelines and minimum standards in relation to protective security for agencies and officers, as well as for contractors and their employees who perform services for the Australian Government. In particular, Part C of the PSM 2005 provides 'guidance on the classification system and the protective standards required to protect both electronic- and paper-based security classified information'.[3] This part sets out minimum standards addressing the use, access, copying, storage, security and disposal of classified information.

33.3 Australian Government agencies are also required by the PSM 2005 to comply with the *Australian Government Information Technology Security Manual* (ACSI 33). ACSI 33 has been developed by the Defence Signals Directorate (DSD) to provide policies and guidance to Australian Government agencies on the protection of their electronic information system.[4]

33.4 Although the PSM 2005 addresses some privacy issues that are dealt with under the Information Privacy Principles (IPPs) of the *Privacy Act*, the privacy protection under the PSM 2005 guidelines is restricted to security classified information and does not deal with other matters under the IPPs, such as the accuracy of personal information.

Australian Fair Pay Commission

Background

33.5 Section s 7(1) of the *Privacy Act* provides that an agency listed in Schedule 1 of the FOI Act is exempt from the operation of the *Privacy Act*, except in respect of matters of an administrative nature.[5] One of the agencies listed under Schedule 1 of the FOI Act is the Australian Fair Pay Commission (AFPC). The other agencies listed in Schedule 1 of the FOI Act are the Australian Industrial Relations Commission (AIRC), and the Industrial Registrar and Deputy Registrars. The exemption that applies to these other agencies is considered in Chapter 32.

33.6 Section 7(1) was originally intended to exempt from the operation of the *Privacy Act* 'industrial tribunals referred to in Schedule 1 of the FOI Act in respect of

---

3 Ibid.

4 Defence Signals Directorate, *Australian Government Information Technology Security Manual (ACSI 33)* (2004). There are two versions of ACSI 33. The security-in-confidence version contains the security policies and guidance for all classifications. The unclassified version only contains policies and guidance for the following classifications: public domain·unclassified, in-confidence, restricted, and protected. An unclassified version of ACSI 33 is available on the DSD's website: Defence Signals Directorate, *Australian Government Information Technology Security Manual (ACSI 33)* (2004).

5 *Privacy Act 1988* (Cth) s 7(1)(a)(i)(A), (b).

administrative matters',[6] such as the Australian Conciliation and Arbitration Commission (now the AIRC), and the Industrial Registrar and Deputy Industrial Registrars. In 2006, the FOI Act, which provides the mechanism for this exemption from the operation of the *Privacy Act*, was amended to include the AFPC in Schedule 1 of that Act.[7] The secondary materials relating to the regulations do not disclose the policy behind the exemption of the AFPC from the FOI Act and the *Privacy Act*.

33.7 The AFPC is an independent, statutory body established under the *Workplace Relations Amendment (WorkChoices) Act 2005* (Cth). The AFPC is responsible for setting and adjusting federal minimum wages to promote the economic prosperity of the people of Australia. The AFPC took over the wage-setting and adjusting functions of the AIRC, which retains its role as a national industrial tribunal dealing with employment disputes.[8] The primary functions of the AFPC are to conduct wage review and exercise its wage-setting powers as necessary. The main wage-setting powers of the AFPC include adjusting the standard federal minimum wage, as well as determining and adjusting: minimum classification rates of pay; special federal minimum wages for junior employees, employees with disabilities or employees to whom training arrangements apply; basic periodic rates of pay and basic piece rates of pay payable to employees or employees of particular classifications; and casual loadings.[9]

33.8 In performing its wage-setting function, the AFPC may inform itself in any way it thinks appropriate, including by: undertaking or commissioning research; consulting with any other person, body or organisation; or monitoring and evaluating the impact of its wage-setting decisions.[10] The AFPC must publish written wage-setting decisions and include reasons in its decisions.[11]

Submissions and consultations

33.9 In the Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether agencies specified in Schedule 1 of the FOI Act, including the Australian Fair Pay Commission, should be exempt from the *Privacy Act*.[12]

33.10 Few stakeholders commented specifically on the exemption that applies to the AFPC. The Australian Government Department of Employment and Industrial Relations (DEWR) submitted that the partial exemption that applies to agencies

12 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 5–3.

specified under Schedule 1 of the FOI Act should remain, because agencies that exercise standard-setting, conciliation and quasi-judicial functions should be exempt to the same extent as federal courts. It stated that it was not aware of any compelling arguments to remove the exemption.[13] In contrast, one individual submitted that there is no valid reason why agencies that deal with workplace and employment issues should be exempt.[14]

33.11 While the Office of the Privacy Commissioner (OPC) did not comment on whether the AFPC should remain exempt, it stated that 'entities with like functions should be treated consistently under the *Privacy Act*'. The OPC also suggested that 'where exemptions apply it would be worthwhile introducing good privacy practices so that individuals understand how their personal information will be handled'.[15]

33.12 More generally, some stakeholders submitted that exemptions of agencies from the operation of the *Privacy Act*, including those specified in the FOI Act, should be limited to the extent possible and any exemption should be justified.[16] The Commonwealth Ombudsman suggested that, 'even where an agency is exempt from coverage by the *Privacy Act*, it should be encouraged to adopt similar standards to the extent possible'.[17]

33.13 It was suggested in one submission that there is no justification for such broad exemptions from the *Privacy Act* for any of the agencies specified in Schedule 1 of the FOI Act.

> Any difficulties that compliance with the privacy principles might cause them should be dealt with by means of selective exceptions to particular principles and provisions, but only on the basis of detailed justification … The extent of any justifiable exemptions to or modifications of specific IPPs should be stated in the *Act*.[18]

ALRC's view

33.14 The original exemption under the *Privacy Act* was intended to apply to industrial tribunals, such as the AIRC. Since the AFPC has only taken over the AIRC's wage-setting function and not its dispute resolution function, the original policy justification that applied to industrial tribunals does not apply to the AFPC. Further, there appears to be no stated policy reason for exempting the AFPC from the requirement to comply with the *Privacy Act* in respect of its non-administrative functions. Therefore, it would appear that this exemption of the AFPC from the

Privacy Act only applies by virtue of the fact that the AFPC is now listed in Schedule 1 of the FOI Act.

33.15 As discussed in Chapter 30, any exemption from the *Privacy Act* should be limited to the extent possible and justified on sound policy grounds. There does not appear to be any policy justification for the AFPC's exemption. The function of standard setting cannot be compared with the exercise of judicial power, which is conferred by the *Australian Constitution*; or dispute resolution, where there may be an argument that the *Privacy Act* presents barriers to information exchange that is necessary for effective and efficient dispute resolution. The ALRC, therefore, proposes that the exemption that applies to the AFPC be removed.

33.16 Currently, the AFPC is exempt from provisions in the FOI Act, which grant an individual the right to access the AFPC's documents unless those documents relate to matters of an administrative nature.[19] In Chapter 12, the ALRC proposes that an individual's right to access or correct his or her own personal information be dealt with in a new Part of the *Privacy Act* instead of under the FOI Act.[20] The ALRC is also inviting submissions on what exceptions should apply to the general provision granting an individual the right to access his or her own personal information.[21] As part of that general question, the ALRC is interested in views on whether the AFPC should continue to be exempt from the general provision granting an individual the right to access his or her own personal information.

Proposal 33–1 The *Privacy Act* should be amended to remove the partial exemption that applies to the Australian Fair Pay Commission under s 7(1) of the Act.

Schedule 2 Part I Division 1 of the *Freedom of Information Act*

Background

33.17 Certain agencies listed in Schedule 2 Part I Division 1 of the FOI Act—including Aboriginal Land Councils and Land Trusts,[22] the Auditor-General and the National Workplace Relations Consultative Council—are exempt from compliance

19 *Freedom of Information Act 1982* (Cth) s 6.
20 Proposals 12–6, 12–7.
21 Question 12–1.
22 Aboriginal Land Councils and Land Trusts are created under the *Aboriginal Land Rights (Northern Territory) Act 1976* (Cth).

with the IPPs.[23] Other provisions of the Act, such as the tax file number provisions do apply to these agencies.

33.18 Section 7A of the *Privacy Act* provides that agencies listed in Schedule 2 Part I of the FOI Act should be treated as organisations, if prescribed by regulation. Where an agency has been prescribed by regulation for this purpose, the National Privacy Principles (NPPs) or an approved privacy code will apply. Currently, the only prescribed agencies are the Australian Government Solicitor and the Australian Industry Development Corporation.[24]

Aboriginal Land Councils and Land Trusts

33.19 Aboriginal Land Councils and Land Trusts were exempted from the FOI Act because they are separate from the executive arm of the government and therefore not subject to public sector responsibilities.[25] It is likely that this is also the reason that these bodies were exempted from the *Privacy Act* when that Act applied only to the public sector. It is unclear why they remain exempt from the *Privacy Act* now that the Act has been extended to the private sector.

Auditor-General

33.20 The Auditor-General is an independent statutory officer responsible for auditing the activities of most Commonwealth public sector entities. The Auditor-General is supported by the Australian National Audit Office, which provides the Australian Parliament with an independent assessment of certain areas of public administration, and assurance about public sector financial reporting, administration and accountability. The Auditor-General has broad information-gathering powers and authority to have access to Commonwealth premises.[26] While the Auditor-General is not required to comply with the IPPs, s 36(1) of the *Auditor-General Act 1997* (Cth) provides that a person who has obtained information in the course of performing an Auditor-General function must not disclose that information except in the course of performing that function.[27]

---

23 *Privacy Act 1988* (Cth) s 7(1)(a)(i)(B), (2). The intelligence agencies—namely, the Australian Security Intelligence Organisation, the Australian Secret Intelligence Service and the Office of National Assessment—and the Inspector-General of Intelligence and Security are also listed in sch 2 pt I div 1 of the FOI Act. Issues concerning the exemption of these agencies from compliance with the *Privacy Act* are discussed in Ch 31.

24 *Privacy (Private Sector) Regulations 2001* (Cth) reg 4. Note that the *AIDC Sale Act 1997* (Cth) provides for the sale of AIDC Ltd, the main operating subsidiary of the Australian Industry Development Corporation, and the progressive winding-down of the Australian Industry Development Corporation. AIDC Ltd was sold in 1998: Commonwealth of Australia, *Commonwealth National Competition Policy—Annual Report 1997–98* (1999). Due to some long term obligations, however, the winding down of the Australian Industry Development Corporation is unlikely to be completed before 2010: Australian Industry Development Corporation, *Statement of Intent* <www.finance.gov.au/gbab/docs/AIDC_SOI.pdf> at 16 August 2007.

National Workplace Relations Consultative Council

33.21 The National Workplace Relations Consultative Council is a consultative body that provides a forum for representatives of the Australian Government, employers and employees to discuss workplace relations matters of national concern.[28] In its review of the Freedom of Information Bill 1978 (Cth), the Senate Standing Committee on Constitutional and Legal Affairs expressed the view that the Council should not be exempt from the FOI legislation because the Council was a consultative body rather than an industrial tribunal, and the Council's proceedings were adequately protected under another provision of the Bill.[29]

33.22 During parliamentary debate on the Freedom of Information Bill 1981 (Cth), a number of parliamentarians commented that there was no reasonable justification for exempting many of the agencies in Schedule 2 to the Bill, many of which did not have commercial or intelligence functions.[30] Particular mention was made of the Aboriginal Land Councils and Land Trusts, the Auditor-General and the National Labour Consultative Council.[31]

33.23 In their 1994 inquiry into the FOI Act, the ALRC and the Administrative Review Council (ARC) commented that decisions to exempt particular agencies from the FOI Act have tended to be selective.[32] The ALRC and ARC recommended that all agencies listed in Schedule 2 Part I of the FOI Act (other than the intelligence agencies, the Inspector-General of Intelligence and Security and government business enterprises) should be required to demonstrate to the Attorney-General the grounds on

32 Australian Law Reform Commission and Administrative Review Council, *Freedom of Information*, IP 12 (1994), [12.4].

which they should be exempt from the operation of that Act. If they did not do this within 12 months, they should be removed from Schedule 2 Part I of that Act.[33]

33.24 On 5 September 2000, the Freedom of Information Amendment (Open Government) Bill 2000 (Cth) was introduced into the Senate by Senator Andrew Murray as a Private Member's Bill. The Bill was designed to amend the FOI Act to give effect to recommendations made by the ALRC and ARC. One proposal under the Bill was to revoke the exempt status of many of the agencies and particular documents of certain agencies listed in Schedule 2 to the FOI Act.[34]

33.25 The provisions of the Bill were referred to the Senate Legal and Constitutional Legislation Committee for inquiry. In its report, the Committee did not support the proposal to remove the exempt status from these agencies and documents on the basis that alternative ways of structuring the exemption provisions under the FOI Act should be examined more closely before amending the legislation.[35] The Bill was amended to remove the proposal.[36]

Submissions and consultations

33.26 In IP 31, the ALRC asked whether agencies specified in Schedule 2 Part I Division 1 of the FOI Act should be exempt from the *Privacy Act*.[37]

33.27 The ALRC received few submissions that commented specifically on this question. As mentioned above, some stakeholders submitted that the general approach to the exemption of any agencies from the *Privacy Act*, including those specified in the FOI Act, is that: the exemption should be limited to the extent possible and justified;[38] any exempt agency should be encouraged to adopt standards similar to those under the *Privacy Act* to the extent possible;[39] and any difficulties that compliance with the privacy principles might cause such agencies should be dealt with by means of selective exceptions on the basis of detailed justification.[40]

33.28 The Queensland Council for Civil Liberties submitted that where exemptions are justified, they should take the form of exceptions to the privacy principles. It submitted that, on this basis, agencies specified in Schedule 2 of the FOI Act

> should be required to demonstrate why they need to be exempt from the *Privacy Act* and if they do not do so, within a specified period of time, they should no longer be exempt. This follows from our generally accepted principle that privacy principles should apply universally unless there is some demonstrated reason why they should not be.[41]

Schedule 2 Part II Division 1 of the *Freedom of Information Act*

Background

33.29 A number of agencies listed in Schedule 2 Part II Division 1 of the FOI Act are exempt from the *Privacy Act* where their acts and practices relate to documents specified in the FOI Act, to the extent that those documents relate to the non-commercial activities of the agencies or of other entities.[42] In relation to documents that are *not* specified under the FOI Act, these agencies are covered by the IPPs where the documents concern the agencies' non-commercial activities or the non-commercial activities of other entities.[43] These agencies are also covered by the NPPs where their acts and practices relate to commercial activities or to documents concerning commercial activities.[44] In addition, they are required to comply with the tax file number provisions and, where applicable, the credit reporting provisions of the *Privacy Act*.[45] These agencies are described below.

Financial departments and agencies

33.30 The Australian Government Department of the Treasury focuses primarily on economic policy and has four principal functions—fostering a sound macroeconomic environment, advising on effective government spending and taxation arrangements, assisting in the formulation and implementation of effective taxation and retirement income arrangements, and advising on policy process and reforms that promote well functioning markets.[46] The Department's acts and practices relating to documents concerning the activities of the Australian Loan Council are exempt from the IPPs and NPPs to the extent that those documents relate to non-commercial activities.[47]

33.31 The Reserve Bank of Australia is a statutory authority, responsible for: formulating and implementing monetary and banking policy; maintaining financial

46 Australian Government—The Treasury, *About Treasury* <www.treasury.gov.au> at 11 August 2007.

47 *Privacy Act 1988* (Cth) ss 7(1)(c), 7A. The Australian Loan Council is a Commonwealth-State ministerial council that coordinates public sector borrowing. It comprises of the Australian Government Treasurer as Chairman, and state and territory treasurers: Australian Government, *2005–06 Budget Paper No 3—Federal Financial Relations 2005–06* (2005), 36.

system stability; contributing to the maintenance of full employment in Australia; and promoting the safety and efficiency of the payments system. It actively participates in financial markets, manages Australia's foreign reserves, issues Australian currency notes and serves as banker to the Australian Government.[48] The Reserve Bank has power to: receive money on deposit; borrow and lend money; buy, sell, discount and re-discount bills of exchange, promissory notes and treasury bills; buy and sell securities issued by the Australian Government and other securities; buy, sell and otherwise deal in foreign currency, specie, gold and other precious metals; establish credits and give guarantees; issue bills and drafts and effect transfers of money; underwrite loans; and issue, re-issue or cancel Australian notes.[49] The Reserve Bank is exempt where its acts and practices relate to documents concerning its banking operations (including individual open market operations and foreign exchange dealings) or exchange control matters, to the extent that these documents relate to non-commercial activities.[50]

33.32 The Export and Finance Insurance Corporation is a self-funding statutory corporation wholly owned by the Australian Government. It provides competitive finance and insurance services to Australian exporters and Australian companies investing in new projects overseas.[51] The Corporation is exempt from the operation of the *Privacy Act* where its acts and practices relate to documents concerning anything it has done under Part 4 (insurance and financial services and products) or Part 5 (national interest transactions) of the *Export Finance and Insurance Corporation Act 1991* (Cth), to the extent that those documents relate to non-commercial activities.[52]

Australian Transaction Reports and Analysis Centre

33.33 The Australian Transaction Reports and Analysis Centre (AUSTRAC) is Australia's anti-money laundering and counter-terrorism financing regulator and specialist financial intelligence unit within the portfolio of the Attorney-General. It oversees compliance with the reporting requirements of the *Financial Transaction Reports Act 1988* (Cth) and *Anti-Money Laundering and Counter-terrorism Financing Act 2006* (Cth) (AML/CTF Act) by a wide range of financial services providers, the gambling industry and others. It also provides financial transaction report information to state, territory and Australian law enforcement, security, social justice and revenue agencies, as well as certain international counterparts.[53] AUSTRAC is exempt from compliance with the *Privacy Act* in respect of documents concerning information communicated to it in relation to:

53 AUSTRAC, *About AUSTRAC* <www.austrac.gov.au> at 10 August 2007.

- reports of suspected illegal transactions by cash dealers involving currency in excess of $10,000 under s 16 of the *Financial Transaction Reports Act*; [54]

- reports of suspicious matters—that is, the reporting of a matter where there are reasonable grounds to suspect that funds are the proceeds of criminal activity, or are related to terrorism financing or money laundering—under s 41 of the AML/CTF Act; and

- further information requested by AUSTRAC from a reporting entity in relation to reports of suspicious matters, threshold transactions[55] and certain international funds transfer transactions under s 49 of the AML/CTF Act.[56]

33.34 Part 11 of the AML/CTF Act contains secrecy and access provisions concerning information obtained or held by AUSTRAC. Section 123 of the AML/CTF Act creates offences for 'tipping off'. A reporting entity is prohibited from disclosing that it has: formed a suspicion about a transaction or matter; given, or is required to give, a suspicious matter report to AUSTRAC; or provided further information under s 49(1) of the AML/CTF Act.[57] A similar provision in the *Financial Transaction Reports Act* applies to cash dealers in relation to suspected illegal transactions.[58]

33.35 An AUSTRAC official is prohibited from disclosing information or documents collected, compiled or analysed by AUSTRAC except for the purposes of: the Act; the performance of the functions of the Chief Executive Officer of AUSTRAC (AUSTRAC CEO); or the performance of the official's duties under the AML/CTL Act or the *Financial Transaction Reports Act*.[59] In addition, AUSTRAC officials and other investigating officials (such as the Commissioner of the Australian Federal Police and the Chief Executive Officer of the Australian Crime Commission) are prohibited from disclosing any information obtained under s 49 of the AML/CTL Act except for the purposes of the Act or in connection with their official functions and duties.[60]

---

54 A 'cash dealer' is defined to include, for example, a financial institution, an insurer or an insurance intermediary, a person who carries on a business of collecting, holding, exchanging, remitting or transferring currency on behalf of other persons: *Financial Transaction Reports Act 1988* (Cth) s 3.

55 A 'threshold transaction' means a transaction involving the transfer of not less than $10,000 of physical currency or e-currency, or a transaction specified in regulations to be a threshold transaction: *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth) s 5.

56 *Privacy Act 1988* (Cth) s 7(1)(c). A reporting entity is a person who provides a 'designated service': *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth) s 5. Designated services include a wide range of specified financial services, bullion trading services, gambling services and other prescribed services: *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth) s 6.

57 This is subject to certain exceptions under s 123(4)–(8) of the *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth).

58 *Financial Transaction Reports Act 1988* (Cth) s 16(5A), (5AA).

59 *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth) s 121.

60 Ibid s 122.

33.36 In the performance of his or her functions, the AUSTRAC CEO must consult with the Privacy Commissioner and take into account his or her comments made in the course of those consultations.[61]

33.37 The interaction between the AML/CTF Act and the *Privacy Act* is discussed further in Chapter 13.

Media regulatory agencies

33.38 The Australian Communications and Media Authority (ACMA) is a statutory body responsible for the regulation of broadcasting, radiocommunications, telecommunications and the internet. Its responsibilities include: promoting self-regulation and competition in the communications industry, while protecting consumers and other users; fostering an environment in which electronic media respects community standards and responds to audience and user needs; managing access to the radiofrequency spectrum; and representing Australia's communications and broadcasting interests internationally.[62]

33.39 The Classification Board and the Classification Review Board are separate and independent statutory bodies. The Classification Board classifies films (including videos and DVDs), computer games and certain publications before they are made available to the public. It also provides classifications to ACMA on internet content, advice to enforcement agencies such as the police, and advice to the Australian Customs Service.[63] The Classification Review Board is a part-time body that reviews the classification of films, publications or computer games upon receipt of a valid application to review the decisions of the Classification Board.[64]

33.40 The Office of Film and Literature Classification was an agency within the Attorney-General's portfolio that provided support to the Classification Board and the Classification Review Board. On 1 July 2007, the Attorney-General's Department took over the policy and administrative functions of the Office of Film and Literature Classification and the Office ceased to exist as a separate agency.[65]

33.41 The Classification Board, the Classification Review Board and the Attorney-General's Department are exempt from the *Privacy Act* where their acts and practices concern 'exempt Internet-content documents' under Schedule 5 to the *Broadcasting*

Services Act 1992 (Cth).[66] An 'exempt Internet-content document' is a document containing offensive information that has been copied from the internet; or a document that sets out how to access, or is likely to facilitate access to, offensive information on the internet.[67]

National broadcasters

33.42 The Australian Broadcasting Corporation (ABC) is a statutory corporation and Australia's only national, non-commercial broadcaster. The Special Broadcasting Service (SBS) is Australia's multicultural and multilingual public broadcaster. It was established under the *Special Broadcasting Services Act 1991* (Cth) to provide multilingual and multicultural radio and television services.[68]

33.43 Pursuant to s 7(1)(c) of the *Privacy Act*, both the ABC and SBS are covered by the *Privacy Act* except in relation to their program materials[69] and datacasting content.[70] Section 7A of the Act provides, however, that despite s 7(1)(c), certain acts and practices of the agencies listed in Schedule 2 Part II Division 1 of the FOI Act (which includes the ABC and SBS) are to be treated as acts and practices of organisations. These include acts and practices in relation to documents concerning their commercial activities or the commercial activities of another entity, and acts and practices that relate to those commercial activities.[71] Therefore, it would appear that, apart from their program materials and datacasting content, the ABC and SBS are covered by the IPPs in relation to non-commercial activities, and the NPPs in relation to commercial activities. To the extent that their program materials and datacasting content relate to commercial activities, they are covered by the private sector provisions of the *Privacy Act*.

---

66 *Privacy Act 1988* (Cth) ss 7(1)(c), 7A.

67 *Freedom of Information Act 1982* (Cth) s 4(1).

68 *Special Broadcasting Service Act 1991* (Cth) s 6.

69 In *Rivera v Australian Broadcasting Corporation* (2005) 222 ALR 189, Hill J of the Federal Court of Australia held that s 7(1)(c) of the *Privacy Act* operated so as to exempt any acts and practices of the ABC dealing with records concerning its program material and therefore the court had no jurisdiction to grant relief under the Act. One commentator observed that the court's attention had not been drawn to all the relevant provisions of the Act, including the media exemption and s 7A which provides that *despite* s 7(1)(c), the ABC is subject to the NPPs where its acts and practices concerns commercial activities: P Gunning, 'Cases + Complaints: Rivera v Australian Broadcasting Corporation [2005] FCA 661' (2004) 11 *Privacy Law & Policy Reporter* 205. In *Australian Broadcasting Corporation v The University of Technology, Sydney* (2006) 91 ALD 514, Bennett J of the Federal Court of Australia held that the ABC is exempt under the *Freedom of Information Act 1982* (Cth) in relation to documents that have a direct or indirect relationship to ABC's program materials, provided that those documents also have a relationship to the ABC.

70 'Datacast' means to broadcast digital information: *Macquarie Dictionary* (online ed, 2005). Under s 6 of the *Broadcasting Services Act 1992* (Cth), 'datacasting service' means a service that delivers content using the broadcasting services bands—whether in the form of text; data; speech, music or other sounds; visual images; or any other form—to persons with the appropriate equipment for receiving that content.

71 *Privacy Act 1988* (Cth) s 7A.

33.44 The relevant Revised Explanatory Memorandum stated, however, that s 7A was not intended to apply to the ABC and SBS.

> The effect of new clause 7A is to make the acts and practices of some agencies subject to the standards in the NPPs (or an approved privacy code, as appropriate), to the extent that they are not currently subject to the Information Privacy Principles (by virtue of section 7 of the Act). The Government's policy is that bodies operating in the commercial sphere should operate on a level playing field. Where agencies are engaged in commercial activities, they should be required to comply with the NPPs, just like private sector organisations …
>
> The aim of the amendment is to ensure that an agency in Division 1 of Part II of Schedule 2 to the FOI Act complies with the standards set out in the NPPs or an approved privacy code (as appropriate) in relation to documents in respect of its commercial activities or the commercial activities of another entity. This clause is intended to apply to agencies such as Comcare, the Health Insurance Commission and Telstra Corporation Limited. It is not intended to apply to the Australian Broadcasting Corporation or the Special Broadcasting Service Corporation.[72]

33.45 Where the acts and practices of the ABC and SBS are to be treated as those of organisations, they may still be exempt if carried out in the course of journalism.[73] The media exemption relating to journalism is discussed in Chapter 38.

Austrade

33.46 The Australian Trade Commission (Austrade) was established by the *Australian Trade Commission Act 1985* (Cth). Its functions are to provide advice, market intelligence and support to Australian companies to reduce the time, cost and risk involved in selecting, entering and developing international markets. In addition, it provides advice and guidance on overseas investment and joint venture opportunities. Austrade also administers the Export Market Development Grants scheme, which provides financial assistance to eligible businesses through partial reimbursement of the costs of specified export promotion activities.[74]

33.47 Austrade is exempt from the operation of the *Privacy Act* where its acts and practices relate to documents concerning the carrying out of overseas development projects, to the extent that these documents relate to non-commercial activities.[75]

National Health and Medical Research Council

33.48 The National Health and Medical Research Council (NHMRC) is a statutory agency responsible for promoting the development and maintenance of public and individual health standards. It does this by fostering the development of consistent

72 Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), notes on clauses [102], [104].

73 *Privacy Act 1988* (Cth) ss 7(1)(ee), 7B(4).

74 Austrade, *What is Austrade?* <www.austrade.gov.au> at 10 August 2007.

75 An overseas development project is a project to be carried out in a foreign country by way of: the construction of works; the provision of services; the design, supply or installation of equipment or facilities; or the testing in the field of agricultural practices: *Australian Trade Commission Act 1985* (Cth) s 3(1).

health standards between the various states and territories, fostering health and medical research and training, and monitoring ethical issues relating to health throughout Australia.[76]

33.49 The NHMRC is exempt from the *Privacy Act* where its acts and practices relate to documents in the possession of its Council members who are not persons appointed or engaged under the *Public Service Act 1999* (Cth), to the extent that these documents relate to non-commercial activities.

Submissions and consultations

33.50 In IP 31, the ALRC asked whether agencies specified in Schedule 2 Part II Division 1 of the FOI Act—other than the intelligence agencies, the Australian Government Solicitor and the Australian Industry Development Corporation—should be exempt from the *Privacy Act*.[77] The ALRC received few submissions that commented specifically on the exemption of these agencies.

33.51 A concern was raised in one submission about the large number of agencies listed under Schedule 2 Part II Division 1 of the FOI Act that are exempt both from the FOI Act and the *Privacy Act*. It was submitted that only those exemptions that are necessary for national security or to curb criminal activity are justified.[78]

33.52 AUSTRAC submitted that its partial exemption from the *Privacy Act* should remain. It suggested that there are two important policy reasons behind the exemption concerning the reporting of suspected illegal transactions: first, individuals should not be alerted to the fact that suspect transaction reports were made in relation to them because

> such reports may be relevant to criminal investigations or investigation relating to terrorism financing and tipping off may prejudice those investigations. In addition, cash dealer staff members that report such transactions may be put at risk if it is disclosed that a suspect transaction report has been lodged.[79]

33.53 AUSTRAC stated that cash dealers have legitimate concerns about protecting their staff from retribution for filing a suspected transaction report. It submitted that if information concerning the existence of a suspected transaction report could become known to the subject of the report, there would be a decrease in both the number and quality of suspected transaction reports.[80]

79 AUSTRAC, *Submission PR 216,* 1 March 2007.
80 Ibid.

33.54 AUSTRAC submitted further that 'protecting the privacy of AUSTRAC's information is a key priority for the agency'. It submitted that there is a high level of privacy protection in relation to AUSTRAC's information, including: training for all staff on privacy requirements; secrecy and access provisions under Part 11 of the AML/CTF Act; limited access to AUSTRAC information pursuant to an Instrument of Authorisation signed by the AUSTRAC CEO under s126(1) of the AML/CTF Act; Memoranda of Understanding between the AUSTRAC CEO and the Chief Executive of 29 of the 33 designated agencies that are entitled or authorised to have access to AUSTRAC information; audit trails of access to suspected transactions reports by its own staff, the Australian Taxation Office and designated agency officers; and a legislative requirement that, in the performance of his or her functions, the AUSTRAC CEO consult with the Privacy Commissioner.[81]

33.55 The ABC submitted that the exemptions applying to agencies listed in Schedule 2 Part II Division 1 of the FOI Act should remain, on the basis that:

> the current scheme of exemptions applying to Part II Division 1 Agencies, whereby those agencies are exempted from the IPPs in respect of certain acts or practices, but are then subject to the NPPs as if they were an organisation, strikes the right balance in maintaining a level playing field between those public sector organisations and private sector organisation with which they may be in competition.[82]

33.56 The ABC and SBS submitted that they should continue to be exempt from the *Privacy Act* in respect of their programming materials and datacasting contents.[83] Both stated that their programming materials and datacasting content are not commercial activities and are therefore not covered by the NPPs. The ABC further suggested that s 7A of the Act, which requires that certain agencies comply with the NPPs in relation to their commercial activities, was not intended to apply to the ABC in relation to any of its activities. The ABC submitted that this suggestion is evident from the Explanatory Memorandum to the Privacy Amendment (Private Sector) Bill 2000 (Cth), and that it also is

> supported by the *Australian Broadcasting Corporation Act 1983* (Cth) … under which the ABC is an independent authority with a particular charter broadcasting functions that are quite readily distinguishable from the imperatives of the commercial broadcasting sector …
>
> The charter functions of the national broadcasters, and the fact that they are subject to governance requirements very different from those applying to private sector media organisations, suggest that they should not be regarded as being in commercial competition with those entities. This argument arguably is stronger in relation to the ABC, which is required by the ABC Act not to broadcast advertisements (section 31 [of the *Australian Broadcasting Corporation Act*]).[84]

84 Australian Broadcasting Corporation, *Submission PR 94,* 15 January 2007.

33.57 SBS, on the other hand, suggested that it is covered by s 7A of the *Privacy Act* to the extent that it engages in commercial activities. SBS submitted that the policy concern behind s 7A—that agencies operating in the commercial sphere should operate on a level playing field with organisations—is applicable to the SBS. It stated:

> The partial exemption in relation to 'commercial activities' should be retained, so that 'hybrid' organisations such as SBS and the ABC which are government organisations which undertake some activities of a commercial nature, are not disadvantaged by being required to disclose information about their commercial activity.[85]

33.58 The ABC and SBS submitted that being exempt from the operation of the IPPs and NPPs in relation to their program-making activities does not mean that they are not subject to privacy regulation or oversight. They observed that they are subject to privacy provisions in their editorial policies, as well as codes of practice that must be notified to ACMA, which investigates complaints about alleged breaches of the codes.[86]

ALRC's view

33.59 The exemption of the agencies listed under Schedule 2 of the FOI Act from the *Privacy Act* is expressed in terms of their exemption from the FOI Act. Therefore, their exemption from the operation of the *Privacy Act* derives from their status under the FOI Act. The purposes of the *Privacy Act* are, however, different from those of the FOI Act. The *Privacy Act* is mainly concerned with the protection of the privacy of personal information about individuals, whereas the FOI Act aims to promote the ideals of an open and transparent government by granting a right of access to, and correction of, government records, except in relation to certain exempt documents. Given the differing purposes of the two Acts, the ALRC questions whether simply adopting the exemption in the FOI Act is appropriate. In the ALRC's view, there should be clear policy justifications for the exemption of these agencies from the *Privacy Act*.

33.60 Except for the ABC, SBS and AUSTRAC, the ALRC has not received submissions from the exempt agencies about their exemption from the operation of the *Privacy Act*, despite specifically inviting submissions from them.[87] Given the lack of information, the ALRC is unable to make an informed policy decision on a number of these agencies specified in Schedule 2 Part I Division 1 and Part II Division 1 of the

---

85 SBS, *Submission PR 112,* 15 January 2007.

86 Ibid; Australian Broadcasting Corporation, *Submission PR 94,* 15 January 2007.

87 In October 2006, the ALRC wrote to the following agencies inviting submissions: Anindilyakwa Land Council, Tiwi Land Council, Northern Land Council, Central Land Council, Auditor-General of Australia, National Workplace Relations Consultative Council, Reserve Bank of Australia, Export and Finance Insurance Corporation, Classification Review Board, Office of Film and Literature Classification, and Austrade. To date, the ALRC has not received any submissions from these agencies. The NHMRC made a submission to this Inquiry but did not comment on whether its exemption should remain: National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

FOI Act. Some overseas jurisdictions, such as the United Kingdom and Hong Kong, exempt very few specified agencies from their privacy legislation.[88] It is, therefore, difficult to compare the exempt agencies that are listed in the FOI Act to overseas agencies that perform similar functions.

33.61 In the circumstances, there are two main options for reform. One is to remove the exemption on the basis that there does not appear to be sufficient justification for it. The other option is to require the relevant agencies to demonstrate to the Attorney-General that they warrant exemption from compliance with the *Privacy Act*, and if they fail to do so within 12 months, remove the exemption. The ALRC considers that the latter option is preferable, as it would give the relevant agencies a final opportunity to consider their position and make their case if they believe an exemption is warranted.

33.62 The ALRC considers that the current partial exemption that applies to AUSTRAC should remain. The exemption is a limited one and does not apply to AUSTRAC's administrative activities. The application of the proposed Unified Privacy Principles (UPPs) to AUSTRAC's existing exempt activities may cause difficulties for its operation, including the proposed principles concerning 'Collection', 'Specific Notification', 'Anonymity and Pseudonymity' and 'Identifiers'. In addition, the handling of information by AUSTRAC is governed by PSM 2005 and ACSI 33, as well as a secrecy provision that prohibits AUSTRAC officials from disclosing information collected, compiled or analysed by AUSTRAC. Unlike the other agencies listed in Schedule 2 of the FOI Act, the functions of AUSTRAC are more akin to those of law enforcement agencies. For these reasons, no strong case has been made out to remove the exemption.

33.63 In the ALRC's view, the current exemption from the FOI Act that applies to AUSTRAC should also remain. Individuals should not be alerted to the fact that a suspicious transaction report has been made about them. If the exemption from the FOI Act were removed, there is a potential for staff members of cash dealers and reporting entities to be at risk of retribution. In addition, in Chapter 15, the ALRC proposes that the proposed UPPs should apply to information privacy except to the extent that more specific primary or subordinate legislation covers a particular aspect of privacy or handling of personal information.[89] The removal of the exemption of AUSTRAC from the FOI Act would be inconsistent with that approach and undermine the objects of the AML/CTL Act and the *Financial Transaction Reports Act*.

33.64 In the ALRC's view, the ABC and SBS should not be exempt from the *Privacy Act* by virtue of their exempt status under the FOI Act. There are insufficient policy justifications for treating national broadcasters differently under the *Privacy Act* from media organisations in the private sector. Setting aside the question of access and

---

88 There are only four exemptions in the *Data Protection Act 1998* (UK) and three in *Personal Data (Privacy) Ordinance* (Hong Kong): see *Data Protection Act 1998* (UK) ss 30(2), 30(3), 31, 36; *Personal Data (Privacy) Ordinance* (Hong Kong) ss 52, 57, 61; and Ch 30.

89 See Proposal 15–3.

correction to their records, which is generally dealt with under the FOI Act, there is no justification for exempting the ABC and SBS from the privacy principles in relation to their program materials and datacasting content. The removal of the exemption would not affect their exempt status in relation to their acts and practices carried out in the course of journalism.

33.65 Currently, the ABC, SBS and other agencies discussed above are either partially or completely exempt from the operation of the FOI Act.[90] In Chapter 12, the ALRC proposes that an individual's right to access or correct his or her own personal information be dealt with in a new Part of the *Privacy Act*, and not under the FOI Act.[91] The ALRC invites submissions on what exceptions should apply to the proposed new provisions granting an individual the right to access his or her own personal information.[92] As part of that consideration, the ALRC is interested in views on whether these agencies should continue to be exempt from the general provision in the FOI Act granting an individual the right to access his or her own personal information.

Proposal 33–2 The following agencies listed in Schedule 2 Part I Division 1 and Part II Division 1 of the *Freedom of Information Act 1982* (Cth) should be required to demonstrate to the Attorney-General of Australia that they warrant exemption from the operation of the *Privacy Act*:

(a) Aboriginal Land Councils and Land Trusts;

(b) Auditor-General;

(c) National Workplace Relations Consultative Council;

(d) Department of the Treasury;

(e) Reserve Bank of Australia;

(f) Export and Finance Insurance Corporation;

(g) Australian Communications and Media Authority;

(h) Classification Board;

(i) Classification Review Board;

90 *Freedom of Information Act 1982* (Cth) s 7.
91 See Proposals 12–6, 12–7.
92 See Question 12–1.

(j) Australian Trade Commission; and

(k) National Health and Medical Research Council.

The Australian Government should remove the exemption from the operation of the *Privacy Act* for any of these agencies that, within 12 months, do not make an adequate case for retaining their exempt status.

Proposal 33–3 The *Privacy Act* should be amended to remove the exemption of the Australian Broadcasting Corporation and the Special Broadcasting Service listed in Schedule 2 Part II Division 1 of the *Freedom of Information Act 1982* (Cth).

Introduction

34.1 The preceding chapters examine exemptions from the *Privacy Act 1988* (Cth) that apply to a number of agencies, including: defence and intelligence agencies; federal courts; and certain agencies listed in the *Freedom of Information Act 1982* (Cth). This chapter discusses the remaining public sector exemptions, including the exemption that applies to royal commissions, the Australian Crime Commission, the Integrity Commissioner, parliamentary departments, state and territory authorities and prescribed state and territory instrumentalities. In addition, the chapter considers whether law enforcement activities should be provided for under the *Privacy Act* by way of an exemption rather than exceptions.[1]

Royal commissions

Background

34.2 Commonwealth royal commissions are government inquiries established by the Governor-General of Australia pursuant to the *Royal Commissions Act 1902* (Cth)

> to make inquiry into and report upon any matter specified in the Letters Patent, and which relates to or is connected with the peace, order and good government of the Commonwealth, or any public purpose or any power of the Commonwealth.[2]

34.3 While royal commissions fall within the definition of an 'agency', their acts and practices are excluded from the definition of 'act or practice' and therefore from the operation of the *Privacy Act*.[3]

34.4 Commonwealth royal commissions have extensive coercive powers, including the power to summon witnesses and take evidence, authorise the application for search warrants, issue warrants for the arrest of witnesses who fail to appear, and inspect and retain any document or thing.[4] To support the use of these powers, the *Royal Commissions Act* creates a number of statutory offences for certain types of conduct, including where a person: fails to attend or produce documents; refuses to be sworn or give evidence; gives false or misleading evidence; bribes, deceives or injures a witness; or conceals, mutilates or destroys any document or thing that is likely to be required in evidence before a royal commission.[5]

34.5 Although Commonwealth royal commissions have powers that are usually exercised by courts and often follow procedures similar to those followed by courts, they cannot exercise judicial power.[6]

---

1 This distinction between an 'exception' and an 'exemption' is discussed below.
2 *Royal Commissions Act 1902* (Cth) s 1A.
3 *Privacy Act 1988* (Cth) s 7(1)(a)(v).
4 *Royal Commissions Act 1902* (Cth) ss 2, 4, 6B, 6F, 6FA.
5 Ibid ss 3, 6, 6AB, 6H–6K, 6M. See also ss 6L, 6N, 6O.
6 Only federal courts created by the Australian Parliament may exercise the judicial power of the Commonwealth: *Huddart, Parker & Co Pty Ltd v Moorehead* (1909) 8 CLR 330, 355.

> The duties of the commission are to inquire and report. It has, in order that it may effectively perform the duty of inquiry, certain powers which normally belong to judicial tribunals. But the function which is primarily distinctive of judicial power—the power to decide or determine—is absent. The commission can neither decide nor determine anything and nothing that it does can in any way affect the legal position of any person. Its powers and functions are not judicial.[7]

34.6 Royal commissions have general powers to order that any evidence be taken in private. They may also prohibit the publication of any evidence, contents of any document, or a description of any thing, produced before, or delivered to, the commission, or any information that might enable a person who has given evidence before the commission to be identified.[8]

34.7 Privacy concerns have been raised where inquiries by royal commissions are held in public. One commentator argues that royal commissions have greater powers than courts to force revelations and even confessions, because they do not presume either innocence or guilt. It was argued, therefore, that there is a risk that individuals who are being investigated may be forced to make embarrassing revelations and face exposure, humiliation and adverse publicity without regard for the appropriate balance between privacy and open justice.[9]

34.8 In New Zealand, royal commissions and other commissions of inquiries are completely exempt from the *Privacy Act 1993* (NZ).[10]

Submissions and consultations

34.9 In the Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether royal commissions should be exempt from the operation of the *Privacy Act*.[11] The ALRC has received few submissions in response to this question. The Office of the Privacy Commissioner (OPC) submitted that, although the *Privacy Act* may not be the appropriate instrument to deal with concerns regarding the operations of royal commissions, 'attention should be given to developing information handling standards for royal commissions that promote respect for privacy'. The OPC also suggested that the matter be referred to the Attorney-General.[12]

ALRC's view

34.10 Royal commissions serve the important function of inquiring into matters of public interest. Central to the performance of that function is the ability of royal commissions to obtain information that may be unavailable by other means of

investigation or inquiry. Although they do not exercise judicial power, they are given powers that are usually exercised by courts.

34.11 In the ALRC's view, the exemption of royal commissions from the *Privacy Act* is warranted. The ALRC agrees with the OPC, however, that information-handling guidelines that apply to royal commissions should be developed. The Attorney-General's Department, in consultation with the OPC, should develop such guidelines.

Proposal 34–1 The Attorney-General's Department, in consultation with the Office of the Privacy Commissioner, should develop and publish information-handling guidelines for royal commissions to assist in ensuring that the personal information they handle is protected adequately.

Australian Crime Commission

Background

34.12 The Australian Crime Commission (ACC) was established under the *Australian Crime Commission Act 2002* (Cth) (ACC Act) to counter serious and organised crime. The ACC was formed by replacing the National Crime Authority (NCA), and absorbing the functions of the Australian Bureau of Criminal Intelligence (ABCI)[13] and the Office of Strategic Crime Assessments.[14] The functions of the ACC include: collecting and analysing criminal intelligence; setting national criminal intelligence priorities; providing and maintaining criminal intelligence systems; and investigating federally relevant criminal activity and undertaking taskforces.[15]

34.13 Although the ACC falls within the definition of 'agency' under the *Privacy Act*, the acts and practices of the ACC are excluded from the definition of 'an act or practice'.[16] In addition, s 7(2) of the Act exempts the ACC from compliance with the tax file number provisions of the Act. The ACC therefore is completely exempt from the operation of the Act.

---

13 The ABCI was established to facilitate the exchange of criminal intelligence among federal, state and territory law enforcement agencies, anti-corruption bodies and regulatory agencies. It was responsible for the analysis and dissemination of criminal intelligence, but relied on these agencies for the collection of information: Australian Crime Commission, *Annual Report 2002–2003* (2003), 152; Parliament of Australia—Parliamentary Joint Committee on the Australian Crime Commission, *The Law Enforcement Implications of New Technology* (2001).

14 The Office of Strategic Crime Assessments was an element of the Australian Government Attorney-General's Department preparing national level strategic law enforcement intelligence: Australian Crime Commission, *Submission to the Inquiry by the Parliamentary Joint Committee of Public Accounts and Audit Management and Integrity of Electronic Information in the Commonwealth*, 1 January 2003, 4.

15 Australian Crime Commission, *Australian Crime Commission Profile—Dismantling Serious and Organised Criminal Activity* (2007) <www.crimecommission.gov.au/content/about/ACC_PROFILE.pdf> at 15 August 2007, 1.

16 *Privacy Act 1988* (Cth) s 7(1)(a)(iv).

34.14 Acts and practices in relation to records that have originated with, or have been received from, the ACC or the Board of the ACC (ACC Board) are also exempt.[17] Accordingly, agencies and organisations receiving a record from the ACC are exempt from the operation of the *Privacy Act* in relation to that record. Furthermore, since the ACC falls within the definition of an 'enforcement body' under the Act,[18] personal information may be disclosed by an organisation to the ACC in certain circumstances, including where the disclosure is for the purpose of preventing, detecting, investigating or prosecuting criminal offences, or prevention, detection, investigation or remedying of seriously improper conduct.[19]

34.15 The ACC has a range of special powers that are used 'where ordinary law enforcement methodologies are ineffective'.[20] These special powers include the power to conduct examinations, issue a summons requiring a person to attend an examination to give evidence under oath or affirmation, and require the production of any document or thing.[21] Failure to attend an examination, or to answer questions or produce specified documents or things at an examination, is an offence that is punishable by fines and imprisonment.[22]

34.16 The ACC Act contains a secrecy provision that prohibits ACC officials and staff from recording, communicating or divulging any information acquired by reason of, or in the course of, the performance of their duties under the Act.[23]

34.17 There is a tension between privacy and law enforcement, particularly in the context of organised crime.

> By definition, effective law enforcement and investigation of organised crime requires maximum disclosure of information by government departments to law enforcement agencies. In theory, a maximum flow of information between law enforcement agencies is also required. At the same time, governments have an interest in preventing the unjustified or unnecessary disclosure of information and protecting citizens from unjustified invasions of their privacy by state officials.[24]

Information management guidelines

34.18 The primary documents that prescribe the requirements for the management and security of information by the ACC include the *Protective Security Manual* (PSM 2005), the *Australian Government Information Technology Security Manual* (ACSI 33) and the *ACC Policy and Procedures Manual*.[25] The *ACC Policy and Procedures Manual* is a classified document.[26]

34.19 PSM 2005 is a policy document that sets out guidelines and minimum standards in relation to protective security for agencies and officers. It also applies to contractors and their employees who perform services for the Australian Government. In particular, Part C of the PSM 2005 provides 'guidance on the classification system and the protective standards required to protect both electronic- and paper-based security classified information'.[27] The part sets out minimum standards addressing the use, access, copying, storage, security and disposal of classified information.

34.20 Agencies are also required by the PSM 2005 to comply with the ACSI 33. ACSI 33 has been developed by the Defence Signals Directorate (DSD) to provide policies and guidance to agencies on the protection of their electronic information systems.[28]

Accountability and oversight mechanisms

34.21 The ACC is subject to oversight through a number of mechanisms described below.

Ministerial oversight

34.22 The ACC is responsible to the Minister for Justice and Customs. The Chair of the ACC Board must keep the Minister informed of the general conduct of the ACC in the performance of the ACC's functions. He or she must comply with the Minister's request for information concerning any specific matter relating to the ACC's conduct

---

25 Australian Crime Commission, *Submission to the Inquiry by the Parliamentary Joint Committee of Public Accounts and Audit Management and Integrity of Electronic Information in the Commonwealth*, 1 January 2003, 11. The ACC is also required to comply with *Australian Government Standards for the Protection of Information Technology Systems Processing Non-National Security Information at the Highly Protected Classification* (ACSI 37) published by the DSD. ASCI 37 is a controlled document that outlines certain requirements for physical security.

26 In addition, there is a range of state legislative and guidance documents prescribing the ACC's requirements for the management and security of information entrusted to the ACC: Ibid, 11.

27 Australian Government Attorney-General's Department, *Protective Security Manual (PSM 2005)* <www.ag.gov.au/www/agd/agd.nsf/Page/National_security> at 31 July 2007.

28 Defence Signals Directorate, *Australian Government Information Technology Security Manual (ACSI 33)* (2004). There are two versions of ACSI 33. The security-in-confidence version contains the security policies and guidance for all classifications. The unclassified version only contains policies and guidance for the following classifications: public domain, unclassified, in-confidence, restricted, and protected. An unclassified version of ACSI 33 is available on the DSD's website: Defence Signals Directorate, *ACSI 33—Australian Government Information and Communications Technology Security Manual* <www.dsd.gov.au/library/infosec/acsi33.html> at 8 August 2007.

in the performance of its functions.[29] The Minister may give directions or issue guidelines to the ACC Board in relation to the performance of the Board's functions.[30]

ACC Board

34.23 The ACC Board consists of the Commissioner of the Australian Federal Police (AFP), the Secretary of the Attorney-General's Department, the Chief Executive Officer (CEO) of the Australian Customs Service, the Chairperson of the Australian Securities and Investments Commission (ASIC), the Director-General of Security, eight state and territory police commissioners, and the CEO of the ACC (as a non-voting member).[31]

34.24 The Board's functions include: determining national criminal intelligence priorities; authorising the ACC to undertake intelligence operations or to investigate matters relating to federally relevant criminal activity; determining whether an operation or investigation is a special operation or investigation;[32] determining the classes of persons to participate in an intelligence operation or investigation; establishing task forces; disseminating strategic criminal intelligence assessments to law enforcement agencies, foreign law enforcement agencies, or prescribed federal, state or territory agencies. It is also required to report to the Inter-Governmental Committee on the ACC's performance.[33]

Inter-Governmental Committee

34.25 The Inter-Governmental Committee on the ACC (IGC) consists of the Minister for Justice and Customs, and federal, state and territory police or justice ministers.[34] It was established under the ACC Act to monitor the work of the ACC and the ACC Board, oversee the strategic direction of the ACC and the ACC Board, and receive reports from the Board for transmission to federal, state and territory governments.[35] Where the ACC Board has determined that an investigation or operation is a special investigation or operation, the IGC may request that the Chair of the ACC Board

---

29 *Australian Crime Commission Act 2002* (Cth) s 59.

30 Ibid s 18.

31 Ibid ss 7B, 7G(3).

32 The ACC Board may determine that an intelligence operation is a special operation if it considers that methods of collecting the criminal information and intelligence that do not involve the use of powers in the ACC Act have not been effective: Ibid s 7C(2). The Board may determine that an investigation into matters relating to federally relevant criminal activity is a special investigation if it considers that ordinary police methods of investigation into the matters are unlikely to be effective: s 7C(3). The making of such a determination by the ACC Board allows an eligible person within the ACC to apply for search warrants; or an ACC examiner to apply to the Federal Court for the surrender of a passport, conduct examinations, summon a person to attend an examination, require a person produce documents or other things, or apply to the Federal Court for a warrant where a witness fails to surrender a passport: ss 22–25A, 28, 29, 31.

33 Ibid s 7C(1).

34 Ibid s 8(1).

35 Ibid s 9(1).

provide the IGC with further information in relation to the determination.[36] The IGC also has the power to revoke that determination.[37]

Parliamentary Joint Committee

34.26 The Parliamentary Joint Committee on the ACC comprises members from both the Senate and the House of Representatives.[38] It is responsible for monitoring and reviewing the performance by ACC, reporting to the Parliament in relation to the ACC, examining the ACC's annual reports, examining trends and changes in criminal activities, practices and methods, and recommending changes to the functions, structure, powers and procedures of the ACC to the Parliament, and conducting inquiries.[39]

Commonwealth Ombudsman

34.27 Under the *Ombudsman Act 1976* (Cth),[40] the Commonwealth Ombudsman has power to investigate complaints about the ACC. It also has oversight over the ACC's use of:

- controlled operations under Part IAB of the *Crimes Act 1914* (Cth);
- surveillance devices under the *Surveillance Devices Act 2004* (Cth); and
- telephone intercept warrants under the *Telecommunications (Interception) Act 1979* (Cth).[41]

34.28 The Commonwealth Ombudsman received nine complaints about the ACC in 2005–06 and 12 in 2004–05. It commented that while it was not obliged to make inquires of the ACC upon receipt of a complaint, the ACC was highly responsive to its inquires. In its annual report for 2005–06, the Commonwealth Ombudsman stated that:

> While the ACC is not required to proactively report complaints to the Ombudsman's office, we continue to have an open working relationship with the ACC. The ACC

A 'controlled operation' is an operation that: involves the participation of law enforcement officers; is carried out for the purpose of obtaining evidence in relation to a serious Commonwealth offence or a serious state offence that has a federal aspect; and may involve a law enforcement officer or other person in acts or omissions that would constitute an office: *Crimes Act 1914* (Cth) s 15H.

> notifies the Ombudsman's office about significant matters, allowing us to consider whether further investigation by Ombudsman staff is warranted.[42]

34.29 The Commonwealth Ombudsman stated that it has inspected the records of the ACC on six occasions, and was generally satisfied with the level of compliance by the ACC. It also reported that all of its recommendations following finalisation of inspections in 2005–06 were accepted by the ACC.[43]

Australian Commission for Law Enforcement Integrity

34.30 The Integrity Commissioner, supported by the Australian Commission for Law Enforcement Integrity (ACLEI), is responsible for preventing, detecting and investigating serious corruption issues in agencies with law enforcement functions, including the ACC.[44] The functions of the Integrity Commissioner include, among other things, investigating and reporting on corruption issues, conducting public inquiries into corruption, and handling information and intelligence relating to corruption.[45]

Auditor-General

34.31 The Auditor-General is an independent officer of the Australian Parliament responsible for performing financial and performance audits of certain agencies, including the ACC.[46] The Auditor-General has broad information-gathering powers and authority to have access to Commonwealth premises.[47]

International instruments

34.32 International privacy instruments commonly provide for exceptions to the principles that apply to criminal investigations. The *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* issued by the Organisation for Economic Co-operation and Development (OECD Guidelines) recognise that member countries may apply the OECD Guidelines differently to different kinds of personal data or in different contexts, such as criminal investigations.[48] The OECD Guidelines also state that criminal investigative activities are one area where, for practical or policy reasons, an individual's knowledge or consent cannot be considered necessary for the collection of his or her personal data.[49]

48 Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980), Memorandum, [47].

49 Ibid, Memorandum, [47].

34.33 The *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (EU Directive) issued by the European Parliament contains exceptions to the privacy principles, including the processing of data necessary for the prevention, investigation, detection and prosecution of criminal offences,[50] and concerning public security, state security and the activities of the state in areas of criminal law.[51] Article 13 of the EU Directive provides that member states may provide for exceptions from specified data processing principles if they are necessary to safeguard public security and the prevention, investigation, detection and prosecution of criminal offences. The principles from which such exceptions are permitted include those relating to: data quality; information to be given to the individual concerned; an individual's right of access to data; and the publicising of processing operations.[52]

34.34 Like the EU Directive, the Asia-Pacific Economic Cooperation (APEC) Privacy Framework states that it is not intended to impede governmental activities authorised by law to protect national security, public safety, national sovereignty and other public policy interests.[53]

Overseas jurisdictions

34.35 Criminal investigation is also a common exception to data protection principles in overseas jurisdictions, such as, the United Kingdom, New Zealand and Hong Kong. Under the *Data Protection Act 1998* (UK), certain data protection principles do not apply if the application of those principles would be likely to prejudice the prevention or detection of crime, the apprehension or prosecution of offenders, or the assessment or collection of any tax or duty or of any imposition of a similar nature. The principles that do not apply include: purpose of collection; fair processing by notification to the individual concerned; an individual's rights of access and correction; data quality; data retention; and an individual's right to prevent processing.[54]

34.36 The New Zealand *Privacy Act 1993* provides for exceptions to some of the information privacy principles where non-compliance is necessary to avoid prejudice to the maintenance of the law by any public sector agency, including the prevention, detection, investigation, prosecution, and punishment of offences, and the enforcement of a law imposing a pecuniary penalty.[55] The relevant principles include those concerning: collection of personal data directly from the individual concerned;

notification to individuals about certain matters; and use and disclosure of personal information.

34.37 Hong Kong privacy legislation also provides for exceptions to the use and access principles where compliance with those principles is likely to prejudice the prevention or detection of crime, the apprehension, prosecution or detention of offenders, and other unlawful conduct.[56]

Submissions and consultations

34.38 In IP 31, the ALRC asked whether the ACC should be exempt from the *Privacy Act*, and, if so, what is the policy justification for the exemption.[57] Few stakeholders responded to this question.

34.39 The OPC noted that the exemption that applies to the ACC originally applied to the NCA.[58] The reasons behind the exemption that applied originally

> appear to have been based on the NCA's coercive powers, unique to Commonwealth law enforcement, which allowed the collection of personal information of a speculative and untested nature.[59]

34.40 The OPC submitted that, since the absorption of the ABCI's functions into the ACC, much of the information collected by the former ABCI is now collected and stored on the ACC's intelligence databases. In addition, the OPC observed that many of the records held in these databases are sourced from the AFP, the Australian Transaction Analysis Centre (AUSTRAC), ASIC and other agencies that are covered by the *Privacy Act*.[60]

34.41 The OPC also stated that some agencies that perform a law enforcement function—for example, the AFP, AUSTRAC, ASIC and the Australian Taxation Office—are covered by the *Privacy Act*, and that it has issued guidance on how the *Privacy Act* provides for law enforcement needs.[61] The OPC submitted that 'in view of the changed role of the ACC over the years … it may be timely to reassess the suitability of the current ACC exemption from the *Privacy Act*'. The OPC suggested that 'one option [for reform] could be for the administrative operations of the ACC to be covered by the *Privacy Act*'.[62]

60 Ibid, 28.
61 Ibid, 28.
62 Office of the Privacy Commissioner, *Submission PR 215*, 28 February 2007.

34.42 It was suggested in another submission that the ACC should be partially exempt from the *Privacy Act*, but only on a case-by-case basis and where there is sufficient oversight.[63]

Options for reform

34.43 There are essentially three options for reform. One option is to remove the exemption that applies to the ACC but amend the definition of 'law enforcement body' to include the ACC. This would ensure that the ACC is subject to the privacy principles except to the extent that non-compliance is required for the performance of its law enforcement activities. It is also consistent with the approach under international instruments and some overseas privacy legislation.

34.44 Another option is to modify the exemption so that the ACC is covered by the *Privacy Act* in respect of its administrative operations, such as the handling of its employee records.

34.45 A third option is to require the ACC to comply with information-handling guidelines, to be developed in consultation with the OPC and issued by the Minster for Justice and Customs. This approach is similar to the approach taken in relation to exempt defence and intelligence agencies, which are required to comply with ministerial directions or guidelines in relation to privacy.[64]

ALRC's view

34.46 As the discussion in Chapter 1 illustrates, privacy is not an absolute right. Privacy interests must be balanced with other competing public interests, including 'the need of society to create and enforce rules of personal and corporate behaviour for the common good'.[65] In a recent review of the ACC Act, the Parliamentary Joint Committee on the ACC commented that:

> Given the particularly violent and pernicious nature of organised crime, history has shown the need to create specialist crime fighting bodies with significant powers to combat these organised crime networks. However, it is evident from the description of the ACC's powers … that the actions of the ACC have the potential to impact profoundly on the individual citizen's freedom and privacy.[66]

34.47 Since the ACC is already subject to information management guidelines and a significant amount of oversight, there may be an argument for its exemption from the *Privacy Act*. There are, however, two major arguments that support imposing privacy requirements on the ACC through the *Privacy Act*—first, there is a significant potential for the ACC's activities to impact on the privacy of individuals; and secondly, other federal law enforcement agencies are covered by the Act. Currently, there are a number

66 Ibid, [5.86].

of specific exceptions to the IPPs that allow federal law enforcement agencies to carry out their law enforcement functions. There are also a number of specific exceptions to the proposed Unified Privacy Principles (UPPs) that would allow federal law enforcement agencies to function effectively.

34.48 As the OPC noted in its submission, many of the records held in the ACC's databases are collected from the AFP, AUSTRAC, ASIC and other agencies that are covered by the *Privacy Act*.[67] In addition, other agencies that perform a law enforcement function are covered by the *Privacy Act*. The ALRC's preliminary view is, therefore, that the ACC should not be exempt from the operation of the *Privacy Act*. Whether privacy principles should provide for law enforcement activities undertaken by law enforcement agencies, such as the ACC, by way of an exemption rather than an exception, is discussed below.

Proposal 34–2 The *Privacy Act* should be amended to remove the exemption that applies to the Australian Crime Commission and the Board of the Australian Crime Commission by repealing s 7(1)(a)(iv), (h) and 7(2) of the Act.

Integrity Commissioner

Background

34.49 Commencing operation in December 2006, the ACLEI was established to detect and investigate corruption in the AFP, the ACC, the former NCA and prescribed Australian Government agencies with law enforcement functions.[68] It is headed by the Integrity Commissioner, whose functions include: investigating and reporting on corruption issues; referring corruption issues to law enforcement agencies for investigation; managing, overseeing or reviewing the investigation of corruption by law enforcement agencies; conducting public inquiries into corruption; collecting, analysing and communicating information and intelligence relating to corruption; and making reports and recommendations to the responsible minister concerning the need or desirability of legislative or administrative actions on corruption issues.[69]

34.50 The Integrity Commissioner has similar powers to a royal commission, including the power to execute search warrants, conduct public or private hearings,

67 Office of the Federal Privacy Commissioner, *Plain English Guidelines to Information Privacy Principles 1–3: Advice to Agencies about Collecting Personal Information* (1994), 28.

68 *Law Enforcement Integrity Commissioner Act 2006* (Cth) ss 5(1) (definition of 'law enforcement agency'), 7, 15. No additional Australian Government agencies have yet been prescribed as law enforcement agencies under the Act.

69 Ibid s 15.

summon people to attend hearings to give evidence or produce any document or thing, and take possession of, copy or retain any document or thing.[70]

34.51 The Integrity Commissioner is exempt from the operation of the *Privacy Act*.[71] Acts and practices in relation to a record that has originated with, or has been received from, the Integrity Commissioner or a staff member of the ACLEI, are also exempt.[72] In addition, since the Integrity Commissioner is an 'enforcement body' under the Act,[73] personal information may be disclosed by an organisation to the Integrity Commissioner in certain circumstances, including where the disclosure is for the purpose of preventing, detecting, investigating or prosecuting criminal offences, or the prevention, detection, investigation or remedying of seriously improper conduct.[74]

34.52 The *Law Enforcement Integrity Commissioner Act 2006* (Cth) imposes certain confidentiality requirements on ACLEI staff.[75] A current or former ACLEI staff member must not record, divulge or communicate any information acquired in the course of carrying out his or her duties, except in the performance of those duties.[76]

Oversight mechanisms

34.53 The Integrity Commissioner is required to give an annual report to the Minister for Justice and Customs to be presented to the Parliament.[77] The Commissioner is also required to give investigation and inquiry reports to the Minister if public hearings were held in the course of an investigation.[78] The Minister must remove certain information—such as information that may endanger a person's life or physical safety or prejudice certain proceedings—before tabling such a report in Parliament.[79] The Integrity Commissioner may also give special reports to the Minister on the operations of his office for presentation to the Parliament.[80]

34.54 The Integrity Commissioner must notify the Minister of any issue concerning the corrupt conduct of a current or former ACLEI staff member, and staff are under a similar obligation to report corruption by the Integrity Commissioner.[81] Any member of the public also may refer to the Minister an allegation or information raising an issue concerning corruption in the ACLEI.[82] The Minister may refer the issue to the Integrity Commissioner for investigation, or authorise a special investigator—who has the same

investigative and reporting powers that would be available to ACLEI—to investigate the issue.[83]

34.55 After the first three years of operation, the Minister must cause an independent review of the ACLEI Act to be undertaken, unless a parliamentary committee or the Parliament Joint Committee on the ACLEI has started or completed a review of the operation of the Act before the end of the three year period.[84]

34.56 The *Law Enforcement Integrity Commissioner Act* established a Parliamentary Joint Committee on the ACLEI.[85] The functions of the Committee are to monitor and review the Integrity Commissioner's performance of his or her functions, examine the annual reports and special reports of the Integrity Commissioner, examine and report on trends and changes in corruption issues and recommend changes to the functions, powers and procedures of the Integrity Commissioner, and conduct an inquiry into any question in connection with the Committee's duties that is referred by either House of Parliament.[86]

34.57 In addition, the Integrity Commissioner is subject to regular inspection and monitoring by the Commonwealth Ombudsman in relation to the exercise of his or her powers to:

- carry out controlled operations under Part 1AB of the *Crimes Act*;
- use surveillance devices under the *Surveillance Devices Act*; and
- undertake telecommunications interception and access stored communications under the *Telecommunications (Interception) Act*.[87]

Submissions and consultations

34.58 In IP 31, the ALRC asked whether the Integrity Commissioner should be exempt from the *Privacy Act*.[88] The ALRC has received few submissions in response to this question. The OPC submitted that it would be desirable if the ACLEI

> developed information handling guidelines to assist in ensuring that the personal information it handles is adequately protected.

88 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 5–3.

> The Integrity Commissioner (Acting) has indicated that he would be amenable for his Office to develop such guidelines with assistance as necessary from the Office of the Privacy Commissioner.
>
> As with the ACC, another option could be for the administrative operations of the ACLEI to be covered by the *Privacy Act*.[89]

ALRC's view

34.59 There is an important public interest in ensuring that government agencies that are vested with coercive powers are monitored and held accountable. The creation of government agencies that perform an oversight role, such as the Integrity Commissioner, serves that public interest. This public interest should, however, be balanced with the need to protect the privacy of personal information about individuals.

34.60 In the ALRC's view, such a balance could be achieved by partially exempting the Integrity Commissioner from the operation of the *Privacy Act* in respect of his or her investigative and inquiry functions. There is, however, no sound policy reason why the Integrity Commissioner should be exempt in respect of the administrative operations of his or her office, such as the handling of employee records. In addition, the Integrity Commissioner should be subject to information-handling guidelines in respect of the non-administrative operations of his or her office.

34.61 This is consistent with the ALRC's proposals in relation to the Inspector-General of Intelligence and Security (IGIS), who oversees the operation of the defence and intelligence agencies. In Chapter 31, the ALRC proposes that the IGIS be covered by the *Privacy Act* in respect of the administrative operations of his or her office. In addition, the ALRC proposes that the IGIS, in consultation with the OPC, develop and publish information-handling guidelines to ensure that the privacy of personal information handled by the Integrity Commissioner in respect of his or her office's non-administrative operations is protected adequately.[90]

Proposal 34–3 The *Privacy Act* should be amended to apply to the Integrity Commissioner in respect of the administrative operations of his or her office.

Proposal 34–4 The Integrity Commissioner, in consultation with the Office of the Privacy Commissioner, should develop and publish information-handling guidelines to ensure that the personal information handled by the Integrity Commissioner and the Australian Commission for Law Enforcement Integrity is protected adequately.

89 Office of the Privacy Commissioner, *Submission PR 215*, 28 February 2007.
90 Proposals 31–6 and 31–7.

Other agencies with law enforcement functions

Background

34.62 With the exception of the ACC, law enforcement agencies and other agencies with law enforcement functions are covered by the *Privacy Act*. For example, the AFP is expressly included within the definition of 'agency' under the Act and therefore is required to comply with the IPPs.[91]

34.63 Given the need to balance the privacy of individuals with the public interest in law enforcement and the regulatory objectives of government, the *Privacy Act* provides for specific exceptions to the IPPs. Under IPPs 10 and 11, agencies are permitted to use or disclose personal information in certain circumstances. In the context of law enforcement, two exceptions are of particular relevance. IPPs 10.1(c) and 11.1(e) authorise the use or disclosure of personal information if it is 'reasonably necessary for enforcement of the criminal law or of a law imposing a pecuniary penalty, or for the protection of the public revenue'.[92] IPPs 10.1(c) and 11.1(d) also allow the use or disclosure of personal information by agencies if the use or disclosure is 'required or authorised by or under law'.[93]

34.64 In addition, some IPPs are interpreted to include law enforcement considerations within their terms. For example, IPP 2 provides that an agency collecting personal information about an individual is to 'take such steps (if any) as are, in the circumstances, reasonable' to ensure that the individual concerned is generally aware of the purpose for which the information is being collected and other matters. In the law enforcement context, 'reasonable steps' have been interpreted to mean taking no step at all in circumstances where a suspect should not be alerted to the fact of the collection of personal information about him or her.

34.65 Furthermore, under IPPs 5.2, 6 and 7, if an agency is required or authorised under an applicable Commonwealth law to do so, it may refuse to provide an individual with information about what personal information is held about him or her, access to a record or the right to correct or amend documents containing personal information about the individual held by the agency. Section 37 of the *Freedom of Information Act 1982* (Cth) (FOI Act) provides that an agency does not have to provide access to, or allow correction of, documents if the disclosure of the document would, or could reasonably be expected to:

---

91 *Privacy Act 1988* (Cth) sch 3, NPP 2, note 1.

92 Where personal information is used or disclosed for enforcement of the criminal law or of a law imposing a pecuniary penalty, or for the protection of the public revenue, the agency must include in the record containing that information a note of that use or disclosure: Ibid s 14, IPPs 10.2, 11.2.

93 See also Ch 13.

- prejudice the conduct of an investigation or the enforcement or proper administration of the law in a particular instance;
- disclose the existence or identity of a confidential source of information in relation to the enforcement or administration of the law;
- endanger the life or physical safety of any person;
- prejudice the fair trial or impartial adjudication of a particular case;
- disclose lawful methods for dealing with breaches or evasions of the law that would, or would be reasonably likely to, prejudice the effectiveness of those methods; or
- prejudice the maintenance or enforcement of lawful methods for the protection of public safety.

34.66 In addition to exceptions to the IPPs that apply to law enforcement agencies, the *Privacy Act* also contains exceptions to the NPPs that allow organisations to cooperate lawfully with agencies performing law enforcement functions, by allowing an organisation to use, disclose, or deny access to, personal information for certain law enforcement or regulatory purposes.[94]

34.67 NPP 2.1 provides that an organisation must not use or disclose personal information about an individual for a purpose other than the primary purpose of collection except in specified circumstances. The specified circumstances include the use and disclosure of personal information where it is: for the purposes of reporting or investigating unlawful activity; required or authorised by or under law; and reasonably necessary for a range of activities carried out by, or on behalf of, an enforcement body.[95] The range of activities include:

> (i) the prevention, detection, investigation, prosecution or punishment of criminal offences, breaches of a law imposing a penalty or sanction or breaches of a prescribed law;
>
> (ii) the enforcement of laws relating to the confiscation of the proceeds of crime;
>
> (iii) the protection of the public revenue;
>
> (iv) the prevention, detection, investigation or remedying of seriously improper conduct or prescribed conduct;
>
> (v) the preparation for, or conduct of, proceedings before any court or tribunal, or implementation of the orders of a court or tribunal.[96]

---

94 *Privacy Act 1988* (Cth) s 6; sch 3, NPPs 2.1, 6.1.
95 Ibid sch 3, NPP 2.1(f)–(h).
96 Ibid sch 3, NPP 2.1(h).

34.68 NPP 6.1 provides further that an organisation must, on request by an individual, provide the individual with access to personal information it holds about the individual, subject to certain exceptions. These exceptions include where: providing access would be unlawful; denying access is required or authorised by or under law; providing access would be likely to prejudice an investigation of possible unlawful activity; providing access would be likely to prejudice certain law enforcement activities; and an enforcement body performing a lawful security function asks the organisation not to provide access to the information, on the basis that providing access would be likely to cause damage to the security of Australia.[97]

34.69 As discussed above, the OECD Guidelines, the EU Directive and some overseas legislation also provide for certain exceptions to their data protection principles for the purposes of criminal investigation. Other jurisdictions, however, provide for law enforcement activities in their privacy legislation by way of exemptions rather than exceptions. In New South Wales, for example, there are detailed exemptions for law enforcement bodies, such as the state and territory police force, the New South Wales Crime Commission, the AFP, the ACC, and the state and territory Directors of Public Prosecutions.[98] Similarly, in Victoria, a law enforcement agency is exempt from compliance with certain privacy principles under the *Information Privacy Act 2000* (Vic) in specified circumstances.[99]

Submissions and consultations

34.70 In IP 31, the ALRC asked whether there are any other agencies that should be exempt, either completely or partially, from the *Privacy Act*.[100] In response, the AFP submitted that the ALRC should consider 'how the protection of personal and sensitive information is best balanced with the broad and unpredictable nature of policing activities'. The AFP observed that, although law enforcement functions and requirements can be understood to be within the terms of the IPPs, there is no explicit recognition of operational policing in the privacy principles concerning collection (IPPs 1–3), and access and correction (IPPs 6 and 7). It suggested that an option for reform would be to extend the exceptions to the IPPs in line with the approach under the EU Directive, and the New South Wales and Victorian privacy legislation. The AFP submitted that this approach is a more transparent way for the *Privacy Act* to set out the range of circumstances in which police can collect, analyse, and disclose personal and sensitive information. It stated that this would also clarify the interaction between the *Privacy Act*, and the secrecy and disclosure provisions in other legislation.[101]

---

98 *Privacy and Personal Information Protection Act 1998* (NSW) s 3(1).

99 Examples of law enforcement agencies include the state or territory police force, the AFP and the ACC: *Information Privacy Act 2000* (Vic) s 3.

100 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 5–3.

101 Australian Federal Police, *Submission PR 186*, 9 February 2007.

ALRC's view

34.71 It is clear that requiring compliance with some of the privacy principles by law enforcement agencies would be inconsistent with the performance of their law enforcement functions in certain circumstances. For example, law enforcement agencies should generally not be required to alert a suspect to the collection of his or her personal information and should be able to disclose information for law enforcement purposes.

34.72 Currently, the *Privacy Act*, in conjunction with other Commonwealth legislation (such as the FOI Act), provides a number of exceptions to the privacy principles that allow such agencies to carry out their law enforcement activities. In its submission, the AFP suggested that these exceptions should be provided for by way of an exemption instead. In Chapter 30, a distinction is drawn between an *exemption* and an *exception*. An *exemption* applies where a specified entity or a class of entity is not required to comply with the privacy principles that would otherwise be applicable to it. An *exception* applies where a requirement in the privacy principles does not apply to any entity in a specified situation or in respect of certain conduct.

34.73 One argument for providing for law enforcement activities by way of an exemption rather than an exception is that it would clarify which law enforcement agencies are not required to comply with privacy principles when carrying out their law enforcement functions. The ALRC , however, does not have sufficient information to make a proposal and would be interested in views from a larger number of stakeholders on whether the current exceptions to the privacy principles for law enforcement purposes should be amended and set out in the form of an exemption for agencies that perform law enforcement functions.

Question 34–1 Should the *Privacy Act* be amended to set out, in the form of an exemption, the range of circumstances in which agencies that perform law enforcement functions, such as the Australian Federal Police and the Australian Crime Commission, are not required to comply with specific privacy principles?

Parliamentary departments

Background

34.74 Section 81(1)(a) of the *Parliamentary Service Act 1999* (Cth) provides that, in any Act other than the *Privacy Act*, a reference to an 'agency' includes a reference to a Department of the Parliament established under the *Parliamentary Service Act*. Since Departments of the Parliament established under the *Parliamentary Service Act* fall outside the definition of an 'agency' under the *Privacy Act*, they are exempt from the operation of the *Privacy Act*. These departments include the Department of the Senate,

the Department of the House of Representatives and the Department of Parliamentary Services (DPS).[102] The Department of the Senate and the Department of the House of Representatives provide advice and support to the Senate and the House of Representatives respectively, and to committees, senators and members.[103]

34.75 The DPS is headed by the Parliamentary Service Commissioner, whose functions are to give advice to Presiding Officers of both Houses of Parliament on the management policies and practices of the Parliamentary Service,[104] and if requested by the Presiding Officers, inquire into and report on matters relating to the Parliamentary Service that are specified in the request. The DPS is responsible for providing information analysis and advice to the Australian Parliament, maintaining and facilitating access to the Parliamentary Library's electronic and print information resources and providing a range of other services, such as information technology, broadcasting and Hansard services.[105]

34.76 The Office of the Parliamentary Librarian is an office within the DPS. The main function of the Parliamentary Librarian is to provide information, analysis and advice to senators and members of the House of Representatives in support of their parliamentary and representational role.[106]

Submissions and consultations

34.77 In its submission, the OPC brought the ALRC's attention to this exemption. The OPC stated that, although it was not aware of any particular concerns with the exemption of the DPS, the existence of the exemption is not apparent from a reading of the *Privacy Act*. There is no reference to the exemption in either the *Privacy Act* or the *Public Service Act 1999* (Cth), from which the *Privacy Act* derives its definition of a department. The OPC suggested that 'in the interests of clarity, the exemption … should be explicitly referred to in the *Privacy Act*', and that the DPS be included in a schedule to the Act of all entities that are exempt from compliance with the Act. Furthermore, the OPC submitted that all entities that are exempt from the Act should implement a set of information-handling standards.[107]

---

102 *Parliamentary Service Act 1999* (Cth) s 54. The DPS is a Department of the Parliament established by resolutions passed by each House of the Australian Parliament: Australian Parliamentary Service Commissioner, *Annual Report 2004–05* (2005), App A.

103 Australian Parliamentary Service Commissioner, *Annual Report 2004–05* (2005), 6.

104 The Presiding Officers are the President of the Senate and the Speaker of the House of Representatives: *Parliamentary Service Act 1999* (Cth) s 7.

105 Australian Parliamentary Service Commissioner, *Annual Report 2004–05* (2005), 6.

106 *Parliamentary Service Act 1999* (Cth) ss 38A, 38B.

107 Office of the Privacy Commissioner, *Submission PR 215*, 28 February 2007.

ALRC's view

34.78 The secondary legislative materials relating to the *Parliamentary Service Act 1999* (Cth) do not disclose a policy justification for the exemption of the parliamentary departments from the *Privacy Act*. As discussed in Chapter 30, any exemptions from the *Privacy Act* should be based on sound policy grounds and limited to the extent possible. The ALRC is interested in views on whether the parliamentary departments should continue to be exempt from the *Privacy Act*.

34.79 If there are legitimate reasons for the exemption of the parliamentary departments, the ALRC agrees with the OPC that the exemption should be referred to expressly in the *Privacy Act*. In Chapter 30, the ALRC proposes that the *Privacy Act* be amended to set out in a schedule to the Act exemptions for specific, named entities, which should distinguish between entities that are completely exempt and those that are partially exempt from the *Privacy Act*. If the exemption of the parliamentary departments were to remain, it should be included in the proposed schedule to the Act.[108]

Question 34–2 Should the Department of the Senate, the Department of the House of Representatives and the Department of Parliamentary Services continue to be exempt from the operation of the *Privacy Act*? If so, what should be the scope of the exemption?

State and territory authorities and prescribed instrumentalities

State and territory authorities

34.80 State and territory authorities fall outside the definition of an 'agency' and are also specifically excluded from the definition of an 'organisation' under the *Privacy Act*.[109] They are, therefore, exempt from the operation of the Act unless states and territories request that such authorities be brought into the regime by regulation.[110] Generally, state and territory authorities are people or bodies that are part of a state or territory public sector. They include, for example, state and territory ministers, departments, and bodies and tribunals and local governments established for a public purpose under a state or territory law.[111]

34.81 State and territory statutory corporations are excluded from the coverage of the *Privacy Act*.[112] State and territory bodies that are incorporated companies, societies or

111 Ibid s 6C(3).
112 Ibid s 6C(3)(c).

associations are, however, deemed to be 'organisations' for the purposes of the Act.[113] They can be prescribed out of the coverage of the Act, but only on request by the relevant state or territory and only after the minister has considered a number of issues outlined in the Act.[114]

34.82 For the period from 21 December 2001 to 31 January 2005, the OPC stated that 16% of all the NPP complaints closed by the OPC on the ground that they were outside of its jurisdiction concerned the exemption for state and local governments.[115] In 2004–05, the OPC received 2,469 enquiries concerning exemptions, of which 32% relate to state or local government bodies that are not covered by the *Privacy Act*.[116]

Prescribed state and territory instrumentalities

34.83 State and territory instrumentalities also fall outside the definition of 'agency' under the *Privacy Act*. A state and government instrumentality includes, for example, a company, society or association under the *Corporations Act 2001* (Cth).[117] They are, however, considered 'organisations' and are therefore subject to the private sector provisions of the Act, unless they have been prescribed to fall outside the definition of 'organisation' in accordance with s 6C(4) of the Act. At present, no state or territory instrumentalities have been prescribed.

34.84 The Revised Explanatory Memorandum to the Privacy Amendment (Private Sector) Bill 2000 (Cth) stated that the reason for this exemption was that the acts and practices of state and territory public sector agencies are for the states and territories to regulate.[118] In addition, it was stated that:

> Sub-clause 6C(4) describes the process for making regulations that stop State or Territory instrumentalities from being organisations … One of the purposes of this sub-clause is to recognise that Commonwealth regulation of a State or Territory instrumentality (for example a Corporations Law company, society or association) that performs core government functions is inappropriate, if such regulation would curtail the capacity of the State or Territory to function as a government.[119]

116 Office of the Privacy Commissioner, *The Operation of the Privacy Act Annual Report: 1 July 2004–30 June 2005* (2005), 38. No statistics on the number of inquiries concerning exempt state and local bodies were reported for 2005–06: see Office of the Privacy Commissioner, *The Operation of the Privacy Act Annual Report: 1 July 2005–30 June 2006* (2006).

117 Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), notes on clauses [74].

118 Ibid, notes on clauses [73].

119 Ibid, notes on clauses [74].

34.85 Some state and territory instrumentalities are required by other federal legislation to comply with the *Privacy Act*. For example, public and private sector higher education providers are required by the *Higher Education Support Act 2003* (Cth) to comply with the IPPs in respect of the personal information of students obtained for the purpose of the provision of financial assistance to students.[120]

Should state and territory authorities be exempt from the *Privacy Act*?

34.86 In submissions to the inquiry by the Senate Legal and Constitutional References Committee into the *Privacy Act* (2005 Senate Committee privacy inquiry), it was suggested that the exemption in relation to state agencies is a significant gap in the coverage of the *Privacy Act*.[121]

34.87 Another issue concerns the inconsistent coverage of state and territory entities. Some state-owned entities fall outside both federal and state privacy regimes while others are covered by both federal and state legislation. This issue is discussed in Chapter 4.[122]

Submissions and consultations

34.88 In IP 31, the ALRC asked whether state and territory authorities should be exempt from the operation of the *Privacy Act*.[123] Some stakeholders considered that state and territory authorities should be exempt from the *Privacy Act*.[124] The Office of the Information Commissioner Northern Territory submitted that:

> State and Territory authorities are the responsibility of their respective jurisdictions which should continue to be responsible for protecting the privacy of personal information collected and held by those authorities.[125]

34.89 The Victorian Office of the Health Services Commissioner stated that:

> Although it is unfortunate that certain state and territory statutory bodies fall outside both the federal and the state privacy regimes … this is not a sufficient reason for the Federal Government to attempt to regulate state and territory public sector agencies.[126]

121 Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005), [5.38].

122 It is important to note that any action by the Australian Government to extend the *Privacy Act* to cover state and territory bodies will raise constitutional issues. This is discussed in detail in Chapter 4.

123 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 5–4.

126 Office of the Health Services Commissioner (Victoria), *Submission PR 153*, 30 January 2007.

34.90 In contrast, other stakeholders considered that state and territory authorities should not be exempt from the *Privacy Act*.[127] The Insurance Council of Australia submitted that removing the exemption for state and territory authorities would create the potential for conflicts between the federal and state and territory laws.[128] It was suggested in one submission that state and territory agencies should only be exempt on a case-by-case basis.[129]

34.91 Some stakeholders submitted that state and territory authorities should be exempt to the extent that they are subject to state and territory privacy laws.[130] For example, the OVPC stated that federal privacy law should not bind state authorities when they are already subject to state privacy laws, because this would result in unnecessary fragmentation and confusion. The OVPC also did not support state referral of power to the Commonwealth,

> as it would remove the state's ability to provide enhanced protection and, while dealing with the constitutional impediment, continues to suffer from the problem of how it is to interact with other state based laws (FOI, archives, human rights etc).[131]

34.92 The OVPC was, however, in favour of federal minimum standards that apply to state and territory public sectors.

> Given that not all jurisdictions have privacy laws in place, there is some merit in the proposal to have minimum standards apply to state and territory public sectors which can be 'rolled back' once that jurisdiction enacts privacy legislation that conforms to the specified federal standard—provided that this allowed for better protection to be adopted by the state and territory governments.[132]

34.93 Some stakeholders noted that the question of exemption of state and territory authorities would fall away if a uniform privacy scheme were adopted.[133]

State and territory government business enterprises

34.94 A number of statutory corporations are government business enterprises (GBEs). GBEs provide a range of services, including communications, transport, employment and health services. The three characteristics to identify GBEs are: 'the Government controls the body; the body is principally engaged in commercial activities; and the body has a legal personality separate to a department of

government'.[134] A state or territory GBE may be a body corporate established by legislation for a public purpose (state-owned or statutory corporations), or a company established under corporations law in which a state or territory government has a controlling interest.

34.95 Currently, there is inconsistent coverage of state and territory statutory corporations under state and territory privacy laws. For example, statutory corporations are covered by privacy legislation in Victoria but not in New South Wales.[135] In Tasmania, specified statutory authorities that are GBEs are covered by privacy legislation.[136] The exemption for statutory corporations in New South Wales (NSW) was originally provided on the basis that statutory corporations should not be put at a competitive disadvantage with the private sector. The then Attorney General of NSW, the Hon Jeff Shaw, stated that:

> When the Act evolves to include coverage of the private sector, State-owned corporations will be similarly covered by the information and privacy principles of the legislation. The Government intends to address this issue in detail following the March 1999 election.[137]

34.96 NSW legislation has not yet been amended to cover statutory corporations.

Submissions and consultations

34.97 Particular concern was raised in submissions that some state-owned statutory corporations are excluded from both the state and the federal privacy regimes.[138] Some stakeholders considered that government businesses that compete with private sector organisations should be subject to the *Privacy Act*.[139]

34.98 In its submission, the OPC made a distinction between departments of state and agencies responsible for direct implementation of government policy, and state and territory entities incorporated for a public purpose by or under law. The OPC was of the view that

> the acts and practices of state and territory bodies that are responsible for policy development and implementation, and for the making of laws, should generally be subject to the oversight of the respective Parliament, and thus ultimately accountable to the electorate of that jurisdiction. This includes Ministers and departments of state in those jurisdictions and bodies, as well as bodies established for a public purpose by or under a law of that state or territory.[140]

34.99 The OPC submitted, however, that state-owned statutory corporations that function as government businesses should be covered by the *Privacy Act*, because not all states and territories have enacted privacy legislation, and the lack of privacy protection for personal information handled by statutory corporations may be inconsistent with community expectations. Furthermore, it submitted that 'applying privacy regulation to state and territory statutory corporations is likely to be consistent with the principle of competitive neutrality'.[141] On this basis, the OPC suggested a three-pronged approach, involving:

- the Australian Government working with all states and territories to implement privacy regulation that is consistent with the *Privacy Act* or adopt the *Privacy Act* as model legislation;

- the application of the *Privacy Act* to all incorporated bodies, including state and territory statutory corporations, except where there is equivalent privacy legislation in the relevant jurisdiction; and

- where it is considered necessary, that state and territory incorporated bodies exempted from coverage of the *Privacy Act* on public interest grounds, by applying a provision such as s 6C(4) of the Act to give effect to the exemption.[142]

34.100 Similarly, Professor Graham Greenleaf, Nigel Waters and Associate Professor Lee Bygrave submitted that:

> There is no reason why State or Territory business enterprises should have an arguable commercial advantage over private sector organisations because they can avoid the costs of compliance with privacy laws. On the other hand, there is no reason why the Commonwealth should monopolise power to establish appropriate privacy standards. Consistency in privacy standards across Australia is desirable, but that is a separate issue. The best balance is struck simply by ensuring that some enforceable privacy standard applies …

> The law should make provision for coverage of any state or territory authorities 'by agreement' (effected through Regulations) to cover the increasing number of 'hybrid' organisations involved in the delivery of public services and to ensure no organisation can 'fall between the gaps'.[143]

34.101 Other state and territory bodies that have been suggested for coverage under the *Privacy Act* include:

- bodies established by administrative arrangements, including on a cooperative basis between jurisdictions; [144]
- universities established under state or territory legislation;[145] and
- federally funded state entities, such as hospitals, research institutes, universities, schools, environment management agencies and road authorities.[146]

34.102 Some stakeholders submitted that certain state and territory bodies should continue to be exempt from the operation of the *Privacy Act*.[147] The NSW Guardianship Tribunal submitted that state and territory guardianship tribunals should remain exempt.[148] The Australian Guardianship and Administration Committee submitted that public trustees should be exempt 'from appropriate provisions of the *Privacy Act* … where the Public Trustee is seeking information about a person, from either the private or public sector, in the ordinary course of the Public Trustee's business as trustee'.[149]

Opt-in provision

34.103 Under s 6F of the *Privacy Act*, state and territory governments may request that certain state and territory authorities or instrumentalities be treated as organisations under the Act. One of the purposes of this opt-in provision

> is to allow statutory corporations whose activities are predominantly commercial, to 'opt-in' to the private sector privacy regime where the State (or Territory) and Minister (in consultation with the Privacy Commissioner) consider that it is appropriate to do so.[150]

150 Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), notes on clauses [96].

34.104 At present, only four state-owned entities have been brought into the federal privacy regime by regulation—Country Energy, EnergyAustralia, Integral Energy Australia and Australian Inland Energy Water Infrastructure.[151]

34.105 In IP 31, the ALRC asked whether any other state and territory authorities should be covered by the privacy principles in the *Privacy Act*, and if so to what extent they should be covered.[152] The OVPC suggested that the opt-in mechanism in s 6F of the *Privacy Act* should remain, because 'while it appears not to have been used, it may be in the future and this type of mechanism maintains control by and independence of the states'. [153]

Options for reform

34.106 Particular concerns have been raised in submissions about the inconsistent coverage of some state and territory GBEs by state and territory privacy laws. Any proposal to bring GBEs under the *Privacy Act*, however, must take into account the fact that some of them are already subject to state or territory privacy law. To avoid subjecting these bodies to two sets of privacy laws, there are essentially two options for reform.

34.107 One option is to provide that state and territory authorities be covered by the *Privacy Act* unless they are covered by a state or territory law that is 'substantially similar' to the *Privacy Act*. In Canada, s 26(2)(b) of the *Personal Information Protection and Electronic Documents Act* (2000) (Canada) provides that the Governor in Council may,

> if satisfied that legislation of a province that is substantially similar to this Part applies to an organization, a class of organizations, an activity or a class of activities, exempt the organization, activity or class from the application of this Part in respect of the collection, use or disclosure of personal information that occurs within that province.[154]

34.108 The Privacy Commissioner of Canada has determined that, in assessing whether provincial legislation is 'substantially similar' to the federal legislation, the Commissioner would

> interpret substantially similar as equal or superior to the [*Personal Information Protection and Electronic Documents Act*] in the degree and quality of privacy

---

151 *Privacy (Private Sector) Regulations 2001* (Cth) reg 3A. Australian Inland Energy Water Infrastructure was subsequently dissolved in July 2005: *Energy Services Corporation (Dissolution of Australian Inland Energy Water Infrastructure) Regulation 2005* (NSW).

153 Office of the Victorian Privacy Commissioner, *Submission PR 217*, 28 February 2007.

154 *Personal Information Protection and Electronic Documents Act 2000* SC 2000, c 5 (Canada) s 26(2)(b).

> protection provided. The federal law is the threshold or floor. A provincial privacy law must be at least as good, or it is not substantially similar.[155]

34.109 Another option is to model the provision on s 18BB(2)(a) of the *Privacy Act*. Section 18BB(2) provides that, before the Privacy Commissioner approves a privacy code, the Commissioner must be satisfied of a number of matters. One of these matters is that 'the code incorporates all the National Privacy Principles or sets out obligations that, overall, are at least the equivalent of all the obligations set out in those Principles.'

34.110 The OPC's *Guidelines on Privacy Code Development* provide guidance on how the Privacy Commissioner assesses whether the condition in s 18BB(2)(a) is met.

> In deciding if this condition has been met, the Commissioner requires code proponents to include a statement of claims detailing:
>
> i) how the obligations under the code differ from the obligations under the NPPs;
>
> ii) the rationale for the change to any obligation provided in the NPPs; and
>
> iii) how, in the opinion of the code proponent, the obligations set out in the code are at least equivalent of all the obligations set out in the NPPs.[156]

ALRC's view

34.111 Concerns have been raised in submissions about the inconsistent coverage of state and territory authorities under state and territory laws. The exemption of these authorities from the operation of the *Privacy Act* means that only those state and territory authorities that are subject to state and territory privacy laws are covered by privacy regulation. The exemption of state and territory authorities represents a significant gap in privacy regulation in Australia.

34.112 Particular concerns were raised about the exemption of state-owned statutory corporations that compete with private sector organisations. In the ALRC's view, the exemption of state-owned statutory corporations from the *Privacy Act* is not justified where they are in competition with an organisation and not subject to equivalent obligations under state or territory privacy legislation. State-owned statutory corporations that compete with private sector organisations should not have a competitive advantage.

34.113 In Chapter 4, the ALRC proposes that state and territories enact legislation applying the proposed Unified Privacy Principles and the proposed *Privacy (Health Information) Regulations* to the state and territory public sector agencies.[157] The enactment of such legislation would resolve issues concerning inconsistent regulation of state and territory authorities. The implementation of such a scheme, however, is likely to take time.

---

155 Privacy Commissioner of Canada, *Report to Parliament Concerning Substantially Similar Legislation* (2002), 2.

156 Office of the Federal Privacy Commissioner, *Guidelines on Privacy Code Development* (2001).

157 Proposal 4–4.

34.114 The ALRC is of the view that, before the proposed enactment of similar legislation in the state and territories, the *Privacy Act* should be amended to apply to all state and territory incorporated bodies, including statutory corporations, except where: they are covered by state or territory privacy law setting out obligations that, overall, are at least the equivalent of the relevant obligations in the *Privacy Act*; or the minister is satisfied that they should be exempt on public interest grounds.

34.115 The ALRC considers that the approach in considering whether a state or territory has equivalent privacy laws should be modelled on s 18BB(2)(a) of the *Privacy Act*. This option is preferable to the Canadian approach because the Privacy Commissioner already has experience in assessing equivalence under s 18BB(2)(a).

34.116 Currently, s 6C(4) of the *Privacy Act* provides a mechanism for regulations to be made to exclude a state or territory instrumentality from the coverage of the Act. In summary, s 6C(4) provides that, before exempting a state or territory instrumentality, the minister must: be satisfied that the exemption is requested by the state or territory; consider whether coverage of the body under the *Privacy Act* would adversely affect the state or territory government; the desirability of regulating that body under the *Privacy Act*; whether there are equivalent privacy laws that apply to that body; and consult with the Privacy Commissioner. The adoption of this mechanism would ensure that those state and territory bodies that should be exempt on public interest grounds, for example, because they are involved in policy development and implementation rather than in competition with organisations, are exempt from the *Privacy Act*.

Proposal 34–5 Subject to Proposal 4–4 (states and territories to enact legislation applying the proposed Unified Privacy Principles and *Privacy (Health Information) Regulations*), the *Privacy Act* should be amended to:

(a) apply to all state and territory incorporated bodies, including statutory corporations, except where they are covered by obligations under a state or territory law that are, overall, at least the equivalent of the relevant obligations in the *Privacy Act*; and

(b) empower the Governor-General to make regulations exempting state and territory incorporated bodies from coverage of the *Privacy Act* on public interest grounds.

Proposal 34–6 The *Privacy Act* should be amended to provide that, in considering whether to exempt state and territory incorporated bodies from coverage of the *Privacy Act*, the Minister must:

(a) be satisfied that the state or territory has requested that the body be exempt from the Act;

(b) consider:

(i) whether coverage of the body under the *Privacy Act* adversely affects the state or territory government;

(ii) the desirability of regulating under the *Privacy Act* the handling of personal information by that body; and

(iii) whether the state or territory law regulates the handling of personal information by that body to a standard that is at least equivalent to the standard that would otherwise apply to the body under the *Privacy Act*; and

(c) consult with the Privacy Commissioner about the matters mentioned in paragraphs (ii) and (iii) above.

35. Small Business Exemption

Introduction

35.1 Generally speaking, small businesses—namely, those that have an annual turnover of $3 million or less—are exempt from the operation of the *Privacy Act 1988* (Cth).[1] It has been estimated that up to 94% of businesses may fall under this exemption. This exemption has been the subject of a number of criticisms and scrutinised by four separate inquiries since 2000.[2] This chapter examines whether the exemption should be retained or removed, and sets out the ALRC's proposals to reform the exemption.

Current law

35.2 Under s 6C of the *Privacy Act*, a small business operator is specifically excluded from the definition of 'organisation' and generally is exempt from the operation of the

1 *Privacy Act 1988* (Cth) s 6C.

2 Parliament of Australia—House of Representatives Standing Committee on Legal and Constitutional Affairs, *Advisory Report on the Privacy Amendment (Private Sector) Bill 2000* (2000); Parliament of Australia—Senate Legal and Constitutional Legislation Committee, *Inquiry into the Provisions of the Privacy Amendment (Private Sector) Bill 2000* (2000); Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005); Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005).

Act. A 'small business operator' is an individual, body corporate, partnership, unincorporated association or trust that carries on one or more small businesses, and does not carry on a business that is not a small business.[3]

35.3 A 'small business' is a business that has an annual turnover of $3 million or less in the previous financial year (or in the current financial year if it is a new business).[4] 'Small businesses' can include non-profit bodies and unincorporated associations,[5] even though the ordinary meaning of the term 'business' may not include such bodies. There are a number of conditions that qualify the application of the exemption for small businesses. A small business may still be covered by the *Privacy Act* if it:

- provides a health service and holds personal health information except in an employee record;[6]
- collects personal information about another individual from, or discloses such information to, anyone else for benefit, service or advantage (unless it always has the consent of the individuals concerned, or only does so when authorised or required by law);[7]
- is or was contracted to provide services to the Australian Government or its agencies;
- is related to a larger business;
- is prescribed by regulation; or
- elects to 'opt in' to be treated as if it were an 'organisation' within the meaning of the *Privacy Act*.[8]

---

3 *Privacy Act 1988* (Cth) s 6D(3).

4 Ibid s 6D(1). The annual turnover of a business for a financial year includes the proceeds of sales of goods and/or services; commission income; repair and service income; rent, leasing and hiring income; government bounties and subsidies; interest, royalties and dividends; and other operating income earned in the year in the course of business: *Privacy Act 1988* (Cth) s 6DA. It does not include assets held by small businesses, capital gains or proceeds of capital sales: Office of the Privacy Commissioner, *A Privacy Checklist for Small Business* <www.privacy.gov.au/business/small/index.html> at 1 August 2007.

5 Office of the Privacy Commissioner, *A Snapshot of the Privacy Act for Small Business* <www.privacy.gov.au/business/small/bp.html> at 1 August 2007.

6 Examples of health service providers that hold personal health information not contained in an employee record include medical practices, pharmacies and health clubs: Australian Government Attorney-General's Department, *Fact Sheet on Privacy in the Private Sector—Small Business* (2000) <www.ag.gov.au> at 1 August 2007. An 'employee record' is defined to mean a record of personal information relating to the employment of the employee: *Privacy Act 1988* (Cth) s 6(1).

7 *Privacy Act 1988* (Cth) s 6D(7), (8). See also Office of the Privacy Commissioner, *What Does 'Trading in Personal Information' Mean?* <www.privacy.gov.au/faqs/sbf/q2.html> at 1 August 2007.

8 *Privacy Act 1988* (Cth) ss 6D(4), (9), 6E, 6EA.

35.4 In addition, under s 6E(1A) of the *Privacy Act*, a small business operator that is a 'reporting entity'—ie, a person who provides a 'designated service' under the *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth)[9]—is deemed to be an 'organisation' for the purposes of the *Privacy Act*. This provision was enacted to bring small business operators under the jurisdiction of the *Privacy Act* in relation to their obligations to collect personal information for the purposes of compliance with anti-money laundering and counter-terrorism financing legislation.

35.5 The Attorney-General may prescribe that certain small businesses or their activities be subject to the Act. The Attorney-General may do so if it is in the public interest and after consultation with the Privacy Commissioner.[10] This provision is intended to enable otherwise exempt businesses to be brought within the federal privacy scheme if they are found to constitute a particular risk to individual privacy.[11]

35.6 The Office of the Privacy Commissioner (OPC) keeps a register of those businesses that choose to 'opt in'. Currently there are 168 small businesses that have opted to be covered by the *Privacy Act*.[12]

35.7 When the private sector amendments were enacted, small businesses were exempted on the basis that many of them do not pose a high risk to privacy.[13] The Australian Government took the view that many small businesses do not have significant holdings of personal information, and those that may have customer records do not sell or otherwise deal with customer information in a way that poses a high risk to their customer's privacy.[14]

35.8 It was also the policy of the Australian Government to minimise compliance costs on small businesses.[15] The specified conditions that qualify the application of the small business exemption were intended to acknowledge that some personal information and some activities pose a higher risk to privacy than others, and that small businesses within these categories ought to be covered by the Act.[16]

15 Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), 6.

16 Ibid, 6.

35.9 For the period from 21 December 2001 to 31 January 2005, 20% of all the National Privacy Principles (NPPs) complaints closed by the OPC as outside of its jurisdiction concerned the small business exemption.[17] In 2005–06, the OPC received 2,000 enquiries concerning exemptions, of which 21% relate to the small business exemption.[18]

35.10 There are no provisions for an exemption for small businesses in international privacy instruments—namely, the *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* issued by the Organisation for Economic Co-operation and Development, the European Parliament's *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (EU Directive) or the Asia-Pacific Economic Cooperation (APEC) Privacy Framework.[19] There also are no similar exemptions in comparable jurisdictions, such as the United Kingdom, Canada and New Zealand.[20]

Retention of the exemption

35.11 The small business exemption was introduced in the *Privacy Amendment (Private Sector) Act 2000* (Cth). The Privacy Amendment (Private Sector) Bill was the subject of two parliamentary committee inquiries—the House of Representatives Standing Committee on Legal and Constitutional Affairs inquiry (2000 House of Representatives Committee inquiry)[21] and the Senate Legal and Constitutional Legislation Committee inquiry (2000 Senate Committee inquiry).[22]

35.12 Despite noting a number of criticisms of the small business exemption, the 2000 House of Representatives Committee inquiry took the view that an effective regulatory balance must be achieved in order to avoid overburdening small businesses that pose a low privacy risk, and that this cannot be achieved without some form of exemption for small businesses.[23] The 2000 Senate Committee inquiry recommended the retention of the exemption, on the basis that it 'achieve[s] an adequate balance between concerns

about the coverage of the exemption and the intention not to impose too great a burden on small businesses'.[24]

35.13 In 2005, both the OPC and the Senate Legal and Constitutional References Committee reviewed the private sector provisions of the *Privacy Act*.[25] Submissions to the review by the OPC of the private sector provisions of the *Privacy Act* (OPC Review) were roughly divided between retention of the small business exemption and its repeal.[26] In evidence before the Senate Legal and Constitutional References Committee inquiry into the *Privacy Act* (2005 Senate Committee privacy inquiry), the Privacy Commissioner did not recommend the abolition of the exemption because:

> One of the premises of the [A]ct is that there be a balance between the individual's right to privacy and the community's needs, and between the free flow of information and businesses operating efficiently. If the small business exemption were removed entirely, there would be a cost to I think it is 1.2 million small businesses in Australia.[27]

The Privacy Commissioner acknowledged, however, that the OPC had not assessed the estimated cost of removing the exemption.[28]

35.14 The 2005 Senate Committee privacy inquiry questioned the need to retain the small business exemption. It considered that privacy rights of individuals should be protected regardless of whether they are dealing with a small business, and that protecting these rights also makes commercial sense for all businesses. Given that privacy regimes in some overseas jurisdictions have operated effectively without the exemption, and that the existence of the exemption is one of the key outstanding issues preventing recognition of Australian privacy laws under the EU Directive,[29] the inquiry recommended that the small business exemption be removed from the *Privacy Act*.[30]

35.15 In response to questions during the 2005 Senate Committee privacy inquiry as to whether it was still necessary or desirable to achieve European Union (EU) adequacy given the use of contractual privacy standards by most businesses, the Privacy

Commissioner stated that it would be simpler for businesses if they did not have to use contractual privacy provisions.[31]

35.16 According to the Australian Government Attorney-General's Department, the small business exemption appears to be the 'key outstanding issue' as to how the matter of EU adequacy is to be resolved between the European Union and Australia.[32] As noted above, this was one of the reasons the 2005 Senate Committee privacy inquiry recommended that the small business exemption be removed from the *Privacy Act*.[33]

35.17 The 2005 Senate Committee privacy inquiry recommended that the ALRC investigate possible measures that could assist Australia in achieving EU adequacy.[34] The Australian Government disagreed with this recommendation, on the basis that 'international negotiations are a matter for the Australian Government and negotiations with the European Union are ongoing'.[35] It is the ALRC's understanding that negotiations with the EU on this issue are ongoing. The issue of EU adequacy is discussed further in Part J.

35.18 In its response to the OPC Review and the 2005 Senate Committee privacy inquiry, the Australian Government has indicated that it 'supports the retention of the small business exemption',[36] and that

> the small business exemption strikes an appropriate balance between the risk of privacy breaches and over regulation of small businesses. Removal of the exemption would be inconsistent with the Government's commitment to workplace reform and cutting red tape.[37]

Costs of compliance

35.19 If the small business exemption were removed, compliance costs could include the costs of: obtaining legal advice; educating or training staff on privacy requirements; maintaining security of personal information held; and dealing with requests from customers for access to and correction of their personal information. Many of these costs may be ongoing.

35.20 Business has identified privacy requirements as an important contributor to their cumulative regulatory burden. In its 2006 report, *Rethinking Regulation*, the Productivity Commission's Taskforce on Reducing Regulatory Burdens on Business recommended that the Australian Government consider the impact of privacy requirements on business compliance costs in the context of a wider review of Australian privacy laws.[38]

35.21 In its 2006 report, *The Victorian Regulatory System*, the Victorian Competition and Efficiency Commission noted the challenge for government in assisting small businesses in complying with regulation, 'given the need to provide adequate protection to the consumers of products produced by these businesses, as well as their workers and the environment'.

> There are a number of ways of meeting this challenge. In some cases, there may be less onerous provisions in the regulations which relate to small businesses … or even exemptions … However, such approaches by favouring some businesses over others can distort markets, and discourage smaller businesses growing past such thresholds. Another approach, advocated by the United Kingdom's Better Regulation Taskforce was to 'think small first' based on the assumption that regulation designed with the capacity and constraints of small business in mind would also be readily implemented by larger businesses.

35.22 The Commission went on to note that 'another approach is to have a consistent regulatory system but to provide special assistance for smaller businesses'.[39]

35.23 The Australian Chamber of Commerce and Industry (ACCI) argued that the low risk to privacy posed by small businesses and the potentially high compliance costs are reasons to retain the small business exemption.[40]

35.24 Associate Professor Moira Paterson provides a counter to this argument when she notes that the costs of compliance on businesses are likely to be significant only where businesses have poor record-keeping practices. Paterson noted that there was evidence from Quebec that implementing data protection measures may in fact result in cost reduction or increased productivity due to improved information-handling practices.[41] Furthermore, she observed that, in New Zealand,

> the limited information available to date does not suggest that the cost of implementation has been a major problem. For example, the New Zealand Real Estate Institute commented in 1994 that, while the passing of the Privacy Act 1993 (NZ) would have a considerable impact on the manner in which the industry might deal

with personal information, it did not expect that there would be any significant cost of compliance; what was required was common sense and fair dealing.[42]

Consent provisions

35.25 At present, a small business that trades in personal information may still be exempt if it has the consent of the individuals concerned to collect or disclose their personal information.[43] The OPC Review recommended the removal of the consent provision on the basis that the provision is 'clumsy and complicated', and that there is a lack of certainty as to whether a single failure to gain consent would change the exempt status of the business.[44] In the OPC's view, this would also ensure that all organisations that trade in personal information would be regulated by the *Privacy Act*, and that public number directory producers cannot make use of the exemption.[45]

35.26 In its response to the OPC Review, the Australian Government disagreed with the OPC Review's recommendation on the basis that 'the Act currently provides a mechanism for dealing with situations in which the consent provisions should not operate'.[46]

Submissions and consultations

35.27 In the ALRC's Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether the small business exemption should remain, and if so, what should be its extent.[47] Some stakeholders considered that the small business exemption should be retained.[48] A number of submissions emphasised the need to balance privacy protection and the interest of the business sector to operate efficiently.[49] Two main reasons were

suggested as to why the exemption should be retained, namely, that: small businesses pose a low risk to privacy because many small businesses do not collect a significant amount of personal information or deal inappropriately with personal information;[50] and the removal of the exemption would increase the overall regulatory burden and compliance costs.[51] One stakeholder also suggested that 'the consequences of misuse of personal information by small business will generally be less than misuse by large organisations or government'.[52]

35.28 The OPC stated that the small business exemption is 'necessary to balance privacy protection against the need to avoid unnecessary cost on small business'. It cited research undertaken by the Regulation Taskforce, which showed that compliance matters can consume up to 25% of the time of large companies and that the impact would be even greater for small businesses that generally do not have the in-house capacity to keep abreast of large amounts of regulation.[53] The OPC conceded, however, that the exemption

> may not promote consistency and may lead to additional burdens for small businesses and individuals because of the uncertainty it creates about whether personal information is regulated by the *Privacy Act*. … For individuals there may be an expectation that their personal information will be regulated by the NPPs and there may not be sufficient awareness that consent given to a small business could mean this protection is not provided.[54]

35.29 The OPC also noted that, under s 6E(1A) of the *Privacy Act*,

> personal information held by small businesses will only be covered [by the Act] where it has been collected for the purposes of anti-money laundering and counter-terrorism financing regulation. Accordingly, relevant small business will need to be able to distinguish between personal information that is regulated, and that which is not. The Office considers that many small business reporting entities may find that compliance is simplified by treating all personal information as though it is covered by the Privacy Act.[55]

55 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

35.30 Consistent with its recommendation in the OPC Review, the OPC further submitted that the consent provisions in ss 6D(7) and 6D(8) of the *Privacy Act* should be clarified as to whether a single failure by a small business to gain consent of an individual to trade in his or her personal information would affect the exempt status of that small business.[56]

35.31 Some stakeholders considered that the exemption should be retained because there are already mechanisms in the *Privacy Act* that limit the application of the exemption: by excluding those small businesses that engage in activities that pose a high risk to privacy; or those that enter into certain business relationships, for example, with government or larger organisations.[57]

35.32 The Victorian Automobile Chamber of Commerce (VACC) submitted that the exemption has been advantageous to its members in reducing the cost of compliance with the Act. VACC stated that the key concern raised by members that operate small businesses was that 'time would be taken away from the core business activities in order to comply with the privacy requirements, reducing their ability to be competitive or make a profit'.[58]

35.33 The Real Estate Institute of Australia (REIA) suggested that:

> Australian small businesses do in fact attract a relatively low number of privacy complaints after considering the sheer number of small businesses, their share of total sales of good and services and the likelihood that complaints outside the jurisdiction of the OPC may actually relate to a host of alternative exemptions.[59]

35.34 Some stakeholders expressed the view that small businesses already take steps to ensure that the personal information of customers is handled appropriately.[60] The VACC suggested that 'reputation and repeat business are essential for small businesses to survive. It is therefore in their best interests to handle information appropriately'.[61]

35.35 The ACCI, REIA and VACC suggested that the current threshold of $3 million is too low. Both the ACCI and the REIA submitted that the threshold for the small business exemption should be increased to an annual turnover of $5 million.[62] The REIA suggested that the threshold for the exemption should be raised to $5 million 'in order to reflect the ongoing impact of inflation and the recent period of economic

prosperity that is likely to have lifted the annual turnover of many small businesses', and that this would ensure that the threshold may be left unchanged over the short term.[63] The VACC submitted that, in 2004:

> small businesses within the automotive industry estimated an annual turnover of approximately $6–7 million despite recording minimum profit margins. Given the high cost of vehicles which are generally greater than $20,000, it is not difficult for small businesses to exceed the $3 million threshold.[64]

35.36 Two stakeholders suggested that the threshold for determining what is a small business must be periodically reviewed and updated to ensure that it remains contemporary and relevant.[65] The REIA submitted that this could be done by locating the small business exemption in regulations.[66]

Costs of compliance

35.37 In submissions to this Inquiry, a number of stakeholders suggested that, if the small business exemption were removed, the costs of compliance would be significant.[67] The costs of compliance would include costs relating to: obtaining advice from external sources, such as legal advice;[68] training and educating staff;[69] purchasing and maintaining reporting and information technology systems;[70] obtaining consent from individuals for the collection and use of the information in business activities;[71] keeping information up-to-date;[72] maintaining security of personal information held;[73] handling access and correction requests;[74] staff members being allocated the role of privacy officers;[75] management and staff time for implementation, reporting and training;[76] and lost business opportunities in circumstances where restrictions on the use of information precludes normal activities.[77] The ACCI suggested that ongoing

compliance costs would also include 'implementation of the policy, staff training, updating of the policy and dealing with inevitable complaints (legitimate or otherwise)'.[78]

35.38 The ACCI submitted that the total fixed costs to establish a simple privacy regime for an individual business would be $3,500. It stated that:

> Estimates of the legal costs for drafting a rudimentary privacy policy in 2007, though again tempered by the fact that the cost could vary considerably depending upon the characteristics of the business, were approximated at $2500. Supporting documentation, in terms of reference material such as the *Federal Privacy Handbook* and the *Privacy [Compliance] Toolkit* would now cost an additional $1000.[79]

35.39 It was noted that small businesses feel the impact of regulation more keenly than large businesses.[80] The ACCI suggested that this is because small businesses: have a narrower revenue base over which to spread the fixed costs of compliance; may not have in-house regulatory expertise to assist with compliance; may lack the time to keep abreast of regulatory developments; and may be discouraged by the complexity of regulation and the threat of penalties for even inadvertent non-compliance. The ACCI was of the view that regulation also can cause businesses to adjust their processes in ways that add to costs, and can make some commercial pursuits unviable or less attractive.[81]

35.40 The REIA suggested that the Australian Government should publish an analysis of the potential costs of abolishing the small business exemption. It submitted that:

> unnecessarily subjecting low risk businesses to the Privacy Act 1988 would simply add to the total regulatory burden and drive up costs without resulting in any significant additional protection for Australian consumers at large.[82]

35.41 On the other hand, it was suggested that any compliance costs would be proportional to the business size—if business operations were small, the costs of compliance would be low.[83] The view was expressed that there are many ways to reduce unnecessary costs of compliance without having an exemption, such as providing small businesses with guidance on records management and collection.[84] For example, the Government of South Australia submitted that:

> as many small businesses do not have significant holdings of personal information, the effect of removing the exemption on the cost burden of compliance is not expected to be significant … Minimising compliance costs should focus on unnecessary compliance cost, not compliance cost per se. There may be different ways and means to minimize unnecessary compliance costs, such as effective

> business awareness raising, more detailed and practical guidance from relevant government agencies, particularly the Office of the Federal Privacy Commissioner (through provision of sample privacy policies, manuals and training kits).[85]

35.42 Abacus–Australian Mutuals (Abacus), while supportive of the extension of the NPPs to small businesses, submitted that any reform of the exemption should be subject to appropriate consultation with affected industries and industry bodies to consider compliance and implementation issues to ensure that compliance costs were not substantive.[86]

Removal of the exemption

35.43 There have been a number of criticisms of the small business exemption. Professor Graham Greenleaf argues that consumers may not be able to determine with any certainty whether the small business exemption applies to the business they are dealing with.[87] He contends that the exemption operates unfairly to prejudice the interests of small businesses that wish to protect privacy, and is so broad as to undermine the credibility of the Act.[88] He further argues that the small business exemption contains a loophole that allows the operator of a number of small businesses to engage in unrestricted transfer and use of personal information, when those small businesses have a combined turnover exceeding $3 million.[89] Similarly, Nigel Waters argues that, together with the exemption for related bodies corporate,[90] the small business exemption may allow large organisations to transfer their data collection activity to a smaller entity within their corporate structure.[91]

35.44 Other arguments for removal of the exemption include, that: there is no appropriate criteria that could exempt only those small businesses that pose low risk to privacy, because any definition of 'small business' would be arbitrary; some small businesses, especially those in high risk sectors, handle large amounts of personal information and carry out some of the most privacy intrusive activities; the compliance burden can be minimised by modifying the application of the privacy principles to small businesses without an exemption; and removal of the exemption would facilitate trade with EU organisations.

Submissions and consultations

35.45 In submissions, there was strong support for the removal of the small business exemption.[92] A number of stakeholders expressed concern that the exemption effectively removes 94% of all businesses from the protection afforded to individuals under the *Privacy Act*.[93] The fact that a substantial number of all NPP complaints closed by the OPC were as a result of the complaints being outside the OPC's jurisdiction due to the small business exemption was also cause for concern.[94] The Office of the Victorian Privacy Commissioner stated that:

> About 30% of our enquiries result in referrals to the federal Office of the Privacy Commissioner, and the majority of these relate to small businesses which are likely to be exempt under the federal Act.[95]

35.46 Some stakeholders submitted that the protection of privacy rights should not depend on the size of business.[96] A view was also expressed that the ability of a business to misuse personal information is not related to its size, and that the consequences of misuse by small businesses could be just as severe as those for larger businesses.[97] Another stakeholder submitted that if individuals want their private personal information protected, they would have to choose to deal with businesses that have an annual turnover of more than $3 million.[98]

35.47 It was noted in a number of submissions that the assumption that small businesses are unlikely to hold significant amounts of personal information, or that they are unlikely to deal with it inappropriately, may no longer be valid.[99] Some small businesses do in fact hold large amounts of personal information, for example, internet

businesses and collectors of tenancy information such as real estate agents.[100] The Australian Communications and Media Authority (ACMA) submitted that:

> The increasing use of technology by small businesses, who may not be experienced in dealing with privacy matters places increasing pressure on the relevance of the small business exemption currently in the Privacy Act.[101]

35.48 Stakeholders also were concerned that consumers may not be able to determine with any certainty whether the small business exemption applies to the business they are dealing with,[102] since annual turnover figures are rarely publicly disclosed.[103] Furthermore, a concern was expressed that businesses themselves may be uncertain as to whether they are covered by the small business exemption—a problem that is further complicated by the conditions that qualify the application of the exemption.[104] For example, the Legal Aid Commission of New South Wales submitted that the Law Council of Australia was unable to provide clear guidance as to whether law firms are covered by the exemption.[105]

35.49 Abacus submitted that the small business exemption means that 'privacy protection is uneven, which adds complexity and confusion to the regime'.[106] The Queensland Government Department of Justice and Attorney-General expressed particular concern about the complexity of the exemptions regime in the educational sector:

> Non-State schools may or may not be required to comply based on a number of tests, for example annual turnover and the collection of 'health information'. Exempt non-state schools may also choose to 'opt in' to the regime. The three tiered approach that currently operates—determined by the size of the school and the collection of one type of information—can create inconsistencies in the management of personal information in educational contexts.[107]

35.50 Concerns have also been raised that the small business exemption, together with the exemption in relation to related bodies corporate, may be used by large

organisations to evade their responsibility under the *Privacy Act* by transferring data collection activities to a smaller entity within their corporate structure.[108]

35.51 The Government of South Australia submitted that 'business efficacy is not likely to be enhanced by misuse or careless management of personal information'. It considered that the benefits of removing the exemption would include: enhancing the protection of personal information; clarifying consumers' confusion and closing off loopholes under the exemption, thus promoting public confidence in the effectiveness of the privacy regime; creating a level playing field for all small businesses, as currently some small businesses are not exempt and others choose to opt in; promoting good business management practice and helping to build business reputation; and further harmonising the trans-Tasman privacy protection regime.[109]

35.52 The Australian Privacy Foundation took the view that:

> The sensible response is to have a default position of all businesses being subject to the privacy principles, but with an overall reasonable steps qualification applying to all principles. This would allow the Privacy Commissioner to issue guidance about the circumstances in which no steps, or only limited steps, would be reasonable.[110]

Definition of 'small business'

35.53 There are no recent official data showing the number of small business operators in Australia with an annual turnover of $3 million or less. According to the Australian Bureau of Statistics (ABS), however, as at June 2006, there were 1,837,503 small businesses with a turnover of less than $2 million, representing 93.6% of all actively trading businesses in Australia.[111] Therefore, the number of small businesses with an annual turnover of $3 million or less would be over 1.8 million. This figure, however, does not take into account the fact that some small businesses would not qualify for the small business exemption, for example, because they trade in personal information without the consent of the individuals concerned.

35.54 In evidence before the 2000 House of Representatives Committee inquiry, the Department of Employment, Workplace Relations and Small Business stated that:

> given the likelihood of the existence of high privacy risk low staff number businesses in, for example, the personal service sector or the online world, it was decided that an annual turnover figure that would capture the same number of businesses as the ABS measure should be used. The original figure of $1 million would have exempted 986,000 businesses. This equates to 93.8% of the businesses that would be defined as small businesses under the ABS definition. The $3 million threshold exempts 1,040,000 businesses. This equates to 98.9% of small businesses as defined by the

> ABS. It was decided by the Government, therefore, that the $3 million turnover threshold best represented a consistent measure of what was a small business. [112]

35.55 The Department also advised the inquiry that:

> based on the ABS *Business Growth and Performance Survey 1997–98*, approximately 94% of all Australian businesses fall under the $3 million threshold. The Department also noted that the survey indicated that the 95% of Australian businesses that are small businesses accounted for only 30% of total sales of goods and services. On this basis the Department estimated that the proportion of private sector business activity undertaken by small businesses was around 30%.[113]

35.56 The 2000 House of Representatives Committee inquiry accepted that any form of threshold would appear arbitrary.[114] It preferred, however, the use of an annual turnover threshold on the basis that the use of employee numbers to define small businesses could have the unintended consequence of exempting high risk internet-based businesses.[115]

35.57 In the context of defining small businesses for the purposes of tax legislation, it has been argued that turnover is preferable to number of employees because turnover is: reasonably well known and understood (although not consistently defined), as it is the most commonly used test in Australia and overseas; and less open to manipulation than measures based on income or taxable income. In addition, it was contended that using employees as a measure of the size of operations could lead to some businesses being classified as small businesses when they should not be due to the increasing use of contractors, and that grouping contractors with employees to determine size would require complicated provisions to distinguish employee-like contractors from truly independent suppliers.[116]

35.58 Submissions to previous inquiries have consistently questioned the rationale for defining small business as businesses with an annual turnover of $3 million or less.[117]

Other legislation defines small businesses differently. For example, under the uniform defamation laws, a corporation has no cause of action for defamation concerning the publication of defamatory matter about the corporation unless it is an 'excluded corporation', including one that employs less than 10 employees at the time of the publication.[118] The stated purpose of this provision is to prohibit corporations from suing for defamation unless they are small businesses or non-profit organisations.[119] In New South Wales, anti-discrimination legislation does not apply to employers who employ five or fewer persons in certain circumstances.[120] For the purposes of the goods and services tax, small businesses are those with an annual turnover of $2 million or less.[121]

35.59 The ABS defines small business as 'a business employing less than 20 people'.[122] As at June 2006, there were 1,877,895 businesses that employed less than 20 employees, representing 95.6% of all actively trading businesses in Australia.[123]

35.60 The OPC Review recommended the use of the ABS definition, on the basis that a business' annual turnover is not generally known and that the number of employees may more easily be understood by consumers and other parties. It also considered that, if the definition were expressed in terms of the definitions used by the ABS, the need to amend the *Privacy Act* each time the ABS definition is changed would be avoided.[124]

35.61 The Australian Government did not agree with the definition recommended by the OPC Review, on the basis that:

> redefining the small business exemption in this way could capture some small operators currently not required to comply with the Act and would increase their

> costs. It is also inconsistent with cutting regulatory 'red tape' and with workplace reform.[125]

Submissions and consultations

35.62 Many stakeholders identified the definition of 'small business' as problematic. In submissions and consultations, there is recognition—by both proponents and opponents of the small business exemption—that the threshold for the small business exemption of an annual turnover of $3 million or less is arbitrary.[126]

35.63 The Australian Privacy Foundation stated that:

> The small business exemption threshold is completely arbitrary. It is impossible to envisage any sensible size or other criteria which would capture potentially significant personal information handling while excluding 'mundane' processing. Even one-person businesses can be at the forefront of privacy intrusion (e.g. private investigators, or specialised websites).[127]

35.64 The OPC reiterated its recommendation in the OPC Review that the definition of small business be expressed in terms of the ABS definition of small business.[128]

35.65 There was some opposition to the OPC's recommendation.[129] The ACCI did not consider it appropriate to define small business in terms of the number of employees, on the basis that:

> - as casual or part time employees are counted as a single employee, this test would capture many small businesses who are currently exempt under the $3 million threshold test, particularly service industries, which are heavily reliant on casual labour; and
> - it would vastly increase costs of such small businesses.[130]

35.66 Electronic Frontiers Australia opposed an exemption based on the number of employees because 'this would still result in exemption for organisations that collect and disclose substantial amounts and types of personal information'.[131] Like the

Australian Privacy Foundation, Electronic Frontiers Australia took the view that even a sole trader may handle large amount of personal information.[132]

High risk sectors

35.67 Submissions to the OPC Review and the 2005 Senate Committee privacy inquiry suggested that some small businesses have significant holdings of personal information and carry out some of the most privacy intrusive activities. These include: tenancy database operators; telecommunication businesses, such as internet service providers (ISPs); debt collectors; private detectives; and dating agencies.[133]

Residential tenancy databases

35.68 Tenancy databases are privately owned electronic databases that contain information on tenants to assist property managers and landlords in assessing risk and identifying potential problem tenants. The *Privacy Act* generally applies to tenancy databases regardless of whether they are run by small businesses, because they trade in personal information. If a tenancy database that is a small business obtains the consent of an individual for the collection or disclosure of his or her personal information, however, then the Act does not apply.[134]

35.69 The 2000 House of Representatives Committee inquiry recommended that the NPPs apply to tenancy databases and that the Australian Government ensure that tenancy databases do not gain the benefit of the small business exemption.[135] This recommendation was rejected by the Attorney-General's Department because it did not believe that there was 'sufficient justification for singling out tenancy databases from the small business exemption'.[136]

35.70 The OPC Review recommended that the Attorney-General consider regulations to ensure that the *Privacy Act* applies to all small businesses operating residential tenancy databases.[137] It also recommended that the Privacy Commissioner be empowered to make a binding code under the Act to apply to all residential tenancy databases.[138] The 2005 Senate Committee privacy inquiry expressed concern that regulating small businesses in some areas—such as tenancy databases and

138 Ibid, rec 16.

telecommunications—but not others would only add to the complexity of the legislation.[139]

35.71 In 2006, the joint working party established by the Ministerial Council on Consumer Affairs and the Standing Committee of Attorneys-General released a report on residential tenancy databases. The joint working party recommended that the *Privacy Act* apply to residential tenancy databases. Like the OPC Review, the joint working party recommended that regulations be made to prescribe residential tenancy databases as organisations for the purposes of the Act. It also recommended that the Australian Government consider the recommendation in the OPC Review that a binding code be made under the *Privacy Act* to apply to all residential tenancy databases.[140] In addition, the joint working party recommended that 'the states and territories develop agreed uniform model legislation on the use by landlords, agents and listing parties of [residential tenancy databases]'.[141]

35.72 On 30 October 2006, in response to the joint working party's recommendations, the Attorney-General announced that regulations would be made pursuant to s 6E of the *Privacy Act* to prescribe all residential tenancy database operators as 'organisations' under the Act.[142]

35.73 The relevant state and territory ministers also have agreed to adopt uniform model residential tenancy database legislation. The Queensland Government will be drafting the model legislation.[143] Issues concerning residential tenancy databases are discussed further in Chapter 14.

Telecommunications industry

35.74 Although the use and disclosure of information by telecommunication providers with an annual turnover of $3 million or less are regulated by Part 13 of the *Telecommunications Act 1997* (Cth), they are not required to observe any standards when engaging in other information-handling practices—such as the collection and storage of personal information—if they have the consent of the individuals concerned when trading in the individuals' personal information.[144]

144 The privacy issues concerning telecommunications service providers are discussed in detail in Part J.

35.75 The OPC Review recommended that the Attorney-General consider regulations to ensure that the *Privacy Act* applies to all small businesses in the telecommunications sector.[145] The 2005 Senate Committee privacy inquiry expressed concern that regulating small businesses in some areas—such as tenancy databases and telecommunications—but not others would only add to the complexity of the legislation.[146]

35.76 In its response to the OPC Review, the Australian Government stated that the Attorney-General's Department would, in conjunction with the relevant government agencies, consider making regulations to ensure that the *Privacy Act* applies to all small businesses in the telecommunications sector.[147]

Debt collectors

35.77 The *Privacy Act* does not generally apply to debt collectors that have an annual turnover of $3 million or less. A debt collection agency that has purchased debts from a credit provider, however, may qualify as a credit provider and be subject to the credit reporting provisions of the Act. In addition, they are regulated by the consumer protection provisions of the *Trade Practices Act 1974* (Cth), the *Australian Securities and Investments Commission Act 2001* (Cth) and other relevant state legislation.[148] Issues concerning the application of the credit reporting provisions of the Act to debt collectors are discussed in Chapter 53.

Small businesses that hold genetic information

35.78 In their report, *Essentially Yours: The Protection of Human Genetic Information in Australia* (ALRC 96), the ALRC and the Australian Health Ethics Committee (AHEC) of the National Health and Medical Research Council noted that there was some doubt as to whether all small businesses that hold genetic information are subject to the *Privacy Act*.[149] It was considered that acts and practices of small businesses that hold genetic information pose a potential risk to the privacy of both the individual and

148 The Australian Competition and Consumer Commission and the Australian Securities and Investments Commission, who are jointly responsible for enforcing consumer protection legislation in relation to the debt collection industry, have issued guidance to assist collectors and creditors in understanding how the legislation applies to them: Australian Competition and Consumer Commission and Australian Securities and Investment Commission, *Debt Collection Guideline: For Collectors and Creditors* (2005).

149 Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), [7.104]. Submissions to ALRC 96 suggested that small businesses may not be covered by the *Privacy Act* if they simply store genetic samples or act as a data repository, without providing a health service; or if they are genomics companies that undertake research and do not trade in personal information: Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), [7.100]–[7.101].

his or her genetic relatives.[150] The ALRC and AHEC recommended in ALRC 96 that the *Privacy Act* be amended to ensure that all small businesses that hold genetic information are subject to the provisions of the Act, regardless of whether they provide a health service.[151]

35.79 The *Privacy Legislation Amendment Act 2006* (Cth) has amended the definitions of 'health information' and 'sensitive information' in the *Privacy Act* to include genetic information about an individual.[152] This means that small businesses that hold genetic information and provide a health service do not fall under the small business exemption.

Submissions and consultations

35.80 Submissions confirmed that there are significant concerns that certain sectors pose a particularly high risk to privacy and therefore should not be exempt from the *Privacy Act*.[153]

35.81 The Consumer Credit Legal Centre (NSW) (CCLC) submitted that:

> some of the most intrusive activities are carried out by very small organisations, and even sole traders, for example, private detectives, debt collectors, internet service providers and dating agencies.
>
> In several key areas we consider that the benefits of the small business exemption do not outweigh the disadvantages for business and for individuals. The key areas are industries that control large amounts of personal information and that also have access to the credit reporting system. Two particular industries are telecommunications and finance. Notably both industries were traditionally dominated by large companies that would not be classified as small businesses for the purposes of the Act. This is no longer the case and there are now many businesses in both finance and telecommunications that would fall under the small business exemption.[154]

35.82 Consistent with its recommendation in the OPC Review, the OPC submitted that some small business sectors that handle significant amounts of personal information should be prescribed as 'organisations' under the *Privacy Act*. It considered that coverage of the *Privacy Act* should be extended to: all small businesses in the telecommunications sector, including ISPs and Public Number Directory Producers;

small businesses that collect and use biometric information; and estate agents, landlords and listing agents who use residential tenancy databases.[155]

Residential tenancy database

35.83 The OPC noted that in addition to small businesses that operate residential tenancy databases, other users of the databases could also fall under the small business exemption—for example, estate agents that conduct database reporting on residential tenants, particularly if the agents have the consent of the individual concerned. The OPC further suggested that:

> if the states and territories do not pass uniform legislation to regulate estate agents, landlords and listing agents who use Residential Tenancy Databases (RTDs), that these businesses should be prescribed as organisations under the Act.[156]

35.84 The REIA supported the introduction of regulations pursuant to s 6E of the *Privacy Act* to prescribe all residential tenancy databases as 'organisations' for the purposes of the *Privacy Act*.[157]

Telecommunications industry

35.85 Some stakeholders, including the Department of Communications, Information Technology and the Arts (DCITA) and ACMA, expressed particular concern that small business operators in the telecommunications industry are exempt from the *Privacy Act*.[158]

35.86 DCITA did not consider it appropriate to treat small businesses in the telecommunications industry differently from medium and large businesses:

> As [the small business exemption] would effectively exempt a broad section of the telecommunications sector, we do not consider it appropriate to treat small businesses in the telecommunications industry differently from medium and large businesses. This is particularly the case in relation to the protection of the contents and substance of communications and the use and disclosure of personal information contained in the [Integrated Public Number Database].[159]

35.87 ACMA noted that more than a quarter of ISPs are small business operators. It expressed concern that carriage service providers, including ISPs, that are small businesses are exempt from the *Privacy Act* and questioned the relevance of the small business exemption in the increasingly convergent telecommunications environment.

159 Australian Government Department of Communications Information Technology and the Arts, *Submission PR 264,* 22 March 2007.

> Most consumers have little or no knowledge of the exemptions to the Privacy Act. As a consequence, many consumers transact with businesses assuming that their personal information is protected by the Privacy Act, when this may not be the case. If the small business exemption is to continue, it may be beneficial to publicise the exemption. This activity may result in voluntary compliance becoming a key market differentiator.[160]

35.88 Electronic Frontiers Australia submitted that all small businesses involved in the telecommunications and internet services sector should be required to comply with the NPPs, on the basis that the *Telecommunications Act* does not cover the collection of personal information.[161]

35.89 By contrast, the Communications Alliance submitted that:

> Whilst we concede that there are non-complying operators in the telecommunications sector that fall within the small business exemption, Communications Alliance recommends education and awareness raising and incentives to industry for voluntary adoption of the NPPs as a way to resolve the problem, rather than additional codes which will only increase the regulatory burden on small business operations.[162]

Debt collection

35.90 The CCLC submitted that a small business exemption should not apply in relation to debt collection, because when a bank sells the debt to a debt collector who is covered by the small business exemption, 'the strict confidentiality the consumer expected when entering into the loan has now been eroded often without their knowledge'. It contended that 'a consumer should be able to expect that the privacy rights that consumer had upon entering the loan are preserved for the life of the debt'.[163]

35.91 On the other hand, Abacus, while acknowledging that debt collection activity may fall under the small business exemption even though the debtor borrowed from a larger financial institution, suggested that:

> The 2005 renewal of the ASIC/ACCC Debt Collection Guidelines does, in *Abacus's* view, provide some confidence that creditors will ensure any debt recovery action is undertaken in accord with privacy measures.[164]

Other industries or services

35.92 Some stakeholders also have suggested other high risk sectors to which the small business exemption should not apply.[165] The NSW Commissioner for Children and Young People expressed concern that services such as child care centres, family counselling or dispute resolution services—which often keep records of sensitive personal information of children and young people—may fall within the small business exemption. It submitted that the *Privacy Act* should be amended to include specifically any business that provides services to children and young people.[166]

35.93 Another stakeholder expressed concern about the retention and use of personal records by the recruitment industry, in circumstances where jobseekers would have to consent to disclosure of their personal information in order to obtain the recruitment organisation's services.[167]

35.94 AXA submitted that 'it is not appropriate to exempt the financial services sector from the *Privacy Act*'.[168]

Modifying the application of the privacy principles to small businesses

35.95 A few stakeholders submitted that there are other ways to minimise the compliance burden on small businesses without the need for an exemption. It was suggested that this could be achieved by modifying the application of the privacy principles to small businesses, through:

- a privacy code for small businesses, which would relax or remove bureaucratic aspects of the principles and the *Privacy Act* while ensuring that personal information is handled appropriately;[169]
- public interest determinations issued by the Privacy Commissioner; or [170]
- specific exceptions to the privacy principles in relation to small businesses.[171]

167 Confidential, *Submission PR 97,* 15 January 2007. Although recruitment organisations trade in personal information, under s 6D(7)(a) of the *Privacy Act*, a recruitment organisation that has an annual turnover of $3 million or less may still be covered by the small business exemption if it has the consent of the individuals concerned. It also should be noted that the acts and practices of a recruitment organisation do not fall within the employee records exemption, unless they are in relation to the employee records of a current or former employee of that recruitment organisation and are directly related to that current or former employment relationship: see Information Technology Contract & Recruitment Association, *Privacy and the Recruitment Industry* <www.itcra.com/index.asp?menuid=100.010&artid=119> at 1 August 2007. The employee records exemption is discussed in Ch 36.

EU adequacy and implementation of the APEC Privacy Framework

35.96 A further argument for the removal of the small business exemption is that its existence is one of the major obstacles to Australia's privacy law being recognised as adequate by the EU, thus, arguably, impeding trade with the EU. One of the objectives of the private sector provisions of the *Privacy Act* was to facilitate trade with the EU.[172]

35.97 In March 2001, the Article 29 Data Protection Working Party of the European Commission released an opinion expressing concern about the sectors and activities excluded from the protection of the *Privacy Act*. The small business and employee records exemptions were noted as particular areas of concern.[173]

35.98 As the EU Directive restricts the export of personal data from an EU Member State to a recipient country that does not have an 'adequate level of protection',[174] Australian businesses that wish to trade with EU organisations would need to have contractual clauses in place to ensure the adequate protection of personal data transferred from the EU.[175]

35.99 The OPC Review noted that negotiations with the European Commission on this issue were continuing, especially in relation to the small business and employee records exemptions.[176] The Review concluded that, although there was no evidence of a broad business push for EU adequacy, there may be long term benefits for Australia in achieving such adequacy. The OPC Review therefore recommended that the Australian Government continue to work with the EU on this issue.[177] The Australian Government agreed with this recommendation.[178]

35.100 In addition, the OPC Review noted that globalisation of information makes implementation of international privacy frameworks important. Therefore the OPC also recommended that the Australian Government continue to work within APEC to implement the APEC Privacy Framework.[179]

Submissions and consultations

35.101 A number of stakeholders were of the view that the removal of the small business exemption would assist to ensure that Australia's privacy law is recognised as adequate by the EU.[180] One stakeholder submitted that Australian privacy laws should be consistent with international standards and therefore Australia should aim to achieve EU adequacy.[181] Professor Greenleaf, Nigel Waters and Associate Professor Lee Bygrave submitted that the exemption is a considerable obstacle for any adequacy finding. They noted that an European company would not be able to ascertain whether a business is an exempt small business for the purposes of the *Privacy Act*. They stated that:

> If personal data are transferred from Europe to some proper recipient in Australia, there is nothing in the Privacy Act except the normal rules governing secondary purposes to prevent the data from being disclosed to an exempt small business operator.[182]

35.102 The Australian Bankers' Association (ABA) submitted that the lack of EU adequacy has significant disadvantages for Australian companies that operate in a European environment. 'An Australian company must comply with the EU Directive through the exemptions (conditions) on a case by case basis when transferring data from an EU country to Australia'. The ABA submitted that removal of the small business exemption would remove a significant impediment to a finding of EU adequacy.[183]

35.103 Some stakeholders submitted that, as Australia's privacy laws are not being recognised as adequate by the EU, Australian businesses that wish to trade with organisations in the EU have to bear the costs of additional contractual arrangements,[184] including the costs of periodic audits of compliance with these arrangements.[185]

35.104 In contrast, the REIA suggested that:

> the APEC Privacy Framework is more closely aligned with the interests of Australia, and that Australia should not pursue a declaration of adequacy under the floundering EU Privacy Directive if this comes at the cost of the small business exemption. Small businesses experiencing problems obtaining personal data from European suppliers may always 'opt in' to the Australian privacy regime, which should 'in principle' be recognized by the EU similarly to businesses operating under the US Safe Harbor

> Privacy Principles. Further, the Australian Government may mandate that certain otherwise exempt entities be made subject to the Privacy Act 1988.[186]

Voluntary compliance and opting in

35.105 In practice, some small businesses appear to have committed to comply voluntarily with the *Privacy Act* without using the opt-in mechanism—for example, by posting privacy policies on their websites, or by agreeing to contractual terms that require them to comply with the *Privacy Act*. In a number of case studies, it was observed that some small businesses have privacy policies that state that they are bound by the *Privacy Act* even though they have not opted in.[187] It has been argued that, since such small businesses have not opted in, this leaves consumers or the other contracting party with limited avenues of complaint.[188]

35.106 In IP 31, the ALRC asked whether the opt-in procedure should continue to be available.[189] A number of submissions supported the retention of the opt-in procedure.[190] The OPC submitted that the opt-in provision in s 6EA of the *Privacy Act* should be retained because:

> it provides a mechanism for businesses to enhance their business reputation, and in some cases it is a requirement if the organisation wants to apply for a Code or Public Interest Determination.[191]

35.107 The Australian Government Department of Employment and Workplace Relations submitted that the opt-in mechanism represents 'a market solution to the question of which small businesses should monitor and control their handling of personal information':

> there is a role for privacy-savvy customers and other organisations having business dealings with small business to alert small business to privacy concerns, and to use their market power to persuade small business to 'opt in' or otherwise incorporate privacy safeguards in their business practices.[192]

35.108 The ACCI stated that it would not oppose an opt-in mechanism, provided that it remains voluntary. It suggested, however, that given the low uptake of the opt-in

192 Australian Government Department of Employment and Workplace Relations, *Submission PR 211,* 27 February 2007.

procedure by small businesses, the procedure be discontinued if the cost is disproportionate to the benefit of opting in.[193]

35.109 On the other hand, the ABA submitted that the opt-in mechanism would not be required if the Privacy Commissioner were to develop a public interest determination modifying the application of the NPPs to small businesses.[194]

ALRC's view

35.110 The ALRC is not convinced that an exemption for small business is either necessary or justifiable. While cost of compliance with the *Privacy Act* is an important consideration, this factor alone does not provide a sufficient policy basis to support the exemption. Further, the fact that no comparable overseas jurisdictions—including the United Kingdom, Canada and New Zealand—have an exemption for small businesses is a relevant consideration.

35.111 At present, subject to some businesses not meeting the conditions that qualify the application of the small business exemption, potentially up to 94% of businesses are exempt from the *Privacy Act*. The ALRC considers that the risks to privacy posed by small businesses are determined by the amount and nature of personal information held, the nature of the business and the way personal information is handled by the business, rather than by their size alone. Some small businesses, such as internet service providers and debt collectors, hold large amounts of personal information. In addition, given the increasing use of technology by small businesses, the risk posed to privacy may not necessarily be low. In this regard, it should be noted that the OPC received a significant number of inquiries that related to this exemption.

35.112 The ALRC does not consider that modifying the exemption is a sufficient response to the concerns raised in submissions and consultations. Whatever the threshold for the exemption is, the definition of 'small business' would be arbitrary, and consumers cannot determine easily whether the exemption applies to a particular business. In some cases, even small businesses may have problems understanding whether the exemption applies to them due to the various conditions for the application of the exemption.

35.113 The ALRC agrees with the 2005 Senate Committee privacy inquiry that regulating small businesses in some areas—such as residential tenancy databases, telecommunications and debt collection—and not others, would add to the complexity of the privacy regime. Modifying the application of the privacy principles to small businesses, either through a code, a public interest determination by the OPC or specific exceptions to certain privacy principles, would also result in uneven privacy protection without adequately addressing concerns about unnecessary costs of compliance to small businesses.

---

193 Australian Chamber of Commerce and Industry, *Submission PR 219,* 7 March 2007.
194 Australian Bankers' Association Inc, *Submission PR 259,* 19 March 2007.

35.114 Further, while the ALRC acknowledges that there is no broad push for Australia to achieve 'adequacy status' under the EU Directive, the removal of the exemption may assist in achieving EU adequacy and facilitate trade with EU organisations.

35.115 The ALRC acknowledges that removal of the exemption will result in compliance costs for small businesses. Costs are a legitimate concern for small businesses and for policy makers. There are, however, a number of ways that unnecessary compliance costs can be minimised without compromising individual privacy.

35.116 The costs of compliance are in part due to the complexity of the *Privacy Act*. In Chapter 3, the ALRC proposes that the *Privacy Act* be amended to achieve greater logical consistency, simplicity and clarity, and that the privacy principles be streamlined. The simplification of the legislation should go some way towards reducing unnecessary costs of compliance to small businesses.

35.117 Another way to reduce compliance costs to small businesses is by assisting them in understanding their regulatory rights and obligations.[195] The ALRC considers that this can be achieved by the OPC providing dedicated assistance and support to small businesses, which would include: a special national helpline for small businesses, similar to the Australian Competition and Consumer Commission's small business helpline;[196] developing guidelines and other educational material; providing templates for Privacy Policies free of charge; and liaising with other government departments and industry bodies—such as the Office of Small Business, the Business Council of Australia and the ACCI—to provide educational programs targeted at small businesses.[197] This may eliminate the need for small businesses to obtain legal advice, and may assist in the provision of training for staff in relation to compliance with the *Privacy Act*.

35.118 Such assistance should be established before the proposed removal of the exemption comes into effect. This would ensure that small businesses have sufficient

---

195 Small Business Ministers Council, *Giving Small Business a Voice—Achieving Best Practice Consultation with Small Business (Endorsed Paper)* (2000) Australian Government Office of Small Business.

196 The helpline was established to assist small businesses in complying with the *Trade Practices Act 1974* (Cth): Australian Competition and Consumer Commission, *Easy Access for Small Business for Advice* (2005) <www.accc.gov.au/content/index.phtml/itemId/718924> at 1 August 2007.

197 It should be noted that, currently, the OPC provides a number of plain English resources to assist small businesses in understanding whether they are covered by the *Privacy Act* and, if so, their obligations under the Act, including, eg, Office of the Privacy Commissioner, *A Snapshot of the Privacy Act for Small Business* <www.privacy.gov.au/business/small/bp.html> at 1 August 2007; Office of the Privacy Commissioner, *A Privacy Checklist for Small Business* <www.privacy.gov.au/business/small/index.html> at 1 August 2007; Office of the Privacy Commissioner, *A Guide to Privacy for Small Business* <www.privacy.gov.au/business/small/bizguide.html> at 1 August 2007.

time to understand their obligations under, and prepare for compliance with, the *Privacy Act* once the exemption is removed.

35.119 The ALRC acknowledges that such dedicated assistance to small businesses will have resource implications for the OPC and may require an increase in funding to the OPC by the Australian Government.

Proposal 35–1 The *Privacy Act* should be amended to remove the small business exemption by:

(a) deleting the reference to 'small business operator' from the definition of 'organisation' in s 6C(1) of the Act; and

(b) repealing ss 6D–6EA of the Act.

Proposal 35–2 Before the proposed removal of the small business exemption from the *Privacy Act* comes into effect, the Office of the Privacy Commissioner should provide support to small businesses to assist them in understanding and fulfilling their obligations under the Act, including by:

(a) establishing a national small business hotline to assist small businesses in complying with the Act;

(b) developing educational materials—including guidelines, information sheets, fact sheets and checklists—on the requirements under the Act;

(c) developing and publishing templates for small businesses to assist in preparing Privacy Policies, to be available electronically and in hard copy free of charge; and

(d) liaising with other Australian Government agencies, state and territory authorities and representative industry bodies to conduct programs to promote an understanding and acceptance of the privacy principles.

36. Employee Records Exemption

Introduction

36.1 An organisation that is or was an employer of an individual is exempt from compliance with the *Privacy Act 1988* (Cth) where an act or practice is directly related to the employment relationship and to an employee record held by the organisation. This chapter considers whether this exemption should remain.

Current law

36.2 Section 6 of the Act defines 'employee record' to mean a record of personal information relating to the employment of the employee. Examples of such personal information include health information about the employee, and personal information about:

(a) the engagement, training, disciplining or resignation of the employee;

(b) the termination of the employment of the employee;

(c) the terms and conditions of employment of the employee;

(d) the employee's personal and emergency contact details;

(e) the employee's performance or conduct;

(f) the employee's hours of employment;

(g) the employee's salary or wages;

(h) the employee's membership of a professional or trade association;

(i) the employee's trade union membership;

(j) the employee's recreation, long service, sick, personal, maternity, paternity or other leave;

(k) the employee's taxation, banking or superannuation affairs.[1]

36.3 Acts and practices of an organisation are exempt from the *Privacy Act* if they are directly related to a current or former employment relationship.[2] Accordingly, the exemption does not apply to: acts and practices of an employer that are beyond the scope of the employment relationship;[3] the personal information of unsuccessful job applicants;[4] and the handling of employee records by contractors and subcontractors to the employer.[5]

36.4 The Revised Explanatory Memorandum to the Privacy Amendment (Private Sector) Bill 2000 (Cth) stated that:

> The act or practice must be directly related to a current or former employer relationship so as to ensure that employers cannot use 'employee records' for commercial purposes unrelated to the employment context.[6]

36.5 The reason given for the employee records exemption was that:

> While this type of personal information is deserving of privacy protection, it is the government's view that such protection is more properly a matter for workplace relations legislation.[7]

---

1 *Privacy Act 1988* (Cth) s 6(1). This list is not intended to be exhaustive: Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), notes on clauses [22]. Some information held by employers relating to individual employees—for example, emails received by an employee from third parties—may not necessarily be an 'employee record': Office of the Federal Privacy Commissioner, *Coverage of and Exemptions from the Private Sector Provisions (Updated with Minor Amendments 6/9/02)*, Information Sheet 12 (2001), 3.

2 *Privacy Act 1988* (Cth) ss 7(1)(ee), 7B(3).

3 For example, employers cannot sell a list of employees for marketing purposes: Office of the Federal Privacy Commissioner, *Coverage of and Exemptions from the Private Sector Provisions (Updated with Minor Amendments 6/9/02)*, Information Sheet 12 (2001), 3. See also *C v Commonwealth Agency* [2005] PrivCmrA 3, in which the Privacy Commissioner determined that the disclosure of an employee record by an employer to the employer's legal counsel in relation to proceedings that did not concern the employee was not an act that was directly related to the employment relationship, and therefore did not fall within the employee records exemption.

4 Once an employment relationship is established, however, records of pre-employment checks on the individual employee become exempt: Office of the Federal Privacy Commissioner, *Coverage of and Exemptions from the Private Sector Provisions (Updated with Minor Amendments 6/9/02)*, Information Sheet 12 (2001), 3.

5 Ibid, 4. The Office of the Privacy Commissioner has stated that 'in many circumstances, the exemptions may not apply to organisations that provide recruitment, human resource management services, medical, training or superannuation services under contract to an employer': Office of the Federal Privacy Commissioner, *Coverage of and Exemptions from the Private Sector Provisions (Updated with Minor Amendments 6/9/02)*, Information Sheet 12 (2001), 3.

6 Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), notes on clauses [109].

36.6 The website of the Australian Government Attorney-General's Department (AGD) indicates that:

> The potential also exists for Commonwealth privacy regulation of employee records to have unintended consequences where it intersects with State and Territory laws dealing with employee records.[8]

36.7 Currently, there is little privacy protection for private sector employees under the federal workplace relations regime. Regulations 19.20 and 19.21 of the *Workplace Relations Regulations 1996* (Cth) allow employees to access certain records. This, however, only applies to records about conditions under which employees are hired, hours worked, remuneration, leave, superannuation contributions and termination.[9] It does not include other personal information that falls within the definition of 'employee record' in the *Privacy Act*, for example, employees' health information, or their taxation or banking affairs. The regulations only require employers to maintain and provide access to records, rather than to protect the privacy of those records.

36.8 There is no corresponding exemption for the handling of employee records by agencies under the *Privacy Act*. Therefore, Australian Government and ACT agencies are required to comply with the Information Privacy Principles (IPPs) when dealing with employee records.[10] Privacy legislation in New South Wales, Victoria and the Northern Territory also applies to employee records of public sector employees.[11] In Tasmania, public sector bodies, councils, the University of Tasmania, prescribed bodies, and contractors to these entities have to comply with the personal information protection principles under the *Personal Information Protection Act 2004* (Tas) in dealing with employee information, subject to certain exceptions.[12] The Victorian *Health Records Act 2001* also regulates the handling of health information, including information contained in employee records, by public and private sector entities.

36.9 A number of overseas jurisdictions—including the United Kingdom, Ireland, New Zealand and Hong Kong—do not exempt employee records from the operation of their privacy or data protection legislation. They do, however, commonly provide for exceptions to their data protection principles when dealing with personal information

7 Commonwealth, *Parliamentary Debates*, House of Representatives, 12 April 2000, 15749 (D Williams—Attorney-General), 15752. See also Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), 4, notes on clauses [109].

8 Australian Government Attorney-General's Department, *Employee Records* (2000) <www.ag.gov.au> at 14 August 2007.

9 *Workplace Relations Regulations 2006* (Cth) regs 19.7–19.16.

10 A slightly amended version of the *Privacy Act 1988* (Cth) applies to ACT government agencies: *Australian Capital Territory Government Service (Consequential Provisions) Act 1994* (Cth) s 23.

11 *Privacy and Personal Information Protection Act 1998* (NSW); *Information Privacy Act 2000* (Vic); *Information Act 2002* (NT).

12 *Personal Information Protection Act 2004* (Tas) ss 3 (definition of 'personal information custodian'), 10, sch 1, cl 2(1)(i)–(j).

for the purposes of recruitment, appointments and contracts for provision of services.[13] Some overseas legislation also provides an exception for personal references relevant to an individual's suitability for employment or appointment to office.[14]

36.10 There is no general exemption for employee records under the *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* issued by the Organisation for Economic Co-operation and Development (OECD Guidelines), the *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (EU Directive) issued by the European Parliament or the Asia-Pacific Economic Cooperation (APEC) Privacy Framework.[15]

36.11 In 2001, the Article 29 Data Protection Working Party of the European Commission released its advisory opinion on the *Privacy Amendment (Private Sector) Act 2000* (Cth). The Working Party stated that employee records often contain sensitive information and saw no reason to exclude them from the protection provided for sensitive information by National Privacy Principle (NPP) 10. Furthermore, the Working Party observed that the exemption allows information about previous employees to be collected and disclosed to a third party (eg, a future employer) without the employee being informed.[16]

36.12 For the period from 21 December 2001 to 31 January 2005, the Office of the Privacy Commissioner (OPC) indicated that 12% of all the NPP complaints closed by the Office as outside of its jurisdiction concerned the employee records exemption.[17] In 2005–06, the OPC received 2,000 enquiries concerning exemptions, of which 43% related to the employee records exemption.[18]

Adequacy of privacy protection for employee records

Background

36.13 In 2000, the House of Representatives Standing Committee on Legal and Constitutional Affairs concluded an inquiry into the Privacy Amendment (Private Sector) Bill (2000 House of Representatives Committee inquiry). The 2000 House of Representatives Committee inquiry was not satisfied that existing workplace relations legislation provided adequate protection for the privacy of private sector employee records, and expressed 'grave concerns' about the exemption.[19]

36.14 The 2000 House of Representatives Committee inquiry stated that employees are in need of privacy protection because employers frequently hold a large amount of information about their employees, some of which can be extremely sensitive—such as health information, genetic test results, financial details and results of psychological testing conducted before employment. The inquiry acknowledged that there are competing considerations and that employers should be able to disclose some information to future employers, such as confidential references. It considered that a distinction could be drawn in the nature, but not the sensitivity, of the information that may be held in employee records. It was the inquiry's view that employees are entitled to expect confidentiality of their workplace records given that they have little choice about providing information to their employers.[20]

36.15 A particular issue was whether the health information of employees should be covered by the *Privacy Act*. The 2000 House of Representatives Committee inquiry strongly objected to the inclusion of 'health information' in the definition of 'employee record'. It also noted that this was inconsistent with the more specific protection given to health information and sensitive information elsewhere in the Privacy Amendment (Private Sector) Bill.[21]

36.16 In rejecting the recommendations by the 2000 House of Representatives Committee inquiry, the Australian Government stated that:

> The regulation of employee records is an area that intersects with a number of State and Territory laws on workplace relations, minimum employment conditions, workers' compensation and occupational health and safety, some of which already include provisions protecting the privacy of employee records. The Government considers that to attempt to deal with employee records in the [Privacy Amendment

19 Parliament of Australia—House of Representatives Standing Committee on Legal and Constitutional Affairs, *Advisory Report on the Privacy Amendment (Private Sector) Bill 2000* (2000), [3.29].
20 Ibid, [3.30]–[3.33].
21 Ibid, [3.37].

> (Private Sector)] Bill might result in an unacceptable level of interference with those State and Territory laws, and a confusing mosaic of obligations.[22]

36.17 In their 2003 report, *Essentially Yours: The Protection of Human Genetic Information in Australia* (ALRC 96), the ALRC and the Australian Health Ethics Committee (AHEC) of the National Health and Medical Research Council recommended that the *Privacy Act* be extended to cover genetic information contained in employee records.[23] The ALRC and AHEC further recommended that the forthcoming inter-departmental review of employee privacy by the AGD and the Australian Government Department of Employment and Workplace Relations (DEWR) consider whether the *Privacy Act* should be amended to cover other forms of health information contained in employee records.[24]

36.18 In February 2004, the AGD and DEWR released a discussion paper on the privacy of employee records.[25] The discussion paper examined the current level of privacy protection for employee records under existing federal, state and territory laws. It also considered some privacy concerns about employee records and suggested options for enhancing privacy. These options included: retaining the exemption; abolishing or modifying the exemption; establishing specific employee records privacy principles; and protecting employee records in workplace relations legislation.[26] No final recommendations were made.

36.19 In its report, *Workplace Privacy—Final Report* (2005), the Victorian Law Reform Commission (VLRC) commented that 'the operation of the employee records exemption leaves a significant gap in the privacy protection of workers' personal information'.[27]

36.20 In April 2006, the Standing Committee of Attorneys-General agreed to establish a working group to advise ministers on options for improving consistency in privacy

---

22 Australian Government Attorney-General's Department, *Government Response to House of Representatives Standing Committee on Legal and Constitutional Affairs, Advisory Report on the Privacy Amendment (Private Sector) Bill 2000* (2000) <www.ag.gov.au> at 1 August 2007. During the OPC Review, a number of submissions and consultations commented on the employee records exemption, despite the fact that it was expressly excluded from the terms of reference for the Review: Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 285.

23 Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), Rec 34–1.

24 Ibid, Rec 34–2.

25 Australian Government Attorney-General's Department and Australian Government Department of Employment and Workplace Relations, *Employee Records Privacy: A Discussion Paper on Information Privacy and Employee Records* (2004).

26 Ibid, [4.15]–[4.42]. The 2005 Senate Committee privacy inquiry expressed disappointment at the slow progress of the AGD and DEWR review, and considered the finalisation and release of the results of the review a matter of urgency: Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005), [7.35].

27 Victorian Law Reform Commission, *Workplace Privacy: Final Report* (2005), [1.19].

regulation, including workplace privacy.[28] In its response to the 2006 report by the Productivity Commission's Taskforce on Reducing Regulatory Burdens on Business, the Australian Government stated that the working group would liaise with—and not duplicate the work of—the ALRC in this area.[29]

36.21 In November 2006, the House of Representatives Standing Committee on Legal and Constitutional Affairs released a report on the harmonisation of legal systems within Australia and between Australia and New Zealand. In its report, the Committee recommended that 'the Australian Government highlight the issue of regulatory inconsistency in privacy regulation, including in the area of workplace privacy regulation', in its submissions to the current Inquiry.[30]

EU adequacy and implementation of the APEC Privacy Framework

36.22 The European Union (EU) has not granted Australia 'adequacy status' under the EU Directive.[31] The OPC's review of the private sector provisions of the *Privacy Act* (OPC Review) noted that there were continuing negotiations with the European Commission regarding the adequacy of the *Privacy Act*, especially in relation to the small business and employee records exemptions.[32] The OPC Review concluded that, although there was 'no evidence of a broad business push' for achieving EU adequacy, there may be long term benefits for Australia in achieving such adequacy. The OPC Review therefore recommended that the Australian Government continue to work with the EU on this issue.[33] The Australian Government agreed with this recommendation.[34]

36.23 In addition, the OPC Review noted that the increase in transborder data flows makes implementation of international privacy frameworks important. The OPC therefore also recommended that the Australian Government continue to work within APEC to implement the APEC Privacy Framework.[35]

35 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 17.

36.24 In its inquiry into the *Privacy Act* in 2005, the Senate Legal and Constitutional References Committee (2005 Senate Committee privacy inquiry) noted with concern that current workplace relations legislation does not adequately protect workplace privacy, and recommended that this Inquiry examine the precise mechanisms under the *Privacy Act* to protect employee records.[36] It also recommended that the current Inquiry investigate possible measures that could assist Australia in achieving EU adequacy.[37] The Australian Government disagreed with this recommendation, on the basis that 'international negotiations are a matter for the Australian Government and negotiations with the European Union are ongoing'.[38] The issue of EU adequacy is discussed further in Chapter 28.

Submissions and consultations

36.25 In the Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether the employee records exemption should remain.[39] A large number of stakeholders supported the removal of the employee records exemption.[40]

36.26 Some stakeholders observed that employers sometimes hold sensitive personal information about their employees, such as health, financial or disabilities information.[41] The Centre for Law and Genetics suggested that there is a real potential for individuals to be harmed if such sensitive personal information is inappropriately used or disclosed.[42] The Queensland Council for Civil Liberties submitted that 'employees usually have no effective choice but to give significant personal information, often of a sensitive nature to their employer'.[43] Similarly, the ACTU stated:

> In many cases information is collected from employees as a condition of their employment; for example, health information, criminal charges or convictions and financial matters such as bankruptcy or garnishee of wages. The exemption allows this information to be disclosed to others in circumstances which could be very damaging to the individual.[44]

36.27 Stakeholders raised particular concerns about the privacy of employees' health information.[45] For example, the Victorian Office of the Health Services Commissioner stated that it has received many inquiries and complaints from employees in relation to their health information being inappropriately collected or disclosed, or not being stored securely.[46]

36.28 The Mental Health Legal Centre expressed concern about the release of information about a person's mental health to prospective employers. It submitted that:

> We know anecdotally of many situations when a person has become unwell, taken leave and produced a medical certificate with the reason for their absence with a diagnosis of their illness. These medical reports go on their employment file and may (and do) mean that a prior knowledge of the person's mental health affects future jobs options.[47]

36.29 In addition, the Mental Health Legal Centre stated that:

> People found not guilty on the grounds of mental impairment under the Victorian *Crimes Mental Impairment and Unfitness to be Tried Act* (1998) have such findings recorded on LEAP (police data). This information is released to potential employers by police upon request (and consent signed by the employee).[48]

36.30 Some stakeholders observed that a significant number of the complaints closed by the OPC as falling outside its jurisdiction concerned the employee records exemption.[49] It was also submitted that 'experience in other jurisdictions (including the IPP regime applying to Commonwealth agencies) shows that employees are major users of privacy rights'.[50]

36.31 Several stakeholders observed that there is privacy protection for employee records of public sector employees but not for those employed in the private sector.[51] For example, the Victorian Government stated:

> under the *Privacy Act* the personal information of workplace participants receives differential treatment depending upon their employment status, and whether or not they work in the public or private sectors. With the increasing mobility of the workforce and increased use of contractors in the workplace, there appears to be no justification for this differential treatment.[52]

36.32 This differential treatment is highlighted by the handling of employee records by Australian Government agencies that are subject to the IPPs in relation to their non-commercial activities and the NPPs in relation to their commercial activities, such as the Australian Postal Corporation. In its submission, the Australian Postal Corporation stated that

> staff who are employed by Australian Post in connection with its commercial activities do not have the same rights of access to their employment records under the law as their colleagues who are employed by the Corporation with its non-commercial activities.[53]

36.33 The OPC submitted that the removal of the employee records exemption would improve the consistent application of the privacy principles to both the public and private sectors.

36.34 The ACTU suggested that it seems unethical for a business to handle the personal information of customers and suppliers differently from that of their employees.[54]

> The moral case for employers being required to respect the confidentiality of information acquired by them about their employees in the course of the latter's employment seems unassailable. It is consistent with the common law duty of trust and confidence which courts have found employers to owe their employees, including in respect of information provided by employees.[55]

36.35 Some stakeholders noted gaps in the protection of workers' privacy in legislation[56] and, in particular, the limited protection provided by the workplace

relations legislation.[57] It was also suggested in some submissions that the continuation of the exemption is likely to lead to further fragmentation in states that have enacted legislation regulating the area of workplace privacy.[58] Some stakeholders noted with concern that states are introducing legislation that attempts to deal with a perceived gap in privacy protection for employees, which results in the complexity of complying with multiple state-based legislation. These stakeholders were of the view that, in the interests of national consistency, the *Privacy Act* should apply to the personal information of employees in place of existing state legislation in this area.[59] Telstra submitted that large companies are covered by state and federal privacy legislation and have the additional burden of 'an unreasonably high cost of compliance in order to comply with several differing privacy regimes relating to employees'.[60]

36.36 The OPC stated that removing the exemption could have a number of benefits, including:

- offering an appropriate balance between the interests of the parties, just as it offers such a balance between organisations and their customers
- providing a minimum set of standards for privacy protection of employee records, consistent with protection of an employee's rights as a private citizen
- providing certainty about rights and obligations for employers and employees
- eliminating regulatory difficulties in interpreting the exemption
- providing access to a conciliation-based complaints process through the Office of the Privacy Commissioner.[61]

36.37 Some stakeholders submitted that the additional costs of compliance resulting from any proposed removal of the exemption may be mitigated by certain factors.[62] The OPC submitted:

> The Office understands that many large businesses already apply the privacy principles to their handling of employee records. For those businesses any removal of the exemption may not create an added compliance cost. Conversely for those

> businesses that do not currently apply the NPPs to their employee records there would be costs to implement and maintain a compliance regime.[63]

36.38 Similarly, AAMI submitted that

> in practice (for larger businesses at least) procedures have been implemented to ensure that employee information is treated in the same way as all other personal information/sensitive information that is received.[64]

36.39 The Office of the Information Commissioner Northern Territory submitted that 'in the absence of clear evidence to the contrary, … the extent of the additional costs to business of removal of the employee records exemption should not be assumed or overstated'. The Office stated that the increase in resources required to include private sector employee records within the existing scheme may be 'marginal', on the basis that:

- because information about clients is not exempted, most businesses subject to the Act are already required to have in place: mechanisms for developing policies to implement the NPPs; and procedures for dealing with complaints about breaches of the NPPs;
- there is growing expertise in dealing with privacy issues within the workforce because of the extensive coverage of privacy legislation. [65]

36.40 It was also submitted that simplifying the structure of the *Privacy Act* by removal of the exemption would remove the current costs of interpreting and applying the employee records exemption.[66]

36.41 Furthermore, some stakeholders submitted that compatibility with overseas jurisdictions and international standards should be a factor in considering whether the exemption should remain.[67] The New Zealand Privacy Commissioner noted the desirability of trans-Tasman compatibility, which may be facilitated by, for example, 'a seamless application of privacy protections for the information of prospective employees applying for work in the other country', or 'former employees after they return home'.[68]

36.42 Professor Graeme Greenleaf, Nigel Waters and Associate Professor Lee Bygrave noted that the Article 29 Working Party has expressed concern that human resource data are often traded across borders and often contain sensitive information.

Although there is no empirical data on the quantity and nature of information flows from Europe to Australia,

> there can be little doubt that personal data *are* being transferred along this channel and that at least some of these relate to current or past employment matters, and are, in addition, sensitive.[69]

Retention of the exemption

36.43 A number of stakeholders expressed support for the retention of the employee records exemption.[70] Some stakeholders suggested that there has been no evidence of detriment caused by the exemption.[71] DEWR stated that submissions to the AGD and DEWR discussion paper on employee records privacy 'did not disclose any significant detriment caused by the employee records exemption that warranted changing the *status quo* and imposing additional compliance costs on business'.[72] Similarly, the Australian Chamber of Commerce and Industry (ACCI) submitted that:

> In the few years the legislation has been in place, there has been no evidence of any systemic problems or shortcomings with the exemption. The onus should be on those parties who wish to alter the current status quo to provide evidence that the exemption should be removed.[73]

36.44 Abacus–Australian Mutuals (Abacus) submitted that it was 'not aware of any substantive concerns in relation to this exemption and therefore believes it should remain on foot'.[74] UNITED Medical Protection, while supportive of the principle of privacy protection for employees, submitted that IP 31 did not indicate that employers are not maintaining the privacy of employees' personal information or denying them access to such information.[75]

75 UNITED Medical Protection, *Submission PR 118,* 15 January 2007.

36.45 Some stakeholders noted the original opposition by businesses to the inclusion of employee records in the private sector provisions of the *Privacy Act*.[76] The ACCI submitted that the employee records exemption 'was a key factor in industry supporting the extension of Commonwealth privacy legislation to the private sector in 2001' and that any removal or narrowing of the exemption 'would necessitate a re-evaluation by industry of support for privacy regulation in the private sector'.[77]

36.46 It was suggested in some submissions that the removal of the exemption would result in an additional regulatory burden and an increase in the costs of compliance for businesses.[78] The ACCI stated that it

> continues to receive advice from member organisations that the exemption is required to assist employers to manage and run their businesses effectively, both in terms of real costs and time.[79]

36.47 The ACCI submitted that any removal or modification of the exemption would: impose substantial costs on businesses; create operational human resource management problems, particularly if other provisions of the Act are modified; and lead to a restriction of business activity, which ultimately would impact adversely on business profitability and the ability of businesses to hire employees.[80]

36.48 The Australian Bankers' Association (ABA) submitted that 'abolition of the employee records exemption would potentially impose a layer of additional record keeping costs and cut across the way banks currently handle employee issues'.[81] The Australian Retailers Association stated 'by adding a further set of employee records principles in the *Privacy Act* it would become heavily regulated, time consuming and costly for employers, especially small businesses'.[82] Abacus submitted that:

> Removing the exemption has the capacity to add significantly to internal systems costs and compliance checks without appreciable benefit to employees and would be likely to impact particularly on smaller businesses.[83]

36.49 Some stakeholders submitted that, despite the exemption, employers already handle employee records with care.[84] The ABA stated that 'each member bank has its

own policies and practices in relation to the keeping, maintenance and control of and access to its employees' records'.[85] UNITED Medical Protection submitted that their human resources department operates on the basis of preserving employees' confidentiality.[86] Similarly, the ACCI stated that:

> Notwithstanding the exemption, employers treat information gathered during the employment relationship with due sensitivity, care and protection. …
>
> It should be noted that business has a serious concern for the protection of sensitive information, such as employee records. It would be erroneous to conclude that just because an exemption exists that employers do not take adequate and conscientious safeguards to protect this data from misuse or exploitation.[87]

36.50 Both the ACCI and the Australian Retailers Association contended that the current workplace relations legislation provides sufficient privacy protection for employees.[88] The ACCI stated that:

> The *Workplace Relations Act 1996* and similar State and Territory legislation extensively regulates record keeping of certain employee records with a well resourced inspectorate. The regime also has the ability to impose substantial penalties for non-compliance.[89]

36.51 In addition, the ACCI submitted that other reasons for the employee records exemption are that: employers maintain employment records mostly for the purposes of complying with statutory requirements that seek to protect the interests of employees; and the maintenance of such records is an essential consequence of the employment relationship and 'does not involve any invasion of privacy or unlawfulness'. It also took the view that:

> Employers continue to operate under a range of regulatory systems, many of which are difficult to comply with. Changes to the exemption should not be contemplated at the present time, particularly when employers and employees alike are adjusting to a major reform in the workplace relations system with the passage of the WorkChoices legislation.[90]

36.52 The Australian Retailers Association, while acknowledging that 'employee information does require privacy protection', submitted that 'abolishing the employee records exemption within the *Privacy Act* will only increase the confusion and intricacies of the Act'.[91] The ACCI expressed concern that:

> State and Territory privacy legislation is not consistent with the Commonwealth Act and ultimately leads to uncertainty. ACCI advocates that an employee records

> exemption is so fundamental that it should not only be retained, but also applied at the State and Territory level.[92]

36.53 AXA submitted that the employee records exemption should be retained, because disputes between employers and employees often include non-privacy related issues that cannot be dealt with by the Privacy Commissioner. AXA submitted that removing the employee records exemption is 'likely to further "segment" disputes which need a more holistic approach'.[93]

36.54 Another concern raised was the need of potential purchasers of businesses to have access to employee records. The ACCI submitted that any proposed removal of the exemption 'would substantially interfere with a purchaser's ability to conduct due diligence when buying a business, including whether it is financially viable to retain existing staff'. It was suggested that potential buyers need to be able to access vendor records, including employee records, in order to determine whether they would buy the business, retain existing staff and seek funds transfer for the vendor. The ACCI submitted that the employee records that would be relevant in this context include records that: indicate the level of leave entitlement; reveal potential issues concerning occupational health and safety or workers compensation; and concern employees' conduct that may give rise to potential legal actions, such as unfair dismissal or anti-discrimination suits.[94]

36.55 Both DEWR and the ACCI supported the use of non-binding best practice guidelines instead of legislation.[95] DEWR stated that if there is to be a change in the regulatory approach towards employee records privacy, 'guidelines are likely to be met with greater support from employer groups'.[96] The ACCI also supported 'the formulation of educational initiatives to better inform employers and employees of their rights and obligations regarding employee records'.[97]

ALRC's view

36.56 Employee records can contain a significant amount of personal information about employees, including sensitive information such as health and genetic information. There is a real potential for individuals to be harmed if employees' personal information is used or disclosed inappropriately. The lack of adequate privacy protection for employee records in the private sector is of particular concern because employees may be under economic pressure to provide personal information to their employers.

95 Ibid; Australian Government Department of Employment and Workplace Relations, *Submission PR 211,* 27 February 2007.
96 Australian Government Department of Employment and Workplace Relations, *Submission PR 211,* 27 February 2007.
97 Australian Chamber of Commerce and Industry, *Submission PR 219,* 7 March 2007.

36.57 Although there is no empirical evidence of misuse of information on employee records, the ALRC notes that the OPC received a large number of inquiries that related to this exemption. The Victorian Office of the Health Services Commissioner also submitted that it has received many inquiries and complaints from employees about their health information being misused or stored insecurely.

36.58 In the ALRC's view, there is no sound policy reason why privacy protection for employee records is only available to public sector employees and not private sector employees. Treating employees' personal information differently from other personal information is also unjustifiable.

36.59 At the time the private sector provisions of the *Privacy Act* were introduced, the Australian Government acknowledged that employee records deserve privacy protection but considered that the issue would be more appropriately dealt with in workplace relations legislation. Six years after the enactment of the private sector provisions, however, workplace relations legislation still does not provide sufficient privacy protection for employee records.

36.60 In the ALRC's view, multi-layered privacy regulation is not a reasonable justification to avoid putting in place privacy protection for employee records. Moreover, maintaining the employee records exemption may result in further regulation by states and territories, thus contributing to fragmentation and inconsistency in workplace privacy regulation.

36.61 Advocates of the exemption suggested in submissions that the costs of compliance are the main reason for retaining the exemption. The ALRC is, however, not persuaded that such costs provide a sufficient policy basis to support the exemption. In addition, the costs to businesses resulting from the removal of the exemption should not be overestimated. In considering the costs of compliance, it should be borne in mind that the organisations which will carry the greatest burden—that is, large businesses—are already required to comply with the *Privacy Act* and therefore already have in place mechanisms and procedures for the handling of personal information. It was also indicated in submissions that some businesses already treat employee records the same way they treat other personal information.

36.62 Furthermore, privacy legislation in some comparable overseas jurisdictions, such as the United Kingdom and New Zealand, does not contain an exemption that applies to employee records. The removal of the employee records exemption may also facilitate recognition of the adequacy of Australian privacy law by the EU, and trade with EU organisations.

36.63 For these reasons, the ALRC is of the view that the privacy of employee records requires regulation and proposes that the employee records exemption be removed. The removal of the exemption would ensure that the privacy of employee records held by

organisations is protected under the *Privacy Act*, and that employees' sensitive information, such as health and genetic information, is given a higher level of protection under the Act. This protection should be in addition to the relevant provisions in the *Workplace Relations Regulations*.

36.64 In Chapter 3, the ALRC proposes that the definition of 'sensitive information' in the *Privacy Act* be amended to include biometric information collected for the purpose of automated biometric authentication or identification as well as biometric template information. Therefore, such biometric information handled in the context of private sector employment will also be given the same level of privacy protection as other sensitive information.

Proposal 36–1 The *Privacy Act* should be amended to remove the employee records exemption by repealing s 7B(3) of the Act.

Evaluative material

36.65 The 2000 House of Representatives Committee inquiry acknowledged that there is a difference between an employee's health, family and financial information, which should not be provided to anyone else without the consent of the employee; and information concerning disciplinary matters or career progression of the employee.[98] The inquiry went on to recommend a significant narrowing of the scope of the exemption to apply only to 'exempt employee records', which would consist of records relating to: the engagement, training, disciplining or resignation of the employee; termination of employment; and the employee's performance or conduct.[99]

36.66 The 2000 House of Representatives inquiry recommended that the other matters listed in the proposed definition of 'employee record' be subject to the NPPs. It also noted that employee records can contain personal and sensitive information regardless of the size of the employer and therefore was of the view that its recommendations also should apply to small business employers.[100] The inquiry's recommendations were not intended to override the provisions in the workplace relations legislation.[101] The inquiry's recommendations were rejected by the Australian Government.[102]

Submissions and consultations

36.67 In IP 31, the ALRC asked what the scope of the employee records exemption should be if the exemption were to remain.[103] Advocates of the exemption strongly objected to limiting the scope of the exemption.[104] For example, the ACCI was of the view that the exemption is 'extremely limited in its scope and the circumstances to which it applies' and did not support any proposal to weaken the exemption.[105] DEWR stated that:

> It was also generally felt that varying the scope of the exemption, for instance, by retaining some of the NPPs for employee records or restricting the exemption by excluding sensitive information from it, would only contribute to the complexity of the privacy framework.[106]

36.68 Other stakeholders submitted that although there should be no general exemption for employee records, some uses of employment records in particular contexts may justify exemptions from, or modifications to, particular privacy principles,[107] provided that the exceptions are specified as narrowly as reasonably possible.[108] For example, the Victorian Office of the Health Services Commissioner submitted that the employee records exemption should be limited to 'the engagement, disciplining and termination of employment as well as the employee's performance or conduct', including, for example, reference checks by prospective employers.[109]

36.69 Stakeholders were also concerned that the proposed changes to the scope of the employee records exemption may affect the ability of prospective employers to engage in free and frank discussion with referees.[110] The ACCI stated that businesses need to be able to ascertain a job applicant's work history (such as disciplinary matters, warnings and terminations) and work experience at the recruitment stage to be confident that that the candidate has the requisite skill and aptitude for the relevant role. It stated that this information is particularly important where the candidate may be working with vulnerable people or applying for a position of trust.[111]

111 Australian Chamber of Commerce and Industry, *Submission PR 219,* 7 March 2007.

36.70 The ACCI further submitted that legally requiring employers to obtain the consent of candidates to perform routine reference checks before hiring would result in delays in the recruitment process, or selecting the wrong candidate for the job.[112] In addition, the ACCI suggested that, since the exemption does not preclude legal actions for anti-discrimination or unlawful termination, the potential for discrimination against an employee due to access to employee records should not be a reason for removing the exemption.[113]

36.71 UNITED Medical Protection submitted that there should be categories of information exempt from access by an employee. It suggested that, for example, employees should be able to access evaluative records such as their own performance reviews, but not employment references.

> If employees were able to access records relating to employment references this would very likely see a dramatic reduction in the willingness of past employers and other relevant persons to provide references due to the threat of litigation by the employee if the employee accessed the record containing the reference and did not agree with the comments made by the person providing the reference. This would be counter to the interests of prospective employers and also the interests of most employees.[114]

36.72 In contrast, the Legal Aid Commission of New South Wales submitted that 'many workers have concerns about the adverse effects of unfair referee reports that may be an obstacle to their continued employment'.[115]

36.73 DEWR stated that, if a more prescriptive framework for the protection of employee records is proposed, 'consideration should be given to achieving this with the least inconvenience to business', for example, by:

> safeguarding the employer's right to refuse an employee's access to their records in certain circumstances; minimising the impact of the more onerous privacy principles such as the notice requirements in NPP 1.3; and ensuring a substantial transition period before business are required to comply.[116]

36.74 The Australian Government Department of Human Services submitted that 'it may be useful to consider the potential impact on smaller organisations that only collect, hold and use health information pertaining exclusively to their employees'.[117]

Options for reform

36.75 As discussed above, the ALRC proposes the removal of the employee records exemption. The ALRC acknowledges the concern expressed by some stakeholders that

---

112 Ibid.
113 Ibid.
114 UNITED Medical Protection, *Submission PR 118,* 15 January 2007.
115 Legal Aid Commission of New South Wales, *Submission PR 107,* 15 January 2007.
116 Australian Government Department of Employment and Workplace Relations, *Submission PR 211,* 27 February 2007.
117 Australian Government Department of Human Services, *Submission PR 136,* 19 January 2007.

the removal of the exemption may affect the ability of prospective employers to engage in full and frank discussion with a job applicant's previous employer. In order to address that concern, three options for reform may be considered.

36.76 One option is to exclude personal references given by referees from the operation of the *Privacy Act*. The Canadian *Privacy Act 1985* defines 'personal information' to exclude 'the personal opinions or views of the individual … about another individual'.[118]

36.77 Another option is to amend the *Privacy Act* to allow the recipient of the reference to deny a request for access to a reference that is given to it in confidence. Under s 29 of the *Privacy Act 1993* (NZ), an agency may deny a request for access to evaluative material, disclosure of which would breach a promise of confidence to the supplier of the information. 'Evaluative material' is defined to mean:

> evaluative or opinion material compiled solely—
>
> (a) For the purpose of determining the suitability, eligibility, or qualifications of the individual to whom the material relates—
>
> (i) For employment or for appointment to office; or
>
> (ii) For promotion in employment or office or for continuance in employment or office; or
>
> (iii) For removal from employment or office; or
>
> (iv) For the awarding of contracts, awards, scholarships, honours, or other benefits; or
>
> (b) For the purpose of determining whether any contract, award, scholarship, honour, or benefit should be continued, modified, or cancelled; or
>
> (c) For the purpose of deciding whether to insure any individual or property or to continue or renew the insurance of any individual or property.[119]

36.78 A third option is to allow a potential employer to deny access to a personal reference given by a referee until after the job applicant has been informed of the result of the recruitment process. In Hong Kong, s 56 of the *Personal Data (Privacy) Ordinance* provides that unless the referee consents, a data user does not have to provide a job applicant with access to, or a copy of, a personal reference given by the referee until after the job applicant has been informed in writing that he or she has been accepted or rejected to fill that position or office.[120]

119 *Privacy Act 1993* (NZ) s 29(3).

120 *Personal Data (Privacy) Ordinance* (Hong Kong) s 56.

ALRC's view

36.79 Stakeholders emphasised that any proposed removal of the employee records exemption should take into account the need of prospective employers to engage in full and frank discussion with previous employers about an employee. The ALRC is of the view that there is sufficient ground for an exception to the access principle, provided that a personal reference is given in confidence to a potential employer. This is in line with the common law obligation of confidence. At common law, an action for breach of confidence may arise where:

- the information has the 'necessary quality of confidence'—that is, it must be non-trivial, and, to some extent, secret or inaccessible;
- the information was communicated or obtained in such circumstances as to give rise to an obligation of confidence; and
- there is actual or threatened unauthorised use of the information.[121]

36.80 Such an exception is also in line with the law that is currently applicable to employees of Australian Government agencies. Although employment records of an Australian Government agency employee are covered by *Privacy Act*, the employee may not be entitled to access personal references about him or her held by an agency if its disclosure would found an action for breach of confidence.[122]

36.81 Accordingly, the ALRC proposes that the *Privacy Act* provide for an exception to the proposed 'Access' principle in relation to a request for access to 'evaluative material' that is given in confidence to an agency or organisation. The proposed amendment should be based on the approach taken in the New Zealand *Privacy Act 1993*. This allows an agency or organisation to deny a request for access by a job applicant to confidential evaluative materials complied solely for the purpose of determining the job applicant's suitability for employment or appointment to a position. This model is preferable to one that excludes personal references from the operation of all privacy principles, because exceptions to the proposed Unified Privacy Principles should be as narrowly drawn as possible. In addition, since the common law obligation of confidence endures for the duration of the confidential relationship, the ALRC does not consider that the exception should apply only until the end of the recruitment process.

---

121 *Moorgate Tobacco Co Ltd v Philip Morris Ltd [No 2]* (1984) 156 CLR 414, 438.

122 Under Information Privacy Principle (IPP) 6, a public sector agency may refuse a request by an individual for access to personal information that the agency holds to the extent that the agency is required or authorised to refuse access under an applicable Commonwealth law that provides for access by persons to documents: *Privacy Act 1988* (Cth) s 14 IPP 6. Under the *Freedom of Information Act 1982* (Cth), an agency may refuse to grant access to the documents if their disclosure under the Act would found an action by a person for breach of confidence: *Freedom of Information Act 1982* (Cth) ss 11, 45.

36.82 In the ALRC's view, the same exception that applies to confidential personal references should also apply to evaluative material complied for the sole purpose of determining the awarding, continuation, modification or cancellation of contracts, awards, scholarships, honours or other benefits. This is because in determining whether an individual should be awarded a contract, an award or other similar benefits, the referee should be able to provide an honest evaluation about the individual's merits without fear of that evaluation being made available to the individual concerned.

36.83 Another concern raised was the need for prospective purchasers of a business to have access to employee records in conducting due diligence. The ALRC is of the view that no exception or exemption in this context is warranted. Where the disclosure of an employee record by the vendor organisation is necessary to enable the prospective purchaser to assess whether to employ particular individuals from the vendor organisation, the individuals' consent for the disclosure should be obtained. In other circumstances, the disclosure of aggregate information about an organisation's employees may be adequate for due diligence purposes.[123]

Proposal 36–2 The *Privacy Act* should be amended to provide that an agency or organisation may deny a request for access to evaluative material, disclosure of which would breach an obligation of confidence to the supplier of the information. 'Evaluative material' for these purposes means evaluative or opinion material compiled solely for the purpose of determining the suitability, eligibility, or qualifications of the individual concerned for employment, appointment or the award of a contract, scholarship, honour, or other benefit.

Location of privacy provisions concerning employee records

36.84 If the employee records exemption were to be removed or modified, a further issue is whether privacy provisions should be located in the *Privacy Act*, workplace relations legislation or elsewhere. The 2005 Senate Committee privacy inquiry was of the view that the most appropriate place to protect employee privacy is in the *Privacy Act* rather than in workplace relations legislation. Further, the inquiry considered that attempts by state governments to regulate workplace surveillance would only

123 The Privacy Commissioner has issued guidance on the application of the NPPs to the buying and selling of businesses. The Privacy Commissioner noted that there are some circumstances in which the employee records exemption may apply, but 'encourage[d] vendor organisations always to consider whether disclosure of aggregated information relating to their employees is adequate for due diligence purposes regardless of whether the exemption might apply': Office of the Federal Privacy Commissioner, *Application of Key NPPs to Due Diligence and Completion when Buying and Selling a Business*, Information Sheet 16 (2002).

contribute to problems of inconsistency and fragmentation. It therefore recommended that the privacy of employee records be protected under the *Privacy Act*.[124]

Submissions and consultations

36.85 In IP 31, the ALRC asked where the employee records exemption should be located—in the *Privacy Act*, workplace relations legislation or elsewhere—if the exemption were to remain.[125] Some stakeholders submitted that the appropriate location for exemption is in privacy legislation,[126] on the basis that this: has worked well in the *Privacy Act*;[127] would allow users of the Act to assess their responsibilities and obligations properly; and would promote national consistency.[128]

36.86 It was suggested in some submissions that the exemption should not be located in the *Workplace Relations Act,* because that Act does not have universal application,[129] and relocating the exemption to that Act would raise unrelated workplace relations concerns.[130]

36.87 In contrast, some stakeholders submitted that privacy regulation concerning employees' personal information should be addressed in workplace relations legislation.[131] The Australian Government Department of Human Services considered that the employee records exemption is 'more relevant' to workplace relations legislation.[132] AXA submitted that:

> The employer/employee relationship is already subject to significant regulation; any regulation in relation to privacy and access should be addressed in the legislation dealing specifically with employment.[133]

36.88 Other stakeholders submitted that provisions concerning employees' rights, especially in relation to workplace privacy, should be contained in a single legislative instrument.[134] AAPT submitted that all employee-related rights should be incorporated into a single legislative instrument, because separate legislative regimes and overlapping legislation (including state-based workplace surveillance and telecommunications interception legislation) created confusion and made the task of

compliance onerous—'potentially lessening the protection that is otherwise afforded by the existence of these Acts'.[135] Similarly, the Law Institute Victoria stated that:

> It would be desirable for all aspects of workplace privacy including information privacy to be regulated in the one piece of legislation, provided a consistent approach was adopted across the States and Territories.
>
> However, in the absence of such legislation, the LIV favours clear, easy to follow provisions in relation to employee records at a national level.[136]

ALRC's view

36.89 The existence of the employee records exemption only increases the level of complexity of the *Privacy Act*. Introducing a further set of privacy principles in a different piece of legislation such as the *Workplace Relations Act* is unlikely to reduce the complexity of the privacy regime.[137]

36.90 The ALRC is of the view that privacy protection of employee records should be located in the *Privacy Act* to allow maximum coverage of agencies and organisations and to promote consistency. Provisions regulating the privacy of employee records should not be located in workplace relations legislation because the *Workplace Relations Act* only applies to specified persons or entities, such as constitutional corporations and persons or entities that engage in constitutional trade and commerce.[138] In addition, employee records are no different from other personal information and therefore should be regulated under the *Privacy Act* in the same way as other personal information.

137 See Australian Law Reform Commission, *Submission to the Australian Government Attorney-General's Department of Employment and Workplace Relations Review on Employee Records Privacy*, 8 April 2004.

138 The *Workplace Relations Act 1996* (Cth) only applies to specified persons or entities that employs, or usually employs, an individual. The specified persons or entities include: a constitutional corporation; the Australian Government; Australian Government authorities; a person or entity (which may be an unincorporated club) that employs (or usually employs), in connection with constitutional trade or commerce, an individual as a flight crew officer, a maritime employee, or a waterside worker; a body corporate incorporated in an Australian territory; and a person or entity (which may be an unincorporated club) that carries on an activity in an Australian territory in Australia: *Workplace Relations Act 1996* (Cth) s 6(1).

Introduction

37.1 The *Privacy Act 1988* (Cth) (*Privacy Act*) does not apply to registered political parties, or political representatives engaging in certain activities in the political process. This exemption is usually referred to as the political exemption. In addition, Australian Government ministers are generally only required to comply with the *Privacy Act* when they are acting in an official capacity. This chapter examines whether the political exemption and the exemption that applies to Australian Government ministers should remain.

Current law

Registered political parties, and political acts and practices

37.2 A 'registered political party' is specifically excluded from the definition of 'organisation' and is therefore exempt from the operation of the *Privacy Act*.[1] In

1 *Privacy Act 1988* (Cth) s 6C(1). A 'registered political party' means a political party registered under Part XI of the *Commonwealth Electoral Act 1918* (Cth): *Privacy Act 1988* (Cth) s 6(1). A list of registered political parties is available on the Australian Electoral Commission's website: Australian Electoral Commission, *Current List of Political Parties* (2007) <www.aec.gov.au/Parties_and_Representatives/Party_Registration/index.htm> at 24 July 2007.

addition, political acts and practices of certain organisations are also exempt.[2] These organisations include: political representatives—namely, Members of Parliament and local government councillors; contractors and subcontractors of registered political parties and political representatives; and volunteers for registered political parties.[3] Acts and practices covered by the exemption include elections held under an electoral law;[4] referendums held under a law of the Commonwealth, a state or a territory; and participation by registered political parties and political representatives in other aspects of the political process.[5]

37.3 In addition to the exemption under the *Privacy Act*, there are other legislative provisions that specifically permit the collection and use of personal information by registered political parties and political representatives in certain circumstances. Under s 90B of the *Commonwealth Electoral Act 1918* (Cth), the Electoral Commission must give information in relation to electoral rolls and certified lists of voters to specified persons or entities in certain circumstances.[6] The persons and entities that are entitled to this information include candidates for a House of Representatives election, registered political parties, Members of Parliament, and state and territory electoral authorities.[7]

37.4 Members of Parliament and political parties may only use the information for certain permitted purposes, including: any purpose in connection with an election or referendum; research regarding electoral matters; monitoring the accuracy of information in electoral rolls; and the performance by Members of Parliament of their functions as parliamentarians concerning enrolled persons.[8] Section 91B of the *Commonwealth Electoral Act* makes it an offence to use the information obtained under the Act for commercial purposes.

37.5 Registered political parties and political representatives are exempt from legislation dealing with some aspects of telemarketing. Under the *Do Not Call Register Act 2006* (Cth), registered political parties, independent Members of Parliament and electoral candidates are exempt from the prohibition against making unsolicited telemarketing calls to a number registered on the Do Not Call Register, provided the call is made for certain specified purposes. The specified purposes include: conducting

3 Ibid s 7C.

4 An 'electoral law' means a Commonwealth, state or territory law relating to elections to a Parliament or to a local government authority: Ibid s 7C(6).

5 Ibid s 7C.

6 The electoral roll sets out each elector's surname, Christian or given names, and place of living. Addresses are suppressed for eligible overseas and itinerant electors: *Commonwealth Electoral Act 1918* (Cth) s 83. A certified list of voters includes each voter's name, sex and date of birth: *Commonwealth Electoral Act 1918* (Cth) s 208.

7 Where the Electoral Commission provides a copy of the electoral roll to a registered political party, a state or territory senator or a member of the House of Representatives, it may also provide certain additional information about electors, including, among other things, an elector's postal address, sex, date of birth, salutation and enrolment status: *Commonwealth Electoral Act 1918* (Cth) s 90B(2).

8 Ibid s 91A.

fundraising for electoral or political purposes; and where the call relates to goods or services, the caller is the supplier or prospective supplier of the goods or services.[9]

37.6 Registered political parties are also exempt from legislation dealing with some aspects of email marketing. Under the *Spam Act 2003* (Cth), registered political parties may, without the prior consent of the recipient, send 'designated commercial electronic messages' that are purely factual or in respect of goods or services that the parties directly supply. Such messages must include information about the individual or organisation that authorised the sending of the message, but they do not have to contain a functional unsubscribe facility.[10]

37.7 In its review of the operation of the *Spam Act* in 2006, the Australian Government Department for Communications, Information Technology and the Arts (DCITA) rejected proposals to extend the coverage of the *Spam Act* to non-commercial messages, on the basis that: such an extension may have an adverse impact on political and religious freedoms; and unsolicited contact that is non-commercial in nature 'is not currently a significant problem relative to commercial spam'. DCITA stated that the provisions concerning designated electronic commercial messages should be maintained as a safeguard for the activities of those who are exempt from the *Spam Act*.[11]

37.8 In his second reading speech on the Privacy Amendment (Private Sector) Bill 2000 (Cth), the then Attorney-General, Mr Daryl Williams AM QC MP, stated that:

> Freedom of political communication is vitally important to the democratic process in Australia. This exemption is designed to encourage that freedom and enhance the operation of the electoral and political process in Australia. I am confident that it will not unduly impede the effective operation of the legislation.[12]

37.9 At the time of the introduction of the Bill, the Privacy Commissioner stated that he did not think that the exemption for political organisations was appropriate.[13]

> If we are to have a community that fully respects the principles of privacy and the political institutions that support them, then these institutions themselves must adopt

---

9 *Do Not Call Register Act 2006* (Cth) s 11, sch 1 cls 2–3. Under this Act, a 'registered political party' means a political party, or a branch or division of a political party, registered under either the *Commonwealth Electoral Act 1918* (Cth) or a state or territory law that deals with electoral matters: *Do Not Call Register Act 2006* (Cth) s 4. The *Do Not Call Register Act* is discussed further in Ch 64.

10 *Spam Act 2003* (Cth) ss 16–18, sch 1 cl 3(a)(ii). Under this Act, a 'registered political party' means a political party, or a branch or division of a political party, registered under either the *Commonwealth Electoral Act 1918* (Cth) or a state or territory law that deals with electoral matters: *Spam Act 2003* (Cth) s 4. The *Spam Act* is discussed further in Ch 64.

> the principles and practices they seek to require of others. I believe that political organisations should follow the same practices and principles that are required in the wider community.[14]

37.10 In June 2006, Senator Natasha Stott Despoja introduced a Private Member's Bill to remove the exemption for political acts and practices.[15] In her second reading speech she stated that:

> Politicians should be included in the rules that we expect the public and private sectors to abide by. We cannot lead and represent Australians when we do not adhere to the rules that we have made for them, as this merely plays into the notion that politicians cannot be trusted.[16]

37.11 For the period from 21 December 2001 to 31 January 2005, the Office of the Privacy Commissioner (OPC) stated that 0.4% of all the National Privacy Principle (NPP) complaints closed by the Office as outside its jurisdiction concerned the political exemption.[17]

37.12 A number of overseas jurisdictions, including the United Kingdom, Canada, New Zealand and Hong Kong, do not provide for an exemption of political parties or political acts and practices from their privacy legislation.

Ministers

37.13 The *Privacy Act* applies to Australian Government ministers only where their acts and practices relate to the affairs of agencies, 'eligible case managers'[18] or 'eligible hearing service providers';[19] or where the acts and practices are in relation to a record concerning these affairs that is in the ministers' possession in their official

15 Privacy (Extension to Political Acts and Practices) Amendment Bill 2006 (Cth). At the time of writing, the Bill has been read for the second time in the Senate.

16 Commonwealth, *Parliamentary Debates*, Senate, 22 June 2006, 19 (N Stott Despoja). The Australian Democrats also unsuccessfully attempted to introduce amendments to the Do Not Call Register Bill 2006 (Cth) to prevent politicians from making telemarketing calls: Commonwealth, *Parliamentary Debates*, Senate, 21 June 2006, 25 (N Stott Despoja). The *Do Not Call Register Act 2006* (Cth) is discussed in Ch 33.

17 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 328.

18 The Information Privacy Principles (IPPs) apply to the acts and practices of 'eligible case managers' in connection with the provision of case management services or the performance of their functions under the *Employment Services Act 1994* (Cth): *Privacy Act 1988* (Cth) ss 6(1), 7(1)(cb). An 'eligible case manager' is an entity that is or has been a contracted case manager within the meaning of the *Employment Services Act*: *Privacy Act 1988* (Cth) s 6(1). Although the *Employment Services Act* was repealed in April 2006, the *Privacy Act 1988* (Cth) continues to provide privacy protection in relation to acts and practices of entities that have been eligible case managers.

19 The IPPs apply to the acts and practices of 'eligible hearing service providers' in connection with the provision of hearing services under an agreement made under Part 3 of the *Hearing Services Administration Act 1997* (Cth): *Privacy Act 1988* (Cth) ss 6(1), 7(1)(cc). An 'eligible hearing service provider' means an entity that is, or has been, engaged under Part 3 of the *Hearing Services Administration Act* to provide hearing services: *Privacy Act 1988* (Cth) s 6(1).

capacity.[20] Other acts and practices of ministers are exempt from the operation of the Act.[21]

37.14 There is no exemption for government ministers from privacy legislation in the United Kingdom, Italy, New Zealand or Hong Kong. In Victoria and Tasmania, privacy legislation provides expressly that it applies to government ministers.[22]

Government inquiries

37.15 In 2000, the Privacy Amendment (Private Sector) Bill was referred to the House of Representatives Standing Committee on Legal and Constitutional Affairs for inquiry and report (2000 House of Representatives Committee inquiry). The 2000 House of Representatives Committee inquiry noted that the political exemption seeks to strike a balance between freedom of political communication and the public interest in protecting the privacy of individuals. The inquiry stated that the exemption seemed to be targeted at the vitality and proper functioning of representative democracy, which requires that parliamentarians be able freely and fully to engage in the democratic process. In the Committee's view, for parliamentarians properly to represent their constituents, they must respond in a more targeted way to their electorates, which requires that they collect and use certain information concerning constituents.[23]

37.16 The 2000 House of Representatives Committee inquiry considered that the drafting of the exemption for political acts and practices needed to indicate clearly that it was intended to support only legitimate purposes, such as serving constituents.[24] It therefore recommended that the exemption be restricted to 'the participation in the parliamentary or electoral process', rather than 'the participation by the political representative in another aspect of the political process'.[25] The Australian Government rejected the recommendation on the basis that this would narrow significantly the scope of the exemption.[26]

37.17 The 2000 House of Representatives Committee inquiry also recommended that a new provision be inserted to provide that the exemption not allow political parties or political representatives to sell or disclose personal information collected in the course

of their duties to anyone not covered by the exemption.[27] The Australian Government rejected this recommendation on the basis that the exemption would operate in a manner that would address the inquiry's concern.[28] A note was inserted in the Bill, however, to make it clear that the exemption does not extend to the use or disclosure (by way of sale or otherwise) of personal information collected by virtue of the exemption in a way that is not covered by the exemption.[29]

37.18 In 2005, the Senate Legal and Constitutional References Committee reviewed the private sector provisions of the *Privacy Act* (Senate Committee privacy inquiry).[30] A number of submissions to the Senate Committee privacy inquiry objected strongly to the exemption for political acts and practices.[31] The Senate Committee privacy inquiry considered the exemption problematic and recommended that the ALRC examine, as part of a wider review of the *Privacy Act*, the operation of, and need for, the exemptions under the *Privacy Act*, particularly in relation to political acts and practices.[32]

International instruments

37.19 The Explanatory Memorandum to the *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* issued by the Organisation for Economic Co-operation and Development states that exceptions to the privacy principles are to be limited to those that are 'necessary in a democratic society'.[33] The *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (EU Directive) contains a specific exemption allowing the compilation of data by political parties on people's political opinion in the course of electoral activities, provided that appropriate safeguards are established.[34] Under the EU Directive, the processing of data by political organisations for marketing purposes is also permitted, subject to certain conditions.[35] The Asia-Pacific Economic Cooperation Privacy Framework does not contain a specific exemption or exception concerning political or electoral activities.

37.20 In September 2005, an international conference of privacy and data protection commissioners adopted a *Resolution on the Use of Personal Data for Political Communication*. The Resolution states that any processing of personal data for the purposes of political communication must respect the fundamental rights and freedoms of interested persons and must comply with specific data protection principles. In particular, the Resolution provides that certain principles concerning the collection of personal data, data quality and security, rights of access and correction, and the right to opt out of unsolicited communication should be observed in political communication. In addition, the Resolution recommends that the processing of personal data be based on the individual's consent or another legitimate ground provided for by the law.[36]

Electoral databases

37.21 Electoral databases are databases maintained by political parties that contain information on voters, which may include voters' policy preferences and party identification.[37] It has been argued that the use of such databases raises some common problems, including: political parties withholding from voters information they have stored; inaccurate information being stored on databases without giving voters the right to correct the record; political parties failing to inform voters that information is being compiled about them; and representatives of political parties failing to identify themselves appropriately when collecting information.[38]

37.22 On the other hand, it has been said that electoral databases serve to improve the functioning of representative democracy by: transmitting information more efficiently between members of parliament and a large of number of constituents; allowing early identification of issues important to the electorate; and giving parliamentarians a comprehensive and accurate picture of public opinion in their electorates.[39]

37.23 Proposals for reform in this area include: allowing freedom of information requests in relation to electoral databases; giving voters the option to exclude the local member of parliament from viewing the information on their electoral enrolment forms; prohibiting parliamentarians from forwarding voter information to third parties, including the central party organisation or to support candidates in a different tier of government; better and more uniform training for the database operators, particularly in the ethics of handling personal information; introducing severe penalties for misuse

of the database software; and transferring voter information to a central database to which all politicians have access.[40]

Implied freedom of political communication

37.24 Any proposed removal or narrowing of the exemption for political acts and practices needs to be considered in light of the constitutional doctrine of implied freedom of political communication.[41] The High Court of Australia has established that an essential element of representative democracy is the freedom of public discussion of political and economic matters.[42] This freedom is not confined to election periods.[43] It does not, however, confer a personal right on individuals, but rather operates as a restriction on legislative and executive powers.[44] The freedom is not absolute,[45] and must be balanced against other public interests. In determining whether a law infringes the implied freedom of political communication, two questions must be answered:

> First, does the law effectively burden freedom of communication about government or political matters either in its terms, operation or effect? Second, if the law effectively burdens that freedom, is the law reasonably appropriate and adapted to serve a legitimate end …[46]

37.25 One option for ensuring that the coverage of registered political parties and political acts and practices by the *Privacy Act* does not contravene the implied freedom of political communication would be to adopt the model provision contained in the *Parliamentary Counsel's Drafting Direction No 3.1—Constitutional Law Issues*.[47] A provision could be inserted in the *Privacy Act* stating:

> This Act does not apply to the extent (if any) that it would infringe any constitutional doctrine of implied freedom of political communication.[48]

37.26 Such a provision is currently contained in several pieces of legislation, including the *Spam Act*, the *Do Not Call Register Act*, the *Criminal Code Act 1995* (Cth) and the *Telecommunications Act 1997* (Cth).[49]

Submissions and consultations

Registered political parties

37.27 In the Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether registered political parties should be exempt from the operation of the privacy principles in the *Privacy Act*.[50] There was considerable support for the abolition of the exemption.[51]

37.28 It was suggested in some submissions that preferential treatment of registered political parties—by exempting them from compliance with the *Privacy Act*—undermines public trust in the political process. The Centre for Law and Genetics submitted that 'political parties should act in the public interest and should not be allowed to breach public privacy standards for political ends'.[52] Electronic Frontiers Australia Inc stated that to treat political parties differently from other organisations 'is to send a message that the *Privacy Act* is only a token gesture, to be evaded when it happens to suit particular vested interests with the political clout to get their own way'.[53] Similarly, the Hon Bob Such MP objected to 'political parties being given an exemption to hold personal information for campaigning purposes … a practice not permitted for others'.[54] The Queensland Council for Civil Liberties stated that it failed 'to see how political parties are any different from private companies in their need to be able to respond "in a more targeted way to their electorate"'.[55]

37.29 Some stakeholders accepted that the constitutional doctrine of implied freedom of political communication has some implications in this context, but disputed that this

requires a blanket exemption.[56] The Queensland Council for Civil Liberties suggested that the implications of the doctrine would be 'minor'.[57] Professor Graham Greenleaf, Nigel Waters and Associate Professor Lee Bygrave submitted that:

> it is difficult to see why this extends to forcing information onto an individual who has expressed a clear preference not to receive it. There are many alternative means for politicians to communicate with electors. However, the constitutional right should define the ambit of any exemption.[58]

37.30 The New South Wales Council for Civil Liberties Inc submitted that, subject to the constitutional doctrine of implied freedom of political communication, political parties should be bound by the *Privacy Act*. It suggested that, if an exemption were to apply at all, it should only apply 'so far as is necessary for political parties to check electoral rolls during election periods'.[59]

37.31 Stakeholders were also concerned that: political parties can collect information about constituents from third parties that could be inaccurate;[60] and constituents do not know what information was collected by the parties and have no right of access or correction in relation to the electoral databases.[61] A particular concern was that political parties may be able to gather and store information about the ethnicity or religion of electors.[62] For example, one concerned individual claimed that a federal member of parliament had used the electoral roll to identify Jewish members of the electorate through their surnames and send out a newsletter targeting these electors, and the individual had to make repeated requests to have his name removed from the list.[63]

37.32 It was observed that the exemption under the EU Directive for compilation of data by political parties is more limited than the exemption under the *Privacy Act*—for example, the exemption under the EU Directive does not exclude the principles of access or security.[64]

37.33 The Office of the Victorian Privacy Commissioner endorsed the view of the previous Victorian Privacy Commissioner, Paul Chadwick, that the exemption of political parties requires attention. Chadwick was of the view that, although there is a

legitimate need for electoral databases for the proper functioning of a democratic community, political parties need to be more open and accountable about these databases in order to promote public trust in the parliament and the political process.[65]

37.34 The OPC noted that it received 'very few complaints or inquiries about the political exemption and therefore the *Privacy Act* may currently provide an appropriate balance'. Nevertheless, the OPC was of the view that if the political exemption is retained, there are two options to enhance privacy protection.[66] One option is to extend s 6EA of the *Privacy Act*, which allows small business operators to voluntarily opt-in to coverage by the Act, to any organisations that are exempt from the operation of the *Privacy Act*, including political parties. Another option is to amend the *Privacy Act* to ensure partial coverage of the political parties by the NPPs. The OPC suggested that:

> consideration be given to requiring political parties to comply with a few key principles, in particular the openness and access and correction principles along with some limits placed on their ability to disclose personal information.[67]

37.35 To date, the ALRC has received no submissions from the federal political parties despite letters from the ALRC specifically inviting a submission on this issue.[68]

Political acts and practices

37.36 In IP 31, the ALRC asked whether political acts and practices should be exempt from the operation of the *Privacy Act*, and if so, whether the current exemption of such acts and practices strike an appropriate balance between the protection of personal information and the implied freedom of political communication.[69] A number of stakeholders expressed support for political acts and practices being exempt only to the extent that it would infringe the constitutional doctrine of implied freedom of political communication.[70]

37.37 The Australian Privacy Foundation and Greenleaf, Waters and Bygrave submitted that a specific exception relating to political acts and practices may be justified only if compliance with any of the privacy principles interferes with the

operation of representative democracy.[71] Some stakeholders suggested that there is no sound policy reason why the principles of notification, data quality and security, and access and correction do not apply to personal information used in political acts and practices.[72]

37.38 The Centre for Law and Genetics noted 'recent concerns that the staff of elected parliamentarians sometimes go beyond service to their electorate and involve themselves in overtly political promotion and lobbying'.[73] A particular concern raised was that individuals who contacted their local member of parliament or other politicians may have their personal information included in an electoral database. Electronic Frontiers Australia Inc submitted that:

> Such practices have the effect of discouraging some people from participating in the democratic process arising from the knowledge that their personal information will be passed on to third parties and secretly stored potentially forever with no means of finding out whether it is accurate or not.[74]

37.39 One individual cited an example where personal information—including an individual's name and home address—had been disclosed by a member of parliament in parliamentary papers and published on the parliament's website. She submitted that, in addition to the effect of a breach of privacy on an individual, the exemption has a

> general chilling effect on political activism or citizens petitioning politicians for help with personal issues when we know that our correspondence with them may be used or disclosed to third parties in various ways that we cannot control, including … instant publication to the web.[75]

37.40 Concerns have also been raised in relation to the handling of personal health information by members of parliament. The Office of the Health Services Commissioner (Vic) submitted that the exemption should not be retained because 'with the exemption, the possibility exists for politicians to use their political position to breach privacy when handling personal or health information'. The Office stated that the lack of a similar exemption in the *Health Records Act 2001* (Vic) 'has not led to any adverse consequences to the democratic process in Victoria'.[76]

37.41 Similarly, the Royal Women's Hospital Melbourne submitted that the *Privacy Act* should be amended to ensure that politicians are accountable for protecting privacy of personal and sensitive health information. It was particularly concerned that

politicians cannot be investigated by the Privacy Commissioner for breaching patient confidentiality.[77]

37.42 On the other hand, the Hon Bob Such MP suggested that the exemption should extend to the activities of members of parliament when they seek information on behalf of constituents.[78]

Ministers

37.43 The OPC observed that the formulation of the exemption applying to Australian Government ministers is complex:

> In the *Privacy Act* under s 6(1), a Minister is defined as an 'agency' and is therefore covered by the Act, however, his or her acts are excluded from coverage of the *Privacy Act* under s 7(1)(a)(iii). However, a Minister acting in his or her official capacity in relation to agencies within his or her portfolio are covered under ss 7(1)(d), (e), (ea), (eb), (ec), and (ed). … to help reduce this complexity, the definition of 'agency' which currently includes a Minister, should add words that describe the specific acts and practices of the Minister that are covered.[79]

37.44 In addition, it was said that the exemption is difficult to apply. As discussed above, ministers acting in their official capacity are bound by the *Privacy Act*, while members of parliament engaging in political acts and practices are not. The Office of the Victorian Privacy Commissioner submitted that:

> It is sometimes difficult to determine in what capacity a Minister acts—in their Ministerial capacity or in their capacity as an elected Member of Parliament—when personal information is collected and disclosed, at times under the umbrella of Parliamentary immunity. It is also unclear whether Ministerial advisors are subject to privacy obligations, given the nature of their employment and principles of ministerial accountability.[80]

37.45 One individual submitted that the exemption applying to ministers results in 'a danger that the information they hold will be used for political purposes and not for the benefit of the individual or the safety of the nation'.[81]

ALRC's view

37.46 In the interests of promoting public confidence in the political process, those who exercise or seek power in government should adhere to the principles and practices that are required of the wider community. There seems to be no sound policy reason why political parties and those engaging in political acts and practices should

not be required to handle personal information about individuals in accordance with the *Privacy Act*. For example, there is no justification for political parties and those engaging in political acts and practices to be exempt from: collecting information by lawful and fair means; ensuring the quality and security of the information; setting out their policies on their management of personal information; letting an individual know what personal information is held about the individual; and allowing an individual the right to access and correct such information.

37.47 While the ALRC acknowledges that the OPC has received few complaints or inquiries about the political exemption, significant concerns regarding the electoral databases maintained by political parties and the handling of individuals' sensitive information by members of parliament have been raised in submissions and consultations.

37.48 A number of overseas jurisdictions do not exempt political parties or those engaging in political acts and practices from compliance with privacy legislation, including the United Kingdom, Canada, New Zealand and Hong Kong. Significantly, the *Data Protection Act 1998* (UK) does not contain a political exemption despite the fact that the EU Directive contains a specific exemption allowing, with appropriate safeguards, the compilation of data by political parties on people's political opinions in the course of electoral activities.

37.49 For these reasons, the ALRC considers that registered political parties and political acts and practices should only be exempt to the extent required to avoid a contravention of the implied freedom of political communication. The ALRC is conscious of the fact that the narrowing of the exemption needs to take into account this constitutional doctrine. The ALRC proposes that the model provision in the *Parliamentary Counsel's Drafting Direction No 3.1—Constitutional Law Issues* be adopted to ensure that the *Privacy Act* be read down so that it does not infringe the constitutional doctrine of implied freedom of political communication.

37.50 Whether any act or practice would infringe the doctrine of implied freedom of political communication would be determined on a case-by-case basis by the relevant court or tribunal. In the ALRC's view, it is unlikely that the application of privacy principles to registered political parties and political representatives—including the proposed 'Anonymity and Pseudonymity', 'Specific Notification', 'Openness', 'Data Quality', 'Data Security', 'Access and Correction', 'Identifiers' and 'Transborder Data Flows' principles—would infringe the doctrine.

37.51 The proposed modification of the political exemption under the *Privacy Act* is not intended to displace more specific legislation that permits the collection and use of personal information by registered political parties and political representatives, including the *Commonwealth Electoral Act*, the *Do Not Call Register Act* and the *Spam*

Act.[82] The relevant provisions in these Acts are intended to ensure that freedom of political communication is maintained. The operation of the *Privacy Act* alongside these more specific provisions should ensure that an appropriate balance between the interests of privacy and freedom of political communication is achieved.

37.52 Currently, Australian Government ministers acting in their official capacity are subject to the *Privacy Act*. Given the proposed modification of the political exemption, there seems to be no policy basis for exempting ministers when they are *not* acting in their official capacity, unless they fall within another exemption from the Act.[83] Accordingly, the ALRC also proposes that the partial exemption that applies to Australian Government ministers be removed.

37.53 Before the proposed removal of the political exemption and the exemption applying to Australian Government ministers comes into effect, it would be desirable for the OPC to provide guidance to registered political parties and others to assist them in understanding and fulfilling their obligations under the Act. It is envisaged that the guidance would be directed towards registered political parties and political representatives, their contractors, subcontractors and volunteers.

Proposal 37–1 The *Privacy Act* should be amended to remove the exemption for registered political parties and the exemption for political acts and practices by:

(a) deleting the reference to a 'registered political party' from the definition of 'organisation' in s 6C(1) of the Act;

(b) repealing s 7C of the Act; and

(c) removing the partial exemption that is currently applicable to Australian Government ministers in s 7(1) of the Act.

Proposal 37–2 The *Privacy Act* should be amended to provide that the Act does not apply to the extent, if any, that it would infringe any constitutional doctrine of implied freedom of political communication.

---

82 This is consistent with the ALRC's proposal that the general requirements under the proposed 'Direct Marketing' principle under the proposed Unified Privacy Principles should be displaced to the extent that more specific sectoral legislation regulates a particular aspect or type of direct marketing, such as the *Do Not Call Register Act* and the *Spam Act*: Ch 23, Proposal 23–2.

83 For example, when they are handling personal information as individuals in the context of their personal, business or household affairs.

Proposal 37–3 Before the proposed removal of the exemptions for registered political parties and for political acts and practices from the *Privacy Act* comes into effect, the Office of the Privacy Commissioner should develop and publish guidance to registered political parties and others to assist them in understanding and fulfilling their obligations under the Act.

Introduction

38.1 Under s 7B(4) of the *Privacy Act 1988* (Cth), acts and practices of a 'media organisation' in the course of journalism are exempt from the operation of the Act if the organisation is publicly committed to observe privacy standards that have been published in writing, either by the organisation, or by a person or body representing a class of media organisations. A 'media organisation' is defined as an organisation (which includes an individual)[1] that collects, prepares or disseminates to the public,

1 An 'organisation' is defined, with certain exceptions, to mean an individual, a body corporate, a partnership, any other unincorporated association or a trust: *Privacy Act 1988* (Cth) s 6C.

news, current affairs, information or documentaries; or commentaries and opinions on, or analyses of, such material.[2]

38.2 The phrase 'in the course of journalism' has not been defined or judicially considered in Australia. When the Privacy Amendment (Private Sector) Bill 2000 (Cth) was first introduced, 'journalism' was defined as the collection, preparation and dissemination of news, current affairs, documentaries and other information to the public.[3] The definition was, however, omitted from the Act 'so that the ordinary meaning of the word will apply'.[4] The term 'journalism' is intended to apply in a technologically neutral way. It is also intended to cover the dissemination of material to the public.[5] The terms 'news', current affairs' and 'documentary' are also not defined.

38.3 Section 66(1A) of the *Privacy Act* provides that a journalist can refuse to give information, answer questions or produce a document or record when so required by the Act if doing so would tend to reveal the journalist's confidential source.[6]

38.4 The reason given for the media exemption was the need to ensure an appropriate balance between the public interest in allowing the free flow of information to the public through the media, and the public interest in safeguarding adequately the handling of information.[7]

38.5 Although there is recognition that an exemption for media activities may be appropriate, some privacy concerns have been raised about the: broad scope of the exemption; lack of criteria and independent assessment of media privacy standards; adequacy of the self-regulatory model; and lack of strong enforcement mechanisms in some media sectors. This chapter discusses these privacy concerns and considers whether any reform of the media exemption is warranted.

Broadcast media

38.6 The broadcast media are regulated by the *Broadcasting Services Act 1992* (Cth), which aims to apply differing levels of regulatory control across a range of broadcasting and other services according to the degree of influence that the various

4 Supplementary Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), [2].

5 Ibid, [4].

6 The ALRC previously recommended that the uniform Evidence Acts be amended to provide for a professional confidential relationship privilege, which includes the privilege between journalists and their sources: Australian Law Reform Commission, New South Wales Law Reform Commission and Victorian Law Reform Commission, *Uniform Evidence Law*, ALRC 102 (2005), Recs 15–1, 15–3.

7 Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), 4, notes on clauses [112]. The right to freedom of expression is recognised in the *International Covenant on Civil and Political Rights*, 16 December 1966, [1980] ATS 23, (entered into force generally on 23 March 1976), art 19(2), (3).

media services are able to exert in shaping community views in Australia.[8] The Act requires radio and television industry groups to develop, in consultation with the Australian Communications and Media Authority (ACMA), codes of practice to apply to the broadcasting operations of each section of the broadcasting industry.[9] The codes must take into account any relevant research conducted by ACMA. Industry codes that have been approved by ACMA are included on ACMA's Register of Codes of Practice. ACMA may impose a licence condition requiring the broadcasting licensees to comply with an applicable code of practice.[10] It is an offence to fail to comply with a licence condition. ACMA may also determine program standards to apply to a section of the industry where no codes of practice have been developed or where a code fails to provide appropriate community safeguards.[11]

38.7 ACMA has also developed *Privacy Guidelines for Broadcasters*. These are intended to assist broadcasters and the public to understand better the operation of the privacy provisions in the industry codes. They provide an overview of the way in which ACMA will assess complaints concerning alleged breaches of the privacy provisions.[12]

Private sector broadcasters

38.8 Privacy provisions are included in the codes of practice developed for the following industry sectors: commercial television; commercial radio; subscription broadcast television; subscription narrowcast television; community television; community radio; and open narrowcast radio.[13]

38.9 The coverage of the codes of practice for private sector broadcasters differs as between industry sectors. In the commercial broadcasting sectors, the privacy provisions relate only to news and current affairs programs, whereas in the community broadcasting sectors, the privacy provisions relate to all programs.[14] There are no specific privacy provisions in the codes of practice developed for the open narrowcast television and radio sectors. Some, but not all, codes of practice provide that certain

programs must not use material relating to a person's personal or private affairs, or which invades a person's privacy, unless there is a public interest for the materials to be broadcast.[15] Further, licensees should not broadcast the words of an identifiable person unless the person has been informed in advance or his or her consent was obtained before the broadcast.[16] Significantly, only two of the codes of practice address the issue of privacy of children.[17] All of the codes of practice, however, cover the handling of complaints from the public.[18]

National broadcasters

38.10 The Australian Broadcasting Corporation (ABC) is a statutory corporation and Australia's only national, non-commercial broadcaster. The functions of the ABC are to: provide within Australia broadcasting services of a high standard as part of the Australian broadcasting system consisting of national, commercial and community sectors; transmit to countries outside Australia broadcasting programs of news, current affairs, entertainment and cultural enrichment; and encourage and promote the musical, dramatic and other performing arts in Australia.[19]

38.11 The Special Broadcasting Service (SBS) is Australia's multicultural and multilingual public broadcaster. It was established under the *Special Broadcasting Services Act 1991* (Cth) to provide multilingual and multicultural radio and television services.[20]

38.12 Pursuant to s 7(1)(c) of the *Privacy Act*, both the ABC and SBS are covered by the Act except in relation to their program materials and datacasting content.[21]

19 *Australian Broadcasting Corporation Act 1983* (Cth) s 6.

20 *Special Broadcasting Service Act 1991* (Cth) s 6.

21 'Datacast' means to broadcast digital information: *Macquarie Dictionary* (online ed, 2005). Under s 6 of the *Broadcasting Services Act 1992* (Cth), 'datacasting service' means a service that delivers content

Section 7A of the Act provides, however, that despite s 7(1)(c), certain acts and practices of the ABC and SBS are to be treated as acts and practices of organisations.[22] Where the acts and practices of the ABC and SBS are to be treated as those of organisations, they may still be exempt if those acts and practices were done in the course of journalism.[23] The specific exemption that applies to the ABC and SBS is discussed further in the context of the public sector in Chapter 33.

38.13 The regulatory regime set out in the *Broadcasting Services Act* for national broadcasting services differs from that for other types of broadcasting services. The ABC and SBS develop their codes of practice through separate consultative processes and are required to inform ACMA of them.[24]

38.14 Privacy provisions are included in the codes of practice for both the ABC and SBS. The *ABC Code of Practice* provides that:

> The rights to privacy of individuals should be respected in all ABC content. However, in order to provide information which relates to a person's performance of public duties or about other matters of public interest, intrusions upon privacy may, in some circumstances, be justified.[25]

38.15 The *SBS Code of Practice* contains a similar provision.[26] In addition, under the *SBS Code of Practice*, SBS is not to transmit the words of an identifiable person except in certain specified circumstances.[27]

Complaints

38.16 Complaints about lack of compliance with a broadcasting code of practice can be made to ACMA only after a written complaint has been made to the particular station, and: the station does not answer the complaint within 60 days; or the complainant is dissatisfied with the station's response.[28] ACMA must investigate such a complaint unless it is satisfied that the complaint is frivolous, vexatious or irrelevant. ACMA has a number of information-gathering powers, including the power to: summon a person to attend before a delegate of ACMA to produce documents or answer questions; examine a person on oath or affirmation; require a person to produce documents for inspection; and hold hearings and direct participants in the hearing to

---

using the broadcasting services bands—whether in the form of text; data; speech, music or other sounds; visual images; or any other form—to persons with the appropriate equipment for receiving that content.

22 There is some ambiguity as to whether those program materials and datacasting content of the ABC and SBS that relate to commercial activities are covered by the private sector provisions of the *Privacy Act*: see discussion in Ch 33.

23 *Privacy Act 1988* (Cth) ss 7(1)(ee), 7B(4).

24 *Broadcasting Services Act 1992* (Cth) pt 11 div 2; *Australian Broadcasting Corporation Act 1983* (Cth) s 8(1)(e); *Special Broadcasting Service Act 1991* (Cth) s 10(1)(j).

25 Australian Broadcasting Corporation, *ABC Code of Practice* (2004), [2.8].

26 Special Broadcasting Service, *SBS Codes of Practice* (2006), [1.9].

28 *Broadcasting Services Act 1992* (Cth) ss 148, 150.

attend a conference. Once ACMA has reached a decision, it must notify the complainant of the results of the investigation.[29]

38.17 Where a private sector broadcasting service has breached, or is breaching, a relevant code of practice, ACMA may issue a notice directing a person to take remedial action to ensure compliance.[30] A failure to comply with such a notice is an offence under the *Broadcasting Services Act* and attracts a penalty.[31] In addition, ACMA may impose conditions on licences, including conditions relating to code compliance.[32] In relation to commercial broadcasting, community broadcasting and subscription television services, a breach of a licensing condition could also lead to suspension or cancellation of the broadcasting licence.[33] If ACMA is satisfied that the codes of practice are not providing appropriate community safeguards, it must determine a standard.[34]

38.18 Furthermore, ACMA has been given new enforcement powers based on the findings of a report prepared by Professor Ian Ramsay at the request of the Australian Broadcasting Authority (now ACMA) on the reform of the enforcement powers of the Australian Broadcasting Authority.[35] Under the *Communications Legislation Amendment (Enforcement Powers) Act 2006* (Cth), ACMA is now able to accept enforceable undertakings in relation to compliance with the *Broadcasting Services Act* and registered codes of practice. If ACMA considers that a person has breached such an undertaking, it may apply to the Federal Court of Australia for an order directing compliance with the undertaking, the payment of compensation for another person's loss or damage suffered as a result of the breach, or the payment to ACMA of the amount of any financial benefit the person has obtained that is reasonably attributable to the breach.

38.19 While ACMA does not register the codes of practice under which national broadcasters operate, it has a role in investigating unresolved complaints arising from broadcasts and taking action where the complaint is justified.[36] If a complaint is upheld in relation to a national broadcaster, ACMA may recommend, by written notice, that the national broadcaster take action to comply with the relevant code of practice, or take other action as specified in the notice. Such action may include broadcasting or otherwise publishing an apology or retraction.[37] If the recommendation is not followed

within 30 days, ACMA may give the responsible minister a written report on the matter, and the minister must table the report in Parliament.[38]

Print media

38.20 The Australian Press Council (APC) is a self-regulatory body that deals with the print media. Its stated objectives are to help preserve the freedom of the press within Australia and ensure that the press acts responsibly and ethically.[39]

38.21 The APC has published a set of *Privacy Standards* for the purposes of the media exemption under the *Privacy Act*.[40] The *Privacy Standards* deal with the collection, use and disclosure, quality and security of personal information; anonymity of sources; correction, fairness and balance; and the handling of sensitive information. The APC receives and deals with complaints about possible breaches of these Standards, but it will not hear a complaint that is subject to legal action or possible legal action, unless the complainant is willing to sign a waiver of the right to such action.[41] The APC secretariat will try to negotiate the settlement of a complaint, failing which a formal response will be sought from the publication and sent to the complainant. If the complainant is not satisfied with the response, he or she, with the agreement of the newspaper, can seek a conciliation hearing conducted by the APC, or can immediately refer the matter to the APC for adjudication. If asked to adjudicate, the APC's Complaints Committee holds a hearing and makes a recommendation to the APC. The APC has no power to penalise or make an order against a publication; it can only distribute the Committee's findings to the media and publish them in the APC's newsletters and annual reports.[42]

Journalists

38.22 The Media Entertainment and Arts Alliance is the union and professional organisation for the media, entertainment, sports and arts industries.[43] Journalist members of the Alliance are bound by its *Code of Ethics*. The *Code of Ethics* provides for certain privacy standards, including the requirement that journalists: do not place unnecessary emphasis on personal characteristics such as race, ethnicity and religious beliefs; identify themselves and their employer before obtaining an interview; and respect private grief and personal privacy.[44]

44 Media Entertainment and Arts Alliance, *Media Alliance Code of Ethics* <www.alliance.org.au/code-of-ethics.html> at 14 August 2007, [2], [8], [11].

38.23 Where a person believes that a journalist member of the Alliance has breached the Code, he or she may make a formal complaint to the Alliance. If the Alliance finds the complaint proven, it can censure or rebuke the journalist, fine the journalist up to $1,000 for each offence, or expel the journalist from membership of the Alliance. Information about complaints against journalists is published and distributed on an annual basis to journalist members of the Alliance.[45]

Complaint statistics

38.24 The Office of the Privacy Commissioner (OPC) examined the media exemption as part of its review of the private sector provisions of the *Privacy Act* (OPC Review). The OPC noted that it had received very few inquiries and complaints about media organisations.[46] During the period between 21 December 2001 and 31 January 2005, the OPC indicated that 1% of all the NPP complaints closed by the OPC on the basis that they were outside of its jurisdiction concerned the media exemption.[47]

38.25 From July 1996 to June 2006, the Australian Broadcasting Authority, and subsequently ACMA, has conducted a total of 82 privacy related investigations involving commercial television; 23 of which were found to involve breaches. For commercial radio, there have been 16 investigations, seven of which involved breaches. During that period, there were no privacy related investigations conducted in relation to the national broadcasters, 1 in relation to the subscription television sector, and 1 in the community broadcasting sector. Neither of these investigations resulted in a finding of breach.[48]

38.26 According to the APC, annually since 2001 there have been 22–25 complaints to the APC on privacy matters.[49]

International instruments

38.27 The *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (OECD Guidelines) issued by the Organisation for Economic Co-operation and Development do not specifically provide for an exemption or exception relating to journalistic activities or freedom of expression.[50] The OECD Guidelines recognise, however, that there may be exceptions to the privacy principles, which should be 'limited to those which are necessary in a democratic society'.[51]

51 Ibid, Guideline 4; Memorandum, [47]. The right to freedom of expression is guaranteed under numerous international human rights instruments, including the *Universal Declaration of Human Rights* and the *International Covenant on Civil and Political Rights*: *United Nations Universal Declaration of Human*

38.28 The *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (EU Directive) issued by the European Parliament contains a specific exception to the principles for the purposes of journalism, or literary or artistic expression. Article 9 of the EU Directive sets out that Member States shall provide for exemptions or derogations from certain provisions of the EU Directive

> for the processing of personal data carried out solely for journalistic purposes or the purpose of artistic or literary expression only if they are necessary to reconcile the right to privacy with the rules governing freedom of expression.[52]

38.29 There are no definitions of 'journalistic purposes', or 'literary or artistic expression' in the EU Directive, and to date, the matter has not come before the European Court of Human Rights. The term 'journalistic purposes' has been considered, however, by the Supreme Court of Sweden.

38.30 In *Case B 293–00*, the Supreme Court of Sweden held that the exemption for 'journalistic purposes' in art 9 of the EU Directive and s 7 of the Swedish *Personal Data Act 1988* applies to a private individual who created a website that published derogatory statements about Swedish banks and named individual employees. The Court declined to limit the meaning of 'journalistic purposes' by reference to the standards of the traditional news media. Instead, the Court focused on identifying the character of the activity taking place. To that end, it suggested that one purpose of journalism was to inform, exercise criticism and initiate debate in societal issues of importance for the public. In addition, the Court held that insulting or derogatory statements in the media could have the character of a journalistic purpose, as they are within the scope of critical societal debate. The Court observed, however, that although the defendant was able to rely on the media exemption in the *Personal Data Act*, he was not immune from other causes of action, including defamation.[53]

Overseas jurisdictions

38.31 Privacy legislation in some overseas jurisdictions provides for an exemption or exception relating to journalistic materials or news activities.[54] In Canada, the personal information protection principles do not apply to personal information collected, used

or disclosed by a private sector organisation for journalistic, artistic or literary purposes.[55]

38.32 In the United Kingdom, except in relation to data security, the data protection principles do not apply to the processing of personal data for journalistic, artistic or literary purposes (the 'special purposes') where:

> (a) the processing is undertaken with a view to the publication by any person of any journalistic, literary or artistic material,
>
> (b) the data controller reasonably believes that, having regard in particular to the special importance of the public interest in freedom of expression, publication would be in the public interest, and
>
> (c) the data controller reasonably believes that, in all the circumstances, compliance with that provision is incompatible with the special purposes.[56]

38.33 Under the *Privacy Act 1993* (NZ), news media are exempt in relation to their news activities.[57] In Hong Kong, businesses that carry on news activities are exempt from compliance with some of the data protection principles in relation to personal data held solely for the purpose of news activity or a directly related activity. Such businesses are exempt from the 'access' principle, 'unless and until the data are published or broadcast'; and the 'use and disclosure' principle, where the data are disclosed by a person who has reasonable grounds to believe, and reasonably believes, that the publishing or broadcasting of the data is in the public interest.[58]

Scope of the exemption

Background

38.34 Does the media exemption strike an appropriate balance between the free flow of information to the public and privacy protection? Some commentators have argued that the exemption is too broad.[59] In 1979, a majority of the ALRC recommended that

---

55 *Personal Information Protection and Electronic Documents Act 2000* SC 2000, c 5 (Canada) ss 4(2)(c), 7(1)(c).

56 *Data Protection Act 1998* (UK) s 32(1). Under the *Data Protection Act 1998* (UK), the seventh data protection principle provides that 'appropriate technical and organisational measures shall be taken against unauthorised or unlawful processing of personal data and against accidental loss or destruction of, or damage to, personal data': *Data Protection Act 1998* (UK) sch 1, principle 7.

57 *Privacy Act 1993* (NZ) s 2(1). 'News activity' means: (a) the gathering of news, or the preparation or compiling of articles or programmes concerning news, observation on news, or current affairs, for the purposes of dissemination to the public; or (b) the dissemination of articles or programmes concerning news, observation on news or current affairs to the public: *Privacy Act 1993* (NZ) s 2(1). 'News medium' means 'any agency whose business, or part of whose business, consists of a news activity; but, in relation to principles 6 and 7, does not include Radio New Zealand Limited or Television New Zealand Limited': *Privacy Act 1993* (NZ) s 2(1).

58 *Personal Data (Privacy) Ordinance* (Hong Kong) s 61.

59 M Neilsen, *Privacy Amendment (Private Sector) Bill 2000: Bills Digest No 193 1999–2000* (2000) Parliament of Australia—Parliamentary Library, 13; N Waters, 'Can the Media and Privacy Ever Get On?' (2002) 9 *Privacy Law & Policy Reporter* 149; N Waters, 'Commonwealth Wheels Turn Again—A Cautious Welcome' (1999) 5 *Privacy Law & Policy Reporter* 127, 128. A similar view was expressed in submissions to the OPC Review: Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 196–197.

legislation should provide privacy protection against publication, without reasonable justification, of sensitive private facts relating to an individual, in circumstances where the publication is likely to cause distress, annoyance or embarrassment on an objective view of the position of the individual. The ALRC considered sensitive private facts to be matters relating to the health, private behaviour, home life, or personal or family relationships of an individual.[60]

38.35 It has also been suggested that media reporting of health information runs a high risk of causing harm to individuals and therefore should be subject to tighter regulation.[61]

Definitions

38.36 Another factor that affects the scope of the media exemption is the definition, or lack of definition, of the terms used in the exemption. Particular concerns have been raised in previous inquiries about the lack of definition of the term 'journalism', and the wide definition of the term 'media organisation', in the exemption.[62]

38.37 Originally, the word 'journalism' was defined in the Privacy Amendment (Private Sector) Bill. After the release of the report on the Bill by the House of Representatives Standing Committee on Legal and Constitutional Affairs (2000 House of Representatives Committee inquiry),[63] the Australian Government amended the Bill to omit the definition of 'journalism'.[64] In response to questions by the Senate Legal and Constitutional Legislation Committee inquiry into the Bill, [65] the Attorney-General's Department (AGD) stated that the Australian Government was aware that journalism may change in nature, and that the Supplementary Explanatory Memorandum to the Bill conveyed the Government's intention that the media exemption cover a range of activities of different forms of media.[66]

38.38 The OPC Review recommended the term 'in the course of journalism' be defined and that the term 'media organisation' be clarified in order to ensure that the

66 Ibid, [3.29].

exemption focuses on news and current affairs.[67] The Australian Government disagreed with this recommendation.[68]

38.39 One commentator argued that:

> the everyday meaning of 'journalism' would appear to include entertainment, infotainment and educational output of the media. Arguably, important issues of freedom of speech and the public interest role of the media are confined to news and current affairs.[69]

38.40 In New Zealand, the exemption is confined to a 'news medium' that carries on the business of 'news activities'.[70] 'News medium' means 'any agency whose business, or part of whose business, consists of a news activity'.[71] 'News activity' is defined as:

> (a) The gathering of news, or the preparation or compiling of articles or programmes of or concerning news, observations on news, or current affairs, for the purposes of dissemination to the public or any section of the public:
>
> (b) The dissemination, to the public or any section of the public, of any article or programme of or concerning—
>
> (i) News;
>
> (ii) Observations on news;
>
> (iii) Current affairs:[72]

38.41 In addition, it has been argued that, due to the lack of statutory definitions of the terms 'news', 'current affairs' and 'documentary', the media exemption may apply to any organisation that publishes material, provided that it is publicly committed to observe published media specific privacy standards.[73] This could include any organisation that collects and disseminates personal information over the internet.[74]

Submissions and consultations

38.42 In the Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether the acts and practices of media organisations in the course of journalism should be exempt

from the operation of the *Privacy Act* and, if so, what the scope of the exemption should be. The ALRC also asked whether s 7B(4) of the *Privacy Act* strikes an appropriate balance between the free flow of information to the public and the protection of personal information.[75]

38.43 Media organisations and their representative bodies strongly supported retaining the current scope of the media exemption.[76] They submitted that the exemption is working well and strikes an appropriate balance between the flow of information on matters of public concern and individual privacy.[77] The ABC stated that 'the importance of allowing the free flow of information to the public through the media appears to be generally accepted'.[78]

38.44 The Queensland Council for Civil Liberties was also in favour of maintaining the media exemption. It submitted that:

> Freedom of Speech is a fundamental value of our society. It seems to us that all the models for limiting or eliminating press exemption involve creating a system of government regulation of the press which would have an undesirable potential.[79]

38.45 Some stakeholders submitted that the current regulatory framework already provides adequate protection of personal privacy,[80] including a range of federal and state laws and industry codes of practice.[81] The ABC suggested that, since the exemption is only available to media organisations that have committed publicly to published privacy standards, individuals have the means to address privacy concerns arising from the activities of media organisations.[82]

38.46 The APC stated that complaints about media intrusion form 'a very small part' of those received by the OPC and the NSW Privacy Commissioner.[83] ACMA observed that the relatively low number of privacy related investigations and findings of breach suggests that 'the electronic media are acting effectively in balancing privacy issues'. It submitted, however, that an assessment of community concern should not be based solely on the frequency of complaints. The following reasons were given:

> - ACMA only considers complaints if they have not been satisfactorily resolved by broadcasters. ACMA does not have access to all complaints made directly to broadcasters and so may underestimate community concern in this area;
> - the bringing of complaints of invasion of privacy in effect repeats the invasion. A potential complainant may decide that to proceed with a complaint about an invasion of privacy compounds the problem; and
> - a lower level of complaints about invasion of privacy is to be expected, because individuals who are not directly affected are less likely to complain. In contrast, areas such as bias or inaccuracy generate complaints from members of the public generally.[84]

38.47 In its submission to the OPC review, the Australian Privacy Foundation suggested that the low level of complaints and inquiries does not indicate satisfaction with the exemption, but rather 'a widespread and correct view that the media are effectively above the law in relation to privacy'.[85]

38.48 SBS suggested that limiting or removing the media exemption 'risks being a disproportionate response to concerns about abuse of privacy', and that 'any reform … would require a significant social imperative to outweigh the public interest in media freedom'.[86] The ABC observed that the exemption is not unconditional, and suggested that it 'may prove to be too narrow, if the undefined term "journalism" is given a restrictive meaning in future judicial determinations'.[87]

38.49 Some stakeholders considered the scope of the media exemption to be problematic.[88] Electronic Frontiers Australia submitted that the scope of the exemption has become 'seriously problematic' following the introduction of uniform defamation laws, under which truth alone is a defence. It suggested that:

> due in part to the increasing number of individuals who publish 'news' and 'commentary' on the Internet, who may or may not be 'journalists' … we consider individuals should have a cause of action for breach of privacy.[89]

89 Electronic Frontiers Australia Inc, *Submission PR 76,* 8 January 2007.

38.50 It was suggested in one submission that issues about the balance between privacy rights and freedom of expression should be addressed by selective exceptions to some of the privacy principles, rather than an exemption.[90]

Children and young people

38.51 Some stakeholders raised concerns about the publication by media organisations of children's personal information—including publication that may contravene laws preventing identification of children as witnesses or parties in legal cases.[91] Both the NSW Commissioner for Children and Young People and the Legal Aid Commission of New South Wales were concerned about a number of instances where children allegedly involved in criminal cases have been named or identified publicly by the media.[92] The NSW Commissioner for Children and Young People submitted that 'exempting the acts and practices of media organisations in section 7B(4) of the *Privacy Act* does not adequately protect the privacy of children and young people'.[93]

38.52 The Queensland Government Commissioner for Children and Young People and Child Guardian considered that the current system of voluntary regulation in the reporting of children and young people lacks sufficient safeguards, and it is currently developing guidelines to promote responsible portrayal of children in the media.[94]

> It is important to consider that members of the media might not have education or expertise in assessing whether a child or young person has the capacity to make decisions or exercise rights regarding their personal information. For example, a journalist may mention the name, age and location of a child or young person in an article which may result in that child or young person being identified by a predator or an abusive parent.[95]

38.53 The APC stated that 'whether the individual is a child and warrants a greater level of privacy protection' is one of the factors that is taken into account when it deals with questions of privacy.[96]

Sensitive information

38.54 Another concern raised is the publication of sensitive personal information by journalists. The Centre for Law and Genetics submitted that the media exemption should be limited to the use of non-sensitive personal information, and that:

---

90 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007.

91 Legal Aid Commission of New South Wales, *Submission PR 107,* 15 January 2007.

92 NSW Commission for Children and Young People, *Submission PR 120,* 15 January 2007; Legal Aid Commission of New South Wales, *Submission PR 107,* 15 January 2007.

93 NSW Commission for Children and Young People, *Submission PR 120,* 15 January 2007.

94 Queensland Government Commission for Children and Young People and Child Guardian, *Submission PR 171,* 5 February 2007.

95 Ibid.

96 Australian Press Council, *Submission PR 48,* 8 August 2006.

> the use of sensitive personal information could be governed by the NPPs, perhaps with the inclusion of a provision allowing publication where there is reasonable justification.[97]

38.55 The APC stated that its own regime 'recognises the existence of "sensitive private facts" and seeks to ensure that publications do not intrude on them'.[98] The ABC submitted that removing the media exemption and substituting it with a defence of 'reasonable justification' would prove unworkable if the term 'reasonable' is interpreted restrictively.[99]

Definitions

38.56 In IP 31, the ALRC asked whether the terms 'in the course of journalism', 'news', 'current affairs' and 'documentary' should be defined in the *Privacy Act*, and if so, how they should be defined.[100] Some stakeholders considered the lack of definitions of these terms problematic.[101] It was submitted that the lack of definition of the term 'journalism', together with the wide definition of the term 'media organisation', 'effectively allows anyone to claim the exemption by setting up a "publishing enterprise"'.[102] In addition, they suggested that:

> If there are to be selective exceptions for public interest media activity, these terms will need to be much more carefully and closely defined. While difficult, it must be possible to distinguish between genuine news and current affairs journalism which deserve some exemption, and the infotainment, entertainment and advertising which makes up the bulk of media content and which should be subject to privacy principles to the maximum extent practicable.[103]

38.57 The Legal Aid Commission of New South Wales submitted that lack of clear definitions of the terms in the exemption is likely to become more problematic,

> given the way that forms of communication such as Internet 'blogs' have come to blur the distinction between commercial media organisations and other people and organizations seeking publicity.[104]

99 Australian Broadcasting Corporation, *Submission PR 94,* 15 January 2007.
100 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 5–11. The ALRC also asked whether there are other terms that would be more appropriate. There was no response to this question in submissions.
101 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007; Legal Aid Commission of New South Wales, *Submission PR 107,* 15 January 2007.
102 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.
103 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.
104 Legal Aid Commission of New South Wales, *Submission PR 107,* 15 January 2007.

38.58 The Centre for Law and Genetics suggested revisiting the definition of 'journalism' that was originally included in the Privacy Amendment (Private Sector) Bill.[105]

38.59 Other stakeholders were of the view that defining these terms would be impractical given rapidly evolving technology and the changing nature of journalism.[106] The APC submitted that it would not have difficulty with the inclusion of definitions of the terms. It queried, however, whether adequate definitions could be crafted, and suggested that 'there is no evidence that the *Act* suffers from this lack of specific definition'.[107] SBS suggested that the most useful approach is to rely on the ordinary natural meaning of the terms.[108]

38.60 The Victorian Society for Computers and Law submitted that the meaning of the terms used in the media exemption should be established by case law, because any definitions may become obsolete as notions such as 'journalism' and 'news' develop over time. It suggested that, if definitions of those terms were to be included in the *Privacy Act*, they should be: 'technology and media neutral in order to maintain their relevance for any significant period of time'; and 'consistent with the fair dealing exceptions relating to the use of copyright material, including under section 42 of the *Copyright Act 1968* (Cth) for the purpose of reporting the news'.[109]

38.61 The ABC suggested that the terms news, current affairs and documentary 'are terms of wide compass whose meanings may further evolve, and accordingly should not be defined'.[110]

38.62 In response to the question of whether the term 'media organisation' is too wide, the APC stated that it had been 'at pains to ensure that only organisations that are principally publishers of print media can subscribe to the [APC's *Privacy*] *Standards*', rather than others who might, incidentally, publish periodicals.[111] The ABC submitted that the definition of 'media organisation' should be extended:

> Given that the policy reason for the media exemption is to facilitate the free flow of information to the public, the ABC does not see why the exemption should focus narrowly on news and current affairs. Many other media publications may be in the public interest, including documentaries and other information programs.[112]

Options for reform

38.63 One means of limiting the scope of the media exemption is to require publication of personal information to be in the public interest.[113] Another way to restrict the scope of the exemption is to define some of the terms that are used in the media exemption. In particular, defining the word 'journalism' in s 7B(4) of the *Privacy Act* would have a significant impact on the scope of the exemption. Although 'journalism' is not defined in other federal, state or territory legislation, privacy legislation in comparable jurisdictions or Australian case law, there are a number of other sources on which the word 'journalism' used in the media exemption may be modelled.

38.64 There are four main options for defining the word 'journalism':

- The *Macquarie Dictionary* defines 'journalism' as 'the occupation of writing for, editing, and producing newspapers and other periodicals, and television and radio shows', or 'such productions viewed collectively'.[114]

- The Privacy Amendment (Private Sector) Bill originally defined 'journalism' as 'the collection, preparation and dissemination of news, current affairs, documentaries and other information to the public', including commentary and opinion on, or analysis of, this kind of material.[115] Due to the inclusion of the word 'information', media content such as infotainment, entertainment and advertising may fall within this definition of journalism.

- The definition of 'journalism' originally used in the Privacy Amendment (Private Sector) Bill could be modified by omitting the word 'information'. This would ensure that the exemption is only available in relation to news, current affairs and documentaries.

- As noted above, the *Privacy Act 1993* (NZ) contains a definition of 'news activity' that focuses on news, observations on news and current affairs, and does not include 'documentary' or 'information'.

ALRC's view

38.65 The free flow of information to the public through the media is an important element of a democratic society. This principle is not, however, absolute. It is necessary to balance the free flow of information to the public through the media and the public interest in adequately safeguarding the handling of personal information. Stakeholders recognised the need to reach such a balance. In the ALRC's view, the most appropriate means of reconciling these sometimes competing principles is to

---

113 See, eg, *Data Protection Act 1998* (UK) s 32.

114 *Macquarie Dictionary* (online ed, 2005).

115 M Neilsen, *Privacy Amendment (Private Sector) Bill 2000: Bills Digest No 193 1999–2000* (2000) Parliament of Australia—Parliamentary Library, 13.

grant media organisations a limited exemption from the operation of the *Privacy Act*. That is, media organisations should be exempt from complying with the *Privacy Act* when acting in the course of journalism.

38.66 It was suggested that the lack of a statutory definition of 'journalism' allows the exemption to be interpreted too broadly. Consistent with the views of a number of stakeholders, the media exemption should focus primarily on reporting by the media of matters of public interest. It should not exclude from the operation of the Act content such as infotainment, entertainment and advertising. Therefore, the ALRC proposes a modified version of the definition of 'journalism' that was originally included in the Privacy Amendment (Private Sector) Bill, by excluding the word 'information' from that definition. This means that to the extent that media organisations publish material that falls within the ambit of the general word *information*—but is not news, current affairs or documentaries—they will be covered by the *Privacy Act*.

38.67 The ALRC's view is that this proposed definition is preferable to both of the alternative definitions discussed above. First, the *Macquarie Dictionary* of 'journalism' is problematic because it is too broad and it is directed, not to the *content* in question, but to the entities that publish this content. That is, the dictionary definition refers to the media—'newspapers and other periodicals, and television and radio shows'—in which the information appears without mentioning the nature of the information covered. Secondly, the definition of 'news activity' in the *Privacy Act 1993* (NZ) is too narrow because it focuses only on news, observations on news, and current affairs, but does not include documentaries.

38.68 Given that 'news', 'current affairs' and 'documentary' are terms of wide import, the ALRC considers that defining these terms in the *Privacy Act* would be impracticable. Instead, the ordinary meaning of these terms should continue to apply.

38.69 In the ALRC's view, the definition of 'media organisation' should remain as it currently stands. As a result, an individual, for example, will continue to fall within this definition provided he or she can satisfy the relevant criteria in the Act. The ALRC believes that this is an appropriate outcome, because the exemption is designed to protect a type of freedom of expression—that is, expression by media organisations—which has a number of significant public benefits.[116] As Professor David Feldman has explained, one such benefit is that, 'as a tool of self-expression it is a significant instrument of personal autonomy'.[117] As such, it is important that the media exemption not be limited to established media businesses or professional journalists.

38.70 In Chapter 5, the ALRC proposes that the *Privacy Act* be amended to provide for a statutory cause of action for invasion of privacy. The retention of the media

116 See, eg, D Feldman, *Civil Liberties and Human Rights in England and Wales* (2nd ed, 2002), ch 14.
117 Ibid, 802.

exemption is not intended to preclude the proposed statutory cause of action for invasion of privacy from being brought against a media organisation or an individual. It is important to emphasise that, where the media exemption applies, it means that a media organisation is not obliged to comply with the privacy principles. This does not mean, however, that the media organisation would be immune from having an action brought against it under the proposed cause of action. That is a separate question and, if an individual is able to establish that the media organisation is liable under the statutory cause of action, he or she could seek a remedy provided for in the relevant provisions of the Act.

Proposal 38–1 The *Privacy Act* should be amended to define 'journalism' to mean the collection, preparation for dissemination or dissemination of the following material for the purpose of making it available to the public:

(a) material having the character of news, current affairs or a documentary; or

(b) material consisting of commentary or opinion on, or analysis of, news, current affairs or a documentary.

Criteria for media privacy standards

38.71 The *Privacy Act* has been criticised for its lack of criteria for, or independent assessment of, the adequacy of media privacy standards.[118] As noted above, under s 7B(4) of the *Privacy Act*, acts and practices of a 'media organisation' in the course of journalism are exempt from the operation of the Act if the organisation is publicly committed to observe 'standards that deal with privacy in the context of the activities of a media organisation'. The OPC Review stated that it is uncertain whether the Privacy Commissioner has powers under the *Privacy Act* to determine whether those standards provide adequate protection. It suggested that one way to resolve this issue would be to amend s 7B(4) to establish criteria by which the Privacy Commissioner could determine whether the standards are adequate.[119]

38.72 The OPC Review recommended that the Australian Government consider amending the *Privacy Act* to require that the Australian Broadcasting Authority (now ACMA) and media bodies consult with the Privacy Commissioner when developing privacy codes.[120] It also recommended that the OPC, together with ACMA, provide

120 Ibid, rec 58.

greater guidance to media organisations on appropriate levels of privacy protection, especially concerning health information, and raise the awareness of organisations that the media exemption is not a blanket exemption.[121]

38.73 The Australian Government did not agree that ACMA and media bodies should be required to consult with the Privacy Commissioner when developing privacy codes. Instead, it was of the view that it would be more appropriate for the OPC to provide guidance and alert organisations to the fact that the media exemption is not a blanket exemption.[122]

Submissions and consultations

38.74 Some stakeholders expressed concern about the inadequacy of the media privacy standards.[123] It was noted in one submission that 'at least some of the current media privacy standards are substantively weak', and that the APC's *Privacy Standards* 'do not contain an equivalent of NPPs 5 (openness) or 9 (transborder data flow) and are more lax in several respects than some of the other NPPs'.[124]

38.75 A concern was raised about the lack of scrutiny of the adequacy of privacy standards.[125] The Centre for Law and Genetics observed that there are significant differences in the way that journalistic acts are regulated across different media. It stated that:

> Currently journalistic acts relating to use of personal information are inadequately regulated in some sectors, largely due to the lack of scrutiny of the adequacy of privacy standards and lack of enforceability of standards.[126]

38.76 Particular concerns were also raised that media privacy standards do not address adequately the privacy needs of children and young people. The Queensland Government Commissioner for Children and Young People and Child Guardian submitted that privacy standards applied through media regulatory bodies do not sufficiently consider the privacy of children and young people and are not regularly enforced.[127] The NSW Commissioner for Children and Young People submitted that the *Privacy Act* should be amended 'to include a provision that requires broadcasters to

include a standard within the industry standard and principles that relates specifically to children and young people'. In addition, it suggested that:

> any standards or principles should recognise that if a parent refuses consent a broadcaster cannot over-ride this consent. However, where a parent does consent, the broadcaster should be subject to a further test of the best interests of the child.[128]

38.77 There was also concern expressed in some submissions about the concept of 'public commitment' to observe privacy standards.[129] It was submitted that 'the condition requiring a public commitment to privacy standards can be satisfied by the organisation itself, with no independent assessment'.[130] The Centre for Law and Genetics stated that the notion of 'public commitment to observe published standards' needs to be clarified.[131]

38.78 A range of reform options were suggested, including: imposing a binding code on media organisations;[132] incorporating media privacy standards into the *Privacy Act*;[133] empowering the OPC to determine the adequacy of media privacy standards;[134] and providing greater guidance to media organisations.[135] The NSW Commissioner for Children and Young People supported a binding code for all broadcasting services,[136] however, the Electronic Frontiers Australia submitted that:

> We are very dubious about proposals to require journalists to subscribe to a binding code etc due to the potential, now or in the future, for such a requirement to restrict 'competition' by requiring journalists, including independent journalists who publish on the Internet without charging fees for access, to pay membership fees (in part to cover code adjudication costs) in order to be able to subscribe to a code.[137]

38.79 The Centre for Law and Genetics submitted that the OPC should be empowered to

> determine whether standards are adequate and particularly whether they provide for sufficient sanctions against non-compliance. In situations where there are no standards, or where the standards are inadequate, the Privacy Commissioner should be given the power to direct that the Act must be complied with.[138]

38.80 Some stakeholders supported the recommendation in the OPC Review that the OPC, in conjunction with ACMA, provide greater guidance to media organisations as to appropriate levels of privacy protection and raise the awareness of organisations that the media exemption is not a blanket exemption.[139]

38.81 Free TV Australia submitted that Australian media are already subject to legislation that adequately protects 'against inappropriate or unfair means of gathering or disclosing information and images'.[140] It noted that there are already privacy requirements in place for broadcasters through the industry codes of practice that are 'specifically adapted to addressing issues of privacy in the media context', and that journalists are subject to privacy requirements through the Journalist's *Code of Ethics*. It stated that, in particular, the codes of practice for the broadcast media are subject to public consultation and review, as well as approval by ACMA.[141]

38.82 The APC stated that it had sought the views of the OPC when developing its *Privacy Standards* for the print media.

> The OPC had adequate opportunity to comment on the Standards while they were in draft form and to contribute to their development. The Council took the OPC's silence to be informed consent.[142]

38.83 The APC stated that all major newspaper publishers, a large number of country newspapers, all major suburban newspapers and a number of magazine publishers have publicly subscribed to the APC's *Privacy Standards*.[143] Furthermore, there have been continuing consultations with publishers and seminars that enable the APC to match its interpretation of the *Privacy Standards* with contemporary community standards.[144] The APC further submitted that there is insufficient evidence that the standards have failed to address public concern about improper handling of information.[145]

ALRC's view

38.84 The current privacy standards of different representative media bodies have varying levels of privacy requirements and some are lacking in detail. In addition, there are no criteria for assessing whether media privacy standards are adequate, and there is no requirement that the OPC be consulted in the development of industry codes of practice or other media privacy standards.

---

139 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; New South Wales Council for Civil Liberties Inc, *Submission PR 156,* 31 January 2007.

144 Ibid.
145 Australian Press Council, *Submission PR 83,* 12 January 2007.

38.85 One option for reform is for media privacy standards to be incorporated into the *Privacy Act*. The ALRC does not consider that this approach is practical, as privacy standards may need to be adjusted from time to time in light of developing technology. A better alternative is for the OPC to establish criteria for assessing the adequacy of media privacy standards. The criteria should be established in consultation with ACMA and peak media representative bodies, including the APC and the Media Entertainment and Arts Alliance. Once the criteria are established, they should be published by the OPC in the form of guidelines.

38.86 Currently, the terms of the media exemption are silent on the adequacy of media privacy standards. Section 7B(4)(b) of the *Privacy Act* provides that a media organisation is exempt if it was engaging in an act or practice in the course of journalism

> at a time when the organisation is publicly committed to observe standards that:
>
> (i) deal with privacy in the context of the activities of a media organisation (whether or not the standards also deal with other matters); and
>
> (ii) have been published in writing by the organisation or a person or body representing a class of media organisations.

38.87 In the OPC Review, the OPC stated that:

> It is not clear if this section enables the Commissioner to decide whether or not the standard deals with privacy in an adequate way in the course of establishing whether or not a media organisation is publicly committed to a standard.[146]

38.88 The ALRC considers that the insertion of the word 'adequately' in s 7B(4)(b) will address this concern.

38.89 These proposals do not envisage that the Privacy Commissioner would be required to assess media privacy standards developed by a media organisation in the absence of a complaint. It does, however, mean that if a complaint is made to the Privacy Commissioner about the activities of a media organisation, the Privacy Commissioner would be able to determine whether the media privacy standards were adequate and therefore whether the media exemption applies in that instance. Where the privacy standards are considered adequate, any complaints would be made to the media organisations and the media bodies that oversee the privacy standards. Where the privacy standards are considered 'inadequate', for example, by the Privacy Commissioner, the media exemption would not apply and the Privacy Commissioner would have jurisdiction to deal with the complaint.

38.90 Particular concerns have been raised in submissions about the publication of information and portrayal of children and young people in the media. In Chapter 60, the ALRC proposes that the criteria for assessing the adequacy of media privacy

---

146 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 198.

standards should include specific provisions dealing with the privacy of children and young people.[147]

38.91 The term 'publicly committed' in the media exemption is not defined and has not been the subject of judicial interpretation. Therefore, the ALRC proposes that the OPC clarifies that in order for the media exemption to apply, public commitment by media organisations to observe privacy standards not only requires *express* commitment, but also *conduct* evidencing commitment to observe those standards.

38.92 In the ALRC's view, it would be desirable for the OPC, together with ACMA, to provide greater guidance to media organisations on appropriate levels of privacy protection and raise awareness that the media exemption is not a blanket exemption.

Proposal 38–2 In consultation with the Australian Communications and Media Authority and peak media representative bodies, the Office of the Privacy Commissioner should establish criteria for assessing the adequacy of media privacy standards for the purposes of the media exemption.

Proposal 38–3 The Office of the Privacy Commissioner should issue guidelines containing the criteria for assessing the adequacy of media privacy standards established under Proposal 38–2.

Proposal 38–4 Section 7B(4)(b)(i) of the *Privacy Act* should be amended to provide that the standards must 'deal *adequately* with privacy in the context of the activities of a media organisation (whether or not the standards also deal with other matters)'.

Proposal 38–5 The Office of the Privacy Commissioner should issue guidance to clarify that the term 'publicly committed' in s 7B(4) of the *Privacy Act* requires both:

(a) express commitment by a media organisation to observe privacy standards that have been published in writing by the media organisation or a person or body representing a class of media organisations; and

(b) conduct by the media organisation evidencing commitment to observe those standards.

147 See Proposal 60–8.

Adequacy of the self-regulatory and co-regulatory models

38.93 In 1997, the Senate Select Committee on Information Technologies was established to evaluate the appropriateness, effectiveness and privacy implications of the self-regulatory framework of the information and communications industries—including the print media, television, radio and telecommunications sectors.[148] The Committee found that there were numerous instances that question the success of self-regulation and co-regulation by the information and communications industries. It considered that the models for self-regulation should remain unchanged, but recommended that an independent statutory body—the Media Complaints Commission—be established as a single reference point to deal with all complaints against Australia's information and communications industries.[149]

38.94 Two other inquiries into the broadcasting media, the Productivity Commission inquiry into broadcasting services in Australia and the inquiry by the Australian Broadcasting Authority into commercial radio, also found flaws with the current self-regulatory models. In 1999, the Australian Broadcasting Authority conducted an investigation under the *Broadcasting Services Act* into allegations that financial arrangements were made between certain radio presenters and third parties. The Australian Broadcasting Authority concluded that agreements existed between certain radio presenters and third parties, and that they had influenced the content of the radio programs.[150] It found that there appeared to be a systemic failure to ensure the effective operation of self-regulation, particularly in relation to current affairs programs—including a lack of staff awareness of the codes of practice and of their implications.[151] The Australian Broadcasting Authority came to a preliminary view that there should be a standard designed to entrench the appropriate functions of the codes across the commercial radio industry.[152] It also proposed that the *Broadcasting Services Act* be amended, including by making compliance with the codes of practice a statutory licence condition, and additional administrative remedies to provide the Australian Broadcasting Authority with more flexible enforcement options.[153] The proposed legislative changes have since been introduced into the *Broadcasting Services Act*.[154]

38.95 In 1999, the Productivity Commission was asked to conduct an inquiry into broadcasting services and 'advise on practical courses of action to improve competition, efficiency and the interest of consumers in broadcasting services'.[155] In its report, the Productivity Commission recommended that the *Broadcasting Services Act* be amended to impose certain additional standard conditions on broadcasters' licences,

including a condition that the broadcasters must take reasonable steps to provide methods for handling complaints.[156]

> The Commission considers, for a co-regulatory system to work effectively, that the regulator should possess credible powers to penalise transgressors. The [Australian Broadcasting Authority] does not have such a credible threat for initial breaches of the codes. [157]

38.96 The Productivity Commission recommended that the co-regulatory scheme be amended to include additional sanctions, including the broadcasting of an on-air announcement of a breach finding and subsequent action during the relevant program or time slot. It also recommended that the Australian Broadcasting Authority be given the power to issue directions for action to broadcasters found in breach of a relevant licence condition.[158] Only the last recommendation has been implemented.[159]

38.97 The 2000 House of Representatives Committee inquiry acknowledged that the freedom of the press and the free flow of information to the public via the media are important elements of a democratic society. The inquiry, however, expressed concern at the enormous potential for breaches of privacy if media organisations or journalists behaved irresponsibly.[160] It recommended that journalists and media organisations be required to subscribe to a code developed by a media organisation, a representative body or the Privacy Commissioner before they can take advantage of the exemption.[161] The AGD opposed this recommendation.[162]

38.98 One commentator argues that the current self-regulatory model should remain.[163] In his view, the only practical alternative is a government-appointed body, but contends that this would be undesirable because the right to publish freely without fear of government intervention is fundamental to a democratic society.[164]

Overseas jurisdictions

38.99 A number of overseas jurisdictions also adopt the self-regulatory model for the print media and the co-regulatory model for the broadcast media. For example, in the United Kingdom, the print media are self-regulated and overseen by the Press Complaints Commission. The Press Complaints Commission is an industry body that deals with complaints from members of the public about the editorial content of newspapers and magazines.[165] In relation to the broadcasting media, the Office of Communications was established under the *Office of Communications Act 2002* (UK) as the regulator for the UK communications industries.[166] It applies a single *Broadcasting Code* across the broadcasting industry.[167] The Office of Communications is charged with handling and adjudicating privacy complaints under s 326 of the *Communications Act 2003* (UK).

38.100 The New Zealand print media is also self-regulatory. It is overseen by the New Zealand Press Council, a private body established in 1972 by newspaper publishers and journalists to provide an independent forum for the resolution of public complaints.[168] The broadcast media are subject to higher regulatory standards, pursuant to a co-regulatory model under the *Broadcasting Act 1989* (NZ). The Act establishes the Broadcasting Standards Authority as a supervisory body whose functions include: receiving and determining complaints; encouraging the development and observance by broadcasters of codes of practice in relation to individual privacy; approving codes; and developing and issuing codes itself where it considers that it is appropriate to do so.[169]

Submissions and consultations

38.101 In IP 31, the ALRC asked how journalistic acts and practices should be regulated if the media exemption is retained.[170] A number of media organisations and their representative bodies submitted that the current regulatory model should remain.[171] It was submitted that the advantages of self-regulation are that: it is inexpensive and efficient;[172] and the newspaper and magazine publishing industry is committed to it and agrees to abide by the APC's rulings to publish adjudications where appropriate.[173]

38.102 Some stakeholders submitted that a body appointed by the government to oversee the media is undesirable,[174] as it would interfere with the right to publish freely without fear of government intervention, which is fundamental to a democratic society.[175] The APC further submitted that the government appointing a body to oversee the print media

> would contradict the basic tenet of press freedom in a liberal democracy: its independence from government so that it can adequately report and comment on government matters, a principle that the High Court identified as a significant feature of our democracy.[176]

38.103 It was also suggested in some submissions that the current regulatory framework already provides adequate protection for individual privacy,[177] as shown by the low number of privacy related complaints against the media.[178]

38.104 In contrast, the Legal Aid Commission of New South Wales submitted that 'alternative remedies under media self regulation are widely seen as lacking real independence or the ability to conduct investigations leading to definite findings'.[179] The New South Wales Council for Civil Liberties submitted that:

> There should also be a mechanism whereby individual complaints can be lodged and dealt with by an independent body and the conduct complained of open to some scrutiny and redress where appropriate.[180]

ALRC's view

38.105 In the ALRC's view, freedom of expression is a fundamental tenet of a liberal democracy. Appointing an independent government body to oversee the media is a measure of last resort. Such an approach should be taken only where there is substantial evidence that self-regulation and co-regulation in the media industry have failed. Based on the relatively low rate of privacy-related complaints, investigations and findings of breach, as well as the small number of submissions calling for a change in regulatory model, the ALRC does not consider that the appointment of a government body, such as a Media Complaints Commission, is warranted.

Enforcement mechanisms

38.106 Concerns have been raised about the lack of adequate enforcement mechanisms for media privacy standards. For example, one commentator criticised the fact that the only mechanism for ensuring compliance with the APC's *Privacy Standards* is the complaint process of the APC**,** which only has jurisdiction over members who have voluntarily accepted it.[181] In addition, it has been argued that the 'penalty' imposed by the APC is not a deterrent.[182]

Submissions and consultations

38.107 A number of media organisations and media representative bodies submitted that the mechanisms to enforce media privacy standards are working well.[183]

38.108 In relation to the print media, the APC acknowledged that 'as the Council has no powers to fine or prosecute publications or force them to publish corrections or apologies, it has, on occasion, been branded a "toothless tiger"'. It suggested, however, that:

> This absence of punitive powers is, in fact, the Council's most beneficial strength. As a self-regulating body, newspapers and magazines have agreed to cooperate with the Council in resolving complaints quickly and at no expense to the complainant. They agree to abide by the Council's rulings and to publish adjudications where appropriate. [184]

38.109 The APC also submitted that its experience with administrating the *Privacy Standards* has been positive, and that fewer than 5% of complaints to the APC were about invasion of privacy. It stated that none of the individuals that comprise the APC Secretariat has a background in journalism and the staff members primarily responsible for the processing of complaints are trained mediators. Further, 'when complaints are referred to the Council for adjudication, the Council includes representatives of the publishers, independent journalists and members of the public'. According to the APC, there have been 22–25 complaints to the APC on privacy matters annually since 2001, and that:

> The overwhelming majority of complaints are settled by conciliation, early in the process, and those settled by adjudication do not demonstrate any egregious abuse of citizens' privacy rights.[185]

38.110 In relation to the broadcasting industry, it was suggested in some submissions that the enforcement mechanism is adequate. ACMA submitted that:

---

181 N Waters, 'Can the Media and Privacy Ever Get On?' (2002) 9 *Privacy Law & Policy Reporter* 149.
182 Ibid.
183 Australian Press Council, *Submission PR 83,* 12 January 2007; Australian Press Council, *Submission PR 48,* 8 August 2006.
184 Australian Press Council, *Submission PR 83,* 12 January 2007.
185 Australian Press Council, *Submission PR 48,* 8 August 2006.

> This new power [under the *Communications Legislation Amendment (Enforcement Powers) Act 2006* (Cth)] will increase the range of appropriate sanctions and regulatory responses available to ACMA in dealing with breaches of broadcasting codes, including privacy-related breaches.[186]

38.111 Free TV Australia submitted that the provisions of the various industry codes of practice 'are overseen and administered by a federal regulator that has specific knowledge and understanding of the media industry'.[187]

38.112 In contrast, it was submitted that at least some of the current media privacy standards lack strong enforcement mechanisms.[188] One submission stated that 'the APC lacks enforcement powers other than publication of findings of non-compliance'.[189] The New South Wales Council for Civil Liberties Inc submitted that 'there should be some effective sanctions to operate as a disincentive to abuse of the media's freedom to report', which may be of a monetary or non-monetary kind.[190]

ALRC's view

38.113 Some of the media privacy standards do not have strong enforcement mechanisms. While ACMA now has legislative power to impose a range of sanctions, the APC can only publish its findings of non-compliance, and the Media Entertainment and Arts Alliance has a limited range of remedies and no power to act against or sanction a non-member. The ALRC considers that the proposed criteria for assessing the adequacy of media privacy standards discussed above should help to address the issue of adequate enforcement powers and sanctions. The adequacy of enforcement powers and sanctions would be a consideration when determining whether media privacy standards are adequate. Where the media privacy standards are inadequate, the media exemption would not apply.

Introduction

39.1 The preceding chapters examined a number of the major private sector exemptions from the *Privacy Act 1988* (Cth) (*Privacy Act*). This chapter considers the remaining private sector exemptions relating to personal, family or household affairs; related bodies corporate and change in partnership; and the circumstances under which overseas acts and practices of an organisation are excluded from the coverage of the privacy principles.

Personal or non-business use

39.2 Individuals are included in the definition of an 'organisation' in the *Privacy Act*.[1] Section 7B(1) of the Act provides that acts and practices of individuals are exempt if they are done *other than* in the course of business. Section 16E further provides that the National Privacy Principles (NPPs) do not apply where information is dealt with solely in the context of an individual's personal, family or household affairs.

39.3 The Revised Explanatory Memorandum to the Privacy Amendment (Private Sector) Bill 2000 (Cth) stated that the *Privacy Act* was not intended to affect the way individuals handle personal information in the course of their personal, family or household affairs.[2] It also stated that the purpose of s 16E was to confirm that the NPPs do not apply where information is dealt with in the context of an individual's personal,

1 *Privacy Act 1988* (Cth) s 6C(1)(a).
2 Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), notes on clauses [106].

family or household affairs, consistently with s 7B(1). It appears from the Revised Explanatory Memorandum that 'personal, family or household affairs' has the same meaning as 'other than in the course of business'.[3]

39.4 There is no express reference to 'personal, family or household affairs' or similar in the *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* issued by the Organisation for Economic Co-operation and Development (OECD Guidelines).[4] The Guidelines do, however, appear to recognise that the collection of personal information in the context of an individual's personal affairs should be excluded from its application. OECD Guideline 2 provides that the Guidelines are only intended to

> apply to personal data, whether in the public or private sectors, which, because of the manner in which they are processed, or because of their nature or the context in which they are used, pose a danger to privacy and individual liberties.[5]

39.5 The Memorandum to the OECD Guidelines goes on to state that 'the risks as expressed in [OECD Guideline 2] are intended to exclude data collections of an obviously innocent nature (for example, personal notebooks)'.[6]

39.6 Both the *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (EU Directive) and the Asia-Pacific Economic Cooperation (APEC) Privacy Framework provide that they do not apply to the handling of personal information in connection with an individual's personal or household affairs. Article 3(2) of the EU Directive provides that 'this Directive shall not apply to the processing of personal data … by a natural person in the course of a purely personal or household activity'.[7] Similarly, the APEC Privacy Framework defines 'personal information controller' as excluding 'an individual who collects, holds, processes or uses personal information in connection with the individual's personal, family or household affairs'.[8]

39.7 The European Court of Justice has interpreted the exemption under art 3(2) of the EU Directive as 'relating only to activities which are carried out in the course of

---

3 Ibid, notes on clauses [164].

4 Privacy legislation in some overseas jurisdictions uses expressions that are similar to 'personal, family or household affairs', eg, 'personal or domestic purposes' (*Personal Information Protection and Electronic Documents Act 2000* SC 2000, c 5 (Canada) s 4(2)(c)); 'personal or domestic activities' (*Federal Data Protection Act 1990* (Germany) ss 1(2), 27).

8 Asia-Pacific Economic Cooperation, *APEC Privacy Framework* (2005), [10].

private or family life of individuals', and not 'publication on the internet so that those data are made accessible to an indefinite number of people'.[9]

39.8 An exemption for personal, family or household affairs is commonly provided for in overseas jurisdictions, for example, the United Kingdom, Canada, New Zealand and Hong Kong.[10]

39.9 Privacy concerns about the exemption arise primarily in the context of developments in technology. For example, in its submissions to previous inquiries, the Australian Privacy Foundation suggested that this exemption needs to be reconsidered due to increasing incidents of abuse, including 'inappropriate use of mobile phone cameras and misguided and extremely prejudicial "vigilante" websites'.[11] During this Inquiry, much of the concern about individuals acting in their personal capacity relates to information posted by individuals on websites, such as the posting of photographs and offensive comments on websites and 'blogs'.[12] Options for reform in this area are considered in Chapter 8.

Related bodies corporate

39.10 An act or practice is not an interference with privacy if it consists of the collection or disclosure of personal information by a body corporate from or to a related body corporate.[13] The exemption does not extend to 'sensitive information',[14] which is defined to include health and personal information such as an individual's racial or ethnic origin, political opinions, religious beliefs or affiliations, sexual preferences and criminal record.[15]

39.11 The stated reason for this exemption is to 'recognise [the] commercial reality that, for many bodies corporate to continue to operate effectively, they need to be able to communicate with related bodies corporate'.[16]

13 *Privacy Act 1988* (Cth) s 13B(1).

14 Ibid s 13B(1).

15 Ibid s 6(1).

16 Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), notes on clauses [138].

39.12 Section 6(8) of the *Privacy Act* provides that 'the question whether bodies corporate are related to each other is determined in the manner in which that question is determined under the *Corporations Act 2001* [(Cth)]'. A 'related body corporate' is defined in s 50 of the *Corporations Act* to mean that where a body corporate is a holding company of another body corporate, a subsidiary of another body corporate, or a subsidiary of a holding company of another body corporate, the first mentioned body and the other body are related to each other. Before an organisation can rely on this exemption to disclose non-sensitive personal information to other related companies, it is required to take reasonable steps to ensure that the individual knows that the organisation has collected the information, the use that will be made of the information and the types of organisations to which the information is usually disclosed.[17]

39.13 In addition, although related companies may share personal information, the handling of that information is still subject to the NPPs in other respects.[18] For example, each company within the group of related companies must use the information consistently with the primary purpose for which it was originally collected, and may use the personal information for a secondary purpose only where that purpose is allowed by NPP 2.1.[19]

39.14 The way the exemption operates may be illustrated by the following example. A large furniture store collects an individual's credit card details to receive payment for a sofa, and the individual's name and address in order to deliver the sofa. The related body corporate exemption allows the furniture store to pass on the individual's name, address and credit card details to a related delivery company. The delivery company is allowed to collect the information from the furniture company without having to inform the individual that it has collected that information. The delivery company can use this personal information only for the purpose for which the furniture store collected it (ie, delivery of the sofa). It cannot use the information for an unrelated purpose.[20]

39.15 The exemption does not apply to the collection of personal information from an entity that is exempt from the requirement to comply with the *Privacy Act*.[21] For example, a company that is related to a media organisation (which is exempt from the operation of the *Privacy Act* where it is acting in the course of journalism under certain conditions)[22] cannot rely on s 13B to collect personal information from the media organisation without complying with the requirement, in NPP 1.5, to take reasonable

20 The information can be used for a secondary purpose that is permitted by NPP 2.1, such as direct marketing.

21 *Privacy Act 1988* (Cth) s 13B(1A)(a), (b).

22 Ibid s 7B.

steps to ensure that individuals are aware of certain matters before collecting that information.[23]

39.16 Section 13B(2) of the *Privacy Act* provides that the exemption does not apply if the company is a contractor under a Commonwealth contract and: the collection or disclosure of personal information from or to the related company is contrary to a contractual provision; or the collection of personal information is for the purpose of meeting an obligation under the contract and the disclosure is for direct marketing purposes.[24] The purpose of s 13B(2) is to ensure that the exemption 'does not override the general rule for organisations that are contracted service providers'.[25]

39.17 Furthermore, the exemption does not apply if the acts and practices of the company: breach the tax file number (TFN) guidelines, or involve an unauthorised requirement or request for disclosure of an individual's TFN; contravene Part 2 of the *Data-matching Program (Assistance and Tax) Act 1990* (Cth) or the data-matching guidelines made under that Act; constitute a breach of the guidelines under s 135AA of the *National Health Act 1953* (Cth); or constitute a credit reporting infringement by a credit reporting agency or a credit provider.[26]

39.18 An inquiry into the Privacy Amendment (Private Sector) Bill by the House of Representatives Standing Committee on Legal and Constitutional Affairs inquiry accepted that many businesses are structured in a way that uses more than one legal entity. The Committee acknowledged that the exact structure of many businesses may not be apparent to consumers. In the Committee's view, this justifies requiring companies to provide greater information about the likely use of the data collected, rather than preventing them from sharing information with other members of their corporate groups.[27] The inquiry therefore recommended that the Privacy Commissioner establish guidelines for use by companies to determine the extent of information they should provide to consumers about the nature of their corporate groups and the information to be shared within the members of that group.[28]

39.19 This exemption has been criticised as a potential loophole through which corporate groups could evade the coverage of the *Privacy Act*.[29] In its submissions to previous inquiries, Electronic Frontiers Australia submitted that the exemption enables large businesses intentionally to structure their affairs to take advantage of the

exemption. In its view, individuals should not have to ask or attempt to investigate corporate structures to find out how far and wide their personal information could be spread. Electronic Frontiers Australia submitted that the exemption should be removed and related bodies corporate treated as third parties.[30]

39.20 Another issue arises in relation to the interaction between the exemption for related companies and NPP 9. NPP 9 outlines the circumstances in which an organisation can transfer personal information outside Australia. This issue is discussed in Chapter 28.

Submissions and consultations

39.21 In the Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether there are any issues concerning related bodies corporate in Part III Division 1 of the *Privacy Act*, and if so, how they should be dealt with.[31]

39.22 Some stakeholders submitted that the exemption should be removed, on the basis that individuals often are not aware that an organisation is related to another organisation. This results in use of information that is contrary to the reasonable expectations of individuals.[32] It was suggested that businesses should be able to meet one of the tests in the exceptions to the use and disclosure principle in NPP 2 without the need for a special exemption.[33]

39.23 Stakeholders also expressed concern that the exemption may allow personal information about an individual to be used for direct marketing by related bodies corporate without the individual's knowledge or consent. While the Queensland Council for Civil Liberties did not object to the exemption, it suggested that:

> the principle should be amended to prevent direct marketing that is contrary to the individuals' reasonable expectation at the time of the original collection of the personal information.[34]

39.24 The Queensland Government Commissioner for Children and Young People and Child Guardian submitted that when children and young people subscribe to mobile phone networks or register for online subscriptions, the sharing of non-sensitive information between related companies may make them susceptible to direct

33 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

34 Queensland Council for Civil Liberties, *Submission PR 150,* 29 January 2007.

marketing. It suggested that 'permission should be sought from children and young people before their personal information is shared between associated organisations'.[35]

39.25 In its submission, the Office of the Privacy Commissioner (OPC) noted that:

> The Office has received complaints from time to time from individuals that their information has been used for direct marketing by a related body corporate without their knowledge or consent. The Office submits that improved notice of disclosure by the relevant body corporate under NPP 1.3 should ameliorate this concern.[36]

39.26 In contrast, some stakeholders considered that the sharing of customers' personal information between related bodies corporate did not raise any issues.[37] In addition, Telstra submitted that the exemption is 'necessary for efficient and effective business practices'. It noted that large organisations provide services to, and contract with, customers through different legal entities for various business purposes and to comply with legislative requirements. Telstra stated:

> Restricting the ability of such organisations to exchange personal information will hinder business operations and cause detriment to consumers by making it more difficult for businesses to contract with their customers in a consistent manner.[38]

39.27 The Australian Bankers' Association Inc (ABA) submitted that while a bank sharing customers' personal information with a related entity is constrained by the bank's duty of confidentiality, the exemption is required when a related entity that is not a bank provides its customers' information to the bank. It noted that a company that collects personal information from a related company is bound by the NPPs as if it were the original collector of the information. In addition, the ABA stated that it was

> unaware of any customer concerns over the sharing of customers' personal information with related entities of banks and this is borne out by the relatively low level of privacy related disputes that the Banking and Financial Services Ombudsman scheme (BFSO) receives in a year …[39]

39.28 The Law Council of Australia suggested that 'the need for commercially efficient inter-company transfers applies equally to transfers of information overseas'. It submitted that the exemption should be extended to transfers of information to a related body corporate overseas—provided that the related body corporate has an organisational link with Australia and, therefore, is subject to the jurisdiction of the *Privacy Act*.[40]

ALRC's view

39.29 The ALRC agrees with the conclusion of the 2000 House of Representative Committee inquiry that, in the interest of business efficacy, companies that have a shared ownership or controlling interest should be able to share non-sensitive personal information.

39.30 The exemption is a limited one. First, it is confined to non-sensitive personal information. Secondly, the exemption does not apply to the collection of personal information from an entity that is exempt from compliance with the *Privacy Act*. In addition, before an organisation can disclose such information to other related companies, it must take reasonable steps to ensure that individuals know the types of organisations to which the information is usually disclosed. Finally, although related companies may share non-sensitive personal information, they must otherwise comply with all the other privacy principles in the handling of that information.

39.31 A concern has been raised about the use of personal information by a related company for direct marketing purposes. As discussed above, the OPC has suggested that an improved notice of disclosure by the relevant body corporate could ameliorate this concern. Currently, NPP 1.3(d) requires an organisation to take reasonable steps to ensure that an individual is aware of the organisations or types of organisations to which the information is usually disclosed. The ALRC does not consider that requiring a more detailed notice of disclosure—for example, one that lists all related companies by name—would adequately address concerns about direct marketing. In practice, individuals may not be interested in reading a long list of related companies or keeping a copy of that list for later reference.

39.32 A better alternative is to provide individuals with the means to opt out of direct marketing. In Chapter 23, the ALRC proposes that an organisation involved in direct marketing be required to: take reasonable steps, upon request, to advise the individual from where it acquired the individual's personal information; and present individuals with a simple means to opt out of receiving direct marketing communications. These proposals should help ensure that individuals are able to opt out of direct marketing from a related company to whom their personal information is disclosed.

39.33 In relation to concerns about direct marketing to children and young people, in Chapter 23 the ALRC proposes that the OPC issue guidance to organisations involved in direct marketing that clarifies their obligations under the *Privacy Act* in dealing with particularly vulnerable people, such as individuals aged 14 and under.[41] This should assist organisations in understanding when it is appropriate to communicate with such individuals by way of direct marketing.

---

41 See Proposal 23–6(b).

Change in partnership

39.34 In certain circumstances, an act or practice is not an interference with the privacy of an individual if it consists of passing personal information from an old to a new partnership.[42] The new partnership must: be formed at the same time or immediately after the old one; have at least one partner transferred from the old partnership; and carry on the same or a similar business as the old partnership.[43] The exemption applies to the disclosure and collection of personal information between the old and new partnerships, but does not apply to the use and holding of the information.[44]

39.35 The exemption does not apply if the acts and practices: breach the TFN guidelines, or involve an unauthorised requirement or request for disclosure of an individual's TFN; breach Part 2 of the *Data-matching Program (Assistance and Tax) Act* or the data-matching guidelines made under that Act; constitute a breach of the guidelines under s 135AA of the *National Health Act*; or constitute a credit reporting infringement by a credit reporting agency or a credit provider.[45]

39.36 The Revised Explanatory Memorandum to the Privacy Amendment (Private Sector) Bill gave the following example to illustrate the reason for the exemption:

> For example, a law firm (a partnership) collects personal information from, and holds personal information about, its clients. If a partner leaves the partnership, and a new partner joins the firm, the first partnership has dissolved and a second partnership forms. The purpose of clause 13C is to prevent disclosure to the second partnership and collection by the second partnership from being an interference with privacy. The sub-clause is not intended to allow a partnership to reform and use the information collected for a totally different business purpose.[46]

Submissions and consultations

39.37 In IP 31, the ALRC asked whether there are any issues concerning changes in partnership in Part III Division 1 of the *Privacy Act*, and if so, how they should be dealt with.[47] The OPC stated that where there is a change in partnership that falls within the exemption,

> as a matter of best practice … [the] new partnership should write to their customers and advise them of the change. In this way the individual concerned has a measure of choice over whether they wish to continue to transact with the new partnership and in

this way have some control over their personal information that the partnership has collected.[48]

ALRC's view

39.38 Partnership law provides that, subject to the terms of the specific partnership agreement, an old partnership is dissolved and a new partnership is created whenever a partner joins or leaves a partnership.[49] In the ALRC's view, the exemption is a sensible approach to avoid an unnecessary burden on partnerships to obtain consent from individuals for the transfer of their personal information from the old partnership to the new one each time a partner joins or leave a partnership. It should be noted that, except for the transfer of personal information from the old partnership to the new one, the partnership must continue to comply with the privacy principles in all other respects.

39.39 The ALRC agrees with the OPC that it is desirable for the new partnership to write to their customers to advise them of the change. This should be a matter of good practice rather than a formal statutory requirement.

Valuers 1129
Archivists and archival organisations 1132
Alternative dispute resolution bodies 1132
Declared emergencies 1137

Introduction

40.1 This chapter discusses possible new exemptions from the requirements of the *Privacy Act 1988* (Cth). New exemptions or partial exemptions (or exceptions)[1] have been suggested in relation to the information-handling practices of private investigators, valuers, professional archivists and archival organisations, and alternative dispute resolution (ADR) bodies.

40.2 The chapter also discusses the partial exemption contained in Part VIA of the Act relating to declared emergencies, which came into operation in December 2006. Part VIA displaces some of the requirements in the Information Privacy Principles (IPPs) and National Privacy Principles (NPPs) by providing a separate regime for the collection, use and disclosure of personal information where there is a connection to an emergency that has been the subject of a declaration by the Prime Minister or a minister.

New exemptions and partial exemptions

40.3 In the ALRC's Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether there are any other entities or types of activities that should be exempt from

1 For the purposes of this Discussion Paper, an exemption applies where a specified entity or a class of entity is not required to comply with the privacy principles. A partial exemption applies where a specified entity or a class of entity is required to comply with either: (1) only some, but not all, of the privacy principles; or (2) some or all of the privacy principles, but only in relation to certain of its activities. An exception applies where a requirement in the privacy principles does not apply to any entity in a specified situation or in respect of certain conduct. This distinction is discussed in more detail in Ch 30.

the operation of the *Privacy Act*; and if so, what those entities or types of activities are, and what the scope of the exemption should be.[2]

40.4 Some stakeholders submitted that there is no case for introducing new exemptions from the operation of the *Privacy Act*.[3] For example, the Office of the Privacy Commissioner (OPC) stated:

> The Office is not aware of a compelling case for any other entities or types of activities, including that of valuers, should be exempt from the operation of the Privacy Act. The Office takes the view that to achieve uniformity and consistency of application of privacy legislation, exemptions under the Privacy Act should be minimised. Where they exist, there should be a clear public interest enunciated for any exemption to be maintained or created.[4]

40.5 The Australian Privacy Foundation stated:

> We do not see the need for any total exemptions, and are not aware of any other entities or types of activities which need selective exceptions. Carefully designed selective exceptions should be able to accommodate any new or currently unrecognised compliance difficulties.[5]

40.6 Other stakeholders suggested new exemptions or partial exemptions in relation to the information-handling practices of private investigators, valuers, professional archivists and archival originations, and ADR bodies. These possible exemptions are discussed below.

Private investigators

40.7 Private investigators provide investigative and legal support services to government agencies, corporate entities and the public in areas that are said to include: fraud prevention, detection, assessment and resolution; corporate fraud and risk management services; insurance fraud and claims investigation, claims monitoring and assessment; aviation accident and loss investigation; marine loss investigations; occupational health and safety incident investigation; witness location and skip tracing; criminal investigations; child protection investigations; investigative journalism; family law investigations; intellectual property protection services; background checking; consumer investigations; and missing person investigations.[6]

40.8 Most states and territories have statutory schemes for licensing private investigators. Licences are granted in New South Wales, Victoria, Queensland,

Western Australia, South Australia, Tasmania and the Northern Territory.[7] Typically, such legislation provides for:

- Threshold requirements for granting a licence—such as minimum age, completion of an approved training course, and absence of convictions in relation to disqualifying offences (as defined in the legislation) which automatically disentitle a person to hold a licence.

- Discretionary considerations for granting a licence—such as appropriateness or fitness to hold a licence, character, previous conduct (including criminal association), previous convictions or findings of guilt, and public interest considerations.

- Licensing offences—including offences in relation to practising without a licence; holding oneself out as having a licence; delegating work to an unlicensed person; improperly obtaining a licence; disposing of licences through sale, loan or gift; and exceeding licence conditions.

40.9 There are many differences, however, between state and territory schemes for licensing private investigators. Major differences include those in relation to the nature of offences that automatically disentitle an applicant from holding a licence; qualifications and training requirements; and penalties for licensing offences. In this context, the Australian Institute of Private Detectives (AIPD) has prepared a draft bill to indicate how uniform national regulation of private investigation might be enacted.[8] The draft bill is based on the *Commercial Agents and Private Inquiry Agents Act 2004* (NSW).

40.10 Private investigators may also be subject to various industry self-regulatory schemes. For example, the AIPD requires its members to be bound by an AIPD Code of Practice, Code of Ethics, standards and guidelines.[9] The only sanction for a breach of these requirements, however, is the cancellation a person's membership. The AIPD does not have any power to remove a person's licence to practise as a private investigator.

Private investigation and the Privacy Act

40.11 The *Privacy Act* makes no specific provision for the activities of private investigators. Private investigators are generally required to comply with the NPPs, even where they are small businesses—the small business exemption[10] does not generally apply to organisations that trade in personal information.[11]

40.12 Various aspects of the operation of the *Privacy Act* that might be seen as unduly hampering the activities of private investigations were highlighted in the OPC's review of the private sector provisions of the *Privacy Act* (OPC Review).[12]

40.13 For example, one concern for private investigators is the obligation, under NPP 1.5, to take reasonable steps to make individuals aware that a private investigator is collecting information about them. In this context, the OPC noted that the 'reasonable steps' required by the privacy principle could include taking no steps, where, for example, a suspicion of fraud or unlawful activity is being investigated.[13]

40.14 On the other hand, where investigators are investigating activity that is 'improper rather than unlawful'—for example, 'misuse of employer resources, abuse of power or position, or marital infidelity' complying with the collection principle 'may impinge on the activities of private investigators'.[14] The OPC observed that:

> it is considerably less clear in these circumstances that the public interest in investigating possibly improper activity outweighs the individual and the public interest in individuals being aware that they are under investigation.[15]

40.15 In the OPC Review, the AIPD and others submitted that NPP 2 severely hampers the activities of private investigators because it prohibits organisations from disclosing information to private investigators, including information necessary for debt collection,[16] service of legal process, and fraud investigation.[17] A particular concern was that, while the *Privacy Act* facilitates access to personal information by law enforcement bodies, no such access is available to private investigators, including those who may be engaged by defendants or others who are subject to law enforcement action.

---

10 See Ch 35.

11 That is, collect personal information about another individual from, or disclose such information to, anyone else for benefit, service or advantage (unless it always has the consent of the individuals concerned, or only does so when authorised or required by law): *Privacy Act 1988* (Cth) s 6D(7), (8).

14 Ibid, 226.

15 Ibid, 226.

16 The disclosure of credit reporting information for debt collection purposes is discussed in Ch 53.

17 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 226.

40.16 On the other hand, the OPC has observed that there are important distinctions between public law enforcement agencies and private investigators. Notably, while law enforcement agencies carry out investigations on behalf of the state, private investigators carry out investigations on behalf of third parties, who are often private individuals.

> Giving private investigators access to personal information in this way could mean that they are carrying out investigations without the important scrutiny and accountability mechanisms that law enforcement agencies are subject to.[18]

Industry view

40.17 The AIPD submitted to the OPC Review that the definition of 'enforcement body' in s 6 of the *Privacy Act* should be amended to include 'private investigators in relation to matters before courts or tribunals'.[19] The effect of this would be to allow disclosure of personal information to a private investigator under NPP 2.1(h)(v), where disclosure is reasonably necessary for the preparation for proceedings before a court or tribunal.

40.18 The AIPD also referred to the model provided by an exemption from non-disclosure provisions contained in the *Data Protection Act 1998* (UK).[20] Section 35 of the *Data Protection Act* provides that:

> (2) Personal data are exempt from the non-disclosure provisions where the disclosure is necessary—
>
> (a) for the purpose of, or in connection with, any legal proceedings (including prospective legal proceedings), or
>
> (b) for the purpose of obtaining legal advice,
>
> or is otherwise necessary for the purposes of establishing, exercising or defending legal rights.

40.19 The Institute of Mercantile Agents, in a submission to the ALRC's Inquiry, did not favour an exemption for private investigation but stated that:

> There should be prescribed access allowing the genuine use of locator data held by licensed operatives (collection, credit and investigations) under State and Federal legislation …[21]

ALRC's view

40.20 Private investigators have a legitimate role in providing investigative and legal support services in a range of contexts. There is, for example, a social interest in

individuals being able to take effective action to recover debts owed to them, find a person who is at fault in a car accident, and prepare a defence case for court proceedings.[22] In some instances, private investigators may perform tasks that could be done by the police or other law enforcement bodies, if resources and priorities permitted.

40.21 The activities of private investigators are often dependent on an ability to obtain access to personal information. The ALRC recognises that the *Privacy Act*, and state and territory privacy legislation, present obstacles to private investigators in obtaining personal information. A sufficient case has not been made, however, for proposing that an exemption (or other special provisions) directed towards private investigation be incorporated in the *Privacy Act*.

40.22 The ALRC is inclined to agree with the conclusion of the OPC Review that it would be difficult to recommend that private investigators be accorded similar access rights to personal information as law enforcement agencies.

> Private detectives can be distinguished from other enforcement bodies on the basis that they are not accountable to the government or the community, or any accountability body such as an ombudsman who can investigate complaints and award compensation, in the same way that law enforcement agencies are.[23]

40.23 One view is that, if the investigations industry were to be regulated more stringently, this might justify some special recognition of the position of private investigators under privacy law. Research reported in 2001 concluded that the industry would support 'tougher licensing, especially in pre-service training requirements' in return for an enhanced capacity to access information relevant to investigations.[24]

> Private investigators want a more active regulatory regime with more proactive auditing of firms, and more comprehensive consultation and communication with licence holders.[25]

40.24 Broader issues concerning the regulation of the private investigation industry including, for example, new national licensing and accountability mechanisms, are beyond the Terms of Reference of this Inquiry. Issues concerning regulation of the private investigation industry may, however, be an appropriate subject for consideration by the Standing Committee of Attorneys-General (SCAG). The OPC Review recommended that SCAG consider issues raised by the AIPD, which included

the regulation of private investigators and the impact of federal, state and territory privacy and related laws on the industry.[26]

> **Question 40–1** Should the Australian Government request that the Standing Committee of Attorneys-General consider the regulation of private investigators and the impact of federal, state and territory privacy and related laws on the industry?

Valuers

40.25 Valuers assess the value of properties, including residential, commercial, industrial and retail properties. They may be engaged by private parties, corporations, financial institutions, or government departments and authorities. Private sector valuers are required to comply with the NPPs. Some state and territory legislation also regulates the handling of personal information by valuers.[27]

40.26 In its submissions to this Inquiry, the Real Estate Institute of Australia (REIA) proposed an exemption for valuers under the *Privacy Act*. In its view, there is an overwhelming public need for accurate, up-to-date and reliable property information for the purposes of making appraisals and preparing valuation reports. It submitted that the ability of valuers to collect up-to-date and reliable personal and property information has been diminished by the *Privacy Act*.[28] The REIA stated that this

> lessens the quality and accuracy of their professional advice to financiers, businesses and consumers, which in turn places them at risk. These risks can be measured in terms of increased financial burdens, uncertainty in property values and investment potential, and flawed land tax and stamp duty assessments. Valuers will also be the subject of increasing litigation.[29]

40.27 The REIA noted that, under NPP 2.1, real estate agents may only disclose personal information relating to property transactions where consent has been granted

29 Real Estate Institute of Australia, *Submission PR 84,* 12 January 2007.

or where the individual to whom the information relates would reasonably expect that his or her information would be disclosed for this purpose.[30]

> Confusion about whether or not a particular agency is exempt under the Privacy Act or whether parties to a property transaction would reasonably expect an agent to disclose information to outside parties is leading to a situation wherein agents are refusing to provide such information to property valuers.[31]

40.28 In relation to the need to disclose the name of the vendor or purchaser, in addition to other transaction details, the REIA stated:

> The name of the person is not always required when determining market values and comparable prices, however, for the purposes of valuation sometimes it is necessary. For example, the valuer needs to determine whether a property sale is at arms length (not an interrelated party or a forced sale) and hence at true market value. In a valuation report a person's name is removed from a comparable property, however, the address is still required in order to be able to identify the property, its location, size and type and any other relevant description which may influence the price. All this property information is necessary to determine the reason for the value given. The removal of a name from a comparable property, which must list the address, can still lead to the identity of a person. This may, in some circumstances, constitute a breach of the Privacy Act if this information is collected, used or disclosed without the person's permission.[32]

40.29 The REIA suggested that there already is sufficient protection to consumers under state legislation, such as the *Valuers Registration Act 1975* (NSW), to ensure that information in the hands of valuers is protected.[33] The REIA submitted:

> a. That the ALRC acknowledge that valuers are already adequately governed by State legislation which imposes professional obligations upon valuers …
>
> b. That the ALRC acknowledge that valuers protect personal and property information to the extent that names are often removed from comparable sales and leasing information contained in valuation reports unless such release is permitted by the Privacy Act.
>
> c. To enable valuers to obtain personal and property information for compiling valuation reports and for property databases, that the ALRC recommend that the Privacy Commissioner create an exemption enabling all agents to pass the required information to Valuers via a Public Interest Determination, as allowable under the Privacy Act … If there are concerns that data held by valuers may be misused, valuers can enter into a specific undertaking with the Privacy Commissioner, such as a privacy code, which will specifically regulate the collection, use and disclosure of personal information required for valuation reports and property databases.

---

30 The REIA advised that, while some real estate agencies are exempt from obligations under the NPPs due to the operation of the small business exemption, and may therefore pass information to valuers concerning recent property sales, inquiries by valuers 'have been regularly met with a refusal on the basis that it would be a breach of privacy and present the risk of complaint or prosecution': Ibid.

31 Ibid.

32 Ibid. See also Real Estate Institute of Australia, *Submission PR 7,* 10 April 2006.

33 Real Estate Institute of Australia, *Submission PR 84,* 12 January 2007; Real Estate Institute of Australia, *Submission PR 7,* 10 April 2006.

> d. That the ALRC recommend that the Privacy Commissioner confirm that the collection, use and disclosure of corporate sales and leasing information … is not restricted as a result of the Privacy Act and the NPPs. If this is not the case, the ALRC should recommend that the Privacy Commissioner make a Public Interest Determination to this effect.[34]

40.30 In contrast, Electronic Frontiers Australia Inc strongly opposed an exemption for valuers, and considered that individuals' names should not be disclosed to valuers without the prior explicit and informed consent of the individual concerned.[35] The OPC also opposed any such exemption.[36]

40.31 Personal information required by valuers may also be obtained from land titles offices. The REIA noted that valuers cannot rely on this information because it is 'three months to twelve months old for residential properties' and 'does not contain property descriptions necessary to determine type and size of property'.[37]

ALRC's view

40.32 In the ALRC's view, there is no compelling reason to propose an exemption or exception from *Privacy Act* obligations in relation to personal information disclosed to valuers by real estate agents, or more generally.

40.33 The Privacy Commissioner has stated that while individuals may reasonably expect that certain personal information collected by real estate agents in the course of selling a property—including the address of the property and the sale price—will be disclosed for valuation purposes, individual vendors or purchasers would not reasonably expect a real estate agent to disclose their names to valuers.[38]

40.34 The 'Use and Disclosure' principle of the proposed Uniform Privacy Principles (UPPs)—as with NPP 2.1—provides adequate latitude for the disclosure of personal information relevant to valuation. Disclosure is permitted for a related secondary purpose where the individual would reasonably expect such disclosure, or with the consent of the individual.

40.35 There is no reason to suggest that the disclosure of transaction information (address and sale price, etc) to valuers would not be within individuals' reasonable

expectations—given that the property market relies on the exchange of such information in order to function efficiently.[39]

40.36 Assuming that the disclosure of the name of the vendor and purchaser (if individuals) would not reasonably be expected by them, there are mechanisms that could be developed by the property industry to ensure that, where the identity of the vendor or purchaser is relevant to valuation, the relevant factors are known. For example, information about the nature of the vendor and purchaser could be developed as a set of categories used to indicate the nature of a particular sale (eg, mortgagee sale, deceased estate, owner/occupier, investor and so on).[40]

Archivists and archival organisations

40.37 In the private sector, archivists and archival organisations are responsible for the collection, maintenance and management of records that are of enduring value to individuals, organisations and businesses, and for making records available for access and research.

40.38 In a submission to the Australian Government Attorney-General's Department on the Privacy Amendment (Private Sector) Bill 2000 (Cth), the Australian Society of Archivists Inc and the Australian Council of Archives recommended an exemption for archival organisations from the operation of the NPPs to facilitate research into the administrative, corporate, cultural and intellectual activity of Australia[41]—in particular, social and genealogical research.[42]

40.39 In this Inquiry, one stakeholder submitted that 'complying with the NPPs is impossible if archives are to continue to fulfil their valuable role in society and … information privacy should not last in perpetuity'.[43]

40.40 The ALRC did not receive submissions from archival organisations expressing concern about the impact of the *Privacy Act* on their activities. The ALRC does not propose any reform in relation to exempting or excepting archivists or archival organisations from obligations under the Act.

Alternative dispute resolution bodies

40.41 An exemption from *Privacy Act* obligations has been suggested for alternative dispute resolution (ADR) bodies. In this context, ADR means dispute resolution

---

39 It is assumed that this information would be 'personal information' under the existing definition in s 6, or under the definition amended as proposed in Ch 3.

42 The special arrangements in place under the *Privacy Act 1988* (Cth) to allow for the use of personal information in health and medical research, and whether these should be extended to apply to research in areas such as criminology and sociology, is discussed in Ch 58.

43 Confidential, *Submission PR 134,* 19 January 2007.

processes, other than judicial determination, in which an impartial person helps those involved in a dispute to resolve their issues.[44]

40.42 ADR schemes have been established in a number of sectors over the last 15 years, including financial services, telecommunications, and energy and water. Industry-based ADR bodies include the Telecommunications Industry Ombudsman (TIO), the Banking and Financial Services Ombudsman (BFSO) and the Financial Industry Complaints Service. These schemes have been developed in response to a need to provide an affordable and flexible alternative to the courts for consumers and small businesses seeking redress against industry sector members.[45]

40.43 In the OPC Review, a range of concerns were expressed about compliance with the NPPs by ADR bodies.[46] In response, the OPC Review recommended that the Australian Government, in recognising the important role played by ADR schemes, should consider:

- amending NPP 2 to enable use and disclosure of personal information to ADR schemes in the course of handling disputes
- amending NPP 10 to enable collection of sensitive information where it is necessary for the investigation and resolution of claims under an ADR scheme
- defining the term 'Alternative Dispute Resolution Scheme' for these purposes in the Act.[47]

40.44 In IP 31, the ALRC noted claims that organisations have refused to disclose information needed by ADR schemes to investigate claims because of a concern that disclosure would breach the NPPs.[48] The ALRC solicited views about whether legislative amendment to the privacy principles is needed to facilitate information handling by ADR bodies.[49]

---

44 See, National Alternative Dispute Resolution Council, *What is ADR?* (2007) <www.nadrac.gov.au/agd/www/Disputeresolutionhome.nsf> at 3 August 2007. The ALRC also uses the term 'external dispute resolution' (EDR) to refer to the resolution of complaints or disputes by an entity (other than a court, tribunal or government regulator) that is external to the organisation subject to the complaint or dispute, including by EDR schemes approved by the Australian Securities and Investments Commission: see Chs 45, 55.

45 Joint submission by Industry Based Alternative Dispute Resolution Schemes, *Submission PR 93,* 15 January 2007.

47 Ibid, 234.

48 Ibid, 232.

49 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), [4.108].

40.45 In a joint submission, five industry-based ADR bodies (ADR bodies),[50] expressed concern about the impact of the NPPs on their operations. ADR schemes collect and use personal information for the purpose of resolving complaints between their members and consumers seeking redress against them ('disputants'). Obligations to comply with NPP 1 and NPP 2, however, are said to be problematic and create uncertainty.

> Unlike many other organisations that are subject to the NPPs, ADR schemes are not always able to determine in advance what information they will collect from disputants and/or members. To a large degree, disputants and members send what they consider to be relevant to the resolution of the dispute. Ultimately, the information provided may or may not be relevant to resolution of a dispute.
>
> In many cases, the member may provide information about the disputant or third parties, either because such information is contained on the relevant file, or because the member considers the information relevant to the issues in dispute, that has not been previously obtained from the disputant. Prior to the member providing the information, the disputant or third party is not in a position to advise the ADR scheme whether he or she expressly consents to the specific information being provided.[51]

40.46 Another set of concerns relates to uncertainty about whether NPP 2.1(f), which permits the disclosure of personal information in investigating or reporting 'unlawful activity' to 'relevant persons or authorities', covers disclosure to industry-based ADR schemes, such as the BFSO and TIO.

40.47 The OPC's *Information Sheet 7* states that 'self-regulatory authorities', such as the TIO and BFSO are 'relevant persons or authorities' to which an organisation may report unlawful activity.[52] Concerns remain, however, because the *Privacy Act* provides no express authority for this proposition and no assurance is provided for the use or disclosure of 'information that does not show unlawful activity but which is nevertheless necessary for the proper resolution of a dispute'.[53]

40.48 More generally, the ADR bodies noted that 'there is no express right of use or disclosure of personal information by an organisation for the purposes of asserting or defending a legal claim in a court, tribunal or other forum'. The ADR bodies submitted that, in addition to authorising use or disclosure 'required or authorised by or under law' (for example, as required by a court process):

---

50 The Banking and Financial Services Ombudsman Ltd, Energy and Water Ombudsman (Victoria), Financial Industry Complaints Service, Insurance Ombudsman Service Ltd, and the Telecommunications Industry Ombudsman.

51 Joint submission by Industry Based Alternative Dispute Resolution Schemes, *Submission PR 93,* 15 January 2007.

52 Office of the Federal Privacy Commissioner, *Unlawful Activity and Law Enforcement*, Information Sheet 7 (2001).

53 Joint submission by Industry Based Alternative Dispute Resolution Schemes, *Submission PR 93,* 15 January 2007.

> NPP 2 should also include an express right for an organisation to use and disclose personal information about an individual to initiate or defend a legal or equitable claim in any court, tribunal or ADR scheme.[54]

40.49 The ADR bodies also noted that dealing with information about third parties with some connection to a dispute can be problematic—particularly in terms of the obligation to take reasonable steps to make third parties aware of collection under NPP 1.5.

> In addition, the status of ADR schemes as organisations fully subject to the NPPs can make members and others asked to provide information reluctant to do so, for fear of breaching privacy laws. Members have, on occasions, refused to provide information necessary to investigate a claim, on the basis that privacy of third parties would be breached.[55]

40.50 Finally, the collection of sensitive information about third parties was said to create problems for ADR schemes. While NPP 10 permits the collection of sensitive information about an individual if the collection is necessary for the establishment, exercise or defence of a legal or equitable claim, it is not always possible to know at the time of collection whether or not it falls into this exception.

> Many disputes brought to ADR schemes are from or about people with mental or physical illnesses. Determinations and negotiated settlements often take into consideration health information or other sensitive information about a disputant or another person. For example, where a disputant's ability to operate a bank account is affected by illness (either suffered by that person or within that person's family), such considerations are likely to be relevant to a determination and may need to be communicated to a member in order to effect a resolution to a dispute. Such information is often provided by the disputant to the ADR scheme unsolicited.[56]

40.51 In order to address these concerns about the impact of the NPPs on their operations, the ADR bodies sought the following amendments to the NPPs:

- Amendment to NPP 1 (Collection) to relieve an ADR scheme of the requirement to inform an individual of the fact of collection, where to do so would prejudice an obligation of privacy owed to a party to the dispute, or could cause safety concerns for another person.
- Amendment to NPP 2 (Use and Disclosure) to permit the use by and disclosure to ADR schemes of personal information for the purposes of dispute resolution, regardless of whether the information is sensitive or non-sensitive in nature.

---

54 Ibid.
55 Ibid.
56 Ibid.

- Amendment to NPP 10 (Sensitive Information) to broaden paragraph 10.1(e) to permit collection of sensitive information where necessary for the investigation or resolution of a claim made to an ADR scheme.[57]

ALRC's view

40.52 The ALRC recognises that industry-based ADR schemes play an important role in the effective, efficient and fair resolution of disputes raised by Australian consumers and small businesses. The importance of this role has been recognised by their integration into the regulatory framework for a number of industry sectors.

40.53 In this Inquiry, the ALRC proposes a greater role for such schemes in the resolution of complaints about credit reporting.[58] It should be noted that, in the credit reporting context, the *Privacy Act* expressly authorises the disclosure by credit providers of personal information relating to credit worthiness:

> (i) to a person or body generally recognised and accepted in the community as being a person appointed, or a body established, for the purpose of settling disputes between credit providers, acting in their capacity as credit providers, and their customers; and
>
> (ii) for the purpose of settling a dispute between the credit provider and the individual concerned …[59]

40.54 The resolution of disputes is facilitated by the disclosure of all relevant information by the parties to dispute resolution bodies. If the *Privacy Act* presents significant barriers to the information exchange necessary for effective and efficient dispute resolution, then consideration should be given to appropriate amendment. Amendments to facilitate dispute resolution have been recommended previously by the OPC Review. The ALRC is interested in further comments on whether changes to privacy principles are desirable to address the concerns of ADR bodies.

Question 40–2 Should the *Privacy Act* or other relevant legislation be amended to provide exemptions or exceptions applicable to the operation of alternative dispute resolution (ADR) schemes? Specifically, should the proposed:

(a) 'Specific Notification' principle exempt or except ADR bodies from the requirement to inform an individual about the fact of collection of personal information, including unsolicited personal information, where to do so would prejudice an obligation of privacy owed to a party to the dispute, or could cause safety concerns for another individual;

---

57 Ibid.
58 See Ch 55.
59 *Privacy Act 1988* (Cth) s 18N(1)(bc).

(b) 'Use and Disclosure' principle authorise the disclosure of personal and sensitive information to ADR bodies for the purpose of dispute resolution; and

(c) 'Sensitive Information' principle authorise the collection of sensitive information without consent by an ADR body where necessary for the purpose of dispute resolution?

Declared emergencies

40.55 After the release of IP 31, the *Privacy Act* was amended to insert a new Part VIA, which commenced operation on 7 December 2006.[60] The amending Act did not make any alterations to the IPPs or NPPs. Instead, Part VIA displaced some of the requirements in the IPPs and NPPs by providing a separate regime for the collection, use and disclosure of personal information where there is a connection to an emergency that has been the subject of a declaration by the Prime Minister or a minister.

40.56 In summary, Part VIA operates as follows:

- The application of Part VIA is triggered by the making of a declaration by the Prime Minister or the relevant minister, where he or she is satisfied of a number of matters, including that there has been an emergency or disaster affecting one or more Australian citizens or permanent residents.[61]

- The declaration commences when it is signed and ceases to have effect at a specified time, when revoked or after a maximum of 12 months.[62]

- When such a declaration is in force, s 80P provides that an entity (which is defined to mean an agency, organisation or other person) may, for a 'permitted purpose', collect, use or disclose personal information relating to an individual if: the entity reasonably believes the individual may be involved in the emergency or disaster; and the disclosure is to one of the persons specified.

- The term 'permitted purpose' is defined in s 80H and includes: identifying injured, missing, dead or affected individuals; assisting affected individuals in accessing services; and assisting law enforcement and coordinating the management of the situation.

---

60 *Privacy Legislation Amendment (Emergencies and Disasters) Act 2006* (Cth).
61 See *Privacy Act 1988* (Cth) ss 80J, 80K, 80L.
62 Ibid ss 80M, 80N.

- Section 80Q creates an offence to disclose information obtained under Part VIA in certain circumstances, punishable by a penalty of 60 penalty units (currently $6,600) and/or imprisonment for one year.

- Division 4 of Part VIA also contains a number of technical provisions including a severability provision and a provision dealing with compensation.

40.57 The aim of the amendment was to enhance information exchange between Australian Government agencies, state and territory authorities, organisations, non-government organisations and others, in emergencies and disasters.[63] Part VIA was designed to establish a legal basis for the collection, use and disclosure of personal information about deceased, injured and missing individuals involved in an emergency or disaster.[64]

40.58 Before the *Privacy Legislation Amendment (Emergencies and Disasters) Act 2006* (Cth) was passed, a number of stakeholders expressed concern to the ALRC in relation to how the *Privacy Act* operates in emergency situations. As outlined in Chapter 22, the ALRC proposes a number of amendments to the privacy principles to cover threats to health and life and other situations—these may be referred to colloquially as emergencies, but they are not declared emergencies within the meaning of Part VIA of the Act.

40.59 A question arises, however, as to whether further refinement is desirable to the Part VIA regime.[65] A number of stakeholders have indicated that most, if not all, of the problems identified about the handling of personal information in emergency situations have been adequately dealt with by the advent of Part VIA.[66]

Background

40.60 Part VIA arose partly as a response to the concern that the provisions of the *Privacy Act* impeded the ability of agencies and organisations in responding to the emergencies of the terrorist attacks in the United States on 11 September 2001, the Bali bombings of 2002 and the Boxing Day tsunami of 2004. Given its consular obligations to assist Australians overseas in times of emergency, the Department of Foreign Affairs and Trade (DFAT) has been particularly affected in this regard. DFAT has

64 See Explanatory Memorandum, Privacy Legislation Amendment (Emergencies and Disasters) Bill 2006 (Cth); and P Ruddock (Attorney-General), 'Improving the Exchange of Information in Emergencies' (Press Release, 13 September 2006).

65 Some stakeholders specifically urged the ALRC to consider this question: G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

66 See, eg, Australian Bankers' Association Inc, *Submission PR 259,* 19 March 2007; Australian Federal Police, *Submission PR 186,* 9 February 2007; G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Australian Taxation Office, *Submission PR 168,* 15 February 2007; National Australia Bank and MLC Ltd, *Submission PR 148,* 29 January 2007.

previously identified two key privacy impediments that hampered its response to emergencies:

> - DFAT's ability to access personal information held by other bodies to assist in its location, identification and assistance efforts; and
> - DFAT's ability to provide personal information to other bodies directly involved in the crisis response.[67]

40.61 DFAT's concern was that while it might be able, operationally, to provide personal information to other agencies directly involved in the crisis response, under IPP 11, information could not be disclosed in all cases because the disclosure could not be classified as necessary to lessen a 'serious and imminent' threat to life or health.[68] The Part VIA regime responds to this problem by not requiring an entity to establish a particular level of threat before collecting, using or disclosing personal information.

What is an 'emergency'?

40.62 The application of Part VIA is triggered by a ministerial declaration of an 'emergency'. A question arises as to whether this is the most appropriate trigger for the Part VIA regime and, if so, whether any refinements need to be made to the triggering process. Some stakeholders have expressed concern about the use of ministerial declarations as the trigger:

> Not all emergencies and disasters are declared. In many cases, [it is necessary] to start collecting and disseminating personal information before this declaration is made in order to act quickly and efficiently.[69]

Providing information to other bodies

40.63 As explained above, where there is a declared emergency, Part VIA provides a separate regime for the collection, use and disclosure of personal information that has the requisite connection to the emergency in question. This new regime was, in part, a response to a number of concerns.

40.64 First, DFAT identified an impediment regarding its ability to provide personal information to other bodies requesting the information to ensure that inappropriate action was not taken against affected Australians—for example, provision of information to Centrelink to stop it from pursuing persons affected by a disaster for overdue payments.[70] The combined effect of ss 80P(1)(c) and 80H under the Part VIA

regime, however, would allow DFAT and other government and non-government entities to make such a disclosure.

40.65 Secondly, concern had been expressed that under IPP 11, agencies were hampered in sharing important personal information after the immediate disaster response—that is, during the disaster recovery stage.[71] This is now dealt with in ss 80M and 80N, which provide clarity as to how long the Part VIA regime for the collection, use and disclosure of personal information will operate after a declared emergency.[72]

40.66 Other jurisdictions deal with this issue differently. For instance, Canadian law contains a broad exception to the rule against disclosure, allowing government institutions to disclose personal information for *any* purpose where, in the opinion of the head of the institution: (a) the public interest in disclosure clearly outweighs any invasion of privacy that could result from the disclosure; or (b) disclosure would clearly benefit the individual to whom the information relates.[73]

Should there be an element of consent?

40.67 The NSW Council for Civil Liberties Inc suggested it might be desirable to add a mechanism for securing the consent of persons who may later be involved in an emergency overseas. It suggested the addition

> to the passenger departure form a box to tick declaring that the passenger is willing to have information released in such circumstances. This would also ensure that people who do not want their whereabouts released to indicate that.[74]

40.68 This would seem to operate as a quasi-veto, allowing individuals to state that they do not want their personal information to be shared in the event that an emergency subsequently occurs while they are outside of Australia.

ALRC's view

40.69 The ALRC has received few comments on whether Part VIA constitutes an adequate and appropriate regime for handling personal information in the context of emergencies. Given that the regime has only recently been enacted it would be premature to propose changes before there has been any opportunity to evaluate how the provisions operate in practice, in the event of a declared emergency. In view of this consideration, the ALRC does not intend to make Part VIA a particular focus of further consultation.

Introduction

41.1 Part F is concerned with the Office of the Privacy Commissioner (OPC). The OPC is an independent statutory body established by the *Privacy Act 1988* (Cth), consisting of the Privacy Commissioner and staff appointed under the Act. The OPC is responsible for administering the *Privacy Act*, and is the federal regulator for privacy in Australia.

41.2 General privacy regulation has operated at a federal level only since the *Privacy Act* was passed in 1988. In the early years of privacy regulation, the Privacy Commissioner was responsible for overseeing compliance with the Act by agencies and tax file number recipients. Since that time, however, the responsibilities of the

OPC have widened significantly to include credit providers, credit reporting agencies and the private sector. These changes resulted in more functions and powers for the Commissioner, although not always a commensurate increase in resources.

41.3 This chapter sets out the key themes arising out of Part F, and summarises some of the major reforms proposed by the ALRC. The chapter also examines the ALRC's approach to addressing systemic issues in privacy compliance. Before turning to those matters, however, the chapter considers the consolidation of the Commissioner's functions.

Consolidating functions

41.4 The *Privacy Act* divides the Privacy Commissioner's functions between interferences with privacy generally, tax file numbers and credit reporting. This division is a product of the historical development of the *Privacy Act*. Consistently with the ALRC's proposal that the *Privacy Act* should be amended to achieve greater logical consistency, simplicity and clarity,[1] the ALRC considers that it would add greater clarity to the Act to consolidate the functions of the Commissioner where appropriate.

41.5 For example, the Privacy Commissioner's functions to investigate potential breaches of the Information Privacy Principles (IPPs), National Privacy Principles (NPPs), Tax File Number Guidelines and credit reporting provisions, could be consolidated into a general function to investigate 'interferences with privacy'. This term 'interference with privacy' is already defined to include breaches of these respective provisions. The specific functions in ss 28(1)(b)–(c) and 28A(1)(b) could then be repealed. This consolidation would be particularly appropriate if the ALRC's proposed Unified Privacy Principles (UPPs) were adopted.

41.6 Similarly, the credit reporting guidelines, advice and education functions in s 28A[2] could be rolled into their equivalent functions in s 27[3] or moved to the proposed *Privacy (Credit Reporting Information) Regulations*.[4]

Facilitating compliance with the *Privacy Act*

Compliance-oriented regulation

41.7 As the regulator responsible for administering the *Privacy Act*, the primary responsibility of the OPC is to foster and enforce compliance with the *Privacy Act*. In the Issues Paper, *Review of Privacy* (IP 31), the ALRC discussed the compliance model underpinning the *Privacy Act*—the specific modes for fostering and enforcing

1 Proposal 3–2.
2 Respectively ss 28A(1)(e), (f), and (k).
3 Those functions are *Privacy Act 1988* (Cth) s 27(1)(e), (f), and (m) respectively.
4 See Part G.

compliance, including the statutory provisions and the manner of their administration and enforcement.

41.8 Chapter 42 develops this discussion further by putting forward a model of compliance-oriented regulation as an appropriate framework in which to administer a principles-based regime such as the *Privacy Act*. Compliance-oriented regulation takes an outcomes-based approach to regulatory design, in which strategies to foster, monitor and enforce compliance with the Act are chosen 'by reference to whether they will contribute to the outcome of compliance with regulatory goals'.[5] The chapter applies the construct of compliance-oriented regulation to the *Privacy Act*, considering both the regulatory tools provided in the Act and the strategies and approaches adopted by the OPC in using those tools.

Enforcing compliance

41.9 The first elements of compliance-oriented regulation examined in Chapter 42 are securing voluntary compliance with the regulatory objectives and undertaking informed monitoring for non-compliance. The other element considered is the appropriate approach to enforcing compliance with the Act where voluntary compliance fails. The chapter sets out the benefits of adopting an explicit enforcement pyramid approach to enforcing compliance with the *Privacy Act*. This approach uses persuasive and compliance-oriented enforcement methods in the first instance, but operates in the shadow of more severe penalties where persuasive approaches fail.[6]

Structure of the OPC

Regulatory structure

41.10 Chapter 43 examines the appropriate regulatory structure for the OPC. The chapter provides an overview of the Privacy Commissioner's powers and examines the accountability mechanisms which the Commissioner is subject to under the *Privacy Act*. The ALRC proposes that the name of the OPC should be changed to the 'Australian Privacy Commission' and that the number of statutory appointees should be increased. The ALRC also proposes that the matters the Commissioner must have regard to in exercising his or her powers should be aligned with the proposed objects of the *Privacy Act*. Finally, the chapter examines the assistance given to the OPC by the Privacy Advisory Committee and proposes reform to the composition of the Committee.

5 C Parker, 'Reinventing Regulation within the Corporation: Compliance Oriented Regulatory Innovation' (2000) 32 *Administration and Society* 529, 531.

6 Ibid, 539.

Powers of the OPC

41.11 Chapter 44 examines the functions and powers vested in the Privacy Commissioner by the *Privacy Act*. The general approach of the *Privacy Act* is to state the Commissioner's 'functions' and give the Commissioner 'power' to do all things necessary or convenient to be done for or in connection with the performance of his or her functions. While much of this Discussion Paper refers to the 'OPC', the actual functions and powers outlined in the *Privacy Act* are vested in the Privacy Commissioner and are to be exercised—or delegated—by the individual appointed as Privacy Commissioner.

41.12 The Privacy Commissioner has functions in relation to interferences with privacy generally, tax file numbers and credit reporting. The Commissioner also has compliance functions under other federal legislation.

Oversight and compliance functions

41.13 Chapter 44 considers the Privacy Commissioner's functions of overseeing and monitoring compliance with the *Privacy Act*—including the functions of giving advice and guidance, undertaking educational programs, and conducting audits—and the Commissioner's powers to issue public interest determinations. The ALRC makes a number of proposals to reform these functions, to expand and strengthen the Commissioner's powers of securing and monitoring compliance with the *Privacy Act*. One proposal is to empower the Privacy Commissioner to audit an organisation's compliance with the proposed UPPs, privacy regulations, rules and any privacy code that binds the organisation.

Privacy codes

41.14 The ALRC considers the co-regulatory aspects of the *Privacy Act* in Chapter 44. These are the provisions in Part IIIAA that allow organisations to develop privacy codes, which, when approved by the OPC, replace the NPPs. The ALRC proposes that the provisions be amended so that privacy codes do not replace the proposed UPPs, but operate in addition to them, providing guidance on how one or more of the principles are to be applied or complied with by an agency or organisation. The ALRC also proposes that the Privacy Commissioner be given the power to initiate and prescribe a privacy code.

Privacy impact assessments

41.15 Chapter 44 also examines the very topical issue of privacy impact assessments. The chapter looks at the role of privacy impact assessments in the regulatory regime, and considers the role they play in facilitating privacy compliance. The ALRC proposes that the *Privacy Act* be amended to empower the Privacy Commissioner to direct an agency or organisation to provide to the Commissioner a privacy impact assessment in relation to a new project or development that the Commissioner considers may have a significant impact on the handling of personal information.

Investigation and resolution of privacy complaints

41.16 Concern has been expressed by stakeholders about the current complaint-handling process in the *Privacy Act*. In Chapter 45, the ALRC proposes to reform the existing provisions to streamline, and increase the effectiveness of, complaint handling under the Act.

Addressing systemic issues

41.17 Stakeholders expressed concern about the ability of the OPC to address systemic issues in privacy compliance. By systemic issues, the ALRC is referring to 'issues that are about an organisation's or industry's practice rather than about an isolated incident'.[7]

41.18 To facilitate a shift in focus to systemic issues, the ALRC proposes that the OPC be devolved of some of the responsibility for handling privacy complaints under the Act. Some privacy complaints, particularly in the credit reporting area, could instead by handled by external dispute resolution schemes. The ALRC proposes that the Privacy Commissioner be given a specific decline and referral power for these purposes.

41.19 The ALRC also proposes that the Privacy Commissioner's power to remedy systemic issues be enhanced by empowering the Commissioner to prescribe, in a determination, the steps an agency or organisation must take to comply with the *Privacy Act*.

Framework for conciliation and determination

41.20 The second central issue examined in Chapter 45 is the manner in which complaints are resolved under the *Privacy Act*. The ALRC proposes that the Act be amended to include a new framework to deal with conciliation and determination. This framework would, amongst other things, give complainants and respondents the right, in certain circumstances, to require the Commissioner to resolve a complaint by determination.

Accountability and transparency

41.21 Chapter 45 also considers issues of accountability and transparency in handling privacy complaints. The ALRC proposes that the *Privacy Act* be amended to provide merits review of all determinations made by the Privacy Commissioner and that the OPC publish a document setting out its complaint-handling policies and procedures.

---

7 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 130 fn 102.

Enforcing the *Privacy Act*

Own motion investigations

41.22 Chapter 46 examines the OPC's powers to enforce compliance with the *Privacy Act*. The chapter focuses on the Privacy Commissioner's powers to commence on the Commissioner's own motion an investigation into an act or practice that may be an interference with privacy. This own motion investigation power complements the Commissioner's power under the *Privacy Act* to investigate complaints. A significant limitation on the Commissioner's own motion investigation powers, however, is the inability to prescribe or enforce remedies where the Commissioner finds that an agency or organisation has contravened the privacy principles. The ALRC proposes that the Privacy Commissioner be empowered to impose remedies where he or she finds a breach of the principles following an own motion investigation.

Strengthening the enforcement pyramid

41.23 Chapter 46 also considers the question whether there needs to be further remedies or penalties available under the Act to enforce compliance. Taking into account the enforcement pyramid approach discussed in Chapter 42, the ALRC proposes that civil penalties be introduced for serious or repeated interferences with the privacy of an individual. This proposal is intended to strengthen the overall enforcement pyramid underpinning the *Privacy Act*, and should provide strong incentives for increased compliance by agencies and organisations.

Data breach notification

41.24 Chapter 47 examines data breach notification. The security of personal information is a growing concern in privacy regulation around the world. One regulatory response to the increasing number of data breaches has been to require agencies or organisations to notify individuals affected where there has been an unauthorised acquisition of personal information.

41.25 In Chapter 47, the ALRC considers the rationale behind mandatory reporting of data breaches, and examines some of the models for data breach notification laws. The key issues considered are the triggering event, the general exceptions to notification and the scope of the responsibility to notify.

Proposed data breach notification provisions

41.26 In the ALRC's view, there is a strong regulatory justification for introducing a requirement for agencies and organisations to report data breaches to individuals affected and to the OPC. The ALRC puts forward a model where notification would be required if specified personal information has been, or is reasonably believed to have been, acquired by an unauthorised person and the agency, organisation or the Privacy Commissioner believes that the unauthorised acquisition may give rise to a real risk of serious harm to any affected individual. Exceptions to this requirement would be where

the personal information is adequately encrypted, where the breach was internal and there was no further disclosure, or where the Privacy Commissioner does not consider that notification would be in the public interest. To provide strong incentives for compliance with the proposed data breach notification provisions, the ALRC proposes that failure to notify the Commissioner of a data breach attract a civil penalty.

Summary of proposals to address systemic issues

41.27 As noted above, a major concern of stakeholders is the ability of the OPC to address systemic issues. In the ALRC's view, the OPC requires a number of tools and strategies to enable it to discover, monitor and remedy systemic issues in agencies, organisations and industries. Ideally, these tools and strategies must allow the Privacy Commissioner to act proactively to identify and resolve systemic issues before a breach occurs and, when enforcing the Act, to act in a manner which will provide specific deterrence to the agency or organisation involved and general deterrence to other agencies and organisations.

41.28 The ALRC puts forward a number of proposals throughout Part F that are aimed at increasing the OPC's ability to monitor and remedy systemic issues. Taken as a whole, the ALRC believes that these proposals would provide the OPC with an appropriate 'toolkit' to deal with systemic issues in privacy compliance.[8]

8 See Proposals 44–6, 44–9, 44–10, 45–2, 45–5, 45–6, 46–1, 46–2.

ALRC's view 1157

Introduction

42.1 In the Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether the current compliance model used in the *Privacy Act 1988* (Cth) is appropriate and effective to achieve the Act's purposes, and if not, whether that is because of its content, its administration, or some other reason.[1] By 'compliance model', the ALRC is referring to the specific modes for fostering and enforcing compliance, including the statutory provisions and the manner of their administration and enforcement.

42.2 In this chapter, the ALRC considers what would be the appropriate compliance model to adopt in regulating privacy in Australia. This chapter is primarily descriptive and analytical, and does not contain any proposals for reform. It aims to provide a theoretical framework that will help in considering the ALRC's proposals to expand the functions and powers of the privacy regulator in Australia to facilitate compliance with the *Privacy Act*.[2]

1 See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 6–21.
2 These proposals are set out in Chs 44–46.

Compliance-oriented approach to privacy regulation

Principles-based regulation

42.3 The *Privacy Act* adopts a principles-based approach to regulating privacy. As explained in Chapter 15, principles-based regulation relies on high level, broadly stated standards or principles, rather than 'bright-line' or detailed, prescriptive rules.[3]

42.4 The guiding purpose of a principles-based approach is to shift the regulatory focus from process to outcomes. It is based on the idea that the agency or organisation itself is 'better placed than regulators to determine what processes and actions are required within their businesses to achieve a given regulatory objective'.[4] Regulators should focus on defining the outcomes they want regulated entities to achieve—for example, by using a principle to set a high-level objective—instead of focusing on prescribing the processes or actions the entities must take. This leaves the regulated entity 'free to find the most efficient way to achieving the outcome required'.[5]

Elements of compliance-oriented regulation

42.5 Compliance-oriented regulation adopts 'an outcomes-based approach to total regulatory design'.[6] Compliance-oriented regulation is 'a total package in which all the factors of regulatory rule making, monitoring, and enforcement are designed to elicit a particular regulatory objective'.[7] Dr Christine Parker has identified a number of elements of compliance-oriented regulation, which can be grouped into: securing voluntary compliance with the regulatory objectives; undertaking informed monitoring for non-compliance; and engaging in enforcement actions where voluntary compliance fails.[8]

42.6 The ALRC considers that compliance-oriented regulation can provide the framework for a principles-based regime such as the *Privacy Act*. The theory on which compliance-oriented regulation is based provides a prism through which to view and assess the compliance model underpinning the *Privacy Act* and the approach taken by the Office of the Privacy Commissioner (OPC) to fostering compliance. It also provides an holistic approach for considering which regulatory strategies would best achieve the objectives of the *Privacy Act*.[9]

8 Ibid, 535.

9 Ibid, 531.

42.7 In this chapter, the ALRC draws on the work of Parker on compliance-oriented regulation as a useful model to apply to the privacy context. Parker has conducted extensive empirical research and published widely on corporate compliance and regulatory enforcement strategies. The chapter considers the elements of compliance-oriented regulation identified by Parker and applies them to the privacy context, focusing on the regulatory tools provided in the *Privacy Act* and the strategies and approaches adopted by the regulator in using those tools. It then considers how these current provisions or practices can be improved to facilitate compliance with the Act.

Securing compliance

42.8 Parker explains that the first step of compliance-oriented regulation is 'providing incentives and encouragement to voluntary compliance and nurturing the ability for private actors to secure compliance through self-regulation, internal management systems, and market mechanisms where possible'.[10] A key way a regulator can help foster an agency's or organisation's capacity to comply is through education and other assistance.[11]

42.9 This first step of compliance-oriented regulation is reflected in the OPC approach to promoting compliance with the *Privacy Act*, which is based on the premise that 'compliance will be achieved most often by helping organisations to comply rather than seeking out and punishing the few organisations that do not'.[12] The OPC has stated that its 'first and preferred approach at all times' will be on providing advice, assistance and information.[13] The Act provides the Privacy Commissioner with an array of tools to provide this assistance, including specific functions of giving advice, undertaking education programs and issuing guidelines to help agencies and organisations comply with the privacy principles and the objects underlying these principles. Co-regulation is also provided for in the Act, by allowing organisations to develop specialised codes for the handling of personal information which, when approved by the OPC, replace the privacy principles.[14]

42.10 While fostering compliance through providing advice, encouragement and guidance to agencies and organisations is consistent with compliance-oriented regulation, a proliferation of guidance can undermine the administration of a principles-based regime, as it can increase prescription, complexity and inaccessibility.[15] It can also deprive the regulator of the benefits of a principles-based

---

approach by 'creating expectations as to its own conduct in the future'. That is, while the regulator may see guidance as advisory only, the regulated entities may understand it as being the definitive interpretation of the principles.[16] The OPC should have regard to this tension in administering the principles-based regime of the *Privacy Act*.

42.11 Another technique suggested by Parker to foster compliance is to encourage the growth of 'compliance professionals'—individuals with specialist expertise who provide advice on how to comply with particular laws.[17] On this point, the ALRC notes the emergence of the 'privacy professional' in recent years, and the increasing profile of 'privacy officers' in the organisational hierarchy.[18] The OPC should continue to encourage the growth of this privacy profession—including through networks such as the privacy contact officer network—to help build compliance into organisational practice and develop a shared understanding of the objectives of the *Privacy Act*.[19]

Monitoring compliance

42.12 The second element of compliance-oriented regulation is 'informed monitoring for non-compliance'.[20] Monitoring must be used 'to determine whether regulatory design is having its desired effect on the target population'.[21] As regulators cannot enforce every rule or cover every problem, they should use information collected about the regulatory problem to develop a 'risk-based approach to targeting inspections'.[22] Monitoring can be used as a proactive tool to secure compliance in the first instance and to ensure that compliance has been restored after an incident of non-compliance.

42.13 The *Privacy Act* already provides the Privacy Commissioner with a number of ways to monitor compliance with certain provisions of the Act by agencies and organisations.[23] The Privacy Commissioner's powers to audit organisations for compliance with the National Privacy Principles is more limited, however, and can only be done on request by the organisation. To extend the Commissioner's power to determine whether regulatory objectives are being achieved in organisations as well as

agencies, the ALRC proposes that the *Privacy Act* be amended to give the Commissioner a 'spot audit' power over organisations.[24]

Enforcing compliance

42.14 A compliance-oriented regulatory design also must provide for enforcement in the event of non-compliance. Parker explains that in compliance-oriented regulation, when organisations fail to comply in the first instance, the preferred approach would be to 'attempt to restore or nurture compliance rather than reverting immediately to a purely punishment-oriented approach'.[25] These attempts to restore compliance, however, must operate in the presence of more punitive sanctions, as the evidence shows that 'persuasive and compliance-oriented enforcement methods are more likely to work where they are backed up by the possibility of more severe methods'.[26]

> The idea is that regulators should engage tit for tat in restorative or persuasive enforcement strategies depending on the responses of the regulated entity. A regulator can start with persuasive or restorative strategies and then move to more punitive strategies if voluntary compliance fails. If the application of punitive sanctions succeeds in bringing about compliance, then the regulator can revert to a trusting demeanour. If it does not bring about compliance, then the regulator must invoke harsher sanctions. The wider the range of strategies (from restorative to punitive) available to the regulator, the more successful tit-for-tat enforcement is likely to be.[27]

42.15 This principle is encapsulated in Professors Ian Ayres and John Braithwaite's enforcement pyramid.[28] Braithwaite contends that compliance is 'most likely' when a regulator displays an explicit enforcement pyramid:

> Most regulatory action occurs at the base of the pyramid where initially attempts are made to coax compliance by persuasion. The next phase of enforcement escalation is a warning letter; if this fails to secure compliance, civil monetary penalties are imposed; if this fails, criminal prosecution ensues; if this fails, the plant is shut down or a licence to operate is suspended; if this fails, the licence to do business is revoked. The form of the enforcement pyramid is the subject of the theory, not the content of the particular pyramid.[29]

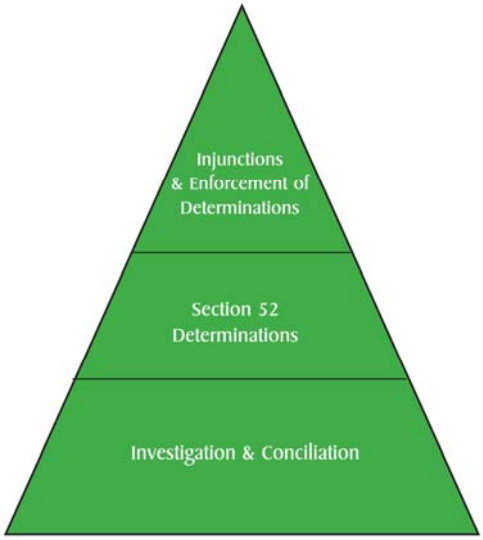
27 C Parker, 'Reinventing Regulation within the Corporation: Compliance Oriented Regulatory Innovation' (2000) 32 *Administration and Society* 529, 541.

28 The model was first put forward by Braithwaite in J Braithwaite, *To Punish or Persuade: Enforcement of Coal Mine Safety* (1985). See also B Fisse and J Braithwaite, *Corporations, Crime and Accountability* (1993); C Dellit and B Fisse, 'Civil and Criminal Liability Under Australian Securities Regulation; The Possibility of Strategic Enforcement' in G Walker and B Fisse (eds), *Securities Regulation in Australia and New Zealand* (1994), 570.

29 Quoted in F Haines, *Corporate Regulation: Beyond 'Punish or Persuade'* (1997), 218–219.

42.16 There is a level of escalation involved in the approach taken to resolving privacy complaints and taking other enforcement action under the *Privacy Act*. This is illustrated in the following diagram.



42.17 As this pyramid demonstrates, coaxing compliance occurs through undertaking investigations and conciliating complaints about interferences with privacy. The next level up is for the Privacy Commissioner to make determinations under s 52, which can involve an element of sanction via a public declaration of breach. The Commissioner can also enforce its own determinations in the federal courts and apply for injunctions.

42.18 This escalation of sanctions has not always been reflected, however, in the OPC's approach to enforcement. In the OPC Review, the OPC acknowledged that it had 'made limited or no use of the more formal enforcement powers, such as making complaint determinations or seeking injunctions from the court, or publicly "naming" and "shaming"'.[30] The OPC explained that this was in part due to: its strong focus on conciliation in resolving individual complaints; the fact that injunctions are more likely to be relevant where there is significant and immediate harm and the respondent is recalcitrant; and the fact that the OPC has received a generally good level of cooperation when it pursues issues.

30 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 126. See also Office of the Federal Privacy Commissioner, *The Privacy Commissioner's Approach to Promoting Compliance with the Privacy Act 1988*, Information Sheet 13 (2001).

42.19 Nevertheless, the OPC Review acknowledged the concern expressed by some consumers and privacy advocates that the enforcement of the *Privacy Act* is 'soft'.[31] It recommended that, while it would maintain its current approach to compliance, it would consider whether it might be appropriate in some circumstances to use its other powers earlier, such as the determination power.[32]

Submissions and consultations

42.20 Several stakeholders commented on the enforcement approach adopted in the *Privacy Act* and by the OPC. Some stakeholders supported the OPC's current approach to compliance and the compliance model in the *Privacy Act*.[33] Stakeholders also expressed support for the use of Braithwaite's 'enforcement pyramid' as a model for enforcing the *Privacy Act*.[34] The OPC suggested that the Act be amended to include stronger powers to handle systemic issues and issues arising from industry practice.[35]

42.21 Other stakeholders suggested better use could be made of the Privacy Commissioner's functions and powers to enhance the OPC's approach to compliance.[36] The Consumer Credit Legal Centre (NSW) (CCLC) found that, in its experience, there is 'no culture of compliance and there is little incentive for respondents to complaints to correct systemic flaws'.[37] The CCLC submitted that the OPC's current approach to compliance is ineffective and strongly supported the consideration of other schemes that contain stronger penalties.

ALRC's view

42.22 The ALRC makes several proposals in Chapters 45 and 46 that are aimed at strengthening the restorative elements of complaint-handling under the Act and enhancing the enforcement pyramid adopted in the *Privacy Act,* by expanding the remedies and sanctions available to the Privacy Commissioner when he or she finds an interference with privacy. The ALRC also proposes that the content of the enforcement

pyramid adopted in the *Privacy Act* be strengthened with the addition of civil penalties for serious or repeated contraventions of the Act.

42.23 These proposals are consistent with Parker's model and aim to widen the range of strategies that are available to the OPC to enforce compliance with the *Privacy Act*. It is important, however, that the OPC adopt a compliance-oriented approach in applying these strategies. While it is consistent with compliance-oriented regulation to focus initially on restoring compliance through negotiated outcomes (such as conciliation), the OPC should not confine itself to this approach. In particular, the ALRC notes Parker's suggestion that a compliance-oriented regulatory design must incorporate enforcement, 'otherwise, regulators cannot meaningfully and discriminately apply incentives, persuasion, and cooperation to organisations that are complying or attempting in good faith to comply'.[38]

42.24 It is crucial that there be an element of public enforcement in the OPC's regulation of privacy, consistent with Parliament's expectation that the Commissioner 'be the means by which there will be accountability to the public on the use by government of their personal information'.[39] A clear enforcement policy that outlines what the usual response to a particular type of breach will be and how that response can be mitigated—such as by evidence of a good internal compliance program—can provide incentives for organisations to put in place those mitigating practices. Such a policy also allows the regulator to discriminate between agencies and organisations that are genuinely trying to comply and those that are not. The regulator can then adopt enforcement responses that send a strong message of general deterrence to the regulated community. This encourages agencies and organisations to keep complying (or at least keep trying to comply), as they will see that non-compliance, combined with no effort to comply, will attract strong sanctions from the regulator.

42.25 Consistent with the compliance-oriented regulatory design underpinning the *Privacy Act*, the OPC should implement a compliance policy that adopts an explicit enforcement pyramid approach to restoring compliance and enforcing the *Privacy Act*. The OPC should use, and should be seen to be using, a wide range of strategies to ensure compliance with the *Privacy Act*, recognising the benefits of specific and general deterrence that can be generated by a transparent, balanced and vigorous enforcement approach.

Introduction

43.1 This chapter considers the structure of the Office of the Privacy Commissioner (OPC). The discussion focuses on the existing structure, functions and powers of the Privacy Commissioner, the constraints on the exercise of the Commissioner's powers, the liabilities to which the Commissioner is subject and the immunities the Commissioner enjoys. The chapter also considers the Privacy Advisory Committee, including its composition and functions.

43.2 The ALRC will make a number of proposals in this chapter, which, if implemented, will result in an updating of the legislative structure of the OPC. The ALRC proposes that the name of the OPC be changed to the Australian Privacy Commission and the number of statutory appointees to the Commission be increased. The ALRC also makes the proposal to align the matters that the Commissioner must have regard to in performing functions and exercising powers with the proposed objects of the *Privacy Act 1988* (Cth). This chapter includes a number of proposals relating to the Privacy Advisory Committee, including a proposal that the membership criteria for the Committee be updated and extended. The chapter also includes a proposal that the Act empower the Commissioner to draw on the assistance of expert panels.

Structure, functions and powers

Legislative structure

43.3 The role and position of Privacy Commissioner was originally established in the *Privacy Act*, as passed in 1988. The Commissioner was initially a member of the Human Rights and Equal Opportunity Commission (HREOC), before the OPC was established as a separate office in July 2000. It was suggested that a separate office was consistent with the approach taken in other countries and that it would provide 'an opportunity to further increase the profile, and thus the effectiveness, of the work of the Privacy Commissioner and of the office of the Privacy Commissioner'.[1]

43.4 The *Privacy Amendment (Office of the Privacy Commissioner) Act 2000* (Cth) amended the *Privacy Act* to establish the 'Office of the Privacy Commissioner', defined to consist of the Privacy Commissioner and staff appointed under s 26A.[2] The *Privacy Act* provides that the Commissioner is appointed by the Governor-General for a period of up to seven years,[3] on such terms and conditions as imposed by the Governor-General and the Act.[4] The Commissioner's appointment may be terminated

1 Commonwealth, *Parliamentary Debates*, House of Representatives, 9 December 1998, 1660 (D Williams—Attorney-General), 1660.

3 Ibid ss 19A(1), 20(1).
4 Ibid s 20.

because of misbehaviour, or physical or mental incapacity, and must be terminated in circumstances of bankruptcy, extended absence or unapproved outside employment.[5]

43.5 The *Privacy Act* does not provide for a Deputy or Assistant Commissioner (as a statutory appointee), but does provide for the appointment of an Acting Commissioner during any vacancy in the office or absence of the Privacy Commissioner.[6] Although this is similar to the approach taken in Australian states, both Canada and New Zealand provide for the appointment of additional statutory officers. For instance, in New Zealand, the Governor-General may, on the recommendation of the Minister, appoint a Deputy Commissioner, who is entitled to all the protections, privileges and immunities of the Commissioner and, subject to the control of the Commissioner, has and may exercise all the powers, duties and functions of the Commissioner under the Act.[7]

Functions and powers of the OPC

43.6 Part IV, Division 2 of the *Privacy Act* vests a range of functions in the Commissioner. These functions are examined in Chapters 44–46 and are divided in the Act into functions relating to interferences with privacy, tax file numbers, and credit reporting.[8] The Privacy Commissioner also has functions under other Acts, which are examined further in Chapter 44 and Part J.

43.7 The *Privacy Act* invests the Commissioner with power to do all things that are necessary or convenient to be done for or in connection with the performance of his or her functions.[9] The Commissioner also has an ancillary function in s 27(1)(s) to do anything incidental or conducive to the performance of any of the Commissioner's other functions in s 27(1).[10]

Delegation

43.8 There are two matters to note about the Commissioner's legislative functions and powers. The first is that the *Privacy Act* invests functions in the Privacy Commissioner personally, rather than in the OPC generally, and only the Commissioner has the power to do all things necessary or convenient to be done in connection with the performance of his or her functions.

---

5 Ibid s 25.

6 Ibid s 26.

7 *Privacy Act 1993* (NZ) s 15. In addition, in Canada the Governor in Council may, on the recommendation of the Privacy Commissioner, appoint one or more Assistant Privacy Commissioners, who engage exclusively in duties or functions of the office of the Privacy Commissioner as delegated by the Privacy Commissioner: *Privacy Act* RS 1985, c P-21 (Canada) s 57.

8 The Commissioner's functions and powers in relation to general interferences with privacy are set out in detail in Ch 44. The Commissioner's functions in relation to credit reporting are discussed in Part G.

9 *Privacy Act 1988* (Cth) ss 27(2), 28(2), 28A(2).

10 Ibid s 34 limits the Commissioner's powers 'in connection with the performance of the functions referred to in section 27' in relation to documents exempt under the *Freedom of Information Act 1982* (Cth).

43.9 Secondly, the Privacy Commissioner can delegate all or any of his or her powers either to a member of the Commissioner's staff or a member of the staff of the Commonwealth Ombudsman, with two exceptions. The Commissioner cannot delegate the powers conferred by s 52, which sets out the Commissioner's power to make determinations, and the Commissioner cannot delegate his or her power under s 17 to issue guidelines relating to tax file number information.[11]

Regulatory structure

43.10 The Privacy Commissioner, supported by the OPC, is an individual, independent regulator, rather than a regulatory agency or commission.[12] There has been some discussion by regulatory theorists about the distinction between an independent individual regulator, such as the Privacy Commissioner, and a commission-style regulator. It has been noted that the rationale for attaching regulatory powers to an individual is

> 'to seek to develop a quicker and less bureaucratic system of regulation. This was centred on the idea of a single, independent regulator for each industry, operating without undue bureaucracy and supported by a small staff.' It was considered, further, that personal responsibility for regulation would reassure the public who could identify regulation with an individual protector of their interests rather than some vague commission of faceless persons.[13]

43.11 The disadvantages of an individual regulator include: the possibility that significant political pressures may be directed at one person; a lack of accountability to a board or equivalent; and the potential for unpredictable decision making.[14] An individual regulator structure means 'important decision making functions which are material to the rights and privileges of third parties' are vested in one individual, which could result in one individual being responsible for advising organisations and adjudicating disputes involving the same organisation.[15] This can raise the danger that the regulator will, or will be seen to, 'fall between stools' such that its enforcement actions are seen as tainted by its policy-making concerns, and vice versa.[16]

43.12 An alternative structure to an individual regulator is a commission. Proponents of commissions argue that a commission structure: helps reduce the danger that regulators will feel vulnerable and behave defensively; creates a sense that decisions follow internal debate; increases legitimacy and accountability; and spreads the

16 R Baldwin and M Cave, *Understanding Regulation: Theory, Strategy and Practice* (1999), 70–71.

workload involved in regulating complex industries.[17] Critics, however, argue that a commission structure may lead to: inconsistent decisions, as decisions would be made by a commission whose composition may change; slower decision making; and possible loss of clarity of responsibility.[18]

Submissions and consultations

43.13 The ALRC asked in Issues Paper 31, *Review of Privacy* (IP 31) whether the legislative structure of the OPC is appropriately meeting the needs of the community.[19] Several submissions received by the ALRC suggested there was no reason to alter the legislative structure of the OPC.[20] The OPC itself supported the continuation of the OPC as a statutory body with a Commissioner appointed for a specified term, noting that it was consistent with international standards regarding privacy regulation.[21]

43.14 In contrast, the Australian Privacy Foundation (APF) suggested that, while the OPC is performing many valuable functions, it 'is not currently meeting the legitimate expectations of the community, either in relation to complaint handling or in relation to wider roles of advocacy and pro-active enforcement'. The APF suggested, however, that it was difficult to identify whether this overall failing is due to the structure of the Act as opposed to the exercise of the functions by successive Commissioners.[22]

43.15 In terms of the name of the regulator, the OPC reiterated the recommendation made in its review of the private sector provisions of the *Privacy Act* (OPC Review) that its name should be changed to the 'Australian Privacy Commission'.[23] The OPC argued that the similarity of names between state privacy regulators and the OPC causes confusion for consumers who are trying to work out to whom they should make a complaint. The OPC also argued that renaming the office as suggested would be more consistent with other federal regulators, such as the 'Australian Competition and Consumer Commission' and the 'Australian Securities and Investments Commission'.[24] The Australian Government did not rule out the name change in its

response to the OPC Review, but rather noted that it would give further consideration to the issue, including any costs associated with the change.[25]

43.16 The OPC also commented on the delegation power in its submission, recommending that the exception in the Commissioner's powers to delegate with regard to s 52 determinations be amended to allow senior staff of the OPC to undertake determinations. In making this suggestion, the OPC acknowledged that the determinations power is a significant power and the limitation of its exercise to the Commissioner, as an independent statutory officer, is reflective of this significance.[26] Without the power to delegate the determinations power, however, the OPC noted that its exercise is necessarily limited to the individual Commissioner's availability. In light of the Commissioner's recent commitment to undertake more determinations,[27] the OPC suggested that it would be preferable, and may become necessary, for the determinations power to be exercisable by other senior staff members (such as the Deputy or Assistant Commissioner). The OPC suggested that this could be done by either introducing a qualified delegation power in respect of the Commissioner's determination powers or by amending the *Privacy Act* to specify an additional position or positions that would be permitted to exercise the determinations power.[28]

ALRC's view

43.17 The legislative structure of the OPC is an integral part of building an effective infrastructure for privacy regulation in Australia. It is critical that the body responsible for regulating the personal information-handling practices of the federal public sector and applicable organisations is structured and constituted in a manner that best helps it achieve its legislative purpose to promote and protect privacy in Australia.[29]

43.18 The ALRC's view is that the following steps need to be taken: the OPC should be renamed the 'Australian Privacy Commission'; and the number of statutory appointments to the Office should be expanded. To this end, the *Privacy Act* should be amended to allow for the appointment of one or more Deputy Privacy Commissioners. The Deputy Commissioners would be appointed by the Governor-General under the *Privacy Act* for a set period and would enjoy the same level of independence, including through the protections against termination of appointment that currently apply to the

27 See Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), recs 37, 42; Office of the Privacy Commissioner, 'Commissioner's Use of s 52 Determination Power' (2006) 1(1) *Privacy Matters* 2.

28 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007. The OPC noted that while it had not identified a similar problem in respect of the limitation on delegating its powers in relation to Tax File Number Guidelines, there was also no strong reason why the power should not also be delegable, particularly as the Guidelines are disallowable instruments.

29 Office of the Privacy Commissioner, *About the Office* <www.privacy.gov.au/about/> at 30 July 2007.

Privacy Commissioner.[30] The Deputy Privacy Commissioners should be empowered to exercise all the powers, duties and functions of the Commissioner under the Act—including the powers in ss 52 and 28A(1)(a)—subject to the oversight of the Privacy Commissioner.

43.19 The ALRC's view is that increasing the size of the OPC should facilitate more accountability and transparency in its operations and encourage more formal, collegiate decision making. This should help respond to concerns raised by stakeholders over the lack of transparency and accountability in the OPC's processes and procedures, particularly in relation to complaint handling, the issues of delay in the Office's investigation and conciliation processes, and the limited exercise of the determinations power in s 52.[31]

43.20 Increasing the number of statutory appointees would also provide a means to address the delegation issue raised by the OPC. The ALRC's view is that the determination power is significant and should only be exercised by statutory officers appointed under *Privacy Act*. Although—following the High Court's decision in *Brandy v Human Rights and Equal Opportunity Commission*,[32]—determinations are no longer binding and conclusive between parties, the power to issue determinations is still one of the most significant powers vested in the Commissioner. The proposal to appoint more statutory officers who are expressly authorised to exercise all the powers of the Privacy Commissioner—including a power under s 52—respects the significance of the power in s 52 and ameliorates the problem of it being limited to one person's availability. Having additional statutory officers with power to make determinations should also give the OPC the means to address concerns about the rare use of the determinations power and would facilitate implementation of the ALRC's proposal to give complainants and respondents the right in certain circumstances to require the Commissioner to issue a determination in relation to their complaint.[33]

43.21 Finally, expanding the OPC to include at least two statutory officers (with potential for more) provides additional support for changing the name of the OPC to the Australian Privacy Commission. This is because a body constituted by multiple statutory officers is consistent with the general understanding of a commission as a body of persons charged with particular functions, rather than an individual regulator.

---

30 That is, as set out in s 25 of the *Privacy Act 1988* (Cth).

31 These concerns were raised by a number of stakeholders and are discussed in detail in Ch 45.

32 *Brandy v Human Rights and Equal Opportunity Commission* (1995) 183 CLR 245. Following *Brandy*, the *Human Rights Legislation Amendment Act 1995* (Cth) removed the Commissioner's power to register determinations in the Federal Court.

33 Proposal 45–5.

Proposal 43–1 The *Privacy Act* should be amended to change the name of the 'Office of the Privacy Commissioner' to the 'Australian Privacy Commission'.

Proposal 43–2 Part IV, Division 1 of the *Privacy Act* should be amended to provide for the appointment by the Governor-General of one or more Deputy Privacy Commissioners. The Act should provide that, subject to the oversight of the Privacy Commissioner, the Deputy Commissioners may exercise all the powers, duties and functions of the Privacy Commissioner under this Act—including a power conferred by s 52 and a power in connection with the performance of the function of the Privacy Commissioner set out in s 28(1)(a)—or any other enactment.

Manner of exercise of powers

Section 29 of the Privacy Act

43.22 In exercising his or her powers under the *Privacy Act*, the Commissioner is bound to have regard to the matters set out in s 29. The matters in s 29 can be divided into two principal concerns. First, the *Privacy Act* requires the Commissioner to take the following into account when performing functions and exercising a power:

- protection of important human rights and social interests that compete with privacy, including the general desirability of a free flow of information (through the media and otherwise) and the recognition of the right of government and business to achieve their objectives in an efficient way;[34] and

- international obligations accepted by Australia, including those concerning the international technology of communications, and developing general international guidelines relevant to the better protection of individual privacy.[35]

43.23 Secondly, the *Privacy Act* requires the Commissioner to ensure that his or her recommendations, directions and guidelines are capable of being accepted, adapted and extended throughout Australia,[36] and are consistent with whichever is relevant out of the Information Privacy Principles (IPPs), the National Privacy Principles (NPPs), *Credit Reporting Code of Conduct* and Part IIIA of the Act.[37]

43.24 The Explanatory Memorandum to the Privacy Bill 1988 (Cth) explained that s 29 requires the Commissioner 'to balance the need to ensure proper protection from

34 *Privacy Act 1988* (Cth) s 29(a).
35 Ibid s 29(b).
36 Ibid s 29(c).
37 Ibid s 29(d).

interferences of privacy against the requirements of government and private sector bodies to achieve their objectives in an efficient manner'.[38] The OPC has previously explained that 'the legislation acknowledges that privacy is not an absolute right and that an individual's right to protect his or her privacy must be balanced against a range of other community and business interests'.[39]

43.25 The New Zealand *Privacy Act* requires its Privacy Commissioner to have regard to largely the same matters as set out in s 29.[40] In other jurisdictions, an alternative approach is taken. Instead of explicitly requiring the privacy regulator to have regard to certain matters in the exercise of their powers, the privacy legislation acknowledges matters such as the competing interests of human rights and organisational efficiency in the preamble or objects section.[41] For example, the *Information Privacy Act 2000* (Vic) has an objects clause covering such matters as balancing the public interest in the free flow of information with the public interest in protecting the privacy of personal information in the public sector.[42] The Act then requires the Privacy Commissioner to have regard to the objects of the Act in the performance of his or her functions and the exercise of his or her powers under the Act.[43]

Submissions and consultations

43.26 The ALRC asked in IP 31 whether these constraints on the exercise by the Privacy Commissioner of his or her powers are appropriate.[44] Most submissions received by the ALRC argued that the constraints were appropriate and supported the retention of s 29 of the *Privacy Act*. For example, the OPC expressed support for the premise that privacy is a right that must be balanced with other community interests and supported the continued inclusion of s 29 as a clear statement acknowledging this context.[45] Similarly, the Queensland Council for Civil Liberties saw no reason to alter the constraints imposed by the Act on the exercise of the powers by the Commissioner,[46] and the Investment and Financial Services Association submitted 'that the present powers of the Commissioner are adequate and provide a reasonable

39 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 28.
40 *Privacy Act 1993* (NZ) s 14. See also *Information Privacy Act 2000* (Vic) s 60.
41 This is the approach taken in a number of jurisdictions, including: *Personal Information Protection and Electronic Documents Act 2000* SC 2000, c 5 (Canada) s 3; European Parliament, *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data*, Directive 95/46/EC (1995), recitals 2, 3; art 1. See also the Organisation for Economic Co-operation and Development, *Guidelines on the Protection of Privacy and Transborder Flows of Personal Data* (1980).
42 *Information Privacy Act 2000* (Vic) s 5.

46 Queensland Council for Civil Liberties, *Submission PR 150,* 29 January 2007.

balance between protecting people's privacy yet not imposing undue additional costs and compliance on industry'.[47]

43.27 In contrast, the APF submitted that successive Commissioners appear to have interpreted s 29(a) as limiting their ability to perform the role of public advocate and champion of privacy, which the AFP describes as an unfortunate and unnecessary interpretation.[48]

ALRC's view

43.28 The ALRC proposes in Chapter 3 that the *Privacy Act* be amended to include an objects clause.[49] In that proposal, the ALRC suggests objects that draw on similar themes to those in s 29, including to implement Australia's obligations at international law in relation to privacy and to provide a framework within which to balance the public interest in protecting the privacy of individuals with other public interests. The ALRC is of the view that s 29 should be amended to require the Commissioner to have regard to the proposed objects of the Act in performing his or her functions and exercising his or her powers. This is consistent with a purposive approach to statutory interpretation, which requires that in interpreting a provision of an Act, a construction that promotes the purpose or object underlying the Act should be preferred to a construction that would not promote that purpose or object.[50]

43.29 Aligning the matters to which the Privacy Commissioner must have regard with the objects of the *Privacy Act* also ensures that everyone interpreting, applying and attempting to understand the Act—whether they are agencies, organisations, lawyers, academics or the OPC itself—has regard to the same set of objects. By moving the factors set out in s 29 to the objects clause, the Act effectively indicates that, not only are the enumerated factors critical in influencing the Privacy Commissioner's administration of the Act, they are also critical in directing the general public's understanding and interpretation of the Act.

Proposal 43–3 Section 29 of the *Privacy Act* should be amended to provide that the Privacy Commissioner must have regard to the objects of the Act, as set out in Proposal 3–4, in the performance of his or her functions and the exercise of his or her powers.

48 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.
49 Proposal 3–4.
50 *Acts Interpretation Act 1901* (Cth) s 15AA.

Accountability mechanisms

43.30 The Privacy Commissioner and the OPC are subject to a number of accountability mechanisms to ensure that decisions made, and conduct engaged in, by the Commissioner and OPC are legal and correct. These mechanisms include judicial review, merits review and review by the Commonwealth Ombudsman.

43.31 In addition to the review rights that, as discussed below, are primarily held by individuals (in the sense that an individual can initiate them through making a complaint or instituting proceeding), the Commissioner is also subject to another form of accountability—that is, the Commissioner is subject to parliamentary scrutiny with regard to the substance of legislative instruments issued by the Commissioner. Most of the binding instruments issued by the Commissioner—such the s 17 Tax File Number Guidelines and public interest determinations[51]—are 'disallowable instruments', which means they are subject to parliamentary oversight and disallowance under the *Legislative Instruments Act 2003* (Cth). This provides further oversight and scrutiny of the substance of decisions made by the Commissioner.

Judicial review

43.32 Complainants and respondents may apply under the *Administrative Decisions (Judicial Review) Act 1977* (Cth) (the ADJR Act) to the Federal Court or Federal Magistrates Court for a review of 'administrative decisions', or 'conduct' preparatory to the making of a decision by the Privacy Commissioner under the *Privacy Act*.[52]

43.33 The ADJR Act provides an aggrieved person with broad grounds to apply for review. These grounds include a breach of natural justice; error of law; and an improper exercise of power, which includes having an improper purpose, taking an irrelevant consideration into account, failing to take a relevant consideration into account, an abuse of power, and unreasonableness.[53]

43.34 Judicial review is to be distinguished from merits review. Under the ADJR Act, the court reviews the legality of the process followed to make the decision, not the substance of the decision (which is the subject of merits review). The court cannot hear the matter afresh or substitute the decision of the Commissioner with its own. If the court finds that the grounds for review are made out, it can make an order setting aside

---

51 Other disallowable instruments issued by the OPC include the *Credit Reporting Code of Conduct*, and determinations made under Part IIIA. Note that privacy codes approved under Part IIIAA of the *Privacy Act* are legislative instruments but are not subject to disallowance by Parliament: see *Legislative Instruments Act 2003* (Cth) s 44(2), Item 44; *Legislative Instruments Regulations 2004* (Cth) sch 2, Item 8.

52 *Administrative Decisions (Judicial Review) Act 1977* (Cth) ss 3, 5, 6.

53 Ibid ss 5, 6.

or quashing the decision and can remit the matter back to the Privacy Commissioner for further reconsideration according to law.[54]

43.35 Matters that could be the subject of an application for review under the ADJR Act include a decision not to investigate (or investigate further) a privacy complaint under s 41, a decision not to make a determination under s 52, and a failure to give reasons to a person adversely affected by a decision of the Commissioner.[55]

Merits review

43.36 As noted above, merits review is concerned with the substance of a decision and, in particular, whether the decision was the correct or preferable decision. There are very limited rights to merits review under the *Privacy Act*. There is a right to apply to the Administrative Appeals Tribunal for a review of the Commissioner's decision to refuse to approve the medical research and genetics guidelines under ss 95, 95A and 95AA of the *Privacy Act*.[56]

43.37 Secondly, merits review is available in respect of determinations against agencies, but only in relation to decisions made to include or not include a declaration for compensation or costs.[57] Merits review is not available for other decisions made by the Privacy Commissioner in the complaints process. For instance, there is no right to merits review of a decision by the Commissioner under s 41 of the Act not to investigate a complaint, or to cease investigations, on the basis that the Commissioner considers that the respondent has adequately dealt with the complaint, regardless of whether the complainant is satisfied with the respondent's response.[58]

Commonwealth Ombudsman

43.38 The Commissioner and the OPC are also subject to review by the Commonwealth Ombudsman with respect to 'a matter of administration'.[59] The Ombudsman is an independent statutory office holder who can investigate administrative actions of Australian Government officials and agencies, such as the OPC, either on receipt of a complaint or on the Ombudsman's own motion. The Ombudsman investigates and resolves disputes through consultation and negotiation, and, where necessary, by making formal, non-binding recommendations to senior

levels of government. The type of actions the Ombudsman may report on include where the action: appears to have been contrary to law; was unreasonable, unjust, oppressive or improperly discriminatory; or was otherwise, in all the circumstances, wrong.[60]

43.39 The Ombudsman and the OPC entered into a memorandum of understanding (MOU) in November 2006. The MOU addresses a number of issues and is intended to ensure, amongst other things, that complaints made to one party about the other are handled efficiently and fairly.

Submissions and consultations

43.40 As noted above, the ALRC asked in IP 31 whether the constraints imposed in the *Privacy Act* on the exercise by the Commissioner of powers conferred by the Act are appropriate.[61] The Consumer Credit Legal Centre (NSW) commented on the liability of the OPC to judicial review, submitting that despite the possibility of judicial review in some circumstances, 'there is no real oversight in relation to the quality of decision-making as there is a lack of any form of merits review'.[62] A number of other stakeholders also commented on the issue of merits review of complaint determinations, and the issue is discussed in detail in Chapter 45.

ALRC's view

43.41 The ALRC considers that the current accountability mechanisms of judicial review and review by the Commonwealth Ombudsman are appropriate. The fact that the Commissioner's decisions are subject to judicial review is an important oversight mechanism to ensure the legality of the exercise of the Commissioner's powers and that proper processes are followed. The oversight by the Ombudsman is consistent with other federal regulators, and provides a necessary avenue for individuals who have a complaint against the administrative workings of the OPC.

43.42 The ALRC does not, however, think the current rights to merits review are sufficient, particularly in relation to complaint determinations. The concerns raised by stakeholders about the inability to challenge the merits of the Commissioner's decisions are addressed in Chapter 45, with a proposal made to provide merits review of determinations made by the Commissioner under s 52 of the *Privacy Act*.[63]

63 Proposal 45–7.

Criminal liability

Background

43.43 The Commissioner and his or her staff and delegates are subject to criminal liability in some circumstances. It is an offence for the Commissioner or a member of his or her staff (present and past) to disclose, use or make a record of information acquired about a person in the performance of that role, other than to do something permitted or required by the *Privacy Act*.[64] Such a person is not obliged to divulge or communicate that information except as required or permitted by the *Privacy Act*.[65] Similar secrecy provisions are found in other federal legislation and state privacy legislation.[66]

Submissions and consultations

43.44 The OPC supported the retention of the above provisions, submitting that they were consistent with secrecy and non-disclosure provisions in other Commonwealth legislation.[67]

ALRC's view

43.45 The ALRC considers the current secrecy provisions are appropriate and has not made any proposals on these matters. The liability of the Commissioner to criminal sanctions for disclosure of certain information is appropriate and the provisions, as noted above, are consistent with other relevant legislation.

Immunity

Background

43.46 The Commissioner, and any person acting under his or her direction or authority, has immunity from civil action for acts done in good faith in the exercise of any power conferred by the *Privacy Act*.[68] This immunity also extends to an adjudicator under an approved privacy code and his or her delegate.[69] Privacy legislation in state, territory and overseas jurisdictions provides similar immunities to

---

64 *Privacy Act 1988* (Cth) s 96(1), (3). The offence is punishable by a penalty of $5,000 or imprisonment for 1 year, or both. Note that the OPC released its new layered privacy policy (which sets out its personal information handling practices) in August 2006: Office of the Privacy Commissioner, *Privacy Policy* (2006).

65 *Privacy Act 1988* (Cth) s 96(2), (4).

66 See, eg, *Ombudsman Act 1976* (Cth) ss 35, 35A; *Migration Act 1958* (Cth) s 377; *Privacy and Personal Information Protection Act 1998* (NSW) s 67; *Information Privacy Act 2000* (Vic) s 67.

69 Ibid s 64.

privacy commissioners,[70] and precedent for immunity can also be found in the *Ombudsman Act 1976* (Cth).[71]

43.47 The *Privacy Act* also provides that civil action will not lie against a person in respect of loss, damage or injury suffered by another person because of certain acts done in good faith. These acts are: the making of a complaint under the Act or under an approved code; the acceptance of a complaint under s 40(1B); or the making of a statement to, or giving a document of information to, the Privacy Commissioner.[72] Similar immunity for complainants can be found in privacy legislation in Australian states and territories.[73]

43.48 In addition, persons who give information, produce a document or answer a question when directed to do so by the Commissioner are not liable to penalties under other Acts.[74]

Submissions and consultations

43.49 The ALRC asked in IP 31 whether the scope of immunities conferred on the Privacy Commissioner, adjudicators and other persons are appropriate.[75] The OPC supported the continuation of the immunity from civil actions provided to the Commissioner (or code adjudicator) and their delegates. The OPC also supported the protection from civil action provided to complainants, explaining that 'this is fundamental to providing individuals with an opportunity to freely raise a complaint without concern that they may be liable for defamation or other civil action'.[76]

43.50 The APF also described these immunities as important and suggested that 'the law should confirm that the protection extends to bodies bringing representative complaints and otherwise drawing privacy compliance issues to the attention of the Commissioner and the public'.[77]

76 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

77 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

ALRC's view

43.51 The ALRC considers the current immunity afforded to the Privacy Commissioner and code adjudicators, and their delegates, is appropriate. The ALRC does not, at this stage, make any proposals in this area.

43.52 The ALRC also does not propose any changes to the current formulation in s 67 of the *Privacy Act*, which provides protection from civil action to a person who, in good faith, makes a complaint under this Act. A complaint can only be made under s 36 of the Act, whether it be an IPP complaint, an NPP complaint, or a representative complaint.[78] The ALRC is of the view that a person or body who lodges a representative complaint under s 36 would enjoy protection from civil action where the act was done in good faith, because the protection in s 67 does not distinguish between the type of complaint made or the person who made the complaint; it applies to the act of making the complaint.

43.53 The ALRC notes, however, that there does not appear to be any guidance on the OPC website as to the protection offered to complainants who make complaints in good faith. It would be useful for the OPC to make this protection clear in the document setting out its complaint-handling policies and procedures, as anticipated in Proposal 45–8. This is particularly important given that, as recognised by the OPC, the protection is fundamental to ensuring that complainants feel safe in raising complaints. In issuing such guidance, it would be helpful to indicate clearly that s 67 applies to individuals and bodies bringing representative complaints in the same way that it applies to individual complainants.

43.54 The ALRC does not believe that the *Privacy Act* should be amended to confirm that the protection from civil action extends to bodies that otherwise draw privacy compliance issues to the attention of the Commissioner and the public.[79] In relation to issues brought to the attention of the Commissioner, s 67(b) already makes it clear that the protection from civil action extends to making a statement or giving a document or information to the Commissioner, whether or not required by s 44 of the *Privacy Act*.[80] This too, however, could be clarified further in the proposed complaint-handling policy and procedures document.

43.55 In relation to the suggestion that issues brought to the attention of the public should also attract immunity, the ALRC does not believe that such a protection can be justified. The ALRC is not aware of examples of such protection being offered for disclosures to the public in any other privacy legislation. The ALRC is of the view that

78 See the respective definitions of each in *Privacy Act 1988* (Cth) s 6(1).

79 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

80 Note also that the Explanatory Memorandum to the Privacy Bill 1988 explained that s 67 'precludes a person from being sued for lodging a complaint with the Commissioner or providing him/her with information where those acts are done in good faith': Explanatory Memorandum, Privacy Bill 1988 (Cth), 59.

the OPC is the appropriate body with which to raise compliance issues. If a body wants to disclose the issues to the public, then it should bear any subsequent risks.

Privacy Advisory Committee

Composition

43.56 The *Privacy Act* establishes a Privacy Advisory Committee (Advisory Committee) consisting of the Commissioner and not more than six other members, of which the Commissioner is convenor.[81] The Governor-General appoints members (other than Privacy Commissioner) as part-time members who hold office for up to 5 years. Members are not remunerated for their service, but enjoy similar protections as the Commissioner against removal,[82] and have an obligation to disclose any conflicts of interest.[83]

43.57 The *Privacy Act* provides membership criteria for the Advisory Committee in two ways. First, it specifies that officers, employees and staff of the Commonwealth must never be in the majority on the Advisory Committee.[84] Secondly, it provides a list of membership criteria.[85] The Advisory Committee is currently constituted by the Commissioner and six members.[86] The membership criteria, and the current appointees under each criterion, are set out in the following table.

Table 43.1 Current Members of the Privacy Advisory Committee

Privacy Act	Description	Current Member
s 82(7)(a)	at least five years' high-level experience in industry, commerce, public administration or government service	Suzanne Pigdon, Former Privacy and Customer Advocacy Manager, Coles Myer Group Joan Sheedy, Assistant Secretary, Information Law Branch, Attorney-General's Department
s 82(7)(b)	at least five years' experience in the trade union movement	Associate Professor John M O'Brien, School of Organisation and Management, University of New South Wales

81 *Privacy Act 1988* (Cth) s 82(1)–(5). See also s 87 regarding meetings of the Advisory Committee.

83 Ibid s 86.
84 Ibid s 82(6).
85 Ibid s 82(7).
86 See Office of the Privacy Commissioner, *Privacy Advisory Committee* <www.privacy.gov.au/act/pac> at 31 July 2007.

s 82(7)(c)	extensive experience in electronic data-processing	Peter Coroneos, Chief Executive Officer, Internet Industry Association
s 82(7)(d)	representing general community interests, including social welfare	Dr William Pring, Director of Consultation-Liaison, Psychiatry Services Box Hill Hospital
s 82(7)(e)	extensive experience in the promotion of civil liberties	Robin Banks, Chief Executive Officer, Public Interest Advocacy Centre Ltd and Director, Public Interest Law Clearing House Inc

43.58 Membership of the Committee was developed 'to represent a variety of community interest groups'.[87] No changes or additions were made to the membership criteria of the Advisory Committee following the introduction of the credit reporting provisions in 1990 or following the inclusion of the private sector provisions in 2000.

Functions

43.59 The *Privacy Act* specifies that the Advisory Committee has functions to advise the Commissioner (whether or not requested) on matters relevant to the Commissioner's functions, recommend material for inclusion in guidelines to be issued by the Commissioner, and engage in and promote community education and consultation for the protection of individual privacy, subject to any directions given by the Commissioner.[88]

43.60 The OPC sets out on its website the terms of reference for the Advisory Committee, which are based on the functions set out in the *Privacy Act*. The OPC notes that the terms of reference 'assume a strategic advisory role' for the Advisory Committee and include:

- advising the Privacy Commissioner on privacy issues, and the protection of personal information;
- providing strategic input to key projects undertaken by the Privacy Commissioner;
- fostering collaborative partnerships between key stakeholders to promote further the protection of individual privacy;

87 Explanatory Memorandum, Privacy Bill 1988 (Cth), 4. Previous members of the Advisory Committee have been drawn from the Australian Consumers' Association, the Australian Chamber of Commerce and Industry, the Australian Information Industry Association and the Human Rights and Equal Opportunity Commission.

88 *Privacy Act 1988* (Cth) s 83.

- promoting the value of privacy to the Australian community, business and government; and

- supporting office accountability to external stakeholders.[89]

43.61 In its most recent annual report, the OPC described the Advisory Committee as acting 'as an external reference point that supports the Commissioner in gaining access to the broad views about privacy in the private sector, government and the community at large'.[90] In the past, the Advisory Committee has assisted the OPC by providing strategic advice about such matters as the review of the private sector provisions of the *Privacy Act* in 2004–05,[91] and the 25th International Conference of Data Protection and Privacy Commissioners in 2003–04.[92] The Advisory Committee has also provided input into guidelines developed by the OPC, as well as advice about the OPC's complaints processes and the publication of complaint case notes.[93]

43.62 The Privacy Commissioner can convene such meetings of the Advisory Committee as he or she considers necessary for the performance of the Committee's functions.[94]

Submissions and consultations

43.63 The ALRC asked in IP 31 whether the Advisory Committee performs a useful role with appropriate powers and functions; whether the fields of expertise represented on the Advisory Committee are appropriate; and whether the Advisory Committee, including the fields of expertise, need to be set out in the *Privacy Act*.[95] The ALRC received a number of submissions in response to the first two parts of this question.

43.64 In relation to the general functions and powers of the Advisory Committee, the OPC submitted that it supported the continuation of the Advisory Committee in its current role as an independent advisory body. The OPC considered that the

95 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 6–3.

Committee's powers and functions are appropriate and found that the Committee provides valuable input into policy development and general strategic discussion.[96]

43.65 In contrast, the APF submitted that:

> The Privacy Advisory Committee may perform a useful function 'behind the scenes', but it is almost invisible to the public. Members do not seem to have seen themselves as accountable to the constituencies which might be inferred from the criteria for appointment and have rarely sought to consult with constituencies.
>
> The objectives of the Advisory Committee might be better performed by separate committees representing business, government and consumer interests respectively, with independent secretariats and public reporting requirements.[97]

43.66 In terms of additional functions, the National Association for Information Destruction submitted that the Advisory Committee could have a role in establishing a standard for secure document destruction.[98]

43.67 Stakeholders also commented on the membership criteria of the Advisory Committee. The OPC submitted that the membership criteria should be reviewed and updated to reflect current business, community and government environments. In particular, the OPC expressed strong support for the introduction of an explicit requirement that a health sector representative be included on the Advisory Committee given the community concern regarding health privacy.[99] Another submission went further and suggested there be two designated positions for the health sector: a consumer (from an advocacy organisation) and a practitioner.[100]

43.68 The OPC also suggested that the criteria in s 82(7)(a) be amended to require separately the inclusion of a member with high level experience in industry or commerce *and* a member with experience in public administration or government, rather than combining these categories.[101] The OPC did not give a reason for this recommendation.

43.69 Other suggestions by stakeholders for membership to the Advisory Committee included:

---

96 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

97 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

98 National Association for Information Destruction, *Submission PR 133,* 19 January 2007.

99 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

100 Confidential, *Submission PR 134,* 19 January 2007. The APF's submission to the Senate Legal and Constitutional Reference Committee inquiry into the *Privacy Act* also recommended that a separate position be 'reserved' for a representative of health issues, given the importance of the issue: Australian Privacy Foundation, *Supplementary Submission to the Senate Legal and Constitutional References Committee Inquiry into the Privacy Act 1988 concerning the Privacy Advisory Committee*, 1 March 2005, 3.

101 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

- an information technology security professional;[102]
- a representative from the Institute of Mercantile Agents;[103]
- a representative from the Council of Small Business Organisations of Australia;[104] and
- a privacy advocate.[105]

43.70 The OPC also suggested that the terminology used in the membership criteria—such as requiring a person with extensive experience in 'electronic data-processing'—should be updated to better reflect current data-handling practices.[106] Electronic data-processing is not a term used throughout the *Privacy Act*.[107]

43.71 Two alternative terms that could replace electronic data-processing are 'information technology' or 'information and communication technologies'. The phrase 'technologies' in this context is likely to be too broad and may lose meaning. The term 'information technology' is generally understood to mean 'the use of computers to produce, store and retrieve information'[108] and encapsulates the notion of 'electronic data-processing'.[109] 'Information and communication technologies' is a modern development on 'information technology' and is intended to broaden the term explicitly to include all types of electronic communications. The term has been used to describe how information is 'produced, collected, sorted, filtered, transmitted, communicated, interpreted and stored'[110] and is used by a number of organisations throughout the world, including the European Commission, World Bank, and Organisation for Economic Co-operation and Development.

102 W Caelli, *Submission PR 99,* 15 January 2007.
103 Institute of Mercantile Agents, *Submission PR 101,* 15 January 2007.
104 Ibid.
105 Confidential, *Submission PR 134,* 19 January 2007.
106 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
107 'Electronic data-processing' is in fact only used in s 82(7)(c) of the *Privacy Act 1988* (Cth). 'Data processing' is used once in the *Privacy Act*, in s 27(1)(c). The use of 'processing' has its heritage in the Council of Europe Convention: see *Convention for the Protection of Individuals with Regard to Automatic Processing of Personal Data*, 28 January 1981, Council of Europe, CETS No 108, (entered into force generally on 1 October 1985).
108 *Macquarie Dictionary* (online ed, 2005).
109 The ALRC notes that the OPC website already refers to 'information technology' in describing the range of perspectives on the Advisory Committee: see Office of the Privacy Commissioner, *Privacy Advisory Committee* <www.privacy.gov.au/act/pac> at 31 July 2007.
110 Commonwealth Scientific and Industrial Research Organisation, *Information and Communication Technology Overview* (2007) <www.csiro.au/org/ICTOverview.html> at 31 July 2007.

Options for reform

43.72 There are two main options for reform in this area. The first is to retain the current structure of the Committee, but make any necessary amendments to the membership requirements to reflect contemporary issues and community concerns. The second option is to change the Committee's legislative structure to make it a more flexible, informal body with a more projects or inquiry-oriented role. This could involve changing the appointment process, so that members are not statutory appointees for a set term, but are appointed by the Privacy Commissioner. Instead of mandating membership criteria, the Act could require that the Committee is broadly representative of the general community and give suggestions as to criteria to achieve broad representation. This kind of membership structure would give the OPC flexibility to set up an Advisory Committee with specific expertise to assist with a particular project.

43.73 Examples of this more flexible model are found in the *Human Rights and Equal Opportunity Act 1986* (Cth). Under this Act, the Minister is required to establish at least one advisory committee to perform such functions as the Minister directs, including advising HREOC in relation to the performance of the Commissioner's functions, and reporting to the Minister on certain matters.[111] HREOC itself may also establish advisory committees to advise the Commission, with the approval of the Minister.[112]

ALRC's view

43.74 The Privacy Advisory Committee should continue in its current form, but with some amendments to the membership criteria. As statutory appointees, the members enjoy independence and protection from removal, allowing them to express views without fear or favour. Leaving the members as statutory appointments by the Governor-General insulates the Commissioner from allegations of bias in relation to a particular appointment. The Commissioner, however, may still make recommendations to the appropriate minister for appointments.

43.75 In order to give the Commissioner additional flexibility, however, the ALRC proposes that the Commissioner be given an express power to establish expert panels to assist with specific projects. This is discussed further below.

43.76 In terms of changes to the existing structure of the Privacy Advisory Committee, the ALRC is of the view that, given the significance of privacy in the health sphere and the impact of health privacy on every member of the community, it is appropriate that a health perspective is represented on the Advisory Committee.[113]

---

111 *Human Rights and Equal Opportunity Act 1986* (Cth) s 17(1).

112 Ibid s 17(2).

113 The ALRC notes that under the current criteria, a health representative could be appointed within the ambit of s 82(7)(d). However, it is the ALRC's view that it would be more beneficial to fill this criterion

43.77 At this stage, the ALRC does not believe that it is necessary that the membership criteria in s 82(7)(a) be separated. While the ALRC sees a benefit in having a government *and* industry representative on the Committee, representatives from both government and business can be appointed under the current membership structure. The Act only specifies five categories of members but allows the appointment of six members. Specifying six categories of membership (that is, including the new health category) and allowing for the appointment of seven members in addition to the Commissioner could be used to achieve the same result.

43.78 There are, however, two alternative approaches on this issue that could be adopted. The first is to separate the membership criteria and allow for one appointment per category (that is, specify seven categories and allow for seven members). The second is to separate the membership criteria, which would create seven categories of membership, and allow for the appointment of one member per category plus one member at large—equalling eight members together.

43.79 If the membership category in s 82(7)(a) was separated, the ALRC is of the view that the second option is preferable to the first, as it retains the flexibility to appoint persons beyond the confines of the membership criteria in the Act and allows for the appointment of more than one person to a membership category. The ALRC is concerned, however, that the second option increases the size of the Committee, which may affect the functioning and flexibility of the body itself, and may shift the preponderance of views on the Committee to the regulated entities—that is, to the government, business, health and data-processing sectors. While the Act specifies that a majority of appointed persons cannot be officers or employees of the Commonwealth, there is no such limitation against business or industry views.

43.80 Given the proposed objects of the Act, it is important that the Advisory Committee provide the Commissioner with a balanced range of views from both the regulated entities and from consumer and privacy advocates. Given these concerns, the ALRC's preliminary view is to retain the current compound category in s 82(7)(a).

43.81 In relation to the other membership criteria put forward by stakeholders, the ALRC is of the view that each suggestion could already be addressed under the existing membership criteria. It is important to keep the criteria at a high level, to enable a variety of backgrounds and stakeholders to be represented. If specific expertise is required for a particular project, expert panels could be utilised.

---

with a representative from the social and community welfare sector more generally, and to require, in addition to that member, a further member representing the health sector.

43.82 With regard to terminology, the ALRC's view is that the reference to 'electronic data-processing' in the membership criterion should be replaced with 'information and communication technologies', to reflect more contemporary practices and parlance. The ALRC prefers 'information and communication technologies' to 'information technology', as it is broader and more clearly encapsulates the notion of electronic communications.

Expert Panels

43.83 In order to give the Commissioner flexibility to solicit expertise in undertaking projects or inquiries, the ALRC is of the view that the Commissioner should have the power to convene temporary or standing expert panels. While it is not technically necessary to include such a power in the Act—as the Commissioner could convene such committees already without an express power—it would be consistent with the approach taken with the Privacy Advisory Committee, which is prescribed in the *Privacy Act*. It is also consistent with the approach taken in the *Human Rights and Equal Opportunity Act*.[114]

43.84 The use of expert panels could address some of the suggestions raised by stakeholders about appointing more specific expertise to the Advisory Committee. For example, as noted above, the National Association for Information Destruction submitted that the Advisory Committee could have a role in establishing a standard for secure document destruction, in which case the Association suggests the Committee should include representatives from the secure information destruction industry.[115] In this instance, rather than mandating a permanent representative on the Advisory Committee, a better route would be to create an expert panel with representatives from the document destruction industry to provide expertise to the OPC in developing the standard.[116]

43.85 Expert panels could also be used to assist the OPC in the development of education and guidance materials in relation to new and developing technologies. This is discussed further in Part B of the Discussion Paper.

Proposal 43–4 Section 82 of the *Privacy Act* should be amended to make the following changes in relation to the Privacy Advisory Committee:

(a) require the appointment of a person to represent the health sector;

(b) expand the number of members on the Privacy Advisory Committee, in addition to the Privacy Commissioner, to not more than seven; and

114 *Human Rights and Equal Opportunity Act 1986* (Cth) s 17.
115 National Association for Information Destruction, *Submission PR 133,* 19 January 2007.
116 See Ibid.

(c) replace 'electronic data-processing' in s 82(7)(c) with 'information and communication technologies'.

Proposal 43–5 The *Privacy Act* should be amended to empower the Privacy Commissioner to establish expert panels at his or her discretion to advise the Privacy Commissioner.

Introduction

44.1 This chapter examines the functions vested in the Privacy Commissioner (Commissioner). These functions include powers to oversee the *Privacy Act 1988* (Cth) and to monitor compliance with the Act.[1] The chapter also discusses privacy impact assessments and the Commissioner's functions in issuing public interest determinations and administering the code provisions in the Act.

Oversight powers

44.2 The Commissioner's functions in overseeing the operation of the *Privacy Act* include: giving advice; providing research and monitoring of technological developments; and conducting education. The Commissioner also has oversight functions in relation to tax file numbers and credit reporting.[2]

Advice functions

44.3 The Commissioner has several advisory functions under the *Privacy Act*. These are to:

- Provide advice to a minister, agency or organisation on any matter relevant to the operation of the *Privacy Act*.[3] A related function is to inform the Minister of

1 The Commissioner's complaint handling and enforcement powers are discussed in Chs 45 and 46.

2 The general approach of the *Privacy Act* is to state the Commissioner's 'functions' and give the Commissioner 'power to do all things necessary or convenient to be done for or in connection with the performance of his or her functions': *Privacy Act 1988* (Cth) ss 27(2), 28(2), 28A(2).

3 Ibid s 27(1)(f). See also the equivalent function in credit reporting: s 28A(1)(f).

action that needs to be taken by an agency to comply with the Information Privacy Principles (IPPs).[4]

- Examine any proposal for data-matching or data linkage that may involve an interference with the privacy of individuals or may otherwise affect adversely the privacy of individuals, and to ensure that any adverse effects are minimised.[5]

- Examine any proposed enactment that would require or authorise acts or practices of an agency or organisation that might, in the absence of the enactment, be an interference with the privacy of individuals or which may otherwise affect adversely the privacy of individuals and to ensure that any adverse effects are minimised.[6]

- Make reports and recommendations to the Minister in relation to any matter that concerns the need for, or the desirability of, legislative or administrative action in the interests of individuals' privacy.[7]

- Provide advice to tax file number (TFN) recipients about their obligations under the *Taxation Administration Act 1953* (Cth) and on any matter relevant to the operation of the *Privacy Act*.[8]

- Provide advice to the adjudicator appointed under a privacy code on any matter relevant to the operation of the *Privacy Act* or the relevant privacy code.[9]

44.4 In 2005–06, the Commissioner used her advice functions to prepare 155 advices on significant policy issues. As described in the Annual Report of the Office of the Privacy Commissioner (OPC), the advices included: letters and emails to government departments, agencies and organisations on specific proposals; submissions to public consultation processes and Senate inquiries; advices for guidance material published by the Commissioner; and advices for inclusion in other reports and published documents.[10]

Research and monitoring functions

44.5 Another aspect of the Commissioner's functions in overseeing the *Privacy Act* is undertaking research into, and monitoring developments in, data processing and

computer technology (including data-matching and data linkage) to minimise their adverse effects on the privacy of individuals and to report to the Minister about the results of such research and monitoring.[11] The Commissioner also has the function of monitoring and reporting on the adequacy of equipment and user safeguards.[12]

Education functions

44.6 The Commissioner's oversight functions in relation to education include:

- promoting an understanding and acceptance of the IPPs and National Privacy Principles (NPPs) and of the objects of those principles;[13] and

- undertaking educational programs on the Commissioner's own behalf or in cooperation with other persons or authorities acting on behalf of the Commissioner, for the purpose of promoting the protection of individual privacy.[14]

44.7 The OPC has said that a factor likely to increase 'community confidence that individuals' rights are protected' is 'raising awareness about individuals' privacy rights'.[15] To this end, the OPC provides information through its information hotline and its website (which contains various OPC publications). Awareness of the existence of the OPC's website has increased each year.[16]

44.8 Considerable attention was given to the Commissioner's education power in the OPC review of the private sector provisions of the *Privacy Act* (OPC Review) and the Senate Legal and Constitutional References Committee inquiry into the *Privacy Act 1988* (Senate Committee privacy inquiry). Overall, the submissions acknowledged that education by the OPC plays a vital part in promoting community awareness of privacy laws. It was suggested in several submissions that public awareness be raised, using either one-off or regular campaigns. It was also suggested that sectors of the community with low awareness of privacy rights be targeted, and that campaigns address not only individuals' rights, but also the rights and obligations of organisations.[17]

17 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 107–111. See also Parliament of Australia—Senate Legal and

44.9 Both reviews called for the OPC to be funded adequately. It was said that this would facilitate a shift in focus from complaint handling to education. In the OPC Review, the OPC noted that '[s]ince the implementation of the private sector provisions, the Office has shifted resources from its guidance and advice role to its compliance role to try to better manage and resolve the complaints received'.[18] It recognised, however, that 'organisations need more guidance'[19] and recommended that the Government consider specifically funding the Office to undertake a systematic and comprehensive education program to raise community awareness of privacy rights and obligations.[20]

44.10 Following the OPC Review, the Government made a commitment to provide additional funding to the OPC over the next four years. In response, the OPC has stated that this could

> allow us to respond to calls from business and industry for greater assistance in meeting their obligations under the *Privacy Act*. Following on from recommendations made in my 2005 review of the private sector provisions of the *Privacy Act*, my Office will work closely with business and consumer representatives to develop guidance and educational material to assist organisations and individuals to better understand their rights and responsibilities under the *Privacy Act*.[21]

Submissions and consultations

44.11 The ALRC asked in the Issues Paper, *Review of Privacy* (IP 31) whether the Commissioner's powers to oversee the *Privacy Act* were appropriate and effectively exercised.[22] The OPC submitted generally that the Commissioner's oversight powers are appropriate and should be retained.[23]

44.12 The Office of the Information Commissioner Northern Territory submitted that the OPC's advice on policy and legislative developments must remain a key feature of its operations.[24] Other stakeholders requested more timely advice and assistance from the OPC. The Consumer Credit Legal Centre (NSW) (CCLC) submitted that while the Commissioner's legislative power to provide advice is appropriate, 'its exercise is not always effective nor does it always produce fair outcomes for consumers'.[25] In

particular, the CCLC submitted that any advice given by the Commissioner in relation to any matter relevant to the operation of the Act should be made public, 'in order to ensure the transparency and fairness of OPC's operations'.

44.13 In relation to the research and monitoring function, the OPC submitted that the reference in s 27(1)(c) to 'computer technology' is outdated and 'may inadvertently restrict the operation of this clause which the Office believes is intended to provide for research into technologies with a possible privacy impact, whether or not they are computer-based'.[26] The OPC recommended that the section be amended by replacing 'computer technology' with wording that would encompass all technologies that could possibly impact on an individual's privacy.

44.14 The education function drew the most comment from stakeholders. Several stakeholders commented on the priority of the education function and the desire to see more guidance from the OPC to encourage understanding and compliance with the principles.[27] Stakeholders noted the preventative aspects of education—to reduce the potential for breaches of privacy and 'ill-informed reliance on privacy as a reason for refusing to take particular action'.[28]

44.15 In relation to public education, stakeholders commented on the 'utility of education materials in uplifting public confidence in, and awareness of, the OPC's ability to enforce privacy rights'.[29] Another stakeholder observed that lack of understanding of privacy regulation is often the source of complaints, with more education identified as a way to address this problem.[30] The public forums conducted by the ALRC in this Inquiry suggested low levels of awareness and understanding of privacy laws in the community. The ALRC received many stories of 'BOTPA' ('because of the *Privacy Act*') explanations being given as a reason for refusing a request for information or assistance from an agency or organisation.[31] While the extent to which such explanations are based on a proper understanding and application of the Act, rather than a deliberate excuse to avoid giving information, is not clear,

education may help to increase understanding and lessen the reliance on BOTPA explanations.[32]

44.16 Some stakeholders suggested that industry bodies, schools and other institutions should also bear some responsibility to educate their members, students or constituencies about privacy obligations.[33] It was suggested, for example, that privacy should be taught at medical schools and in intern programs to ensure that medical students are aware of their obligations before they handle personal information about their patients. It was also suggested that human research ethics committees (HRECs), and the relevant health department, should be required to educate their researchers about relevant privacy regulation.[34]

44.17 The National Health and Medical Research Council (NHMRC) commented on the formulation of the education power, noting that the stated purpose of the Commissioner's role in s 27(1)(m) is to promote the protection of individual privacy. The NHMRC submitted that

> education about the *Privacy Act* for all stakeholders should address, in a balanced manner, individual privacy rights, the public benefit to be obtained from the controlled handling of personal information in the absence of consent in appropriate circumstances, the potential tensions between these objectives in some situations and the ways in which such tensions can be resolved in the overall public interest.[35]

44.18 The OPC commented on the importance of education in dealing with technological developments, noting, for example, that 'education of individuals who use the internet will also be important if individuals are to be proactive in protecting their privacy and managing their identities online'. The OPC suggested that the importance of education in dealing with developing technologies should be recognised expressly in s 27(1)(c) or (m), or both.[36]

ALRC's view

44.19 The Commissioner's oversight functions provide important tools to: increase understanding of federal privacy law; contribute a privacy perspective to public debates; and establish dialogue on privacy issues between the OPC and agencies and organisations. These functions enable the Commissioner to be proactive in increasing awareness and understanding of privacy to prevent non-compliance. In the ALRC's view, these functions should be as broad as possible, and resourced effectively.

---

33 See Consumer Credit Legal Centre (NSW) Inc, *Submission PR 160,* 31 January 2007; National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

34 B Armstrong, *Consultation PC 47*, Sydney, 10 January 2007; Menzies School of Health Research, *Consultation PC 108*, Darwin, 27 February 2007. A similar recommendation in relation to genetics education was made in Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), Rec 23–4.

35 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

36 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

44.20 The ALRC proposes one amendment to the Commissioner's oversight functions. The ALRC's view is that, given the serious impact technology can have on invading privacy or enhancing privacy protection, the Commissioner's research and monitoring function should be broad enough to enable it to research and monitor all relevant technologies.[37] Some technologies may not come within an ordinary understanding of 'computer technology', yet still raise privacy issues. Biometrics is one example. The wording of s 27(1)(c) should be broadened to allow for research and monitoring of any pertinent technologies. This can be most easily achieved by removing the reference to 'computer'. This is also consistent with the ALRC's proposal that the *Privacy Act* be technologically neutral.[38]

44.21 While the ALRC is not proposing any reform of the advice function, the ALRC notes the concerns of stakeholders that advice should be timely and public. It is preferable, therefore, that advices (or a generic form of them) are made public if they are relevant to a broader audience and would increase understanding of the *Privacy Act*. It would not be reasonable, however, to require that all advice given by the Commissioner in relation to any matter relevant to the operation of the Act be made public. A minister or an agency may approach the Commissioner for advice on a confidential basis about Cabinet proposals, or an organisation may seek advice on proposals that are commercial-in-confidence or disclose an innovation or new project. Requiring such advices to be made public may discourage agencies and organisations from approaching the OPC, which would undermine the Commissioner's oversight and advisory functions.

44.22 In relation to the education functions, the ALRC notes the concerns raised by the OPC and NHMRC but is not proposing any reform at this stage. As currently worded, the functions provide broad powers for the OPC to educate agencies, organisations and individuals on the content and objects of the privacy principles, the importance of protecting individual privacy, and the rights and obligations provided in the *Privacy Act*.

Proposal 44–1 The *Privacy Act* should be amended to delete the word 'computer' from s 27(1)(c) of the *Privacy Act*.

Summary of proposals made in relation to education

44.23 The ALRC makes a number of proposals in various chapters of this Discussion Paper for further education programs to be undertaken by the OPC. For ease of reference, these proposals are to:

37 The ALRC proposes that the Commissioner use this research and monitoring function to consider technologies that can be deployed in a privacy enhancing way by individuals, agencies and organisations: see Proposal 7–3.

38 See Proposal 7–1.

- provide information to the public concerning the proposed statutory cause of action for invasion of privacy;[39]

- educate individuals, agencies and organisations about specific privacy enhancing technologies and the privacy enhancing ways in which technologies can be deployed;[40]

- provide support to small businesses to assist them in understanding and fulfilling their obligations under the Act, before the proposed removal of the small business exemption from the *Privacy Act* comes into effect;[41]

- develop and publish educational material about privacy issues aimed at children and young people;[42] and

- develop and publish educational material, in consultation with various bodies, that addresses the rules regulating privacy in the telecommunications industry and complaint handling about privacy in telecommunications.[43]

Guidelines

44.24 In a principles-based regime, guidance is often necessary to make the rights and obligations in the Act sufficiently certain and clear.[44] Guidance can be provided through the Commissioner's oversight functions discussed above, and through the power to issue non-binding and binding guidelines under the *Privacy Act* and other legislation.

Power to issue non-binding guidelines

Section 27(1)(e) guidelines

44.25 The Commissioner has the power to prepare and publish guidelines to assist agencies and organisations to avoid acts or practices that may be interferences with, or affect adversely, the privacy of individuals.[45] Section 27(1)(e) guidelines are advisory only and are not legally binding. Guidelines are based on the OPC's understanding of how the *Privacy Act* works and indicate some factors the Commissioner may take into

42 See Proposal 59–2.
43 See Proposal 64–5.
44 J Black, *Principles Based Regulation: Risks, Challenges and Opportunities* (2007) London School of Economics and Political Science, 14.
45 *Privacy Act 1988* (Cth) s 27(1)(e). There is an analogous power to prepare guidelines for the avoidance of acts or practices of a credit reporting agency or credit provider that may or might be interferences with the privacy of individuals: see *Privacy Act 1988* (Cth) s 28A(1)(e).

account when handling a complaint. Nothing in the guidelines limits how the OPC can handle complaints.[46] For example, the Data Matching Guidelines explain:

> While the Privacy Commissioner may take these guidelines into consideration in assessing compliance with the [IPPs], these guidelines aim to encourage a higher standard of regard for people's privacy rights in relation to data-matching than is required by bare compliance with the IPPs and an agency would not necessarily breach the IPPs if it did not adhere to these guidelines.[47]

44.26 The Audit Manual for the IPPs, published by the OPC, also discusses the status of guidelines and provides that 'in any privacy audit, the auditors may, at the discretion of the Privacy Commissioner, examine and report on the level of adherence to any such additional guidelines'.[48] Thus, while guidelines issued under s 27(1)(e) are not determinative, they are often highly persuasive.

Privacy code guidelines

44.27 Specific provision is made for the Commissioner to prepare and publish guidelines regarding privacy codes. These may assist organisations to develop or apply approved privacy codes; relate to the making of, and dealing with, complaints under approved privacy codes; or discuss matters the Commissioner may consider in deciding whether to approve a code or a variation of an approved code.[49] The OPC published *Guidelines on Privacy Code Development* in September 2001.[50] These Guidelines are binding in relation to complaint handling under a code but otherwise are advisory only.[51]

Power to issue binding guidelines

Tax file numbers

44.28 In addition to the Commissioner's powers to issue non-binding guidelines, the Commissioner can also issue 'binding' statutory guidelines under the *Privacy Act* and other Acts. For example, under s 17 of the *Privacy Act*, the Commissioner must issue guidelines concerning the collection, storage, use and security of TFN information.[52]

---

46 Office of the Federal Privacy Commissioner, *Guidelines to the National Privacy Principles* (2001), 26. A similar approach is taken in the Office of the Federal Privacy Commissioner, *Privacy and Public Key Infrastructure: Guidelines for Agencies using PKI to Communicate or Transact with Individuals* (2001), 25; Office of the Federal Privacy Commissioner, *Guidelines on Privacy in the Private Health Sector* (2001), i.

47 Office of the Federal Privacy Commissioner, *The Use of Data Matching in Commonwealth Administration—Guidelines* (1998), 3.

48 Office of the Privacy Commissioner, *Privacy Audit Manual—Part I (Information Privacy Principles)* (1995), 5.

49 *Privacy Act 1988* (Cth) s 27(1)(ea).

50 Office of the Federal Privacy Commissioner, *Guidelines on Privacy Code Development* (2001). The OPC has undertaken to review the Code Development Guidelines: Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 47.

51 See *Privacy Act 1988* (Cth) s 18BB(3)(A)(ii).

52 See also Ibid s 28(1)(a).

These guidelines are made binding by virtue of s 18, which prohibits a file number recipient from doing an act or engaging in a practice that breaches the guidelines.[53]

44.29 The OPC issued Tax File Number Guidelines in 1992 and it publishes an annotated version of the Guidelines (including all amendments as at March 2004) on its website.[54] The Commissioner has a general power to evaluate compliance with TFN guidelines and may investigate an act or practice of file number recipients that may breach the guidelines.[55] File number recipients can also be audited to ascertain whether records of TFN information maintained by the recipient are in accordance with the s 17 guidelines,[56] which are discussed below.

Medical Research Guidelines

44.30 The *Privacy Act* also invests the Commissioner with the power to approve guidelines issued by the NHMRC in relation to medical research and genetic information under ss 95, 95A and 95AA.[57] Once approved, these guidelines are binding.

Other Acts

44.31 The Commissioner is specifically given the power to formulate and issue binding guidelines under s 12 of the *Data-matching Program (Assistance and Tax) Act 1990* (Cth) and s 135AA of the *National Health Act 1953* (Cth).[58]

ALRC's view

44.32 The power to issue guidance is an important part of regulating a principles-based regime such as the *Privacy Act*. The Commissioner's function in 27(1)(e), as currently drafted, is broad enough to enable the Commissioner to issue guidance on a range of matters, particularly when read in conjunction with the Commissioner's powers to issue advice, promote an understanding of the NPPs and IPPs, and undertake education programs. Accordingly, the ALRC is not proposing any reform to the guideline function at this stage.

44.33 The ALRC proposes, however, that the language used in the Act should be changed to reflect more accurately the binding or non-binding nature of the guidelines issued. Non-binding guidelines should continue to be called 'guidelines', as they provide a voluntary guide on ways to achieve the outcome set by the relevant privacy principle, without directly compelling a particular course of action. In contrast, where the guidelines provide rules for compliance, a breach of which constitutes an interference with privacy, then they should be called 'rules'. This is consistent with the

---

53 A breach of these guidelines constitutes an interference with the privacy of the individual: Ibid s 13(b).
54 Office of the Federal Privacy Commissioner, *Tax File Number Guidelines* (1992).
55 *Privacy Act 1988* (Cth) ss 28(1)(f), s 28(1)(b).
56 Ibid s 28(1)(e).
57 These guidelines are discussed further in Ch 58.
58 *Privacy Act 1988* (Cth) s 27(1)(p)–(pa).

ALRC's proposal that the Act be redrafted to achieve greater clarity.[59] This proposal will assist agencies and organisations to distinguish between guidelines that are merely advisory and those that operate as rules.

Proposal 44–2 The *Privacy Act* should be amended to reflect that where guidelines issued by the Privacy Commissioner are binding they should be renamed 'rules'. For example, the following should be renamed to reflect that a breach of the rules is an interference with privacy under s 13 of the *Privacy Act*:

(a) Tax File Number Guidelines issued under s 17 of the *Privacy Act* should be renamed *Tax File Number Rules*;

(b) Medicare and Pharmaceutical Benefits Programs Privacy Guidelines (issued under s 135AA of the *National Health Act 1953* (Cth)) should be renamed the *Medicare and Pharmaceutical Benefits Programs Privacy Rules*;

(c) Data Matching Program (Assistance and Tax) Guidelines (issued under s 12 of the *Data-Matching Program (Assistance and Tax) Act 1990* (Cth)) should be renamed the *Data Matching Program (Assistance and Tax) Rules*; and

(d) Guidelines for National Privacy Principles about genetic information should be renamed *Genetic Information Privacy Rules*.

Personal Information Digest

Background

44.34 The Commissioner has the function under s 27(1)(g) of maintaining and publishing annually, a record of 'the matters set out in records maintained by record-keepers in accordance with clause 3 of IPP 5'. Record keepers, in this context, are agencies. This record is known as the Personal Information Digest (Digest). The matters that must be included in the Digest are the:

- nature of the records of personal information kept by or on behalf of the record-keeper;
- purpose for which each type of record is kept;

---

59 See Proposal 3–2. Note that, as the ALRC proposes to abolish the existing ss 95 and 95A guidelines (see Ch 58), the ALRC has not included these guidelines in Proposal 44–2 (although if they remain, they should be renamed rules consistent with Proposal 44–2). This language is also consistent with the approach taken in *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth) s 229.

- classes of individuals about whom records are kept;
- period for which each type of record is kept;
- persons who are entitled to have access to personal information contained in the records and the conditions under which they are entitled to have that access; and
- steps that should be taken by persons wishing to obtain access to that information.

44.35 Currently, agencies provide their Digest entries to the OPC, which then makes them available on the OPC website.

Submissions and consultations

44.36 In IP 31, the ALRC asked whether the Digest is published in a useful manner, how it could be improved and whether the record itself is useful.[60] All of the submissions received by the ALRC that discussed the Digest recommended that it be changed in some way. For example, the Australian Government Department of Human Services submitted:

> The current arrangements are not very useful and are repetitive to prepare. Most agencies have adopted the use of websites to publish relevant information about record holdings. The websites in most cases contain much more information than was contemplated when the *Privacy Act 1988* was implemented.[61]

44.37 The OPC suggested that the manner of reporting the Digest may need to be changed and that the form of the Digest should be reviewed. In particular, the OPC suggested that it may be more appropriate for agencies to include the information currently reported to the OPC in the Digest entry on their websites or to report the updating of their Digest entry in their annual report, with the OPC overseeing compliance with these requirements. The OPC suggested that the form of the Digest should be reviewed, particularly in light of the OPC's suggestion that agencies develop a comprehensive privacy policy. If such a suggestion were taken up, the OPC considered it 'questionable' whether it would still be necessary for agencies to create a Digest entry.[62]

44.38 Other stakeholders thought the Digest was valuable, but that its utility could be improved. For example, the Australian Federal Police (AFP) submitted that the Digest 'is a useful document to collate the ways in which an agency collects, stores, and provides access to personal information as well as why the agency collects the

62 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

information'.[63] The AFP noted, however, that the Digest is based on a concept of hard copy published reports being the most reliable source of official information, and suggested that there may now be 'other ways for agencies to make this information available to citizens, for example through self publishing on agency websites in line with guidelines issued by the Privacy Commissioner'.[64]

44.39 It was also submitted that the Digest has the potential to provide a valuable research tool for academic inquiry, investigative journalism and Parliamentary scrutiny, but, to date, it has not been used as effectively as it could be.[65] It was suggested that the requirement to prepare a Digest be retained, but that accessibility to the Digest be improved, for example, by publishing it on the internet in searchable form and allowing other publishers to re-publish it with different forms of search facilities added. This would, it was said, 'make it easier to track the extent of use and interconnection of personal information'.[66] It was also suggested that the Commissioner should be given more scope to vary the amount of information an agency is required to disclose, and the power to require businesses to prepare a Digest entry.[67]

ALRC's view

44.40 The ALRC proposes that the general notification principles currently located in the IPPs and NPPs should be consolidated and simplified into a proposed 'Openness' principle.[68] The proposed principle would require an agency to produce a 'Privacy Policy' setting out the type of information currently required in the Digest entry, with some additions. The agency or organisation would be required to take reasonable steps to make its Privacy Policy available to an individual electronically, such as on its website, or in hard copy.[69]

44.41 This proposal, if implemented, would obviate any need for the current requirement to prepare a Digest entry. It would also mean that the corresponding obligation on the Commissioner to prepare the consolidated Digest could be removed.

44.42 The question remains, however, whether the OPC should have any corresponding obligation in relation to Privacy Policies—that is, to prepare and publish on its website a consolidated index of all Privacy Policies. The ALRC's preliminary view is that this is not necessary. It would be resource-intensive for the OPC to establish and maintain the register and it is not clear that there would be a benefit in so

doing, as it is unlikely to increase awareness of privacy policies more generally. As a number of stakeholders pointed out, publication of the Digest on the OPC website is an historical anomaly. In the current environment, individuals seeking an agency's Privacy Policy are more likely to go to the agency's website than look on the OPC website. The key concern is that Privacy Policies should be readily available to members of the public, which would be achieved by the requirement to make the Policies available without charge electronically or in hard copy.

Proposal 44–3 Following the adoption of Proposal 21–1 to require agencies to produce and publish Privacy Policies, the *Privacy Act* should be amended to remove the requirement in s 27(1)(g) to maintain and publish the Personal Information Digest.

Privacy impact assessments

Background

44.43 Privacy impact assessments (PIAs) have been the topic of much discussion in recent reviews of the *Privacy Act* and in privacy commentary more generally. The term 'privacy impact assessment' is not defined in the *Privacy Act*, nor is there a requirement for the Commissioner, or for an agency or organisation, to undertake a PIA. There is, however, a related function vested in the Commissioner, which is to examine and advise on a proposed enactment.[70] While the Commissioner may produce a PIA as a result of such an examination, the term 'privacy impact assessment' has come to refer to a more formalised assessment conducted by the relevant agency or privacy consultant, rather than by the Commissioner.[71]

44.44 This section provides some background on the role of PIAs in a regulatory regime and draws on some international examples. It also considers submissions received by the ALRC on questions asked in IP 31 relating to when a PIA should be prepared and by whom.[72]

Definition

44.45 The OPC suggests that a PIA is an assessment tool that 'tells the story' of the project from a privacy perspective. It describes the personal information flows in a

---

70 *Privacy Act 1988* (Cth) s 27(1)(b). Privacy Commissioners in other Australian jurisdictions have similar powers to examine and advise on the privacy impacts of proposed legislation. See, eg, the *Information Privacy Act 2000* (Vic) s 58(1); *Information Act 2002* (NT) s 86(1)(f); *Information Act 2002* (NT) s 86(1)(f). See also *Human Rights and Equal Opportunity Act 1986* (Cth) ss 11(1)(e), 46C(1)(d); *Disability Discrimination Act 1992* (Cth) s 67(1)(i); *Sex Discrimination Act 1984* (Cth) s 48(1)(f).

71 See, eg, the Office of the Privacy Commissioner, *Privacy Impact Assessment Guide* (2006); New Zealand Government Privacy Commissioner, *Privacy Impact Assessment Handbook* (2007); Office of the Victorian Privacy Commissioner, *Privacy Impact Assessments—a guide* (2004).

72 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Questions 6–6, 6–7.

project and analyses the possible impact on privacy of those flows.[73] Others have suggested a PIA is 'an assessment of any actual or potential effects that the activity or proposal may have on individual privacy and the ways in which any adverse effects may be mitigated'.[74]

44.46 It is suggested that PIAs are a form of proactive regulation that can help prevent privacy intrusive legislation or projects from being implemented. In a principles-based regulatory regime, PIAs can also help 'marry the discretion allowed under the Act with a degree of accountability to the public where a significant privacy erosion will be caused'.[75] In addition, a PIA may also help 'tackle wider privacy issues such as intrusion'[76] and are seen by many as one of the key ways to address the possible privacy impact (whether negative or positive) of new or developing uses of technology.[77]

44.47 The most significant benefits of a PIA are achieved when it is integrated into the decision-making process for the project.[78] It has been suggested that the PIA must take place 'during the development of proposals when there is still an opportunity to influence the proposal'.[79] In this way, a PIA is to be distinguished from a privacy compliance audit. While both are proactive compliance measures, the latter examines the information-handling practices of an auditee 'that are in place at the time, as opposed to future proposals that the auditee might be contemplating'.[80] A PIA, in contrast, focuses on future projects.

Status in Australia

44.48 As noted above, the Commissioner can prepare a PIA when exercising the function of examining and advising on proposed enactments. While the Commissioner can report to the Minister about a proposed enactment and *must* report if directed to do

so by the Minister,[81] the Minister is not required to obtain the OPC's advice in relation to proposed legislation or to act on any recommendations made by the OPC in a report to the Minister.[82] Similarly, there are no requirements in the *Privacy Act* for an agency to undertake a PIA. In the absence of a legislative directive, the OPC has said the incentive for doing a PIA comes from the fact that 'the success of an agency's project will depend in part on it complying with legislative privacy requirements and how well it meets broader community expectations about privacy'.[83]

44.49 To encourage agencies to undertake PIAs, the OPC produced a Privacy Impact Assessment Guide (PIA Guide), which provides detail on the nature, purpose and effect of a PIA. The PIA Guide contains modules for undertaking the PIA process. The PIA Guide notes that, while there is no formal role for the OPC in the development, endorsement or approval of PIAs, the OPC may be able to advise agencies on privacy issues arising throughout the assessment process.[84] The OPC often recommends that a department undertake a PIA as part of its advice on proposed enactments and policy submissions.[85] Departments sometimes conduct PIAs 'in-house' and often hire privacy consultants to conduct the PIA.

44.50 The OPC has not prepared a similar guide for organisations, although the use of PIAs in the private sector was discussed in the OPC Review. It was suggested that organisations should use the PIA process 'to assess and avoid privacy risks inherent in many large scale projects using new technologies'.[86] The OPC noted that it could encourage those that develop new technologies, and those that use such technology, to conduct a PIA for large-scale, high privacy risk projects.[87] Ultimately, the OPC did not recommend that organisations should be *required* to prepare, or obtain, a PIA. The OPC has subsequently noted that 'it considers that the best way for organisations and government agencies to avoid interferences with privacy is for them to use a [PIA] to

81 *Privacy Act 1988* (Cth) s 31. Currently, the relevant Minister is the Attorney-General of Australia: Commonwealth of Australia, *Administrative Arrangements Order*, 21 September 2006 [as amended 30 January 2007], pt 2.

82 The Australian Government Department of the Prime Minister and Cabinet, *Legislation Handbook* (1999), [4.7(h)(vi)] provides that, in relation to legislative matters going before Cabinet, it is expected that the relevant department undertake other consultations in preparing the submission, including 'with the Privacy Commission [sic] if the legislation has implications for the privacy of individuals'.

87 Ibid, 256.

analyse the risks to privacy posed by new projects, technologies or rules and to address those risks before problems occur'.[88]

44.51 The Senate Committee privacy inquiry went further and recommended that the *Privacy Act* 'be amended to include a statutory [PIA] process to be conducted in relation to new projects or developments which may have a significant impact on the collection, use or matching of personal information'.[89] The Australian Government did not agree with the Senate's recommendation, noting that 'the Privacy Commissioner is developing a [PIA] process for use by agencies and considers that at this time a statutory process is not appropriate'.[90]

PIAs in other jurisdictions

Requirements on agencies

44.52 A number of jurisdictions require agencies to prepare a PIA in certain circumstances. The Canadian government was the first federal government to make PIAs mandatory.[91] Under the Canadian Government's Privacy Impact Assessment Policy, all federal departments and agencies must conduct a PIA 'for proposals for all new programs and services that raise privacy issues'.[92] Representatives of the Office of the Privacy Commissioner of Canada (Canadian Privacy Commissioner) must be involved at the earliest possible stage of the development of the PIA, and a copy of the PIA must be provided to the Canadian Privacy Commissioner and published on the internet.[93] The Canadian Privacy Commissioner's role is not to accept or reject projects, but 'to assess whether or not departments have done a good job of evaluating the privacy impacts of a project and to provide advice, where appropriate, for further improvement'.[94]

44.53 Some Canadian provinces also encourage or require PIAs.[95] In addition, the *E-Government Act* in the United States requires that a PIA be undertaken, reviewed by the Chief Information Officer of the agency and, if practicable, published, before an

agency develops or procures a new information system or initiates a new collection of personally identifiable information.[96]

Requirements on organisations

44.54 While there are precedents for requiring agencies to conduct PIAs, the ALRC is not aware of any jurisdiction that requires an organisation to conduct a PIA on new projects or developments. There has been, however, discussion about extending a PIA process to the private sector in the UK. The Office of the Information Commissioner (UK) (UK Information Commissioner) has proposed that PIAs be introduced 'to ensure public confidence in initiatives and technologies which could otherwise accelerate the growth of a surveillance society'.[97] The UK Information Commissioner argued that the introduction of PIAs would 'ensure organisations set out how they will minimise the threat to privacy and address all the risks of new surveillance arrangements before their implementation'.[98]

Submissions and consultations

44.55 In IP 31, the ALRC asked a number of questions about the role of PIAs in privacy regulation.[99] The ALRC received several submissions in response to these questions.

Statutory requirement on agencies

44.56 Several stakeholders expressed support for a statutory PIA process for proposed legislation or agency projects.[100] Others, however, opposed such a requirement.[101] The responses from those supporting a statutory PIA process ranged from support for empowering the Commissioner to carry out PIAs 'for all proposed Commonwealth legislation, or other proposed developments of agencies',[102] to a more qualified requirement for an agency to carry out a PIA where the legislation or project is likely to have an impact or significant impact on privacy. As an example of the latter

approach, the OPC supported the Senate Committee privacy inquiry recommendation that there be a statutory requirement for agencies to undertake a PIA for new projects or legislation that significantly impacts on the collection or handling of personal information.[103] The OPC suggested that, if a mandatory scheme is adopted, it should include a set of criteria to establish when a PIA is required.[104]

44.57 The Office of the Information Commissioner Northern Territory also supported a more qualified statutory requirement to prepare PIAs. It submitted that agencies should be required to consult with the OPC in relation to any legislation or proposal that raises privacy issues, and the OPC should be permitted to 'consider the need for a PIA, discuss the issue with the agency, and direct that an assessment be undertaken if necessary'.[105]

44.58 In contrast, the AFP did not believe that 'legislating to require a privacy impact assessment for the development of Commonwealth legislation is necessary'. It suggested that 'consideration of the impact of a range of competing interests, including privacy, is part of the policy approval and drafting stages of the development of legislation'.[106] The Insurance Council of Australia suggested that privacy impacts would not be relevant in a majority of situations and, where there is a potential privacy issue in relation to the introduction of new legislation or regulation, 'this could and should be simply built into the regulatory impact statement'.[107]

44.59 Numerous stakeholders also argued that imposing a statutory obligation on agencies to prepare PIAs was unnecessary, would be onerous, and is being done when required in any event. For example, the Australian Taxation Office (ATO) argued that requiring a PIA for all projects would impose a significant workload on agencies like the ATO, which handle a large volume of personal information. It submitted that it would favour 'voluntary use of PIAs for appropriate projects'. If a statutory requirement were introduced, the ATO submitted that it should only be for 'projects that will have a significant impact on the collection, use or data matching of personal information'.[108]

44.60 There was also a strong consensus in consultations that a statutory PIA requirement would be difficult to implement. Two main reasons were highlighted: the broad spectrum of circumstances in which privacy will be seen as an issue; and the large amount of personal information handled by agencies. It was also suggested that a

108 Australian Taxation Office, *Submission PR 168,* 15 February 2007.

statutory requirement would be seen as an administrative hurdle to get over rather than facilitating the minimisation of a project's impact on privacy.

Statutory requirement on organisations

44.61 The majority of stakeholders that commented on this issue opposed any requirement on organisations to conduct PIAs.[109] AAMI suggested that 'the law and its regulators are seen to be a stakeholder in any project management process and are therefore included in any stakeholder analysis'. It suggested that there appears to be little value in requiring organisations to prepare PIAs and it would 'simply add expense and another layer of "compliance" whilst the final outcome for customers would be the same (if not somewhat delayed)'.[110] The Australian Government Department of Employment and Workplace Relations (DEWR) submitted that there was 'no compelling case' to require the private sector to undertake PIAs and that, in any event, any organisation that undertakes a project or development will have to comply with the relevant privacy principles.[111]

44.62 The OPC noted that many projects undertaken by organisations would benefit from a requirement that PIAs be conducted during the development and implementation phases of such projects. The OPC did not support, however, imposing a statutory obligation on organisations to undertake PIAs for new projects or developments, believing that 'greater consumer choice in the private sector enables individuals to choose to interact with businesses with good privacy practices'.[112] It suggested instead that organisations should be encouraged to undertake PIAs for large-scale projects involving a high risk to privacy.[113]

44.63 The Office of the Information Commissioner Northern Territory submitted that organisations might benefit from a similar approach to that which it proposed for agencies. While the Information Commissioner noted that this approach would have resource implications for the OPC, it concluded that 'organisations should be encouraged to consult with the OPC in relation to major initiatives, and the option should remain for the OPC to become involved to the extent resources will allow'.[114]

44.64 In contrast, the Australian Privacy Foundation supported a requirement for organisations undertaking 'major personal information handling projects' to prepare

and publish a PIA before the organisation makes the decision to proceed with the project.[115]

Responsibility for conducting the PIA

44.65 In IP 31, the ALRC asked who should be involved in, and bear the cost of, preparing PIAs.[116] The majority of stakeholders suggested that the agency or organisation responsible for the project should prepare (or arrange for a third party to prepare) the PIA.[117] The OPC explained:

> The purpose of doing a PIA is to identify and recommend options for managing, minimising or eradicating privacy impacts. Given that the agency or organisation's compliance with the *Privacy Act* is the responsibility of that agency or organisation, the Office considers that the conduct of any PIA should be the responsibility of the particular agency or organisation.[118]

44.66 The responses in relation to costs seemed to depend on whether the requirement to prepare the PIA was mandatory or voluntary. The Australian Privacy Foundation, which supported a mandatory scheme, submitted that the cost of the assessment should be borne by the proponent of the project.[119] The ATO submitted that the responsible agency generally should bear the cost, but that if the obligation was mandatory, consideration should be given to the resources involved and whether additional funding is required.[120]

Oversight and accountability

44.67 The ALRC also asked in IP 31 who should be entitled to view the results of a PIA, and what role the Commissioner should play in overseeing a requirement to prepare PIAs.[121] A number of stakeholders called for PIAs to be made publicly available.[122] While encouraging the publication of PIAs (such as in the PIA Guide), the OPC acknowledged that PIAs are essentially internal working documents designed to

assist agencies to make good privacy decisions and, therefore, it is critical that the PIA process be 'unfettered by concerns regarding poor publicity'.[123] As such, the OPC appreciated there may be circumstances where agencies or organisations may not wish to publish their PIA in full.[124]

44.68 The OPC suggested that some kind of accountability mechanism should be included in the *Privacy Act* if a statutory requirement for PIAs to be conducted is introduced. This could be achieved by requiring agencies to include a report of PIAs undertaken in their annual report, or giving the Commissioner the function of monitoring PIAs undertaken—for example, by requiring that the Commissioner be provided with an opportunity to comment on PIAs produced under any mandatory requirement.[125] The Office of the Information Commissioner Northern Territory submitted that the OPC should have the power to approve the terms of reference for the PIA and review and comment on the assessment,[126] and the ATO suggested that the Commissioner provide clear guidelines and provide resources to assist agencies as required.[127]

Options for reform

44.69 There is general recognition of the value and benefits of conducting PIAs in relation to projects and developments of agencies, and, to a lesser extent, organisations. As a proactive regulatory tool, PIAs help identify privacy impacts and can prevent future problems. PIAs also help to build privacy compliance into the culture and practices of agencies and organisations, which is consistent with the OPC's overall approach to facilitating compliance with the *Privacy Act*.[128]

44.70 Having regard to those benefits, the ALRC is of the view that PIAs should be given some legislative underpinning in the *Privacy Act*. This could be done by either:

- amending the *Privacy Act* to include a requirement to prepare a PIA for proposed projects and developments that significantly impact on the handling of personal information; or

- encouraging the preparation of PIAs and empowering the Commissioner to direct the preparation of a PIA where the Commissioner thinks a project or

See also Surveillance Studies Network, *A Report on the Surveillance Society* (2006) United Kingdom Government Information Commissioner's Office, [45.1.2].

development is likely to have a significant impact on the handling of personal information.

44.71 In both situations, the Commissioner could review and comment on the PIA produced and could report to the Minister on non-compliance. If necessary, the Commissioner could seek an injunction from the Federal Court to stop a project from being implemented if he or she believed it breached the *Privacy Act*.[129] Both of these options could be restricted to agencies, or be extended to organisations as well.

ALRC's view

44.72 The ALRC's view is that the second option is preferable at this stage. Agencies and organisations should be encouraged to conduct PIAs for new projects and developments, and the OPC should educate agencies and organisations on the value of PIAs and the process involved in conducting a PIA.[130] This encouragement and education should be supported by a power vested in the Commissioner to direct the preparation of a PIA and for the Commissioner to report to the Minister on non-compliance with such a direction. The relevant agency or organisation should prepare (or obtain) the PIA, as compliance with the Act is its responsibility and the project or development is its concern. The OPC should continue to review and provide guidance and advice on the PIA process, to ensure it adequately addresses and resolves privacy issues.[131]

44.73 The ALRC includes organisations in this proposal, as many new projects or developments undertaken by organisations would benefit from being subject to a PIA to ensure that the privacy risks are assessed and adequately managed in the design and implementation of the project. Organisations are often at the forefront of development and utilisation of new and developing technologies. While there may be an element of customer choice involved with organisations, this can be removed where the use of technologies is not disclosed to customers, or where it is so widespread across an industry that most companies of a comparable nature utilise the technology. It is also important that privacy compliance continue to be built into organisational practice, rather than be 'bolted on' at the end.[132]

44.74 A power to direct the preparation of a PIA should not place as large a compliance burden on agencies and organisations as a mandatory scheme, but rather seek to strengthen the existing voluntary regime. It is envisaged that the power to direct

---

129 See *Privacy Act 1988* (Cth) s 98.

130 In relation to terminology, the ALRC continues to adopt the definition of 'project' in the PIA Guide, where it is used to refer to any proposal, review, system, database, program, application, service or initiative that includes the handling of personal information: Office of the Privacy Commissioner, *Privacy Impact Assessment Guide* (2006), 3. The ALRC notes that a project could be a new development or a new policy proposal, and a project may be implemented by legislation or administratively.

131 This is consistent with the approach recommended in B Stewart, 'Privacy Impact Assessments' (1996) 3 *Privacy Law and Policy Reporter* 61.

132 Surveillance Studies Network, *A Report on the Surveillance Society* (2006) United Kingdom Government Information Commissioner's Office, [45.1.2].

would be used primarily in two circumstances. First, it could be used where the OPC currently recommends that a PIA be undertaken, as part of its policy advice on a proposal or bill. Rather than being limited to 'recommending', the OPC would have the flexibility of directing, where appropriate, the agency to prepare the PIA. Secondly, it could be used where there has been some publicity about a project or development, or a complaint, inquiry or tip-off, and the OPC believes the project or development may have a significant impact on the handling of personal information.

44.75 Monitoring compliance with a direction to prepare a PIA should be less onerous and more manageable than monitoring compliance with a mandatory scheme, and the power to report non-compliance to the Minister should have a valuable deterrent effect. As part of the Commissioner's auditing functions, the Commissioner would also be able to assess the extent to which an agency or organisation complies with the voluntary PIA guide, which may alert the Commissioner to keep a closer watch on agencies or organisations that do not appear to be conducting PIAs where appropriate.[133] If a project raised serious privacy concerns, the Commissioner could apply to the Federal Court or the Federal Magistrates Court for an injunction to stop the agency or organisation from implementing the project, pending the preparation of the PIA and the review of that assessment by the OPC.[134]

Guidance

44.76 Consistent with the approach taken with agencies, the ALRC proposes that the OPC produce a PIA guide tailored to the needs of organisations. Such a guide should help educate organisations on the value of a PIA, the process involved, and the assistance that the OPC can give during the process of conducting a PIA. The OPC should also include guidance in the respective PIA guide on what constitutes a 'significant impact on the handling of personal information' and the circumstances in which the Commissioner may exercise the power to direct that a PIA be undertaken. These circumstances could draw on the examples put forward by Blair Stewart,[135] including where: the project or development involves a new technology or the convergence of an existing technology; the use of a known privacy intrusive technology in a new circumstance; or a major endeavour or change in practice that has obvious privacy risks.[136]

44.77 The PIA guide should also clarify the OPC's expectations in relation to preparing PIAs. In particular, there may be value in making it clear that there is a prima facie obligation on agencies and organisations to prepare a PIA for new projects or developments that may have a significant impact on the handling of personal

---

133 The OPC already monitors compliance with voluntary guidelines, such as the Data-Matching Guidelines, even though they are not binding. See Office of the Privacy Commissioner, *Privacy Audit Manual—Part I (Information Privacy Principles)* (1995), 9.

134 See *Privacy Act 1988* (Cth) s 98.

information, and if the agency or organisation decides not to conduct a PIA, it should inform, and justify the decision to, the OPC.[137]

Proposal 44–4 The *Privacy Act* should be amended to empower the Privacy Commissioner to:

(a) direct an agency or organisation to provide to the Privacy Commissioner a privacy impact assessment in relation to a new project or development that the Privacy Commissioner considers may have a significant impact on the handling of personal information; and

(b) report to the Minister an agency or organisation's failure to comply with such a direction.

Proposal 44–5 The Office of the Privacy Commissioner should develop Privacy Impact Assessment Guidelines tailored to the needs of organisations.

Compliance powers

44.78 Regulatory theorists suggest that a critical part of ensuring compliance with a regulatory regime is to monitor and enforce implementation of the regime by the regulated entities.[138] The Commissioner's functions in monitoring compliance with the *Privacy Act* include: conducting audits and examining records; receiving, investigating and resolving privacy complaints; enforcing the Act through determinations, injunctions and federal court proceedings; and determining that certain acts or practices will not be taken to breach the Act where there is a substantial public interest in doing so.

44.79 The Commissioner's complaint handling and enforcement powers are discussed in the next two chapters. This part of the chapter focuses on the Commissioner's auditing functions, including self-auditing and public interest determinations.

137 This is analogous to the approach taken in the Australian Stock Exchange Listing Rule 4.10. This rule requires an entity to disclose the extent to which they have followed best practice recommendations and if it has not followed all recommendations, the entity must identify the recommendations that have not been followed and give reasons for not following them. See Australian Stock Exchange, *Listing Rules—Chapter 4: Periodic Disclosure* (2005) <www.asx.com.au/ListingRules/chapters/Chapter04.pdf> at 31 July 2007, [4.10.3].

Audit functions

Background

44.80 The Commissioner has a number of functions under the *Privacy Act* to audit compliance. The OPC describes an audit as 'a snapshot of personal information handling practices in relation to an agency or organisation program at a certain time and in a particular location'.[139] An audit involves a systematic inspection and review of an agency and organisation, to obtain evidence to enable the Commissioner to assess the extent to which records are maintained in accordance with various provisions of the Act.[140]

44.81 The spot audit and examination functions conferred on the Commissioner are divided between the IPPs, TFN information and credit reporting provisions, and include:

- auditing records of personal information maintained by agencies to ascertain whether they comply with the IPPs;[141]
- auditing particular acts and practices of agencies in relation to personal information, if the acts or practices are prescribed by regulations;[142]
- auditing records of TFN information maintained by file number recipients to ascertain whether they comply with the TFN Guidelines;[143]
- monitoring the security and accuracy of TFN information kept by file number recipients;[144]
- examining the records of the Commissioner of Taxation to ensure he or she is not using TFN information for unauthorised purposes and is taking adequate measures to prevent the unlawful disclosure of such information;[145]
- auditing credit information files maintained by credit reporting agencies and credit reports possessed by credit providers or credit reporting agencies to

ascertain whether they comply with the *Credit Reporting Code of Conduct* and Part IIIA of the *Privacy Act*;[146] and

- examining the records of credit reporting agencies and credit providers to ensure they are not using personal information contained in the files or reports for unauthorised purposes and are taking adequate measures to prevent the unlawful disclosure of such information.[147]

44.82 The number of audits carried out each year by the OPC has 'varied over the life of the *Privacy Act* depending on the nature of privacy complaints and other priorities of the Office'.[148] The OPC notes in its 2005–06 Annual Report that:

> In 2005-06 the Office only undertook audits where it had received specific funding to do so. This is consistent with the approach taken by the Office since 2002-03 when the Commissioner decided to redirect the Office's resources as a result of the significant increase in complaint numbers.[149]

Audits of organisations

44.83 Organisations are subject to audit by the Commissioner under functions associated with the TFN and credit reporting provisions, as discussed above. There is no general power to 'spot audit' the privacy compliance of organisations. If an organisation requests it, however, the Commissioner has power to examine the records of personal information maintained by the organisation, for the purpose of ascertaining whether the records are maintained in compliance with either an approved privacy code or the NPPs, as applicable.[150] As at the date of the OPC Review, the Commissioner had not conducted any audits under this power.[151]

Previous inquiries

44.84 Several stakeholders in the OPC Review and Senate Committee privacy inquiry submitted that the NPPs should be amended to confer an audit power on the Commissioner.[152] One participant in the OPC Review commented that if the Commissioner had audit powers, 'we might be able to convince our boards to comply

[with the *Privacy Act*]'.[153] Others expressed the view that an extended audit power is necessary to maintain public confidence in the Commissioner's role.[154]

44.85 The OPC Review did not, however, recommend that the Commissioner be given the power to audit organisations. While recognising that a private sector audit power may increase community confidence in the efficacy of the *Privacy Act* and give the OPC additional power to identify systemic issues and to monitor responses, the OPC concluded that it would have resource implications and may be a more appropriate role for private consultants to perform.[155] The OPC Review recommended instead that it would 'consider promoting privacy audits' by organisations, such as by providing information on the value of auditing as evidence of compliance in the event of complaints, and by developing and providing privacy audit training.[156] In contrast, the Senate Committee privacy inquiry urged the introduction of OPC private sector auditing powers.[157]

Private sector audits in other jurisdictions

44.86 The Canadian Privacy Commissioner has power to conduct audits of private sector organisations under the *Personal Information Protection and Electronic Documents Act* 1985 (Canada).[158] This Act provides that the Canadian Privacy Commissioner may, on reasonable notice and at any reasonable time, audit the personal information management practices of an organisation if the Commissioner has reasonable grounds to believe that the organisation is contravening particular provisions of the Act.[159]

44.87 The UK Information Commissioner's power to conduct audits on private sector organisations has a similar limitation to that of the OPC—it can only be done with the organisation's consent.[160] The UK Information Commissioner has recently called for stronger powers to allow the Information Commissioner's Office to carry out inspections and audits of organisations without the organisation's consent.[161] The UK Information Commissioner argued that the requirement for consent 'fetters' the power

to conduct audits and inspections and 'limits proactive oversight and the deterrent effect of possible inspection in areas where there may be real risks to compliance'.[162]

Submissions and consultations

44.88 In IP 31, the ALRC asked what powers the Commissioner should have to audit agencies and organisations.[163] Some stakeholders commented that the Commissioner's audit powers were appropriate and an important tool.[164] The OPC considered privacy audits 'are a key method for determining the extent of compliance with the *Privacy Act* and are an important educative tool'.[165] In relation to private sector auditing, submissions either favoured extending the Commissioner's power without limitation (similar to the power to audit agencies) or extending it with some qualification—for example, restricting its use to where there is evidence of some widespread or systemic issues in the organisation or industry.

In support of a general private sector audit power

44.89 A number of stakeholders supported the extension of a general audit power to the private sector.[166] For example, the Australian Privacy Foundation suggested that the audit power should be extended to organisations, 'where reliance on complaints to detect non-compliance is arguably even less effective than in the public sector'.[167] The Centre for Law and Genetics described the audit power as a 'crucial issue' and suggested that:

> If the approach of general guidance principles and industry codes is to have any public credibility and practical effectiveness, the [Privacy Commissioner] must have genuine powers to audit agencies and organisations. As the approach aims to develop a co-operative model, the OPC should have powers that require actions by the agency or organisation to address the problem *before* a mandatory audit. The power to carry out unannounced spot audits should be restricted to serious cases.[168]

In support of a qualified private sector audit power

44.90 Several stakeholders preferred a more qualified private sector audit power—that is, one that can only be exercised following certain triggers. The OPC, while reiterating its concerns about resourcing, noted that the Commissioner's current audit functions 'do not provide the flexibility to identify other areas or practices that may require

particular scrutiny through privacy audits undertaken by the Office'.[169] Accordingly, the OPC suggested that the *Privacy Act* be amended to give the Commissioner a power to audit organisations where the Commissioner has reasonable grounds to believe that the organisation is engaging in practices that: pose new and significant risks to the personal information they hold; or contravene the privacy principles in the Act or a commitment made in response to a complaint or own-motion investigation. A reasonable belief of the first point could be established by community concern regarding the emergence of a new technology in the private sector, such as the use of biometrics. A reasonable belief of the second point could be 'established through further complaints or observance of continuing non-compliant practice following an investigation into a complaint or an own-motion investigation'.[170]

44.91 The OPC noted that its audit activities, while part of a compliance framework, serve primarily an educative function and that, just as there are no sanctions attached to poor privacy practices identified in a credit reporting or TFN audit, it does not propose that sanctions be introduced in respect of an NPP audit.[171] The OPC noted that it

> anticipates that it is likely that an NPP audit power as described would be infrequently used. However, where appropriate, it would allow the Office to expand on its current own motion investigation activities to formally interrogate the general information handling practices of an organisation and work with the organisation to address any privacy risks or ongoing privacy issues identified.[172]

44.92 AAMI and the Investment and Financial Services Association (IFSA) also supported a limited private sector audit power. AAMI submitted that the Commissioner should be able to audit organisations if there have been 'systemic issues identified and the OPC is of the view that the business is continuing to fail to comply with the *Privacy Act*, despite the use of infringement notice/enforceable undertakings'.[173] IFSA submitted that its member organisations are already subject to ongoing regulatory audits by APRA and ASIC and would 'resist the concept of random compliance audits by yet another government body'.[174] IFSA submitted that its industry's history of good levels of compliance in handling personal information, which it says is evidenced by the low level of complaints, suggests that random audits are not necessary. IFSA also stated, however, that it would not object to 'audits based on reasonable grounds such as systemic issues'.[175]

Resourcing

44.93 Some of the stakeholders who commented on the Commissioner's audit power also addressed the related issue of resourcing. There was some consensus that the audit power is valuable (whether or not extended to the private sector) and the Commissioner should be resourced sufficiently to be able to exercise it effectively.[176] Several stakeholders also noted specifically that resourcing would need to be increased if the audit power were extended to the private sector.[177]

ALRC's view

Audit function

44.94 The OPC's audit functions are an important part of its compliance activities. It is one of the few proactive regulatory tools vested in the OPC, in that it allows the Commissioner to monitor an agency or organisation's compliance with the *Privacy Act* before, and in the absence of, evidence of non-compliance, with the aim of preventing such non-compliance occurring in the future. It also allows the Commissioner to identify systemic issues and bring about systemic change, and to use information gathered in an audit to target educational materials and programs.[178]

44.95 In relation to private sector audits, there is some consensus among stakeholders that the Commissioner should have a power to audit organisations to assess compliance with the NPPs. The difference of opinion arises as to when the Commissioner should be able to exercise the power, and, in particular, whether the Commissioner should have a wide or a qualified audit power.

44.96 In the ALRC's view, the real value in audits lies in their proactive nature—they can be used to take a snapshot of the level of compliance in an agency or organisation or across an industry. The presence of an audit power can act as an important preventative measure, as 'the existence of the audit functions and programs encourages organisations subject to the Act to take compliance seriously'.[179] The ALRC's preliminary view, therefore, is that the power to audit organisations should not be restricted to situations where there are reasonable grounds to believe that the organisation is engaging in practices that pose new and significant risks or contravene the privacy principles or a commitment made in a settlement. Rather, the Commissioner should be empowered to spot audit the levels of compliance in

organisations more generally, as she is currently empowered to do in relation to agencies.

44.97 This approach is consistent with the current position of audits on the compliance spectrum—that is, they are considered primarily educative and there are generally no penalties attached to a poor privacy audit (unless there is some evidence of deliberate wrongdoing).[180] It may complicate the overall enforcement approach of the OPC if the OPC could undertake an audit to address situations where there is a reasonable belief that the organisation is engaging in non-compliant acts or practices. The ALRC believes that the Commissioner's own motion investigation power provides a more appropriate mechanism for such situations.

44.98 Audits could also have a role to play following a complaint settlement or determination, or the issuance of a compliance notice.[181] In particular, it may be valuable for the OPC to undertake pre-emptive spot audits to assess whether the organisation is abiding by the terms of the settlement, determination or compliance notice—or to require the organisations themselves to undertake such audits. This is analogous to an undertaking under s 87B of the *Trade Practices Act 1974* (Cth), which may include agreement by the company to have its compliance program independently audited for a number of years and provide the audit report to the Australian Competition and Consumer Commission (ACCC).[182] The ALRC does not believe that auditing should be limited to where the Commissioner believes the organisation is contravening a commitment made in resolution of a complaint or own motion investigation. Such a case may require a more serious response than an educative audit—an investigation could be undertaken or enforcement action could be instituted in the federal courts.

Audit manuals

44.99 If the Commissioner's audit function were expanded to include private sector audits, the ALRC believes that it would be valuable for the OPC to develop an audit manual for organisations (or amend the existing IPP Manual) to provide further detail on the processes involved in an audit. In addition, the audit manuals should clarify when the results of an audit will be used in an educative and collaborative manner, and when they may lead to sanctions. Audit manuals should be updated to reflect the OPC's current expectations as to the levels of compliance to be achieved by agencies and organisations.[183]

---

180 The TFN Manual explains that, if any evidence of deliberate breaches of the Guidelines are detected by the auditors, the matter will be referred to the relevant authority for consideration of further action: Office of the Privacy Commissioner, *Privacy Audit Manual—Part II (Tax File Number Guidelines)* (1995), 4.

181 See Proposal 46–1.

182 Australian Competition and Consumer Commissioner, *Section 87B of the Trade Practices Act: A Guideline on the Australian Competition and Consumer Commission's Use of Enforceable Undertakings* (1999), 7.

183 The ALRC notes that the manuals reflect the Commissioner's expectations at the time the Manuals were published, which may now be out-dated. For example, the Credit Reporting Manual sets out that, as credit

Consolidating audit functions

44.100 Consistently with the ALRC's proposal that the *Privacy Act* be amended to achieve greater logical consistency, simplicity and clarity,[184] the audit functions of the Commissioner should be consolidated. Given the ALRC's proposal to introduce the Unified Privacy Principles (UPPs), audit functions for agencies and organisations could be combined and could include TFN and credit reporting auditing. References to agencies or organisations would include agencies or organisations in their capacity as file number recipients and as credit providers or credit reporting agencies, as applicable.

Proposal 44–6 The *Privacy Act* should be amended to empower the Privacy Commissioner to conduct audits of the records of personal information maintained by organisations for the purpose of ascertaining whether the records are maintained according to the proposed Unified Privacy Principles (UPPs), Privacy Regulations, Rules and any privacy code that binds the organisation.

Self-auditing

Background

44.101 A possible alternative or addition to the Commissioner's power to conduct audits is a requirement on agencies or organisations to undertake self-auditing.[185] The *Corporations Act 2001* (Cth) model of financial reporting and audits was suggested as a possible model. That model includes an obligation on corporations to self-audit, to report periodically to the Australian Securities and Investments Commission (ASIC), and to be subject to audit by ASIC. By analogy, organisations subject to the federal privacy regime could be required to self-audit privacy compliance and, if requested by the OPC, report to the Commissioner on their compliance.[186] The Commissioner could then audit such organisations as the Commissioner chooses, without being required to audit every organisation.

44.102 There is some movement towards self-auditing for privacy in the United States. While some regimes, particularly those relating to the private sector, 'do not

---

reporting provisions have 'only' been in force since 1992, the 'Commissioner has taken the view that credit providers should be given the benefit of the doubt where instances of breach are detected. In any case only in clearly culpable circumstances would further action be taken'. See Office of the Privacy Commissioner, *Privacy Audit Manual—Part I (Information Privacy Principles)* (1995), [1.6.1–1.6.2].

184 See Proposal 3–2.

See also Baycorp Advantage, *Consultation PC 2*, Sydney, 24 February 2006.

186 A stakeholder to the Senate Committee privacy inquiry suggested a 'self-audit-self-regulatory process' as a more efficient way to deal with complaints: Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005), [6.21].

explicitly require the formal conduction and report of an audit, auditing is generally necessary in order to be in full compliance'.[187]

Submissions and consultations

44.103 In IP 31, the ALRC asked whether organisations and agencies should be required to self-audit periodically to ensure and to demonstrate compliance with the *Privacy Act*.[188] Submissions were divided between those in support of a mandatory self-audit scheme and those who opposed such a scheme.

44.104 A number of stakeholders supported a general requirement to self-audit periodically as part of a compliance program,[189] with one suggesting that audit findings be published.[190] Several stakeholders who supported the introduction of self-auditing requirements noted they already conduct these audits periodically.[191] The NSW Disability Discrimination Legal Centre supported a self-audit requirement and stated that 'regular auditing has proved to be a powerful tool in ensuring both awareness of, and compliance with, principles of practice in areas of Equal Employment Opportunity, Freedom of Information, and Occupational Health and Safety'. There was, it said, 'no reason to believe that auditing would not function in the same way in the privacy context'.[192]

44.105 The Fundraising Institute of Australia welcomed the requirement to self-audit privacy compliance 'as it will serve to strengthen the role of the Privacy Principles, as well as guide both business and consumers in their choices of business and transactional interactions'.[193] It noted, however, the difficulty of self-auditing in the complex and multi-layered legislative environment that currently exists and urged strongly that uniform privacy principles be implemented before any legislative requirement to self-audit is introduced. It also suggested that guidelines for self-audits be clear and not overly burdensome.[194]

44.106 On the other hand, the OPC submitted that a self-audit requirement 'may not be the most appropriate way to facilitate better privacy compliance'.[195] While recognising there may be a greater role for the OPC in assisting organisations to

undertake self-audits, it suggested that a mandatory scheme may put a disproportionate compliance burden on businesses that are not significant data-holders. It would also require monitoring by the OPC, which, given the huge number of organisation and agencies that are subject to the *Privacy Act*, would have intensive resource implications. For these reasons, the OPC considered that it would be more appropriate and efficient for a targeted private sector audit function to be introduced in the *Privacy Act* rather than a requirement to self-audit.

44.107 Several stakeholders argued that there was no evidence to indicate systemic problems with compliance that would justify introducing a requirement to self-audit.[196] These stakeholders also pointed to the significant cost of auditing, with one suggesting that 'any benefit gained from auditing procedures is disproportionate to the burden placed on organisations'.[197] Stakeholders were more supportive of the OPC Review's suggestion that the OPC provide information to organisations about the value of auditing.[198]

44.108 Some stakeholders discussed the possibility of OPC recognition for good compliance with the *Privacy Act*, similar to the idea of the privacy logo raised in the OPC Review.[199] For example, while not supporting a legislative requirement to self-audit, Telstra submitted that it would support action on the part of the OPC to recognise organisations that have taken significant steps to comply with their privacy obligations, for example, by way of an OPC 'seal of approval' that could be used by an organisation on its website.[200] Other stakeholders suggested that the OPC could provide a user-pays audit service whereby organisations that are found to comply can get a 'tick in the box' for good compliance.[201] An alternative suggestion was to establish a certification program, where self-auditing and spot auditing are part of the certification process.[202]

ALRC's view

44.109 The ALRC agrees with the comments made by the Fundraising Institute of Australia that instituting a self-audit requirement at this time would be premature. Before such a requirement can be considered, there needs to be uniformity in the privacy regimes across Australia.[203]

---

201 D Giles, *Consultation PC 6*, Sydney, 2 March 2006.

202 National Association for Information Destruction, *Submission PR 133,* 19 January 2007.

203 See the ALRC's proposals in this regard: Proposals 4–1, 4–2, 4–3, 4–4, 4–5, 4–6.

44.110 The ALRC is also concerned that a requirement to self-audit may only improve levels of compliance if results are reported and the OPC has the time and resources to monitor self-audit reports produced and conduct spot audits to verify the self-auditing process. This would place a large compliance burden on agencies and organisations, and require significant use of OPC resources. It would also be particularly onerous for small businesses, if the ALRC's proposal to abolish the small business exemption were implemented.[204]

44.111 For these reasons, the ALRC's preliminary view is that agencies and organisations should not be required to self-audit and report on privacy compliance. The OPC should continue, however, to educate agencies and organisations on the value of self-auditing, including to ensure compliance with the proposed 'Openness' principle.[205] The OPC should also clarify situations where it will regard a self-audit policy as a reasonable step to take to ensure the protection of personal information held, in compliance with the proposed 'Data Security' principle.[206]

Functions under other Acts

Background

44.112 In addition to the functions enumerated in the *Privacy Act*, the Commissioner has functions under other legislation.[207] In summary, these functions are to:

- Issue the *Data-matching Program (Assistance and Tax) Guidelines* and to investigate an act or practice that may breach the Guidelines or Part 2 of the *Data-matching Program (Assistance and Tax) Act 1990* (Cth).[208]

- Issue the *Medicare and Pharmaceutical Benefits Programs Privacy Guidelines* and to investigate an act or practice that may breach the guidelines.[209]

- Monitor compliance with the record keeping requirements under Part 13 of the *Telecommunications Act 1997* (Cth).[210] The Commissioner must also be consulted about industry codes and standards that deal with privacy issues

---

204 See Proposal 35–1.

205 In particular, self-auditing can help agencies and organisations ensure that they have an adequate Privacy Policy in place. See also Ch 21. A similar suggestion was made in Veda Advantage, *Submission PR 163,* 31 January 2007.

206 See Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

207 These functions are set out in more detail in Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), [6.66]–[6.75].

208 Issued pursuant to *Privacy Act 1988* (Cth) s 27(1)(p) and *Data-matching Program (Assistance and Tax) Act 1990* (Cth) s 12(2). These replaced the interim guidelines set out in *Privacy Act 1988* (Cth) sch 2. The current guidelines came into effect on 14 April 1997.

209 Office of the Federal Privacy Commissioner, *Medicare and Pharmaceutical Benefits Programs Privacy Guidelines: Issued under Section 135AA of the National Health Act 1953* (1997), 2–3.

210 *Telecommunications Act 1997* (Cth) s 309.

pursuant to Part 6 of the *Telecommunications Act*[211] and must be consulted before the Australian Communications and Media Authority (ACMA) enforces an industry code relating to a matter dealt with by the NPPs or an approved privacy code.[212]

- Investigate and determine complaints about breaches of the spent convictions scheme in Part VIIC of the *Crimes Act* and to assess applications for complete or partial exclusions from the requirements of the scheme.[213]

Submissions and consultations

44.113 In IP 31, the ALRC asked whether all the Commissioner's functions be consolidated in the *Privacy Act*.[214] All stakeholders who commented on this issue were supportive of consolidation.[215] For example, the OPC noted that, consistent with its argument that the *Privacy Act* be restructured to take a more logical format to assist the ease of use for the reader, it supported the consolidation of the Commissioner's functions into one section of the Act, including where the functions are presently under other legislation.[216]

ALRC's view

44.114 Consistently with the ALRC's proposal that the *Privacy Act* should be redrafted to achieve greater logical consistency, simplicity and clarity,[217] the ALRC believes it would add transparency to the role of the OPC to list all of the OPC's functions in the *Privacy Act*, including those under other legislation. Ideally, this would be achieved by amending the *Privacy Act* to list all of the Commissioner's functions as they currently stand, and ensuring that any new legislation that confers powers and functions on the Commissioner also consequentially amends the list.[218]

---

211 Ibid ss 117(1)(j), 117(1)(k), 118, 134. In 2005–06, the Privacy Commissioner was consulted on 12 Australian Communications Industry Forum codes developed pursuant to the *Telecommunications Act 1997* (Cth): Office of the Privacy Commissioner, *The Operation of the Privacy Act Annual Report: 1 July 2005–30 June 2006* (2006), [1.6.1].

212 *Telecommunications Act 1997* (Cth) ss 121, 122.

213 *Crimes Act 1914* (Cth) ss 85ZZ, 85ZZC.

214 See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 6–11.

215 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007; Fundraising Institute—Australia Ltd, *Submission PR 138,* 22 January 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007; Institute of Mercantile Agents, *Submission PR 101,* 15 January 2007. It was also suggested that the Commissioner's functions be listed in a separate schedule to the Act: Office of the NSW Privacy Commissioner, *Submission PR 193,* 15 February 2007.

216 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

217 See Proposal 3–2.

218 An example of such a provision can be found in the *Australian Securities and Investments Commission Act*, which sets out a list of Acts which confer functions and powers on ASIC (in addition to the functions set out in the ASIC Act itself): *Australian Securities and Investments Commission Act 2001* (Cth) s 12A(1).

44.115 The ALRC recognises, however, that with the pace of change in developing and amending legislation, it may not be feasible to expect these consequential amendments to be made. A practical solution may be for the OPC to maintain a list of all the Commissioner's functions in a clearly marked place on its website, and update that list where a new function is conferred or an existing one is changed or removed. The ALRC notes that the OPC already maintains a list of 'Related Legislation' under which the Commissioner has responsibilities.[219] This list could be enhanced by specifying in more detail the functions vested in the Commissioner under the respective Acts, including references to the relevant sections, and in all cases including a hyperlink to the legislation.[220]

Proposal 44–7 The Office of the Privacy Commissioner should maintain and publish on its website a list of all the Privacy Commissioner's functions, including those functions that arise under other legislation.

Public interest determinations

Background

44.116 The Commissioner has the power to make a determination that an act or practice of an agency or organisation, which may otherwise breach an IPP, NPP or approved privacy code, should be regarded as not breaching that principle or privacy code while the determination is in force. Such a determination is called a 'public interest determination' (PID) and is issued under Part VI of the *Privacy Act*.[221]

Nature of determinations

44.117 A PID can be made if the public interest in an agency or organisation doing an act or engaging in a practice which breaches or may breach an applicable IPP, NPP or code provision outweighs *to a substantial degree* the public interest in adhering to the IPP, NPP, or code provision.[222] A PID made by the Commissioner in relation to

---

219 See Office of the Privacy Commissioner, *About the Office* <www.privacy.gov.au/about/> at 30 July 2007.

220 This is consistent with the approach taken on the Federal Court of Australia website, which lists all Acts that confer jurisdiction on the Federal Court, with hyperlinks to the full text of the consolidated Act: Federal Court of Australia, *Acts which Confer Jurisdiction (as at 30 June 2006)* <www.fedcourt.gov.au/aboutct/aboutct_jurisdiction_acts.html> at 31 July 2007.

221 There are similar instruments in other Australian jurisdictions: see *Information Act 2002* (NT) s 81; *Privacy and Personal Information Protection Act 1998* (NSW) s 41. As at 1 July 2007, there were nine public interest determinations registered, dated from September 1989 with the most recent determination dated October 2002. There are no current temporary public interest determinations: Office of the Privacy Commissioner, *Public Interest Determinations* <www.privacy.gov.au/act/publicinterest/index.html> at 31 July 2007.

222 *Privacy Act 1988* (Cth) s 72(1)–(2). Emphasis added.

organisations (but not agencies) can be given general effect so that it covers all organisations in respect of that act or practice.[223]

44.118 The *Privacy Act* sets out a detailed process for receiving and application for, consulting on, and issuing a PID. The OPC has issued non-binding guidelines to assist those considering or making applications for a PID,[224] and 'strongly encourages' agencies and organisations to discuss matters with the OPC before making an application.[225]

Temporary public interest determinations

44.119 The Commissioner also has the power to issue a temporary public interest determination (TPID). A TPID has the same effect as a PID but is limited in duration to a maximum of 12 months.[226] The Commissioner can make a TPID in relation to an act or practice of an agency or organisation that is the subject of an application for a standard PID where the application raises issues that require an urgent decision.[227] The Commissioner can give a TPID in respect of an act or practice of an organisation general effect, so that it applies to other organisations.[228]

Submissions and consultations

44.120 In IP 31, the ALRC asked whether the Commissioner's powers to make PIDs and TPIDs were appropriate and administered effectively.[229] Most stakeholders submitted that the powers are appropriate,[230] with the OPC suggesting that they provided 'necessary flexibility' to respond to situations where 'the operation of the high level privacy principles in the *Privacy Act* may be inconsistent with the public interest'.[231]

44.121 The Australian Privacy Foundation found that the powers to make PIDs are generally appropriate but have not been used often.[232] Other stakeholders noted

231 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007. Similar comments on the benefits of PIDs were made in Australian Federal Police, *Submission PR 186,* 9 February 2007; Australian Government Department of Human Services, *Submission PR 136,* 19 January 2007; Office of the Information Commissioner (Northern Territory), *Submission PR 103,* 15 January 2007.

232 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007. The limited use of PIDs was also noted in Australian Federal Police, *Submission PR 186,* 9 February 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007; I Turnbull, *Submission PR 82,* 12 January 2007.

problems with the process of getting a PID. The Office of the Information Commissioner Northern Territory considered that the OPC should be given 'greater flexibility in the process to be adopted prior to a determination' and that Part VI could be simplified significantly.[233] The Insolvency and Trustee Service Australia stated that the PID process 'appears to be cumbersome and there does not appear to be much guidance'.[234] The Australian Privacy Foundation also noted the significant consultation and delay involved in getting a PID, but concluded that this was 'appropriate given that they have the effect of weakening the level of privacy protection'.[235] It suggested, however, that the Commissioner needs 'to be mindful of the burden which detailed PID consultations place on unfunded consumer organisations'.[236]

44.122 The OPC noted that it lacks any discretion under the Act to dismiss an application for a PID or decline to consider it. This means that once an application is made to the OPC, it must embark on the lengthy consultation process set out in the Act. The OPC submitted that 'as such, there is a risk that an application could be made frivolously or vexatiously or where there is clearly no merit and the Commissioner would then be bound to undertake full consideration of the matter'. The OPC recommended that the Act be amended to require an applicant to consult with the OPC before making an application or give the Commissioner a discretion not to consider an application if it is clearly of no merit. The OPC noted that either decision would be subject to judicial review.[237]

ALRC's view

44.123 The ALRC does not propose any reform to the public interest test for the making of a PID or TPID at this stage. The ALRC is, however, proposing reform to the parallel test used in relation to medical research. Under those provisions, where research may breach the IPPs or NPPs, the medical research guidelines provide that the research must be approved by a HREC.[238] Before approving a particular research proposal under the guidelines, HRECs are required to consider whether the public interest in the research substantially outweighs the public interest in the protection of privacy. In Chapter 58, the ALRC proposes that this test should be changed to whether the public interest in the research *outweighs* the public interest in maintaining the level of privacy protection provided by the IPPs and NPPs.

44.124 The ALRC does not propose that a similar change be made to the PID test. There are significant differences between a PID and the approval of a research proposal by an HREC. PIDs have the potential to reduce the protection provided by the

privacy principles across broad sectors for significant periods of time. In contrast, approval by an HREC is limited to specific research activities for the duration of those activities.

44.125 In relation to the process involved in issuing a PID, the ALRC acknowledges that the *Privacy Act* provisions are more prescriptive than their counterparts in the states and territories. The ALRC recognises that it is a resource-intensive process to undertake where an application clearly has little or no merit, or is frivolous, vexatious or misconceived—for both the OPC and for consumer and privacy groups that contribute to the consultation process. Accordingly, the ALRC's view is that the *Privacy Act* should be amended to give the Commissioner discretion to decline to accept an application for a PID where the Commissioner is satisfied that the application is frivolous, vexatious, misconceived or lacking in merit. This proposal would set a high standard for dismissing an application outright, and should operate to encourage applicants to discuss their applications with the Commissioner before submitting them, consistent with the PID guidelines. The ALRC also notes that any decision to refuse to accept an application would be subject to judicial review.

Proposal 44–8 The *Privacy Act* should be amended to empower the Privacy Commissioner to refuse to accept an application for a public interest determination where the Privacy Commissioner is satisfied that the application is frivolous, vexatious, misconceived or lacking in merit.

Privacy codes

Background

44.126 When bringing organisations within the ambit of the *Privacy Act*, Parliament decided to adopt a co-regulatory approach. It established a framework in which organisations are able to develop specialised codes for the handling of personal information which, when approved, replace the NPPs.[239] This approach was 'designed to allow for flexibility in an organisation's approach to privacy, but at the same time, guarantees consumers that their personal information is subject to minimum standards that are enforceable in law'.[240]

Commissioner's powers in relation to codes

44.127 Part IIIAA of the *Privacy Act* sets out provisions on privacy codes. The Commissioner's powers regarding privacy codes are generally to:

239 Ibid s 16A. The code may also cover exempt acts or practices: s 18BAA.

240 Office of the Federal Privacy Commissioner, *Guidelines on Privacy Code Development* (2001), 16. See also the comments made in the Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), 19.

- approve privacy codes and variations of approved privacy codes and to revoke those approvals;[241]

- review the operation of approved privacy codes;[242]

- prepare and publish guidelines about development, approval and variation of privacy codes, and about complaint handling processes under codes;[243]

- perform functions and exercise powers conferred on an adjudicator under an approved privacy code where the Commissioner has been appointed as the independent adjudicator under that code;[244] and

- consider applications for review of determinations of adjudicators (other than where the Commissioner is the adjudicator) in relation to a complaint.[245]

Requirements for codes

44.128 The content of a code must meet set standards. In particular, a code must incorporate all the NPPs or set out 'obligations that, overall, are at least the equivalent of all the obligations set out in those Principles'.[246] Subscription to a code is voluntary. Codes must specify the organisations to which they apply, and may be approved even where they apply for a limited period or to a specified activity or industry sector.[247] If the code sets out procedures for making and dealing with complaints, these processes must comply with the Commissioner's guidelines and the prescribed standards.[248]

44.129 Codes are legislative instruments under s 5 of the *Legislative Instruments Act 2003* (Cth). A privacy code approved under Part IIIAA is not, however, subject to disallowance by Parliament.[249] There are currently three codes listed on the Register of Approved Privacy Codes found on the OPC's website and two code applications currently being considered by the OPC.[250]

Note that an approval of a variation of a privacy code and a revocation of an approval of an approved privacy code, or revocation of a variation of an approved privacy code are also nominated as legislative instruments that are not subject to disallowance: cls 8A, 8B.
250 Codes currently in operation are the Market and Social Research Privacy Code, administered by the Association of Market Research Organisations; the Queensland Club Industry Privacy Code, administered by Clubs Queensland; and the Biometrics Institute Privacy Code, administered by the Biometrics Institute. There was a fourth code approved by the Privacy Commissioner (the General Insurance Information Privacy Code), revoked on 30 April 2006. Code applications currently being considered by the OPC are the Australian Casino Association Privacy Code and the Internet Industry

Code development process

44.130 Before the Commissioner can approve a code, he or she must be satisfied that members of the public have been given an adequate opportunity to comment on a draft of the code.[251] This requirement for public consultation is just one part of the process involved in developing a code. The Guidelines on Privacy Code Development (Code Guidelines) issued by the OPC in 2001 set out the detailed process involved in making a privacy code, including requirements in relation to NPP equivalence, explanatory material, coverage, voluntary membership, code review and drafting standards. In deciding whether to approve a privacy code, the Commissioner may consider the matters specified in the Code Guidelines.[252] Following various comments from stakeholders about the complex and costly code approval process, the OPC Review recommended that the Office review the Code Guidelines with a view to simplifying them.[253]

Binding Codes

44.131 The Commissioner cannot initiate a privacy code and cannot make it binding on organisations that do not consent to be bound by the code. The issue of binding codes was discussed in detail in the OPC Review and the Senate Committee privacy inquiry. In the former, stakeholders submitted that the Commissioner should have power to formulate and impose binding codes even where an organisation does not consent to being subject to a code. It was argued that this would be one way of solving systemic issues in privacy compliance.[254] Although support for this proposition was not universal, the OPC recommended that the Australian Government consider amending the *Privacy Act* to give the Commissioner power to make binding codes and suggested a number of models for the power, as discussed below.[255]

44.132 The Senate Committee privacy inquiry also considered binding codes, and noted the explanation given by the Privacy Commissioner on the difference between privacy codes approved under Part IIIAA and the OPC Review's proposal for binding codes:

> The idea of the binding codes that we have suggested is to come up in other areas where perhaps they were not going to be voluntary. The NPP codes are developed on

> a voluntary basis. The ones that were binding could possibly be done for technology, or for an industry that was not working as well—perhaps the tenancy database area.[256]

44.133 The New Zealand Privacy Commissioner has the power to issue binding codes of practice that become part of the law.[257] The Codes may modify the application of one or more of the information privacy principles by prescribing standards that are more stringent or less stringent than the standards prescribed by the principle, or by prescribing how any one or more of the principles are to be applied, or are to be complied with.[258] The Codes may modify the operation of the Act for specific industries, agencies, activities or types of personal information.[259] Proposals for issuing a code can be made by a body representing the interests of a particular class of agency or industry or by the Privacy Commissioner.[260]

Prescribed industry codes under the Trade Practices Act

44.134 One of the models put forward by the OPC for a binding code power was Part IVB of the *Trade Practices Act 1974* (Cth) (TPA). Under the TPA, the Minister has the power to prescribe an industry code of conduct in the regulations.[261] The regulations declare the industry code to be a mandatory industry code or a voluntary industry code. A prescribed mandatory code of conduct is binding on all industry participants.[262] The Act makes the codes enforceable by prohibiting a corporation, in trade or commerce, from contravening an applicable industry code.[263]

44.135 At a practical level, formal proposals for TPA codes are initiated at the ministerial level, 'following representations from industry participants, consumers or government authorities about problems in a particular industry'.[264] As the regulator under the TPA, the ACCC is responsible for promoting compliance with codes by providing education and information and, where necessary, by taking enforcement action. Since introducing these provisions in 1998, three mandatory codes of conduct have been prescribed under the TPA.[265]

Industry codes and standards in the Telecommunications Act

44.136 Another model put forward by the OPC was Part 6 of the *Telecommunications Act 1997* (Cth). Under this Act, bodies and associations that represent sections of certain industries may develop industry codes, which may be registered by ACMA. Compliance with the code is voluntary unless otherwise directed by ACMA.[266] In addition, ACMA can request a body or association to develop an industry code.[267] If the request is refused or the code prepared following a request is not registered by ACMA, or if an existing code is deficient, ACMA may determine an 'industry standard'.[268]

44.137 In making an industry standard, ACMA must be satisfied that it is necessary or convenient for it to determine a standard in order to provide appropriate community safeguards in relation to the matter, or otherwise regulate adequately participants in that section of the industry.[269] Compliance with an industry standard is mandatory; each participant in the section of an industry to which the standard applies must comply with the standard.[270] Breach of the standard is subject to a civil penalty and ACMA may issue a formal warning if a person contravenes an industry standard registered under Part 6.[271] An industry standard is a disallowable instrument and the Act specifies that ACMA must undertake public consultation on industry standards, and must also consult with consumer bodies and relevant regulators.[272]

Binding guidelines

44.138 A potential subset of binding codes, or an alternative to them, is the concept of binding guidelines. The benefits of giving the Commissioner a general power to issue binding guidelines was discussed in the OPC Review. It was suggested that such a power 'could be a useful tool in contexts where the Office becomes aware of systemic issues and wishes to issue general, but binding guidance to ensure that all organisations comply with them'.[273] The guidelines

> could address aspects of the NPPs as they are applied in specific contexts, for example, steps to be taken in a particular industry sector to ensure personal information is accurate, complete and up to date. They could overcome uncertainty in application of NPPs in particular situations. It would also benefit consumers to have a more specific idea of their rights.[274]

Submissions and consultations

44.139 The ALRC asked a series of questions in IP 31 about privacy codes, including whether the provisions for approving privacy codes are appropriate and effective, whether privacy codes are an appropriate method of regulating and complying with the Act, why have they been so little used, and whether the Commissioner should have the power, on his or her initiative, to develop and impose a binding code on agencies or organisations.[275] The ALRC also asked for views on whether the Commissioner should have power to issue binding guidelines, and if so, in what circumstances.[276]

Existing code provisions

44.140 The OPC reiterated its conclusion from the OPC Review that, 'given the lack of take up in codes and the revocation of the only code that established its own complaint handling process, it is reasonable to conclude that the code making provisions have not been highly successful in their current form'.[277] The OPC raised several issues with codes, one being that there is tension between the concept of national consistency and industry privacy codes, in that a proliferation in industry codes may increase the complexity and fragmentation of privacy regulation for individuals, organisations and agencies. The OPC also noted that it had not derived any significant efficiency benefits from codes, as the Commissioner remains the complaint-handling body. This in turn raises the risk that the OPC's compliance role will become increasingly complex and cumbersome, as complaint staff will have to apply different sets of principles for different complaints.

44.141 The OPC also noted that despite its recommendation that the Code Guidelines be simplified, the code approval process is likely to continue to be 'lengthy and potentially complicated' given that it must assess whether the code provisions offer an equivalent protection to the NPPs. The OPC did not, however, support the removal of the equivalence requirement or a model under which codes would be able to derogate from, or waive compliance with, the principles. It nominated the PID mechanism as the more appropriate process to deal with applications to waive NPPs in certain circumstances.[278]

44.142 Given these concerns, the OPC suggested that 'there is strong argument to amend the code provisions in the interests of efficiency and national consistency'. The OPC proposed two ways to achieve this. The first was to give the Commissioner discretion to decline to consider a proposal for a code where there is little or no public interest in code development. Public interest in this situation would involve weighing up the need for a code against the impact on national consistency and the costs involved. Secondly, codes could operate in addition to the privacy principles rather than replacing the principles, similarly to the *Credit Reporting Code of Conduct*. This

277 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
278 Ibid.

would mean that privacy principles would apply as a base standard across the community (supporting national consistency) and the code would then provide specific and binding guidelines on how the NPPs should be applied in particular sectors. The OPC gave the example of a real estate industry code that could specify the types of information that could be considered, under NPP 1.1, as 'necessary' to collect in a tenancy application process.[279]

44.143 The NHMRC also considered the tension between codes and national consistency. It expressed concern that the 'current provisions for voluntary codes add (unhelpfully) to the complexity of the federal privacy regulatory regime'.[280] The NHMRC was particularly concerned about codes that apply horizontally rather than vertically.

> If organisations delivering health care and conducting health and medical research subscribed to such a code, they would be required to comply with additional and/or different regulatory requirements covering only a proportion of their activities. We consider that this creates a significant disincentive for such organisations to subscribe to voluntary codes that apply horizontally.[281]

44.144 Other stakeholders commented more generally on the Commissioner's code-making powers. The Australian Privacy Foundation noted that while the code-making provisions are 'potentially useful', it is not surprising they have been so little used as code making involves a significant commitment of resource from a code's proponent with little benefit.[282] The Foundation submitted that it would helpful to extend the code provisions to apply to agencies and noted that this would allow the Biometrics Code to be enforced against any agencies that adopted it.[283] The Foundation also submitted that codes could prove useful in interpreting the application of privacy principles in the context of specific sectors or technologies.[284] As applications from organisations would be unlikely, the Australian Privacy Foundation considered that the Commissioner should have the power to initiate code development.[285]

44.145 Several other stakeholders supported a continuation of the co-regulatory approach.[286] For example, DEWR supported the maintenance of a non-prescriptive approach to privacy regulation, noting that the 'ability for organisations and industry sectors to develop their own privacy codes is a key element of the flexibility inherent

---

279 Ibid.
280 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

282 The onerous costs of code development were also noted in other submissions: eg, Australian Direct Marketing Association, *Submission PR 298,* 29 June 2007; Institute of Mercantile Agents, *Submission PR 101,* 15 January 2007.
283 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.
284 See also Australian Direct Marketing Association, *Submission PR 298,* 29 June 2007.
285 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.
286 Australian Government Department of Employment and Workplace Relations, *Submission PR 211,* 27 February 2007; Fundraising Institute—Australia Ltd, *Submission PR 138,* 22 January 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007.

in the current *Privacy Act'*.[287] Similarly, the Centre for Law and Genetics supported the continuation of a co-regulatory model, but submitted that the process for developing, approving and implementing privacy codes must be improved. The Centre also suggested that the OPC must be given greater authority to ensure that the code side of the co-regulatory model works, with strengthened enforcement provisions.[288]

Binding codes and guidelines

44.146 In relation to binding codes and binding guidelines, the OPC reiterated its recommendation from the OPC Review that it 'be provided with the power to make binding codes as a component of a more robust compliance regime that is responsive to arising privacy issues'.[289] It submitted that the code-making power could be based on the 'prescribed industry code' model in Part IV of the TPA or the 'prescribed standard' model in Part 6 of the *Telecommunications Act*, and it would:

> - Provide the Commissioner with an effective and efficient means of responding to recurrent privacy issues within a particular sector and thereby create a more level playing field among organisations, and ensuring that conscientious organisations are not commercially disadvantaged
> - Provide an opportunity to give clear guidance for individuals and organisations regarding how the *Privacy Act* applies in particular circumstances
> - Provide the *Privacy Act* with sufficient flexibility to respond to new and emerging privacy issues, including those that relate to technologies …[290]

44.147 The OPC emphasised in its submission that 'any power to issue binding guidelines or codes should necessitate significant consultation with affected stakeholders' and that as a further accountability mechanism, binding codes initiated by the Commissioner should be disallowable instruments.[291]

44.148 The Office of the NSW Privacy Commission supported providing the Commissioner with the power to develop binding statutory codes and/or guidelines in cases where there is a strong public interest or it is clear that systemic issues need to be addressed. It suggested that codes would become part of the uniform set of privacy principles and:

> would be especially useful in addressing privacy issues/problems in an organisation/industry-specific context, creating less uncertainty about the application of privacy principles in that context, as well as clarifying the scope of protection with prescriptive requirements.[292]

---

287 Australian Government Department of Employment and Workplace Relations, *Submission PR 211,* 27 February 2007.
288 Centre for Law and Genetics, *Submission PR 127,* 16 January 2007.
289 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
290 Ibid.
291 Ibid.
292 Office of the NSW Privacy Commissioner, *Submission PR 193,* 15 February 2007.

44.149 The Centre for Law and Genetics submitted that the OPC 'must have power, where there has been a failure by the industry after reasonable notice, to develop and impose a binding code'. The Centre described binding codes as 'another crucial issue for the development of our preferred approach of general guidance principles supported by industry codes'.[293] Similarly, Legal Aid Queensland supported the recommendations of the OPC that it have the power to make a binding code, and suggested, along with a number of other stakeholders, that the Commissioner should make a binding code for residential tenancy databases.[294]

44.150 The NHMRC submitted that the incorporation of a binding-code power in the *Privacy Act* would achieve 'only a marginal improvement of the current complex and confusing regime'.[295] Given its concerns about codes not being taken up uniformly across a sector, the NHMRC nevertheless expressed 'in principle' support for giving the Commissioner power to formulate and impose binding codes, on the basis that 'uniform imposition of a code within the sector which is subject to the *Privacy Act* would be preferable to its partial voluntary uptake'.[296] It specified that a binding code must be developed through a collaborative and consultative process and must replace rather than complement existing regulation. It also submitted that the code must apply to entire industry sectors and organisations rather than specific technologies or functions.

44.151 DEWR did not support the OPC having a statutory power to develop and impose privacy codes on the private sector, stating that a 'combination of market forces and advice and directed advocacy from the OPC and other government bodies with an interest in information privacy is sufficient for organisations to adopt appropriate information privacy principles and practices'. It also noted the risk that 'externally-imposed codes and practices will not be adhered to if they involve significant costs to those subject to them'.[297]

ALRC's view

Reforming the current code provisions

44.152 One of the consistent themes discussed by stakeholders in this Inquiry involves the need to promote national consistency and to reduce fragmentation, complexity and confusion in privacy regulation. In support of this goal, the ALRC believes that codes should operate in addition to the privacy principles, rather than

replacing them. At all times and for all agencies and organisations subject to the *Privacy Act*, the privacy principles should operate as the base standard. Codes could be used to provide more guidance (however named) on how one or more of the proposed UPPs are to be applied or are to be complied with by the organisation bound by the code. This would resemble the operation of codes in New Zealand.[298]

44.153 Under this model, the guidelines contained in the code must impose obligations equivalent to those imposed by the relevant privacy principle. This relationship between the principle and the guideline in the code can be illustrated as follows. A real estate industry code could prescribe an exhaustive list of information that can be considered 'necessary', under the proposed 'Collection' principle, to collect in a tenancy application process.[299] By specifying particular types of information as those necessary to collect in a tenancy application form, the guidelines would contain equivalent obligations to the principle, as both require that only information that is necessary be collected. The code, however, provides more detailed guidance than the principle and would assist real estate agencies in meeting the outcome set by the principle.

Binding code-making power

44.154 This ability to prescribe standards for one or more of the proposed UPPs would also be a useful regulatory tool for the Commissioner in industries with low levels of compliance and high levels of complaint, or where there are calls for more assistance and consistency in applying privacy principles across the industry. The residential tenancy database industry is a good example, as there continues to be high levels of complaints about operators and the OPC has acknowledged that 'in practice, the impact of the Commissioner's determinations on the tenancy industry appears to have been limited'.[300] The OPC Review also noted that a number of database operators have called for the Commissioner to 'rule' on a number of aspects of the NPPs; the interest seems to be in 'seeking certainty and to some extent a level playing field'.[301]

44.155 The ALRC's view is that the OPC should have a power, first, to request the development of a code and, secondly, to develop and impose a code on its own initiative. The ALRC's preliminary view is that the *Telecommunications Act 1997* (Cth) provides the best model for a binding code power in the privacy context. This model leaves the Commissioner with responsibility for code administration and development rather than the Minister, and can be integrated into the current Part IIIAA provisions.

44.156 Under this model, there could be a three-step process. As a first step, industries would be encouraged, where the OPC or the industry association considered

301 Ibid, 159.

it appropriate, to develop privacy codes (being the current Part IIIAA codes as amended by the ALRC's proposal). These codes would set standards to bring participants within compliance with the privacy principles. They would operate in addition to the privacy principles, rather than replacing them, and could apply vertically across an industry as well as horizontally. As a second step, the OPC could request an industry to develop an industry code. This power could be exercised in circumstances where the OPC considers that the development of a code is necessary or convenient in order to provide appropriate community safeguards, or deal with inadequate levels of compliance by participants in the industry. It could also be exercised where the OPC does not believe that, in the absence of a request, a code would be developed within a reasonable time. If the industry does not develop a code in response to the request, or the developed code is determined to be inadequate, or a code already in place is deficient, then the OPC could take the third step of prescribing a binding code for the industry. The code would be prescribed only after public consultation and would be a disallowable instrument.

44.157 This model expands the ability of codes to deal with new and developing technologies, by giving the Commissioner power to translate the steps an agency or organisation must take to comply with the proposed UPPs in the context of a particular technology.[302]

44.158 The ALRC notes that codes (whether initiated by industry or the Commissioner) could be used to incorporate the concept of 'no disadvantage' where necessary.[303] As explained in Chapter 29, such a concept promotes the idea that an individual should not be disadvantaged by asserting his or her privacy rights. A code could formalise and clarify existing protections in the privacy principles, such as the requirement in the proposed 'Access and Correction' principle that, if an organisation charges for providing access to personal information, those charges must not be excessive. A code could provide guidance on how to apply this principle to prevent excessive fees, by explaining how to set an access fee and providing examples of reasonable and excessive fees.

Codes versus regulations

44.159 The proposed reforms to the code provisions are to be distinguished from the ALRC's proposals to make regulations for credit reporting and health.[304] The most significant difference between the two instruments is that, if the ALRC's proposed changes are implemented, the privacy principles would always operate as the base standard in a privacy code—the code cannot replace the principles. In contrast, the proposed privacy regulations must be consistent with the objects of the Act but can

---

302 The use of codes to address technological issues is discussed further in Part B.

303 Stakeholders that supported the addition of a no disadvantage principle included: G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

304 See Proposals 50–2 (proposing regulations for credit reporting), and 56–2 (proposing regulations for health information).

modify the operation of the UPPs to impose different or more specific requirements in particular contexts, including imposing more or less stringent requirements on agencies and organisations than are provided for in the UPPs.[305]

44.160 The proposed privacy codes are a form of co-regulation that 'fills in the gaps' between the outcome set by a privacy principle and the application of, or compliance with, that principle. In contrast, the regulations provide flexibility in certain industries, such as credit reporting and health, to provide more or less stringent requirements than those in the principles themselves to achieve better regulatory outcomes.

Proposal 44–9 Part IIIAA of the *Privacy Act* should be amended to specify that:

(a) privacy codes approved under Part IIIAA operate in addition to the proposed UPPs and do not replace those principles; and

(b) a privacy code may provide guidance or standards on how any one or more of the proposed UPPs should be applied, or are to be complied with, by the organisations bound by the code, as long as such guidance or standards contain obligations that are at least equivalent to those under the Act.

Proposal 44–10 Part IIIAA of the *Privacy Act* should be amended to empower the Privacy Commissioner to:

(a) request the development of a privacy code to be approved by the Privacy Commissioner pursuant to s 18BB; and

(b) develop and impose a privacy code that applies to designated agencies and organisations.

305 Proposal 3–1.

Introduction

45.1 The *Privacy Act 1988* (Cth) provides an avenue for individuals to complain about acts or practices of an agency or organisation that may be an interference with their privacy. The Act vests power in the Privacy Commissioner (Commissioner) to investigate, conciliate and make determinations to finalise complaints.

45.2 This chapter considers issues concerning the investigation and resolution of complaints under the *Privacy Act*. The chapter examines concerns about accountability and transparency in the Act and in the policies and procedures of the Office of the Privacy Commissioner (OPC) with regard to complaint handling. The chapter also considers some particular issues raised by stakeholders in relation to representative complaints, preliminary inquiries, and the conduct of investigations.

Investigating privacy complaints

Background

45.3 The Commissioner's powers to investigate complaints of a breach of the Information Privacy Principles (IPPs) and the National Privacy Principles (NPPs) are established in separate paragraphs of s 27(1).[1] The trigger that enlivens these powers is that a 'complaint' is made. The *Privacy Act* confers rights on individuals to complain to the Commissioner about acts or practices that may be an interference with individuals' privacy rights, as created by the *Privacy Act*.[2]

Matters the Commissioner must not investigate

45.4 The Commissioner is generally required to investigate an act or practice if it may be an interference with an individual's privacy and a complaint has been made about it under s 36.[3] The Commissioner must not investigate a complaint, however, if the complainant did not complain to the respondent before complaining to the Commissioner under s 36, unless the Commissioner considers that it was not appropriate for the complainant to complain to the respondent.[4] The Commissioner must also cease investigating if certain offences have been committed, or where the Auditor General is already investigating the matter.[5] These last two situations are discussed later in this chapter.

Discretion not to investigate or to defer investigation

45.5 The Commissioner has the discretion to decide not to investigate, or not to investigate further, an act or practice about which a complaint has been made under s 36, or accepted under s 40(1B), where the:

---

1 *Privacy Act 1988* (Cth) ss 27(1)(a), 27(1)(ab).

2 Ibid s 36. Note, there is no right to complain to the Commissioner about acts or practices of an organisation bound by an approved privacy code where the code contains a procedure for making and dealing with complaints to an adjudicator, and the code is relevant to the act or practice in question: see s 36(1A).

3 Ibid s 40(1). The power to investigate on the Commissioner's own motion is discussed in Ch 46.

4 Ibid s 40(1A). In practice, the OPC requires that complainants provide it with a copy of their letter to the respondent and a copy of any response received by the complainant. The OPC requires that the complainant give the respondent 30 days to reply to the letter of complaint: see Office of the Privacy Commissioner, *Privacy Complaints* <www.privacy.gov.au/privacy_rights/complaints/index.html> at 1 August 2007.

5 *Privacy Act 1988* (Cth) ss 49, 51.

- act or practice is not an interference with privacy; the complaint was made over 12 months after the complainant became aware of the act or practice; the complaint is frivolous, vexatious, misconceived or lacking in substance; the act or practice is the subject of an application under another federal, state or territory law and the complaint is being dealt with adequately under that law; or another law provides a more appropriate remedy for the complaint;[6]

- complainant has complained to the respondent about the act or practice and the respondent is dealing adequately with the complaint or has not yet had an adequate opportunity to deal with the complaint;[7] or

- respondent has applied for a public interest determination and the Commissioner is satisfied that the interests of persons affected by the act or practice would not be unreasonably prejudiced if the investigation were deferred until the application has been disposed of.[8]

Submissions and consultations

45.6 Stakeholders commented on the requirement that a complainant must complain to the respondent before making a complaint to the Commissioner. For example, the Consumer Credit Legal Centre (NSW) (CCLC) submitted that the requirement is 'overly bureaucratic' and must be reconsidered, particularly in the credit reporting context, where

> a complaint may be required to be made in writing up to four times before it can be addressed as it could involve both the credit reporting agency and the credit provider as respondents. This delays the process and the complainant is prejudiced by the delay as a disputed default listing prevents them from getting credit. This obviously is not an effective complaint mechanism.[9]

45.7 In contrast, the OPC strongly supported the retention of a 'general requirement that individuals complain to the body with whom they have the grievance in the first instance'.[10] The OPC suggested the requirement was consistent with those of other regulators and provides respondents 'with an opportunity to take greater control and ownership of their handling of complaints', and an incentive to deal actively with matters before they are raised with the Commissioner.[11]

The discussion of the complaint 'merry-go-round' in the credit reporting context is addressed in Ch 55.
10 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
11 Ibid.

45.8 The OPC and the Commonwealth Ombudsman commented on the Commissioner's discretions under the *Privacy Act* not to investigate a complaint, or not to investigate it further. The OPC considered its discretions in the context of trying to find a balance between focusing on individual complaints and addressing broader systemic issues. To achieve this balance, the OPC recommended that the Commissioner be granted a discretionary power to decline to investigate complaints where there appears to be little public interest, such as where there is minimal apparent harm or the matter has been considered before and the organisation has changed its practices.[12] The OPC suggested that the proposed power could be balanced by a requirement that the OPC advise the respondent that a complaint has been lodged and, while it is not being investigated, any further complaints of a similar nature may be. The OPC pointed to similar powers to decline vested in other complaint handlers, such as the power of the Human Rights and Equal Opportunity Commission (HREOC) to decline to investigate where the complaint is trivial.[13]

45.9 The Commonwealth Ombudsman described the OPC's discretions under s 41 as 'narrower' than the Ombudsman's.[14] The Ombudsman explained that a common basis for declining to investigate a complaint under the *Ombudsman Act 1976* (Cth) is that an investigation would not be warranted in all the circumstances.[15] This power enables it 'to decide not to investigate where, for example, the matter is trivial, there is no practical remedy or where there is no prospect of a satisfactory resolution'.[16]

45.10 The OPC also observed that the Commissioner lacks the specific discretion to cease an investigation where a complainant repeatedly fails to respond to correspondence from the OPC. The OPC suggested that it would be preferable for the Commissioner to have a specific power to stop investigating a complaint if the complainant has ceased to pursue the matter or has withdrawn the complaint.[17]

ALRC's view

45.11 A central tension in regulating compliance with the *Privacy Act* is how to strike a balance between resolving individual complaints and remedying systemic issues. By systemic issues, the ALRC is referring to 'issues that are about an organisation's or industry's practice rather than about an isolated incident'.[18] Systemic issues can be distinguished from issues that have no implications beyond the immediate actions and

---

12 The OPC made a similar recommendation in Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 46.

13 See *Human Rights and Equal Opportunity Act 1986* (Cth) s 46PH(1)(c). The NSW Privacy Commissioner also has the discretion to dismiss trivial complaints: see *Privacy and Personal Information Protection Act 1998* (NSW) s 46(3)(b).

14 Commonwealth Ombudsman, *Submission PR 202,* 21 February 2007.

15 See *Ombudsman Act 1976* (Cth) s 6(1)(b)(iii).

16 Commonwealth Ombudsman, *Submission PR 202,* 21 February 2007. The OPC also commented on this power: Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

17 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

18 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 130 fn 102.

rights of the parties to the complaint.[19] They can, however, be identified out of the consideration of a single complaint, 'because the *effect* of the particular issue will clearly extend beyond the parties to the complaint'.[20]

45.12 In the ALRC's view, a compromise needs to be made between addressing individual complaints and addressing systemic issues. The compromise proposed by the ALRC is to give the Commissioner more discretion not to investigate individual complaints in certain circumstances. First, the ALRC proposes that the Commissioner should be given discretion not to investigate an act or practice if he or she is satisfied that an investigation, or further investigation, of the act or practice is not warranted having regard to all the circumstances. This discretion would enable the Commissioner to dismiss trivial complaints, or complaints that have no prospect of a practical or satisfactory resolution.[21]

45.13 Secondly, the ALRC believes the Commissioner's powers to dismiss stale complaints should be clarified. The ALRC proposes that the *Privacy Act* be amended to give the Commissioner the specific discretion to cease investigating a complaint that has been withdrawn by the complainant; or where the Commissioner has had no substantive response from the complainant for a certain period, following a request by the Commissioner for a response in relation to the complaint.[22]

45.14 The ALRC does not propose any reform to the requirement that complainants first complain to the respondent. The ALRC agrees with the OPC that where a complaint can be resolved between the complainant and respondent without involving the OPC, this is likely to be the most efficient means of resolving it. This approach is also consistent with other privacy legislation and the approach taken in external dispute resolution (EDR) schemes such as the Banking and Financial Service Ombudsman (BFSO) and the Telecommunications Industry Ombudsman (TIO).[23] The obligation on complainants to complain first to the respondent should, however, be supported by agencies and organisations adopting internal dispute resolution processes and making the avenues of complaint clear in their Privacy Policies.[24]

---

19 Australian Securities and Investments Commission, *Approval of External Complaints Resolution Schemes: ASIC Policy Statement 139*, 8 July 1999, [PS 139.131]–[PS 139.133].

20 Ibid, [PS 139.131]–[PS 139.133]. A similar definition was put forward in Consumer Credit Legal Centre (NSW) Inc, *Submission PR 160,* 31 January 2007.

21 Other statutes also have a similar test: *Anti-Discrimination Act 1977* (NSW) s 92(1)(a)(iii).

22 Examples of similar provisions include: *Health Records Act 2001* (Vic) s 53(1); *Information Privacy Act 2000* (Vic) s 30.

23 See, eg, *Information Privacy Act 2000* (Vic) s 29; *Health Records Act 2001* (Vic) s 51; *Ombudsman Act 1976* (Cth) s 6; Banking and Financial Services Ombudsman, *About Us* <www.abio.org.au> at 1 August 2007; *Telecommunications Industry Ombudsman Constitution*, 20 May 2006, [5].

24 This is consistent with Proposal 21–2.

Proposal 45–1 Section 41(1) of the *Privacy Act* should be amended to provide that, in addition to existing powers not to investigate, the Commissioner may decide not to investigate, or not to investigate further, an act or practice about which a complaint has been made under s 36, or which the Commissioner has accepted under s 40(1B), if the Commissioner is satisfied that:

(a) the complainant has withdrawn the complaint; or

(b) the complainant has not responded to the Commissioner for a specified period following a request by the Commissioner for a response in relation to the complaint; or

(c) an investigation, or further investigation, of the act or practice is not warranted having regard to all the circumstances.

Transferring complaints to other bodies

Background

45.15 The *Privacy Act* contemplates the use of other bodies to resolve privacy complaints. For example, a privacy code approved under the Act can provide procedures for dealing with complaints under the code. The *Privacy Act* also vests the Commissioner with discretion to refer complaints on to other bodies. Where the Commissioner forms the view that the complaint could have been made to HREOC, the Commonwealth Ombudsman, the Postal Industry Ombudsman or the Public Service Commissioner, and would be dealt with more effectively or conveniently by one of those bodies, the Commissioner may decide not to investigate, or further investigate, the matter, and can transfer the complaint to the relevant body.[25]

45.16 Independent of the *Privacy Act* provisions, there are also several EDR schemes that have jurisdiction to deal with privacy complaints under their terms of reference, including the BFSO and TIO.[26]

45.17 The OPC Review considered improving liaison with overlapping complaint handlers, to maximise efficiency and minimise confusion and costs for individuals and organisations.[27] In 2006, the OPC entered into a memorandum of understanding with the Commonwealth Ombudsman, to 'facilitate the exchange of information, subject to

25 *Privacy Act 1988* (Cth) s 50.

26 See Banking and Financial Services Ombudsman, *Terms of Reference*, 1 December 2004, [3.1]; *Telecommunications Industry Ombudsman Constitution*, 20 May 2006, [4.1].

27 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 159–160.

the expectations of the individuals concerned, so that individuals with complaints can continue to have their concerns dealt with effectively and efficiently'.[28]

Submissions and consultations

45.18 Stakeholders commented on the transfer of privacy complaints between complaint-handling bodies. The OPC explained that where it becomes aware that a privacy complaint is being handled by the BFSO or TIO, it will generally decline to investigate the matter concurrently on the basis that the respondent is engaged in a dispute resolution process that has yet to be finalised and, as such, has not had an adequate opportunity to deal with the matter.[29] The OPC suggested that it be given a specific power to decline to investigate in this situation. It also recommended that it be given the power to decline to investigate a complaint that would be handled more suitably by a recognised EDR scheme and to refer the complaint to the scheme with a request for investigation. The OPC suggested that these decline and referral powers could be limited to matters that are before a 'recognised' EDR scheme, and the OPC could be given the additional function of recognising such bodies for the purposes of the exercise of such powers.[30]

45.19 Other stakeholders commented on the role of EDR schemes. For example, Veda Advantage expressed support for a 'system of alternative dispute resolution that is speedy and informal' and noted that that it has joined the BFSO scheme.[31] Legal Aid Queensland submitted that EDR schemes monitored by a regulator can provide effective redress for complainants. For example, in the financial services sector, licensed entities must belong to an EDR scheme approved by the Australian Securities and Investments Commission (ASIC). Legal Aid stated that this requirement 'has provided positive outcomes for many thousands of consumers who were unable to access court based solutions'.[32]

ALRC's view

Transferring complaints to EDR schemes

45.20 The ALRC believes there is merit in recognising more formally the role of EDR schemes in handling privacy complaints. Schemes such as the TIO and BFSO already

28 Office of the Privacy Commissioner, 'Ombudsman and Privacy Commissioner to Streamline Joint Complaint Handling Processes' (Press Release, 30 November 2006).

29 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007. See *Privacy Act 1988* (Cth) s 41(2)(b).

30 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

31 Veda Advantage, *Submission PR 163,* 31 January 2007. See also Consumer Action Law Centre, *Submission PR 274,* 2 April 2007.

32 Legal Aid Queensland, *Submission PR 212,* 27 February 2007. The role of EDR schemes in the credit-reporting context is discussed in Ch 55.

resolve privacy complaints under their terms of reference and provide an efficient and binding avenue of complaint resolution for complainants and respondents.[33]

45.21 In the ALRC's view, the *Privacy Act* should be amended to empower the Commissioner to decline to investigate, or investigate further, a complaint that is already being handled by an approved EDR scheme. The Commissioner should also be empowered both to decline to investigate a complaint and refer it on to an EDR scheme, where the Commissioner is satisfied that the complaint would be handled more suitably by the scheme. A greater role for EDR schemes in dealing with privacy complaints has the potential to increase efficiency in dispute resolution and to provide parties with a one-stop-shop for complaints that are partly about privacy and partly about service delivery.

45.22 The ALRC notes that the EDR schemes under these proposed powers must be 'approved' by the OPC. This is consistent with the approach taken in Chapter 55, where the ALRC proposes that credit providers must be part of an 'approved EDR scheme' to be able to list default information. As noted in Chapter 55, the OPC could be expected to approve EDR schemes already approved by the ASIC under the *Corporations Act* and those with another statutory basis, such as the TIO.[34] In approving new schemes, the OPC could look at the ASIC standards and other similar instruments for benchmarks in its approval process.[35] The ALRC notes that the ASIC standard requires that approved EDR schemes report to ASIC on systemic issues and serious misconduct.[36] A similar reporting mechanism would be valuable in the privacy context to increase the OPC's awareness of systemic issues.

45.23 If these reforms were implemented, the OPC should publish a list of approved EDR schemes on its website, to increase transparency and awareness of the referral process.

Referring complaints to state bodies

45.24 The ALRC believes there can be similar benefits in using existing state complaint-handling bodies for the investigation and resolution of privacy complaints under the *Privacy Act*. This would facilitate complaints being handled by local bodies, which can be more efficient and convenient for the complaint handler and the parties to the complaint.

---

33 Under the Terms of Reference of the BFSO, a determination issued by the BFSO is binding on the complainant and respondent if the complainant agrees to accept it in full and final settlement of the subject matter of the dispute: Banking and Financial Services Ombudsman, *Terms of Reference*, 1 December 2004, [7.12]. A similar approach is taken by the TIO: *Telecommunications Industry Ombudsman Constitution*, 20 May 2006, [6.1].

34 *Telecommunications (Consumer Protection and Service Standards) Act 1999* (Cth).

35 Australian Securities and Investments Commission, *Approval of External Complaints Resolution Schemes: ASIC Policy Statement 139*, 8 July 1999.

36 Ibid, [PS 139.59].

45.25 Two models are available under which this federal-state relationship could be set up. The first is to adopt intergovernmental arrangements similar to those under the *Human Rights and Equal Opportunity Act* (HREOC Act).[37] Under this model, the Minister may make an arrangement with a minister of a state or territory for or in relation to the performance on a joint basis of any functions of the Commissioner; or the performance by that state or territory or by an instrumentality of that state or territory on behalf of the Commonwealth of any functions of the Commissioner. The second option is to extend the Commissioner's delegation power under the *Privacy Act* to empower the Commissioner to delegate to a state or territory authority any of his or her powers in relation to complaint handling, including the power to issue determinations.[38]

45.26 There are advantages and disadvantages to both models. The first is more transparent and may provide an easier mechanism to put any necessary funding arrangements in place. The second option, however, may provide greater flexibility, as it would allow the Commissioner to delegate his or her powers on a case-by-case basis, without the need to set up formal arrangements.

45.27 The ALRC's preliminary view is that the Commissioner's delegation function should be extended. The ALRC understands that there have been difficulties in practice in implementing the HREOC arrangements. In the ALRC's view, flexibility is important to assist with the efficient and effective resolution of complaints. The ALRC notes that the Commissioner would not be required to delegate his or her functions unless of the view that it would be appropriate or effective to do so.

Guidance

45.28 Given the ALRC's proposals to empower the Commissioner to transfer complaints to EDR schemes and delegate complaint-handling powers to state bodies, it would be beneficial to provide guidance on these different avenues of complaint handling to agencies, organisations and potential complainants. This could be part of a document setting out the OPC's complaints handling policies and procedures.[39]

Proposal 45–2 The *Privacy Act* should be amended to empower the Privacy Commissioner to:

(a) decline to investigate a complaint where the complaint is being handled by an approved external dispute resolution scheme; or

37 See *Human Rights and Equal Opportunity Act 1986* (Cth) s 16.
38 The delegation power is set out in *Privacy Act 1988* (Cth) s 99.
39 See Proposal 45–8.

(b) decline to investigate a complaint that would be more suitably handled by an approved external dispute resolution scheme, and to refer that complaint to the external dispute resolution scheme with a request for investigation.

Proposal 45–3 Section 99 of the *Privacy Act* should be amended to empower the Privacy Commissioner to delegate to a state or territory authority all or any of the powers, including a power conferred by section 52, in relation to complaint handling conferred on the Commissioner by the *Privacy Act*.

Resolution of privacy complaints

Model under the *Privacy Act*

45.29 The *Privacy Act* provides two formal ways of resolving a complaint following an investigation. First, the Commissioner can endeavour, by conciliation, to effect a settlement between the complainant and respondent.[40] Secondly, the Commissioner can make a determination either dismissing the complaint or finding the complaint substantiated.[41]

Conciliation

45.30 The Commissioner is given the general direction in complaints against both agencies and organisations, to attempt, by conciliation, to effect a settlement of the matters that gave rise to the investigation. The Commissioner is only required to conciliate a complaint where he or she considers it appropriate to do so.[42] In contrast to other privacy legislation, the *Privacy Act* does not set out detailed provisions on how to conduct the conciliation process.[43]

45.31 In practice, the OPC will conciliate complaints where it thinks there is enough evidence to support the complaint. The OPC conciliates by writing or telephoning the respondent to see if they agree to the complainant's solution, or bringing parties together in a conciliation conference.[44] If parties reach an agreement during conciliation, the OPC closes the file on the basis that the respondent has dealt adequately with the matter. The OPC received around 1200 complaints in 2005–06.[45]

---

40 *Privacy Act 1988* (Cth) ss 27(1)(a), 27(1)(ab).

41 Ibid s 52.

42 Ibid ss 27(1)(a), 27(1)(ab).

43 See, eg, the conciliation provisions in *Information Privacy Act 2000* (Vic) pt 5, div 3; *Health Records Act 2001* (Vic) pt 6, div 3; *Information Act 2002* (NT) ss 110–113 (in relation to mediation). See also the proposed provisions in Information Privacy Bill 2007 (WA) pt 5, div 2.

44 See Office of the Privacy Commissioner, *Privacy Complaints* <www.privacy.gov.au/privacy_rights/complaints/index.html> at 1 August 2007.

45 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 126.

Typical outcomes involved the respondent: apologising to the complainant; providing access to, or correcting, a record; changing its procedures; and paying compensation.[46]

45.32 If the parties cannot reach agreement during conciliation, the OPC will make a decision about how the complaint should be resolved. That decision may be that the respondent has made the complainant a reasonable offer which they have not accepted, in which case the OPC may close the file on the grounds that the respondent has dealt with the matter adequately, even if the complainant does not agree. Alternatively, the OPC may decide that the respondent has not made a reasonable offer, in which case the Commissioner can make a determination instructing the respondent on how to resolve the complaint, including by ordering the respondent to apologise, pay compensation or change its practices.[47]

Determinations

45.33 As noted above, the Commissioner can make a determination dismissing the complaint or can find a complaint substantiated and make a determination that includes one or more of the following declarations that:

- the respondent has engaged in conduct constituting an interference with the privacy of an individual and should not repeat or continue such conduct;[48]
- the respondent should perform any reasonable act or course of conduct to redress any loss or damage suffered by the complainant;[49]
- the complainant is entitled to a specified amount by way of compensation for any loss or damage;[50] or
- it would be inappropriate for any further action to be taken in the matter.[51]

The *Privacy Act* does not limit the monetary compensation that the Commissioner may award to a complainant: Australian Institute of Company Directors, Office of the Federal Privacy Commissioner and Information and Privacy Commissioner Ontario, *Privacy and Boards: What You Don't Know Can Hurt You* (2004), 11; *Rummery and Federal Privacy Commissioner* [2004] AATA 1221, [26]–[29]. See s 52(4)–(6) in relation to compensation orders in representative complaints. The Commissioner can also make a declaration that the complainant is entitled to a specified amount as reimbursement for expenses reasonably incurred in connection with the complaint: *Privacy Act 1988* (Cth) s 52(3).

51 *Privacy Act 1988* (Cth) s 52(1)(b)(iv).

45.34 A determination of the Commissioner under s 52(1) is not binding or conclusive between any of the parties to the determination.[52] This reflects the fact that Commonwealth judicial power can only be exercised by a court in accordance with Chapter III of the *Australian Constitution*.[53] Enforcement of determinations is discussed in Chapter 46.

45.35 There have been eight complaint determinations made since the *Privacy Act* commenced in 1989, with the most recent being in 2004.[54] Following a number of submissions from stakeholders commenting on the limited exercise of the determination power and suggesting that complainants should be able to compel the Commissioner to make a determination, the OPC Review recommended that it would consider circumstances in which it might be appropriate to make greater use of the Commissioner's power to make determinations under s 52.[55] Since then, the OPC has reviewed the use of the s 52 determination powers and identified situations where it may proceed more quickly to a determination, including where the:

- interests of the parties will be better served by the opportunity to make formal submissions to the Commissioner;
- issues in the complaint are not clear and the Commissioner will need to make findings; or
- complaint is not amenable to conciliation or conciliation has failed.[56]

45.36 The OPC also clarified that determinations would 'not necessarily be limited to the most serious cases, nor will determinations issued by the Commissioner necessarily be punitive'.[57]

45.37 The other issue with determinations identified by stakeholders in the OPC Review is the inability of the Commissioner to prescribe remedies to prevent future harm. The issue was said to be illustrated in determinations made against a residential tenancy database operator in 2004. In those determinations, the Commissioner found that, while he could declare that the respondent should not repeat or continue conduct

that constitutes an interference with the privacy of an individual, he did not have the power to prescribe how the respondent should act in the future.[58] Following concerns from stakeholders that this restriction limited the Commissioner's ability to address systemic issues, the OPC recommended that the Government consider amending the *Privacy Act* to expand the remedies available under a determination to include giving the Commissioner power to require a respondent to take steps to prevent future harm arising from systemic issues.[59] In its response to the OPC Review, the Australian Government agreed with this recommendation.[60]

Submissions and consultations

Framework for conciliation

45.38 Stakeholders expressed concerns about the lack of distinction between the stages of investigation, conciliation and determination under the *Privacy Act*.[61]

45.39 The OPC commented on the timing of conciliation in the complaint-handling process. The OPC noted that s 27 provides for a complaint to be conciliated *after* investigation. The OPC expressed interest in 'promoting early conciliation, where appropriate, as an expedient means of resolving complaints to the satisfaction of both parties'. It recommended that its specific conciliation functions in s 27 be amended to provide for the option of conciliating complaints at any stage in the complaint-handling process, including before the commencement of a formal investigation.[62]

45.40 Stakeholders commented on the fact that the Commissioner may stop investigating a complaint if he or she is satisfied that the respondent has dealt adequately with the complaint, even if the complainant does not agree.[63] The CCLC noted that:

> In the last reported year, the most commonly cited reason for declining to investigate complaints further following an investigation was made under s 41(2)(a) of the Act, ie that the respondent had adequately dealt with the matter. CCLC's advice and casework experience has revealed that this response from the OPC has frustrated

> many consumers, and as illustrated by *X v Commonwealth Agency* [2004], a dismissal of complaints on these grounds stands even if the complainant does not agree.[64]

45.41 The Australian Privacy Foundation submitted that the conciliation process adopted by the OPC, which involves the 'exchanges of correspondence over lengthy periods', is inefficient and ineffective.[65] Similarly, the CCLC submitted that the OPC's 'conciliatory approach does not necessarily produce fair results' as the delay in conciliating the complaint can deter one party from continuing, rather than acting to further negotiation.[66] In contrast, the Australian Federal Police submitted that it 'is able to work within the current privacy complaint handling system'.[67]

45.42 The Australian Government Department of Human Services expressed concern that the *Privacy Act* does not protect adequately the conciliation process, as there is 'no provision for confidentiality where conciliation is being or has been pursued'.[68]

Exercise of determination power

45.43 Several stakeholders commented on the very limited use of the determination power and the fact that successive Commissioners have failed to use the power, even when requested to do so by complainants.[69] The Australian Privacy Foundation explained that the 'determination making powers are potentially very powerful' and noted its experience that

> many complainants desire, more than anything else, a formal finding that the respondent has breached a privacy principle. Greater use of the determination making powers would also result in a body of public decisions which would be a valuable resource for educating both data users and the public about the application of the law, and which could if necessary be formally challenged in the courts.[70]

45.44 The Commonwealth Ombudsman expressed the view that the 'apparent intent of the *Privacy Act* is that most matters will be resolved between the complainant and the respondent, but with some guidance from the Commissioner and the determinative role of the Commissioner standing as an inducement for settlements'.[71] The Legal Aid Commission of NSW submitted that the rarity of formal determinations by the Commissioner was understandable, 'given the emphasis on conciliation of complaints

71 Commonwealth Ombudsman, *Submission PR 202,* 21 February 2007.

and the limited legal consequences of determinations that do not include a finding substantiating a complaint'.[72]

45.45 The Office of the NSW Privacy Commissioner (Privacy NSW) submitted that it is not clear how or in what circumstances the Commissioner may elect to use the determination power. It suggested that the internal review process prescribed by the *Privacy and Personal Information Act 1998* (NSW) provided a more successful mechanism to resolve complaints efficiently.[73]

45.46 Stakeholders submitted that, given the current power for the Commissioner to dismiss complaints when he or she is satisfied that the respondent has dealt adequately with the matter, even if the complainant does not agree, complainants should have the right to compel a determination under s 52 of the Act.[74] One stakeholder pointed to the fact that, at the very least, a determination can contain a public declaration that the respondent breached the privacy principles. If a complainant does not agree with declarations made in a determination, such as the adequacy of compensation, a determination gives rise to other rights, including merits review in the Administrative Appeals Tribunal (AAT) and a hearing in the federal courts. Even if the determination dismissed the complaint, the complainant would have a more detailed decision upon which to found an action for judicial review.[75]

45.47 In contrast to these submissions, the Law Council Privacy Working Party suggested that the Commissioner's powers to make determinations are appropriate and administered effectively and the 'light touch' approach to privacy protection 'strikes an acceptable balance between consumer rights and efficiency in business'. The Working Party did not support a right to compel determinations, submitting that the ability of the Commissioner to dismiss frivolous and vexatious complaints at an early stage promotes flexibility and efficiency by reducing costs associated with unnecessary investigations. It also provides an incentive for respondents to deal independently with complaints to avoid a formal determination. In contrast, public disclosure of privacy breaches in a determination, even where the complainant had addressed the breach adequately, would discourage respondents from 'taking independent action to resolve these issues'.[76]

72 Legal Aid Commission of New South Wales, *Submission PR 107,* 15 January 2007.

73 Office of the NSW Privacy Commissioner, *Submission PR 193,* 15 February 2007. See *Privacy and Personal Information Protection Act 1998* (NSW) pt 5.

74 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007; Consumer Credit Legal Centre (NSW) Inc, *Submission PR 160,* 31 January 2007. Legal Aid Queensland also supported the right for a complainant to compel the Commissioner to make a determination: Legal Aid Queensland, *Submission PR 212,* 27 February 2007.

75 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007. See also Legal Aid Queensland, *Submission PR 212,* 27 February 2007.

76 Law Council of Australia, *Submission PR 177,* 8 February 2007.

45.48 Legal Aid Queensland also considered the incentive for organisations to resolve complaints. Its view, however, was that corporations are 'very aware' that the Commissioner rarely makes determinations and 'in such circumstances, there is no incentive on corporations to commercially resolve the matter'.[77]

Addressing systemic issues

45.49 Several stakeholders, including the OPC, suggested that the Commissioner's determination powers should be amended to allow the Commissioner to prescribe remedies for systemic issues.[78] For example, AAMI submitted that

> the Commissioner does not have enough legislative power to be able to deal with systemic issues within industry. The OPC currently acts as more of an Ombudsman rather than a Regulator. This shortfall does not benefit the consumer as individual complaints have to be made against each organisation in turn if a systemic issue is to be rectified.[79]

45.50 The Australian Privacy Foundation noted that the determination power does not appear to allow the Commissioner to prescribe acceptable acts and practices, giving the example of the 2004 residential tenancy database determinations, discussed above. The Foundation submitted that the Commissioner's finding that he could not prescribe what steps the respondent should take left enforcement as a 'guessing game' and it was 'clearly desirable' that this situation be clarified by amending s 52 to include an ability to prescribe acceptable acts and practices.[80] Privacy NSW also supported giving the Commissioner the power to require a respondent to obey orders requiring prescriptive action. Privacy NSW considered that this would allow the Commissioner 'to specify, as part of the determination orders, positive and prescriptive actions to be taken to improve an agency or organisation's level of statutory compliance'.[81]

ALRC's views

Framework for conciliation and determinations

45.51 The relationship in the *Privacy Act* between conciliation and determination is not clear. An explanation of the intended relationship was provided in the Second Reading Speech for the Privacy Bill 1988 (Cth), where the then Attorney-General stated:

---

77 Legal Aid Queensland, *Submission PR 212,* 27 February 2007.

78 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007; Consumer Credit Legal Centre (NSW) Inc, *Submission PR 160,* 31 January 2007; AAMI, *Submission PR 147,* 29 January 2007. See also Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 44.

79 AAMI, *Submission PR 147,* 29 January 2007.

80 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007. See also G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007.

81 Office of the NSW Privacy Commissioner, *Submission PR 193,* 15 February 2007.

> Under the Bill an individual will be able to complain to the Privacy Commissioner about alleged interferences with privacy, who will attempt to resolve the allegations by conciliation and, failing that, making binding determinations against agencies, including determinations for compensation and costs.[82]

45.52 The ALRC believes that the relationship between conciliation and determination, and the Commissioner's functions in relation to each, should be clarified in the *Privacy Act* to provide greater transparency and accountability. First, the ALRC proposes that s 27(1)(a) and (ab) be amended to clarify up front the Commissioner's various functions in relation to privacy complaints, including the functions of receiving and investigating complaints, conciliating where appropriate or making a determination. Consistently with the proposal that the *Privacy Act* should be amended to achieve greater logical consistency, simplicity and clarity,[83] this amendment would, if implemented, provide a succinct summary of the Commissioner's functions in relation to the investigation and resolution of privacy complaints. It would also clarify the Commissioner's ability to conciliate a complaint at any stage after receiving it.[84]

45.53 Secondly, the ALRC proposes that the *Privacy Act* be amended to include new provisions dealing expressly with conciliation. These provisions should clarify that the Commissioner must use all reasonable attempts to conciliate a complaint where the Commissioner thinks it reasonably possible that the complaint may be conciliated successfully. This expands on the existing obligation on the Commissioner in s 27 to conciliate complaints where appropriate, and is similar to obligations on privacy commissioners in other privacy legislation.[85]

45.54 Thirdly, the provisions should clearly set out what happens when conciliation fails. The ALRC proposes that conciliation will be taken to have failed where, in the opinion of the Commissioner, all reasonable attempts to settle the complaint by conciliation have been made and the Commissioner is satisfied that there is no reasonable likelihood that the complaint will be resolved by conciliation. This framework adopts language from industrial relations legislation, where conciliation and

---

82 Commonwealth, *Parliamentary Debates*, House of Representatives, 1 November 1988, 2117 (L Bowen–Attorney-General). A similar description of the role of conciliation and determinations was given in Explanatory Memorandum, Privacy Bill 1988 (Cth), 3. Note determinations were originally automatically binding between parties, before the amendments made by the *Law and Justice Amendment Act 1994* (Cth) and the *Human Rights Legislation Amendment Act 1995* (Cth).

83 Proposal 3–2.

84 Note there is precedent for a more open conciliation power in the *Anti-Discrimination Act 1977* (NSW) s 91A, which provides that the President may 'at any stage after acceptance of the complaint endeavour to resolve the complaint by conciliation'. The ability of the Commissioner to conciliate the complaint at any stage is also reflected in Proposal 45–5(a).

85 See *Information Privacy Act 2000* (Vic) s 33; *Health Records Act 2001* (Vic) s 59. See also the precedent in *Industrial Relations Act 1996* (NSW) s 109.

arbitration are well-established practices in resolving industrial disputes.[86] State and territory privacy legislation also provides expressly for conciliation failing or being unsuccessful.[87] This amendment would, if implemented, provide clearer parameters in which to conduct conciliation.

45.55 Finally, the ALRC proposes that the Act should be amended to provide that where the Commissioner is of the opinion that conciliation has failed, the Commissioner must notify the complainant and respondent that conciliation has failed and the complainant or respondent may require that the complaint be resolved by determination.

45.56 This proposal is analogous to the provisions in the *Information Privacy Act 2000* (Vic), where, if the Commissioner has attempted unsuccessfully to conciliate a complaint, he or she must notify the complainant and the respondent in writing, and the complainant may require the Commissioner to refer the complaint to the Victorian Civil and Administrative Tribunal for hearing.[88] It is also comparable to the approach in the HREOC Act where, if the President terminates a complaint on the basis that he or she is satisfied that there is no reasonable prospect of the matter being settled by conciliation, any person affected in relation to the complaint may make an application to the Federal Court or the Federal Magistrates Court alleging unlawful discrimination by the respondent.[89] The ALRC's proposed model is also similar to the relationship between conciliation and arbitration in state industrial relations legislation.[90]

45.57 This proposal, if implemented, should lead to an increase in the number of determinations issued by the OPC, which would help address concerns from stakeholders about the lack of jurisprudence on the *Privacy Act*.[91] The proposal should increase public enforcement and awareness of the Act, which is consistent with Parliament's expectation that the Commissioner 'be the means by which there will be accountability to the public on the use by government of their personal information'.[92] The proposal is also consistent with the legislative intention that determinations be

---

86 See, eg, *Industrial Relations Act 1996* (NSW) ss 134–135.

87 See *Information Privacy Act 2000* (Vic) s 37; *Health Records Act 2001* (Vic) s 63; *Information Act 2002* (NT) s 111.

88 *Information Privacy Act 2000* (Vic) s 37. See also *Health Records Act 2001* (Vic) s 63; *Information Act 2002* (NT) s 113.

89 *Human Rights and Equal Opportunity Act 1986* (Cth) ss 46PH(1)(i), 46PO.

90 See *Industrial Relations Act 1996* (NSW) s 135.

91 The ALRC considers that there is greater jurisprudential value in determinations than in case notes of conciliated complaints. Professor Julia Black has argued that, as settlements represent a compromise on both sides, the 'dynamics of a settlement negotiation are not conducive to a pure and objective interpretation and application of principles'. As such, it can be difficult to know how far a particular interpretation adopted in a conciliated case 'is applicable in other factual situations, whether directly or by analogy': J Black, *Principles Based Regulation: Risks, Challenges and Opportunities* (2007) London School of Economics and Political Science, 15–16.

92 Commonwealth, *Parliamentary Debates*, House of Representatives, 1 November 1988, 2117 (L Bowen–Attorney-General). Note this speech only refers to the government, as organisations were not covered by the *Privacy Act* when the Act was originally passed.

issued where conciliation has failed. The presence of the power to request a determination should provide a real incentive for agencies and organisations to engage in the conciliation process, which some stakeholders suggest has been lost due to the very limited number of determinations issued.

45.58 The ALRC acknowledges the concerns raised by stakeholders that providing a right to compel a determination may encourage vexatious litigants and may add to the unreasonable expectations sometimes held by complainants about how a complaint will be resolved. The model proposed by the ALRC, however, incorporates adequate safeguards against vexatious and trivial conduct, as it only operates in relation to complaints that the Commissioner has not dismissed under s 41. That is, the complaint must have passed the threshold requirements of being in time, involving a possible breach, and not being frivolous, vexatious, misconceived or lacking in substance. The complaint must, therefore, have a degree of merit. The proposal also requires the complainant and respondent to have made a genuine and concerted effort to conciliate the complaint.

45.59 The ALRC also proposes that the Act be amended to protect evidence produced in the conciliation process from being used in a determination hearing or later enforcement proceedings. This proposed provision is based on a provision in the Victorian *Information Privacy Act,*[93] and is intended to encourage parties to engage in full and frank negotiations as part of conciliation.

Addressing systemic issues

45.60 The ALRC recognises the need for the Commissioner to be able to prescribe remedies that address systemic issues and effect systemic changes in agencies, organisations and industries. The ALRC proposes that the Commissioner's determination powers under s 52 be amended to empower the Commissioner to make an order in a determination that a respondent must take specified action within a specified period for the purpose of ensuring compliance with the *Privacy Act*.[94] The ability to prescribe how the respondent should act to comply with, for example, the proposed Uniform Privacy Principles (UPPs) should end the enforcement 'guessing game' described by stakeholders. It should also provide greater certainty to agencies, organisations and the public on what behaviour is consistent with the principles or regulations.[95]

---

93 See *Information Privacy Act 2000* (Vic) s 36.

94 This wording is based on the compliance notice model used in other privacy legislation. See Ibid s 44; *Health Records Act 2001* (Vic) s 66; *Information Act 2002* (NT) s 82.

95 Greater certainty was requested by some residential tenancy database operators following the 2004 determinations: see Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 159.

45.61 The ALRC notes that the proposal to give complainants and respondents a right to require the Commissioner to resolve a complaint by determination in certain circumstances should, in conjunction with the proposal to empower the Commissioner to prescribe steps a respondent must take to bring itself into compliance with the Act, help effect systemic change. While a determination may relate to an individual complaint, that individual complaint may itself be about a systemic issue.[96] Empowering the Commissioner to prescribe remedies that are able to address systemic issues in the complaint handling process allows the Commissioner to achieve maximum change from each individual complaint.

Proposal 45–4 Sections 27(1)(a) and (ab) of the *Privacy Act* should be amended to make it clear that the Privacy Commissioner's functions in relation to complaint handling include:

(a) to receive complaints about an act or practice that may be an interference with the privacy of an individual;

(b) to investigate the act or practice about which a complaint has been made; and

(c) where the Commissioner considers it appropriate to do so and at any stage after acceptance of the complaint, to endeavour, by conciliation, to effect a settlement of the matters that gave rise to the complaint or to make a determination in respect of the complaint under s 52.

Proposal 45–5 The *Privacy Act* should be amended to include new provisions dealing expressly with conciliation. These provisions should give effect to the following:

(a) If, at any stage after receiving the complaint, the Commissioner considers it reasonably possible that the complaint may be conciliated successfully, he or she must make all reasonable attempts to conciliate the complaint.

(b) Where, in the opinion of the Commissioner, all reasonable attempts to settle the complaint by conciliation have been made and the Commissioner is satisfied that there is no reasonable likelihood that the complaint will be resolved by conciliation, the Commissioner must notify the complainant and respondent that conciliation has failed and the complainant or respondent may require that the complaint be resolved by determination.

96 Australian Securities and Investments Commission, *Approval of External Complaints Resolution Schemes: ASIC Policy Statement 139*, 8 July 1999, [PS 139.131]–[PS 139.133]. An example of such a complaint is provided in *D v Banking Institution* [2006] PrivCmrA 4.

(c) Evidence of anything said or done in the course of a conciliation is not admissible in a determination hearing or any enforcement proceedings relating to the complaint, unless all parties to the conciliation otherwise agree.

Proposal 45–6 Section 52 of the *Privacy Act* should be amended to empower the Privacy Commissioner to make an order in a determination that an agency or respondent must take specified action within a specified period for the purpose of ensuring compliance with the Act.

Accountability and transparency

Background

45.62 A number of stakeholders have submitted that transparency and accountability in complaint handling under the *Privacy Act* should be improved. Two methods to improve transparency and accountability are merits review of the Commissioner's determinations and providing more guidance on the OPC's complaint-handling policies and procedures.

Merits review

Background

45.63 The right to merits review of determinations made by the Commissioner is limited to where the respondent is an agency, and is available only in relation to the Commissioner's decision to include or not include a declaration for compensation or costs.[97] There is no right of appeal to the AAT in respect of determinations against organisations or determinations dismissing a complaint.

45.64 Some stakeholders making submissions to the OPC Review expressed the view that the narrowness of merits review available under the *Privacy Act* is one factor that prevents there being a useful legal jurisprudence on the Act which people can rely on.[98] It was suggested that the existing provisions were unfair to complainants because, while respondents have a de facto right to have the case heard afresh by refusing to comply with a determination and waiting for the Commissioner or complainant to enforce it in court, this strategy is not available to an aggrieved complainant.[99] The OPC Review concluded that the lack of merits review of determinations was out of step with the position applying to other government authorities and recommended that

97 *Privacy Act 1988* (Cth) s 61.

98 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 137–138.

99 Ibid, 138–139. See also G Greenleaf, *Consultation PC 5*, Sydney, 28 February 2006.

the Government amend the Act 'to give complainants and respondents a right to have the merits of complaint decisions made by the Commissioner reviewed'.[100]

Submissions and consultations

45.65 A number of stakeholders supported a right to merits review of complaint determinations involving organisations.[101] Some described the lack of appeal rights as the 'principal deficiency in the Act'.[102] The Legal Aid Commission of NSW suggested that the key issue with determinations is the absence of a right of appeal against a determination by the Privacy Commissioner under s 52(1)(a) dismissing a complaint. It suggested that 'the lack of such an appeal removes an important accountability check on the way the Commissioner's investigative functions operate' and that the alternative course of a review under the *Administrative Decisions (Judicial Review) Act 1977* (Cth) is limited and does not allow the merits of the decision to be assessed adequately.[103]

45.66 The OPC expressed support for 'the extension of the appeal rights under the *Privacy Act* in the interests of providing a fair and transparent complaint-handling process that is sufficiently open to scrutiny'.[104] It recommended that all determinations made by the Commissioner should be reviewable by the AAT, including those made against organisations. The review, it was suggested, should extend to all decisions made using the determination power, rather than being limited to decisions regarding compensation.[105]

45.67 Privacy NSW suggested that merits review would assist in dealing with the problem that determinations are not binding and would remove the necessity of taking determinations to the Federal Court for enforcement.[106] In contrast, the Queensland Council for Civil Liberties failed to see the need for AAT merits review and submitted

that the process of seeking enforcement through the courts would 'no doubt effectively act as a review'.[107]

ALRC's view

45.68 The ALRC believes the current rights to merits review of determinations are not sufficient. To increase transparency and accountability, and to facilitate the growth of more jurisprudence on the *Privacy Act*, the ALRC proposes that the Act be amended to provide for merits review of all decisions made by the Commissioner under s 52.

Proposal 45–7 The *Privacy Act* should be amended to provide that a complainant or respondent can apply to the Administrative Appeals Tribunal for merits review of a determination made by the Privacy Commissioner under s 52 and the current review rights set out in s 61 should be repealed.

Complaint-handling policies and procedures

Background

45.69 Another method of increasing transparency and accountability in the OPC's processes and decision making is by publishing clear policies and procedures that outline how the OPC deals with complaints, and by publishing case notes.

45.70 Submissions from stakeholders calling for the OPC to produce a comprehensive manual on its complaint resolution policies and procedures, in order to shed more light on the way it handles complaints, were considered in the OPC Review.[108] The OPC Review recognised that greater transparency was likely to benefit both complainants and respondents and would increase scrutiny of the OPC's decisions. It found, however, that 'it does not appear to be common practice for regulators to publish manuals which set out in great detail their complaint processes'.[109]

45.71 Case notes can help add transparency and accountability to the OPC's handling of complaints by providing examples of how the principles have been interpreted and applied in practice. The OPC publishes case notes that describe the issues and outcomes in selected complaints and has stated that, by providing this insight into how the privacy principles are being applied, the Commissioner aims to 'ensure the Office

is accountable and transparent in its processes and decision making'.[110] Case notes also play an important role in promoting individual privacy, as they 'serve to demonstrate to members of the public how the Commissioner handles complaints' and they 'assist the public to know if their personal information is being handled appropriately, or assist them to decide whether to pursue a complaint'.[111]

Submissions and consultations

45.72 Several stakeholders commented on the lack of transparency and accountability in the OPC's complaint-handling procedures.[112] One stakeholder submitted:

> There is no published manual of the procedures used, and policies adopted, by the OPC in its investigation and resolution of complaints. Potential complainants, respondents and organizations representing them, are left to infer these procedures and policies from piecemeal and scattered complaint summaries which are infrequently issued by the OPC.[113]

45.73 Stakeholders commented on the lack of transparency about complaint resolutions and the remedies being granted by the OPC.[114] For example, it was noted that while the OPC has improved the level and detail of its case note reporting, it 'is still not sufficient to play the role that reporting of examples can and should play in the overall administration of the *Privacy Act*'.[115] In particular, stakeholders pointed to the lack of understanding of the criteria the OPC applies in deciding which cases to report, and the fact that there is 'no objective means of measuring whether these are a true reflection' of the OPC's practices.[116]

45.74 Stakeholders also noted the lack of transparency around how the OPC screens complaints in the initial stages, which 'makes it difficult for organisations to ensure they prepare and consult in the appropriate manner'.[117] Similarly, the Institute of Mercantile Agents suggested that 'every complaint should generate an advice to all

parties so an investigation can be commenced immediately and all information needed is protected and not deleted'.[118]

45.75 Two methods were put forward by stakeholders to remedy this lack of transparency. The first was that guidelines or a manual setting out the OPC's complaint-handling policies and procedures should be published.[119] For example, the Department of Human Services submitted:

> Guidelines should be developed for the investigation and conciliation processes that clearly articulate roles and responsibilities. The guidelines should include information regarding confidentiality during all phases of the investigation as well as appropriate provision of relevant information to the Privacy Commissioner.[120]

45.76 The second method suggested—often in addition to publishing a complaint-handling manual—was to require the Commissioner to publish more case notes.[121] For example, one stakeholder submitted that the OPC should reform its procedures for reporting privacy complaints and should, among other things, adhere to publicly-stated criteria of seriousness in deciding which complaints to report.[122]

45.77 Increasing efficiency in administering the Act by reducing delay in resolving privacy complaints was a related concern. The issue of delay in investigating and resolving privacy complaints was of great concern to many stakeholders—consumers, organisations and agencies alike.[123] The OPC received a boost of $8.1 million in additional funding in the 2006 budget. In its 2005–06 Annual Report, the Commissioner indicated that one of the major areas to which the additional funding

would be directed was complaint handling. This would allow the OPC to handle privacy complaints efficiently and 'reduce the current complaint backlog while enhancing service standard and conciliating techniques'.[124]

ALRC's view

45.78 The ALRC believes that a valuable way to increase transparency in complaint handling under the *Privacy Act* would be for the OPC to prepare and publish a document setting out its complaint-handling policies and procedures. This document could draw on existing resources and publications of the OPC, such as information included in the 'Privacy Complaints' section on the OPC website and in Information Sheet 13, which sets out the Commissioner's approach to promoting compliance with the *Privacy Act*.[125] The proposed document could also include the OPC's new determination policy.[126]

45.79 Consolidating this information into one document should increase the accessibility and transparency of the complaint-handling process. It would also make a useful resource for agencies, organisations and individuals.

Proposal 45–8 The Office of the Privacy Commissioner should prepare and publish a document setting out its complaint-handling policies and procedures.

Other issues in the complaint-handling process

Background

45.80 In addition to general issues about investigation and resolving complaints under the *Privacy Act*, stakeholders raised a number of concerns relating to specific provisions in the Act. These included those provisions dealing with representative complaints, preliminary inquiries, and the conduct of investigations.

Representative complaints

45.81 The *Privacy Act* allows for the making of representative complaints, whereby one of a class of two or more individuals makes a complaint on behalf of all the

---

124 Office of the Privacy Commissioner, *The Operation of the Privacy Act Annual Report: 1 July 2005–30 June 2006* (2006), 2. The ALRC also notes that the OPC has recently committed to new response timeframes for complaint handling: see Office of the Privacy Commissioner, 'Privacy Commissioner implements new response timeframes' (2007) 1(3) *Privacy Matters* 5.

125 See Office of the Privacy Commissioner, *Privacy Complaints* <www.privacy.gov.au/privacy_rights/complaints/index.html> at 1 August 2007; Office of the Federal Privacy Commissioner, *The Privacy Commissioner's Approach to Promoting Compliance with the Privacy Act 1988*, Information Sheet 13 (2001).

126 Office of the Privacy Commissioner, 'Commissioner's Use of s 52 Determination Power' (2006) 1(1) *Privacy Matters* 2.

individuals in the class.[127] A representative complaint can be lodged under s 36 if the class members have complaints against the same person; all the complaints are in respect of, or arise out of the same or related circumstances; and all the complaints give rise to a substantial common issue of law or fact.[128]

45.82 The Commissioner has power to determine that a complaint should no longer be treated as a representative complaint, and may turn an individual complaint into a representative complaint.[129] The Commissioner can also replace the complainant with another class member and a class member can withdraw from a representative complaint at any time before the Commissioner begins to hold an inquiry into the complaint. Representative complaints can be lodged without the consent of class members and a person who is a class member for a representative complaint is not entitled to lodge a complaint in respect of the same subject matter.[130]

Submissions and consultations

45.83 In Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether the procedures for making and pursuing complaints, including representative complaints, are appropriate.[131] The OPC raised several issues about representative complaints in its submission to the ALRC. First, the OPC observed that there is no requirement that the party making a representative complaint has standing to make the complaint.[132] While noting that the Commissioner has certain discretions under the Act to cease handling a matter as a representative complaint, the OPC considered that it might be appropriate to provide the Commissioner with a specific discretion to refuse to handle a matter as a representative complaint where the party making the complaint has insufficient standing.[133]

45.84 Secondly, the OPC observed that an individual's capacity to make an individual complaint could be removed without their knowledge or agreement, by virtue of the combination of ss 38(3) and 39 of the *Privacy Act*. The only way an individual can retain the ability to make an individual complaint on the same topic is to withdraw from the representative complaint. The OPC recommended that individuals be given the option of 'opting out of a representative complaint at any time if the individual did not consent to be a class member'. The OPC noted, in this context, that the HREOC

132 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
133 Ibid.

Act allows a class member to withdraw from a representative complaint at any time before the President terminates the complaint.[134]

45.85 The Australian Privacy Foundation suggested that 'Commissioners have not encouraged or used the potential of representative complaints' and that representative complaints are not 'given the attention they may deserve'.[135]

ALRC's view

45.86 In the ALRC's view, the *Privacy Act* should be amended to allow a class member of a representative complaint to withdraw from the complaint at any time if the class member has not consented to be a class member. This would address the issue that an individual's right to lodge a complaint can be removed by circumstances beyond their knowledge or control.

45.87 In relation to the issue of standing, s 38A gives the Commissioner a broad discretion to determine that a complaint should not continue as a representative complaint when he or she is satisfied that it is in the interests of justice to so. Reasons for making such a determination include that the complaint was not brought in good faith as a representative complaint, or where it is otherwise inappropriate that the complaints be pursued by means of a representative complaint.[136] These powers provide the OPC with adequate discretion to cease handing a complaint as a representative complaint where it was brought by a person with no standing.[137]

Proposal 45–9 Section 38B(2) of the *Privacy Act* should be amended to allow a class member to withdraw from a representative complaint at any time if the class member has not consented to be a class member.

Preliminary inquiries

45.88 Where a complaint is made to, or accepted by, the Commissioner, he or she has the power to make preliminary inquiries of the respondent. The power is limited by its purpose, which is to determine whether the Commissioner has power to investigate the matter complained about or whether the Commissioner may exercise his or her discretion not to investigate the matter.[138]

---

134 Ibid. The OPC noted the precedent in the *Human Rights and Equal Opportunity Act 1986* (Cth) s 46PC. Tthe HREOC Act's provisions on representative complaint are very similar to the *Privacy Act* and allow a representative complaint to be lodged without the consent of class members: *Human Rights and Equal Opportunity Act 1986* (Cth) s 46PB(4).

135 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

136 *Privacy Act 1988* (Cth) s 38A(2)(c)–(d).

137 See also Australian Law Reform Commission, *Beyond the Door-Keeper: Standing to Sue for Public Remedies*, ALRC 78 (1996).

138 *Privacy Act 1988* (Cth) s 42.

Submissions and consultations

45.89 The OPC suggested that the Commissioner should be given a specific power to contact third parties when undertaking preliminary inquiries into a complaint. This is particularly relevant when the complaint relates to a disputed credit default, in which case 'it is usually relevant to the assessment of the case for the Office to seek a copy of the individual's credit information file'. The OPC submitted that while it has the power to do anything 'incidental or conducive to the performance of any of the Commissioner's other functions', it would be appropriate for the Commissioner to have a specific power to contact third parties in these circumstances.[139]

ALRC's view

45.90 The ALRC's view is that s 42 of the *Privacy Act* should be amended to allow the Commissioner to contact third parties at the preliminary inquiries stage. While it is possible that a similar result could be achieved through the Commissioner's ancillary function to do anything 'incidental or conducive to the performance of any of the Commissioner's other functions', the ALRC believes that it would be clearer and more transparent if the section itself provided specifically that the Commissioner has the ability to make inquiries of third parties. This amendment should also help reduce delays in addressing complaints in the credit reporting context.

Proposal 45–10 Section 42 of the *Privacy Act* should be amended to empower the Privacy Commissioner to make preliminary inquiries of third parties as well as the respondent.

Ceasing investigations if certain offences have been committed

45.91 If the Commissioner forms the opinion, in the course of an investigation, that a 'credit reporting offence' or 'tax file offence' has been committed, he or she must inform the Commissioner of Police or the Commonwealth Director of Public Prosecutions (DPP), and is to discontinue the investigation except to the extent that it concerns matters unconnected with the alleged offence. The Commissioner may continue with the investigation upon receiving a notice from the Commissioner of Police or the DPP indicating that the matter will not, or will no longer be, the subject of proceedings for an offence.[140]

---

139 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

140 *Privacy Act 1988* (Cth) s 49. An example of the operation of this provision is provided in *F and G v Taxation Accountant* [2006] PrivCmrA 6.

Submissions and consultations

45.92 The OPC noted that, in its experience, very few matters referred by the OPC to the Australian Federal Police (AFP) are prioritised for investigation. As the OPC's investigation is suspended while the AFP decides whether to investigate, this can cause delay in resolving the complaint. The OPC suggested that a way to alleviate these problems would be for the 'offence provisions to set a higher test than the test for an interference with privacy under the *Privacy Act*', thereby giving the OPC a kind of discretion not to refer a matter to the AFP where the conduct was not serious or caused no harm. While most of offences under the Act already set a higher test than for an interference with privacy (see, for example, s 18R), the exception is the tax file number offence under s 8WB of *Taxation Administration Act*.[141]

ALRC's view

45.93 The ALRC does not propose any reform to s 49 of the *Privacy Act*. While the ALRC acknowledges the operation of this provision can cause delays to the OPC's investigation, the referral of offences to the AFP and DPP is part of the broader prosecution policy of the Commonwealth.[142] The ALRC also proposes, in Part G, the repeal of the credit reporting offences.[143]

Conduct of investigations

45.94 The *Privacy Act* outlines how an investigation is to be conducted. As a general rule, an investigation is to be 'conducted in private but otherwise in such manner as the Commissioner thinks fit'.[144] The Commissioner must inform parties when an investigation commences or ceases.[145] For the purposes of performing the Commissioner's functions in relation to a complaint (except an NPP complaint or a code complaint accepted under s 40(1B)), the Commissioner can compel the complainant, respondent and any other relevant person to attend a conference.[146] The Commissioner also has the power, subject to certain limitations, to obtain information and documents from persons, and make inquiries of persons or examine witnesses on oath or affirmation.[147]

---

141 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

142 In particular, see Commonwealth Director of Public Prosecutions, *Prosecution Policy of the Commonwealth* (1992). The AFP also prioritises matters for investigations pursuant to its Australian Federal Police, *Case Categorisation and Prioritisation Model* (2006). Section 8WB of the *Taxation Administration Act* is currently under review by the Australian Government Treasury as part of the inquiry into secrecy and disclosure provisions in Australian taxation law: see Australian Government—The Treasury, *Review of Taxation Secrecy and Disclosure Provisions: Discussion Paper* (2006).

143 See Proposal 55–8.

144 *Privacy Act 1988* (Cth) s 43(2).

145 Ibid ss 43(1), 48.

146 Ibid s 46(1). It is an offence to fail to attend such a conference as required by the Commissioner: *Privacy Act 1988* (Cth) s 46(2).

147 *Privacy Act 1988* (Cth) ss 44–46. It is an offence not to comply with the Commissioner's directions: *Privacy Act 1988* (Cth) ss 46(2), 65–66.

45.95 In addition to these requirements, the *Privacy Act* requires that complainants and respondents be given the opportunity to appear before the Commissioner in certain circumstances. In particular, the Commissioner must not make a finding under s 52 that is adverse to a complainant or respondent unless the Commissioner has afforded the complainant and respondent an opportunity to appear before the Commissioner and to make submissions orally, in writing, or both, in relation to the matter to which the investigation relates.[148] This requirement reflects the 'hearing rule' which, in the context of administrative decision making, is the common law rule that a statutory authority having power to affect the rights of a person is bound to afford the person a hearing before exercising the power.[149]

45.96 The rules of natural justice, including the hearing rule, can be modified or abrogated by statute.[150] For example, the *Social Security (Administration) Act 1999* (Cth) provides that a party to a merits review of a decision before the Social Security Appeals Tribunal may make oral or written submissions, or both.[151] The Executive Director of the Social Security Appeals Tribunal may direct, however, that a hearing be conducted without oral submissions from the parties if: the Executive Director considers that the review hearing could be determined fairly on the basis of written submissions by the parties; and all the parties to the review consent to the hearing being conducted without oral submissions.[152]

45.97 The *Administrative Appeals Tribunal Act 1975* (Cth) provides that a matter may be dealt with by considering documents or other material lodged with or provided to the AAT—and without holding a hearing—if it appears to the AAT that the issues for determination on the review of a decision can 'be adequately determined in the absence of parties; and the parties consent to the review being determined without a hearing'.[153]

Submissions and consultations

45.98 In IP 31, the ALRC asked whether the Commissioner's powers relating to the conduct of investigations are appropriate and exercised effectively.[154] The Australian Privacy Foundation suggested that the Commissioner's investigation powers are generally appropriate but are not always exercised effectively.[155]

154 See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 6–15.

155 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

45.99 The OPC supported the continued inclusion of the Commissioner's investigation powers provided in ss 43–47 of the *Privacy Act*. The OPC noted that these provisions relate to more extreme situations where agencies or organisations do not cooperate in the investigation process.[156] The OPC recommended, however, two changes to the provisions. First, it suggested that the references to a 'compulsory conference' in ss 46 and 47 be clarified to make it clear that it means a compulsory *conciliation* conference. Secondly, the OPC recommended that the power to compel parties to a compulsory conference should extend to NPP and code complaints. It observed that the Commissioner otherwise has the same functions in handling the different types of complaints (such as IPP, credit reporting and TFN complaints) and suggested that the Commissioner's powers to conduct investigations should be consistent regardless of the subject of the complaint.[157]

45.100 The OPC also commented on two restrictions placed on the personal information and documents that can be furnished or produced to the Commissioner during the investigation of a privacy complaint. Section 69 of the Act prevents people giving the Commissioner information generated for the purposes of taxation law or a law relating to census or statistics, unless it relates to an individual who has made a complaint. Secondly, it sets out 'very broad restrictions on the provision of information about an individual other than the complainant to the Commissioner', requiring that such information can only be provided with the individual's consent.[158] As the OPC noted, this provision overrides the Commissioner's powers to require information to assist an investigation (such as in s 44 of the *Privacy Act*).

45.101 While the OPC supported the first restriction, recognising the sensitive nature of information held by the ATO and the Australian Bureau of Statistics, it expressed concern about the second restriction:

> If applied rigorously this provision would make the complaint handling process very onerous both for organisations and agencies who are respondents to complaints under s 36 of the Act. For example, a description of an incident leading to a privacy complaint may be less meaningful or less convincing without naming third parties including employees. The lack of such information may make it difficult for the Commissioner to investigate. The process of obtaining consent may be difficult or costly.

45.102 The OPC observed that the rationale for the provision is unclear and 'appears to depart from the framework that would ordinarily be applied to a regulatory body'. The OPC suggested that the section be reframed to target more clearly the circumstances when third party consent would be required to furnish or produce information to the Commissioner.[159]

156 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
157 Ibid.
158 Ibid.
159 Ibid.

ALRC's view

45.103 In relation to compulsory conferences, the Explanatory Memorandum for the Privacy Bill 1988 (Cth) made it clear that ss 46 and 47 were intended to empower the Commissioner to 'direct persons to attend a compulsory conference in order to attempt a settlement of a complaint'.[160] The term 'compulsory conference' is only used in the section headings for ss 46 and 47. As the heading to a section of an Act is not taken to be part of the Act, the ALRC does not believe it is necessary for the word conciliation to be included in the section heading.[161] The OPC could clarify, however, the role of conferences in the conciliation process in the document setting out its complaint-handling policies and procedures.[162]

45.104 In the ALRC's view, the power to compel parties to attend a compulsory conference should extend to where the complaint is an NPP complaint, or a code complaint accepted under s 40(1B). Conciliation conferences are an important part of the conciliation process, and the Commissioner's powers to resolve complaints should be consistent across all types of complaints.

45.105 In relation to the OPC's concerns about s 69 of the *Privacy Act*, the ALRC's view is that the restrictions in s 69(1)–(2) on the Commissioner's ability to collect third party information in the process of investigating a complaint should be removed. These restrictions may fetter the ability of the Commissioner to resolve complaints efficiently and effectively, and are inconsistent with provisions applying to other regulators.[163] The ALRC also notes that the OPC is subject to secrecy provisions in s 96 of the *Privacy Act*, which make it an offence for the Commissioner or a member of his or her staff (present and past) to disclose, use or make a record of information acquired about a person in the performance of that role, other than to do something permitted or required by the *Privacy Act*.[164] These provisions provide protection for any information collected in an investigation.

45.106 In relation to the hearing requirements before a determination is made, the ALRC proposes that the *Privacy Act* should be amended to give the Commissioner flexibility to make determinations 'on the papers' in certain circumstances. The ALRC recognises that there may be situations where a determination could be made fairly and efficiently without parties appearing before the Commissioner to make oral

---

160 Explanatory Memorandum, Privacy Bill 1988 (Cth). This interpretation of compulsory conferences is also consistent with *Human Rights and Equal Opportunity Act 1986* (Cth) ss 46PJ(1), s 46PF(1).

161 See *Acts Interpretation Act 1901* (Cth) s 13(3).

162 See Proposal 45–8.

163 There is no equivalent provision in the *Human Rights and Equal Opportunity Act 1986* (Cth) or other state or territory privacy legislation.

164 *Privacy Act 1988* (Cth) s 96(1), (3). The offence is punishable by a penalty of $5,000 or imprisonment for 1 year, or both. Note that the OPC released its privacy policy (which sets out its personal information handling practices) in August 2006: Office of the Privacy Commissioner, *Privacy Policy* (2006).

submissions. The ALRC also recognises that the proposal that complainants and respondents be given the right, in certain circumstances, to require that a complaint be resolved by a determination would, if implemented, give rise to a consequent right for the complainant or respondent to appear before the Commissioner before a determination is made. The combination of the proposal and the current provision could increase the number of hearings held by the Commissioner, which may have significant resource implications. There is merit, therefore, in giving the Commissioner greater flexibility to make determinations on the papers.

45.107 There are several options to allow for determinations on the papers. The first is to remove the automatic right to appear before the Commissioner and instead give the Commissioner the discretion to provide a party with an opportunity to appear before him or her where the Commissioner considers that the circumstances require it, and in all other circumstances to make a determination based on written submissions. The second option is retain the current right to appear before the Commissioner to make oral or written submissions, but to provide explicitly that a hearing can be conducted on the basis of written submissions only where the parties agree. This is the approach taken in the *Social Security (Administration) Act*. This would allow for the entire hearing to be conducted on the papers where the parties consent.

45.108 In the ALRC's view, the second approach is preferable. The existing right to appear before the Commissioner should be retained but the Act should empower the Commissioner to make a determination on the basis of written submissions where the Commissioner considers that the determination could be made fairly in the absence of the parties and the parties consent to the determination being made without an oral hearing.

Proposal 45–11 Section 46(1) of the *Privacy Act* should be amended to empower the Privacy Commissioner to compel parties to a complaint, and any other relevant person, to attend a compulsory conference.

Proposal 45–12 Section 69(1) and (2) of the *Privacy Act* should be deleted, which would allow the Privacy Commissioner, in the context of an investigation of a privacy complaint, to collect personal information about an individual who is not the complainant.

Proposal 45–13 The *Privacy Act* should be amended to provide that the Privacy Commissioner may direct that a hearing for a determination may be conducted without oral submissions from the parties if:

(a) the Privacy Commissioner considers that the matter could be determined fairly on the basis of written submissions by the parties; and

(b) the complainant and respondent consent to the matter being determined without oral submissions.

Introduction

46.1 The Office of the Privacy Commissioner (OPC) is responsible for enforcing compliance with the *Privacy Act 1988* (Cth). This involves investigating instances of non-compliance by agencies and organisations and prescribing remedies to redress non-compliance. While Chapter 45 examines the Privacy Commissioner's powers to investigate and resolve privacy complaints, this chapter considers the Commissioner's powers to investigate an act or practice on his or her own motion. It also considers the Commissioner's power to enforce complaint determinations, report on certain activities and apply for injunctions. Lastly, the chapter discusses other enforcement mechanisms that could be introduced into the Act.

Enforcing own motion investigations

Background

46.2 In addition to the Commissioner's power to investigate an act or practice when a complaint has been made, the Commissioner can also investigate an act or practice on his or her own motion where the Commissioner considers it desirable that the act or practice be investigated.[1] Own motion investigations are used by the OPC where it becomes aware of matters that may involve interferences with privacy through media reports, tip-offs, and notification of breaches by agencies or organisations.[2]

Remedies following own motion investigations

46.3 The Commissioner can report to the Minister on own motion investigations against agencies, file number recipients, credit reporting agencies or credit providers. Section 30 of the Act provides that, where the Commissioner has investigated an act or practice without a complaint having been made under s 36, the Commissioner may report to the Minister about the act or practice investigated and must report where the:

- Minister directs the Commissioner to do so; or

- Commissioner thinks the act or practice investigated is an interference with an individual's privacy and the Commissioner has not considered it appropriate to endeavour to settle the matter, or has tried to settle the matter without success.[3]

46.4 Section 30(6) of the Act specifies that these reporting obligations do not apply to a complaint made under s 36 in relation to an act or practice of an organisation or a complaint accepted under s 40(1B). The purpose of this subsection was said to be 'to clarify that there is no requirement to report to the Minister following investigations conducted by the Privacy Commissioner into the acts or practices of organisations'.[4]

46.5 The OPC stated in its Annual Report for 2005–06 that, in the majority of cases it investigated and found allegations to be substantiated following an own motion investigation, the respondent dealt with the issues of concern either on its own initiative or following the OPC's suggestions. The types of action taken included advice to people affected, apologies, retrieval and disposal of records, and changes in practice and procedures.[5]

3 *Privacy Act 1988* (Cth) s 30(1). Currently, the relevant Minister is the Attorney-General of Australia: Commonwealth of Australia, *Administrative Arrangements Order*, 21 September 2006 [as amended 30 January 2007], pt 2.

4 Revised Explanatory Memorandum, Privacy Amendment (Private Sector) Bill 2000 (Cth), 107.

5 Office of the Privacy Commissioner, *The Operation of the Privacy Act Annual Report: 1 July 2005–30 June 2006* (2006), [3.4.2].

46.6 The inability of the Commissioner to enforce remedies following an own motion investigation was commented on by stakeholders in the OPC's review of the private sector provisions of the *Privacy Act* (OPC Review) and the Senate Legal and Constitutional References Committee inquiry into the *Privacy Act 1988* (Senate Committee privacy inquiry). In the former, stakeholders submitted that a wider power of enforcement should be conferred on the Commissioner. It was suggested that the Commissioner should 'be able to enforce any directions given in relation to findings after an own motion investigation', ensuring that 'light handed' measures taken by the Commissioner have the 'weight of possible further action attached to them'.[6]

46.7 In the OPC Review, the OPC acknowledged that it had 'experienced some difficulties' in dealing with potential privacy breaches where there was no individual complainant and where the respondent was not cooperative.[7] It recommended that the Australian Government consider amending the *Privacy Act* to 'provide for enforceable remedies following own motion investigations where the Commissioner finds a breach of the National Privacy Principles' (NPPs).[8] The Australian Government agreed with this recommendation.[9]

Submissions and consultations

46.8 Several stakeholders commented on the OPC's own motion investigation powers. The Consumer Credit Legal Centre (NSW) (CCLC) was supportive of the Commissioner's power to conduct own motion investigations as a means of addressing systemic issues raised by consumer representative groups and other third parties. It expressed disappointment, however, that these investigations do not occur as often as the CCLC felt was necessary.[10]

46.9 Several stakeholders reiterated the need for the Commissioner to have the power to enforce remedies following own motion investigations where the Commissioner finds a breach of the privacy principles.[11] The OPC supported the introduction of

See also Electronic Frontiers Australia Inc, *Submission to the Senate Legal and Constitutional References Committee Inquiry into the Privacy Act 1988*, 24 February 2005 as affirmed in Electronic Frontiers Australia Inc, *Submission PR 76,* 8 January 2007.

coercive orders as an enforceable remedy following an own motion investigation.[12] Other stakeholders submitted that the Commissioner should be given power to make and enforce determinations as a result of an own motion investigation and that such investigations should be the subject of public notice by the Commissioner.[13] It was also suggested that procedures be developed for appropriate intervention by interested parties, such as non-government organisations.[14]

ALRC's view

46.10 Own motion investigations provide a valuable tool for the Commissioner to investigate allegations of non-compliance that come to light via means other than a complaint being lodged. In order to make these investigations effective as a compliance tool, however, it is important that the Commissioner have adequate means to enforce remedies where he or she finds a breach of the NPPs, the Information Privacy Principles (IPPs) or other provisions in the *Privacy Act*.

46.11 Accordingly, the ALRC proposes that the *Privacy Act* be amended to allow the Commissioner to issue a notice to comply following an own motion investigation. The Commissioner should be empowered to determine in the notice that the agency or organisation has engaged in conduct constituting an interference with the privacy of an individual. Consistently with the ALRC's proposal in relation to determinations,[15] the Commissioner should also be empowered to prescribe in the notice that the agency or organisation must take specified action within a specified period for the purpose of ensuring compliance with the Act.[16]

46.12 As with determinations, the notice will be enforceable by proceedings in the Federal Court or Federal Magistrates Court. Unlike in the case of determinations, the ALRC does not propose that there be merits review of a notice to comply issued by the Commissioner. If the respondent in a notice to comply contests the Commissioner's findings or the actions prescribed in the notice, the respondent could choose not to comply with the notice and wait for the Commissioner to enforce it in the Federal Court by way of a hearing de novo.

Proposal 46–1 The *Privacy Act* should be amended to empower the Privacy Commissioner to:

12 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
13 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007.
14 Ibid.
15 See Proposal 45–7.
16 The proposed wording for this power is based on the compliance notice model used in other privacy legislation: see *Information Privacy Act 2000* (Vic) s 44; *Health Records Act 2001* (Vic) s 66; *Information Act 2002* (NT) s 82.

(a) issue a notice to comply to an agency or organisation following an own motion investigation, where the Commissioner determines that the agency or organisation has engaged in conduct constituting an interference with the privacy of an individual;

(b) prescribe in the notice that an agency or organisation must take specified action within a specified period for the purpose of ensuring compliance with the *Privacy Act*; and

(c) commence proceedings in the Federal Court or Federal Magistrates Court for an order to enforce the notice.

Enforcing a determination

46.13 The *Privacy Act* contains provisions for the enforcement of determinations made under s 52. These mechanisms are different depending on whether the respondent is an agency or organisation.

Enforcement of determinations against organisations

46.14 The respondent to a determination under s 52 or an approved privacy code must not repeat or continue conduct covered by a declaration and must perform the act or course of conduct covered by the declaration.[17] These obligations are enforceable in the Federal Court or the Federal Magistrates Court in proceedings commenced by the complainant, the Commissioner, or an adjudicator for the approved privacy code under which the determination was made.[18] If satisfied that the respondent has engaged in conduct that constitutes an interference with the privacy of the complainant, the court 'may make such orders (including a declaration of right) as it thinks fit'.[19] The court is to deal with the question of whether the respondent has engaged in conduct that constitutes an interference with privacy by way of a hearing de novo.[20]

Enforcement of determinations against agencies

46.15 As with organisations, an agency must not repeat or continue conduct covered by a declaration and must perform the act or course of conduct covered by the declaration.[21] Where the respondent to a determination is the principal executive of an agency, he or she is responsible for ensuring that the determination is brought to the

17 *Privacy Act 1988* (Cth) s 55. Section 52 of the *Privacy Act* sets out the declarations the Privacy Commissioner can make in a determination.
18 Ibid s 55A(1).
19 Ibid s 55A(2).
20 Ibid s 55A(5).
21 Ibid s 58.

attention of the relevant members, officers and employees of the agency and that those people desist from or perform conduct covered by the declaration.[22]

46.16 Unlike enforcement of determinations against organisations, where a determination against an agency or principal executive includes a declaration for compensation or reimbursement for expenses, the *Privacy Act* provides that the complainant is entitled to be paid the amount specified. The amount is recoverable either as a debt due to the complainant by the agency or the Commonwealth.[23] If an agency or the principal executive of an agency fails to comply with obligations in relation to a declaration, the Commissioner or complainant can apply to the Federal Court or Federal Magistrates Court for an order directing the agency or principal executive to comply.[24] In contrast to the provisions for organisations, the court does not have to assess, by way of a hearing de novo, whether the agency engaged in conduct that constituted an interference with privacy. Rather, on application under the Act, the court may make 'such other orders as it thinks fit with a view to securing compliance by the respondent'.[25]

Submissions and consultations

46.17 In the Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether the *Privacy Act* provisions for enforcing determinations are adequate and administered effectively.[26] The Australian Privacy Foundation described the enforcement as 'unfortunate' in that complainants and the Commissioner have to go through a hearing de novo to enforce a determination if an agency or organisation fails to comply with its terms.[27]

ALRC's view

46.18 Given the constitutional restrictions on the Commissioner exercising judicial power,[28] the ALRC does not propose any amendments to the enforcement provisions. The ALRC notes, however, that its proposal that the *Privacy Act* should be amended to provide for a complainant or respondent to seek merits review of determinations made by the Commissioner under s 52 may provide an alternative, and less costly, 'enforcement' mechanism for complainants than is currently provided in the Act.[29]

28 See the discussion in Ch 45.
29 See Proposal 45–7. This was suggested by the Office of the NSW Privacy Commissioner: Office of the NSW Privacy Commissioner, *Submission PR 193,* 15 February 2007.

Reports by the Commissioner

46.19 The Commissioner has powers to report on the exercise of some of his or her functions. In addition to the reporting obligations following certain own motion investigations discussed above, where the Commissioner has monitored an activity or conducted an audit in the performance of the functions in ss 27, 28 and 28A of the *Privacy Act*, the Commissioner may report to the Minister about the activity or audit, and must report if directed to do so by the Minister.[30] The Commissioner can give a further report to the Minister where the Commissioner believes it is in the public interest to do so, and the Minister must lay the report before each House of Parliament within 15 sitting days.[31]

46.20 There is no express power or obligation to report investigations of complaints and the *Privacy Act* does not explicitly envisage the Commissioner reporting directly to Parliament.[32] The ability to report on the results of audits, however, provides the Commissioner with another kind of 'enforcement' mechanism, as such reporting can involve a measure of publicity and sanction.

Injunctions

Background

46.21 The *Privacy Act* contains detailed provisions regarding the granting of injunctions. Section 98 provides that following an application from the Commissioner or another person, the Federal Court or Federal Magistrates Court can grant an injunction restraining a person from engaging in conduct that would constitute a contravention of the *Privacy Act* and, if the court thinks it desirable to do so, requiring a person to do any act or thing.[33] An injunction may be granted if it appears to the court that it is likely the person will engage in the relevant conduct if the injunction is not granted, whether or not the person has previously engaged in conduct of that kind, and whether or not there is an imminent danger of substantial damage to any person if the person engages in the relevant conduct.[34] Where the Commissioner applies for an injunction under s 98, the court will not require the Commissioner or any other person to give an undertaking as to damages.[35]

---

30 *Privacy Act 1988* (Cth) s 32. The relevant Minister is currently the Attorney-General of Australia: Commonwealth of Australia, *Administrative Arrangements Order*, 21 September 2006 [as amended 30 January 2007], pt 2. Certain matters may be excluded from reports—see *Privacy Act 1988* (Cth) s 33.

32 See Ibid s 30(6). See also Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005), [6.38]; Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 128.

33 *Privacy Act 1988* (Cth) s 98(1)–(2).

34 Ibid s 98(5)(b). See also s 98(6).

35 Ibid s 98(7).

46.22 Two features of the injunctions power are significant. First, it does not only concern enforcement of determinations.[36] It is a freestanding provision that deals with any contravention of the *Privacy Act*. Secondly, the 'standing' requirement is relatively easy to satisfy—the application may be made by the Commissioner 'or any other person'.[37]

46.23 There appear to be few cases in which an injunction has been granted to restrain contravention of the *Privacy Act*, though the remedy is potentially of general application and utility.[38] The OPC has stated that the Commissioner would seek an injunction only 'when other more informal means have failed to yield a satisfactory outcome'.[39]

Submissions and consultations

46.24 In IP 31, the ALRC asked whether the *Privacy Act* provisions for obtaining injunctions are adequate and effective.[40] The OPC expressed concern about the breadth of the standing provision in s 98. The OPC suggested that 'it could allow a party with no interest in the privacy of the individuals in question to seek an injunction that may, as a consequence, impact on how an agency or organisation interacts with that individual'.[41] The OPC recommended that s 98 be amended to include a more rigorous test for standing. In contrast, another stakeholder described the ability of non-government organisations to seek injunctions, because of the provision for open standing, as a 'theoretically valuable means by which contesting interpretations of principles could be resolved'.[42]

46.25 The Australian Privacy Foundation also submitted that the injunction power is valuable and that the Commissioner should make greater use of the power, 'both during complaint investigations and as a pro-active tool where interferences with privacy are brought to attention in other ways'.[43] The Queensland Council for Civil Liberties saw no reason to alter the position in relation to obtaining injunctions.[44]

42 G Greenleaf, N Waters and L Bygrave—Cyberspace Law and Policy Centre UNSW, *Submission PR 183,* 9 February 2007. The ability to seek an injunction was said to be 'inherently valuable'.

43 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

44 Queensland Council for Civil Liberties, *Submission PR 150,* 29 January 2007.

ALRC's view

46.26 The ALRC does not propose any reform to the injunction provisions. The power is comparable to provisions for statutory injunctions under the *Trade Practice Act 1974* (Cth) (TPA) and the *Corporations Act 2001* (Cth).[45] While the provisions have not been utilised often, the power itself is appropriate. The ALRC also recognises the value in providing for open standing in this area, because it allows consumer and privacy organisations to initiate proceedings under the section.[46] As noted by Dr Norman Witzleb:

> This may prove of particular use where large organisations introduce services which have the potential of presenting privacy threats on a massive scale—such as, for example, the recently introduced 'g-mail' service by *Google*, which prompted substantial criticism from privacy and consumer groups worldwide.[47]

46.27 Greater use could be made of the injunctions power if the ALRC's proposal that the *Privacy Act* be amended to empower the Commissioner to direct an agency or organisation to prepare a privacy impact assessment is implemented.[48] If a project or development raised serious privacy concerns and the Commissioner believed it would, if implemented, interfere with the privacy of individuals, the Commissioner could seek an injunction from the Federal Court or Federal Magistrates Court to stop the project.[49]

Other enforcement mechanisms following non-compliance

Enforcement pyramid

46.28 As discussed in Chapter 42, Professors Ian Ayres and John Braithwaite have suggested that the ideal regulatory approach to enforcing compliance with regulation is through the adoption of an explicit 'enforcement pyramid'. Under such a model, regulators use coercive sanctions only when less interventionist measures have failed to produce compliance.[50] Breaches of increasing seriousness are dealt with by sanctions of increasing severity, with the most serious or 'ultimate sanctions' generally held in reserve as a threat.

48 See Proposal 44–4.

49 See *Privacy Act 1988* (Cth) s 98.

50 The model was first put forward in J Braithwaite, *To Punish or Persuade: Enforcement of Coal Mine Safety* (1985) and was further discussed in B Fisse and J Braithwaite, *Corporations, Crime and Accountability* (1993); C Dellit and B Fisse, 'Civil and Criminal Liability Under Australian Securities Regulation; The Possibility of Strategic Enforcement' in G Walker and B Fisse (eds), *Securities Regulation in Australia and New Zealand* (1994), 570.

46.29 There is great value in adopting the enforcement pyramid structure in the *Privacy Act*, as discussed further in Chapter 42. In some respects, the *Privacy Act* already adopts a pyramid-type structure for enforcing compliance. The approach relies initially on encouraging compliance, with determinations (and enforcement in the courts) and injunctions held in reserve. While there is some degree of escalation involved in these remedies, there are no civil penalties for serious contraventions of the Act, except some limited criminal penalties attached to credit reporting, and tax file number, offences.[51]

Submissions and consultations

46.30 In IP 31, the ALRC asked whether the range of remedies available to enforce rights and obligations created by the *Privacy Act* required expansion. Further remedies suggested by the ALRC include administrative penalties, enforceable undertakings or other coercive orders, remedies in the nature of damages, infringement notices, civil penalties and criminal sanctions.[52]

46.31 The ALRC received mixed responses from stakeholders about the need for further enforcement mechanisms. The Australian Health Insurance Association suggested that harsher penalties under the Act are unnecessary as it has not been shown that the lack of 'teeth' in privacy legislation has reduced compliance with privacy laws.[53] In contrast, the Australian Privacy Foundation submitted that a wider range of remedies and sanctions is desirable.[54]

46.32 Some stakeholders also commented on the resources needed to pursue an expanded range of remedies. The Fundraising Institute–Australia observed that, for the Commissioner to administer the complete range of penalties identified in IP 31, significant additional resources would be required.[55] While recognising the resource implications of additional remedies, the CCLC observed that

> stronger enforcement mechanisms, including through civil pecuniary penalties, present the OPC with a more long-term cost-effective way of functioning. Forcing businesses and industry to be accountable by imposing greater deterrents should result in less cases and investigations by the OPC.[56]

46.33 The ALRC also received comments on some of the particular remedies described by the ALRC in IP 31, which are discussed below.

---

51 The ALRC proposes the repeal of these credit reporting offences: see Proposal 55–8.

52 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 6–22. The remedies are discussed in more detail at [6.180]–[6.205].

56 Consumer Credit Legal Centre (NSW) Inc, *Submission PR 160,* 31 January 2007.

Administrative penalties and infringement notices

46.34 Several stakeholders commented on the use of administrative penalties and infringement notices. Administrative penalties are automatic, non-discretionary monetary penalties that are imposed without intervention by a court or tribunal.[57] Infringement notices are administrative methods of dealing with certain breaches of the law. When such a breach is committed, the regulator 'may prosecute or take civil penalty proceedings, or may issue an infringement notice offering the offending party the chance to discharge or expiate the breach through payment of a specified amount'.[58] The ALRC has previously expressed the view that infringement notice schemes are 'constitutionally valid where they do not involve a regulator assessing a penalty after a hearing of any description, but merely applying the law that determines the breach, together with a statement of the amount that the notice invites the alleged offender to pay'.[59] Both the *Spam Act 2003* (Cth) and the *Do Not Call Register Act 2006* (Cth) set up systems of infringement notices for contraventions of civil penalty provisions, as an alternative to the regulator instituting proceedings in the Federal Court.[60]

46.35 The OPC considered that administrative penalties or infringement notices would usefully address the compliance issues that arise in the *Privacy Act*. The OPC suggested that a non-discretionary fine would not be suitable in a complaints framework, where the OPC must assess different versions of an event and establish whether an exception to the general rule applies in the particular circumstances. Similarly, the OPC queried whether infringement notices would be appropriate in individual complaints that are frequently contested. The OPC considered it unlikely that there would be many circumstances in which an infringement notice could lawfully be issued prior to an investigation having been undertaken.[61]

46.36 In contrast, the Australian Privacy Foundation suggested that the experience of other jurisdictions suggests that administrative penalties and infringement notices can be particularly effective, noting that both the *Spam Act* and the *Do Not Call Register Act* include such provisions.[62] AAMI also noted that infringement notices could be used as a first step in a pyramid approach to penalties.[63] The CCLC submitted that administrative penalties have 'great potential for ensuring compliance' because the

63 AAMI, *Submission PR 147,* 29 January 2007.

non-discretionary nature of the penalty could 'posit accuracy and privacy protection as norms and just part of "good practice"'.[64]

Coercive orders

46.37 The ALRC noted in IP 31 that enforceable undertakings may be a possible remedy for breaches of the *Privacy Act*. The ALRC has previously described an enforceable undertaking as 'a promise enforceable in court'. A breach of the undertaking is not contempt of court but, once the court has ordered the person to comply, a breach of that order is contempt.[65]

46.38 Another type of coercive order is the compliance notice model used in other privacy legislation. For example, the *Information Act 2002* (NT) gives the Information Commissioner the power to serve a compliance notice on an organisation if it appears that the organisation has contravened a privacy principle, and the contravention is serious or flagrant or contraventions of that kind have occurred on three occasions within the previous two years. The notice requires the organisation to take specified action to ensure it complies with the privacy principles in the future. Failure to comply with the notice is an offence with a significant monetary penalty.[66]

46.39 The Office of the Information Commissioner Northern Territory described this compliance notice scheme as 'an effective compliance measure that could be used in respect of serious breaches by agencies or organisations'.[67] The OPC suggested that the compliance notice model was more appropriate in the privacy context than an enforceable undertaking. It noted that, in the trade practices context, enforceable undertakings operate as an alternative to litigation. As the Commissioner cannot prosecute organisations for breaches of the *Privacy Act*, the same incentive for organisations to commit to enforceable undertakings is not present.[68] The CCLC observed that, in its experience, enforceable undertakings are not very useful, 'especially as one must ultimately rely on a court to ensure results'.[69]

46.40 In contrast, AAMI found that the Australian Securities and Investments Commission uses this remedy effectively and suggested that it could be used in the privacy context in circumstances where an organisation continually breaches the Act, despite formal and repeated warnings from the regulator.[70] The Law Council of

Australia suggested that enforceable undertakings would give the Commissioner the ability to enforce a certain level of compliance without needing to turn to the courts.[71]

46.41 As discussed above, the ALRC has adopted a similar mechanism to the compliance notice in Proposal 46–1. Under the ALRC's proposal, however, a compliance notice could be issued only where the Commissioner finds an interference with privacy following an own motion investigation. Where the Commissioner finds an interference with privacy following a complaint investigation—which is the only other way the Commissioner can investigate a possible interference with privacy under the Act—the ALRC has proposed that the Commissioner be empowered to make orders in a determination that an agency or organisation must take specified action within a specified period for the purpose of bringing itself into compliance with the *Privacy Act*. This power is analogous to the proposed compliance notice and can be understood as a type of coercive order.

Remedies in the nature of damages

46.42 There is currently no provision for direct civil action by individuals against agencies or organisations that breach the *Privacy Act*. In contrast, the TPA provides that a person who suffers loss or damage by conduct of any person that was done in contravention of specific parts of the TPA may recover the amount of the loss or damage by action against that other person or against any person involved in the contravention.[72]

46.43 Some stakeholders supported providing individuals with an avenue for seeking damages via the development of a tort of privacy.[73] Beyond this, the OPC favoured the conciliation model as the primary complaint-handling model under the Act, including where an individual is seeking compensation. The OPC noted the high costs involved in pursuing a matter through the courts and the low level of compensation awarded in the resolution of privacy complaints. The OPC also observed that individuals could pursue compensation through the federal courts where an organisation does not comply with a determination.[74]

74 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

Publicity

46.44 Publicity can be a formal, legislated sanction or operate to create a negative perception of an agency or organisation by virtue of the imposition of another penalty.[75] The OPC has outlined that it will only use publicity in rare circumstances, given the serious 'commercial consequences' that can flow from making public the circumstances of a particular complaint or investigation.[76] The OPC has issued media statements outlining the actions taken in respect of particular organisations and agencies.[77]

46.45 The CCLC suggested that adverse publicity 'has a great potential as a weapon to ensure an organisation's compliance as this can impact on investment as well as potential for future customers or clients'.[78] The CCLC described it as a 'drastic measure', and suggested that its use could be limited to more extreme circumstances and for recurrent offenders. Another stakeholder stated that using publicity as an enforcement response was contrary to the concept of privacy and the spirit of the *Privacy Act*.[79]

Civil pecuniary penalties

46.46 Civil pecuniary penalties are essentially punitive—although their chief aim is often said to be deterrence—and they are payable whether or not harm was actually caused by the unlawful action.[80] A number of stakeholders in the OPC Review submitted that there should be some level of civil penalty resulting from a contravention of the *Privacy Act*.[81] One stakeholder stated that it is hard to convince some company boards to comply with privacy laws when no schedule of penalties is attached to non-compliance with the NPPs.[82] This view was also expressed in a number of consultations.

46.47 In its submission, the OPC acknowledged the comments made by stakeholders in the OPC Review, but considered that there are 'few circumstances where the introduction of civil penalties would be appropriate'.[83] In line with an enforcement

83 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

pyramid approach to compliance under the *Privacy Act*, however, civil penalties could be considered as a sanction for failure to comply with a compliance notice following an own motion investigation.[84] The OPC also suggested that civil penalties could apply to failure to report a data breach, if such a requirement were introduced into the Act.[85]

46.48 The CCLC submitted that imposing civil penalties, regardless of whether harm has been caused by the breach, 'is another effective measure for compliance'. The CCLC submitted that ss 16 and 16A of the Act should be nominated as civil penalty provisions, and suggested that any money generated by the penalty could be directed towards a privacy fund dedicated to enforcement.[86] Another stakeholder observed that the Act is not amenable to civil penalties because of the 'random extent of the exceptions and exemptions'. If the exemptions and exceptions were removed or limited, however, the Act could be amended to provide civil penalties enforceable by the OPC 'upon request by aggrieved individuals'.[87]

Criminal penalties

46.49 The *Privacy Act* already contains some criminal offences. For instance, furnishing information knowing that it is false or misleading in a material particular is an offence carrying a penalty of $2,000 or 12 months' imprisonment, or both.[88] There are also offences in the credit reporting provisions. For example, a credit reporting agency that intentionally contravenes s 18K(1) or s 18K(2)—which set limits on the disclosure of personal information by credit reporting agencies—is guilty of an offence punishable, on conviction, by a fine not exceeding $150,000.[89]

46.50 There was no support for introducing further criminal penalties into the *Privacy Act*, such as for a reckless, intentionally dishonest or flagrant contravention. The OPC considered that a cautious approach should be taken to the inclusion of further criminal sanctions, and noted that 'as privacy is unlikely to be a high policing priority, a significant increase in criminal sanctions may impede rather than facilitate better privacy protection and privacy complaint outcomes'.[90]

ALRC's view

46.51 The framework of compliance-oriented regulation underpinning the *Privacy Act* should be considered when examining whether there should be further penalties added to the Act. As discussed in Chapter 42, a compliance-oriented approach to

90 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

enforcement, which includes a focus on fostering compliance in the first instance, requires the presence of punitive sanctions to be effective. This is because 'persuasive and compliance-oriented enforcement methods are more likely to work where they are backed up by the possibility of more severe methods'.[91] The existence of a strong penalty can, by itself, act as an incentive for compliance, as long as the regulated entity knows that the regulator will impose the penalty where appropriate.

46.52 Determinations are regarded by some as a 'strong' penalty, because they can involve a public declaration of breach and thereby contain an element of informal, negative publicity.[92] The ALRC notes, however, that according to the OPC's new determination policy, determinations are not necessarily going to be limited to the most serious cases, 'nor will determinations issued by the Commissioner necessarily be punitive'.[93] This approach by the OPC is consistent with the ALRC's proposal to increase the number of determinations issued, by giving complainants and respondents the right to require the Commissioner to issue a determination in certain circumstances.[94]

46.53 Although the significance of determinations should not be underestimated, the ALRC believes there is a need to strengthen the overall enforcement pyramid of the *Privacy Act*. Accordingly, it proposes that the Act should be amended to allow a civil penalty to be imposed where there is a serious or repeated interference with the privacy of an individual.[95] The Commissioner should be empowered to bring proceedings for pecuniary penalties in the Federal Court, similar to the approach taken with the Australian Competition and Consumer Commission (ACCC) under the TPA.[96]

46.54 Consistently with the ALRC's recommendation in *Principled Regulation* (ALRC 95), the ALRC proposes that the OPC develop and publish enforcement guidelines setting out the criteria upon which a decision to pursue a civil penalty under the *Privacy Act* would be made.[97] It is likely that the OPC would only undertake civil penalty proceedings where the matter involves: an apparent blatant disregard of the law; a history of previous contraventions of the law; significant public detriment or

significant number of complaints; or the potential for action to have a worthwhile educative or deterrent effect.[98]

46.55 The ALRC does not propose that an administrative penalty or infringement notice scheme be included in the Act. The ALRC acknowledges the difficulties of using non-discretionary fines and infringement notices in the context of the principles-based regime of the *Privacy Act*. The ALRC also does not propose that enforceable undertakings be introduced in the Act. The ALRC's proposals to introduce compliance notices for own motion investigations and to expand the remedies available in a determination empower the Commissioner to make coercive orders and will provide additional methods to enforce the *Privacy Act*.

Proposal 46–2 The *Privacy Act* should be amended to allow a civil penalty to be imposed where there is a serious or repeated interference with the privacy of an individual. The Office of the Privacy Commissioner should develop and publish enforcement guidelines setting out the criteria upon which a decision to pursue a civil penalty is made.

98 These factors are similar to the enforcement priorities of the ACCC: see Australian Competition and Consumer Commissioner, *Section 87B of the Trade Practices Act: A Guideline on the Australian Competition and Consumer Commission's Use of Enforceable Undertakings* (1999), 2.

Overview

Background

47.1 Data breach notification is a topical issue in privacy regulation around the world. Data breach notification is, in essence, a legal requirement on agencies and organisations to notify individuals when a breach of security leads to the disclosure of personal information.

47.2 This chapter starts by considering the rationales given for data breach notification laws in the United States (US), which is at the forefront in the development of such laws. The chapter then considers some of the key elements of data breach notification laws in other jurisdictions, including the event that triggers the requirement to notify. Finally, the chapter sets out the ALRC's view on the justification for a data breach notification law and proposes that the *Privacy Act 1988* (Cth) be amended to include a new part on data breach notification.

Current regulatory requirements

47.3 The Information Privacy Principles (IPPs) and the National Privacy Principles (NPPs) in the *Privacy Act* do not impose an obligation on agencies and organisations to notify individuals whose personal information has been compromised. The *Privacy Act* requires, however, that agencies and organisations take reasonable steps to maintain the security of the personal information they hold.[1]

47.4 In the Issues Paper, *Review of Privacy* (IP 31), the ALRC asked whether the *Privacy Act* should be amended to require agencies or organisations to advise individuals of any misuse, loss or unauthorised access, modification or disclosure of personal information.[2] If the answer to this threshold question is 'yes', further issues arise about the nature and extent of such an obligation. Specifically, should the obligation extend to any unauthorised disclosure or only those disclosures that could lead to harm, such as identity theft?

Rationale for data breach notification

Identity theft

47.5 In the US, concerns about identity theft and identity fraud have been the main issues driving the development of data breach notification laws.[3] As discussed in Chapter 9, identity theft is a subset of the broad concept of 'identity crime' and is used to describe the illicit assumption of a pre-existing identity of a living or deceased person, or of an artificial legal entity such as a corporation.[4] A stolen identity can be used to commit 'identity fraud', which is where a fabricated, manipulated or stolen identity is used to gain a benefit or avoid an obligation. An example of identity fraud is using a stolen identity to make fraudulent purchases or steal money from the victim (known as 'account takeover').[5] Another example of identity fraud is where a criminal

uses personal information about an identity theft victim to open new accounts in the name of the victim (sometimes called 'true name fraud').[6]

47.6 With advances in technology, agencies and organisations are storing vast amounts of identifying information electronically.[7] Any breach of the secure storage of this information can result in the release of personal, identifying information of an individual. That personal information may be sufficient to allow an unauthorised person to assume the identity of the victim and use that illicit identity to open, for example, new accounts in the victim's name.

47.7 For these reasons, a security breach, resulting in unauthorised 'leaks' or acquisitions of information, is thought to contribute to the risk of identity theft, and the consequent risks of identity fraud.[8] By requiring notice to persons who may be affected adversely by a breach, data breach notification laws 'seek to provide such persons with a warning that their personal information has been compromised and an opportunity to take steps to protect themselves against the consequences of identity theft'.[9] As one commentator explains:

> Identity theft and identity fraud have emerged as serious crimes for consumers, citizens and business … Given the peculiar nature of this type of theft—namely, that it can be perpetrated by accessing information stored in places uncontrolled by the victim and in places of which the victim is often unaware—legislators have passed or are considering passing laws which require that the consumer be notified in the event of a data breach.[10]

47.8 Data breach notification laws are, therefore, based on the recognition that 'individuals need to know when their personal information has been put at risk in order to mitigate potential identity fraud damages'.[11]

11 Canadian Internet Policy and Public Interest Clinic, *Approaches to Security Breach Notification: A White Paper* (2007), 2.

Lack of market incentives for notification

47.9 Some commentators suggest that the obligation to notify individuals of a data breach needs to be mandated legally because the market, by itself, may not provide sufficient incentives for organisations to take measures to notify individuals affected by the breach.[12] In particular, an organisation may not have an incentive to notify individuals affected by a security breach when the 'cost' of the notification exceeds the expected damage to the organisation.[13]

47.10 The cost of notification does not just include the actual cost involved in notifying every individual affected by a security breach, although that, by itself, can be very expensive. Notifying customers of a security breach also gives rise to a real potential for market damage to the organisation, including reputational damage, lost customers and lost future profits. Notification can also expose an organisation to civil penalties from regulators and costly private litigation proceedings by individuals affected. If the organisation has a high profile or the security breach is large, notification can also result in negative publicity in the media. In these circumstances, an organisation may avoid reporting a security breach if it is not legally required to do so, as the cost to the organisation of notifying individuals significantly outweighs the costs caused by the actual breach. For these reasons, therefore, it has been observed that, in the absence of a legal requirement to notify, market forces may 'undersupply notification'.[14]

Provides incentives to secure data

47.11 Given the reputational damage that can flow from having to disclose a security breach, it has been suggested that the existence of a data breach notification law provides commercial incentives for organisations to take adequate steps in the first place to secure data.[15] The purpose of the Delaware data breach notification legislation, for example, is to 'help ensure that personal information about Delaware residents is protected by encouraging data brokers to provide reasonable security for personal information'.[16] This is an important effect of data breach notification, particularly as organisations in the US may not be subject to express data security obligations such as those in the *Privacy Act*.[17]

16 *Delaware Code* , Synopsis. Similar comments are made in *Arkansas Code* § 4-110-102.

17 Some of the data breach notification laws, however, also require regulated entities to implement and maintain reasonable security procedures and practices: see, eg, *Arkansas Code* § 4-110-104.

Increasing number of data breaches

47.12 The rapid growth in data breach notification laws in the US in the past few years is said to be a direct response to a series of high profile, well-publicised data breaches.[18] One of the most notorious data breaches was the disclosure by ChoicePoint, a large identification and credential verification organisation in the US, of sensitive information it had collected on 145,000 individuals.

47.13 The Privacy Rights Clearinghouse maintains a Chronology of Data Breaches, which lists all breaches reported in the US that expose individuals to identity theft or breaches that qualify for disclosure under state laws. As at 18 July 2007, the total number of records containing sensitive personal information involved in security breaches was 150 million.[19] Security breaches are, therefore, a concern in the US community.

Models of data breach notification laws

Background

47.14 California was the first US state to require the reporting of data breaches involving personal information. The Californian law has been a model for legislation passed in over 30 US state legislatures and there are moves to implement a national notification standard concerning compromised data.[20] While many states adopt very similar provisions to the Californian law, some US states set a different test of when notification will be required.

47.15 While organisations are subject to differing data breach notification requirements depending on which state they operate in, all financial institutions in the US are subject to the data breach notification requirements set out in the *Interagency Guidance on Response Programs for Unauthorized Access to Customer Information and Customer Notice*, issued by the US Department of Treasury and other agencies (US Interagency Guidance). The US Interagency Guidance interprets the requirements of the *Gramm-Leach-Bliley Act 1999* (US), which regulates all financial services institutions in the US, to develop and implement a response program 'to address unauthorized access to, or use of customer information that could result in substantial harm or inconvenience to a customer'.[21] The US Interagency Guidance only applies to

21 United States Department of the Treasury, Federal Reserve System and Federal Deposit Insurance Corporation, *Interagency Guidance on Response Programs for Unauthorized Access to Customer*

financial services institutions, and does not apply to other organisations or federal or state government agencies.

47.16 In Canada, only the province of Ontario requires notification after a security breach.[22] The Privacy Commissioners of Canada, British Colombia and Ontario have, however, issued a 'Breach Notification Assessment Tool' to assist organisations in determining what steps should be taken in the event of a privacy breach.

47.17 There have also been moves at the federal level in Canada to introduce a data breach notification law. The Canadian Internet Policy and Public Interest Clinic (CIPPIC) issued in January 2007 a White Paper, *Approaches to Security Breach Notification*, which puts forward a model law for Canada. In addition, the review of the *Personal Information Protection and Electronic Documents Act 2000* (Canada) (PIPED Act), by the Canadian Government Standing Committee on Access to Information, Privacy and Ethics, considered the issue of breach notification. The Committee recommended that the PIPED Act be amended to include a breach notification provision requiring organisations to report certain defined breaches of personal information holdings to the Canadian Privacy Commissioner. The Canadian Privacy Commissioner would then determine whether or not affected individuals and others should be notified and, if so, in what manner.[23]

47.18 There are, therefore, a number of proposed or established models for data breach notification laws. These laws, however, adopt a variety of approaches on key areas such as the triggering event, exceptions to the notification requirement and responsibility to notify. The following section focuses on the key approaches taken in data breach notification laws in California and other US states, the US Interagency Guidance and the CIPPIC proposal in Canada.

Trigger for notification

47.19 In California, the event that triggers the obligation to provide notice is any 'breach of the security of the system', which is defined as the 'unauthorised acquisition of computerized data that compromises the security, confidentiality, or integrity of personal information maintained by the agency'.[24] A good faith acquisition of personal information by an employee or agent of the agency for the purposes of the agency does not constitute a breach of the security of the system, 'provided that the personal information is not used or subject to further unauthorised disclosure'.[25] This is said to

24 *California Civil Code* § 1798.29(a).

25 Ibid § 1798.29(d).

provide an exception to the general obligation to notify for 'harmless internal breaches'.[26]

47.20 The Californian triggering event of any 'unauthorised acquisition' of computerised data sets quite a low threshold for notification, as it requires notification even if the organisation considers it very unlikely that the personal information acquired could give rise to a risk of harm or identity theft. While this triggering event has been followed in a number of other US states,[27] some US states have adopted a higher threshold for notification. For example, the Indiana Code requires notification where there has been unauthorised acquisition of personal information 'if the database owner knows, should know, or should have known that the unauthorised acquisition constituting the breach has resulted in or could result in identity deception, identity theft or fraud affecting the Indiana resident'.[28] Other US states provide an exception to notification if, after a reasonable investigation, the person or business determines that there is no reasonable likelihood of harm to customers.[29]

47.21 In its approach to defining the triggering event, the US Interagency Guidance gives the relevant organisation greater discretion to decide whether notification is necessary. The US Interagency Guidance provides that when an institution becomes aware of an incident of unauthorised access to sensitive customer information, the institution should conduct a reasonable investigation to determine promptly the likelihood that the information has been, or will be, misused. If the institution determines that misuse of the information has occurred or is reasonably possible, it should notify affected customers as soon as possible.[30]

47.22 In its proposed model for Canada, the CIPPIC picked up on the Californian triggering event of 'acquisition or reasonable belief of acquisition by an unauthorised person'. The CIPPIC argued that this standard 'is higher than mere "access by an unauthorised person", but lower than standards that incorporate a "risk of identity fraud" element'.[31] The CIPPIC suggested that:

> The test should be designed to avoid notification obligations where the breach does not expose individuals to a real risk of identity theft, but to apply in all situations where such a risk is created.[32]

32 Ibid, 25.

Definition of 'personal information' in data breach notification laws

47.23 The data breach notification laws in each state define the type of 'personal information' which, when leaked, may give rise to the obligation to notify. For the purpose of data breach notification, the definition of 'personal information' tends to focus more on the combination of certain pieces of personal information rather than providing a broad definition like that provided in the *Privacy Act*. References to 'personal information' in the context of data breach notification, therefore, are not meant to refer to personal information as defined in the *Privacy Act*.

47.24 The general approach adopted in a number of states, including California, is to define personal information as an individual's first name (or initial) and last name in combination with any of the following:

- social security number;
- driver's licence number or state identification card number; or
- account number, credit card number, debit card number in combination with any necessary security code, access code or password that would permit access to the account.[33]

47.25 Some US states include medical information in the definition of 'personal information'. For example, the Delaware code defines 'personal information' to include 'individually identifiable information, in electronic or physical form, regarding the Delaware resident's medical history or medical treatment or diagnosis by a health care professional'.[34]

47.26 The CIPPIC's proposed law for Canada defines 'designated personal information' in a similar manner as California, although it includes the combination of an address by itself (that is, without a name as well) with other sensitive information within the definition of 'designated personal information'. The CIPPIC justified this approach on the basis that 'it is relatively easy to obtain a person's name from an address, using phone books, online databases and search engines'.[35]

47.27 Under the Californian definition and a number of other US states, personal information does not include 'publicly available information that is lawfully made

---

33 *California Civil Code* § 1798.29(e). A similar definition is adopted in United States Department of the Treasury, Federal Reserve System and Federal Deposit Insurance Corporation, *Interagency Guidance on Response Programs for Unauthorized Access to Customer Information and Customer Notice* (2005).

34 *Delaware Code* § 12B-101(2). See also *Arkansas Code* § 4-110-103.

35 Canadian Internet Policy and Public Interest Clinic, *Approaches to Security Breach Notification: A White Paper* (2007), 25.

available to the general public from federal, state, or local government records'.[36] The US Interagency Guidance, however, outlines that it would be inappropriate to exclude publicly available information from the definition of sensitive customer information where the publicly available information is otherwise covered by the definition of customer information. For example, while a personal identifier, such as a name or address, may be publicly available, it is sensitive customer information when linked with particular non-public information such as a credit card account number.[37]

Exceptions

Encryption

47.28 Most states that have data breach notification laws, including California, do not require notification where the personal information that was the subject of the unauthorised acquisition was encrypted.[38] Some US states specify that the exception does not apply where the encryption key was also acquired.[39] The CIPPIC model also made an exception for encrypted data.[40]

47.29 In contrast, the US Interagency Guidelines rejected a blanket exclusion for encrypted data because 'there are many levels of encryption, some of which do not effectively protect customer information'.[41]

47.30 To address the differing standards of encryption and provide more guidance to organisations, some US states define encryption in the statute. For example, the Indiana Code provides that data are encrypted for the purposes of the data breach notification law if data:

> (1) have been transformed through the use of an algorithmic process into a form in which there is a low probability of assigning meaning without use of a confidential process or key; or
>
> (2) are secured by another method that renders the data unreadable or unusable.[42]

42 *Indiana Code* § 24-4.9-2-5. See also *Ohio Revised Code* § 1347.12(A)(4).

47.31 Others US states give the organisation discretion to determine what constitutes valid encryption under the statute.[43] As this CIPPIC explains, this 'provides latitude to organisations in selecting encryption applications that suit them'.[44]

Redaction

47.32 Some US states also provide an exception to notification for data that is redacted. Redaction can refer to a variety of practices. In Indiana, redaction is defined as data that are altered or truncated so that not more than the last four digits of a driver's licence number, stated identification number, or account number, are accessible as part of personal information.[45] The CIPPIC proposal for a Canadian data breach notification law also proposes exceptions for 'information that is redacted or otherwise altered by any method or technology in such a manner that the name or data elements are unreadable by unauthorized persons'.[46]

Responsibility to notify

47.33 In all US states and in the US Interagency Guidance, the responsibility for deciding whether notification is required following a breach in the security of the system rests with the organisation itself.[47] The CIPPIC adopted a similar approach in its proposed model for Canada, providing that organisations should have the responsibility for determining whether the standard for breach notification is met.[48] The CIPPIC acknowledged that generally the affected organisation is in the best position to calculate the associated risks of a breach of its information security and should be entrusted with this determination.[49]

47.34 In all the proposed models considered by the ALRC, notification of the security breach was required to any individual affected by the breach.[50] In addition to notifying individuals affected, some US states require that the organisation notify the relevant

consumer protection agency.[51] The US Interagency Guidance provides that an institution should notify its primary federal regulator as soon as possible when the institution becomes aware of an incident involving unauthorised access to or use of 'sensitive personal information'.[52] Similarly, the CIPPIC recommended in its proposed model for Canada, that

> there should be a requirement that every breach involving defined personal information be reported to the Privacy Commissioner, with full information about the nature and extent, the anticipated risks, mitigation measures, steps taken to notify affected individuals or, where notification is not considered warranted, the justification for not taking this step.[53]

47.35 Under the CIPPIC model, notice should be made to the Privacy Commissioner regardless of whether the test of individual notification is met. This would ensure that a record is kept of all security breaches, which provides oversight of organisational practices. It also 'offers the potential for organisations to obtain guidance from the Privacy Commissioner regarding notification obligations and methods'.[54] The CIPPIC also proposed that government agencies, credit bureaux and law enforcement authorities should be notified. The CIPPIC envisages that the Privacy Commissioner provide guidance to organisations as to which agencies should be notified in the context of a specific breach.[55]

Timing, method and content of notification

Timing of notification

47.36 In California, and most other US states with data breach notification laws, notification must occur in 'the most expedient manner possible and without unreasonable delay'.[56] The US Interagency Guidance provides that an institution must notify an affected customer 'as soon as possible' after concluding that misuse of the customer's information has occurred or is reasonably possible. Most US states, and the US Interagency Guidance, allow for delays in, or exceptions to, notification if notice will jeopardise a law enforcement investigation.

47.37 The CIPPIC proposal for Canada adopted similar timing for data breach notification. It proposed that notification should be undertaken 'as soon as possible and

without unreasonable delay after the occurrence of the breach, except where a law enforcement agency has made a written request for a delay'.[57]

Method of notification

47.38 The general approach of US state data breach notification laws is to describe the method of notification. For example, the *California Civil Code* provides that notice may be provided by written notice and electronic notice.[58] Other US states also allow notice by telephone or facsimile.[59]

47.39 California also provides for substituted notice where the organisation demonstrates that the: cost of providing notice would exceed a $250,000; affected class of subject persons to be notified exceeds 500,000; or agency does not have sufficient contact information. Substituted notice consists of: email notice, where the organisation has an email address for the subject persons; conspicuous posting of the notice on the organisation's website page, if the organisation maintains a website; and notification to major statewide media.[60]

47.40 Most US states have developed similar substituted notice schemes to handle large security breaches.[61] While the threshold and methods for substituted notice vary between states, a number of US states have adopted the same requirements as California.[62] In contrast to these approaches, the US Interagency Guidance prescribes a more general requirement that notice should be delivered 'in any manner that is designed to ensure that a customer can reasonably be expected to receive it'.[63]

47.41 In the CIPPIC's proposed model, notification 'should generally be by regular mail, but electronic and substitute notice should be permitted when certain conditions are met'.[64] In particular, email notice should only be allowed where the individual concerned has consented explicitly to receiving 'important notices such as this by email'. Substituted notice should be permitted where 'large numbers of individuals (eg, over 100,000) must be notified, where the total cost of individual notification is extraordinary (eg, over $150,000), or where the Privacy Commissioner has specifically

approved the substitute notice'.[65] The CIPPIC proposed similar substituted mechanisms as provided in the California data breach notification law.

Form and content of notification

47.42 California does not specify the contents of the actual data breach notice. In contrast, other US states and the US Interagency Guidance provide detail on what should be covered in a notice. The general approach is to require the following information:

- a general description of what occurred, including the time and date of the breach and when it was discovered;
- the type of personal information that was the subject of the unauthorised access, use or disclosure;
- contact information for affected individuals to obtain more information and assistance; and
- a reminder of the need to remain vigilant and to report promptly incidents of suspected identity theft to the organisation.[66]

47.43 In its proposal for a Canadian data breach notification law, the CIPPIC proposed that breach notices include similar matters as set out above. It also suggested that the notice

> should be separate from other communications and should include detailed information about the breach, including an assessment of the risk that the personal information of affected individuals will be used in an unauthorized manner.[67]

Penalties for failure to notify

47.44 Some US states provide penalties for failure to make a disclosure or notification in accordance with the applicable law. For example, the Indiana Code provides that any person that fails to comply with its data breach notification law 'commits a deceptive act that is actionable only by the Attorney General'.[68] The Attorney General

68 *Indiana Code* § 24-4.9-4-1.

may bring an action to obtain an injunction or a civil penalty of not more than $150,000 per deceptive act.[69]

Submissions and consultations

General support

47.45 Many stakeholders, including the Office of the Privacy Commissioner (OPC), expressed general support for a requirement that data users notify individuals of a breach to their personal information in certain circumstances.[70] Supporters of a data breach notification law gave a number of reasons why such a law would be valuable. These include that it would:

- provide a strong market incentive and stimulus to organisations to secure databases adequately to avoid the brand and reputational damage arising from negative publicity;[71]
- encourage attention to compliance and vigilance against identity theft;[72] and
- improve accountability, openness and transparency in the handling of personal information by agencies and organisations.[73]

Opposing a data breach notification requirement

47.46 Some stakeholders stated expressly that there is no need for a data breach notification principle or requirement. Others submitted that the current principles were appropriate—implying that a data breach principle is not appropriate or necessary.[74]

47.47 The Australian Federal Police (AFP) submitted there should be no requirement to notify individuals about the misuse, loss or unauthorised access to, modification or disclosure of personal information. While recognising the benefit to the individual of notification, the AFP expressed concern that requiring notification may contribute to the already excessive caution exercised by agencies, organisations and individuals in relation to privacy.[75]

Triggers for reporting

47.48 A number of stakeholders identified the criteria for triggering the requirement to notify individuals affected by a data breach as a critical issue.[76] For example, the National Health and Medical Research Council submitted that the requirement to report should be qualified on the basis of the significance of the breach and the practicality and reasonableness of notifying individuals.[77] The idea of making the reporting proportionate to the potential for harm was supported by a number of stakeholders, including the OPC.

47.49 Microsoft Australia submitted, for example, that the trigger for requiring notification of a security breach should be if the 'breach could reasonably result in the misuse of that individual's unencrypted sensitive financial information'. Microsoft Australia argued that this test strikes

> an appropriate balance between empowering individuals to minimise the more serious consequences that might flow from a security breach involving their personal information, and avoiding a situation whereby security notifications are so frequent that individuals disregard them or are unable to differentiate between those that indicate a significant risk and those that don't.[78]

47.50 In terms of the type of notification, Microsoft Australia suggested that organisations should be afforded some discretion as to the method by which they provide breach notification to individuals. In particular, organisations should be able to take into account factors such as the size of their organisation; number of potential recipients of a notification; the relative cost of different methods of providing

notification; and the ways in which the organisation typically communicates with its customers.[79]

47.51 The Office of the Victorian Privacy Commissioner stated that the starting point for breach notification in Victoria is the objects clause of the *Information Privacy Act 2000* (Vic), which provides that the collection and handling of personal information is to be 'responsible' and 'transparent'. Part of this obligation is to tell individuals 'when something goes wrong and to explain to them what has been done to try to avoid or remedy any actual or potential harm'.[80] There is a presumption, therefore, that privacy breaches ought to be notified to those whom they potentially affect. Only in exceptional cases should a senior decision-maker in possession of all the facts make the decision that notification is 'neither necessary nor desirable'. In deciding whether the circumstances of a case are exceptional, the decision maker should have regard to the following factors:

- the potential for reasonably foreseeable harm to result from the breach for the persons whose information is involved;
- the potential for notification itself to cause reasonably foreseeable harm to the data subjects, excluding harm to those responsible for the breach; and
- whether, considering the two points above, notification is reasonably likely to alleviate more harm than it would cause.[81]

47.52 While not expressing direct support for a data breach notification requirement, Veda Advantage acknowledged that there may be a case for organisations that operate large, highly transactional databases to notify consumers and regulators in the event of a significant data loss or theft.[82]

47.53 The Law Council of Australia did not express support for a data breach notification requirement. The Law Council noted, however, that many organisations already report data breaches where they believe the information is confidential and disclosure could result in harm. In contrast, where a breach is internal and is quickly remedied so no harm could result, organisations would not necessarily disclose the breach, as disclosure may give rise to unjustified alarm on the part of the individual.[83]

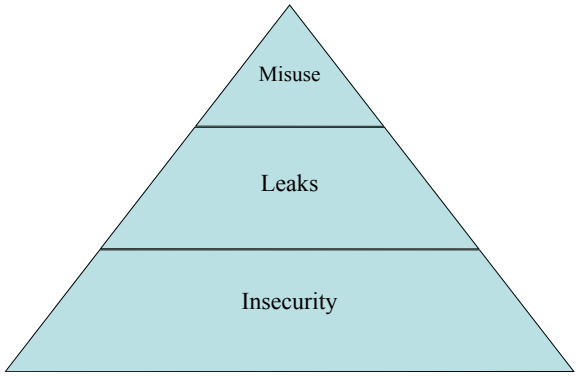
ALRC's view

47.54 In considering whether a data breach notification law is appropriate for Australia, the ALRC has had regard to the theoretical framework proposed by Professor Daniel Solove in dealing with information abuses, such as identity theft and fraud.[84] The ALRC has also considered the general objectives of regulation, as discussed by Professors Robert Baldwin and Martin Cave.[85]

Data abuse pyramid

47.55 Data breach notification should be considered within the context of the *Privacy Act*'s objective to protect the personal information of individuals. Solove has suggested that data security 'is quickly becoming one of the major concerns of the Information Age'.[86] Solove has developed a 'data abuse pyramid' in which 'to think about information abuses, their causes and the way they should be remedied'.[87] The pyramid represents how and why many types of information abuses occur, and is represented below.



47.56 At the top of the pyramid are actual 'misuses' of data—that is, when information is employed to carry out identity theft, fraud, or other activities. A level below misuse are 'leaks'—when entities improperly release or provide access to personal information. At the bottom of the pyramid is 'insecurity', which involves a general lack of protection accorded to personal data by entities.[88] Solove suggests that

84 D Solove, *The New Vulnerability: Data Security and Personal Information* (2005) George Washington University Law School Public Law Research Paper No 102.
85 See R Baldwin and M Cave, *Understanding Regulation: Theory, Strategy and Practice* (1999).

87 Ibid, 2.
88 Ibid, 2–3.

the law must become involved at the lower levels of the pyramid, rather than just responding to the top of the pyramid, by way of criminal sanctions for identity crimes.[89]

Data leaks

47.57 As Solove explains, 'with a leak, the harm consists in being exposed to the potential for being subjected to identity theft, fraud, or even physical danger'.[90] The *Privacy Act* does not provide any direct response to the second level of Solove's pyramid, where information has been 'leaked', or where there has been an unauthorised acquisition of personal information from an agency or organisation. As the Act currently stands, therefore, there is no obligation to inform individuals that their personal information has been accessed by an unauthorised person and that they may be at an increased risk of identity theft or fraud.

47.58 In the ALRC's view, the Act should provide notification to individuals affected by a security breach. The ALRC agrees with the central rationale given for data breach notification laws that notifying people that their personal information has been breached can help to minimise the damage caused by the breach.[91] Notification acknowledges the fact that a data breach can expose an individual to a potentially serious risk of harm and, by arming the individual with the necessary information, gives the individual the opportunity, for example, 'to monitor their accounts, take preventative measures such as new accounts, and be ready to correct any damage done'.[92] Early notification would also facilitate the ALRC's proposal in Chapter 52, that individuals be able to apply to credit reporting agencies to put a notice on their credit report that the individual has been the subject of identity theft.[93]

47.59 A legal requirement to notify, in contrast to a voluntary approach, is necessary because, as explained above, there is a risk that the uncontrolled market may 'undersupply notification'.[94] That is, because of the reputational damage that notification can cause, organisations may not have incentives to notify customers of a data breach voluntarily.[95]

---

Data insecurity

47.60 The *Privacy Act* contains provisions to address the problems identified at the base of Solove's pyramid, by requiring agencies and organisations to take reasonable steps to keep personal information secure. This is in contrast to many states in the US, which, as noted above, do not have broader legislation in place regulating the personal information handling practices of agencies or organisations.

47.61 In the ALRC's view, a data breach notification requirement can enhance the existing protections offered by the *Privacy Act* by providing incentives to improve data security, in compliance with the proposed 'Data Security' principle. The reputational damage that can follow a high-profile data breach, and the commercial consequences of such a breach, can provide powerful deterrents against lax security.

47.62 Even more broadly, notification of security breaches can play an important role in keeping the market informed of the privacy practices of organisations. As Baldwin and Cave suggest, 'competitive markets can only function properly if consumers are sufficiently well informed to evaluate competing products'.[96] In the absence of notification, a data breach causes an 'information inadequacy', as the organisation knows that there has been an unauthorised acquisition of an individual's personal information, but the individual affected does not. Thus, until the individual is notified of a security breach, there may be inadequate information in the market for individuals to evaluate the different personal information-handling practices of organisations. Notification can provide insight into an organisation's security practices and help inform the market about the vulnerabilities or weaknesses of a particular organisation compared to others.

Trigger for notification

47.63 In the ALRC's view, the proposed data breach notification provisions should include a general requirement to notify the Privacy Commissioner and affected individuals when specified personal information has been, or is reasonably believed to have been, acquired by an unauthorised person; and the agency, organisation or Privacy Commissioner believes that the unauthorised acquisition may give rise to a real risk of serious harm to any affected individual.

47.64 There are several factors to note about this proposed triggering event. First, it sets a higher threshold for notification than is provided in the Californian test. Rather than requiring notification of 'any unauthorised acquisition' of personal information, the proposed test allows the agency or organisation to investigate the data breach and make an assessment of whether the unauthorised acquisition may give rise to a real potential for serious harm to an individual. Serious harm is not limited to identity theft

96 R Baldwin and M Cave, *Understanding Regulation: Theory, Strategy and Practice* (1999), 12.

or fraud. The harm could include, for example, discrimination, if sensitive medical information was released.

47.65 Setting the threshold higher than an unauthorised acquisition should reduce the risk of 'notification fatigue', where individuals receive so many notices of data breaches that it becomes difficult for them to assess which ones carry a serious risk of harm and which ones are minor in nature and consequence. A higher threshold for notification should also reduce the compliance burden on agencies and organisations.

47.66 Secondly, while the agency or organisation is given primary responsibility for deciding whether the triggering event has occurred, the ALRC's proposal provides for oversight by the Privacy Commissioner. It is preferable that the decision about notification is made in consultation with the Privacy Commissioner, and that the Commissioner is able to require notification where he or she believes that the unauthorised acquisition gives rise to a real risk of serious harm to any affected individual, even if the agency or organisation disagrees. This oversight is similar to the model put forward by the CIPPIC and the Canadian Government Standing Committee on Access to Information, Privacy and Ethics. The Commissioner could also use this oversight power to require that notification be made to other bodies as appropriate, such as the major credit reporting agencies.[97]

47.67 Thirdly, consistently with the ALRC's proposal that the *Privacy Act* be technologically neutral,[98] the requirement to notify should not be restricted to computerised information, but should apply to any unauthorised access to personal information—whether through a lost laptop; a hacker accessing an organisation's electronic files; misplaced hard copy files; or careless disposal of hard copy personal information. This broad application should encourage compliance with the proposed 'Data Security' principle, which requires that agencies and organisations take reasonable steps to protect the information it holds and to destroy or render non-identifiable personal information if it is no longer needed for any purpose permitted by the proposed Unified Privacy Principles (UPPs).

Exceptions

47.68 While the proposed triggering event set out above is narrower than that adopted in many states in the US, the ALRC acknowledges the concern expressed by stakeholders that there be some exceptions and discretion around the requirement to notify.

47.69 The ALRC proposes that the provisions should include an exception where the specified personal information was encrypted adequately. The requirement that encryption be 'adequate' implicitly requires that the encryption key was not also acquired by the unauthorised person—encryption will obviously not be adequate where

97 This would also facilitate Proposal 52–1.
98 See Proposal 7–1.

there is an easy means of decoding the information. This phrasing also avoids any need to specify exactly what type of encryption is adequate, which would be contrary to the ALRC's goal of making the *Privacy Act* technologically neutral. An assessment of adequacy will depend on the circumstances of the case, taking into account matters such as the type of personal information, the nature of the organisation holding it, and the risk of harm that would be caused by its unauthorised acquisition. The Privacy Commissioner should issue guidance on the type and standard of encryption he or she will generally consider adequate, and the factors he or she will consider in assessing whether an agency or organisation will be able to avail itself of this exception in the case of a data breach.

47.70 The ALRC proposes that the data breach notification provisions provide an exception to the requirement to notify where the information was acquired in good faith by an employee or agent where the agency or organisation was otherwise acting for a purpose permitted by the proposed UPPs—provided that the personal information is not used or subject to further unauthorised disclosure. This exception would apply to situations where, for example, an employee accidentally accesses specified personal information of a customer in the process of collecting information for a permitted purpose. It would not cover situations where an employee is acting outside a purpose permitted by the proposed UPPs, such as where he or she is 'snooping' or accessing personal information for illegitimate purposes.[99]

47.71 The ALRC also proposes that the Privacy Commissioner have a broad discretion to waive the notification requirement where the Commissioner does not consider that it would be in the public interest. This would cover situations where there is a law enforcement investigation being undertaken into the breach and notification would impede that investigation.

'Specified personal information' for the purposes of notification

47.72 As noted above, in US state data breach notification laws, only the combination of particular types of personal information gives rise to the obligation to notify. The US laws do not apply to the range of personal information which falls within the definition of 'personal information' in the *Privacy Act*.

47.73 In the ALRC's view, the *Privacy Act* should adopt a definition of 'specified personal information' for the purposes of the proposed data breach notification provisions. This definition should draw on the existing definitions of 'personal information' and 'sensitive information' in the *Privacy Act* and should prescribe what combinations of these types of information would, when acquired without authorisation, give rise to a real risk of serious harm so as to require notification.

---

99 See, eg, the 'Centrelink Staff Sacked over Breaches', *Sydney Morning Herald* (online), 22 August 2006, <www.smh.com.au>.

47.74 For example, adopting the approach of the US Interagency Guidance and CIPPIC definitions, 'specified personal information' could include information in electronic or paper form, which includes an individual's name or address, in combination with any of the following:

- driver's licence or proof of age;
- Medicare number—or new access card number if the legislation is passed;
- account numbers, credit or debit card numbers, or other unique identifiers issued by other organisations together with any security code, password or access code that would permit access to the individual's information; or
- sensitive information (as defined in the *Privacy Act*).

47.75 The unauthorised acquisition of any of these combinations of information could arm a person with sufficient personal information to commit both an 'account takeover' and 'true name fraud', as defined above. The ALRC recognises that this suggested definition of 'specified personal information' is not limited to financial information, as suggested by Microsoft Australia.[100] While preventing identity fraud is one of the key rationales for data breach notification, it is not the only consequence that can flow from an unauthorised acquisition of personal information. Discrimination, stalking, and other harmful consequences could potentially flow from a security breach. The proposed data breach notification provisions should therefore deal with a broader range of information than 'sensitive financial information'.

Other matters

47.76 At this stage, the ALRC has not specified in the proposal the form, content, method or timing of notification. As with the definition of 'specified personal information', however, there are elements of the US laws and CIPPIC proposal upon which the data breach notification law could be modelled, if the decision was made to implement such provisions in the *Privacy Act*.

Form of notification

47.77 In relation to the form of the breach notification, the ALRC agrees with the CIPPIC's proposal that data breach notification should be a stand-alone communication, and should not be attached to other correspondence from the agency or organisation. Including the notification with other correspondence, such as marketing material, may confuse individuals about the nature and seriousness of the notification, and may cause it to be 'lost in the bundle'.

---

100 See Microsoft Australia, *Submission PR 113,* 15 January 2007.

Content of notification

47.78 In the ALRC's view, the content of breach notification should address similar matters to those suggested in the US Interagency Guidance and CIPPIC proposal for Canada. In particular, the notification should provide:

- a description of the breach;
- a list of the type of personal information that was disclosed;
- an assessment of the risk of identity fraud as a result of the breach and steps the individual can take to help mitigate that risk; and
- contact information for affected individuals to obtain more information and assistance.

Method of notification

47.79 Ordinarily, a breach notification should be directed personally to the individual affected. Rather than prescribing the various methods by which an agency or organisation can notify an individual, in the ALRC's view, it would be preferable to allow for the method of notification to be determined by the agency's or organisation's ordinary method of communicating with the individual. If, for example, an agency or organisation usually corresponds with an individual through by post, then it should not provide notification by email. Agencies and organisations should also be able to have regard to any arrangements they have in place for contacting an individual in an emergency situation.

47.80 In relation to substituted notice, the ALRC does not propose to set a particular threshold for allowing substituted notice, in terms of cost of notification or number of people to notify. It would be difficult to set a threshold that would be fair and reasonable to all the agencies and organisations subject to the *Privacy Act*, particularly if the small business exemption were removed. In the ALRC's view, it would be preferable to empower the Privacy Commissioner to approve substituted notice where he or she believes it is appropriate, reasonable and fair in all the circumstances.

Timing of notification

47.81 In the ALRC's view, notification should occur as soon as reasonably practicable after notification to the OPC. As noted above, under the proposed provisions the Commissioner would have discretion to delay or exempt notification for law enforcement purposes.

Penalties

47.82 In the ALRC's view, failure to comply with the proposed data breach notification provisions should attract a civil penalty. This would provide a strong incentive for agencies and organisations to disclose data breaches where required, and should act to encourage agencies and organisations to consult with the OPC where a data breach has occurred to ensure they are in full compliance with the requirements.[101] The presence of civil penalties should also provide incentives to train staff adequately to ensure that laptops are not left in airports, hard files are not left unsecured, electronic and hard copy information is appropriately disposed of, and electronic information is encrypted and secured adequately.

Proposal 47–1 The *Privacy Act* should be amended to include a new Part on data breach notification, to provide as follows:

(a) An agency or organisation is required to notify the Privacy Commissioner and affected individuals when specified personal information has been, or is reasonably believed to have been, acquired by an unauthorised person and the agency, organisation or Privacy Commissioner believes that the unauthorised acquisition may give rise to a real risk of serious harm to any affected individual.

(b) An agency or organisation is not required to notify any affected individual where:

  (i) the specified information was encrypted adequately;

  (ii) the specified information was acquired in good faith by an employee or agent of the agency or organisation where the agency or organisation was otherwise acting for a purpose permitted by the proposed Unified Privacy Principles (provided that the personal information is not used or subject to further unauthorised disclosure); or

  (iii) the Privacy Commissioner does not consider that notification would be in the public interest.

(c) Failure to notify the Privacy Commissioner of a data breach as required by the Act may attract a civil penalty.

Senate deliberations 1332
Privacy Amendment Act 1990 1333
Credit Reporting Code of Conduct 1334
Subsequent amendments 1334

Introduction

48.1 The *Privacy Amendment Act 1990* (Cth), which commenced operation in September 1991, extended the coverage of the *Privacy Act* to consumer credit reporting. The credit reporting provisions of the *Privacy Act 1988* (Cth) are contained in Part IIIA and associated provisions (the credit reporting provisions).[1]

48.2 The credit reporting provisions regulate the collection, use and disclosure of personal information concerning credit that is intended to be used wholly or primarily for domestic, family or household purposes.[2] Commercial credit information is only incidentally regulated by the Act, for example, where it is used to assess an application for consumer credit.[3]

48.3 Part G examines the credit reporting provisions and makes proposals for reform. This chapter introduces the topic by describing the role of credit reporting, the background to the national regulation of credit reporting through the *Privacy Act*, and the legislative history of the credit reporting provisions.

---

1 The major associated provisions include definitions and interpretation provisions: *Privacy Act 1988* (Cth) ss 6, 11A and 11B; and provisions dealing with the *Credit Reporting Code of Conduct*: ss 18A; 18B.

2 See the definitions of 'commercial credit' and 'credit': Ibid s 6(1).

3 Ibid s 18L(4).

48.4 Chapter 49 provides a summary of the content of the credit reporting provisions, the responsibilities and powers of the Office of the Privacy Commissioner (OPC) with regard to credit reporting,[4] and the remedies and penalties available in the event of non-compliance with the credit reporting provisions.[5]

48.5 Chapter 50 introduces the ALRC's proposals for reform of the credit reporting provisions. The chapter summarises views expressed in submissions and consultations about the operation of existing regulation. The ALRC proposes that the credit reporting provisions of the *Privacy Act* be repealed and credit reporting regulated under the general provisions of the *Privacy Act* and proposed Unified Privacy Principles (UPPs).[6]

48.6 The ALRC proposes, in Chapter 50, that privacy rules, which impose obligations on credit reporting agencies and credit providers in respect to the handling of credit reporting information, be promulgated in regulations under the *Privacy Act*—the *Privacy (Credit Reporting Information) Regulations*. The ALRC also makes a range of other proposals concerning the general approach to the drafting and application of the *Privacy (Credit Reporting Information) Regulations* and proposes that the regulations be supplemented by a credit reporting industry code.

48.7 Chapter 51 considers proposals to extend the current system of credit reporting to permit a broader spectrum of personal information to be collected and disclosed—referred to in this Discussion Paper as 'more comprehensive' credit reporting. The chapter examines the arguments for and against more comprehensive credit reporting, with particular reference to comments received in submissions and consultations, and information derived from empirical research into the possible effects of more comprehensive credit reporting on credit markets and the economy. The ALRC proposes a modest extension in the categories of personal information that may be collected for credit reporting purposes.

48.8 Chapter 52 discusses the collection of credit reporting information, the permissible content of credit reporting information and notification of collection. The ALRC makes a range of proposals in relation to, among other things, regulating the collection of information about identity theft, personal insolvency, serious credit infringements and debts of children and young people. The imposition of more prescriptive notice requirements is also proposed.

48.9 Chapter 53 discusses issues concerning the use and disclosure of credit reporting information. The ALRC makes a range of proposals concerning the relationship between the proposed 'Use and Disclosure' principle of the UPPs and the proposed *Privacy (Credit Reporting Information) Regulations*, and regulating the use and disclosure of credit reporting information in direct marketing and identity verification.

---

4 The powers and responsibilities of the OPC generally are discussed in Part F.
5 The remedies and penalties available under the Act generally are discussed in Part F.
6 As discussed in Part D.

The chapter also considers the role of individual consent to the use and disclosure of credit reporting information.

48.10 Chapter 54 discusses the data quality and security of credit reporting information. The ALRC makes a range of proposals in relation to regulating the reporting of statute-barred debts, overdue payments, and schemes of arrangement, and to improve data quality generally. The chapter also discusses the deletion of credit reporting information after maximum permissible periods of retention and data security.

48.11 Chapter 55 discusses individual rights of access to, and correction of, credit reporting information. Proposals are made setting out how these matters should be dealt with under the proposed UPPs and the *Privacy (Credit Reporting Information) Regulations*. The ALRC examines complaint handling in credit reporting disputes by the OPC and other complaint-handling mechanisms, and penalties for breach of the regulations. Importantly, the ALRC proposes that the *Privacy (Credit Reporting Information) Regulations* should provide that credit providers may only list overdue payment information where the credit provider is a member of an external dispute resolution scheme approved by the OPC.

What is credit reporting?

48.12 Credit reporting involves providing information about an individual's credit worthiness to banks, finance companies and other credit providers, such as retail businesses that issue credit cards or allow individuals to have goods or services on credit. Credit reporting is generally conducted by specialised credit reporting agencies that collect and disclose information about potential borrowers, usually in order to assist credit providers to assess applications for credit.

48.13 Credit reporting agencies collect information about individuals from credit providers and publicly available information (such as bankruptcy information obtained from the Insolvency and Trustee Service Australia—a federal government agency). This information is stored in central databases for use in generating credit reporting information for credit providers. In assessing credit applications, this information augments information obtained directly from an individual's application form and the credit provider's own records of past transactions involving the individual.

48.14 The information contained in credit reporting databases may be used in credit scoring systems. Credit scoring may be described as the use of 'mathematical algorithms or statistical programmes that determine the probable repayments of debts

by consumers, thus assigning a score to an individual based on the information processed from a number of data sources'.[7]

48.15 More generally, credit reporting agencies provide information processing services that assist credit providers to assess credit applications. One agency, Veda Advantage stated that:

> Statistical modelling of individual's behaviour over significant timeframes has enabled Veda Advantage to provide its customer base with the credit file characteristics which are statistically relevant to the probability of default. Customisation of these credit file and behavioural characteristics by each subscriber is based on the particular risk model, portfolio and competitive positioning.[8]

48.16 As Professor Daniel Solove explains, credit reporting is an understandable response to a modern, interconnected world containing 'billions of people' and where 'word-of-mouth is insufficient to assess reputation'. He goes on to state:

> Credit reporting allows creditors to assess people's financial reputations in a world where first-hand experience of the financial condition and trustworthiness of individuals is often lacking.[9]

48.17 The role of a credit reporting agency is to provide rapid access to accurate and reliable standardised information on potential borrowers. Such information enables credit providers to manage the risks of lending and to guard against identity fraud. In economic theory, it is said that:

> Credit reporting addresses a fundamental problem of credit markets: asymmetrical information between borrowers and lenders that leads to adverse selection and moral hazard.[10]

48.18 Information asymmetry refers to the fact that, because a credit provider often cannot know the full extent of an applicant individual's credit history, the individual has more information about his or her credit risk than the credit provider. Adverse selection arises where a credit provider, operating in response to information asymmetry, prices credit based on the *average* credit risk of individuals. This creates an incentive for high risk applicants to apply (the price is low to them) and low risk applicants to reject credit (it is overpriced for them).

> The result is adverse selection because the client group the credit provider ends up with is a higher risk than the credit provider priced for. Better information allows credit providers to more accurately measure borrower risk and set loan terms accordingly, which is why credit providers maintain their own databases of

information on a consumer but also seek out information shared by other credit providers and supplied to them by a credit reporting agency.[11]

48.19 Information asymmetry also creates moral hazard. A credit applicant may obtain credit fraudulently by failing to disclose his or her credit history. Credit reporting reduces moral hazard because non-payment to one credit provider can inform the actions of other credit providers.[12]

48.20 While the major purpose of credit reporting is to provide information to assist credit providers to assess applications for credit, credit reporting also may be seen as serving the associated purpose of facilitating responsible lending. That is, the information provided by credit reporting to credit providers may help to prevent individuals becoming financially overcommitted. Credit reporting also assists in trade and mortgage insurance and in debt collection.

Credit reporting agencies

48.21 At present, there are three main credit reporting agencies operating in the Australian market. These are—in order of market share—Veda Advantage, Dun and Bradstreet and Tasmanian Collection Service.

48.22 The major consumer credit reporting agency is Veda Advantage (previously named Baycorp Advantage), which states that it maintains credit worthiness related data on more than 13 million individuals in Australia and New Zealand.[13] It has over 5,000 subscribers from a wide range of industries, including banking, finance telecommunications, retail, utilities, trade credit, government, credit unions and mortgage lenders.[14]

48.23 Veda Advantage's Australian credit reporting business commenced in 1968 as the Credit Reference Association of Australia (CRAA), which was established by the finance industry.[15] As discussed below, the CRAA played a central role in developments leading to the enactment of the credit reporting provisions of the *Privacy Act*.[16]

16 The following background to the enactment of the *Privacy Act* credit reporting provisions is drawn primarily from an article prepared by Roger Clarke, then chair of the Economic, Legal and Social Implications Committee of the Australian Computer Society: R Clarke, *Consumer Credit Reporting and Information Privacy Regulation* (1989) Australian Computer Society; and from annual reports of the New South Wales Privacy Committee: New South Wales Government Privacy Committee, *Annual Report 1984* (1984); New South Wales Government Privacy Committee, *Annual Report* (1989).

Background to national regulation

48.24 There is a near universal view that the practice of credit reporting should be regulated. There are many reasons for this. One is that it vindicates an individual's right to privacy—as Professor Solove puts it, '[p]eople expect certain limits on what is known about them and on what others will find out'.[17] Another justification is that a credit report, which contains aggregated personal data, can be used to make decisions that 'profoundly affect a person's life'.[18] As such, there is special urgency in ensuring that it is accurate and not misused.

State legislation

48.25 The first Australian legislation regulating aspects of credit reporting was enacted in 1971. In Queensland, Part III Division I of the *Invasion of Privacy Act 1971* (Qld) established a licensing scheme for credit reporting agents. The Act included statutory provisions dealing with the:

- permissible purposes of credit reports;
- information to be furnished to consumers and credit reporting agencies when credit is refused on the basis of a credit report;
- information to be disclosed by credit reporting agencies on request by consumers; and
- obligations on credit reporting agencies to investigate and correct inaccurate information and delete old information.[19]

48.26 The *Invasion of Privacy Act* contained offences in relation to: obtaining information falsely from a credit reporting agency; unauthorised disclosure of credit reporting information; supplying false credit reporting information; and demanding payment by making threats in relation to credit-related information.[20] The credit reporting provisions of the Act were repealed in 2002.[21]

48.27 South Australia enacted the *Fair Credit Reports Act 1975* (SA), which provided individuals with rights of access and correction; required credit reporting agencies to adopt procedures to ensure the accuracy and fairness of consumer reports; and required

21 *Tourism, Racing and Fair Trading (Miscellaneous Provisions) Act 2002* (Qld) s 45.

traders to inform individuals of their use of adverse information in such reports.[22] The Act was repealed in 1987.[23]

48.28 In Victoria, the *Credit Reporting Act 1978* (Vic) provides consumers with rights of access to copies of files held in relation to them by a credit reporting agency and provides a mechanism to dispute details and request the amendment of incorrect information. Credit reporting regulations were made in 1978 to prescribe procedures and time limitations to be followed by consumers seeking to amend personal credit reports held by credit agents.[24] The Victorian Consumer Credit Review recently noted that:

> With the commencement of the [federal] *Privacy Act*, however, it appears that the continuing relevance of the Victorian Act declined because the *Privacy Act* was binding on the industry and more comprehensive for consumers.[25]

48.29 Australia's first privacy regulator, the New South Wales Privacy Committee, identified credit reporting as an important privacy issue.[26] In 1976, concerns about the privacy of credit reporting information led the Privacy Committee and the CRAA to enter a so-called 'Voluntary Agreement' under which the CRAA would provide individuals with access to the information it held about them.[27]

48.30 Despite the Voluntary Agreement, few incentives existed to encourage CRAA's credit provider subscribers to comply with the Voluntary Agreement, notify individuals about adverse reports and rights of access, or to ensure that information they provided to the CRAA was accurate and complete.[28] Some observers expressed serious doubts about the willingness and ability of the CRAA to discipline its member credit providers.

> Few clients appear to have ever been suspended, had their memberships cancelled, or had specific employees suspended, for breach of CRAA rules. In 1985, when the Secretary of a Hibernian Credit Union was found to have made an enquiry for purposes other than credit granting (and in the process invented an application for a $50,000 mortgage loan), CRAA failed to discipline either its client or the client's employee (NSW Privacy Committee Annual Report, 1985, 92–98). Even a Report to Parliament, the NSW Privacy Committee's ultimate sanction, had no effect.[29]

29 Ibid, 5.

48.31 During 1983, the New South Wales Privacy Committee reviewed its experience with the Voluntary Agreement and concluded that self-regulation of the credit reporting industry was ineffective. The Committee made proposals that it hoped would be the basis of fair credit reporting legislation or a code of practice under consumer protection legislation.[30] The Committee stated that this position was in line with its view that the 'time is now ripe for information privacy legislation'.[31]

48.32 In 1989, Roger Clarke stated:

> Judging by the last decade's complaints and enquiries to the country's only long-standing privacy 'watchdog', the NSW Privacy Committee, the public regards consumer credit reporting as the largest single information privacy issue.[32]

New regulatory momentum

48.33 The momentum for regulation of credit reporting intensified in the late 1980s. In large part this was in response to proposals by the CRAA to implement a new system of credit reporting. This system was referred to by the CRAA as the Payment Performance System (PPS) and was described by the CRAA and others as a form of 'positive' reporting.[33]

48.34 In the 1980s, credit reporting in Australia did not involve the collection or disclosure in credit reports of so-called 'positive' information about an individual's credit position. Apart from publicly available information about bankruptcies and court judgments, credit information was restricted to default reports made by CRAA members—that is, 'negative' information.

48.35 During the latter part of 1988, CRAA publicised an intention to augment its collection of credit reporting information by including information about individuals' current credit commitments. The nature of the proposal was summarised by Clarke as follows:

> Under PPS, credit providers would supply CRAA with tapes containing their customers' credit accounts. This data would be merged with previously recorded data every 30 to 60 days. Reports would then contain a complete listing of all known credit accounts, balances owing (at some recent point in time), and the consumer's payment performance on every account during the previous 24 payment periods … Payments 120 days or more overdue would result in a default report being generated automatically.[34]

33 As discussed in Ch 51, the ALRC is of the view that such systems are better described as 'comprehensive' or 'more comprehensive' credit reporting.

34 R Clarke, *Consumer Credit Reporting and Information Privacy Regulation* (1989) Australian Computer Society, 6.

48.36 The CRAA's proposals intensified concern about its operations. In 1989, the New South Wales Privacy Committee concluded that the CRAA proposals represented a 'new and significant threat to privacy' and again recommended regulation of credit reporting.[35] In April 1989, CRAA announced that it would postpone the introduction of the PPS until January 1990, at the request of the Commonwealth Minister for Consumer Affairs, the Hon Senator Nick Bolkus.

48.37 On 19 April 1989, a 'Summit' was sponsored by the Australian Privacy Foundation. The meeting was attended by federal parliamentarians, CRAA representatives, state government agencies, credit providers, consumer and civil liberties groups and the Australian Computer Society.[36] At the conclusion of the Summit, the Minister for Consumer Affairs announced that the Australian Government intended to extend the *Privacy Act* to cover consumer credit reporting. Credit reporting would therefore become subject to national legislation for the first time.

Legislative history

48.38 As enacted, the *Privacy Act* had limited application to the private sector. The Act set out the Information Privacy Principles (IPPs), which regulated the collection, handling and use of personal information by Commonwealth public sector agencies.[37] The Act also provided guidelines for the collection, handling and use of individual tax file number information in both the public and private sectors following enhancements in the use of this unique identifier in 1988.[38]

Privacy Amendment Bill 1989

48.39 The Privacy Amendment Bill 1989 was introduced on behalf of the Minister for Consumer Affairs on 16 June 1989. The second reading speech stated that:

> The Privacy Amendment Bill 1989 is the next step in the Government's program to introduce comprehensive privacy protection for the Australian community. The principal purpose of this Bill is to provide privacy protection for individuals in relation to their consumer credit records.[39]

48.40 To this end, the Bill adapted information privacy principles to provide privacy protection for individuals in relation to their personal information held by the consumer credit reporting industry.

37 Since 1994, the IPPs also cover ACT public sector agencies: *Australian Capital Territory Government Service (Consequential Provisions) Act 1994* (Cth).

38 *Taxation Laws Amendment (Tax File Numbers) Act 1988* (Cth).

39 Commonwealth, *Parliamentary Debates*, Senate, 16 June 1989, 4216 (G Richardson).

> At the present time, there are inadequate controls on consumer credit reporting agencies to prevent them from using their databases for non consumer credit purposes.[40]

48.41 The Bill was intended to regulate the collection, storage, access to, correction of, use and disclosure of personal credit information by credit providers and credit reporting agencies. These provisions would be supported by a code of conduct applying to information held in, or disseminated from, a central database and to the transfer of information between industry participants.[41] The Bill also provided individuals with an enforceable right of access to, and correction of, their credit records.

48.42 Significantly, the Bill restricted the categories of information that credit reporting agencies were permitted to include in individuals' credit information files. Essentially, credit reporting agencies were limited to collecting the kinds of information that they already held.[42]

48.43 The second reading speech highlighted public concern about the privacy implications of a more comprehensive form of credit reporting. It was said that 'the credit reporting agency would effectively become a central clearing house of information about the current financial commitments of all Australians'.

> Positive reporting would constitute a major change in the level of information collected on individuals. While the notion of information collected in a centralised agency is not new, the collection of personal information on individuals' spending habits is—credit and spending profiles of individuals would have been built up through all their credit transactions.[43]

48.44 The Australian Government did not consider that there was 'any proven substantial benefit from positive reporting proposals'. In view of such strong privacy concerns, it concluded that any such expansion was 'impossible to condone'.[44]

Senate deliberations

48.45 The Privacy Amendment Bill 1989 was the subject of intense debate in the Senate. During the passage of the Bill, some 120 amendments from the Government, the Opposition and the Australian Democrats were proposed.[45]

48.46 On 2 November 1989, the Minister for Consumer Affairs tabled amendments to the Bill as introduced. These amendments were the result of consultations with the

45 Commonwealth, *Parliamentary Debates*, Senate, 12 November 1990, 3939 (M Tate—Minister for Justice and Consumer Affairs).

credit reporting industry and consumer and privacy groups and were said to clarify aspects of the regulatory scheme.[46]

48.47 Specifically, the amendments were intended to:

- widen the classes of businesses that would be able to access a credit reporting agency;
- enable credit information to be used to assist credit providers in combating serious credit infringements and in collecting debts; and
- allow commercial and consumer credit reports to be cross-referenced by credit providers when making lending decisions.[47]

48.48 Following the return of the Hawke Government in March 1990, the Privacy Amendment Bill 1989 was restored to the Senate Notice Paper on 31 May. On 23 August 1990, the Bill was referred to the Senate Standing Committee on Legal and Constitutional Affairs (the Senate Standing Committee) for inquiry and report.

48.49 The Senate Standing Committee report, recommending 64 amendments to the legislation, was presented to the Senate on 22 October 1990.[48] In debate on 12 November, the Government moved 23 modifications to the amendments recommended in the report.[49]

48.50 The Bill received a third reading, before passing with the support of the Democrats and the independent Senator Brian Harradine. The Bill was returned from the House of Representatives without amendment on 6 December 1990.

Privacy Amendment Act 1990

48.51 The *Privacy Amendment Act 1990* (Cth) received Royal Assent on 24 December 1990. The Privacy Amendment Bill 1989 had been described by the CRAA as containing 'the most restrictive credit reference laws in the Western world'.

> The credit industry launched a concerted campaign against the Bill, and obtained numerous amendments, but the 1989 Bill remained substantially intact when enacted.[50]

50 G Greenleaf, 'The Most Restrictive Credit Reference Laws in the Western World?' (1992) 66 *Australian Law Journal* 672, 672.

48.52 Heralding the enactment of the legislation, Professor Graham Greenleaf noted that the credit reporting industry, in attempting to expand its activities into more comprehensive reporting, had 'provoked a degree of legislative control which it had avoided in the past'.[51] The legislation not only limited further expansion of credit reporting but was seen as 'rolling back the clock' by restricting certain existing practices, such as the provision of credit reports to real estate agents to check prospective tenants and mercantile agents to search for debtors' addresses.[52]

> It is rare for privacy legislation in any country to attempt such a retrospective repeal of the extension of data surveillance … This is the major achievement of the legislation: as a matter of public policy, it rejects the development of a multi-purpose reporting system as an unacceptable invasion of privacy—at least in the private sector.[53]

48.53 In order to allow the credit reporting industry time to comply with the new regulatory scheme, and to permit the Privacy Commissioner to issue a credit reporting code of conduct,[54] the Act did not commence operation until 24 September 1991. Before that date, transitional provisions were enacted,[55] deferring the commencement of the credit reporting provisions and the obligation to comply with the *Credit Reporting Code of Conduct* until 25 February 1992.[56]

Credit Reporting Code of Conduct

48.54 On 11 September 1991, the federal Privacy Commissioner issued the *Credit Reporting Code of Conduct* under s 18A of the *Privacy Act*. As required by the Act, the Privacy Commissioner consulted with government, commercial, consumer and other relevant bodies and organisations during the development of the Code. The Code became fully operational in February 1992 and was amended in 1995. Since then, amendments to the *Credit Reporting Code of Conduct* and explanatory notes have been made periodically, including to take into account changes made to the credit reporting provisions of the *Privacy Act*.[57]

Subsequent amendments

48.55 Amendments were made to the credit reporting provisions even before the *Privacy Amendment Act 1990* commenced operation. The *Law and Justice Legislation Amendment Act 1991* (Cth)[58] made amendments, among other things, to

58 *Law and Justice Legislation Amendment Act 1991* (Cth) pt 3, ss 10–20.

- clarify the definition of 'credit reporting business';
- provide that agents of credit providers can be treated as credit providers;
- permit individuals to authorise other persons to have access to their credit information file or credit report;
- ensure that credit providers can consider telephone applications for credit;
- permit information to be used for internal management purposes by credit providers;
- provide for notices in the case of joint applications for credit; and
- permit disclosure of personal information by credit providers to guarantors, mortgage insurers, dispute resolution bodies, in credit card and EFTPOS transactions and mortgage securitisation.

48.56 Since the commencement of the *Privacy Amendment Act 1990*, there have been a series of amendments to the credit reporting provisions. The first set of amendments was contained in the *Law and Justice Legislation Amendment Act (No 4) 1992* (Cth) and related to securitisation, then a relatively new development in the financial sector. Securitisation refers to a complex method of financing loans under which, for example, a mortgage financed ostensibly by a credit provider, such as a credit union or building society, ultimately may be financed under mortgage securitisation using funds invested by investors in a trust.[59] Although the credit reporting provisions of the *Privacy Act* already made some provision for securitisation, it was necessary to substitute these provisions with more comprehensive ones given the complexity of the industry.[60]

48.57 The *Law and Justice Legislation Amendment Act 1993* (Cth) amended provisions governing disclosure of credit information by credit providers to state and territory authorities that administer mortgage assistance schemes to facilitate the giving of mortgage credit to individuals.

48.58 The *Law and Justice Legislation Amendment Act 1997* (Cth) amended the credit reporting provisions to:

- insert a definition of the term 'guarantee';

---

59 Explanatory Memorandum, Law and Justice Legislation Amendment Bill (No 4) 1992 (Cth).
60 Ibid.

- give the Privacy Commissioner the power to determine that a federal agency is a credit provider; and

- allow an overdue payment under a guarantee to be listed on the guarantor's credit information file.

48.59 The *Financial Sector Reform (Amendments and Transitional Provisions) Act (No 1) 1999* (Cth) changed the definition of credit provider in s11B by repealing s11B(1)(b)(i) and (ii), which referred to building societies and credit unions respectively.

48.60 The *Law and Justice Legislation Amendment (Application of Criminal Code) Act 2001* (Cth) amended various offence provisions under Part IIIA to require an intention to breach certain provisions of Part IIIA, as distinct from reckless or misleading behaviour.

48.61 Most recently, amendments providing for non-disclosure of reports made to certain law enforcement agencies under s 18K(5) were made by the *National Crime Authority Legislation Amendment Act 2001* (Cth), *Australian Crime Commission Establishment 2002* (Cth) and *Law Enforcement Integrity Commissioner (Consequential Amendments) Act 2006* (Cth).

Introduction

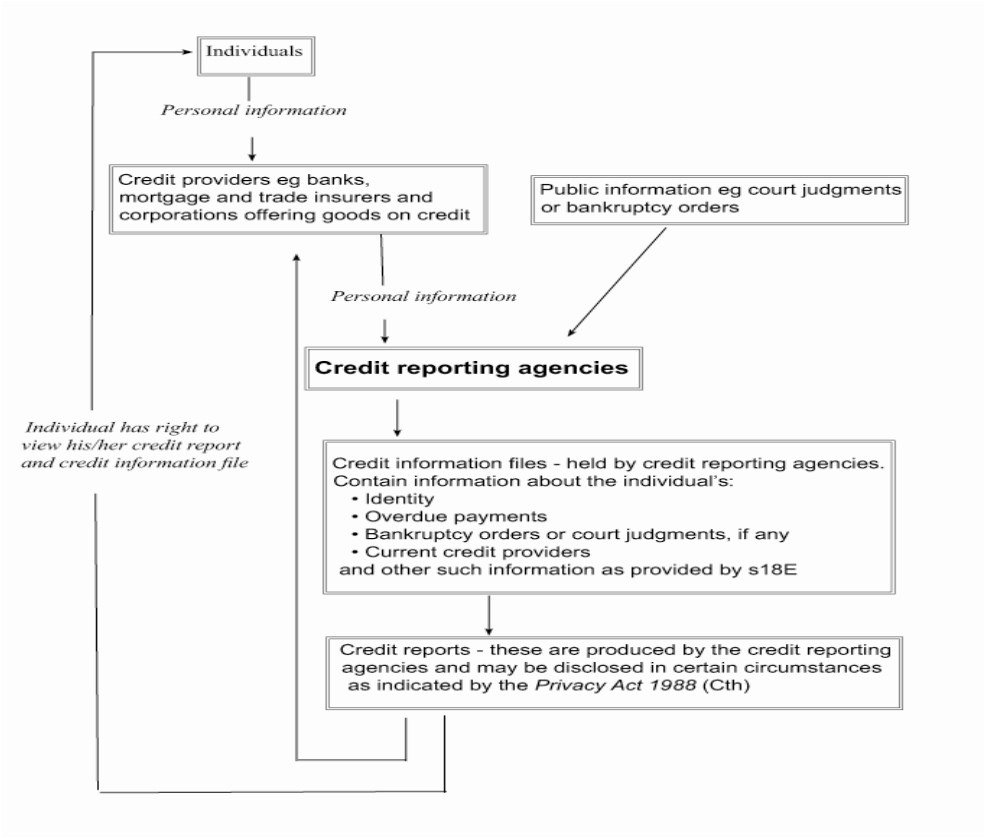
49.1 This chapter provides an overview of the credit reporting provisions of the *Privacy Act 1988* (Cth). Part IIIA of the *Privacy Act* contains the substantive provisions that regulate credit reporting. Some provisions dealing with the scope and application of the credit reporting provisions are located elsewhere in the Act. In addition, the Act empowers the Privacy Commissioner to issue a binding Code of Conduct.[1] A *Credit Reporting Code of Conduct* came into effect on 24 September 1991.

1 *Privacy Act 1988* (Cth) ss 18A, 18B.

49.2 The chapter first considers the people and information covered by the credit reporting provisions. It summarises how personal information may be used and disclosed in the credit reporting process, and how the Act provides for rights of access and correction for individuals in relation to their personal information. The chapter then considers the relationship between Part IIIA of the Act and the National Privacy Principles (NPPs).[2]

49.3 The chapter also describes the responsibilities and powers of the Office of the Privacy Commissioner (OPC) with regard to credit reporting[3] and the remedies and penalties in the event of non-compliance with the credit reporting provisions.[4]

49.4 Finally, this chapter sets out in detail how the *Privacy Act* permits and restricts the transfer of personal information in credit reporting. The diagram below is a summary of the main data flows under the present regulation of credit reporting.



2 The NPPs are located in Ibid sch 3.
3 The powers and responsibilities of the OPC generally are discussed in Part F.
4 The remedies and penalties available under the Act generally are also discussed in Part F.

Application of the credit reporting provisions

49.5 This part of the chapter answers the following questions. What information is covered by the credit reporting provisions? To whom do the provisions apply?

Information covered by the provisions

49.6 A number of terms define the scope of the regulatory framework for credit reporting in the *Privacy Act*. The most important of these are 'personal information', 'credit information file' and 'credit report'. Their respective meanings, and the inter-relationship of these terms, are discussed here.

49.7 The Act, principally in Part IIIA,[5] regulates the use and disclosure of 'personal information' for credit reporting purposes. 'Personal information' is defined to mean:

> information or an opinion (including information or an opinion forming part of a database), whether true or not, and whether recorded in a material form or not, about an individual whose identity is apparent, or can reasonably be ascertained, from the information or opinion.[6]

49.8 An individual's personal information may be collated by a credit reporting business to create a 'credit information file'. In relation to an individual, this means:

> any record that contains information relating to the individual and is kept by a credit reporting agency in the course of carrying on a credit reporting business (whether or not the record is a copy of the whole or part of, or was prepared using, a record kept by another credit reporting agency or any other person).[7]

49.9 The credit information file may in turn be used to create a 'credit report'. It is in this form that an individual's personal information may pass from the person collecting the information (the credit reporting agency) to the person wishing to use the information (the credit provider).[8] The term 'credit report' is defined as:

> any record or information, whether in a written, oral or other form, that:
>
> (a) is being or has been prepared by a credit reporting agency; and
>
> (b) has any bearing on an individual's:
>
> (i) eligibility to be provided with credit; or
>
> (ii) history in relation to credit; or
>
> (iii) capacity to repay credit; and

---

5 Note that other parts of the Act also relate to credit reporting. For instance, Part V deals with investigations by the Privacy Commissioner into alleged breaches of, among other things, the credit reporting rules.

6 *Privacy Act 1988* (Cth) s 6(1). The definition of 'personal information' is discussed in detail in Ch 3.

7 Ibid s 6(1).

8 The meanings of 'credit reporting agency' and 'credit provider' are discussed below.

> (c) is used, has been used or has the capacity to be used for the purpose of serving as a factor in establishing an individual's eligibility for credit.[9]

49.10 Section 18N applies to a third category of personal information contained in 'reports', which term covers a much broader spectrum of documents than is encompassed by the term 'credit report'. Section 18N(9) states that 'report' means:

> (a) a credit report; or
>
> (b) subject to subsection (10), any other record or information, whether in a written, oral or other form, that has any bearing on an individual's credit worthiness, credit standing, credit history or credit capacity;
>
> but does not include a credit report or any other record or information in which the only personal information relating to individuals is publicly available information.

Persons within the ambit of the provisions

49.11 There are four main categories of person affected by Part IIIA of the *Privacy Act*. These are: (i) individuals; (ii) credit reporting agencies; (iii) credit providers; and (iv) third parties who provide personal information to credit reporting agencies.

Individuals

49.12 An individual, whose personal information forms the basis of a credit information file, may be affected by a credit report—especially in terms of the individual's application for credit. The Act stipulates that an individual must be 'a natural person' and that the definition of 'credit' does not include 'commercial credit'.[10]

49.13 This means that a corporation, for instance, cannot claim the protection of the credit reporting provisions in its own right. Commercial credit information is only indirectly regulated by the Act—where, for example, it is used to assess an application for consumer credit.[11]

Credit reporting agencies

49.14 The collection of personal information, its collation in credit information files and the disclosure of this information to credit providers only may be performed by a 'credit reporting agency'.[12] Section 11A provides that this term has two elements: a credit reporting agency must be a corporation and it must carry on a credit reporting business.

49.15 The requirement that a credit reporting agency must be a corporation is subject to a qualification. If the entity in question is engaged in wholly intra-state trade or

---

9 *Privacy Act 1988* (Cth) s 6(1).
10 Ibid s 6(1).
11 Ibid s 18L(4).
12 Ibid s 18C.

commerce, and it is not engaged in banking or insurance (other than state banking or state insurance), then it is not regulated by Part IIIA.[13]

49.16 Section 6(1) of the Act defines the second element of a credit reporting agency—namely, that the agency carry on a 'credit reporting business'—as being:

> a business or undertaking (other than a business or undertaking of a kind in respect of which regulations made for the purposes of subsection (5C) are in force) that involves the preparation or maintenance of records containing personal information relating to individuals (other than records in which the only personal information relating to individuals is publicly available information), for the purpose of, or for purposes that include as the dominant purpose the purpose of, providing to other persons (whether for profit or reward or otherwise) information on an individual's:
>
> (a) eligibility to be provided with credit; or
>
> (b) history in relation to credit; or
>
> (c) capacity to repay credit;
>
> whether or not the information is provided or intended to be provided for the purposes of assessing applications for credit.

49.17 This second element remains subject to some exemptions. Information concerning an individual's commercial transactions is excluded.[14] Also, the regulations may exempt certain businesses from being considered credit reporting businesses for the purposes of the Act.[15] To date, however, no such regulations have been made.

Credit providers

49.18 In general, credit reporting agencies may only disclose information in credit information files to 'credit providers'. Credit providers, in turn, may use credit reports only for certain purposes—notably, in assessing a person's application for credit.

49.19 There is a finite list of categories of entities considered credit providers for the purposes of Part IIIA. This list does not include, for instance, real estate agents, debt collectors, employers and general insurers, and thus they are not permitted to obtain credit reports.[16] Under the Act, the following are considered 'credit providers':

- a bank;[17]

---

13 See Ibid s 18C(2). This qualification is discussed in detail later in this chapter.

14 Ibid s 6(5A).

15 Ibid s 6(5C).

16 Office of the Privacy Commissioner, *Credit Reporting: Key Requirements of Part IIIA* <www.privacy.gov.au/act/credit/index.html> at 24 August 2007.

17 *Privacy Act 1988* (Cth) s 11B(1)(a). The term 'bank' is defined in s 6(1) to mean: (a) the Reserve Bank of Australia; or (b) a body corporate that is an authorised deposit-taking institution for the purposes of the *Banking Act 1959* (Cth); or (c) a person who carries on 'State banking' within the meaning of s 51(xiii) of the *Constitution*.

- a corporation, or an entity that is neither a corporation nor a government agency, that provides loans or issues credit cards as a substantial part of its business, or is carrying on a retail business;[18]

- an entity that provides loans (including by issuing credit cards), provided the Privacy Commissioner has made a determination in respect of such a class of entity;[19]

- a government agency that provides loans and is determined by the Privacy Commissioner to be a credit provider for the purposes of the Act;[20]

- a person who carries on a business involved in securitisation or managing loans that are subject to securitisation;[21] and

- an agent of a credit provider while the agent is carrying on a task necessary for the processing of a loan application, or managing a loan or account with the credit provider.[22]

49.20 The regulations also can exempt a corporation that would otherwise be considered a credit provider from being so regarded for the purposes of the Act.[23] To date, no such regulations have been made.

Persons providing personal information to credit reporting agencies

49.21 Finally, the credit reporting provisions also apply to a person, X, who provides personal information about another person, Y, to a third person, Z, carrying on a credit reporting business. Subject to certain constitutional limitations discussed later in this chapter, s 18D states that X must not give personal information about Y to Z unless Z is a corporation. Personal information is taken to be 'given' for the purposes of s 18D if the person to whom the information is given (ie, Z) 'is likely to use the information in the course of carrying on a credit reporting business'.[24]

Content of credit information files

49.22 A credit information file may contain information that is 'reasonably necessary … to identify the individual'.[25] Under s 18E(3), the Privacy Commissioner may determine 'the kinds of information that are … reasonably necessary to be included in

---

18 *Privacy Act 1988* (Cth) s 11B(1)(b), (c).
19 Ibid s 11B(1)(b)(v). These determinations are discussed further in Ch 50.
20 Ibid s 11B(1)(d). Indigenous Business Australia is the only entity deemed to be a credit provider under this provision: Privacy Commissioner, *Credit Provider Determination No 2006–5 (Indigenous Business Australia)*, 25 October 2006.
21 *Privacy Act 1988* (Cth) s 11B(4A), (4B).
22 Ibid s 11B(5). The Act makes clear that 'the management of a loan' in subsection (5) does not include action taken to recover overdue loan repayments: s 11B(7).
23 Ibid s 11B(2).
24 Ibid s 18D(5).
25 Ibid s 18E(1)(a).

an individual's credit information file in order to identify the individual'. Any such determination is said to be a 'disallowable instrument', which means that it must be tabled in the Australian Parliament and is then subject to disallowance.[26] In 1991, the Privacy Commissioner determined that the following kinds of information are 'reasonably necessary' to identify the individual:

i. full name, including any known aliases; sex; and date of birth;

ii. a maximum of three addresses consisting of a current or last known address and two immediately previous addresses;

iii. name of current or last known employer; and

iv. driver's licence number.[27]

49.23 The Act does not state that information purporting to identify an individual must be verified in any particular way or be of any particular standard *before* it is included in a credit information file. This may be relevant to such issues as identity theft.

49.24 As well as information reasonably necessary to identify the individual, s 18E provides an exhaustive list of the other categories of personal information that may be included in a credit information file. Anything that constitutes personal information, but is not included in this list, may not be included in a credit information file. The Act allows a credit reporting agency to hold personal information in an individual's credit information file only for a finite period, the length of which depends on the nature of the information in question. After this period has elapsed, the agency must delete the relevant information within one month.[28]

49.25 In summary, information may be included in a credit information file if it is a record of:

- a credit provider having sought a credit report in connection with an application for consumer or commercial credit, provided the record also states the amount of credit sought;[29]

---

26 Ibid s 18E(4)–(6). Note that s 18E(6) of the *Privacy Act* refers to s 46A of the *Acts Interpretation Act 1901* (Cth). However, the latter provision has been repealed. Section 6(d)(i) of the *Legislative Instruments Act 2003* (Cth) provides that an instrument said to be a disallowable instrument for the purposes of s 46A of the *Acts Interpretation Act* should be considered a legislative instrument for the purposes of the *Legislative Instruments Act*.

27 Privacy Commissioner, *Determination under the Privacy Act 1988: 1991 No 2 (s 18E(3)): Concerning Identifying Particulars Permitted to be Included in a Credit Information File*, 11 September 1991.

28 *Privacy Act 1988* (Cth) s 18F(1).

29 Ibid s 18E(1)(b)(i). The information may be kept for a maximum of five years after the relevant credit report was sought: s 18F(2)(a).

- a credit provider having sought a credit report for the purpose of assessing the risk in purchasing, or undertaking credit enhancement of, a loan by means of securitisation;[30]

- a mortgage or trade insurer having sought a credit report in connection with the provision of mortgage or trade insurance to a credit provider;[31]

- a credit provider having sought a credit report in connection with the individual having offered to act as guarantor for a loan;[32]

- a credit provider being a current credit provider in relation to the individual;[33]

- credit provided by a credit provider to an individual, where the individual is at least 60 days overdue in making a payment on that credit and the credit provider has taken steps to recover some or all of the credit outstanding;[34]

- a cheque for $100 or more that has been dishonoured twice;[35]

- a court judgment or bankruptcy order made against the individual;[36]

- a credit provider's opinion that the individual has committed a specific serious credit infringement;[37]

- an overdue payment to a credit provider by a person acting as guarantor to a borrower, provided the following conditions are met: the credit provider is not prevented by law from bringing proceedings to recover the overdue amount; the credit provider has given the guarantor notice of the borrower's default; 60 days have elapsed since the notice was given; and the credit provider has taken steps to recover the overdue payment from the guarantor;[38] and

30 Ibid s 18E(1)(b)(ia). The information may be kept for a maximum of five years after the relevant credit report was sought: s 18F(2)(a).

31 Ibid s 18E(1)(b)(ii), (iii). The information may be kept for a maximum of five years after the relevant credit report was sought: s 18F(2)(a).

32 Ibid s 18E(1)(b)(iv). The information may be kept for a maximum of five years after the relevant credit report was sought: s 18F(2)(a).

33 Ibid s 18E(1)(b)(v). The information may be kept for a maximum of 14 days after the credit reporting agency is notified that the credit provider is no longer the individual's credit provider: s 18F(2)(b).

34 Ibid s 18E(1)(b)(vi). The information may be kept for a maximum of five years after the credit reporting agency was informed of the overdue payment concerned: s 18F(2)(c).

35 Ibid s 18E(1)(b)(vii). The information may be kept for a maximum of five years after the second dishonouring of the cheque: s 18F(2)(d).

36 Ibid s 18E(1)(b)(viii), (ix). A record of judgment may be kept for a maximum of five years after the judgment was made: s 18F(2)(e). A record of a bankruptcy order may be kept for a maximum of seven years after the order was made: s 18F(2)(f).

37 Ibid s 18E(1)(b)(x). The information may be kept for a maximum of seven years after the information was included in the credit information file: s 18F(2)(g).

38 Ibid s 18E(1)(ba). The information may be kept for a maximum of five years after the credit reporting agency was informed of the overdue payment: s 18F(2A).

- a note or annotation to be made to an individual's existing credit information file, pursuant to ss 18J(2), 18F(4) or 18K(5).[39]

49.26 Certain types of personal information must never be included in an individual's credit information file. That is, information recording an individual's:

- political, social or religious beliefs or affiliations;
- criminal record;
- medical history or physical handicaps;
- race, ethnic origins or national origins;
- sexual preferences or practices; or
- lifestyle, character or reputation.[40]

49.27 If a credit report contains personal information that does not fall within the permitted categories, a credit provider who holds the report must not use this personal information, and must not use the report at all until the relevant information has been deleted.[41] A breach of this requirement constitutes a credit reporting infringement.[42] In this situation, an individual may complain to the Privacy Commissioner that the credit provider has committed an interference with the individual's privacy.[43] The Privacy Commissioner may then carry out an investigation and issue a determination in accordance with Part V of the Act.[44]

Accuracy and security of personal information

49.28 Credit reporting agencies and credit providers have obligations to ensure the accuracy and security of personal information in their possession or control. Credit reporting agencies and credit providers are required to take reasonable steps to ensure that:

---

39 Ibid s 18E(1)(c), (d); see also s 18E(7). Note that s 18J(2) obliges a credit reporting agency to include a statement of the correction, deletion or addition sought by an individual to his or her credit information file, where the agency has not made the relevant change; s 18F(4) requires a credit reporting agency, when appropriately informed, to include a note saying that the individual is no longer overdue in making a payment; and s 18K(5) requires a credit reporting agency to include a note on a person's credit information file when it has disclosed personal information from the file.

40 Ibid s 18E(2).

41 Ibid s 18L(3).

42 A breach of a provision of Part IIIA is a 'credit reporting infringement': Ibid s 6(1).

43 See Ibid ss 13(d), 36(1).

44 The Privacy Commissioner's complaint-handling processes are discussed in Ch 45.

- personal information in a file or report is 'accurate, up-to-date, complete and not misleading';

- the file or report is protected against 'misuse' including 'unauthorised access, use, modification or disclosure'; and

- if an agency or credit provider must give the file or report to a person in connection with the provision of a service to the agency or credit provider, it must 'prevent unauthorised use or disclosure of personal information contained in the file or report'.[45]

49.29 Credit reporting agencies and credit providers are prohibited from disclosing to anyone a false or misleading credit report. If an agency or provider intentionally contravenes this provision, it is liable for a fine of up to $75,000.[46]

Disclosure of personal information

49.30 The *Privacy Act* restricts how, and to whom, personal information in credit information files and credit reports may be disclosed. As explained below, the Act largely focuses on regulating the actions of credit reporting agencies, credit providers and others—setting rules on what these entities may do. Part IIIA, however, also prohibits any other person from obtaining access to a credit information file or credit report, where the Act does not authorise the person to do so, or where the person gains access by a false pretence.[47]

Credit reporting agencies

49.31 Section 18K of the Act contains four general rules on how personal information may be conveyed by credit reporting agencies to people who are permitted to view that information. If a credit reporting agency intentionally contravenes any of the relevant provisions, it is liable for a fine of up to $150,000.[48]

49.32 The general rules are as follows. First, a credit reporting agency is not permitted to make a credit information file directly available to another entity; instead the agency must convey that information in the form of a credit report. Secondly, a credit report only may be given to a credit provider.[49] Thirdly, personal information in a credit report only may be disclosed by a credit reporting agency for one of the purposes specified in the Act—these are summarised below. Fourthly, a credit reporting agency must not disclose personal information if the information does not fall within the permitted categories in s 18E, or if the agency is required to delete the information in

45 *Privacy Act 1988* (Cth) s 18G.
46 Ibid s 18R.
47 Ibid ss 18S, 18T. The penalty in respect of each offence is a fine not exceeding $30,000.
48 Ibid s 18K(5).
49 The terms 'credit report' and 'credit provider' are discussed earlier in this chapter.

question under s 18F.[50] These rules are, however, subject to certain exceptions, which are also set out below.

49.33 The purposes for which an individual's credit report may be given to a credit provider are set out exhaustively in the section. They relate to the state of mind and activities of the credit provider. The permitted purposes are to:

- assess the individual's application for credit;[51]
- assess the risk in purchasing, or undertaking credit enhancement of, a loan by means of securitisation;[52]
- assess an application for commercial credit, provided the individual agrees to the disclosure;[53]
- assess whether to accept the individual as a guarantor of a loan, provided the individual agrees in writing to the disclosure;[54]
- inform a current credit provider that the individual is at least 60 days overdue in making a payment to a second credit provider and this second credit provider has taken steps to recover some or all of the credit outstanding;[55]
- assist in collecting overdue payments from the individual;[56] and
- assist in collecting overdue payments in respect of commercial credit, provided the individual consents or the commercial credit was given prior to 24 September 1991.[57]

49.34 There are some situations in which a credit reporting agency may disclose an individual's credit report to a person who is not a credit provider, including disclosure to: (i) another credit reporting agency;[58] or (ii) a mortgage or trade insurer, where the insurer is assessing matters connected with whether to provide mortgage or trade insurance to a credit provider in respect of the individual.[59]

---

50 *Privacy Act 1988* (Cth) s 18K(2).
51 Ibid s 18K(1)(a).
52 Ibid s 18K(1)(ab), (ac).
53 Ibid s 18K(1)(b). The individual's agreement must usually be given in writing—see s 18K(1A).
54 Ibid s 18K(1)(c).
55 Ibid s 18K(1)(f). The relevant credit reporting agency is permitted to make such a disclosure only where it has received this information at least 30 days before the disclosure.
56 Ibid s 18K(1)(g).
57 Ibid s 18K(1)(h).
58 Ibid s 18K(1)(j).
59 Ibid s 18K(1)(d), (e). In respect of trade insurance, the disclosure is permitted only if the individual has agreed in writing: s 18K(1)(e).

49.35 The rule prohibiting the direct disclosure of personal information from an individual's credit information file is subject to a number of exceptions, namely where the:

- only personal information disclosed is publicly available;[60]
- disclosure is required or authorised by law;[61] or
- credit reporting agency is satisfied that a credit provider or law enforcement authority reasonably believes the individual has committed a serious credit infringement and the information is given to a credit provider or law enforcement authority.[62]

Credit providers

49.36 The rules dealing with how a credit provider may disclose personal information in its possession are set out in ss 18N and 18NA of the Act. The general rule is that a credit provider is prohibited from disclosing an individual's personal information (either from a credit report or other credit worthiness information held by the credit provider and that is not publicly available) unless a stated exception applies. If a credit provider intentionally contravenes this provision, it is liable for a fine of up to $150,000.[63]

49.37 There is a finite list of exceptions to the general rule. In summary, a credit provider is permitted to disclose an individual's personal information to:

- a credit reporting agency that is creating or modifying a credit information file;[64]
- another credit provider for a particular purpose, provided either the individual specifically agrees or it is in connection with an overdue payment;[65]
- the guarantor of an individual's loan in connection with enforcing the guarantee;[66]
- a mortgage insurer for the purpose of risk assessment or as required by the contract between the credit provider and the insurer;[67]

67 Ibid s 18N(1)(bb).

- a recognised dispute settling body that is assisting in settling a dispute between the credit provider and the individual;[68]
- a government body with responsibility in this area;[69]
- a supplier of goods or services for the purpose of determining whether to accept a payment by credit card or funds transfer, provided the personal information disclosed does no more than identify the individual and inform the supplier whether the individual has sufficient funds for the proposed payment;[70]
- a person considering taking on the individual's debt, provided the personal information disclosed does no more than identify the individual and inform the person of the amount of the debt;[71]
- the guarantor, or a proposed guarantor, of a loan, provided the borrower specifically agrees;[72]
- a debt collector in respect of overdue payments to the credit provider, provided the personal information disclosed does no more than: identify the individual; give specified details relating to the debt; and provide a record of any adverse court judgments or bankruptcy orders;[73]
- a corporation related to the credit provider that is itself a corporation;[74]
- a corporation, in connection with its taking on a debt owed to the credit provider;[75]
- a person who manages loans made by the credit provider;[76]
- a person, as required or authorised by law;[77]

72 Ibid s 18N(1)(bg), (bh). The borrower's agreement is not necessary if: the guarantee (or security) was provided before 7 December 1992; the information discloses the guarantor's liability; and the credit provider previously advised the borrower that such disclosures may take place: s 18N(1)(bg)(ii). See also s 18NA in respect of indemnities.
73 Ibid s 18N(1)(c). If the debt relates to commercial credit, the credit provider is prohibited from disclosing the details of the debt to a debt collector: s 18N(1)(ca).
74 Ibid s 18N(1)(d).
75 Ibid s 18N(1)(e).
76 Ibid s 18N(1)(f).
77 Ibid s 18N(1)(g).

- the individual or another person authorised by the individual;[78] and

- another credit provider or a law enforcement authority, where the credit provider reasonably suspects the individual has committed a serious credit infringement.[79]

49.38 The Privacy Commissioner has a power to determine the manner in which such a report may be disclosed;[80] however, the Commissioner is yet to make such a determination.

Information given by credit providers to credit reporting agencies

49.39 In practice, credit reporting agencies, in compiling credit information files, obtain most of that information from credit providers themselves.[81] This creates a two-way flow of personal information between credit reporting agencies and credit providers.

49.40 In view of this, the Act limits the information that a credit provider may provide to a credit reporting agency. That is, a credit provider must not give to a credit reporting agency personal information relating to an individual in any of the following situations:

- where the information would not fall within the categories in s 18E(1) summarised above;

- where the credit provider does not have reasonable grounds for believing the information is correct; or

- where the credit provider did not, at the time of, or before, acquiring the information, inform the individual that the information might be disclosed to a credit reporting agency.[82]

Use of personal information

Credit providers

49.41 Section 18L(1) of the Act states the general rule that a credit provider may only use an individual's credit report, or personal information it derives from the credit report, for the purpose of assessing the individual's application for credit, or for one of the other permitted purposes for which the report was originally given to the credit

78 Ibid s 18N(1)(ga), (gb).

82 Ibid s 18E(8).

provider.[83] If a credit provider intentionally contravenes this provision, it is liable for a fine of up to $150,000.[84]

49.42 The rule in s 18L(1) is subject to the following exceptions, which allow a credit provider to use a credit report:

- as required or authorised by law;[85]
- if the credit provider reasonably believes the individual has committed a serious credit infringement, and the information is used in connection with the infringement;[86] or
- in connection with an individual's commercial activities or commercial credit worthiness, provided the individual agrees.[87]

Use and disclosure by mortgage and trade insurers

49.43 Mortgage and trade insurers must only use personal information contained in an individual's credit report in connection with assessing the risk in providing such insurance to the individual's credit provider, or as required or authorised by law.[88] They must not disclose personal information from a credit report to any person unless required or authorised by law.[89] If a mortgage or trade insurer 'knowingly or recklessly' contravenes any of these provisions, it is liable for a fine of up to $150,000.[90]

Use and disclosure by other persons

49.44 There are specific rules on how other persons may use personal information that they have obtained from a credit provider or credit reporting agency. Any person who intentionally contravenes one of these provisions will be liable for a fine of up to $30,000.[91] The rules are:

- Where a credit provider discloses information to a related corporation, the related corporation is subject to the use and disclosure limitations that apply to

---

83 The other permitted purposes are summarised earlier in this chapter.
84 *Privacy Act 1988* (Cth) s 18L(2).
85 Ibid s 18L(1)(e).
86 Ibid s 18L(1)(f).
87 Ibid s 18L(4), (4A). The Privacy Commissioner has a power to determine how this information may be used and how an individual's consent may be obtained: s 18L(6)–(8). To date, this power has not been exercised.
88 Ibid s 18P(1), (2). Mortgage insurers may also use such information pursuant to the contract between the mortgage insurer and the credit provider: s 18P(1)(c).
89 Ibid s 18P(5).
90 Ibid s 18P(6).
91 Ibid s 18Q(9).

the credit provider. The same rules also apply where a credit report is received by a person who was deemed to be a credit provider because it was engaged in securitisation of a loan, but has since ceased to be a credit provider.[92]

- Where information is received by a corporation, in connection with its taking on a debt owed to the credit provider, the corporation may only use the information in considering whether to take on the debt. If it takes on the debt, the corporation may use the information in connection with exercising its rights. Similar rules apply to a professional legal adviser or financial adviser in connection with advising the corporation about these matters, or as required or authorised by law.[93]

- Where information is received by a person who manages loans made by the credit provider, the information may only be used for managing these loans, or as required or authorised by law.[94]

Rights of access, correction and notification

49.45 Credit reporting agencies and credit providers, in possession or control of an individual's credit information file or credit report, must take reasonable steps to allow the individual access to the file or report. The individual can authorise another person (who is not a credit provider or a trade or mortgage insurer) to exercise these same rights in connection with applying for a loan, or advice in relation to a loan.[95]

49.46 Credit reporting agencies and credit providers must, in relation to credit information files and credit reports in their possession or control, 'take reasonable steps, by way of making appropriate corrections, deletions and additions, to ensure that personal information in the file or report is accurate, up-to-date, complete and not misleading'. If so requested, the agency or provider must either amend personal information in a file or report as requested by the individual concerned, or it must include a statement of the correction, deletion or addition sought by the individual.[96]

49.47 Credit providers also have notification obligations when they use a credit report to refuse an application for credit. Where a credit provider refuses an application for credit, and this refusal relates partly or wholly to information in an individual's credit report, the credit provider must: (i) notify the individual of these facts and of the individual's right to access his or her credit report; and (ii) provide the name and address of the relevant credit reporting agency.[97]

---

92 Ibid s 18Q(1), (6)–(7A).
93 Ibid s 18Q(2), (3). See also s 18Q(8).
94 Ibid s 18Q(4). See also s 18Q(8).
95 Ibid s 18H.
96 Ibid s 18J.
97 Ibid s 18M(1).

49.48 Where a joint application for credit is refused, and this refusal relates partly or wholly to information in the credit report of one of the applicants or proposed guarantors, the credit provider must inform the other applicants that the application was refused for this reason.[98] In this situation, however, the credit provider does not have to provide any further information, as the other applicants do not have a right to view the credit report of this person.

Responsibilities and powers of the OPC

49.49 The *Privacy Act* gives the OPC a range of responsibilities and powers under the Act.[99] These responsibilities and powers were described in more detail in Part F of this Discussion Paper. This chapter describes aspects of the OPC's responsibilities and powers in relation to:

- issuing a code of conduct relating to credit information files and credit reports;[100]
- making certain determinations, on the Privacy Commissioner's initiative, under the credit reporting provisions of the *Privacy Act*;[101]
- auditing credit information files and credit reports held by credit reporting agencies and credit providers;[102] and
- investigating credit reporting infringements,[103] either in response to a complaint or on the OPC's initiative,[104] and making determinations after investigating complaints.[105]

Credit Reporting Code of Conduct

49.50 Under s 18A of the *Privacy Act*, the Privacy Commissioner must, after consulting government, commercial, consumer and other relevant bodies,[106] issue a code of conduct concerning:

> (a) the collection of personal information for inclusion in individuals' credit information files; and

98 Ibid s 18M(2), (3).
99 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Ch 6.
100 Office of the Federal Privacy Commissioner, *Credit Reporting Code of Conduct* (1991) issued under the *Privacy Act 1988* (Cth) s 18A.
101 *Privacy Act 1988* (Cth) ss 11B(1), 18E(3), 18K(3), 18L(6), 18N(5).
102 Ibid s 24A(1)(g).
103 A 'credit reporting infringement' is defined as a breach of either the *Credit Reporting Code of Conduct* or the provisions of pt IIIA: Ibid s 6.
104 Ibid pt V.
105 Ibid s 52.
106 Ibid s 18A(2).

> (b) the storage of, security of, access to, correction of, use of and disclosure of personal information included in individuals' credit information files or in credit reports; and
>
> (c) the manner in which credit reporting agencies and credit providers are to handle disputes relating to credit reporting; and
>
> (d) any other activities, engaged in by credit reporting agencies or credit providers, that are connected with credit reporting.[107]

49.51 In preparing the code of conduct, the Commissioner must have regard to the Information Privacy Principles (IPPs), the NPPs, Part IIIA of the Act and the likely costs to credit reporting agencies and credit providers of complying with the code.[108]

49.52 The *Credit Reporting Code of Conduct* (Code of Conduct) came into effect on 24 September 1991 and remains in force. The Code of Conduct is legally binding. Section 18B of the *Privacy Act* provides that a credit reporting agency or credit provider must not do an act, or engage in a practice, that breaches the Code of Conduct. Breach of the Code of Conduct constitutes a credit reporting infringement and an interference with privacy under s 13 of the Act.[109]

49.53 In broad terms, the Code of Conduct supplements Part IIIA on matters of detail not addressed by the Act. Among other things, the Code of Conduct requires credit providers and credit reporting agencies to:

- deal promptly with individual requests for access and amendment of personal credit information;
- ensure that only permitted and accurate information is included in an individual's credit information file;
- keep adequate records in regard to any disclosure of personal credit information;
- adopt specific procedures in settling credit reporting disputes; and
- provide staff training on the requirements of the *Privacy Act*.[110]

49.54 The Code of Conduct is accompanied by Explanatory Notes, which explain how Part IIIA and the Code interact. For example, in relation to the permitted content of credit information files, the Code of Conduct provides that:

> A credit reporting agency recording an enquiry made by a credit provider in connection with an application for credit may include, within the record of the enquiry, a general indication of the nature of the credit being sought.[111]

---

107 Ibid s 18A(1). The Code of Conduct is a disallowable instrument: *Privacy Act 1988* (Cth) s 18A(4).
108 *Privacy Act 1988* (Cth) s 18A(3).
109 Ibid s 13(d).
110 Office of the Federal Privacy Commissioner, *Credit Reporting Code of Conduct* (1991), 3.
111 Ibid, [1.1].

49.55 The Explanatory Notes explain that, while s 18E(1) expressly permits inclusion of a record of an enquiry made by a credit provider in connection with an application for credit, together with the amount of credit sought:

> because of the size of the credit reporting system, and the large number and variety of credit applications recorded every year, it is accepted that an account type indicator should be allowed to be included in the file in order to facilitate speedy and accurate identification verification by credit providers of the enquiries recorded in credit information files.[112]

Determinations

49.56 The Privacy Commissioner has power to make certain determinations under the credit reporting provisions of the *Privacy Act*, including[113] determinations relating to:

- the definition of 'credit provider';[114] and
- the kinds of identifying information reasonably necessary to be included in credit information files.[115]

Credit provider determinations

49.57 Under Part IIIA, access to personal information provided by credit reporting agencies is generally restricted to businesses that are credit providers. Section 11B defines 'credit providers' for the purposes of the Act. In summary, under s 11B, financial organisations such as banks, building societies, credit unions and retail businesses that issue credit cards are automatically classed as credit providers.

49.58 Other businesses are also credit providers if they provide loans—defined to include arrangements under which a person receives goods or services with payment deferred, such as under a hire-purchase agreement[116]—and are included in a class of corporations determined by the Privacy Commissioner to be credit providers for the purpose of the Act.[117]

49.59 The Privacy Commissioner has made three determinations under s 11B of the Act. These include a determination that corporations are to be regarded as credit providers if they:

---

112 Ibid, Explanatory Notes, [1]–[2].

113 Other determinations by the Privacy Commissioner have been issued under *Privacy Act 1988* (Cth) s 18K(3)(b)—permitting the disclosure of certain information included in a credit information file or other record before the commencement of s 18K (24 September 1991).

114 Ibid s 11B(1).

115 Ibid s 18E(3).

116 Ibid s 6.

117 Ibid s 11B(1)(v)(B).

- make loans in respect of the provision of goods or services on terms that allow the deferral of payment, in full or in part, for at least seven days; or

- engage in the hiring, leasing or renting of goods, where no amount, or an amount less than the value of the goods, is paid as deposit for return of the goods, and the relevant arrangement is one of at least seven days duration.[118]

49.60 Another determination deems corporations to be credit providers where they have acquired the rights of a credit provider with respect to the repayment of a loan (whether by assignment, subrogation or other means).[119]

49.61 Both these determinations for privacy protection, in relation to the disclosure by credit reporting agencies of credit reports, are discussed further in Chapter 50.[120]

Identifying information

49.62 The Privacy Commissioner may determine the kinds of information that are, for the purposes of s 18E(1)(a), 'reasonably necessary to be included in an individual's credit information file in order to identify the individual'.[121] The Privacy Commissioner made a determination under this provision in 1991.[122]

Audits of credit information files

49.63 The Privacy Commissioner has power to audit credit information files and credit reports held by credit reporting agencies and credit providers.[123] The purpose of such audits is to ascertain whether credit information files and credit reports are being maintained in accordance with the Code of Conduct and Part IIIA of the *Privacy Act*.

49.64 The Privacy Commissioner also may examine the records of credit reporting agencies and credit providers to ensure that they are not using personal information in those records for unauthorised purposes, and are taking adequate steps to prevent unauthorised disclosure of those records.[124]

Investigating credit reporting infringements

49.65 Part V, Division 1 of the *Privacy Act* deals with the investigation of complaints and investigations on the Privacy Commissioner's initiative.[125] These provisions must

125 These provisions are discussed in more detail in Ch 45.

be considered in association with the dispute settling procedures relating to credit reporting, which are set out in the Code of Conduct.

49.66 Under s 36(1) of the *Privacy Act* an individual may complain to the Privacy Commissioner about 'an act or practice that may be an interference with the privacy of the individual'. In the case of an act or practice engaged in by a credit reporting agency or credit provider, an act or practice is an interference with the privacy of an individual if it 'constitutes a credit reporting infringement in relation to personal information that relates to the individual'.[126] In turn, a 'credit reporting infringement' means a breach of the Code of Conduct or a breach of a provision of Part IIIA of the Act.[127] Subject to certain exceptions, the Privacy Commissioner must investigate an act or practice that may be an interference with the privacy of an individual if a complaint has been made under s 36.[128]

49.67 Under Division 2 of Part V of the *Privacy Act*, the Privacy Commissioner may make a determination after investigating a complaint. Under s 52, if the complaint is found to be substantiated, the determination may include declarations that the respondent not repeat or continue the conduct; or provide redress or compensation for any loss or damage suffered by the complainant.[129] The Privacy Commissioner may also order that a respondent make an appropriate correction, deletion or addition to a record, or attach to a record a statement provided by the complainant.[130]

49.68 Under s 41(2), the Privacy Commissioner may decide not to investigate, or to defer investigation, if satisfied that the respondent has dealt, or is dealing, adequately with the complaint; or if the respondent has not yet had an adequate opportunity to deal with the complaint.

49.69 The Code of Conduct sets out dispute settling procedures that must be followed by credit reporting agencies and credit providers.[131] The Code provides, among other things, that:

- credit reporting agencies and credit providers must handle credit reporting disputes in a fair, efficient and timely manner;[132]

- where a credit reporting agency establishes that it is unable to resolve a dispute it must immediately inform the individual concerned that it is unable to resolve

the dispute and that the individual may complain to the Privacy Commissioner;[133] and

- a credit provider should refer a dispute between that credit provider and an individual to a credit reporting agency for resolution where the dispute concerns the contents of a credit report issued by the credit reporting agency.[134]

Remedies and penalties

49.70 Part IIIA creates a range of credit reporting offences, including offences in relation to:

- non-corporations carrying on a credit reporting business;[135]
- persons giving personal information to a non-corporation carrying on a credit reporting business;[136]
- credit reporting agencies disclosing personal information other than as permitted;[137]
- credit providers using personal information contained in credit reports other than as permitted;[138]
- credit providers disclosing credit-worthiness information other than as permitted;[139]
- credit reporting agencies or credit providers intentionally giving out a credit report that contains false or misleading information;[140]
- persons intentionally obtaining unauthorised access to credit information files or credit reports;[141] and
- persons obtaining access to credit information files or credit reports by false pretences.[142]

Introduction

50.1 This chapter introduces the ALRC's proposals for reform of the credit reporting provisions of the *Privacy Act 1988* (Cth). The starting point for these proposals is the ALRC's preliminary view that Part IIIA and its related provisions should be repealed and credit reporting regulated under the general provisions of the *Privacy Act* and the proposed Unified Privacy Principles (UPPs).[1] Under this proposed regime, privacy regulation specific to credit reporting would be set out in regulations promulgated under the Act.

1 The UPPs are discussed in Part D.

50.2 As discussed in this chapter, there are three main approaches available for reform of the credit reporting provisions:

- Credit reporting could continue to be regulated under Part IIIA of the *Privacy Act 1988* (Cth) and its related provisions.

- Part IIIA and its related provisions could be repealed, and credit reporting regulated under the general provisions of the *Privacy Act*.

- Credit reporting could be regulated by new sectoral legislation dealing specifically with the privacy of credit information files and credit reports.

50.3 There was little support in submissions for the retention of Part IIIA in its present form. As discussed in this chapter, even those who value the privacy protections provided by Part IIIA generally agree that the provisions should be simplified, while retaining the basic rules.

50.4 The ALRC proposes that the credit reporting provisions should be substantially rewritten in the form of regulations under the *Privacy Act*—referred to for the purposes of this Discussion Paper as the *Privacy (Credit Reporting Information) Regulations*. The reasons for this position are: the desirability of amending the Act to achieve greater logical consistency, simplicity and clarity, including by providing one set of overarching privacy principles (that is, the UPPs); and the need substantially to improve and amend the credit reporting provisions themselves—for example, to permit more comprehensive credit reporting[2] and to provide consumers with additional dispute resolution mechanisms.[3]

Part IIIA and the NPPs

50.5 In considering options for reform, it is important to understand the relationship between the credit reporting provisions of Part IIIA and the existing National Privacy Principles (NPPs).

50.6 Part IIIA of the *Privacy Act* was originally intended to adopt and reflect privacy principles in the specific context of credit reporting.[4] The NPPs were enacted later, in 2000,[5] and established a set of general principles designed to provide privacy protection in respect of personal information in the private (non-government) sector.

50.7 The rules in Part IIIA are designed to achieve broadly the same objectives as the NPPs. The obligations in Part IIIA apply only in respect of credit reporting whereas the

4 Commonwealth, *Parliamentary Debates*, Senate, 16 June 1989, 4216 (G Richardson).
5 *Privacy Amendment (Private Sector) Act 2000* (Cth). The NPPs are located in *Privacy Act 1988* (Cth) sch 3.

NPPs apply to the private sector generally. In substance, the provisions of Part IIIA of the *Privacy Act* constitute a third major set of privacy rules, in addition to the Information Privacy Principles (IPPs) and the NPPs—albeit more detailed and prescriptive than either of those sets of principles. For example, while NPP 1.1 sets out a general principle that an organisation must not collect personal information unless the information is necessary for one or more of its functions or activities, Part IIIA provides that a credit reporting agency must not include personal information in a credit information file unless the information comprises specified permitted content.[6]

50.8 The obligations in Part IIIA can be seen as both strengthening and derogating from the privacy protection afforded to personal information by the NPPs. A brief comparison of some of the NPPs and the credit reporting provisions illustrates this point.[7]

50.9 In some important respects, the NPPs can be seen as imposing a lower level of privacy protection than the provisions of Part IIIA:

- Under NPP 1, an organisation must not collect personal information unless the information is necessary for one or more of its functions or activities. This broad test of necessity can be contrasted with the detailed provisions of s 18E, which prescribe the permitted content of credit information files held by credit reporting agencies. Even if other categories of information can be shown to be necessary for credit reporting under NPP 1, collection is prohibited (even if the individual consents) under s 18E.

- Under NPP 2, an organisation must not use or disclose personal information about an individual for a purpose other than the primary purpose of collection unless the secondary purpose is related or within the reasonable expectations of the individual concerned. In addition, NPP 2.1(c) permits, in some circumstances, the use of information for the secondary purpose of direct marketing—including by related bodies corporate.[8] In contrast, ss 18K and 18N limit the disclosure of personal information by credit reporting agencies and credit providers respectively to an exhaustive list of specific circumstances.

- Under NPP 3, an organisation must take reasonable steps to ensure that personal information it collects, uses or discloses is 'up-to-date'.[9] There is no equivalent of s 18F, however, which provides for the deletion of personal information in credit information files after the end of maximum permissible periods for the keeping of different kinds of information.

---

6 *Privacy Act 1988* (Cth) s 18E(1).
7 The proposed UPPs do not depart significantly from the NPPs in these respects.
8 *Privacy Act 1988* (Cth) s 13B.
9 A similar obligation applies to information in credit information files and credit reports: Ibid s 18G(a).

- Under NPP 6, individuals have rights to access to personal information about them. Unlike the equivalent rights under s 18H, NPP 6 specifically allows organisations to charge for access and contains an extensive list of exceptions, under which access may be refused in certain circumstances.

50.10 In other respects, the NPPs can be seen as imposing a higher level of privacy protection than the provisions of Part IIIA. Importantly, Part IIIA operates to authorise some information-handling practices that would not be permitted under the NPPs without the consent of the individual concerned:

- Sections 18K and 18N operate to authorise a range of secondary uses and disclosures of personal information that would not be permitted under NPP 2.1—for example, credit reports may be used by mortgage insurers and those considering entering securitisation arrangements, without the individual's consent.[10]

- The credit reporting provisions implicitly permit indirect collection of personal information by credit reporting agencies while NPP 1.4 requires that, if it is reasonable and practicable to do so, an organisation must collect personal information about an individual only from that individual.

50.11 A breach of a requirement of Part IIIA, unless the relevant provision states otherwise, has the same effect as a breach of one of the NPPs, and constitutes an 'interference with the privacy of an individual'.[11] Part IIIA and the NPPs operate independently.[12] Under s 13A(2), an organisation commits an interference with the privacy of an individual if it breaches a NPP, notwithstanding that the organisation is also a credit reporting agency or a credit provider. Section 16A(4) states that conduct that does not breach the NPPs is not lawful for the purposes of Part IIIA merely because it does not breach the NPPs.

Options for reform

50.12 In IP 32, the ALRC noted that review and reform of credit reporting regulation was generally favoured by consumer groups,[13] and that there was also active support within the financial sector for review, including in order to permit the introduction of more comprehensive credit reporting.[14] The credit reporting provisions may be criticised for being overly complex and prescriptive. Such is the complexity of the

10 Ibid ss 18K(1)(ab), (ac), and (d).
11 See Ibid s 13(d).
12 A Tyree, 'The Privacy (Private Sector) Amendments' (2000) 11 *Journal of Banking and Finance Law and Practice* 313, 315.
13 See, eg, Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005).
14 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [7.35]–[7.40].

provisions, and the definitions in particular, that it has been suggested they should be rewritten even if the substance of regulation were to remain largely unchanged.

50.13 It has also been suggested that the credit reporting provisions operate as a barrier to new entrants into the credit reporting market and may hinder competition. The reasons for this view include that it takes a long period to develop databases of 'negative' events, such as defaults on loans; and complex and prescriptive legislative requirements increase the cost to a new entrant of developing the information technology infrastructure needed to conduct consumer credit reporting.

50.14 On the other hand, the credit reporting provisions were the result of significant parliamentary deliberation and may be viewed as having operated since 1991 without fundamental problems.

50.15 In IP 32, the ALRC asked whether Part IIIA, and related provisions of the *Privacy Act* dealing specifically with credit reporting, should:

- continue to regulate credit reporting, with appropriate amendment;
- be repealed, and credit reporting regulated under the *Privacy Act*, NPPs and a privacy code;
- be repealed, and credit reporting regulated under new sectoral legislation outside the *Privacy Act*; or
- be repealed, and credit reporting regulated by a self-regulatory scheme?[15]

Repeal and new regulation under the Act

50.16 The leading option for reform is to repeal the credit reporting provisions of the *Privacy Act* and leave credit reporting to be governed by the general provisions of the Act and the UPPs, supplemented by subordinate legislation. Some of the arguments in favour of this approach are discussed below, including the following:

- In dealing in detail with the handling of personal information within a particular industry or business sector, the credit reporting provisions are an unjustified anomaly within the *Privacy Act*. The Act would be significantly simplified by the repeal of Part IIIA.
- The independent operation of the NPPs and Part IIIA results in unnecessary duplication and complexity in the application of privacy principles. The repeal

15 Ibid, Question 7–1.

of Part IIIA is consistent with the ALRC's proposal to develop one set of privacy principles regulating both the public and private sectors.

- An equivalent level of privacy protection can be provided to individuals under the proposed new UPPs and a code or regulations dealing with credit reporting specifically.

The anomalous nature of Part IIIA

50.17 The credit reporting provisions are the only provisions in the *Privacy Act* that deal in detail with the handling of personal information within a particular industry or business sector. One credit reporting agency has observed that Part IIIA of the *Privacy Act* is a 'significantly more prescriptive legislative regime than applies to other arguably more sensitive sectors of the private sector'.[16] While it may be argued that credit reporting presents a suite of privacy issues that are uniquely deserving of specific regulation, the reasons for this anomaly are to some extent historical in that the credit reporting industry was made subject to privacy regulation before the rest of the private sector.

50.18 In 1990, when the credit reporting provisions were inserted into the *Privacy Act*, the Act had very limited application to the private sector.[17] While further privacy regulation was anticipated,[18] comprehensive coverage of the private sector was not implemented until 2000, with the enactment of the *Privacy Amendment (Private Sector) Act 2000* (Cth). The *Privacy Amendment (Private Sector) Act*, which came into effect on 21 December 2001, established the NPPs, which apply to the handling of personal information in the private sector.

50.19 The history of credit reporting regulation in Australia may be contrasted with that in New Zealand where credit reporting regulation, under a legally binding code, followed the enactment of the *Privacy Act 1993* (NZ), which applied information privacy principles across the public and private sectors.

50.20 As discussed in Chapter 15, the ALRC proposes that the IPPs and NPPs should be replaced by a single set of privacy principles regulating both the public and private sectors (the proposed UPPs). The repeal of Part IIIA is consistent with this proposal to develop one set of legislative privacy principles and with the approach taken to the privacy protection of health information.

---

16 Baycorp Advantage, *Submission to the Senate Legal and Constitutional References Committee Inquiry into the Privacy Act 1988*, 16 March 2005.

17 The *Privacy Act* provided guidelines for the collection, handling and use of individual tax file number information in the private, as well as public, sector: *Taxation Laws Amendment (Tax File Numbers) Act 1988* (Cth).

18 For example, the second reading speech stated that the credit reporting provisions were 'the next step' in the Government's program to introduce comprehensive privacy protection: Commonwealth, *Parliamentary Debates*, Senate, 16 June 1989, 4216 (G Richardson).

Duplication and complexity

50.21 Arguably, the independent operation of the NPPs and Part IIIA results in unnecessary duplication and complexity in the application of privacy principles. First, there are overlapping rules where an organisation subject to the NPPs also falls within the ambit of Part IIIA.[19] When using personal information contained in a credit report, a bank, finance company or other credit provider must comply with both the NPPs and Part IIIA. On the other hand, the handling of other personal information relevant to credit worthiness by a credit provider, such as that obtained solely from the credit provider's own records, may be covered only by the NPPs.[20]

50.22 Other complexity results from the fact that Part IIIA distinguishes between consumer and commercial credit reporting. Part IIIA regulates consumer credit reporting activities, but does not cover personal information about commercial loans (that is, loans not intended to be used wholly or primarily for domestic, family or household purposes).[21] The handling of personal information relating to commercial loans is regulated primarily by the NPPs.

50.23 The regulation of publicly available information under the NPPs and Part IIIA is also complex. Under Part IIIA, the permitted content of credit information files includes some categories of publicly available information, notably information about court judgments and bankruptcy orders.[22] Some identifying particulars, such as an individual's current address, also may be publicly available. Other publicly available information is not regulated by Part IIIA, provided that it is kept separate from other information that affects credit worthiness.[23]

50.24 In contrast, the NPPs protect personal information that has been collected by an organisation and is held in a 'record'.[24] Personal information includes information that is publicly available, even if obtained from a generally available publication.[25]

---

19 Similarly, the obligations in pt IIIA may also overlap with those in the IPPs and tax file number provisions.

20 Note, however, that s 18N dealing with the disclosure of personal information protects a broader category of information than other provisions of pt IIIA, which protect information contained in a 'credit report' or 'credit information file'.

21 *Privacy Act 1988* (Cth) s 6(1) definition of 'credit'. However, pt IIIA touches on some aspects of commercial credit reporting. Section 18E(1)(b) permits credit reports to contain information about commercial credit and there are complex provisions to the effect that information about consumer credit can be used in commercial credit transactions, and vice versa, provided that agreement of the individual concerned is obtained: *Privacy Act 1988* (Cth) ss 18K(1)(b); 18L(4).

22 *Privacy Act 1988* (Cth) s 18E(1)(viii)–(ix).

23 See Ibid ss 6(1) (definition of 'credit reporting business'), 18K(1)(k), 18N(9).

24 Ibid s 16B. A 'record' is defined as a document, a database, or a photograph or other pictorial representation: *Privacy Act 1988* (Cth) s 6(1).

25 That is, while a 'record' does not include a 'generally available publication', a record may include personal information that is publicly available: *Privacy Act 1988* (Cth) s 6(1).

Separate records of publicly available personal information held by credit reporting agencies or credit providers, therefore, will be covered by the NPPs.

Specific credit reporting rules

50.25 The credit reporting provisions of the *Privacy Act* are complex and prescriptive. While some of this complexity and prescriptiveness may be unnecessary, effective regulation of credit reporting needs to incorporate at least some of this detail and, more generally, to tailor broad privacy principles to the specific conditions of the credit reporting industry. Incorporating the credit reporting provisions into regulations or a code under the *Privacy Act*, rather than leaving them in the primary legislation, makes it easier for rules to be amended to take into account the changing nature of the credit sector in Australia and developments in the role and potential uses of the credit reporting system.

50.26 One approach might be to incorporate the credit reporting provisions into a legally binding code issued by the Privacy Commissioner. Models of credit reporting privacy codes include those in New Zealand[26] and Hong Kong.[27] In New Zealand, credit reporting is regulated under a legally binding code issued by the Privacy Commissioner under the Act.[28] Many basic elements of the *Credit Reporting Privacy Code 2004* (NZ) are similar, in effect, to regulation in Australia.

Sectoral credit reporting legislation

50.27 An alternative approach to reform of the credit reporting provisions of the *Privacy Act* would be to repeal those provisions and enact new sectoral legislation dealing specifically with the privacy of credit reporting information.[29] In IP 32, the ALRC identified range of advantages and disadvantages of this approach.[30]

50.28 Some of the possible advantages were said to include that, given the detailed nature of credit reporting privacy regulation, it may be easier to regulate through sectoral legislation and that related, non-privacy consumer protection issues could be dealt with in legislation designed to operate consistently with the *Consumer Credit Code*.[31]

---

26 *Credit Reporting Privacy Code 2004* (NZ).

27 Office of the Privacy Commissioner for Personal Data Hong Kong, *Code of Practice on Consumer Credit Data* (1998).

28 *Credit Reporting Privacy Code 2004* (NZ) under *Privacy Act 1993* (NZ) s 46.

29 In this Discussion Paper, the term 'credit reporting information' is used to describe all personal information proposed to be covered by the *Privacy (Credit Reporting Information) Regulations*.

30 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [7.28]–[7.34].

31 The *Consumer Credit Code* is set out in the *Consumer Credit (Queensland) Act 1994* (Qld) and is adopted by legislation in other states and territories.

50.29 The possible disadvantages include the following:

- Banks, finance companies and other credit providers would have to deal with two statutory privacy regimes—that is, specific rules in relation to credit reporting, and the proposed UPPs in relation to other aspects of handling personal information.

- Specific credit reporting legislation may add to problems caused by inconsistency and fragmentation in privacy law, including complexity of privacy regulation, varying levels of privacy protection, and regulatory gaps.[32]

50.30 The ALRC noted that, if credit reporting regulation were to be located outside the Act, questions may arise about whether the Privacy Commissioner remains the appropriate regulator.[33] For example, credit reporting conceivably could be regulated as a financial services consumer protection law by the Australian Securities and Investments Commission.

50.31 Overseas jurisdictions take differing approaches to the location of credit reporting legislation and the nature of the regulator. In the United States, credit reporting is regulated under the *Fair Credit Reporting Act 1970* (US) by the Federal Trade Commission.[34] In the United Kingdom, the activities of credit reference agencies are regulated by both the *Consumer Credit Act 1974* (UK) and under privacy legislation.[35] New Zealand and Canada more closely follow the Australian position. Credit reporting is regulated by these jurisdictions' privacy commissioners under the *Privacy Act 1993* (NZ) and the *Personal Information Protection and Electronic Documents Act 2000* (Canada) respectively.

Submissions and consultations

50.32 Stakeholders expressed a wide range of opinions on the approach to reform of the credit reporting provisions. These included views on whether Part IIIA should be repealed or retained, and on the regulatory model that might replace it.

---

32 See Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Ch 7.

33 The OPC already has some functions under legislation other than the *Privacy Act* including under the *Data-matching Program (Assistance and Tax) Act 1990* (Cth); *National Health Act 1953* (Cth); *Telecommunications Act 1997* (Cth); and *Crimes Act 1914* (Cth): see Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006). IP 31 notes that one issue for consideration by the Inquiry is whether these functions should be consolidated under the *Privacy Act*.

34 Note that the United States does not have a federal information privacy commissioner.

35 The United Kingdom Information Commissioner (the equivalent of the OPC) deals with credit reporting complaints, and credit reference agencies are bound by the *Data Protection Act 1998* (UK).

50.33 A particular focus was on the respective roles in a regulatory model of the *Privacy Act* or new sectoral legislation, regulations or other subordinate legislation including legally binding codes, and self-regulation through industry codes.

Repeal of Part IIIA

50.34 There was explicit support in some submissions for the repeal of Part IIIA.[36] GE Capital Finance Australasia (GE Money), for example, stated:

> In our view, the benefits of adopting a principles-based approach to privacy regulation (including that flexibility required to deal with developing technologies and products over time) cannot be attained unless the provisions of Part IIIA of the Privacy Act are repealed.[37]

50.35 The Australian Finance Conference (AFC) stated that its preferred approach to reform would be 'the repeal of the current credit reporting provisions and regulation of consumer credit information under the NPPs and a Credit Reporting Code'.[38]

50.36 Other stakeholders called for a complete or substantial redrafting of Part IIIA.[39] Veda Advantage stated that the credit reporting provisions of Part IIIA are 'overly prescriptive and overly restrictive' and submitted that

> credit reporting regulation should be aligned with the National Privacy Principles (NPPs). Proceeding from a principle of proportionality, use and prevention of harm, we argue that the NPPs should apply to credit reporting, with additional protections applying to credit information in the hands of [credit reporting agencies] contained in a re-written Part IIIA.[40]

50.37 There was some support for the retention of Part IIIA, with modification. Abacus–Australian Mutuals stated that it supported the continued regulation of credit reporting within the scheme established under Part IIIA, but that 'it is timely for the ALRC to consider possible changes to the Part IIIA regime to refine and improve its application and effectiveness'.[41] In the view of the Consumer Action Law Centre, the existing credit reporting provisions are not 'in need of great change':

> While small improvements to the scheme could be made in various areas, the overall scheme is already relatively comprehensive and addresses key areas of concern. In our view, the main problems and concerns currently relate not to the rules, but to the way in which complaints handling and enforcement have operated in practice ...

40 Veda Advantage, *Submission PR 272,* 29 March 2007.

41 Abacus–Australian Mutuals, *Submission PR 278,* 10 April 2007.

> Improved avenues for dispute resolution and a greater emphasis on compliance and enforcement would be priorities.[42]

50.38 Optus stated that it believed the credit reporting provisions 'function well and do not require significant change'.

> In particular, to ensure the continuation of our ability to make informed and sound credit decisions, we oppose any moves to further restrict access to the data that is already available. Also, whilst we accept that the credit provisions could be simplified and re-worded, at this stage we are not supportive of any changes to the scope of the provisions.[43]

The regulatory model under the Privacy Act

50.39 The Consumer Action Law Centre considered that the various provisions of Part IIIA, the *Credit Reporting Code of Conduct* and the Privacy Commissioner's credit provider determinations[44] could be consolidated into 'one body of provisions, whether that be Part IIIA or a detailed code sitting under the National Privacy Principles'.[45]

50.40 The Centre was strongly opposed, however, to 'a reliance on the NPPs alone or to a self-regulatory system'.[46] Similarly, National Legal Aid supported the retention of 'separate provisions dealing with credit reporting rather than any proposal to collapse Part IIIA into the general provisions of the Privacy Act that deal with the private sector'.[47]

50.41 The Australian Privacy Foundation stated that it would be 'premature and dangerous' to change significantly either the location or the strength of the credit reporting provisions. The Foundation considered that prescriptive rules for credit reporting

> need not remain in a separate Part IIIA, but could instead be expressed as additional NPPs applying only to [credit reporting agencies] and/or [credit providers] as appropriate. Instead simplify the overall regulatory framework by consolidating the current mix of Part IIIA, Determinations and Code.[48]

50.42 Veda Advantage considered that, in addition to a rewritten Part IIIA, there should be credit reporting regulations, a code and a data governance standard.

> Regulations made under the Act should deal with what data cannot be collected, and who should have access to what level of data. A re-written Code would contain more

> detail preventing harmful uses of credit reporting data. Finally, [credit reporting agencies] would be required to be audited against a Data Governance Standard.[49]

50.43 The Office of the Privacy Commissioner (OPC) stated that Part IIIA should be repealed and credit reporting regulated under the NPPs and a binding code.

> The Office believes that this approach will provide a regulatory regime that is consistent with the principle based approach of the Privacy Act while at the same time imposing specific and enforceable obligations on credit providers and credit reporting agencies, in relation to their credit reporting activities.[50]

50.44 Other stakeholders favoured repeal of the prescriptive requirements of Part IIIA and submitted that credit reporting regulation should be reframed to reflect a principles-based approach.[51] GE Money, for example, stated that credit reporting should be regulated

> by privacy principles (including rules with legislative force developed in consultation with industry), in the way that the National Privacy Principles apply to other 'sensitive' information such as health related information.[52]

New sectoral legislation

50.45 There was little support expressed in submissions or consultations for new credit reporting legislation to be enacted outside the *Privacy Act*. One exception was the view, expressed by National Legal Aid, that ASIC, 'with a more comprehensive brief to monitor the finance and credit sectors', may be able to deal more effectively than the OPC with credit reporting issues that relate to broader systemic problems concerning the way credit is provided and debts are pursued.[53]

50.46 The OPC noted the difficulties that might be involved in regulating credit reporting as an industry matter rather than regulating the handling of personal information used in credit reporting. It stated that:

> significant dangers exist for creating further inconsistency and fragmentation in Australian privacy law through the implementation of sectoral legislation. This danger would increase with the number of different industry sectors in which credit reporting legislation was introduced.[54]

50.47 Veda Advantage noted that, internationally, credit reporting is regulated generally within privacy laws except where regulation of credit reporting preceded the

enactment of privacy laws, or where there is no comprehensive privacy or data protection legislation.[55] The Australian Privacy Foundation observed that

> the substance of credit reporting regulation is clearly fair information handling, which places it squarely in the area of data protection or information privacy law. On balance, we favour keeping the regulation of credit reporting within the *Privacy Act*, and urgently addressing the shortcomings of that Act and its enforcement.[56]

ALRC's view

50.48 The repeal of Part IIIA need not result in any lessening in privacy protection in relation to credit reporting. An equivalent level of privacy protection could be provided to individuals under the proposed UPPs supplemented by regulations or a legally binding code dealing with credit reporting issued by the Privacy Commissioner.

50.49 It is not would not be sufficient to leave credit reporting to be regulated by the UPPs alone, or by the UPPs supported only by some form of industry code. In comparison to general privacy principles (such as the existing NPPs or the proposed UPPs), the credit reporting provisions tend to a prescriptive rather than a principles-based regulatory approach. The ALRC agrees with the OPC, however, that

> credit reporting does require a certain of level of prescription to ensure that credit providers, credit reporting agencies and individuals understand their obligations and rights. Adverse personal credit listings can have a significant impact on the life and opportunities of an individual.[57]

50.50 This additional level of prescription should be provided by regulations promulgated under the *Privacy Act* rather than a code issued by the Privacy Commissioner.

50.51 The ALRC proposes, in Chapter 44, that Part IIIAA of the *Privacy Act* should be amended to empower the Privacy Commissioner to develop and impose a privacy code that applies to designated agencies and organisations.[58] Such codes would be unable, however, to impose less stringent requirements on agencies and organisations than are provided for in the UPPs. As discussed below, credit reporting regulations need to be able to impose more *or* less stringent requirements on credit reporting agencies and credit providers than provided for in the UPPs.

50.52 In any case, regulations are made by the Governor-General in Council, on the recommendation of the responsible minister (in this case, the Attorney-General). Even if the same result, in terms of privacy protection, might be achieved through a code,

58 Proposal 44–10.

given the extensive consultation conducted by the ALRC, it seems more appropriate to recommend the promulgation of regulations than to leave matters for further consideration by the OPC. Proceeding by way of regulations also is consistent with the ALRC's approach to the privacy of health information.[59]

Proposal 50–1 The credit reporting provisions of the *Privacy Act* should be repealed and credit reporting regulated under the general provisions of the *Privacy Act* and proposed Unified Privacy Principles (UPPs).

Proposal 50–2 Privacy rules, which impose obligations on credit reporting agencies and credit providers with respect to the handling of credit reporting information, should be promulgated in regulations under the *Privacy Act*—the proposed *Privacy (Credit Reporting Information) Regulations*.

Approaches to the new credit reporting regulations

50.53 The following part of this chapter discusses a range of general issues relevant to the drafting of the proposed *Privacy (Credit Reporting Information) Regulations*. These include the relationship between the regulations and the proposed UPPs, and approaches to simplify the drafting of the regulations—at least as compared to the existing provisions of Part IIIA.

The regulations and the proposed UPPs

50.54 The content of the proposed *Privacy (Credit Reporting Information) Regulations* will include provisions that can be seen as both strengthening and derogating from the privacy protection afforded to personal information by the UPPs. For example, the *Privacy (Credit Reporting Information) Regulations* will continue to prescribe the permissible content of credit reporting information held by credit reporting agencies and will mandate the indirect collection of personal information.

50.55 The relationship between the UPPs and the *Privacy (Credit Reporting Information) Regulations* requires detailed consideration in light of the potential inconsistencies. Two broad approaches appear to be available.

50.56 The relationship between the UPPs and the *Privacy (Credit Reporting Information) Regulations* could mirror the existing relationship between the NPPs and Part IIIA of the *Privacy Act*. Credit reporting agencies and credit providers would have to comply with both regimes.

59 See Ch 56.

50.57 An alternative approach is taken in New Zealand under the *Credit Reporting Privacy Code 2004* (NZ) (NZ Code). The NZ Code is a binding code issued by the Privacy Commissioner pursuant to the *Privacy Act 1993* (NZ).[60]

50.58 The *Privacy Act 1993* (NZ) provides that the doing of any action that would otherwise be a breach of an information privacy principle[61] is deemed not to be a breach if the action is done in compliance with the NZ Code.[62] General requirements of the information privacy principles are incorporated into the credit reporting rules set out in the NZ Code, along with those that are different or more specific than provided for in the principles.

50.59 Some stakeholders addressed the possible relationship between new regulation of credit reporting and the obligations of organisations under the NPPs. The Australian Privacy Foundation and Nigel Waters of the Cyberspace Law and Policy Centre UNSW submitted that credit reporting regulation should not duplicate the obligations set out in general privacy principles.[63] The Foundation stated:

> where existing rules only duplicate obligations under the NPPs, they can be repealed, provided that all users of the credit reporting system are brought under the NPP regime, by removing them from the small business exemption.[64]

50.60 In this context, it should be noted that the ALRC proposes the *Privacy Act* be amended to remove the small business exemption by deleting the reference to 'small business operator' from the definition of 'organisation' in s 6C(1) of the Act; and repealing ss 6D–6EA of the Act.[65]

50.61 Waters submitted that a sensible approach to the review of the credit reporting provisions of the *Privacy Act* would be to 'map' the current regime, and any proposed changes, onto the 'foundation' NPPs.

> The NPPs, which are the default information privacy standard for all larger private sector businesses, cover the same ground as Part IIIA, the Code of Conduct, and the Credit Reporting Determinations, i.e. collection, data quality, transparency and notice, storage and retention, security, use, disclosure and access and correction. One objective of any reform should be to avoid simple repetition of NPP obligations in the

---

60 *Credit Reporting Privacy Code 2004* (NZ).

61 The information privacy principles are the NZ equivalent of the NPPs and IPPs.

62 *Privacy Act 1993* (NZ) s 53(a). On the other hand, failure to comply with the Code, even though that failure is not otherwise a breach of any information privacy principle, is deemed to be a breach of an information privacy principle: s 53(b).

65 Proposal 35–1.

> credit reporting 'rules'. Those rules should be confined to additional or more tailored obligations.[66]

50.62 Other stakeholders also commented on the relationship between Part IIIA and the NPPs. The Consumer Credit Legal Centre (NSW) (CCLC) submitted that:

> Part IIIA of the Act should be redrafted using the National Privacy Principles as a guide to the structure. Without diminishing the relevant rights and responsibilities of all parties, the obligations should be contained in a hierarchy under each privacy principle so that it is clear what each section or group of sections purport to achieve, and that the individual sections do not diminish the overarching obligation to observe the principle.[67]

50.63 Stakeholders considered that credit reporting regulation should align more closely with the obligations in the NPPs.[68] Veda Advantage stated, for example, that the credit reporting provisions 'fit poorly' with the principles based approach of the NPPs.

> The Act contains very detailed instructions and prohibitions on the use of data, while the NPPs are more 'broad brush' and principles-based. This leads to ambiguity and presents operational difficulties for business and consumers.[69]

Simplification of credit reporting regulation

50.64 Many stakeholders referred to the need to simplify credit reporting regulation.[70] The CCLC, for example, stated:

> The drafting of the current Part IIIA is complex, rigid and often difficult to comprehend and apply. It also arguably undermines the thrust of the privacy principles. Credit providers, consumers and decision-makers alike become mired in the detailed requirements of the Act and can easily lose sight of the principles those sections were meant to uphold.[71]

50.65 National Legal Aid observed that while some of the complexity of Part IIIA would have been difficult to avoid:[72]

> It is nevertheless worth asking whether there is now an opportunity to prune back some of this complexity, given the broader application of the *Privacy Act*, changes in

> the way credit is provided and the enhanced capacity of computerised information systems.[73]

50.66 Industry stakeholders made similar comments. AAPT, for example, stated that the credit reporting provisions 'need to be re-written in plain English and in a simple style' and that the provisions are 'currently difficult to read and consumer protection must therefore be eroded'.[74]

ALRC's view

50.67 The ALRC considers that the existing credit reporting provisions contained in Part IIIA and associated provisions should be recast as regulations under the Act, incorporating content that reflects the policy recommendations resulting from the current Inquiry.

50.68 In drafting the *Privacy (Credit Reporting Information) Regulations,* the existing provisions of Part IIIA of the *Privacy Act* remain an appropriate starting point. Despite the criticisms made of the existing credit reporting provisions, Part IIIA of the Act provides comprehensive privacy protection. Further, the current practices of credit reporting agencies and credit providers have been developed to comply with these obligations. The AFC, for example, stated that:

> Significant resources have been expended to ensure documentation, procedures and training meet the requirements of Part IIIA and related provisions on an on-going basis … Any change would potentially impact and bring with it significant cost which may be borne by customers in the pricing of credit products.[75]

50.69 In the interests of maintaining privacy protection and minimising the transition costs to industry of new credit reporting regulations, any significant departure from the policy framework of Part IIIA needs to be justified.

50.70 The ALRC proposes, in Chapter 3, that the regulation-making power in the *Privacy Act* provide expressly that regulations may modify the operation of the UPPs to impose more or less stringent requirements.[76] Credit reporting agencies and credit providers should have to comply with both the UPPs and the *Privacy (Credit Reporting Information) Regulations*. This approach is consistent with the existing relationship between the credit reporting provisions and general privacy principles contained in the *Privacy Act*, and with the approach to be taken to the proposed *Privacy (Health Information) Regulations*.[77]

75 Australian Finance Conference, *Submission PR 294,* 18 May 2007.
76 See Proposal 3–1.
77 See Ch 56, Ch 15, Proposal 15–3.

50.71 The regulations should be drafted to contain only those requirements that are different or more specific than provided for in the UPPs. Any problems of inconsistency would be limited because conduct that complies with the *Privacy (Credit Reporting Information) Regulations* is 'required or authorised by law' under the UPPs.

50.72 There is potential for the *Privacy (Credit Reporting Information) Regulations* to simplify significantly the privacy rules relating to credit reporting. A number of approaches could be pursued. There is room, for example, to simplify the overall regulatory framework by consolidating the provisions of Part IIIA, the Privacy Commissioner determinations and the *Credit Reporting Code of Conduct*[78]—notably in relation to the definition of credit provider (discussed below).

50.73 In addition, some of the approaches taken in the NZ Code have the potential to simplify credit reporting regulation in Australia. The NZ Code is an important model because it was significantly influenced by the Australian credit reporting provisions and intended to bring about 'greater trans-Tasman regulatory alignment'.[79] Importantly, however, the New Zealand Privacy Commissioner also aimed to avoid some of the complexity and rigidity of Part IIIA.[80]

50.74 The New Zealand Assistant Privacy Commissioner has summarised the NZ Code as taking a similar approach to Part IIIA on some broad issues[81] and in some specific matters,[82] while being less complex and prescriptive.[83] There are, however, notable differences in some areas, including in relation to limits on the disclosure of credit information, which are less restrictive in New Zealand.[84]

50.75 One key approach taken under the NZ Code is to apply obligations to credit reporting agencies ('credit reporters') only and not credit providers. This can be contrasted with Part IIIA, which provides rights and obligations applicable to credit reporting agencies, credit providers and individuals.

50.76 The relative simplicity of the NZ Code approach can be illustrated by the differing approaches to the drafting of the provisions dealing with the use and disclosure of credit information. The NZ Code is able to deal succinctly with limits on use and disclosure of credit information by credit reporters in Rules 10 and 11

84 For example, a credit reporter may disclose credit information to a prospective landlord or employer: *Credit Reporting Privacy Code 2004* (NZ), Rule 11(2).

respectively, while Part IIIA of the *Privacy Act* relies on the extensive provisions of ss 18K, 18L, 18N, 18P and 18Q.[85]

50.77 Some of this simplicity results from that fact that, in New Zealand, the credit reporting activities of credit providers are regulated indirectly through obligations imposed under contract. Under the NZ Code, a credit reporter must ensure that a complying subscriber agreement is in place before disclosing any credit information to a credit provider.[86] There has been no call for such an approach in submissions.

50.78 More generally, the drafting and layout of the credit reporting provisions could be improved to assist credit providers, credit reporting agencies and consumers to understand their obligations and rights.[87] Many of the proposals made in this and subsequent chapters should contribute to a less complex form of credit reporting regulation.

50.79 It must be stressed, however, that it is not the ALRC's practice to draft regulations. As discussed in Chapter 1, this is partly because drafting is a specialised function better left to the legislative drafting experts and partly a recognition that the ALRC's time and resources are better directed towards determining the policy that will shape any resulting legislation.

Proposal 50–3 The obligations imposed on credit reporting agencies and credit providers by the proposed *Privacy (Credit Reporting Information) Regulations* should be in addition to those imposed by the proposed UPPs.

Proposal 50–4 The proposed *Privacy (Credit Reporting Information) Regulations* should be drafted to contain only those requirements that are different or more specific than provided for in the proposed UPPs.

Application of the regulations

50.80 A number of important issues arise in relation to the scope of the proposed regulations. As discussed in more detail in Chapter 49, the provisions of Part IIIA apply by reference to both the nature of the personal information and the person or

85 The NZ Code deals with the use and disclosure of credit information in less than 1,000 words, as compared to the 6,000 relevant words of Part IIIA (leaving aside related definitions).

86 See *Credit Reporting Privacy Code 2004* (NZ), Rules 5(2)(d); 8(3)(a); 11(2) and sch 3. The handling of credit information disclosed to a credit provider by a credit reporter is covered by the general information privacy principles of the *Privacy Act 1993* (NZ), as it would be if the information was obtained by the credit provider from its own clients directly.

87 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

organisation handling it. The following part of this chapter discusses issues arising in relation to the existing definitions of:

- 'credit information files', 'credit reports' and 'reports';
- 'credit reporting agency'; and
- 'credit provider'.

Credit reporting information

50.81 The provisions of Part IIIA apply variously to personal information in 'credit information files', 'credit reports' and 'reports'. As discussed in Chapter 49, each term is defined differently. Briefly:

- a credit information file is information kept by a credit reporting agency in the course of carrying on a credit reporting business;[88]
- a credit report is information prepared by a credit reporting agency that is used (by a credit provider) in establishing an individual's eligibility for credit;[89] and
- a report is a credit report or any other information that has any bearing on an individual's credit worthiness.[90]

50.82 Stakeholders have expressed support for reconsidering the retention of the separate terms, especially in view of commercial practice and technology.[91] Veda Advantage stated:

> For [credit reporting agencies] and their customers, the definitions of 'report', 'credit information' and 'credit report' are now out of step with commercial practice, technology and market demand, meaning that the information and business intelligence products we provide often have unclear or uncertain regulatory treatment, especially where they constitute a score, derived in part from information on a credit file.[92]

50.83 Veda Advantage submitted that the terms should be replaced with a single definition of 'credit information' based on the current definition of 'credit report'. Veda noted, however, that the use of 'data streams within the credit environment has meant that the traditional concept of a physical credit report no longer exists'.[93] An

93 Ibid.

example is the development of automated credit card responses over the internet where a bank provides a '60 second response' in relation to a credit card application:

> The bank has a direct connection into the credit bureau and utilises elements of an individuals credit file to make the lending decision. There is no actual physical transfer or manual interrogation of a credit file—automated decision paths apply the banks assessment criteria. Credit data is more fluid, is used real time, and is an enabler of a larger process.[94]

50.84 The OPC stated that the usefulness of retaining these separate terms (especially the definition of a 'credit report') needs to be considered. Alternatively, the relationship between the terms needs to be defined with greater precision.[95] The Australian Privacy Foundation and Nigel Waters submitted that the ALRC should recognise the 'legitimate wider scope of the regime' recommending, that a new term, 'credit information', be introduced, defined in similar terms to a 'report' in s 18N(9).[96]

ALRC's view

50.85 The ALRC proposes that the *Privacy (Credit Reporting Information) Regulations* should apply only to the handling by credit reporting agencies and credit providers of personal information maintained by credit reporting agencies and used by credit providers in assessing an individual's credit worthiness. This category of personal information should be defined as 'credit reporting information'. The existing definitions of 'credit information files', 'credit reports' and 'reports' should not be reproduced in the new regulations.

50.86 The ALRC does not favour incorporating a broad definition of credit information based on the definition of 'report' in s 18N(9). As discussed in Chapter 53, the ALRC proposes that there should be no equivalent in the *Privacy (Credit Reporting Information) Regulations* of s 18N. Rather, the definition of credit reporting information should combine elements of the current definitions of 'credit information file' and 'credit report'.[97]

50.87 The ALRC suggests the following illustrative definition:

> ***credit reporting information***, means any record that contains personal information about an individual and is:
>
> (a) maintained by a credit reporting agency in the course of carrying on a credit reporting business; or
>
> (b) held by a credit provider and:

---

94 Ibid.
95 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.
96 N Waters—Cyberspace Law and Policy Centre UNSW, *Submission PR 277,* 3 April 2007; Australian Privacy Foundation, *Submission PR 275,* 2 April 2007.
97 *Privacy Act 1988* (Cth) s 6(1).

(i) is being or has been prepared by a credit reporting agency; and

(ii) has any bearing on an individual's eligibility to be provided with credit, history in relation to credit, or capacity to repay credit; and

(iii) is used, has been used or has the capacity to be used for the purpose of serving as a factor in establishing an individual's eligibility for credit.

Proposal 50–5 The proposed *Privacy (Credit Reporting Information) Regulations* should apply only to the handling by credit reporting agencies and credit providers of personal information maintained by credit reporting agencies and used by credit providers in assessing an individual's credit worthiness. This category of personal information should be defined as 'credit reporting information'.

Credit reporting agencies

50.88 Under the *Privacy Act*, the term 'credit reporting agency' has the meaning given by s 11A. Briefly, a credit reporting agency is a corporation that carries on a 'credit reporting business'.

50.89 A 'credit reporting business' is defined as

> a business or undertaking … that involves the preparation or maintenance of records containing personal information relating to individuals (other than records in which the only personal information relating to individuals is publicly available information), for the purpose of, or for purposes that include as the dominant purpose the purpose of, providing to other persons (whether for profit or reward or otherwise) information on an individual's:
>
> (a) eligibility to be provided with credit; or
>
> (b) history in relation to credit; or
>
> (c) capacity to repay credit;
>
> whether or not the information is provided or intended to be provided for the purposes of assessing applications for credit.[98]

50.90 The OPC recommended that the definition of a 'credit reporting business' should be amended to remove the exclusion 'other than records in which the only personal information relating to individuals is publicly available information'.[99] This suggestion is consistent with the ALRC's proposal that the *Privacy (Credit Reporting Information) Regulations* should permit credit reporting information to include publicly available information (Proposal 52–6). The proposal below is intended to ensure that businesses that provide credit reporting information that is publicly available are caught by the regulations.

---

98 Ibid s 6(1).

99 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

Proposal 50–6 The definition of a 'credit reporting business' in the proposed *Privacy (Credit Reporting Information) Regulations*, if based on that in s 6(1) of the *Privacy Act*, should exclude the phrase 'other than records in which the only personal information relating to individuals is publicly available information'.

Credit providers

50.91 In general, credit reporting agencies may disclose personal information contained in credit information files (for example, a credit report) only to those persons who are 'credit providers' as that term is defined in the Act.[100] An entity is a credit provider under s 11B if the entity is, among other things,

- a bank;
- a corporation, a substantial part of whose business or undertaking is the provision of loans;
- a corporation that carries on a retail business in the course of which it issues credit cards; or
- a corporation that provides loans and is included in a class of corporations determined by the Privacy Commissioner to be credit providers for the purposes of the *Privacy Act*.[101]

50.92 A loan is defined to include a hire-purchase agreement or an agreement for the hiring, leasing or renting of goods or services under which full payment is not made or a full deposit is paid for the return of goods.[102]

Privacy Commissioner credit provider determinations

50.93 The Privacy Commissioner has made two determinations of general application[103] in relation to the definition of credit provider under s 11B. These determinations were renewed from August 2006.

---

100 These provisions are summarised in more detail in Ch 49.
101 *Privacy Act 1988* (Cth) s 11B(1)(b)(v)(B).
102 Ibid s 6(1), definition of 'loan'.
103 A third credit provider determination relates to a particular Australian Government agency and is not discussed here: Privacy Commissioner, *Credit Provider Determination No 2006–5 (Indigenous Business Australia)*, 25 October 2006.

50.94 Under the Privacy Commissioner's *Credit Provider Determination No. 2006–4 (Classes of Credit Provider)* (Classes of Credit Provider Determination)—first made in substantially similar form in 1991—corporations are to be regarded as credit providers if they:

- make loans in respect of the provision of goods or services on terms that allow the deferral of payment, in full or in part, for at least seven days; or

- engage in the hiring, leasing or renting of goods, where no amount, or an amount less than the value of the goods, is paid as deposit for return of the goods, and the relevant arrangement is one of at least seven days duration.[104]

50.95 Under the Privacy Commissioner's *Credit Provider Determination No. 2006–3 (Assignees)* (Assignees Determination)—first made in substantially similar form in 1995—corporations are to be regarded as credit providers for the purposes of the *Privacy Act* if they acquire the rights of a credit provider with respect to the repayment of a loan (whether by assignment, subrogation or other means). A corporation deemed to be a credit provider by virtue of the Assignees Determination is regarded as the credit provider to whom the loan application was submitted, or who provided the loan.[105] The scope of these credit provider determinations raises a range of issues, which are discussed below.

50.96 Other issues concerning the definition of 'credit provider' include the fact that, under s 11B(1)(b)(iii), a corporation is a credit provider if a 'substantial' part of its business or undertaking is the provision of loans. This requirement may create uncertainty for corporations that provide loans as part of their business or undertaking. The OPC has stated that it considers that the word 'substantial' connotes both value and proportion—so that this aspect of the definition of a credit provider may be satisfied where a corporation's lending activities involve substantial amounts of money, even if such activities are not the dominant part of its overall business.[106]

Participation in the credit reporting system

50.97 The definition of credit provider raises broad issues about who should be permitted to participate in the credit reporting system; and what standards participants should have to comply with, in relation to credit reporting and more generally.

50.98 In IP 32, the ALRC noted, for example, suggestions that credit providers should have to comply with the *Consumer Credit Code* in order to participate in the credit

104 Privacy Commissioner, *Credit Provider Determination No. 2006–4 (Classes of Credit Providers)*, 21 August 2006.

105 Privacy Commissioner, *Credit Provider Determination No. 2006–3 (Assignees)*, 21 August 2006.

106 Office of the Privacy Commissioner, *Credit Reporting Advice Summaries* (2001), [1.4]. The OPC submitted that the definition of credit provider could be improved by defining the meaning of 'substantial' in legislation: Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

reporting system.[107] The *Consumer Credit Code*, which has been adopted by all state and territory governments, governs many aspects of credit transactions and provides a range of important protections for consumers.

50.99 These protections include, for example, notice requirements that must be met before a credit provider may begin enforcement proceedings, prescribed periods within which a default may be remedied by the consumer,[108] and the power of a court to reopen an unjust transaction.[109]

50.100 Some organisations, which are recognised as credit providers for the purposes of the credit reporting provisions of the *Privacy Act*, are not required to comply with the *Consumer Credit Code*, which applies to 'credit providers' defined more narrowly.[110] Importantly, the *Consumer Credit Code* 'does not recognise services provided with payment in arrears terms as credit'.[111]

50.101 Other issues arise in relation to the classes of organisation that do not meet the current criteria for participation in the credit reporting system but consider that they should be permitted to obtain personal information contained in credit information files. Mercantile agents and others engaged in debt collection, investigation and related activities are one such group. Real estate agents and landlords are another. In relation to the latter, the NZ Code specifically permits a credit reporter to disclose credit information (where authorised by the individual) to a prospective landlord for the purpose of assessing the credit worthiness of the individual as a tenant.[112]

50.102 When considering what classes of persons or organisations should be permitted to obtain credit reports, it is important to understand that participation in the credit reporting system need not be 'all or nothing'. That is, regulation might permit different levels of access to the information contained in credit information files. For

107 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [5.97] referring to Office of the Privacy Commissioner, *Report on the Review of the Credit Provider Determinations (Assignees and Classes of Credit Providers)* (2006), 15.

108 *Consumer Credit Code* ss 80–81.

109 In determining whether a transaction is unjust, the court may have regard to, among other things, whether 'the credit provider knew, or could have ascertained by reasonable inquiry of the debtor at the time, that the debtor could not pay': Ibid s 70(2)(l).

110 Under the *Consumer Credit Code*, a 'credit provider' is defined to mean a person who provides 'credit': Ibid s 3(1), Sch 1. For the purposes of the Code, credit is provided if, under a contract, 'payment of a debt … is deferred' or a person 'incurs a deferred debt to another': *Consumer Credit Code* s 4(1). The *Consumer Credit Code* applies only to the provision of credit where a charge is or may be made for providing the credit: *Consumer Credit Code* s 5(1).

111 Consumer Action Law Centre, *Submission PR 274,* 2 April 2007.

112 *Credit Reporting Privacy Code 2004* (NZ) r 11(2)(b)(ii).

example, mercantile agents might be permitted to obtain name and address information in order to locate debtors, but not other details.[113]

Submissions and consultations

50.103 In IP 32, the ALRC noted concerns about the proliferation of entities that have access to the credit reporting system. Veda Advantage alone has over 5,000 subscribers.[114] The 2005 report of the Senate Legal and Constitutional References Committee's inquiry into the *Privacy Act* stated that:

> Determinations issued by the Privacy Commissioner under Part IIIA of the Privacy Act have extended access to the credit reporting system beyond traditional lenders such as banks to a wide range of retailers and service providers. Video store operators, legal services and healthcare providers, for example, are now deemed to be credit providers.[115]

50.104 In IP 32, the ALRC asked about the issues raised by the disclosure of personal information by credit reporting agencies to credit providers covered by the Privacy Commissioner's credit provider determinations, and by the definition of 'credit provider' more generally.[116]

50.105 Some stakeholders expressed concerns about the breadth of the definition of credit provider under the Privacy Commissioner's determinations.[117] National Legal Aid, for example, stated that while Part IIIA was intended to limit access to credit reporting information to 'genuine' credit providers, for the purpose of assessing credit worthiness, the definition of credit provider has led to

> determinations by the Privacy Commissioner that extend the definition to include sectors where the function of providing credit might be thought to be secondary to other activities. There are concerns that this has facilitated the process whereby credit reference services have become a resource for functions such as debt collection which the legislation was not designed to cover.[118]

---

113 This approach is currently taken in relation to disclosure of personal information by credit providers. Under s 18N(1)(c), a credit provider may disclose certain items of personal information to a debt collector from a credit report, but not others. The information that may be disclosed is limited to identifying information about the individual; information about overdue payments; and information about court judgments and bankruptcy orders.

114 Veda Advantage, *Submission PR 163,* 31 January 2007.

115 Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005), [5.15]. The ALRC understands that, in practice, credit reporting agencies do not have any subscribers that are video store operators.

116 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), Questions 5–10 to 5–12.

117 Queensland Law Society, *Submission PR 286,* 20 April 2007; N Waters—Cyberspace Law and Policy Centre UNSW, *Submission PR 277,* 3 April 2007; Australian Privacy Foundation, *Submission PR 275,* 2 April 2007; Consumer Action Law Centre, *Submission PR 274,* 2 April 2007; National Legal Aid, *Submission PR 265,* 23 March 2007; Min-it Software, *Submission PR 236,* 13 March 2007. American Express favoured further restrictions if more comprehensive reporting is introduced: American Express, *Submission PR 257,* 16 March 2007.

118 National Legal Aid, *Submission PR 265,* 23 March 2007.

50.106 National Legal Aid expressed particular concern about the provisions of the Classes of Credit Provider Determination, which allows corporations to be regarded as credit providers if they provide goods or services on terms that allow the deferral of payment for at least seven days.

> The current definition is too broad. Few people would expect, or consider it reasonable, that their solicitor, dentist or builder should be able to access their personal credit information.[119]

50.107 The Assignees Determination was also criticised. National Legal Aid stated that assignees 'are typically debt collection agencies, which are thus given access to an information resource which was originally intended to exclude them from direct access to credit information files'.[120] In contrast, the AFC considered that the *Privacy Act* should be amended 'to specifically recognise assignees as credit providers in the relevant definition'.[121]

50.108 The Australian Privacy Foundation and Nigel Waters criticised the scope of the Privacy Commissioner's credit provider determinations and considered that the Commissioner had failed 'to strike the correct balance' between commercial interests and protecting the privacy of credit reporting information.

> We therefore submit that this power should be removed from the Commissioner, and that instead, the meaning of 'credit provider' should be exhaustively defined in the Act. Inadvertent oversight of legitimate claims … in the original legislation were rectified in early Determinations. These can now be incorporated in a new statutory definition. There has been enough experience of the law to ensure that all legitimate claims for inclusion have been brought to light and accommodated. Leaving the Commissioner with a power to further extend the definition is now just an open invitation for 'function creep'.[122]

50.109 This approach was echoed by the CCLC, which submitted that 'credit provider' should be clearly defined in the *Privacy Act* and that there should be 'capacity in the regulations to specifically exclude further categories of credit provider, but not to extend the definition'.[123]

119 Ibid.

120 The assignment or factoring of debts, including debts that are not overdue is, however, a common commercial practice: Institute of Mercantile Agents, *Submission PR 270,* 28 March 2007.

121 Australian Finance Conference, *Submission PR 294,* 18 May 2007.

122 N Waters—Cyberspace Law and Policy Centre UNSW, *Submission PR 277,* 3 April 2007; Australian Privacy Foundation, *Submission PR 275,* 2 April 2007.

123 Consumer Credit Legal Centre (NSW) Inc, *Submission PR 255,* 16 March 2007; Consumer Credit Legal Centre (NSW) Inc, *Credit Reporting Research Report* (2007), rec 35.

50.110 A number of stakeholders submitted that compliance with the *Consumer Credit Code* should be a condition of access to the credit reporting system.[124] The Banking and Financial Services Ombudsman (BFSO), for example, submitted that access should not be allowed unless the credit that has been provided is regulated credit, as defined in the *Consumer Credit Code*.

> This would also ensure that only those credit providers who are obliged to properly assess a consumer's capacity to repay a debt under the [*Consumer Credit Code*] are able to subsequently list a default with a credit reporting agency.[125]

50.111 The Consumer Action Law Centre shared concerns about access to credit reporting by 'non-traditional lenders':

> While the purpose of the credit reporting system is … to correct information asymmetry in the lending market, non-traditional 'lenders' such as utilities, medical practices and video stores primarily use the credit reporting system as a tool in debt collection and do not use the information at the time of deciding whether to provide services to a consumer on terms of payment in arrears (with the exception of some larger utility businesses).[126]

50.112 The Centre also noted that non-traditional lenders are more likely to be businesses that

> do not have the required dispute resolution systems in place … nor proper systems to ensure accurate data relating to the consumer and the debt (for example, whether it is statute-barred).[127]

50.113 The BFSO noted that regulation could permit some organisations that are not bound by the *Consumer Credit Code* (and are members of an external dispute resolution scheme) to obtain access to credit reporting information but not list defaults or serious credit infringements.[128] The Consumer Action Law Centre suggested that such a move would be consistent with the *Consumer Credit Code*, which does not provide consumers of services with the same level of protection as consumers taking out consumer credit.[129]

50.114 A particular focus of concern is access to the credit reporting system by telecommunications and utilities companies.[130] National Legal Aid stated:

---

124 N Waters—Cyberspace Law and Policy Centre UNSW, *Submission PR 277,* 3 April 2007; Australian Privacy Foundation, *Submission PR 275,* 2 April 2007; Banking and Financial Services Ombudsman Ltd, *Submission PR 263,* 21 March 2007. 130 Australian Privacy Foundation, *Submission PR 275,* 2 April 2007; National Legal Aid, *Submission PR 265,* 23 March 2007; Telecommunications Industry Ombudsman, *Submission PR 221,* 8 March 2007.

> Legislation that was drafted with banks and building societies in mind, now applies to a broad range of 'credit providers'—most of the utilities—but does not adequately allow for billing disputes and other issues that arise with these 'credit providers'.[131]

50.115 Telecommunications and utilities companies use the credit reporting system to assess the credit worthiness of applicants for accounts and to assist in debt collection and may report overdue payments (defaults). The ALRC understands that telecommunications and utilities companies are credit providers for the purposes of Part IIIA of the *Privacy Act* by virtue of the Classes of Credit Provider Determination. These companies are not generally bound to comply with the provisions of the *Consumer Credit Code.*

50.116 The Telecommunications Industry Ombudsman stated that, in its view, the regulatory environment does not adequately reflect the role of telecommunications companies as credit providers for credit reporting purposes because

> at the 'front end' of the relationship between credit provider and consumer, there does not exist any like obligation on telecommunications providers to assess a consumer's capacity to pay for services which expose them to sizeable debt burdens, as there is for consumer credit providers regulated by the *Uniform Consumer Credit Code.* The inadequacy of assessment procedures in the telecommunications industry results in unacceptably large numbers of consumers incurring unexpectedly large debts which they have difficulty paying. This in turn exposes them to the risk of credit default listings.[132]

50.117 The CCLC recommended that telecommunications companies should be subject to 'similar regulatory obligations as consumer credit providers in relation to assessing ability to pay and/or providing appropriate products, dealing with financial hardship and notice prior to any form of enforcement action'.[133] The Australian Privacy Foundation submitted that the ALRC should 're-assess the arguments for and against inclusion of utility suppliers, and for special conditions and safeguards in relation to the use of credit reporting by utility suppliers'.[134]

50.118 On the other hand, telecommunications and utilities companies emphasised their need for credit reporting information. Optus noted that, without access to this information, it would be 'forced to undertake more intrusive information collection in order to assess the level of risk of providing that customer with a service'. Alternative credit assessment mechanisms, it was said,

> could disadvantage some consumers who already find it difficult to pass a credit assessment, such as new migrants or young people moving out of home, making it more difficult for them to obtain telecommunications services.[135]

50.119 EnergyAustralia stated that it would be 'unfair to allow one particular class of credit provider access to information that enables them to make judgements about creditworthiness and deny this to another class of credit providers'. In particular, EnergyAustralia submitted that not all credit providers, for these purposes, should have to be covered by the *Consumer Credit Code*. The Code

> may conflict with acts and regulations under which specific industries operate. For example, electricity and gas industries have their own set of Acts and Regulations setting out what information must be included in a supply contract, requirements in relation to reminder notices, dispute resolution, marketing, disconnection of supply and security deposits among other matters.[136]

50.120 The ALRC notes that some steps have been taken to address concerns about credit management in telecommunications. In January 2006, following the identification of concerns that consumers may be at risk of unwittingly incurring high bills because they do not understand the costs, terms and conditions of telecommunications services,[137] the Australian Communications Industry Forum released a revised credit management code.[138] Most importantly for present purposes, the credit management code requires that certain procedures must be followed before reporting a customer to a credit reporting agency. For example, a supplier must take all reasonable steps to ensure that debts that are listed with a credit reporting agency do not include any unresolved service or billing issues involving disputed account balance amounts.[139]

50.121 Some stakeholders considered that, in some respects, the definition of credit provider is too restrictive and excludes some businesses that have legitimate claims to have access to credit reporting information. The AFC stated that the definition should be 'broadened to cover any business that supplies goods or services other than on an

137 Australian Communications Authority, *Preventing Unexpectedly High Bills: Credit Management in Telecommunications* (2004).

138 Australian Communications Industry Forum, *Industry Code ACIF C541: 2006 Credit Management* (2006). The credit management code was registered by the Australian Communications and Media Authority on 13 April 2006 and binds telecommunications carriers and carriage service providers. The code deals with, among other things: the steps undertaken to enable a consumer to gain and maintain access to services; the minimum steps (including acceptable minimum timeframes for advising consumers) that a supplier must take before suspending, restricting or disconnecting a consumer's services; the processes that follow disconnection of services, including the collection of debts; and the disclosure of consumer personal information to a third party that may take place as a consequence of credit management action: Australian Communications Industry Forum, *Industry Code ACIF C541: 2006 Credit Management* (2006), i.

139 Australian Communications Industry Forum, *Industry Code ACIF C541: 2006 Credit Management* (2006), [5.10.2].

up-front cash basis' and the definition should not rely on any limit based on a fixed number of days for which payment is deferred:

> In our view, in order for the credit referencing system to have optimal value, it should be accessible by any business that supplies an individual with goods or services without requiring payment up-front (ie any business that provides a loan/gives credit).[140]

50.122 The AFC also submitted that real estate agents and employers should have regulated access to credit reporting information.[141] The Institute of Mercantile Agents stated:

> Currently, car hire firms and any business that uses credit cards as their main source of payment is denied the opportunity of using a credit reporting agency and the right to list a 'default' simply because under the current Act, they are not deemed a 'credit provider'. The current Act is fundamentally flawed in this aspect.[142]

ALRC's view

50.123 Submissions indicated a range of views, including those favouring new restrictions on access to the credit reporting system by excluding telecommunications and other service providers (or all organisations) that are not obliged to comply with the provisions of the uniform *Consumer Credit Code*.

50.124 There is room for different views on whether access to credit reporting information 'should be limited to businesses that are primarily credit providers, or whether the scheme should embrace all businesses that have a legitimate interest in knowing whether consumers represent a credit risk so that the way they collect and use credit related information can be appropriately regulated'.[143] The ALRC is not convinced that there is a sufficiently compelling case to tighten the definition of credit provider for the purpose of new credit reporting regulation.

50.125 The credit provider determinations have been in place since 1991 and commercial practices have developed in reliance on continued access to credit reporting information. The determinations were reviewed and renewed without substantive amendment by the OPC in 2006. The OPC concluded that while there were recurring issues that required attention, these issues had not prevented the Classes of Credit Provider Determination from operating satisfactorily.[144] The OPC undertook to develop information sheets and education strategies targeted at businesses covered by the Classes of Credit Provider Determination and those operating in the

telecommunications sector; and to consider, as resources became available, the development of a credit reporting audit program focusing on non-traditional credit providers.[145]

50.126 Opponents of access by credit providers covered by the credit provider determinations did not deny that some of these businesses have an operational need for access to credit reporting information to assess the credit worthiness of potential customers. Objections to such access were based in large part on the use of default listing as a debt collection tool and on the quality of data reported by these credit providers.

50.127 Many of the concerns about the breadth of the definition of credit provider may be addressed effectively by the ALRC's proposals to improve credit reporting data quality (see Chapter 54) and complaint-handling procedures (Chapter 55). In particular, the ALRC proposes that the *Privacy (Credit Reporting Information) Regulations* should provide that credit providers may only list overdue payment information where the credit provider is a member of an external dispute resolution (EDR) scheme approved by the OPC. This proposal is aimed at improving complaint-handling processes but may have the secondary effect of removing 'fringe' players from the credit reporting system who are unwilling to join an EDR scheme.

50.128 The ALRC proposes that the *Privacy (Credit Reporting Information) Regulations* include a simplified definition of 'credit provider' under which those individuals or organisations who are currently credit providers for the purposes of Part IIIA of the *Privacy Act* should generally continue to be credit providers for the purposes of the new regulations.

50.129 The ALRC remains interested, nevertheless, in further comment on whether the new definition of credit provider could be tightened at the margins. One such option is to provide that organisations are to be regarded as credit providers if they make loans in respect of the provision of goods or services on terms that allow the deferral of payment for at least thirty days as compared to seven days, as is currently the case under the Classes of Credit Provider Determination. This would bring the definition into line with common trade terms relating to payment for invoiced goods or services.

50.130 A final issue concerns the drafting of the definition. Under the NZ Code, a credit provider is defined as an entity 'that carries on a business involving the provision of credit to an individual'. The term 'credit' means 'property or services acquired before payment, and money on loan'.[146] It has been suggested that the *Privacy (Credit*

---

145 Ibid, 22. The OPC also concluded that the Assignees Determination was operating satisfactorily and recommended that education programs should be developed and audit programs considered: Office of the Privacy Commissioner, *Report on the Review of the Credit Provider Determinations (Assignees and Classes of Credit Providers)* (2006), 20, 22.

146 *Credit Reporting Privacy Code 2004* (NZ) cl 5.

Reporting Information) Regulations should adopt a similar approach.[147] The ALRC is interested in further comment on this option, which (in contrast to the preceding suggestion) would loosen the definition of credit provider.

Proposal 50–7 The proposed *Privacy (Credit Reporting Information) Regulations* should include a simplified definition of 'credit provider' under which those individuals or organisations who are currently credit providers for the purposes of Part IIIA of the *Privacy Act* (whether by operation of s 11B of the *Privacy Act* or pursuant to determinations of the Privacy Commissioner) should generally continue to be credit providers for the purposes of the regulations.

Question 50–1 Should organisations be regarded as credit providers if they make loans in respect of the provision of goods or services on terms that allow the deferral of payment, in full or in part, for at least thirty days as compared to seven days, as is currently the case under the OPC's *Credit Provider Determination No. 2006–4 (Classes of Credit Provider)*?

Question 50–2 Should the definition of 'credit provider' under the *Credit Reporting Privacy Code 2004* (NZ) be adopted as the definition of 'credit provider' under the proposed *Privacy (Credit Reporting Information) Regulations*? That is, should 'credit provider' be defined simply as 'a person that carries on a business involving the provision of credit to an individual'; and credit as 'property or services acquired before payment, and money on loan'?

Application to foreign credit providers

50.131 In IP 32, the ALRC noted that there has been some concern about the: (a) listing on credit information files of information about foreign credit; and (b) disclosure of credit reports to foreign credit providers.[148] For example, as some credit reporting agencies operate in both New Zealand and Australia, individuals applying for credit in Australia may have default listings relating to loans from New Zealand credit providers.

50.132 Under the *Privacy Act*, a credit provider is defined to include a corporation if a substantial part of its business or undertaking is the provision of loans.[149] In turn, a

147 Veda Advantage, *Submission PR 272,* 29 March 2007.
148 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [5.163].
149 See *Privacy Act 1988* (Cth) s 11B.

corporation includes a foreign corporation within the meaning of s 51(xx) of the *Australian Constitution*.[150]

50.133 The provisions of s 5B of the *Privacy Act* dealing with its application to acts and practices outside Australia do not apply to the credit reporting provisions.[151] In particular, the Privacy Commissioner is not empowered to take action outside Australia to investigate credit reporting complaints.[152]

50.134 The OPC faces difficulties in investigating complaints about information from foreign credit providers, given limitations on the extraterritorial operation of Part IIIA. The ALRC understands that, in response to these concerns, Baycorp Advantage (now Veda Advantage) agreed not to include information about foreign loans in its credit reports.

50.135 More generally, there may be no means to ensure that a foreign credit provider complies with any of the obligations of credit providers under Part IIIA—for example, in relation to notifying individuals that information may be disclosed to a credit reporting agency.

50.136 In IP 32, the ALRC asked whether information from foreign credit providers or about foreign loans should be permitted in credit information files and credit reports; whether foreign credit providers should be permitted to obtain credit reports; and about issues of enforcement and the extraterritorial operation of the credit reporting provisions.[153]

50.137 The OPC confirmed that, based on the statutory construction of Part IIIA, it has taken the view that

> the listing of overseas incurred loans (and any information relating to those loans) on an individual's credit information file and the disclosure of personal information in credit information files … to a party overseas is not permitted by Part IIIA.[154]

50.138 In the OPC's view, practical and jurisdictional difficulties dictate that foreign credit providers and foreign loans should continue to be excluded from regulation under the *Privacy Act*. The Office suggested that the credit reporting provisions should explicitly exclude foreign credit providers.[155]

50.139 The CCLC stated that access by foreign credit providers would pose 'a huge risk of privacy abuse' and regulation could not be enforced effectively against them.[156]

155 Ibid.
156 Consumer Credit Legal Centre (NSW) Inc, *Submission PR 255,* 16 March 2007.

The Australian Privacy Foundation and Nigel Waters addressed the question of extraterritorial operation and submitted that there is no reason why the provisions of s 5B of the *Privacy Act* should not apply to Part IIIA.[157]

> Whatever application the Act has for private sector organisations subject to the NPPs, and the Commissioner's powers, should logically apply also to [credit reporting agencies and credit providers].[158]

50.140 Members of the Queensland Law Society stated that if foreign credit providers can demonstrate compliance with data security and complaint-handling procedures they should be permitted to access credit reporting information in Australia.[159] The Institute of Mercantile Agents also supported access by foreign credit providers.

> Our society is global and this global nature must be recognised in our credit reporting and privacy systems. Routinely, our industry sees consumers with default credit cards in multiple jurisdictions. Most OECD companies and many in Asia have similar privacy laws. Credit files should be transparent, especially if the credit applicant has signed an authority.[160]

50.141 Veda Advantage noted the desirability of facilitating transborder data flows of credit reporting information.

> A core issue for a company like Veda Advantage is the ability to deliver consumer data protection (keeping the promise that was originally made) when data is transferred across borders. Yet the globalisation of the credit business has created demand for accurate and complete historical credit data which encompasses all jurisdictions. The barriers to cross border data transfers impedes both credit providers and consumers from making the right decisions.[161]

50.142 Stakeholders focused specifically on the desirability of trans-Tasman flows of credit reporting information.[162] Dun and Bradstreet stated that, if consistency in credit reporting regulation is achieved, 'it should be permissible to list both Australian and New Zealand data on consumer credit reports in both countries'.[163]

50.143 Veda Advantage stated that it sought 'urgent measures' to 'permit trans-Tasman access to credit reporting for business and consumers'. Veda submitted that

163 Dun & Bradstreet (Australia) Pty Ltd, *Submission PR 232,* 9 March 2007.

Australian and New Zealand credit providers should have 'limited access' to trans-Tasman credit reporting information and provide consumers with 'rights of access, correction, and notice'. In addition, regulators should provide guidelines to support these trans-Tasman rules, supported by an amendment to the extraterritoriality provisions of the *Privacy Act*.[164]

ALRC's view

50.144 Issues concerning the participation of foreign credit providers are linked to the regulation of transborder data flows, which is discussed in Chapter 28. The proposed 'Transborder Data Flows' principle is designed to regulate the transfer of Australian credit reporting information overseas, but has nothing to say about inward data flows—for example, a default report from an overseas credit provider that is transferred to an Australian credit reporting agency.

50.145 In theory, such a provision could be built into the proposed *Privacy (Credit Reporting Information) Regulations* so that, for example, foreign credit providers may report credit reporting information if they are subject to a law, binding scheme or contract which effectively upholds principles for fair handling of credit reporting information that are substantially similar to those in the proposed regulations. It is questionable, however, whether such a provision would work in practice.[165]

50.146 As discussed above, however, the primary concern about the reporting of personal information by overseas credit providers relates to the availability of effective enforcement and complaint handling. On this basis, the ALRC agrees with the OPC that foreign credit providers should, at least for the time being, be excluded from participation in the credit reporting system. The ALRC proposes that the *Privacy (Credit Reporting Information) Regulations* should exclude the reporting of personal information about foreign credit and foreign credit providers; and the disclosure of credit reporting information to foreign credit providers.

50.147 In the future, however, it may be possible to facilitate credit reporting across jurisdictional boundaries and, in particular, between Australia and New Zealand. The Australian and New Zealand banking and financial services markets are highly integrated and many credit providers (and both major credit reporting agencies) operate on both sides of the Tasman. The New Zealand Privacy Commissioner observed, in this context, that 'consumer credit reporting is an activity in which the same major companies dominate business on both sides of the Tasman' and urged the ALRC to consider 'the trans-Tasman angle'.[166]

50.148 There are important benefits in maintaining harmonisation in the area of credit reporting, and harmonisation may ultimately permit integration of regulatory

systems. Starting from their similar legal and commercial backgrounds, New Zealand and Australia have already achieved a significant degree of coordination and cooperation in a number of areas of business law (including in fair trading and other consumer protection law).

50.149 The countries are committed to further development of business law coordination under the *Memorandum of Understanding Between the Government of New Zealand and the Government of Australia on Coordination of Business Law* (2000).[167] Recent progress in this regard has involved cross-border company recognition, cross-border insolvency provisions, mutual bans on disqualified company directors and information sharing between trans-Tasman competition and consumer regulators.[168] Coordinating the regulation of credit reporting regulation would be a subject consistent with this overall agenda.

Proposal 50–8 The proposed *Privacy (Credit Reporting Information) Regulations* should exclude: the reporting of personal information about foreign credit and foreign credit providers; and the disclosure of credit reporting information to foreign credit providers.

Proposal 50–9 The Australian Government should consider including credit reporting regulation in the list of areas identified as possible issues for coordination pursuant to the *Memorandum of Understanding Between the Government of New Zealand and the Government of Australia on Coordination of Business Law* (2000).

Consumer and commercial credit

50.150 The credit reporting provisions are made more complex because Part IIIA distinguishes between consumer and commercial credit reporting. Part IIIA regulates consumer credit reporting activities, but does not cover personal information about commercial loans (that is, loans not intended to be used wholly or primarily for domestic, family or household purposes).[169] The handling of personal information relating to commercial loans is regulated primarily by the NPPs.

---

167 *Memorandum of Understanding Between the Government of New Zealand and the Government of Australia on Coordination of Business Law* (2000) Department of Foreign Affairs and Trade <www.dfat.gov.au/geo/new_zealand/anz_cer/memorandum_of_understanding_business_law.html> at 1 August 2007.

169 *Privacy Act 1988* (Cth) s 6(1) definition of 'credit'.

50.151 Part IIIA, however, touches on some aspects of commercial credit reporting. For example, s 18E(1)(b) permits credit reports to contain information about commercial credit and there are complex provisions to the effect that information about consumer credit can be used in commercial credit transactions, and vice versa, provided that agreement of the individual concerned is obtained.[170] Further, the fact that an individual is the guarantor of a commercial loan is currently permitted content of a credit information file.[171]

50.152 In IP 32, the ALRC asked whether the distinction in the credit reporting provisions of the *Privacy Act* between consumer and commercial credit is necessary or whether personal information about consumer and commercial credit should be regulated by the same statutory provisions.[172]

50.153 Most stakeholders who addressed the issue in submissions favoured retaining the distinction between consumer and commercial credit reporting.[173] This view may be influenced, at least in part, by the fact that the *Consumer Credit Code* makes such a distinction.[174] From a consumer perspective, the CCLC stated:

> We contend in principle that commercial credit should be entitled to the same basic protections as consumer credit. In our view, it still remains a necessary distinction because in some matters we can envisage that consumer credit should have a higher level of protection.[175]

50.154 While industry stakeholders generally wanted commercial credit reporting to remain outside the rules set out in Part IIIA,[176] the Mortgage and Finance Association of Australia considered that the distinction between consumer and commercial credit was 'unnecessary and confusing'.[177]

50.155 The OPC noted that credit reporting agencies currently make an individual's commercial credit transactions available to credit providers to assess an individual's credit eligibility and that some provisions of Part IIIA already regulate aspects of

commercial credit granted to individuals. This 'fragmented approach adds to the complexity of the provisions'.[178] The OPC recommended that personal information relating to credit advanced to an individual for commercial purposes should be covered by Part IIIA.[179]

ALRC's view

50.156 The current distinction between consumer and commercial credit may create needless complexity and appears inconsistent with the general approach of the *Privacy Act*. The *Privacy Act* does not distinguish in any other respect between personal information about an individual's personal and commercial activities. The distinction is not made in the NZ Code, which simply covers personal information that is credit information.

50.157 Where credit-related personal information is maintained by a credit reporting agency and is, for example, inaccurate or misleading, an individual should have the same rights of recourse regardless of whether the credit advanced was for a domestic or commercial purpose. The individual also should have the benefit of all the protections provided by the *Privacy (Credit Reporting Information) Regulations*.

50.158 This proposal does not mean that all credit-related information concerning an individual will be covered by the regulations (or the UPPs). The information must still be 'personal information'—that is, information 'about' an individual rather than, for example, about a company (of which the individual happens to be a director) having entered into a loan agreement.[180]

50.159 The ALRC remains interested, however, in further comments on the commercial implications of this proposal for credit reporting agencies and credit providers, for example, in view of the fact that the *Consumer Credit Code* does distinguish between consumer and other credit contracts.[181]

Proposal 50–10 The proposed *Privacy (Credit Reporting Information) Regulations* should apply to personal information relating to credit advanced to an individual for any purpose and not limited to 'domestic, family or household' purposes as is currently the case under the definition of 'credit' in the *Privacy Act*.

Credit reporting industry code

50.160 In this chapter, the ALRC proposes a model for new credit reporting regulation. Under this model, the credit reporting provisions of the *Privacy Act* would be repealed and credit reporting regulated under the general provisions of the Act and the proposed UPPs. Privacy rules imposing obligations on credit reporting agencies and credit providers specifically would be promulgated in regulations under the Act in the proposed *Privacy (Credit Reporting Information) Regulations*.

50.161 Some matters raised in the Inquiry, however, are not addressed most appropriately through legislation. For example, credit providers generally support the principle of reciprocity in credit reporting and obligations to report information consistently. Arguably, credit providers themselves and their industry associations should take responsibility for such matters, within the framework provided by legislation.

50.162 A desirable final element of the regulatory model is, therefore, a credit reporting industry code. Such a code should be developed by industry to deal with detailed operational matters—especially those relevant to compliance with data quality obligations—with input from consumer groups and regulators, including the OPC.

50.163 In Chapter 54, the ALRC proposes that the credit reporting industry code should promote data quality by mandating procedures to ensure consistency and accuracy in the reporting of overdue payments and other personal information by credit providers (see Proposal 54–5). In Chapter 51, the ALRC proposes that the industry code should provide for access to information on credit information files according to principles of reciprocity (see Proposal 51–2).

50.164 The need for a self-regulatory code was reflected in comments made in submissions[182]—although in some cases, self-regulation was seen as substituting for, rather than augmenting, legislative regulation.

50.165 Experian referred to the United Kingdom regulatory model, which depends on a range of industry codes. Adherence to these codes is 'embedded in the agency contracts with their clients, thus any infringement would be likely to be a breach of contract and possibly a breach of the Data Protection Act'.[183]

50.166 Other stakeholders referred to the role of an industry code in regulating credit reporting. Dun and Bradstreet submitted that credit reporting should be regulated under the NPPs and an 'industry code of conduct'.[184] The industry group, the

Introduction

51.1 This chapter considers proposals to extend the current system of credit reporting to permit a broader spectrum of personal information to be collected and disclosed—referred to in this Discussion Paper as 'more comprehensive' credit reporting.

51.2 This chapter begins by explaining what is meant by more comprehensive credit reporting and summarises the existing position with regard to the content of credit information files. The *Privacy Act 1988* (Cth), as explained in Chapter 49, restricts the types of personal information that may be collected and disclosed in the course of credit reporting. Broadly speaking, the Act mainly (but not exclusively) permits the collection and disclosure of personal information that detracts from an individual's credit worthiness—such as the fact that an individual has defaulted on a loan. This is commonly referred to as 'negative' or 'delinquency-based' credit reporting.

51.3 There has been a strong push by some stakeholders to expand the types of personal information that may be collected and disclosed in the credit reporting process. While these proposals differ in their detail, the common unifying feature is a system that permits the reporting of personal information relating to an individual's current credit commitments or repayment performance (or both).

51.4 This chapter examines the arguments for and against more comprehensive credit reporting, with particular reference to comments received in submissions and consultations, and information derived from empirical research into the possible effects of more comprehensive credit reporting on credit markets and the economy. The chapter also outlines some possible models of comprehensive credit reporting schemes, taking account of developments in other jurisdictions. For the reasons discussed in this chapter, the ALRC proposes that there should be a modest extension in the categories of personal information that may be collected for credit reporting purposes.

51.5 Any expansion in the categories of personal information that may be collected for credit reporting cannot be considered in isolation from other aspects of the privacy regulation of credit reporting —for example, in relation to the data quality of credit reporting information, dispute resolution and penalties for the unauthorised use or disclosure of such information. These and other issues are discussed in Chapters 52–55 of this Discussion Paper.

'Positive' or 'more comprehensive' credit reporting?

51.6 Much of the literature distinguishes between two distinct systems of credit reporting: 'negative' and 'positive' credit reporting.[1] The difference between these two sorts of credit reporting is said to lie in the kinds of personal information that can be collected as part of the credit reporting process. As the term suggests, negative credit reporting involves 'negative' information—that is, information that detracts from an individual's credit worthiness, such as the fact that an individual has defaulted on a loan. On the other hand, positive credit reporting is said to involve 'positive' information about an individual's credit position and includes information relating to

1 See, eg, Consumer Affairs Victoria, *The Report of the Consumer Credit Review* (2006); Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005).

an individual's current credit commitments. An example of information in this category is a record of an individual having made a loan repayment.

51.7 The terms 'negative' and 'positive' credit reporting are sometimes used as convenient shorthand expressions to distinguish between what is permitted under the current law (negative reporting) and what may be permitted if the current restrictions on reporting were relaxed (positive reporting). The use of the terms in this way involves a significant over-simplification because the credit reporting provisions currently permit the collection of some 'positive' items.[2]

51.8 More fundamentally, the term 'positive credit reporting' may in fact be misleading because information collected through a positive credit reporting scheme can, in reality, be positive (in the sense of enhancing an individual's credit worthiness) or negative (that is, detracting from credit worthiness) depending on the particular situation. For example, 'data that is not default data can still be negative if it concerns missed payments or even very high levels of debt'.[3]

51.9 Therefore, a debate on whether 'positive' information should be included in credit reporting runs the risk of introducing a false premise—namely, that all information in this category would enhance the credit worthiness of the individual concerned. It is important that the debate be framed more clearly. As a result, the focus of this chapter is on whether it is appropriate to expand the categories of personal information involved in credit reporting and, if so, how.

51.10 Partly as a response to this semantic problem, some terms have been developed as alternatives to the term 'positive' credit reporting. The alternative term with the widest currency is 'comprehensive' credit reporting.[4] This term is preferable because it conveys more clearly that the information covered will not necessarily assist, nor hamper, an individual's application for credit. 'Comprehensive' in this context does not necessarily mean 'all' conceivable personal information of a financial nature that relates to an individual's credit worthiness. It is more appropriate, therefore, to talk about a *more comprehensive* system of credit reporting because this more accurately conveys the idea that what is being proposed is an expansion of the types of information a credit reporting agency can collect.

---

2 That is, a record of a credit provider being a current credit provider in relation to the individual: *Privacy Act 1988* (Cth) s 18E(1)(b)(v); a record of an enquiry made by a credit provider in connection with an application for credit, together with the amount of credit sought: s 18E(1)(b)(i).

3 Experian Asia Pacific, *Submission PR 228,* 9 March 2007.

4 See, eg, Centre for International Economics and Edgar Dunn and Company, *Options for Implementation of Comprehensive Credit Reporting in Australia [Prepared for MasterCard Worldwide]* (2006). Another synonym is 'full-file reporting': see, eg, Consumers' Federation of Australia, *Full-File Credit Report: Is it Really the Answer to Credit Overcommitment?* (2005) <www.consumersfederation.com/documents/PositionPaperFeb05.doc> at 1 August 2007, 1.

51.11 While the use of the term 'positive' credit reporting has become prevalent in describing proposals to expand credit reporting in Australia, the ALRC considers that 'comprehensive' or 'more comprehensive' credit reporting represent clearer and more accurate short-hand expressions. Therefore, when the terms 'comprehensive' or 'more comprehensive' credit reporting are used in this chapter, they simply refer to a system of credit reporting that permits more types of personal information to be collected and used in credit reporting than is currently allowed under the *Privacy Act*.

Australia's approach to more comprehensive credit reporting

51.12 There are many different models of more comprehensive credit reporting, as discussed below. However, most jurisdictions that permit some form of more comprehensive credit reporting include some or all of the following types of personal information:

- information about an individual's current loans or credit facilities, including the balances;
- an individual's repayment history;
- information about an individual's bank and other accounts, including the identity of the institution where the account is held and the number of accounts held; and
- further information than is currently permitted under the *Privacy Act* relating to overdue or defaulted payments.[5]

51.13 Reform to permit the collection and use of such categories of personal information in credit reporting would represent a significant extension of the current system.[6]

Current law

51.14 More comprehensive credit reporting is currently prohibited under the *Privacy Act*. This prohibition derives from the interaction of ss 18E and 18K.[7] Section 18E(1) sets out what information may be included in a credit information file.[8] The section provides that a credit reporting agency may include information that identifies the individual in question and sets out an exhaustive list of the other categories of personal information that may be included in the file. With some notable exceptions,[9] this list

---

5 See, eg, Centre for International Economics and Edgar Dunn and Company, *Options for Implementation of Comprehensive Credit Reporting in Australia [Prepared for MasterCard Worldwide]* (2006), 2.

6 The personal information that may be used currently in credit reporting is summarised in Ch 49.

7 These provisions are summarised in greater detail in Ch 49.

8 In addition, *Privacy Act 1988* (Cth) s 18E(2) prohibits certain categories of personal information from being included in an individual's credit information file.

9 Ibid s 18E(1)(b)(v), s 18E(1)(b)(i).

contains mainly so-called negative information, such as information relating to the individual having defaulted on a loan.

51.15 Section 18K(2)(a) provides that a credit reporting agency must not disclose personal information if the information does not fall within the permitted categories in s 18E. Similarly, s 18E(8)(a) provides that a credit provider must not disclose personal information to a credit reporting agency if the information does not fall within the permitted categories in s 18E.

Government responses

51.16 Since the 1980s, both before and after the enactment of the credit reporting provisions, Australian federal and state governments have on several occasions had reason to consider the introduction of more comprehensive credit reporting.

Credit Reference Association of Australia proposal

51.17 As noted in Chapter 48, there was a push in the late 1980s for the introduction in Australia of a form of more comprehensive credit reporting. In that year, the Credit Reference Association of Australia (CRAA) stated its intention to collect information about individuals' current credit commitments.[10] This plan was postponed, however, at the request of the then Commonwealth Minister for Consumer Affairs, the Hon Nick Bolkus.[11] Subsequently, the Commonwealth Parliament passed the *Privacy Amendment Act 1990* (Cth), which had the effect of prohibiting 'positive' credit reporting.

51.18 There were a number of concerns about the CRAA's proposal. The New South Wales Privacy Committee feared that CRAA's proposal 'would greatly increase the quantity of personal information held by CRAA', and it may be too widely available.[12] The Australian Computer Society was concerned that this was 'an extremely privacy-invasive measure' demanding 'substantial justification'. It maintained that no detailed justification was publicly presented.[13]

51.19 Prior to the passage of the *Privacy Amendment Act 1990* (Cth), the then Minister for Consumer Affairs stated that one of the government's aims in passing this legislation was to 'tackle the whole question of positive reporting'. He noted that the government's rejection of 'positive reporting' was endorsed both by the Opposition and the Australian Democrats.[14] In the Second Reading Speech, the Minister went

12 Ibid, 22.

13 R Clarke, *Consumer Credit Reporting and Information Privacy Regulation* (1989) Australian Computer Society, [3.2].

14 Commonwealth, *Parliamentary Debates*, Senate, 15 August 1989, 13 (N Bolkus—Minister for Consumer Affairs).

further, stating that so-called 'positive reporting' represents an unwarranted 'intrusion into individuals' lives' and that:

> The Government does not consider that there is any proven substantial benefit from the positive reporting proposals and that in view of the strong privacy concerns held by the community this massive expansion of the extent of information held about individuals should not be allowed to develop.[15]

Financial System Inquiry (Wallis Report)

51.20 The Financial System Inquiry chaired by Mr Stan Wallis discussed the issue of more comprehensive credit reporting in its 1997 final report (the Wallis report).[16] The Wallis report stated that the inquiry was not in a position to assess whether the benefits of positive credit reporting outweighed the costs, but considered the potential benefits warranted a complete review of the issue.[17]

51.21 The Wallis report recommended that the Attorney-General should establish a working party, comprising representatives of consumer groups, privacy advocates, the financial services industry and credit reference associations to review the existing credit provisions of the *Privacy Act*. The purpose of this review should be to identify specific restrictions that prevent the adoption of world best practice techniques for credit assessment, and evaluate the economic loss associated with these restrictions against the extent to which privacy is impaired by their removal.[18]

Senate Legal and Constitutional References Committee

51.22 The inquiry undertaken in 2005 by the Commonwealth Senate Legal and Constitutional References Committee[19] (Senate Committee privacy inquiry) dealt with credit reporting. Generally, the inquiry stated that while 'government action is required to maintain community confidence in [the] integrity of the credit reporting regime', it did 'not see any need for review or reform of Part IIIA at this time'.[20]

51.23 Specifically, the Senate Committee privacy inquiry recommended 'that the Privacy Act not be amended to allow the introduction of positive credit reporting in Australia'.[21] It explained this position by saying:

> The committee sees no justification for the introduction of positive credit reporting in Australia. Moreover, the experience with the current range of credit information has shown that industry has not run the existing credit reporting system as well as would be expected and it is apparent that injustice can prevail. As mentioned elsewhere in this report, positive reporting is also rejected on the basis that it would magnify the

> problems associated [with] the accuracy and integrity of the current credit reporting system. The privacy and security risks associated with the existence of large private sector databases containing detailed information on millions of people are of major concern.[22]

51.24 The Australian Government disagreed with the Senate Committee's recommendation concerning credit reporting, stating that review of the credit reporting provisions is a matter that could be considered as part of the ALRC's current inquiry.[23]

Senate Economics Committee

51.25 The Senate Economics Committee also considered the issue in its 2005 report *Consenting Adults, Deficits and Household Debt: Links between Australia's Current Account Deficit, the Demand for Imported Goods and Household Debt*.[24] The Committee stated that it was not persuaded to take a different view to that expressed by the Senate Legal and Constitutional References Committee.

> The Committee does not believe that credit providers are making full use of the information currently available to them. Further … defaults and other signs of financial distress in the credit card market are very low and do not justify the very significant change that would be required for positive credit reporting to be introduced. The Committee does not consider that any further parliamentary inquiry into this matter is justified at this time.[25]

Victorian Consumer Credit Review

51.26 Finally, the 2006 Victorian Consumer Credit Review (the Victorian Review) dealt with comprehensive credit reporting as part of a broad review of the efficiency and fairness of the operation of credit markets and the regulation of credit in Victoria.[26]

51.27 The Victorian Review received a large number of submissions on the benefits and limitations of the current system of credit reporting, and in relation to proposals to institute more comprehensive credit reporting. Ultimately, it concluded that a form of more comprehensive credit reporting should not be introduced, at least 'while

26 Victoria has its own legislation on credit reporting: *Credit Reporting Act 1978* (Vic). The Victorian Consumer Credit Review concluded that the Victorian legislation should be repealed because it has been superseded by the credit reporting provisions of the *Privacy Act 1988* (Cth): Consumer Affairs Victoria, *The Report of the Consumer Credit Review* (2006), 280.

substantial questions remain about whether the benefits outweigh the costs', and it suggested further research and analysis in this area.[27]

51.28 In its response to the review, the Victorian Government agreed that comprehensive credit reporting should not now be implemented in Victoria on the ground that 'there is insufficient evidence' to show that it would be more beneficial than not to implement such a system. It went on to state that responsibility for '[f]urther research and analysis' in this area should be borne by the Commonwealth, as distinct from the Victorian Government.[28]

The argument for more comprehensive credit reporting

51.29 The *Privacy Act* contains strict limitations on the categories of personal information that may be collected and used as part of the credit reporting process. These have been criticised by those advocating the introduction of more comprehensive credit reporting in Australia.

51.30 The underlying basis for criticism of the current credit reporting regime is that it does not do enough to allow credit providers to redress the information asymmetry between the credit providers and potential borrowers.[29] As explained in Chapter 48, 'information asymmetry' refers to the situation where, because a credit provider often cannot know the full credit history of an individual applying for credit, the individual has more information about his or her credit risk than the credit provider. The greater the asymmetry, the harder it is for the credit provider to assess the risk premium associated with lending to the individual in question.[30]

51.31 The argument for reform of the current system of credit reporting is, in essence, that the current information asymmetry between credit providers and potential borrowers makes it unnecessarily difficult to assess the risk premium of individuals applying for credit. This, in turn, is said to cause a number of problems in assessing whether to provide credit. These were described in the Issues Paper, *Review of Privacy—Credit Reporting Provisions* (IP 32) as follows:[31]

- It is difficult for a credit provider accurately to assess the risk involved in lending to an individual. This paucity of information can cause the credit provider to 'select some bad borrowers' (who default in their repayments) and to

30 The 'risk premium' reflects the costs associated with lending to a potential borrower. See, eg, Ibid, 2.
31 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [6.28]–[6.29].

'ignore some good ones' (who would have made their repayments had credit been extended to them).[32]

- While 'good borrowers have no way of signalling their reliability' to credit providers, 'bad borrowers have no incentive' to disclose their lack of credit worthiness.[33]

- When an individual has committed 'a minor default in the previous five years [this] can prevent access to affordable and serviceable credit', even when the individual's circumstances have changed. For instance, a person who defaulted on a payment for his or her mobile phone when he or she was under the age of 18 may be refused credit at a later stage—after he or she has entered the workforce and consequently represents a much lower credit risk.[34]

51.32 Due to problems in assessing the risk presented by individual borrowers, credit providers may charge borrowers an average interest rate that takes account of their experience of the pool of borrowers (good and bad) to whom they lend. This may cause adverse selection so that 'some good borrowers to drop out of the credit market', further increasing the average interest rate 'to cover the cost of loans that are not repaid'.[35]

Benefits of more comprehensive credit reporting

51.33 In IP 32, the ALRC asked what are the advantages and disadvantages of more comprehensive credit reporting over the current credit reporting system and what would be the economic and social impact of introducing a system of more comprehensive credit reporting in Australia.[36]

51.34 There are a number of possible benefits that may result from introducing comprehensive credit reporting. Some of the possible benefits are discussed below with reference to views expressed in submissions.

36 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), Questions 6–1, 6–2.

Improved risk assessment

51.35 The starting point for many of the purported benefits of more comprehensive credit reporting derive from the claim that it would improve the accuracy of credit risk assessment. The benefits said to flow from improved credit assessment include lower rates of over-indebtedness and default, greater competition in the credit market and less expensive credit. For example, it is said that the introduction of comprehensive credit reporting would increase the ability of credit providers to 'distinguish better between good and bad borrowers' and, in turn, reduce the rate of default and 'increase the volume of credit that can be provided to good borrowers'.[37]

51.36 Submissions from credit providers were virtually unanimous in the view that more comprehensive credit reporting has the potential to enhance credit risk assessment significantly.[38] As explained by Experian Asia Pacific (Experian):

> There is a general consensus amongst credit and risk professionals that the sharing of more information should lead to better decisions. When coupled with good regulatory protections for consumers the outcome is a robust and well balanced credit market.[39]

51.37 GE Capital Finance Australasia (GE Money) stated that:

> Our experience in a number of international markets is that comprehensive or 'positive' credit bureau data adds significantly to our ability to accurately assess an applicant's credit risk. This improved capability enables us to more accurately assess risk, which can in turn reduce credit losses (including fraud losses), a cost that is ultimately borne by consumers.[40]

51.38 Submissions contrasted the predictive power of the information currently available to that available under more comprehensive credit reporting systems. American Express submitted that inadequate data sharing under existing arrangements leads to problems of adverse selection and moral hazard.[41] In contrast, the application of more comprehensive information is able to 'detect those individuals comprising the pool of high risk potential debtors'.[42] Veda Advantage noted that:

> When overall levels of the borrower's obligations are provided as part of the 'positive data' then less reliance is needed on the incomplete data provided in negative only

> data environments. Lenders can then use the full picture of a consumers' indebtedness and their previous payment history to make a much more informed assessment of risk and hence a more responsible lending decision.

51.39 GE Money highlighted the predictive power of payment history information, as compared to information provided by an individual on an application form (and current credit reporting), when using credit risk scoring processes.

> Application demographic information such as 'time with current employer' and 'time at current address' are modelled based on how applicants with a similar profile (not the applicant individually) have performed in the past.
>
> An applicant's previous payment and spend behaviour data is by far the most predictive form of data because it is modelled on the actual performance of the applicant.
>
> The current credit bureau data only permits a credit provider to see one aspect (at the extreme end of the spectrum) of payment data, that is when someone has fallen into bankruptcy, had a default or serious credit infringement.[43]

51.40 GE Money stated that studies in a diverse range of international markets have proven 'aggregate account behaviour data' to add more predictive power to the credit scoring than the demographic data supplied by the applicant on the application form.[44]

51.41 Credit providers have legal obligations, including under the uniform *Consumer Credit Code* not to provide credit where capacity to repay has not been reasonably established. Submissions noted that more comprehensive credit reporting would enhance the ability of credit providers to comply with those obligations. For example, MasterCard Worldwide (MasterCard) stated:

> Greater availability of accurate data on an applicant's capacity to repay makes the UCCC a much [more] effective tool to prohibit over-extension, or impose sanctions on those [who] breach such prohibitions.[45]

51.42 MasterCard also submitted that consumer groups should, on that basis, lobby for the introduction of compulsory comprehensive credit reporting in Australia 'in much the same way that their counterparts in the United Kingdom are outspoken supporters of positive credit reporting there'.[46]

46 MasterCard claimed that many Australian debt counselling groups believe the system will reduce over-indebtedness: Ibid.

Promoting competition and efficiency

51.43 Comprehensive credit reporting is also said to promote competition in credit markets.[47] Among other things, more competition may mean that credit is more readily available, at lower cost, and in more forms than would otherwise be the case.

51.44 A report commissioned by MasterCard (the MasterCard/ACIL Tasman Report) stated that, for example, following increases in the types of personal data collected and used in credit reporting in the United States in the 1980s and 1990s, there was 'a wave of new entrants into the bank credit card market'. This led to 'downward pressure on interest rates and fees for bank credit cards' and 'the introduction of differential pricing in bank credit cards … with lower interest rate margins for lower risk borrowers', and an overall expansion in the credit card market.[48] In response, it may be observed that many of these developments also occurred in countries where there were no similar changes to credit reporting—including Australia.

51.45 In the Australian context, Abacus–Australian Mutuals (Abacus) noted that the ability of larger credit providers to use internal databases of 'positive' credit data relating to their own customers offers a potential competitive advantage in assessing credit risk. More comprehensive reporting may help create more competitive markets, because consumers are less reliant on existing institutional relationships to obtain credit.

> Those consumers with healthy repayment histories with one credit provider can, under a positive reporting scheme, transfer that good record to other credit providers. Under the current system, despite being able to demonstrate a capacity and propensity to repay, this positive data is not transferable within the credit reporting scheme.[49]

51.46 Other submissions referred to the promotion of more competitive credit markets.[50] For example, Dun and Bradstreet stated that 'improved data sharing is critical to the efficient operating of credit markets, resulting in improved products and rates for consumers and more efficient pricing for credit providers'.[51] Veda Advantage considered that more comprehensive reporting promotes competition in credit markets 'by reducing information barriers for small or new credit providers'.[52] GE Money stated:

> As demonstrated by the US and the UK experience when credit providers have the data that allows them to more accurately assess credit risk, entering into a new market segment becomes viable for providers who do not have existing customer bases.[53]

51.47 Submissions noted the possible role of more comprehensive credit reporting in reducing the transaction costs involved in assessing credit applications. For example, Experian considered that more comprehensive credit reporting could facilitate more automation and 'faster decisions' in credit and other financial services transactions.

51.48 The need for reform of credit reporting to maintain 'competitive neutrality' among credit providers was highlighted.[54] If more comprehensive credit reporting were introduced in Australia, this would also have a significant impact on the credit reporting market. For instance, it is said that this would enhance the capacity for competition between credit reporting agencies.[55] This should make it easier for relative newcomers in the Australian credit reporting market to increase their market share more rapidly.

51.49 Reference was made to the fact that the existing credit reporting provisions may operate as a barrier to new entrants into the credit reporting market and hinder competition.[56] The reasons for this view include that it takes a long period of time to develop databases of 'negative' events, such as defaults on loans; and complex and prescriptive legislative requirements increase the cost to a new entrant of developing the information technology infrastructure needed to conduct consumer credit reporting. The benefits of competition between credit reporting agencies might include improved data accuracy and a greater range of related services available to individuals and credit providers.[57]

Flow-on benefits for consumers

51.50 Improved risk assessment by credit providers and greater competition in credit markets may have a range of flow-on benefits for individual consumers in terms of lowering the cost of credit; increasing the availability of credit; reducing default rates; encouraging responsible lending practices; and promoting financial literacy.

51.51 Some argue that, by ensuring greater accuracy in risk assessment and management for credit providers, comprehensive credit reporting could help reduce the

cost of credit for individuals—particularly for those who are a low credit risk.[58] By allowing credit providers to assess risk more accurately, it would 'increase their scope to set interest rates to reflect the risk premiums associated with different types of borrowers'.[59]

51.52 In response to IP 32, a number of credit providers confirmed that more comprehensive credit reporting has the potential to lead to lower cost credit.[60] This outcome was attributed to the likely effects of increased competition between credit providers;[61] reduced credit provider costs associated with the risk assessment process;[62] and the reduced cost of bad debts.[63]

51.53 Another possible effect of more comprehensive reporting may be to increase access to credit, especially among low income earners.[64] Abacus noted that more comprehensive reporting may improve the chances of low income earners 'gaining access to mainstream credit and diminishing reliance on payday and other fringe lenders'.[65] Dun and Bradstreet submitted:

> The evidence demonstrates that comprehensive reporting allows improved access for under-served sections of the community to wealth creating credit such as home loans. This section of the community is often denied access to mainstream credit under a negative only system, due to an inability to demonstrate a strong payment history. Consequently they are forced into alternative credit arrangements often at hight rates of interest.[66]

51.54 American Express stated that more comprehensive reporting, by allowing credit providers to grant credit based on total debt exposure (and in the absence of proof of income), means that 'borrowers such as sole proprietors would have easier access to credit facilities'.[67]

67 American Express, *Submission PR 257,* 16 March 2007.

51.55 Submissions in support of more comprehensive credit reporting also focused on its possible role in reducing default rates and encouraging responsible lending practices.[68] At least in theory, a better understanding of a credit applicant's existing financial obligations should assist credit providers to avoid lending to those who are over-committed and to intervene to manage existing customers who become over-committed.

51.56 Some submissions also claimed that more comprehensive credit reporting will increase levels of 'financial literacy'[69]—the knowledge necessary for individuals to make informed decisions about the management of their personal finances. Arguably, individuals in jurisdictions that have systems that record 'positive' information about credit history are more aware of their 'credit rating' and the consequences of late payments or default. Individuals also have the potential to 'repair' their credit record after a default by subsequently establishing a solid repayment history.[70] In Australia, by comparison, many individuals are not even aware of the credit reporting system unless they have actually been refused credit as a result of information in their credit information file.

Effects on the credit market and lending practices

51.57 One of the claimed benefits of more comprehensive credit reporting is that it can reduce levels of over-indebtedness and default because credit providers will be in a better position to gauge when credit should be refused. However, some have challenged this proposition.

51.58 In response to the claimed link between the categories of personal information available to credit providers and overall levels of indebtedness, the Victorian Review cited research carried out in 2003 by Nicola Jentzsch and Amparo San José Riestra. This research found that evidence from the European and United States markets 'does not support the argument that there is a relationship between [the existence of comprehensive credit reporting] and lower levels of indebtedness'.[71]

51.59 The Victorian Review suggested that, if this conclusion is correct, it throws into doubt whether 'more information in a credit report' can 'assist in managing risk' or aid

'responsible lending'.[72] The Consumers' Federation of Australia (CFA) has also argued that, rather than comprehensive credit reporting decreasing the number of individuals defaulting on repayments, it is 'likely to increase the number of consumer credit defaults'.[73]

51.60 The CFA maintained that research conducted by United States economists Professors John Barron and Michael Staten (the Barron and Staten research), relied on by a number of the advocates of comprehensive credit reporting, is equivocal on this point.[74] The CFA stated that the conclusion of Barron and Staten's research is that comprehensive credit reporting could result in either greater availability of credit (with the current rate of default) or a lower rate of default (with a correspondingly lower availability of credit), but not both. It argued that the two results cannot be achieved simultaneously and 'the most likely outcome is more lending, rather than reduced defaults'.[75]

51.61 This interpretation was restated in submissions to the Inquiry by consumer groups.[76] The Consumer Action Law Centre stated that the actual outcome of more comprehensive reporting will depend on whether credit providers choose to reduce default rates or to advance more credit.

> Given that the latter allows for more lending business overall, it is highly likely that [comprehensive credit reporting] would mean lenders choose to expand their businesses. While the default rate would remain the same, the greater overall business means that more people overall would face defaults, and in human terms defaults equate to financial hardship, home losses, impaired credit information files and bankruptcies.[77]

51.62 MasterCard submitted that it is a misinterpretation of the Barron and Staten research to suggest that more comprehensive reporting may lead to either a lower default rate or more availability of credit with the same default rate (but not both). MasterCard stated that, while the actual levels of default and credit availability modelled cannot be achieved simultaneously (given the research assumes holding one parameter constant when modelling the impact of change to the other measure), lower

77 Consumer Action Law Centre, *Submission PR 274,* 2 April 2007.

default rates and greater availability of credit 'are not mutually exclusive' outcomes. Rather, 'the Australian credit marketplace will find a natural balance'.[78]

51.63 In submissions, consumer groups expressed continued concern about the actual impact on the credit market of more comprehensive reporting—particularly in the absence of a 'specific legislative requirement upon all credit providers to lend responsibly having regard to all reasonably accessible data'.[79] The Consumer Credit Legal Centre (NSW) (CCLC) noted that:

> - while credit providers could refuse to extend credit to borrowers who are already over-extended, they could equally target those same borrowers with expensive priced for risk products;
> - while credit providers could use the additional information available to reduce defaults, they could equally use the information to increase lending volumes while maintaining default rates resulting in a larger total number of defaulters;
> - while credit providers could use the additional information to improve the quality of their lending decisions, they could equally use the information to further abridge the application process (by relying on the credit report rather than application data, for example) to compete more effectively on the basis of approval time and price.[80]

51.64 Veda Advantage also noted concerns that more comprehensive reporting might have the effect of pushing marginal consumers out of the formal credit system and into the hands of pay day lenders.[81]

51.65 Some credit providers concede that the overall level of indebtedness is likely to rise, even though the overall proportion of bad loans declines.[82] Westpac, which does not support more comprehensive credit reporting, submitted that 'there is no statistical evidence which establishes the relationship between comprehensive credit reporting and a reduction in levels of over-indebtedness'. Rather, it submitted, international experience with comprehensive reporting strongly supports the view that it can 'lead to increases in personal unsecured lending levels'. In this context, Westpac noted that the level of Australian consumer credit default is low when compared with, for example, the United Kingdom.[83]

---

78 MasterCard Worldwide, *Submission PR 237,* 13 March 2007.

79 Consumer Credit Legal Centre (NSW) Inc, *Credit Reporting Research Report* (2007), 133. The CCLC recommended that stand-alone responsible lending provisions should be introduced into the *Consumer Credit Code*, requiring credit providers to take reasonable steps to ensure that an applicant can meet his/her obligations under the contract without substantial hardship: Consumer Credit Legal Centre (NSW) Inc, *Credit Reporting Research Report* (2007), rec 58.

80 Consumer Credit Legal Centre (NSW) Inc, *Submission PR 255,* 16 March 2007.

81 Veda Advantage, *Submission PR 272,* 29 March 2007.

82 Australasian Retail Credit Association, *Submission PR 218,* 7 March 2007.

83 Westpac, *Submission PR 256,* 16 March 2007.

51.66 Consumer groups have also expressed concern about possible lending and credit pricing practices that might be facilitated by more comprehensive reporting. The CCLC submitted that, for example, the 'use of credit file information to trigger price variations on existing contracts should be expressly prohibited' and warned that an enhanced ability on the part of credit providers to price risk 'should not be accepted as being necessarily in the public interest'.[84]

51.67 More generally, consumer groups are not confident that more comprehensive reporting would automatically result in more responsible lending decisions. The CCLC stated that current casework experience 'suggests that the improvement in responsible lending predicted by the credit reporting agencies will not occur as a consequence of an extended credit reporting system but would have to be specifically imposed by the legislature'.[85]

Problems with more comprehensive credit reporting

51.68 Those against introducing more comprehensive credit reporting challenge some of the claimed benefits. In addition, it is argued that any benefits from the introduction of comprehensive reporting are likely to be outweighed by concerns about information privacy and security.

Impact on privacy and security of personal data

51.69 In IP 32, the ALRC noted disquiet about the impact of comprehensive credit reporting on individuals' privacy rights.[86] Various government inquiries have expressed concern in this regard.[87] The Victorian Consumer Credit Review noted that a system of more comprehensive credit reporting would have a significant 'potential impact on privacy … particularly in relation to financial matters'.[88]

51.70 The CCLC submitted that more comprehensive credit reporting 'is fraught with privacy and security risks', particularly given that it will likely entail 'a large database of information about millions of people [being] maintained by one or more third parties'. In particular, the CCLC was concerned about the following risks:

> - the errors that occur in the current system will increase in proportion to the amount of data, magnifying the above effects;
>
> - [these] data would be potentially very valuable and the temptation to sell it for marketing and other unauthorised purpose could be difficult to resist (if only by unscrupulous employees);

84 Consumer Credit Legal Centre (NSW) Inc, *Submission PR 255,* 16 March 2007.

> - this concentration of electronically stored data could also be the target of identity fraudsters and other people with illegal intent.[89]

51.71 Stakeholders elaborated on privacy concerns about more comprehensive reporting. Veda Advantage characterised the privacy risks as involving: first, the risk to the individuals arising from a more significant quantity of data about them being held and shared among credit providers; and secondly, the potential harms arising from the misuse of the data, for both credit and non-credit related purposes.[90]

51.72 Concerns were expressed about the possible use and disclosure of credit information for non-credit related purposes.[91] For example, Westpac stated:

> The introduction of comprehensive reporting also brings with it a significant risk that highly sensitive customer information may be used inappropriately, as the existence of such comprehensive, centralised databases may be mined for data by credit providers and other reporting agencies for marketing purposes.[92]

51.73 Veda Advantage also noted that, with more personal information collected and stored, there may be pressure for secondary use of the data, for example, for employment screening. However, this 'function creep' is 'not in itself a harm for data subjects, but does present challenges for maintaining a tight regime of consumer data protection'.[93]

51.74 The accuracy of the information collected under a more comprehensive credit reporting system was another focus of concern in submissions.[94] For example, the Office of the Privacy Commissioner (OPC) noted that complaints about accuracy 'are often the result of inadequate steps being taken by credit providers to ensure accuracy of information, rather than the volume of information that is available'. On this basis, the OPC said

> it is reasonable to extrapolate that expanding the volume and depth of information that would be available on individuals' credit information files may worsen the current problems with accuracy of credit information.[95]

51.75 The OPC submitted that current problems with inaccuracy 'cannot necessarily be resolved solely by permitting comprehensive credit reporting' and that any proposal

95 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

to introduce more comprehensive credit reporting should be supported by 'standards that would promote a higher level of data accuracy'.[96] Westpac endorsed the view that 'comprehensive reporting would magnify, not minimise, problems associated with the accuracy and integrity of the current credit reporting system'.[97]

51.76 In contrast, credit reporting agencies and some credit providers believed that more comprehensive credit reporting should result in improved accuracy of data.[98] These improvements will result from more frequent and automated reporting[99] (depending on the model of reporting implemented) and more consumer engagement with credit information files.[100] MasterCard stated:

> Overseas evidence suggests that inaccuracies are 'washed out' by the more regular update of an individual's record. Indeed we understand that the vast bulk of credit record errors relate to the consumer's name (such as spelling) and address. With the implementation of more sophisticated screening software (as will be required to support more comprehensive credit reporting) … such errors will be drastically reduced.[101]

51.77 Further, the chances of inaccuracies affecting decisions about granting credit may be reduced because of the presence of other data.[102] For example, the impact of one late payment on an individual's credit score may be mitigated by the balance of that individual's overall repayment history.

51.78 Data security was also cited as a privacy concern. Westpac referred to incidents overseas where the security of comprehensive credit reporting information has been compromised by credit reporting agencies.[103]

51.79 Finally, there was concern about the appropriateness of credit reporting agencies collecting and reporting payment performance information in relation to utilities, such as telecommunications, energy and water.[104] The Telecommunications Industry Ombudsman noted that there 'are numerous reasons why a customer may not be able to

able to pay their bill on time, many of which do not equate to the customer being a potential credit risk'.[105]

51.80 Submissions from those in favour of more comprehensive credit reporting indicated that the proponents are well aware of these and other privacy concerns. American Express stated, rather than being insurmountable, privacy concerns can be addressed through 'the imposition of legislative controls or general prohibitions on the use of information', strengthened enforcement and more flexible penalties.[106]

51.81 Proponents agree that, if a more comprehensive credit reporting system is to be implemented, there needs to be a range of improvements to the present regulatory regime. These improvements, many of which are desirable whether or not there is a move toward more comprehensive reporting, are discussed in detail in Chapters 52–55.

Empirical studies

51.82 Proponents claim that empirical studies provide important evidence about the likely economic benefits of more comprehensive credit reporting. A number of studies have been referred to in consultations and submissions. These and other relevant studies, including forthcoming research commissioned by Veda Advantage, are discussed briefly below.

51.83 The research most commonly cited in this context is the Barron and Staten research.[107] The results of this research were published in 2000.[108] Barron and Staten compared the position of credit providers in relation to risk assessment under the rules provided by the FCRA in the United States and the *Privacy Act* respectively, using United States data provided by Experian Information Solutions Inc, a leading United States credit reporter. The research compared the accuracy of risk scoring models using the credit reporting variables available under the United States system with the more limited set of variables available in Australia.

51.84 The research found that the more comprehensive form of credit reporting would enable credit providers to achieve a lower rate of defaults on loans, while maintaining the same loan approval rate (for example, at an approval rate of 60%, the Australian variables produced a default rate of 3.35%, as compared to 1.9% for the United States variables). At the same time, assuming that default rates were maintained at the same

107 The Barron and Staten research was referred in: Veda Advantage, *Submission PR 272,* 29 March 2007; MasterCard Worldwide, *Submission PR 237,* 13 March 2007; GE Capital Finance Australasia Pty Ltd, *Submission PR 233,* 12 March 2007; Dun & Bradstreet (Australia) Pty Ltd, *Submission PR 232,* 9 March 2007; Consumer Credit Legal Centre (NSW) Inc, *Submission PR 28,* 6 June 2006.

108 J Barron and M Staten, *The Value of Comprehensive Credit Reports: Lessons from the US Experience* (2000) Online Privacy Alliance <www.privacyalliance.org/resources/staten.pdf> at 1 August 2007.

rate (for example, 4%) credit providers using the Australian variables would extend new credit to 11,000 fewer consumers for every 100,000 applicants than would be the case if they were allowed to use the more comprehensive data available under United States law.[109]

51.85 Later research by Barron and Staten, conducted at the request of the Australian Finance Conference (AFC), compared the effect of the United States variables with an 'intermediate model' of credit reporting that allows for the reporting of the 'existence (and type) of accounts that are in good standing or have been paid in full, but does not report current balances or revolving account credit limits'.[110] This 2007 research found that, at the targeted approval rate of 60%, the intermediate model produced a 2.46% default rate.[111]

51.86 The implications of the Barron and Staten research are said to include that consumer credit will be less available and more expensive in countries (for example, Australia) where credit reporting omits categories of variables that would provide a more complete picture of a consumer's financial position.[112]

51.87 Other evidence about the benefits of more comprehensive reporting is said to derive from studies that compare credit reporting regimes in different jurisdictions with the characteristics of the credit markets in those jurisdictions. For example, Tullio Jappelli and Marco Pagano analysed the credit reporting regimes and credit markets in 43 countries, including the US, Australia and most other OECD countries. Their econometric analysis found that the breadth and depth of a credit market was positively associated with the extent of the credit information that is exchanged between lenders.[113]

51.88 In 2003, a United States Congressional Research Service report surveyed the literature (including that already discussed) and concluded that empirical research suggested that privacy laws that restrict the reporting of consumer credit data could lead to the potential loss of significant economic benefits. That is, credit data limitations may increase the cost of consumer credit, reduce accessibility and lower the overall volume of lending.[114]

---

109 Ibid, 20. The more comprehensive credit reporting model would approve 83% of applicants compared to 74% of applicants using the more restricted information.

114 L Nott, *The Role of Information in Lending: The Cost of Privacy Restrictions* (2003), 9.

51.89 Submissions to this Inquiry have referred to the experience in a range of other countries as support for the view that the introduction of more comprehensive reporting would have significant economic benefits.

51.90 Dun and Bradstreet referred to data from Japan, Hong Kong and Latin America (in addition to placing reliance on the Barron and Staten research). For example, it was said that Hong Kong experienced a dramatic decline in loan defaults following the introduction of more comprehensive reporting in 2002.[115] MasterCard and American Express also referred to the Hong Kong experience.[116] An important qualification to the conclusions drawn is that Hong Kong's economy began to recover from a recession in this period, and it is possible that this recovery was a more important cause of the decline in loan defaults than credit reporting reform.

51.91 Other studies cast doubt on the relationship between more comprehensive credit reporting and credit market efficiency. Jentzsch and San José Riestra created a 'credit reporting regulatory index' for 27 jurisdictions in Europe and the United States, which measured the extent of information privacy regulation affecting credit reporting. Their research found that while increased coverage of credit reporting (in terms of the number of credit reports issued scaled by population) is associated with increasing access to credit, there is no evidence that privacy restrictions greatly hamper information sharing in consumer credit markets.[117]

51.92 Finally, research has modeled the macro-economic impact of introducing more comprehensive credit reporting in Australia.[118] The MasterCard/ACIL Tasman report concluded that comprehensive credit reporting would generate a one-off increase in capital productivity of 0.1 per cent, which would translate to economic benefits to the Australian economy of up to $5.3 billion, in net present terms, over the next ten years.[119]

---

115 Dun & Bradstreet (Australia) Pty Ltd, *Submission PR 232,* 9 March 2007.

116 MasterCard Worldwide claimed that, in Hong Kong, material defaults by individuals fell by 27% following the introduction of comprehensive credit reporting: American Express, *Submission PR 257,* 16 March 2007; MasterCard Worldwide, *Submission PR 237,* 13 March 2007. See also Centre for International Economics and Edgar Dunn and Company, *Options for Implementation of Comprehensive Credit Reporting in Australia [Prepared for MasterCard Worldwide]* (2006), 17.

117 N Jentzsch and A San José Riestra, 'Consumer Credit Markets in the United States and Europe' in G Bertola, R Disney and C Grant (eds), *The Economics of Consumer Credit* (2006) 27, 51.

118 ACIL Tasman, *Comprehensive Credit Reporting: Main Report of an Analysis of its Economic Benefits for Australia [Prepared for MasterCard International]* (2004). The ACIL Tasman research was referred to in: MasterCard Worldwide, *Submission PR 237,* 13 March 2007; Dun & Bradstreet (Australia) Pty Ltd, *Submission PR 232,* 9 March 2007.

119 ACIL Tasman, *Comprehensive Credit Reporting: Executive Summary of an Analysis of its Economic Benefits for Australia [prepared for MasterCard International]* (2004), 3. See also ACIL Tasman, *Comprehensive Credit Reporting: Main Report of an Analysis of its Economic Benefits for Australia [Prepared for MasterCard International]* (2004), 28.

51.93 ACIL Tasman used what was described as an 'applied general equilibrium model' of the Australian and world economies to quantify the benefits of more comprehensive credit reporting. The model assumed that 'the efficiency of the credit market has implications for the efficiency of virtually every sector of the economy',[120] and took as one starting point the Barron and Staten findings about the possible reduction in the rate of default if a US-style comprehensive reporting system was adopted.[121]

The limitations of empirical studies

51.94 There is debate about the conclusions it is appropriate to draw from empirical studies of the effects of more comprehensive credit reporting on credit markets and the economy, especially in view of methodological limitations and the assumptions built into research models. On one view, the subject matter does not lend itself to precise modelling due to the level of complexity and the small orders of magnitude involved in terms of benefits. It is questionable, therefore, that any modelling will provide definitive answers.

51.95 For example, it may be observed that the Barron and Staten research—in comparing the accuracy of credit scoring using variables available under the United States system with the more limited set of variables available in Australia—disregarded the 'positive' information provided on application forms.

> Their results are not directly comparable to actual experience in the Australian market, because they do not factor in the additional (though limited) predictive value of the additional demographic data that Australian lenders generally use to make up that difference.[122]

51.96 The Victorian Credit Review noted that, in order to consider fully the possible benefits of more comprehensive reporting in assessing capacity to repay, research would need to show a material gap between the information provided by the consumer and in a more comprehensive credit report. That is, whether the information sourced directly from consumers

> is materially less helpful to assessing capacity to repay than that from a positive credit reporting agency having regard for:
>
> - weight given to negative information rather than positive information generally;
> - existing capacity to verify positive information, albeit through a more costly process of having to contact other credit providers individually;
> - likely inaccuracies in the data;

120 ACIL Tasman, *Comprehensive Credit Reporting: Main Report of an Analysis of its Economic Benefits for Australia [Prepared for MasterCard International]* (2004), 3.

121 Ibid, 24.

122 GE Capital Finance Australasia Pty Ltd, *Submission PR 233,* 12 March 2007.

- the potential use of profit scoring[123] mechanisms;
- other factors independent of this information that may be more material to repayment capacity, such as loss of job, death/separation from spouse, etcetera.[124]

51.97 Further, different macro-economic environments limit the applicability of conclusions drawn from international experience about the possible effects of more comprehensive reporting on levels of default, credit availability and interest rates in Australia. There are many factors, relating to credit markets and macro-economic conditions generally, which have an influence on these outcomes.

51.98 For example, Australia is recognised as having a credit market that is very competitive by international standards. This may limit the potential for competitive gains resulting from more comprehensive reporting. Equally, a macro-economic upturn seems likely to have a much greater influence on credit availability than any change to a credit reporting system.

Veda Advantage research

51.99 Some of the limitations in available evidence about the likely impact of more comprehensive reporting may be addressed by new research proposed by Veda Advantage. Veda Advantage has advised that it is working on research proposals to:

- study the potential effects on lending behaviour and consumers, of more comprehensive credit reporting, using Australian data (the data study); and
- model the micro-economic and allocative effects of more comprehensive credit reporting in Australian credit markets, and the impact on different cohorts of consumers (the economic study).[125]

51.100 The data study is intended to model the effect that comprehensive consumer credit reporting will have on the accuracy of credit providers' application risk evaluation. Veda Advantage proposes to use information from its existing credit reporting database and more comprehensive 'positive' information, including credit card application, account and payment histories, provided by participating credit providers.[126]

---

123 'Profit scoring' essentially refers to a score that takes into account profits generated from late payments, for example, rather than the actual risk. Accordingly, risk reduction may compete with profit scoring: Consumer Affairs Victoria, *The Report of the Consumer Credit Review* (2006), 261.

124 Ibid, 260. In April 2005, ANZ conducted a trial of completed statements of financial position provided by customers applying for a credit limit increase in the ACT. The study found that 24% of forms had errors and omissions in financial details: ANZ, *Submission PR 291,* 10 May 2007.

125 Veda Advantage, *Submission PR 272,* 29 March 2007.

126 Ibid.

51.101 The economic study is intended to draw correlations between financial markets that have different forms of credit reporting regulation in order to model how Australian financial institutions are likely to change their lending practices in response to more comprehensive credit reporting. The primary source of data for this study will be international literature on comprehensive reporting and lending practices, supplemented by the results of the data study, micro-economic modelling, statistics provided by overseas credit providers and credit reporting agencies, and interviews with financial institutions.[127]

Regulation in other jurisdictions

51.102 As discussed above, the credit reporting provisions of Part IIIA provide an exhaustive list of the kinds of personal information that may be included in a credit information file or credit report. The collection of other kinds of information, including information about credit granted to individuals—such as credit limits or current balances—is not permitted. The following material considers how this aspect of credit reporting is regulated in other jurisdictions.[128]

New Zealand

51.103 New Zealand is another jurisdiction in which more comprehensive credit reporting is effectively prohibited. In that jurisdiction, credit reporting is regulated by a binding code issued by the Privacy Commissioner under the *Privacy Act 1993* (NZ).[129]

51.104 The *Credit Reporting Privacy Code 2004* (NZ) (the NZ Code) provides that a credit reporting agency must not collect personal information for the purpose of credit reporting unless it is 'credit information'.[130] Briefly, credit information is defined exhaustively and includes identification information, information about credit applications, credit default information, judgment and bankruptcy information, serious credit infringements and information from public registers.[131]

51.105 While the information permitted by the NZ Code is in some respects broader than that permitted under Part IIIA,[132] the permitted content of credit reports closely replicates the position in Australia. Importantly, the NZ Code does not permit a credit reporter to collect information about an individual's current credit commitments and facilities.

---

127 Ibid.

128 Material on the regulation of credit reporting in other jurisdictions is drawn, in part, from: Centre for International Economics and Edgar Dunn and Company, *Options for Implementation of Comprehensive Credit Reporting in Australia [Prepared for MasterCard Worldwide]* (2006).

129 *Credit Reporting Privacy Code 2004* (NZ) under *Privacy Act 1993* (NZ) s 46.

130 *Credit Reporting Privacy Code 2004* (NZ) r 1(2).

131 Ibid cl 5.

132 For example, the New Zealand Code allows the collection of 'information relating to identification documents reported lost or stolen or otherwise compromised' and 'credit scores': Ibid cl 5.

United States

51.106 In the United States, credit reporting is regulated under the *Fair Credit Reporting Act 1970* (US) (FCRA) by the Federal Trade Commission. The FCRA does not limit the permissible content of credit information files held by credit reporting agencies or the content of credit reports—although, for example, consumers must consent in writing to the disclosure of reports containing medical information.[133]

51.107 Major credit reporting agencies in the United States hold and report detailed information about individuals' credit accounts including, but not limited to, current balances, credit limits, amounts past due, payment performance and payment status pattern and account descriptions.[134]

51.108 Credit reporting agencies receive information from credit providers and others, generally every month, and update their credit files within one to seven days of receiving new information.[135]

United Kingdom

51.109 In the United Kingdom, credit reporting agencies are regulated by both the *Consumer Credit Act 1974* (UK) and the *Data Protection Act 1998* (UK)—the latter being the equivalent in the UK of the Australian *Privacy Act*.

51.110 Neither the *Consumer Credit Act* nor the *Data Protection Act* specifically limits the permissible content of credit information files. The *Consumer Credit Act* deals only with individuals' rights of access to, and correction of, credit information about them.[136] Under the *Data Protection Act*, a 'data controller' (which may include a credit reporting agency) must comply with the data protection principles (DPPs) set out in the Act. These include DPP 3, which provides that 'personal data shall be adequate, relevant and not excessive in relation to the purpose or purposes for which they are processed'.[137]

51.111 The information held by credit reporting agencies in the United Kingdom, and included in credit reports, includes: data about the date accounts are opened; the credit limit or amount of the loan; payment terms; payment history; and payment arrangements entered with the credit provider.[138] Unlike in the United States, information on credit account balances is not collected.

Other jurisdictions

51.112 A 2006 report prepared for MasterCard Worldwide (the MasterCard/CIE/EDC Report) summarised the key features of the regulatory systems for credit reporting in more than a dozen countries.[139] All the countries studied, with the exception of France, were said to permit more comprehensive credit reporting than in Australia.

51.113 A comparison was made of the kinds of information held by credit reporting agencies in Australia, the United States, the United Kingdom, Germany, Canada, Japan, Hong Kong and Singapore.[140] This showed that in all countries except Australia, credit reporting agencies collect information about individuals' credit limits and payment history. In addition, credit reporting agencies in the United States, Japan and Hong Kong also hold information about individuals' credit account balances.

51.114 In the last few years, some jurisdictions have moved from reporting only negative information, such as overdue payments, to more comprehensive credit reporting. For example, in 2003, Hong Kong implemented a regime of more comprehensive credit reporting, in part due to concern about levels of debt default and bankruptcy.[141] The Hong Kong Monetary Authority considered that the sharing by banks of more comprehensive information—through credit reporting agencies and subject to information privacy legislation—would help to promote a more effective banking system.[142]

Lessons for Australia

51.115 Stakeholders that advocated more comprehensive credit reporting continued to contrast the position in Australia with that in jurisdictions overseas. For example, Veda Advantage noted that, in the past five years Hong Kong, Belgium, Greece, India and South Africa have all implemented models of more comprehensive reporting.[143] American Express highlighted the advantages of the systems in the United States, United Kingdom, Hong Kong and Canada.[144]

Kingdom Government Information Commissioner's Office, *Data Protection: Credit Explained* (2006), 8, 13.

139 Centre for International Economics and Edgar Dunn and Company, *Options for Implementation of Comprehensive Credit Reporting in Australia [Prepared for MasterCard Worldwide]* (2006). The countries reviewed include the United States, Canada, the United Kingdom, Germany, France, Italy, Belgium, South Africa, Japan, Hong Kong, South Korea, Singapore, Mexico and selected countries in central and South America.

140 In some of these jurisdictions, credit reporting information is held by public credit registries rather than private sector credit reporting agencies. Public credit registries are operated by governments, usually banking and finance industry regulators that are similar, for example, to the Australian Prudential Regulation Authority: see Ibid, 9–11.

141 Ibid, 112.

142 Ibid, 112.

143 Veda Advantage, *Submission PR 272,* 29 March 2007.

144 American Express, *Submission PR 257,* 16 March 2007.

51.116 While most other comparable jurisdictions permit credit reporting agencies to collect a broader spectrum of information than is permitted in Australia, this is not universally true. A number of jurisdictions—such as France, Spain and New Zealand—possess comparable restrictions to Australia in relation to the types of personal information that may be collected and used in credit reporting.[145]

Models of more comprehensive credit reporting

51.117 In IP 32, the ALRC noted that lack of consensus regarding a preferred model of comprehensive reporting has hindered debate about whether more comprehensive reporting should be introduced, including in the context of previous government inquiries.[146]

51.118 The following part of this chapter examines the spectrum of views about the categories of personal information that should be able to be collected as part of a more comprehensive credit reporting system. The chapter also considers, more briefly, other related aspects of regulation seen by stakeholders as necessary in a move to allow more comprehensive reporting. The Discussion Paper returns to some of these issues in Chapters 52–55.

New categories of personal information

51.119 In IP 32, the ALRC asked whether Australian law should be amended to expand the categories of personal information that may be collected and used in credit reporting and, if so, what categories of personal information should be permitted.[147] A range of responses were received, from those suggesting loosening prohibitions on the content of credit reporting information through to those suggesting only minor extensions in the content currently permitted under s 18E of the *Privacy Act*.

51.120 The following discussion focuses only on categories of personal information that concern an individual's current credit commitments or repayment performance. Chapter 52 deals with the collection of other categories of personal information, such as identifying information.

145 Centre for International Economics and Edgar Dunn and Company, *Options for Implementation of Comprehensive Credit Reporting in Australia [Prepared for MasterCard Worldwide]* (2006), 12; J Peace, 'Knowing Your Customer: An Advantage for Business and Individuals?' (Paper presented at 28th International Conference of Data Protection Commissioners, London, 2 November 2006).

146 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [6.72] citing, eg, Consumer Affairs Victoria, *The Report of the Consumer Credit Review* (2006), 273. In its response to the Victorian Consumer Credit Review, the Victorian Government observed that this lack of consensus makes it difficult to determine whether more comprehensive credit reporting would in practice 'enhance decision making' by credit providers: Victorian Government, *Government Response to the Report of the Consumer Credit Review* (2006), 46.

147 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), Question 6–3.

51.121 The Australasian Retail Credit Association (ARCA) submitted that the *Privacy Act* should be amended to 'remove the barrier to comprehensive reporting and focus on defining what is not allowed rather than having proscriptive legislation'.[148] Broadly, ARCA favours an approach similar to that in the United Kingdom where legislation does not specifically limit the permissible content of credit reporting information files.[149]

51.122 In the United Kingdom, under the *Data Protection Act*, a credit reporting agency must only comply with DPP 3, which provides that 'personal data shall be adequate, relevant and not excessive in relation to the purpose or purposes for which they are processed'. In Australia, the equivalent would involve leaving the potential content of credit information files to be restricted only by National Privacy Principle (NPP) 1.1, which provides that an organisation 'must not collect personal information unless the information is necessary for one or more of its functions or activities'.

51.123 ARCA does not hold a firm view on the precise data items that should be collected as part of more comprehensive credit reporting. An important aspect of its position is that the credit reporting system needs to be flexible, in order to respond to the changing needs of credit providers and individuals. Similarly, the AFC stated that ALRC should not

> make the 1989 mistake of specifying (and freezing in time) credit report permitted content but should recommend that such content be developed by the Privacy Commissioner in consultation with industry, community groups and government agencies … so that statistical, systems and public aspirational issues, in addition to legal ones, can be taken into account and evolve over time.[150]

51.124 GE Money submitted that credit reporting agencies should be permitted to collect and use

> a comprehensive range of data (with mandated minimum content) for evaluating credit risk and capacity to repay, collections purposes (specifically, 'clear out') and for anti-money laundering and fraud prevention.[151]

51.125 In relation to payment performance data, GE Money recommended that to 'ensure optimal credit risk assessment capability' the following data should be collected by credit reporting agencies:

- product eg, credit card, personal loan;
- start date;
- closed date;

---

148 Australasian Retail Credit Association, *Submission PR 218,* 7 March 2007. St George Bank supported the ARCA submission: St George Banking Limited, *Submission PR 271,* 29 March 2007. Veda Advantage expressed a similar view, stating that 'legal framework should seek to proscribe information that is not permitted rather than prescribing in detail what is': Veda Advantage, *Submission PR 272,* 29 March 2007.

149 Australasian Retail Credit Association, *Submission PR 218,* 7 March 2007.

150 Australian Finance Conference, *Submission PR 294,* 18 May 2007.

151 GE Capital Finance Australasia Pty Ltd, *Submission PR 233,* 12 March 2007.

- initial advance or credit limit;
- current balance;
- 24 months repayment history and current payment status;
- date of last payment;
- account status eg. written off, inactive etc;
- date of account status;
- monthly repayments;
- worst ever delinquency status;
- amount of write-off;
- current unpaid write-off;
- date debt sold (if sold to a third party);
- value of debt at time of sale (if sold to a third party) ...[152]

51.126 Other credit providers also favoured the collection of an extensive range of information about accounts, repayment performance and current credit commitments. American Express referred to the need to collect repayment performance and current credit commitment data on a monthly basis, which 'at the very least contains the total limits on credit facilities or available credit and the individual's total liabilities'.[153] MasterCard supported recommendations made in the MasterCard/CIE/EDC Report.[154] These recommended that information about an individual's repayment performance and current credit commitments include the following:

> Institution; type of credit; term of credit (eg, fixed, open ended); security (secured, unsecured); account open date; account ownership (individual, joint, guarantor, Director, etc); amount of credit granted (refreshed if changed); current month balance; current month past due amount (if applicable); 24 month repayment performance history (categories: current, 1–29, 30–59, … 150–179, 180+); account close date.[155]

51.127 Veda Advantage favoured the collection of 'the widest range of data necessary to inform credit markets', and suggested the collection of categories of repayment and credit commitment information similar to those favoured by GE Money.[156]

---

152 Ibid. GE Money also recommended that collection of 'extended credit application summary' data for anti-money laundering and fraud prevention: see Ch 53.

155 Ibid, 51.

156 Veda Advantage, *Submission PR 272,* 29 March 2007. The categories were: credit facility type; account status; date opened; date closed; days past due; credit limit; outstanding credit balance; highest credit balance; term of credit; collateral type, value and date of valuation; scheduled payment amount; actual payment amount; amount past due; date of last payment; last activity date; reason for closure; amount of write-off.

51.128 Another credit reporting agency, Dun and Bradstreet, has proposed a model of more comprehensive credit reporting, which is said to avoid some of the features of the more permissive regime of credit reporting in the United States and to be 'a modified, fairer version that provides more limited but valuable data'.[157] Dun and Bradstreet recommended that the *Privacy Act* be amended to permit credit reports to contain 'four additional data elements':[158]

- type of account—eg, personal loan, credit card;
- credit provider;
- credit limit;
- date account is opened.[159]

51.129 Some credit providers considered that these categories of information are the minimum necessary to deliver benefits in credit decision making. On the other hand, this more limited model of more comprehensive reporting has been criticised by others in the credit industry. For example, GE Money states that the Dun and Bradstreet model is inadequate because, among other things, it 'lacks the most predictive risk data that is the repayment history'.[160] GE Money also expressed concerns about competitive neutrality in that a limited model of more comprehensive reporting

> may be acceptable in connection with products that have a long application 'life-cycle' (mortgages for example), but could not be operationalised in relation to 'on the spot' products such as store credit applications. Any such limited model would confer a competitive disadvantage on providers of short application life-cycle products.[161]

51.130 In its submission, the OPC noted that the *Privacy Act* already allows a credit report to contain a record of a prospective credit provider having sought a credit report on an individual in relation to a credit application and the amount of the application;[162] and allows the credit provider to list themselves as being a current credit provider when the credit is advanced.[163] The OPC submitted that:

> In addition to these two categories of information, the Office believes consideration should be given to including provisions which allow: a credit provider to note on an individual's credit information file on a voluntary basis that an offer of credit was accepted without specifying the actual amount ...[164]

Reciprocity and reporting

51.131 In IP 32, the ALRC asked, if Australian law is amended to permit more comprehensive credit reporting, what changes should be made to the way in which

personal information is collected and disseminated for the purposes of credit reporting. For example, the ALRC asked whether it would be desirable to make personal credit information available to a broader or narrower spectrum of individuals and organisations than may currently access such information; and whether there should be differential levels of access to personal information that is collected under such a system.[165]

51.132 There was considerable support in submissions for the principle of reciprocity in credit reporting.[166] In relation to data sharing among credit providers, this principle has been expressed as dictating that 'data will be shared on the principle that subscribers receive the same credit performance level data that they contribute, and should contribute all such data available'.[167]

51.133 All credit providers interviewed in the course of research by the CCLC were reported as being 'convinced of the benefits of reciprocity in ensuring the completeness of credit reporting data'.[168] One of the main aims of ARCA, a peak body of credit providers interested in the operation and reform of the credit reporting system, is to improve data standards and consistency, including by promoting the principle of reciprocity.[169]

51.134 GE Money submitted that principles of reciprocity should be legislatively mandated as part of a system of more comprehensive credit reporting. GE Money also considered that 'in order to ensure the ongoing commitment to a comprehensive credit reporting model from credit providers with large market share', participation should be mandatory.[170] Abacus stated that access to more comprehensive credit reporting should be

> based on mandatory information collection to ensure users have a stake in the quality and safety of data collected–although caution should be exercised not to lock out smaller credit providers …[171]

51.135 In contrast, American Express submitted that more comprehensive reporting should be introduced on a voluntary basis, but that voluntary participation should not

continue indefinitely as the efficiency and utility of the system can only be maximised through the participation of all credit providers. Telecommunications companies AAPT and Optus also stated that contributing data to a more comprehensive credit reporting system should not be mandatory.[172]

51.136 Reciprocity is one means by which access to enhanced credit reporting information could be differentiated—so that, for example, some subscribers may obtain information about debt default, but not other information about current credit commitments and repayment performance. It has been suggested that telecommunications companies should continue to contribute only 'negative' default and other credit information and, in turn, they should be entitled to receive reports based only on those categories of information.

51.137 Some submissions referred to the desirability of 'tiered' access, including in relation to non-credit related purposes, such as debt collection and identity verification.[173] Tiered access can be based on reciprocity, or take other factors into account so that subscribers may obtain some categories of information that they do not provide to the agency. For example, some companies might be permitted to use credit reporting information for identity verification, despite not providing information on their own customers. Veda Advantage supported tiered (full or summary only) access to credit reporting information based on:

- reciprocity;
- data protection compliance standards;
- use context;
- harm prevention;
- participation in an ASIC approved EDR scheme.[174]

Type of credit reporting agency

51.138 In IP 32, the ALRC discussed whether, if Australian law is amended to permit more comprehensive credit reporting, there should be any consequential changes to the way in which personal information is collected, and what kind of bodies should be permitted to act as a credit reporting agency.[175]

51.139 Currently, personal information may be collected for credit reporting purposes by credit reporting agencies, and agencies charge credit providers a fee in return for disclosing some of that information in a credit report. Those consumer credit reporting agencies currently operating in Australia are private enterprises that carry out

a business for profit. The CRAA, previously the dominant Australian consumer credit reporting agency, however, was a not-for-profit association established by the finance industry.

51.140 Some overseas models, like the United States and United Kingdom, adopt a similar approach to Australia's, by allowing private enterprises to act as credit reporting agencies. Some other jurisdictions permit more comprehensive credit reporting but have a different form of credit reporting agency. Alternative models include industry-owned credit reporting agencies that operate on a not-for-profit basis; and government-operated credit information databases (also known as public credit registries).[176]

51.141 The CCLC submitted that, in Australia, any credit reporting agency should be a non-profit, licensed or state owned, monopoly. It was suggested that this would:

- improve public confidence in privacy protection;
- ensure easy consumer access to reports and information (no multiple credit reporting agencies);
- improve transparency;
- expedite reform processes by removing the vested interests of credit reporting agencies from any debate (balancing the needs of credit providers with the needs of consumers only); and
- remove conflict of interest between the commercial imperative and the public interest.[177]

51.142 Otherwise, submissions and consultations did not indicate any support for regulatory change in this regard. MasterCard observed that any move towards a single 'centrally maintained database to hold credit information' would 'prevent the obvious benefits that would arise from a competitive credit reporting industry, including technology enhancements, competition in data quality and pricing'.[178] The ALRC observes, however, that the arguments for placing credit reporting databases under government or public control become stronger as the information held on them becomes more comprehensive.

Privacy safeguards

51.143 In IP 32, the ALRC asked, if Australian law is amended to permit more comprehensive credit reporting, whether any additional safeguards should be introduced to protect the privacy of personal information.[179]

51.144 The CCLC submitted that if the implementation of a more comprehensive credit reporting system is to be considered:

- The purpose of the credit reporting system should be clearly defined;
- The type of data able to be collected and the level of access to that data should be limited to only what is the most relevant or necessary to achieving that purpose;
- There should be adequate rights for consumers in relation to accessing their report, understanding their report and how it is used;
- There should be robust and rigorous dispute resolution schemes in place;
- There should be adequate safeguards to ensure the security and integrity of the data;
- There should be a specific legislative requirement on lenders to lend responsibly having regard to all readily available information; and
- There should be safeguards to ensure that the system is not used to exacerbate or entrench financial hardship, such as prohibitions on access by employers or real estate agents, for marketing or for triggering price differentials on existing accounts.[180]

51.145 The Australian Privacy Foundation considered that individuals should be given a choice about whether more comprehensive credit reporting information should be provided to agencies. The Foundation stated that this should be on a consent or opt-in basis, 'rather than either an implied consent or "opt-out" basis, or simply being notified that it was a condition of a loan application'.[181]

51.146 Submissions from credit providers and credit reporting agencies also highlighted the need to consider the adequacy of existing privacy protections. Veda Advantage submitted that consideration should be given to allowing individuals to opt-in or opt-out of providing 'positive' information.[182] Credit providers and credit reporting agencies also referred to the need for strict prohibitions on the use of credit

reporting information in marketing,[183] improved complaint and dispute resolution mechanisms,[184] and data governance standards.[185]

Should more comprehensive reporting be permitted?

51.147 Submissions to the ALRC Inquiry indicated broad support for the implementation of more comprehensive reporting among credit providers and other subscribers to the existing credit reporting system.[186] Consumer groups, privacy advocates and regulators generally opposed more comprehensive credit reporting.[187] The benefits of, and problems associated with, more comprehensive reporting as perceived by these stakeholders are discussed throughout this chapter.

51.148 Many of those who opposed the introduction of more comprehensive credit reporting submitted that the focus of the present Inquiry should be on reforms to improve the current credit reporting system, before any consideration of its extension.[188] In this context, in IP 32, the ALRC noted earlier suggestions that implementing comprehensive credit reporting is not the only possible, nor necessarily the best, way of improving the current reporting regime.[189] For example, the Victorian Review noted that alternatives to both the status quo and comprehensive credit reporting include:

- Improving the existing negative reporting scheme in terms of its accuracy.

189 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [6.48]–[6.52].

- Providing additional incentives for credit reporting agencies to maintain accurate and complete data. For example, requiring credit reporting agencies to pay a specified amount to a consumer in each case where information is reported as inaccurate may assist in addressing current information asymmetry within the current system.
- Requiring consumer declarations in relation to loan applications.
- Expanding financial literacy programs to encourage better self-selection by consumers and shopping for credit by consumers.[190]

51.149 In response to IP 32, Westpac submitted that improvements to aspects of the current system were a 'viable and preferable alternative' to the introduction of more comprehensive reporting.[191] Westpac proposed, among other things: introducing compulsory, uniform default reporting requirements; developing a consumer education program; simplifying complaint and dispute resolution processes; addressing issues of inaccuracy in reporting; and introducing a requirement that debtors be advised when a default has been listed.

> In essence, ensuring the data integrity within the current (negative) reporting scheme must be the focus in the short term. The changes suggested above would help to improve the accuracy of the current credit reporting system to the benefit of both consumers and credit providers.
>
> Westpac recommends that these suggestions be implemented and after a reasonable period of time (say 3 years), their effectiveness in addressing the issues identified assessed, before any decision is made to proceed with significant reform of the current credit reporting system.[192]

51.150 Similarly, the Australian Privacy Foundation submitted that the ALRC should recommend that any further consideration of comprehensive reporting be 'deferred until after experience with an initial round of reforms resulting from the current Review'.[193] National Legal Aid also stated that it would oppose the introduction of more comprehensive reporting 'until there is positive progress on addressing the major defects of the current scheme'.[194]

51.151 One particular focus of debate concerning the efficacy of the present credit reporting system involves the reporting of 'current credit provider' status, as permitted under s 18E(1)(b)(v). From one perspective, a record of current credit provider status is 'positive' information, showing that the individual has been granted a credit facility. The ALRC understands that it is not common for credit providers to report that they are current credit providers in respect to individuals. Credit providers do not report current credit provider status because 'the costs outweigh the marginal benefits of providing the information'.[195] In this context, GE Money noted:

---

190 Consumer Affairs Victoria, *The Report of the Consumer Credit Review* (2006), 272.
191 Westpac, *Submission PR 256,* 16 March 2007.
192 Ibid.
193 Australian Privacy Foundation, *Submission PR 275,* 2 April 2007.
194 National Legal Aid, *Submission PR 265,* 23 March 2007.
195 Veda Advantage, *Submission PR 272,* 29 March 2007.

> The cost of contributing 'full' data files under a comprehensive reporting model would be significantly less than the cost of reporting limited data at 'triggers' such as number or days overdue for payment. This is the reason that GE Money (and other credit providers) does not take advantage of the ability to note that it is a 'current credit provider' on a customer's credit file—the cost of doing so far exceeds the benefit that can be gained from such a limited notation on a consumer credit file.[196]

51.152 The OPC suggested that that if s 18E(1)(b)(v), and other provisions that allow credit providers to share information between themselves with the consent of individuals,[197] were being fully utilised, the introduction of more comprehensive credit reporting may be unnecessary.[198]

51.153 The Banking and Financial Services Ombudsman (BFSO) noted that credit providers can reduce information asymmetry 'by asking for details of all current credit facilities as part of the application process and requiring consumer declarations as to the accuracy of the information'. Therefore, addressing the 'absence of a comprehensive dispute resolution regime and the ability to report unregulated credit … would appear to be the more immediate priorities'.[199]

51.154 A number of submissions suggested that further study is required before reaching any decision to recommend the implementation of more comprehensive credit reporting.[200] The CCLC submitted that:

> Any change to increase, or substantially alter, the permitted categories of data held by credit reporting agencies should be preceded by independent local research with a view to estimating the effect of any proposed change on:
>
> - over-indebtedness;
> - access to affordable credit, including for those who are socially or economically disadvantaged.[201]

---

196 GE Capital Finance Australasia Pty Ltd, *Submission PR 233,* 12 March 2007. The ALRC observes that, from one perspective, the cost of reporting information always outweighs the benefit to the credit provider who reports it. The benefit comes from access to information reported by *other* credit providers.

199 Banking and Financial Services Ombudsman Ltd, *Submission PR 263,* 21 March 2007. The Consumer Action Law Centre also considered that improved complaint handling and enforcement mechanisms should be more of a priority than the possible introduction of more comprehensive reporting: Consumer Action Law Centre, *Submission PR 274,* 2 April 2007.

200 Legal Aid Queensland, *Submission PR 292,* 11 May 2007; Queensland Law Society, *Submission PR 286,* 20 April 2007; Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007; Consumer Credit Legal Centre (NSW) Inc, *Submission PR 255,* 16 March 2007.

201 Consumer Credit Legal Centre (NSW) Inc, *Submission PR 255,* 16 March 2007.

51.155 ANZ suggested that Treasury should undertake an assessment of the social and economic impact of introducing more comprehensive credit reporting.[202] The OPC also recommended that independent research be conducted on the impact that comprehensive credit reporting would have on the Australian financial system and Australian consumers.[203] The OPC suggested that the research should provide recommendations about:

1. Whether comprehensive credit reporting should be introduced in Australia; and
2. If comprehensive credit reporting were to be introduced:

- what model should be adopted;
- which industry participants should be included in the expanded system; and
- and what compliance framework should be imposed.[204]

ALRC's view

51.156 The ALRC recognises that, according to widely accepted economic theory, making more information available to credit providers will tend to increase efficiency in the market for credit and assist in making credit more available to those able to repay and reduce rates of default (or both).[205] There was no significant disagreement among stakeholders that more comprehensive credit reporting should improve risk assessment by credit providers, even among those who expressed concerns about how this improved risk assessment will be used in the credit market.[206]

51.157 Submissions have highlighted opposing views about the significance of available empirical evidence about the likely effects of more comprehensive credit reporting on the Australian credit market and economy. It has been suggested that answering questions about what information should be collected for the purposes of credit reporting in Australia—or what information is 'necessary' in terms of information privacy principles[207]—requires some form of economic analysis or modelling.[208]

51.158 Suggestions have been made that the ALRC should itself conduct or commission such research. In view of the difficulties and limitations of such studies,

---

202 ANZ, *Submission PR 291,* 10 May 2007. ANZ stated that the 'complexity and importance of this issue would require the appointment of an expert panel, including consumer representatives, to define the operational aspects of the model'.

207 For example, in terms of *Privacy Act 1988* (Cth) sch 3, NPP 1.1.

208 Consumer Credit Legal Centre (NSW) Inc, *Submission PR 255,* 16 March 2007.

and taking into account the Inquiry's timetable and available resources, the ALRC considers that such a course is not practicable.

51.159 The ALRC welcomes further research, including that proposed by Veda Advantage. It notes, however, that there remain significant practical difficulties in conducting such studies—not least because the ideal methodology requires a pre-judgment to be made about the items of personal information that would be available under a more comprehensive credit reporting system. More fundamentally, any credit reporting system is only one tool, albeit an important one, used by lenders to assess risk and to determine lending practices. This tool can be used in different ways, which may depend on other factors including, for example, a particular credit provider's competitive position in the market. The information available through the credit reporting system ultimately cannot dictate what lending practices will emerge or prevail in the marketplace.

51.160 Even assuming that increasing access to credit is necessarily economically beneficial,[209] research results cannot determine the policy position to be adopted. Any proven economic benefit still needs to balanced against individual privacy rights and the risk of breach of those rights. An appropriate balance needs to be struck between efficiency in credit markets and privacy protection.

51.161 There are many possible approaches to reform of the credit reporting provisions to permit more comprehensive credit reporting. The spectrum of choice ranges from recommending no changes in the categories of information now permitted under s 18E of the *Privacy Act* through to recommending that the existing provisions dealing with the permitted content of the credit information files be repealed.

51.162 In the latter case, it would be expected that the provisions of the NPPs—or the 'Collection' principle in the proposed Unified Privacy Principles (UPPs)—would provide some limits on content. The 'Collection' principle would provide that 'an agency or organisation must not collect personal information unless it reasonably believes the information is necessary for one or more of its functions or activities'.[210] In addition, the legislative proscription on including certain categories of personal information in credit information files could be retained.[211]

51.163 The ALRC does not favour removing regulation dealing with the permitted content of credit reporting information. Any such move would create uncertainty as to

---

209 The validity of this assumption has been questioned: see, eg Consumer Affairs Victoria, *The Report of the Consumer Credit Review* (2006), 257; Australian Privacy Foundation, *Submission PR 275,* 2 April 2007.

210 See Ch 18.

211 *Privacy Act 1988* (Cth) s 18E(2) prohibits personal information recording an individual's (a) political, social or religious beliefs or affiliations; or (b) criminal record; or (c) medical history or physical handicaps; or (d) race, ethnic origins or national origins; or (e) sexual preferences or practices; or (f) lifestyle, character or reputation.

the scope of information that may be 'necessary' to assess credit risk or for other functions or activities of credit reporting agencies or credit providers.

51.164 The ALRC's preliminary view is that there should be a modest extension in the categories of personal information that may be collected for credit reporting purposes. Specifically, credit reporting agencies should be able to collect:

- the type of each current credit account opened (for example, mortgage, personal loan, credit card);
- the date on which each current credit account was opened;
- the limit of each current credit account (for example, initial advance, amount of credit approved, approved limit); and
- the date on which each credit account was closed.[212]

51.165 This extension of the current reporting system has some support from both industry and consumer groups. Importantly, credit providers would have access to more information about an individual's current credit commitments to assist in promoting responsible lending. The proposed extension in credit reporting information would provide much of the additional predictiveness desired by proponents of more comprehensive reporting.[213]

51.166 Under the proposed system, credit providers would be aware of an individual's major potential commitments.[214] The additional categories of credit reporting information would assist to highlight discrepancies with the information provided by the individual credit applicant. The fact that credit providers may be reluctant, for reasons of time and cost, to undertake further inquiries of other credit providers is not a sufficient reason to permit the collection and disclosure of detailed repayment performance and current balance information. As discussed in Chapter 1, an argument for greater access to personal information based on reduced cost to data custodians, or customer convenience, generally will not tilt the balance in favour of reduced privacy protection.

51.167 In order for this reform to benefit the operation of the credit market, reporting by credit providers of the additional data items needs to be as universal as

---

212 These categories of information would replace 'current credit provider' status under Ibid s18E(1)(b)(v).

213 The Barron and Staten (2007) research found that an 'intermediate model' between the existing Australian and United States credit reporting systems would provide 'some 71% of the reduction in delinquencies achievable under the full US scenario': M Staten and J Barron, *Positive Credit Report Data Improves Loan Decision-Making* (2007) Australian Finance Conference, 6. The ALRC's proposed model allows additional categories of credit reporting information to those under the assumed 'intermediate model' and would, therefore, be more rather than less predictive.

214 Further, matching information about credit inquiries with credit granted would address concerns about the currently misleading nature of inquiry information: see Ch 52.

possible. The unwillingness of credit providers to report current credit provider status under the current credit reporting provisions serves as an undesirable precedent. As noted above, credit providers generally support the principle of reciprocity in credit reporting and obligations consistently to report information. The ALRC does not believe, however, that it is an appropriate role for regulation to mandate reporting obligations. Credit providers themselves and their industry associations should take responsibility for deciding how information sharing should proceed within the framework provided by legislation.

51.168 The United Kingdom provides one model in this regard. In the United Kingdom, the finance industry established the Steering Committee on Reciprocity (SCOR) to develop guidelines on the 'use and sharing of credit performance and related data on individuals'. This body consists of representatives from credit providers and credit reference agencies and has produced principles of reciprocity that set out the 'rules for the recording, supply and access of credit performance data' shared through the credit reporting agencies.[215]

51.169 As discussed in Chapter 50, the ALRC proposes that credit reporting agencies and credit providers should develop an industry code dealing with operational matters. This industry code should provide for access to information on credit information files according to principles of reciprocity (see Proposal 51–2 below).

51.170 Submissions emphasised the need to review and improve the existing regime of privacy protection, regardless of whether more comprehensive credit reporting is permitted by legislation or implemented by the finance the industry. For example, Nigel Waters of the Cyberspace Law and Policy Centre UNSW submitted:

> Any review of the existing rules inevitably invites questions about each stage of the information life cycle—collection, retention, access, use and disclosure—the answers to which straddle the boundary between negative and positive information.
>
> It is already the case that credit information files are permitted to contain some information that is not necessarily 'negative' such as current credit providers and inquiries, including type and amount of credit sought … The fact that the existing scheme is already a 'hybrid' strengthens the case for the review to address the issues surrounding comprehensive reporting at the same time as the need for changes to Part IIIA and the Code.[216]

51.171 The ALRC agrees with this approach. The ALRC's proposal to permit an extension in the categories of personal information that may be collected for credit reporting purposes is intended as part of broader reform of the credit reporting system.

---

215 Steering Committee on Reciprocity, *Information Sharing: Principles of Reciprocity* (2003).
216 N Waters—Cyberspace Law and Policy Centre UNSW, *Submission PR 277,* 3 April 2007.

51.172 Other changes to the regulation of credit reporting proposed in Chapters 52–55 are intended, among other things, expressly to prohibit the use or disclosure of credit reporting information in direct marketing, promote consistency and accuracy in the reporting of overdue payments, and improve complaint handling and dispute resolution processes.

51.173 The ALRC proposes that the *Privacy (Credit Reporting Information) Regulations* provide for review after operation for five years. The review should focus on the impact of more comprehensive credit reporting on privacy and the credit market.

Proposal 51–1 The proposed *Privacy (Credit Reporting Information) Regulations* should permit the inclusion in credit reporting files of the following categories of personal information in addition to those currently permitted under s 18E of the *Privacy Act*:

(a) the type of each current credit account opened (for example, mortgage, personal loan, credit card);

(b) the date on which each current credit account was opened;

(c) the limit of each current credit account (for example, initial advance, amount of credit approved, approved limit); and

(d) the date on which each credit account was closed.

Proposal 51–2 The credit reporting industry code (see Proposal 50–11) should provide for access to information on credit information files according to principles of reciprocity. That is, in general, credit providers only should have access to the same categories of personal information that they provide to the credit reporting agency.

Proposal 51–3 The proposed *Privacy (Credit Reporting Information) Regulations* should provide for a review after five years of operation. The review should focus on the impact of more comprehensive credit reporting on privacy and the credit market.

52. Collection of Credit Reporting Information

Introduction

52.1 As discussed in Chapter 50, the ALRC proposes that the credit reporting provisions of the *Privacy Act 1988* (Cth) be repealed and credit reporting regulated under the general provisions of the *Privacy Act* and the proposed Unified Privacy Principles (UPPs).[1] Privacy rules imposing obligations on credit reporting agencies and credit providers should be promulgated in regulations made under the *Privacy Act*—the proposed *Privacy (Credit Reporting Information) Regulations*.

52.2 This chapter discusses the existing provisions of Part IIIA of the *Privacy Act* dealing with the collection (and notification of collection) of information in credit information files and credit reports and makes proposals on how these matters should be dealt with under the proposed UPPs and *Privacy (Credit Reporting Information) Regulations*.

52.3 The issues in this chapter and Chapters 53–55 are discussed broadly in the order of the proposed UPPs, which are intended to replace the Information Privacy Principles and National Privacy Principles (NPPs). Where applicable, the provisions of the UPPs and Part IIIA of the *Privacy Act* are briefly compared.

---

1 See Part D.

Collection and notification

52.4 The proposed 'Collection' principle in the UPPs provides that an agency or organisation may only collect personal information:

- that it reasonably believes the information is necessary for one or more of its functions or activities;
- by lawful and fair means and not in an unreasonably intrusive way;
- about an individual only from that individual, if it is reasonable and practicable to do so; and
- in compliance with the 'Specific Notification' principle.

52.5 The proposed 'Specific Notification' principle in the UPPs provides that at or before the time an agency or organisation collects personal information about an individual from the individual, it must take reasonable steps to ensure that the individual is aware of the:

- fact and circumstances of collection (for example, how, when and from where the information was collected);
- identity and contact details of the agency or organisation;
- fact that the individual is able to gain access to the information;
- purposes for which the information is collected;
- main consequences of not providing the information;
- types of people, organisations, agencies or other entities to whom the agency or organisation usually discloses personal information; and
- avenues of complaint available to the individual if he or she has a complaint about the collection or handling of his or her personal information.

52.6 Where an agency or organisation collects personal information from someone other than the individual concerned, it must take reasonable steps to ensure that the individual is or has been made aware of the above matters and the source of the information, if requested by the individual.

52.7 The provisions of Part IIIA depart significantly from these principles (and the equivalent NPP) in two relevant respects. First, s 18E of the *Privacy Act* sets out the

permitted content of credit information files held by credit reporting agencies,[2] and no other personal information may be included in an individual's credit information files, even if the information is 'necessary' in terms of the privacy principles.

52.8 Secondly, Part IIIA contains a specific notification obligation in that, under s 18E(8)(c), a credit provider must not give to a credit reporting agency personal information relating to an individual if 'the credit provider did not, at the time of, or before, acquiring the information, inform the individual that the information might be disclosed to a credit reporting agency'.

52.9 Issues relating to the permitted content of credit information files and notification of the collection of personal information in credit reporting are discussed below.

Permitted content of credit information files

52.10 The permitted content of credit information files and credit reports has been subject to a range of comment and criticism. This is discussed below, with the exception of the specific issue of more comprehensive reporting, which was discussed in Chapter 51.

Identifying particulars

52.11 A credit information file may contain information that is 'reasonably necessary … to identify the individual'.[3] Under s 18E(3), the Privacy Commissioner has determined that credit information files may contain: an individual's full name, including any known aliases, sex, and date of birth; a maximum of three addresses consisting of a current or last known address and two immediately previous addresses; name of current or last known employer; and driver's licence number.[4]

52.12 The identifying particulars permitted in credit information files are important in several contexts, including in relation to the accuracy of credit reporting (because identifiers are used to match records) and the value of credit reporting information for non-credit related purposes, such as identity verification.[5] These issues are discussed in Chapters 53 and 54.

Identity theft

52.13 In the Issues Paper, *Review of Privacy—Credit Reporting Provisions* (IP 32), the ALRC asked whether credit reporting regulation should provide expressly for the

---

2 The permitted content of credit information files is summarised in Ch 49.

3 *Privacy Act 1988* (Cth) s 18E(1)(a).

4 Privacy Commissioner, *Determination under the Privacy Act 1988: 1991 No 2 (s 18E(3)): Concerning Identifying Particulars Permitted to be Included in a Credit Information File*, 11 September 1991.

5 N Waters—Cyberspace Law and Policy Centre UNSW, *Submission PR 277,* 3 April 2007; Australian Privacy Foundation, *Submission PR 275,* 2 April 2007.

problem of identity theft—the theft or assumption by a person of the pre-existing identity of another person.[6] For example, credit reports might be permitted to contain information that the individual concerned has been the subject of identity theft.[7]

52.14 In the United States, under the *Fair Credit Reporting Act 1970* (US), an individual may, in defined circumstances, require that a credit reporting agency insert a 'fraud alert' on a credit information file. A fraud alert is a statement that notifies prospective users of a credit report that the individual concerned 'may be a victim of fraud, including identity theft'.[8] Credit reports in the United Kingdom are also permitted to indicate that the individual has been the subject of identity theft.[9]

52.15 This suggestion received considerable support in submissions.[10] Legal Aid Queensland expressed concern that where an individual is the victim of identity theft, there is currently no centralised system for dealing with this.[11] The Australian Privacy Foundation noted that the ability to 'flag' identity theft seems 'both in the interests of consumers, and directly relevant to the primary purpose of credit assessment'.[12]

52.16 Some submissions in favour of including notations relevant to identity fraud stated that such information should only be recorded on the initiative of the individual who has been the subject of identity theft.[13] The Consumer Action Law Centre submitted that regulation should require that the alert be given to any credit provider who accesses information in that credit information file.[14]

52.17 The Australian Finance Conference (AFC) noted that, in some jurisdictions,[15] legislation allows for the issue of a court certificate to a victim of identity crime.[16]

Such a certificate, which may be issued at the court's own initiative or on application by either the victim or the prosecutor,

> is not a remedy. It does not compel others to take restorative action, eg for financial institutions to reinstate a person's credit rating. Rather the certificate provides a means to present the outcome of a court's decision in a way that may be used by the victim.[17]

52.18 There is concern that identity theft is becoming more prevalent due to developments in information and communications technology. The ALRC agrees that there is merit in the credit reporting provisions being amended, on the request of the individual, to allow notations to be placed on an individual's file in relation to identity theft.

Proposal 52–1 The proposed *Privacy (Credit Reporting Information) Regulations* should provide for the recording, on the initiative of the relevant individual, of information that the individual has been the subject of identity theft.

Inquiry information

52.19 A credit information file may include information that is a record of both a credit provider having sought a credit report in relation to a credit application and the amount of credit sought in the application.[18] In addition, the *Credit Reporting Code of Conduct* states that 'a general indication of the nature the credit being sought' may also be included.[19]

52.20 In IP 32, the ALRC noted concerns expressed about the listing of this 'inquiry' information.[20] For example, the Consumer Credit Legal Centre (NSW) Inc (CCLC) has stated that 'the listing of inquiries on credit reports is completely ambiguous and misleading for credit providers in relation to the assessment of credit'.

> In our advice and casework experience, it is becoming increasingly common for a person's application for credit to be rejected solely on the basis of the number of inquiries on the person's credit report, despite there being no default listings. Worse, it is arguable that consumers are being penalised for shopping around.[21]

21 Consumer Credit Legal Centre (NSW) Inc, *Submission PR 28,* 6 June 2006.

52.21 Submissions continued to express concern about the role of inquiry information in credit risk assessment.[22] Consumer credit caseworkers related their experiences about individual clients being unfairly declined credit on the basis of multiple inquiry listings, including due to 'shopping around' for credit cards or frequent changes of telecommunications service provider.[23]

52.22 The CCLC conceded that consumers with more than a specified frequency of inquiries on their credit report are statistically more likely to default in the future than those who have less than a specified frequency. This is because, for example, a series of applications for personal loans within a short time often precedes bankruptcy. However, the CCLC stated that reliance on this statistical construct

> will inevitably disadvantage consumers who have multiple inquiries for completely different reasons. For example, there is absolutely no evidence to suggest a nexus between bankruptcy and mobile phone applications.[24]

52.23 The CCLC submitted that inquiry information relating to services (such as telecommunications) should only appear 'as an audit trail' and not be used in credit risk assessment.[25] The Australian Privacy Foundation submitted that there should be a requirement on credit providers not to use inquiry information 'negatively' in credit risk assessment without establishing the reason for the inquiries.[26] The Office of the Privacy Commissioner (OPC) stated that the ALRC should consider whether to allow credit information files to record that a credit offer has been accepted, in relation to a specific inquiry, without the amount being specified.[27]

52.24 The CCLC submitted that, if the permitted content of credit reporting is to include information about current credit commitments, inquiry information should not be available to credit providers, 'only to the person the report concerns and any authorised auditing body'.[28]

52.25 In Chapter 51, the ALRC proposes that a limited form of more comprehensive credit reporting should be permitted, which would allow credit granted to be matched with inquiry information. This reform should mean that inquiry information will no longer be as open to misinterpretation or relied on to the same extent in credit scoring

processes. The ALRC would welcome further comment on the role of inquiry information under the more comprehensive credit reporting scheme proposed by it and whether any other reform relating to the collection, use or disclosure of inquiry information is desirable.

'Negative' information

52.26 The permitted content of credit information files and credit reports includes a range of 'negative' information. Submissions raised a number of concerns about permitted content in relation to small overdue payments; dishonoured cheques; bankruptcy and similar information; and serious credit infringements.

Small overdue payments

52.27 Section 18E(1)(b)(vi) permits the inclusion in credit information files of information about credit where the individual is at least 60 days overdue in making a payment and the credit provider has taken steps towards recovery of the amount outstanding. The credit reporting provisions do not provide for any minimum amount for debts that may be listed, except in the case of presented and dishonoured cheques (discussed below). The ALRC understands, however, that telecommunications providers and other credit providers have agreed not to list overdue payments of less than $100.[29]

52.28 In IP 32, the ALRC noted concerns about aspects of the listing of small debts, including by telecommunications companies.[30] In particular, there were concerns that the consequences of listing a small debt far outweigh the gravity of the conduct—especially as many small debts are said to be related to problems with billings systems, billing errors and change of address notification.[31] For example, the Telecommunications Industry Ombudsman (TIO) stated that common scenarios from its complaint handling experience are where:

- the default relates to an amount that was accrued after the consumer claims to have cancelled the service;
- the consumer claims never to have received a bill for the amount in question (often due to change of address);
- the default relates to an old debt, of which the customer either was not aware, or believed that the amount had either been paid or waived in resolution of a complaint;
- the consumer claims the debt does not belong to them (mistaken identity).[32]

---

31 Consumer Credit Legal Centre (NSW) Inc, *Submission PR 28,* 6 June 2006.

32 Telecommunications Industry Ombudsman, *Submission PR 221,* 8 March 2007.

52.29 There was support for a limit on the minimum amount of overdue payments listed by credit reporting agencies.[33] Legal Aid Queensland suggested that imposing a minimum listing amount of $500 across all credit providers is 'fairer and more easily implemented than giving credit providers differing levels of access'.[34] The OPC also suggested that the ALRC should consider the introduction of a statutory minimum listing amount of $500.[35] The TIO stated that it

> has received complaints where consumers have been default listed for amounts as low as $37. In such cases, a default listing seems entirely disproportionate to the quantum of the debt. While the TIO does not have a definitive view on the precise dollar limit that should be imposed, a limit in the order of $500 does not appear unreasonable.[36]

52.30 The extent to which small debts are predictive of future default is relevant to the desirability of imposing a minimum amount for the listing of overdue payments. In this context, the ALRC referred to the results of research conducted by Dun and Bradstreet focusing on telecommunications debts, which claimed to show that individuals who default on low value amounts (below $500) or non-bank credit are at higher risk of defaulting on larger amounts provided under more traditional credit arrangements.[37] In its submission, Dun and Bradstreet stated that there should be no minimum limits on listing debts.[38]

52.31 Nigel Waters of the Cyberspace Law and Policy Centre UNSW cast doubt on the application of the Dun and Bradstreet research to Australia, and stated that:

> Even if there was a similar correlation in Australia it does not follow that allowing the use of this information is justified, given the significant consequences for individuals of a 'default' record.[39]

52.32 In contrast, credit providers were in no doubt about the significance of small debts in relation to credit risk assessment and considered that there should be no limit on the minimum amount, or no limit lower than $100.[40] The AFC stated:

40 Confidential, *Submission PR 297,* 1 June 2007; Australian Finance Conference, *Submission PR 294,* 18 May 2007; AAPT Ltd, *Submission PR 260,* 20 March 2007; MasterCard Worldwide, *Submission PR 237,* 13 March 2007; Min-it Software, *Submission PR 236,* 13 March 2007; EnergyAustralia, *Submission PR 229,* 9 March 2007.

> Imposing a minimum default listing as a means of addressing a perceived lack of compliance or misuse of the credit referencing system by a few would, in our view, not be appropriate or warranted and would impact on the system to the detriment of the other participants, including all customers (existing and future) of credit.[41]

52.33 AAPT commented that, while it accepted that there are 'commercial practicalities involved in not chasing debts of less than $100, the ability to default list for $100 should be re-considered'.[42]

52.34 There is, therefore, no consensus between industry and consumer groups about the benefits and problems involved in reporting small debts. Veda Advantage currently operates an agreed minimum of $100 and credit providers generally do not object to such a limit (if only because small debts may not justify the cost of listing). The AFC submitted that a 'market driven setting of a minimum as a matter of commercial practice is preferable to a prescribed minimum' because it provides the 'requisite flexibility to react to the market in a timely fashion while maintaining the integrity of the credit referencing system and appropriate protections for the individual and credit providers'.[43]

52.35 Some of the problems caused by the listing of small debts can be addressed by other mechanisms, such as improved data quality and complaint-handling processes. On the other hand, there remains significant support for the imposition of a minimum amount by regulation. Another alternative would be to leave the question to self-regulation by credit providers and credit reporting agencies, with consumer group input.

Proposal 52–2 Credit reporting agencies only should be permitted to list overdue payments of more than a minimum amount.

Question 52–1 Should the proposed *Privacy (Credit Reporting Information) Regulations* provide a minimum amount for overdue payments listed by credit reporting agencies? If not, by what mechanism should a minimum amount for overdue payments be set and enforced?

---

42 AAPT Ltd, *Submission PR 260,* 20 March 2007. EnergyAustralia noted the importance of reporting small debts as a debt collection tool: EnergyAustralia, *Submission PR 229,* 9 March 2007.

43 Australian Finance Conference, *Submission PR 294,* 18 May 2007.

Overdue payments and capacity to repay

52.36 Credit providers have legal obligations, including under the uniform *Consumer Credit Code*,[44] not to provide credit where capacity to repay has not been reasonably established. There have been suggestions that where a credit provider improperly extends credit beyond an individual's capacity to repay, no adverse listing should be made (or remain) on the individual's credit information file.[45]

52.37 The Banking and Financial Services Ombudsman (BFSO) submitted that credit reporting regulation should require credit providers (in the case of a disputed listing) to show that consumers had the capacity to repay the listed debt at the time that credit was extended; and provide that the credit provider is not entitled to list an outstanding debt where a consumer negotiates a variation[46] or is being assisted by a bank,[47] unless the consumer fails to adhere to any subsequent arrangement.[48]

52.38 The Australian Privacy Foundation and Nigel Waters recognised the policy importance of promoting responsible lending practices but stated that

> it is difficult to justify excluding any actual defaults (over a sensible monetary threshold) from 'permitted content' of [credit information files] given that they are clearly relevant to an individual's capacity to repay other loans.[49]

52.39 The ALRC tends to agree with this view and does not propose any change to credit reporting regulation in this regard.

Dishonoured cheques

52.40 Section s 18E(1)(b)(vii) permits the listing on credit information files of information that is a record of a twice presented and dishonoured cheque for an amount of not less than $100. Questions may be raised about the appropriateness of this provision, as there is some doubt about whether a dishonoured cheque constitutes 'credit' as that term is defined for the purposes of Part IIIA.

---

44 The *Consumer Credit Code* is set out in the *Consumer Credit (Queensland) Act 1994* (Qld) and is adopted by legislation in other states and territories. Under s 70 of the *Consumer Credit Code* , a court may reopen an unjust transaction. In determining whether a transaction is unjust the court may have regard to, among other things, whether 'the credit provider knew, or could have ascertained by reasonable inquiry of the debtor at the time, that the debtor could not pay': *Consumer Credit Code* s 70(2)(l).

45 Banking and Financial Services Ombudsman, *Submission in Response to the Consumer Affairs Victoria Issues Paper: Consumer Credit Review*, 1 July 2005. This suggestion was supported by: Consumer Action Law Centre, *Submission PR 274,* 2 April 2007; Min-it Software, *Submission PR 236,* 13 March 2007. The suggestion was opposed by Optus, on the basis that telecommunications service providers have no obligation to assess capacity to repay: Optus, *Submission PR 258,* 16 March 2007.

46 Under the *Consumer Credit Code* s 66.

47 In accordance with the *Code of Banking Practice*: Australian Bankers Association, *Code of Banking Practice* (1993) cl 25.2.

48 Banking and Financial Services Ombudsman Ltd, *Submission PR 263,* 21 March 2007.

49 Australian Privacy Foundation, *Submission PR 275,* 2 April 2007. Also N Waters—Cyberspace Law and Policy Centre UNSW, *Submission PR 277,* 3 April 2007.

52.41 The OPC stated that the ALRC should consider removing the ability to list dishonoured cheques.[50] This course was also favoured by the Australian Privacy Foundation and Nigel Waters.[51] Waters stated:

> If it were determined, and widely known, that dishonoured cheques are 'credit', there is the potential for almost any individual or organisation to be a 'credit provider' and gain access to [credit information files]. This would allow a major expansion of consumer credit reporting well beyond the relatively constrained limits, and beyond the policy objectives of the legislation.[52]

52.42 The ALRC understands that, in practice, dishonoured cheques are rarely listed with credit reporting agencies. The ALRC tends to agree that the listing of presented and dishonoured cheques is anomalous and should no longer be permitted. The ALRC would, however, welcome further comment on this issue.

Proposal 52–3 The proposed *Privacy (Credit Reporting Information) Regulations* should not permit credit reporting information to include information about presented and dishonoured cheques, as currently permitted under s 18E(1)(b)(vii) of the *Privacy Act*.

Personal insolvency information

52.43 Section 18E(1)(b)(ix) permits the inclusion in credit information files of information about 'bankruptcy orders made against the individual'. The Act does not define the term 'bankruptcy order' and the term is not used in bankruptcy legislation.

52.44 Under the *Bankruptcy Act 1966* (Cth), a person may become bankrupt upon the making of a sequestration order by the Federal Court following the presentation of a creditors' petition.[53] However, bankruptcy does not always require the making of an 'order against an individual'. For example, bankruptcy can occur following the acceptance of a debtors' petition by the Official Receiver.[54] The *Bankruptcy Act* also provides, as alternatives to bankruptcy, debt agreements under Part IX and personal insolvency agreements under Part X.

52.45 In IP 32, the ALRC suggested that the fact that the term 'bankruptcy order' is not defined in the *Privacy Act* creates uncertainty about what may or may not be listed. The ALRC asked for comments on whether the application of Part IIIA of the *Privacy*

54 See Ibid pt IV, s 55(4A).

Act to information about bankruptcy and agreements under the *Bankruptcy Act*, as used in s 18E(1)(b)(ix), should be clarified.[55]

52.46 The suggestion that the term 'bankruptcy order' be clarified received support in submissions.[56] The Insolvency and Trustee Service Australia (ITSA) stated that, in practice, credit reporting agencies and credit providers interpret this term as including voluntary arrangements under Part IX and Part X, as well as bankruptcy proper. ITSA suggested, nevertheless, that 'personal insolvency information included in a person's credit information file needs to be aligned with a person's insolvency status under the *Bankruptcy Act*'.[57]

52.47 Some submissions stated that credit reports should be able to include all personal insolvency information.[58] The Consumer Action Law Centre submitted that the *Privacy Act* be clarified 'to provide for separate categories of listings for the different types of bankruptcy and for Part IX and Part X agreements'.[59] The OPC suggested that 'to promote consistency and reduce complexity' consideration should be given to whether information about Part IX and Part X agreements should be permitted content of a credit information file.[60]

52.48 The CCLC expressed concern about the listing of debt agreements under Part IX of the *Bankruptcy Act* and submitted that such listings, if permitted, should be removed when the debtor has satisfied their obligations under the agreement.[61]

52.49 The Government has specifically asked ITSA to address the question of whether the fact that a debtor has entered into a debt agreement under the *Bankruptcy Act* should be included in credit information files. The arguments against reporting debt agreements include that debtors should be encouraged to enter into debt agreements and an incentive for doing so is that some of the public 'stigma' of personal insolvency will be ameliorated. On the other hand:

> A debt agreement can be used only by a debtor who is insolvent and is a formal insolvency administration under the bankruptcy legislation which allows the debtor's

> debts to be compromised. This means creditors are paid less than the full amount of their debts and this information should be available to all creditors in the future.[62]

52.50 ITSA concluded that the 'policy reasons which support the public notification of bankruptcy … apply equally to debt agreements' and that if one aim of credit reporting is to ensure that 'fewer persons face financial difficulties' then reporting of debt agreements should be supported.[63]

52.51 ITSA has concerns about the accuracy and completeness of personal insolvency information recorded on credit reports. ITSA stated that:

> It is unclear if credit reporting agencies are including all relevant information as a 'bankruptcy order' to accurately determine a person's insolvency status. For example, because there is no definition of that term, credit reporting agencies are at liberty to include or not include notices of objections made under the *Bankruptcy Act*.[64]

52.52 In ITSA's view, there is uncertainty about whether not including the notice of objection is a breach of the credit reporting provisions. ITSA submitted that ensuring that credit reporting information about a person's insolvency status aligns with their status under the *Bankruptcy Act* is an important factor in ensuring the accuracy of credit reporting.[65]

52.53 Clearly, the term 'bankruptcy orders' does not reflect all the types of personal insolvency administration available under the *Bankruptcy Act*. ITSA has noted that, in addition to bankruptcies, including voluntary debtor's petitions and deceased estates administered in bankruptcy, the *Bankruptcy Act* provides for voluntary arrangements with creditors under Part IX and Part X and post-bankruptcy administration.[66]

52.54 All these forms of administration are currently recorded on the National Personal Insolvency Index (NPII),[67] the source of bankruptcy information collected by credit reporting agencies.[68] Information on the NPII is publicly available information.

---

62 Insolvency and Trustee Service Australia, *Submission PR 235,* 12 March 2007.

63 Ibid.

64 A bankrupt subject to a notice of objection is not discharged from bankruptcy and the absence of such information inaccurately reflects the person's insolvency status: Ibid.

65 Ibid.

66 See, *Bankruptcy Act 1966* (Cth) pt VI, div 6.

67 The NPII is established and maintained in accordance with the *Bankruptcy Regulations 1996* (Cth) pt 13.

68 The content of searches on the NPII will ordinarily show: type of administration or proceeding; date of administration or proceeding; identification number; full name and alias of debtor; address of debtor; date of birth of debtor; occupation and business name of debtor; name of trustee or controlling trustee; particulars of any prior or subsequent listing; the end date of the administration: Insolvency and Trustee Service Australia, *National Personal Insolvency Index* (2007) <www.itsa.gov.au> at 1 August 2007.

52.55 The AFC referred to an increase in the incidence of Part IX Debt Agreements.[69] While the AFC recognised that 'a debt agreement has different connotations to a bankruptcy order insofar as it reflects a different attitude of a customer towards the repayment of their debt', it recommended that

> either the definition of bankruptcy order be amended or a new definition of Part IX & Part X information be included in the Act to clarify that debt agreement and Part X personal insolvency agreement information can be included on a customer's credit information file.[70]

52.56 The ALRC considers that credit reporting information should be permitted to include all categories of information available on the NPII. Such information is important in credit risk assessment and, in practice, credit providers rely on obtaining this from credit reporting agencies rather than directly from the NPII.[71] In accordance with their obligations to ensure the accuracy and completeness of credit reporting information, credit reporting agencies should ensure that credit reports adequately differentiate the forms of administration identified on the NPII.

Proposal 52–4 The proposed *Privacy (Credit Reporting Information) Regulations* should permit credit reporting information to include personal insolvency information recorded on the National Personal Insolvency Index (NPII) administered under the *Bankruptcy Regulations 1966* (Cth).

Proposal 52–5 Credit reporting agencies, in accordance with obligations to ensure the accuracy and completeness of credit reporting information, should ensure that credit reports adequately differentiate the forms of administration identified on the NPII.

Serious credit infringements

52.57 Section 18E(1)(b)(x) permits the inclusion in credit information files of the 'opinion of a credit provider that the individual has … committed a serious credit infringement'. A serious credit infringement is defined as an act done by a person:

> (a) that involves fraudulently obtaining credit, or attempting fraudulently to obtain credit; or
>
> (b) that involves fraudulently evading the person's obligations in relation to credit, or attempting fraudulently to evade those obligations; or

69 Approximately 6,500 new debt agreements were made between 1 July 2006 and 30 June 2007, compared with just under 5,000 debt agreements in the 2005–06 financial year: P Ruddock (Attorney-General), 'Amendments to Support Debt Agreements Commence' (Press Release, 9 July 2007).

70 Australian Finance Conference, *Submission PR 294,* 18 May 2007.

71 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

> (c) that a reasonable person would consider indicates an intention, on the part of the first-mentioned person, no longer to comply with the first-mentioned person's obligations in relation to credit.[72]

52.58 A serious credit infringement listing has more serious consequences for the individual concerned than other default listings—not least because such a listing may remain on the record for seven years, as compared to five years for most other adverse information.

52.59 For an overdue payment to be listed on a credit information file, an individual must be 60 days overdue in making a payment, and the credit provider must have taken recovery action.[73] There are no similar requirements for the listing of a serious credit infringement.

52.60 The *Credit Reporting Code of Conduct* provides some guidance on what constitutes a serious credit infringement.[74] The ALRC noted, however, that it may be appropriate for the credit reporting provisions to define what constitutes a serious credit infringement with more precision—rather than leaving it to differing interpretations under the internal policies of credit providers.[75]

52.61 There was broad support in submissions for clarification of the meaning of a serious credit infringement.[76] For example, National Legal Aid stated that the definition has proved to be too loosely drafted.

> A range of actions or failures to act where the individual concerned had no intention of avoiding their obligations are characterised as serious credit infringements. The definition is regularly applied to anyone who fails to advise a forwarding address when leaving a property with an amount owing to a utility provider.[77]

52.62 There was no clear view on how the issue should be dealt with. For example, the CCLC submitted that a series of steps, including the giving of notices and the making of reasonable attempts to contact the individual, should be taken before a serious credit

77 National Legal Aid, *Submission PR 265,* 23 March 2007.

infringement listing is made.[78] The CCLC also recommended that there should be a 'separate process for other types of fraudulent conduct, requiring a conviction in a criminal court before a listing can be made, and the reference to fraud should be deleted from the current serious credit infringement section'.[79] The BFSO stated that a serious credit infringement should only be listed where fraud has been proven.[80] The practice of listing individuals who cannot be found by a credit provider ('clearouts') as having committed a serious credit infringement without further confirmation was also criticised.[81]

52.63 The ALRC recognises that there are valid concerns about the interpretation of the current definition of a serious credit infringement. The definition appears too broad. The ALRC would welcome further comments on whether a definition of serious credit infringement should be retained in the credit reporting regulations and, if so, how it should be framed. For example, one possible approach would be to remove any equivalent of paragraph (c) of the existing definition—restricting the concept of a serious credit infringement to situations where there are reasonable grounds for suspicion of fraud.

Question 52–2 Should the proposed *Privacy (Credit Reporting Information) Regulations* allow for the listing of a 'serious credit infringement' or similar and, if so, how should this concept be defined?

Publicly available information

52.64 The credit reporting provisions regulate some aspects of the collection of publicly available information, but not others. The definition of a 'credit reporting business' excludes businesses or undertakings that maintain records 'in which the only personal information relating to individuals is publicly available information'.[82] On the other hand, the permissible content of a credit information file does not include 'publicly available information'—although some permissible items may be publicly available, such as bankruptcy and court judgment information.

52.65 The appropriateness of regulating some categories of publicly available information under Part IIIA, but not others, may be questioned. For example, if a credit reporting agency holds publicly available information about court judgments in

82 *Privacy Act 1988* (Cth) s 6(1). Part IIIA provides that credit reporting agencies and credit providers may disclose information contained in a record 'in which the only personal information relating to individuals is publicly available information': see, *Privacy Act 1988* (Cth) ss 18K(1)(k), 18N(9) definition of 'report'.

separate records—rather than in credit information files—the information can be retained indefinitely as there are no specified time limits for retention under general privacy principles. If governed by Part IIIA, the information would have to be deleted five years after the judgment was made.[83]

52.66 In IP 32, the ALRC asked what issues are raised by the collection of publicly available personal information for use in credit reporting and how should the collection, use and disclosure of such information be regulated.[84]

52.67 The OPC recommended that the definition of a 'credit reporting business' be amended to remove the exclusion for publicly available information and noted that this

> will have the effect of regulating publicly available personal information, such as commercial credit information, including defaults, directorships, judgments and proprietorship information that is collected by a credit reporting agency for the purpose of assessing an individual's eligibility for credit.[85]

52.68 The OPC stated that, if such a proposal were to proceed, the permitted content of a credit information file should be amended to include publicly available information.[86]

52.69 There is much support from credit reporting agencies and credit providers for the inclusion of new categories of publicly available information in credit information files and credit reports, including for identity verification (discussed below) and in order to ensure the data quality of credit reporting information.[87]

52.70 There is also some criticism of the collection of existing categories of publicly available information permitted under s 18E. As discussed, these include concerns about the collection of bankruptcy and other personal insolvency information. In addition, the CCLC noted concerns about the listing of court judgments:

> Court judgments are not necessarily an indicator of a person's credit worthiness, but rather, disputes that have been determined by the courts … Further in cases where a consumer is appropriately insured, his or her insurance company may opt to initiate or defend proceedings in the consumers' name under their right of subrogation. It would be manifestly unjust for the consumers' ability to obtain credit to be jeopardised in these circumstances.[88]

86 Ibid.

87 See Ch 54.

88 Consumer Credit Legal Centre (NSW) Inc, *Credit Reporting Research Report* (2007), rec 32.

52.71 The CCLC submitted that court judgments should only be included 'if they relate to a credit contract by a credit provider as defined by the *Privacy Act* or any other relevant instrument'.[89] The ALRC notes that where court judgment information is not relevant to credit worthiness, the collection of the information could be challenged on the basis that it breaches the proposed 'Data Quality' principle of the UPPs, which requires that personal information be 'relevant' with reference to a permitted purpose of collection.

52.72 The current provisions dealing with the collection of publicly available information create undesirable inconsistency and a lack of clarity. In practice, credit reporting agencies are important aggregators of publicly available information. The ALRC understands that they comply with the credit reporting provisions by ensuring that publicly available information is kept in separate databases and is not technically provided as part of a credit report.

52.73 The ALRC considers that the interests of individuals and business would be better served if publicly available information were permitted content under the *Privacy (Credit Reporting Information) Regulations*. This would ensure that where publicly available information is used in credit risk assessment, privacy interests are fully protected by, for example, the application of the special rights of access and correction that apply to credit reporting information and complaint-handling mechanisms.

Proposal 52–6 The proposed *Privacy (Credit Reporting Information) Regulations* should permit credit reporting information to include publicly available information.

Compulsory reporting of permitted content

52.74 A related issue is whether it should be compulsory for credit providers to report some or all kinds of information that may be included in a credit information file. At present, there are no obligations placed on credit providers to report information to credit reporting agencies.

52.75 The value of credit information files in the assessment of credit worthiness may be reduced significantly by the fact that credit providers may 'pick and choose' whether information about particular overdue payments or other adverse information is reported. It has been suggested, therefore, that it should be made compulsory for credit providers to report negative information.[90] On the other hand, compulsory reporting obligations may interfere with the relationship between a credit provider and its

89 Ibid, rec 32.

90 Centre for International Economics and Edgar Dunn and Company, *Options for Implementation of Comprehensive Credit Reporting in Australia [Prepared for MasterCard Worldwide]* (2006), 63.

customers, for example, when negotiating a repayment plan with an overcommitted individual.

52.76 In IP 32, the ALRC asked whether credit providers that subscribe to a credit reporting agency should be required to provide to the credit reporting agency some or all kinds of information that may be included in a credit information file.[91]

52.77 In submissions, some credit providers supported compulsory reporting as desirable, but not necessarily as a subject appropriate for regulation.[92] Westpac, for example, supported compulsory reporting, in addition to new standards governing the format and timing of reporting, in order to 'improve the accuracy of credit information files and therefore optimise credit assessments'. This would also 'provide more certainty for the consumer as to how their data will be reported'.[93]

52.78 Other submissions from industry opposed compulsory reporting because of possible compliance costs for smaller credit providers[94] and telecommunications service providers.[95] One bank noted that compulsory reporting

> would need to somehow accommodate the often extraordinary circumstances that surround consumer credit defaults. These include death, divorce and other extreme health issues.

52.79 Legal Aid Queensland supported the compulsory reporting of current credit provider status[96] and identifying particulars, but not default information. Legal Aid Queensland stated that

> negotiating repayment arrangements often takes longer than the 60 days.[97] If the borrower is disputing liability 60 days is an insufficient timeframe in which to come to a settlement of the dispute.[98]

52.80 The BFSO noted that compulsory reporting, by removing discretion on the part of credit providers in relation to listing, would diminish the effectiveness of important provisions of the *Code of Banking Practice*, which requires a subscribing bank to try to

help customers overcome difficulties with credit.[99] In strongly opposing compulsory reporting, the Consumer Action Law Centre stated:

> The market is able to determine at what point the cost of providing more information outweighs the benefits of having more information in the credit reporting system. The proposal to implement compulsory reporting would be a complete inversion of the purpose of the regulatory scheme by using it to advance the interests of certain market participants who have been unable to get the market to justify these interests. It would be the worst sort of regulation—imposing red tape on business to protect the interests of certain industry players.[100]

52.81 Submissions also considered that, if reporting was compulsory, there would need to be improvement in the provisions regulating the use and disclosure of credit information for non-credit related purposes,[101] in dispute resolution processes,[102] and compliance with responsible lending obligations.[103]

52.82 This issue is related to the discussion in Chapter 51, about the desirable model of more comprehensive reporting. In that context, there is broad support for the concept of reciprocity—which includes the idea that credit providers should contribute to the credit reporting agency data of the categories the credit provider receives from the agency. This principle, however, need not rule out some discretion on the part of credit providers with respect to reporting information about individual customers, in certain circumstances. The ALRC considers that, like reciprocity, the question of compulsory reporting should be a matter for self-regulation by credit providers and their industry associations.

Prohibited content

52.83 Section 18E(2) provides that certain types of personal information must never be included in an individual's credit information file. This list is similar to, but differs in some respects from, the general definition of 'sensitive information' in s 6(1). The OPC suggested that the ALRC consider whether the definition of prohibited content set out in s 18E(2) should be aligned with the definition of sensitive information in s 6(1) of the *Privacy Act*.[104]

52.84 The definitions of prohibited content and sensitive information serve quite distinct purposes. The former, in effect, acts to prohibit collection (with or without the consent of the individual); the latter to restrict collection without consent, and use or

104 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

disclosure for secondary purposes.[105] Nevertheless, it may make sense to align the two definitions, if only to simplify the drafting of the Act.

52.85 Two significant issues arise. First, the definition of 'sensitive information' includes 'health information'. Health information is defined in s 6(1) to include information or an opinion about:

(i) the health or a disability (at any time) of an individual; or

(ii) an individual's expressed wishes about the future provision of health services to him or her; or

(iii) a health service provided, or to be provided, to an individual …

52.86 It is conceivable that some content of credit information files permitted under s 18E may constitute health information in terms of s 6(1)—for example, a record of an overdue payment owed to a hospital or doctor. Credit reporting information, however, would not ordinarily be specific enough to constitute information 'about' the individual's health (as opposed to about the fact an individual owes money to a health service provider). In any case, credit providers, unless exempt, are already bound by the NPPs in addition to their obligations under Part IIIA, so aligning the definitions would not cause any new problem in this regard.

52.87 Secondly, the definition of prohibited content in Part IIIA includes personal information recording an individual's 'lifestyle, character or reputation'.[106] While this may be seen as an important protection against the inclusion of subjective opinions in credit reporting information, such information also would not be permitted content under the *Privacy (Credit Reporting Information) Regulations*.

Proposal 52–7 The proposed *Privacy (Credit Reporting Information) Regulations* should prohibit the collection in credit reporting information of 'sensitive information', as that term is defined in s 6(1) of the *Privacy Act*.

Debts of children and young people

52.88 In IP 32, the ALRC noted concerns about credit information files and credit reports concerning individuals under the age of 18—especially in relation to the listing of debts by telecommunication companies in relation to mobile telephone contracts.[107]

105 In conjunction with NPPs 10 and 2.1.

106 *Privacy Act 1988* (Cth) s 18E(2)(f).

107 See Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [5.141]–[5.147].

52.89 A 'protective' approach is reflected in the common law, where contracts are not binding on a person under the age of 18 unless it is a contract for 'necessaries'. The common law applies in all Australian states and territories except New South Wales, where legislation has modified the common law position and focuses on the contract being for the 'benefit' of the child or young person, where the child or young person is sufficiently mature to understand his or her participation in the contract.[108]

52.90 While many companies are mindful of how the law of contract applies to those under the age of 18—and many mobile telephone contracts are signed by adults on behalf of young people—young people, nevertheless, regularly purchase mobile telephones in their own name or sign contracts for future telecommunications services in their own name.[109] Other young people may enter contracts with banks or other financial institutions for loans or credit cards. While some seek loans or credit facilities due to the need to live independently, others may complete offers for credit cards inadvertently sent to them as part of a marketing campaign. Other young people may accumulate a debt by not paying a fine, such as parking fines, or fines issued for public transport ticket violations.

52.91 Where credit obligations are not discharged, telecommunications companies and other credit providers may list overdue payment information with a credit reporting agency. Such information can remain on the individual's credit information file for up to five years and prejudice a young person's future access to credit. This may be the case even where the legality of the contract is in question.

52.92 In IP 32, the ALRC asked what issues are raised by credit information files and credit reports about children and young people, and how the handling of this information should be regulated.[110]

52.93 Some submissions stated that the collection of credit reporting information about individuals under the age of 18 should be prohibited.[111] For example, the Consumer Action Law Centre stated

---

108 *Minors (Property and Contracts) Act 1970* (NSW). Some limited exceptions to the common law apply in the other states and territories: see L Blackman, *Representing Children and Young People: A Lawyers Practice Guide* (2002), 240.

109 A 1999 Australian study indicated that 48% of young people under the age of 18 with a mobile telephone signed the contract in their own name: A Funston and K MacNeill, *Mobile Matters: Young People and Mobile Phones* (1999) Communications Law Centre, 3. Note, however, that in 2005 most telecommunications companies commenced using a new form of contract requiring disclosure of age and not allowing persons under the age of 18 to sign the contract in their own name: Children and Young People Issues Roundtable, *Consultation PC 121*, Sydney, 7 March 2007.

110 See Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), Question 5–24.

Except in the case of unpaid fines: Min-it Software, *Submission PR 236,* 13 March 2007.

> no listings [should] be permitted while the individual remains under the age of 18, in recognition of the different capacities and experience of young people. If debts incurred by a minor are to continue to be allowed to be listed, we would strongly advocate that such listings (and other listings related to minors) be subject to a shorter timeframe before deletion, for example two years, in recognition of the different legal position of minors.[112]

52.94 In contrast, the Institute of Mercantile Agents (IMA) noted that its members 'encounter many instances of young persons lying in order to obtain a mobile phone, internet access and credit cards'.

> Given these circumstances it is difficult to justify requiring some special case method for handling identifier and credit based information relating to young persons. Our industry members are aware of cases where a number of creditors have been deliberately targeted by young consumers who appear to be aware that nothing will be done to them for their fraudulent activities.[113]

52.95 Questions may be raised about whether any person under the age of 18 has the developmental capacity to consider the long term consequences of these decisions.[114] Decisions regarding consumer credit can have a long term impact if the young person is then unable to meet the commitments and is listed as a credit risk. The effect may not be immediate, but may have repercussions some years later when the young person is in need of credit. One approach would be to permit the collection of credit reporting information about individuals under the age of 18, but to require deletion after the expiry of a shorter maximum permissible period than applies to other default information.

52.96 On balance, the ALRC proposes that the collection in credit reporting information about individuals under the age of 18 years should be prohibited. Any regulation to this effect, however, would have to recognise that credit providers may not always know the age of their clients. The ALRC is interested also in comment on whether such a reform might have some undesirable effects, for example in prejudicing the ability of some younger people—living independently, or those with parents with bad credit records—to obtain credit or services they need.

---

112 Consumer Action Law Centre, *Submission PR 274,* 2 April 2007; The OPC also submitted that shorter credit listing timeframes should be considered for minors: Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

113 Institute of Mercantile Agents, *Submission PR 270,* 28 March 2007.

114 New South Wales Commission for Children and Young People, *Consultation PC 34*, Sydney, 18 July 2006.

Proposal 52–8 The proposed *Privacy (Credit Reporting Information) Regulations* should prohibit the collection in credit reporting information about individuals the credit provider or credit reporting agency knows to be under the age of 18 years.

Notification of collection

52.97 The proposed 'Specific Notification' principle provides that, at or before the time an organisation collects personal information, the organisation must take reasonable steps to ensure that the individual is aware of a range of matters including the fact and circumstances of collection (for example, how, when and from where the information was collected); the identity and contact details of the agency or organisation; the types of people, organisations, agencies or other entities to whom the agency or organisation usually discloses personal information; and avenues of complaint available to the individual if he or she has a complaint about the collection or handling of his or her personal information.

52.98 Part IIIA provides only indirectly for notification. Under s 18E(8)(c), a credit provider must not give to a credit reporting agency personal information relating to an individual if 'the credit provider did not, at the time of, or before, acquiring the information, inform the individual that the information might be disclosed to a credit reporting agency'.

52.99 In IP 32, the ALRC noted that the words 'at the time of, or before, acquiring the information' may permit the credit provider a choice about when to provide notice to the individual that information may be disclosed. It was suggested that, given that a significant period may elapse between the relevant events, more prescriptive notice provisions may be appropriate.

52.100 The ALRC asked what issues are raised by the provisions of the *Privacy Act* requiring individuals to be informed about the disclosure of personal information to a credit reporting agency and about how these provisions operate in practice.[115]

52.101 Submissions from a range of bodies favoured the imposition of more prescriptive notice requirements.[116] As discussed below, these included suggestions

115 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [5.30], Question 5–3.

116 Queensland Law Society, *Submission PR 286,* 20 April 2007; Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007; N Waters—Cyberspace Law and Policy Centre UNSW, *Submission PR 277,* 3 April 2007; Australian Privacy Foundation, *Submission PR 275,* 2 April 2007; Consumer Action Law Centre, *Submission PR 274,* 2 April 2007; Banking and Financial Services Ombudsman Ltd, *Submission PR 263,* 21 March 2007; Westpac, *Submission PR 256,* 16 March 2007; Consumer Credit Legal Centre (NSW) Inc, *Submission PR 255,* 16 March 2007.

that credit providers or credit reporting agencies should specifically be required to notify individuals about default listings and complaint-handling processes.[117]

52.102 The interpretation of s 18E(8)(c) is the subject of a representative complaint to the OPC, lodged in April 2006 by the CCLC and the Consumer Credit Legal Service Inc (Vic) against Baycorp Advantage Business Information Services Ltd and Alliance Factoring Pty Ltd.[118] The complaint relates to the listing of about 600,000 individuals for default or serious credit infringement, lodged by Alliance in relation to Telstra debts.

52.103 The complaint claims a failure to inform individuals that personal information might be disclosed to a credit reporting agency. The complainants submitted that the correct interpretation of s 18E(8)(c) is that an individual should be notified at the time of, or before, the handing over of personal information, and the relevant time is the time of the application for a loan, account or other relevant facility. The opposing argument is that a credit provider may comply with s 18E(8)(c) by notifying an individual that it intends shortly to list a default—and does not need to have notified the individual about this possibility at the time of the initial credit application.

52.104 The Consumer Action Law Centre contested the validity of the latter interpretation, which it considered 'has been developed to meet the interests of debt purchase firms and [credit reporting agencies] to maximise the listing of utility defaults'.[119] The Centre submitted that, nevertheless,

> more prescriptive notice provisions may be appropriate, as they would in effect simply clarify the operation of the existing provision, namely that notice should be given at relevant times, for example at initial application stage, if a default is to be listed, if a debt is assigned and so on.[120]

52.105 The OPC noted that the notice provision in s 18E(8)(c) is important as it 'promotes transparency between the individuals, credit providers and to some extent credit reporting agencies'. The notice provision was said to generate a number of complaints, particularly in relation to assigned loans where, for example, notice may have been given a long time before a listing is made, or an assignee assumes notice has been provided by the original credit provider and does not provide notice at the time of listing.[121] The OPC recommended that s 18E(8)(c) be re-drafted to 'align it more

---

117 Issues concerning the notification given when an individual's application for credit is refused on the basis of a credit report under *Privacy Act 1988* (Cth) s 18M are discussed in Ch 52.

118 The outcome of this complaint is pending.

119 Consumer Action Law Centre, *Submission PR 274,* 2 April 2007.

120 Ibid.

121 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

closely with the requirements under NPP 1.3, and to require that notice is given prior to any listing being made or a debt being assigned'.[122]

52.106 Other submissions also favoured imposing an express obligation on credit providers, or credit reporting agencies, to notify individuals about the collection or proposed collection of credit reporting information at specified times or in specified circumstances (in addition to notification at the time of the initial credit application).

52.107 The most common suggestions were that credit providers should be required to notify individuals before or at the time of listing a default or other adverse credit reporting information;[123] or when a debt is assigned.[124] For example, the CCLC recommended that credit providers should be required to issue a notice giving individuals 30 days to rectify a default, or raise a dispute, before a default can be reported.[125] The BFSO stated:

> It would be useful if there was a more explicit regulatory requirement in either the Act or the Code requiring a credit provider to notify a consumer as part of the debt collection process that it intends to list a debt on the consumer's credit information file and the time frame.[126]

52.108 Such a requirement was opposed by others. EnergyAustralia referred to the practical difficulties involved in notifying individuals who leave no forwarding address.[127] Min-it Software stated that an 'obligation to notify individuals when adverse information is added to their file highlights a lack of commercial reality'.[128]

52.109 Submissions also focused on the obligations of credit reporting agencies,[129] including to ensure that individuals are notified about adverse listings and can seek correction of any inaccurate information. The OPC submitted that the ALRC should

127 EnergyAustralia, *Submission PR 229,* 9 March 2007.

128 Min-it Software, *Submission PR 236,* 13 March 2007. Min-it Software, nevertheless, favoured notification prior to the default listing of an assigned debt.

129 Queensland Law Society, *Submission PR 286,* 20 April 2007; Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007; N Waters—Cyberspace Law and Policy Centre UNSW, *Submission PR 277,* 3 April 2007; Australian Privacy Foundation, *Submission PR 275,* 2 April 2007; Banking and Financial Services Ombudsman Ltd, *Submission PR 263,* 21 March 2007.

consider whether credit reporting agencies should be required to inform an individual within 14 days when an adverse listing is made.[130] The BFSO stated:

> Ideally, the credit reporting agency would notify the individual each time a default or serious credit infringement listing is made or altered, including when any publicly available information such as a court order or bankruptcy is added to the credit information file.[131]

52.110 Nigel Waters submitted that credit reporting agencies should have an obligation to inform individuals periodically of the existence of their consumer information file and, specifically, at the time a default listing is made. Waters noted that, while these requirements might appear onerous, 'the contribution that pro-active notification would make to data quality should more than outweigh the cost'.[132] Queensland Law Society members also referred to the data quality benefits of notification and noted that email may provide a cost-effective means of notification.[133]

ALRC's view

52.111 Section 18E(8)(c) has been the subject of varying interpretation and lacks clarity in its application. For example, the drafting allows credit providers to argue that the obligation does not require:

- notification at the time of the initial credit application that a default might be listed in the future; or

- notification before or at the time a default listing is made, provided that notification (that a default might be listed in the future) was given at the time of the initial credit application.[134]

52.112 More prescriptive notice provisions seem appropriate, if only to bring the credit reporting provisions in line with the proposed 'Specific Notification' principle. In relation to notification at the time of the initial application, the *Privacy (Credit Reporting Information) Regulations* should be drafted in a form consistent with the proposed 'Specific Notification' principle and the approach to privacy notices discussed in Chapter 21.

---

130 The OPC also stated that there should be notification of any other listing which may have an adverse impact, such as file linking: Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

131 Banking and Financial Services Ombudsman Ltd, *Submission PR 263,* 21 March 2007.

132 N Waters—Cyberspace Law and Policy Centre UNSW, *Submission PR 277,* 3 April 2007. Also Australian Privacy Foundation, *Submission PR 275,* 2 April 2007.

133 Queensland Law Society, *Submission PR 286,* 20 April 2007.

134 The ALRC understands that giving notice immediately prior to listing a default has been adopted generally as good industry practice: Consumer Action Law Centre, *Submission PR 274,* 2 April 2007.

52.113 In addition, the *Privacy (Credit Reporting Information) Regulations* should prescribe the circumstances in which a credit provider must later inform an individual that personal information might be disclosed to a credit reporting agency. These circumstances should include where 'negative' credit reporting information is to be reported.[135]

52.114 The ALRC is interested in further comment on whether credit reporting agencies should be required to notify individuals when such information is reported to them by credit providers. Credit reporting agencies already offer, for a fee, to notify individuals of additions or changes to their credit information files.[136] Veda Advantage has advised that it intends to pursue a capacity to manage consumer 'notifications electronically and directly with consumers where appropriate'.[137]

Proposal 52–9 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that, at or before the time credit reporting information is collected about an individual, credit providers must take reasonable steps to ensure that the individual is aware of:

(a) the fact and circumstances of collection (for example, how and where the information was collected);

(b) the credit provider's and credit reporting agency's identity and contact details;

(c) the fact that the individual is able to gain access to the information;

(d) the main consequences of not providing the information;

(e) the types of people, organisations, agencies or other entities to whom the credit provider and credit reporting agency usually discloses credit reporting information; and

(f) the avenues of complaint available to the individual if he or she has a complaint about the collection or handling of his or her credit reporting information.

135 That is, the information referred to in *Privacy Act 1988* (Cth) s 18E(1)((vi)–(x), to the extent these are permitted content under the proposed new *Privacy (Credit Reporting Information) Regulations*.

136 See Ch 55.

137 Veda Advantage, *Submission PR 272,* 29 March 2007.

Proposal 52–10 The proposed *Privacy (Credit Reporting Information) Regulations* should prescribe the specific circumstances in which a credit provider must inform an individual that personal information might be disclosed to a credit reporting agency, for example, in circumstances where the individual defaults in making payments.

Question 52–3 In what specific circumstances should a credit provider be obliged to inform an individual that personal information might be disclosed to a credit reporting agency; and what information should notices contain? Who should give notice when a debt is assigned—the original credit provider, the assignee or both?

Question 52–4 Should the proposed *Privacy (Credit Reporting Information) Regulations* prescribe specific circumstances in which a credit reporting agency must inform an individual that it has collected personal information?

Introduction

53.1 This chapter discusses the existing provisions of Part IIIA of the *Privacy Act* dealing with the use and disclosure of information in credit information files and credit reports and makes proposals on how these matters should be dealt with under the proposed Unified Privacy Principles (UPPs) and the *Privacy (Credit Reporting Information) Regulations*. The chapter also considers the role of consent in the regulation of credit reporting system.

Use and disclosure

53.2 Under the proposed 'Use and Disclosure' principle in the UPPs, an agency or organisation must not use or disclose personal information about an individual for a purpose (the secondary purpose) other than the primary purpose of collection unless:

> (a) both of the following apply:
>
> > (i) the secondary purpose is related to the primary purpose of collection and, if the personal information is sensitive information, directly related to the primary purpose of collection; and

> (ii) the individual would reasonably expect the agency or organisation to use or disclose the information for the secondary purpose; or
>
> (b) the individual has consented to the use or disclosure; or
>
> (c) the agency or organisation reasonably believes that the use or disclosure is necessary to lessen or prevent a serious threat …
>
> (d) the agency or organisation has reason to suspect that unlawful activity has been, is being or may be engaged in, and uses or discloses the personal information as a necessary part of its investigation of the matter or in reporting its concerns to relevant persons or authorities; or
>
> (e) the use or disclosure is required or authorised by or under law; or
>
> (f) the agency or organisation reasonably believes that the use or disclosure is necessary for [law enforcement purposes].

53.3 The relative simplicity of the general principle set out in clause (a), which permits use or disclosure for a related secondary purposes within the reasonable expectation of the individual concerned, may be contrasted with the complexity of the use and disclosure provisions of Part IIIA.

53.4 Sections 18K, 18L, 18N, 18P and 18Q all deal with aspects of the use or disclosure of personal information (or both). These provisions place various limits on use and disclosure of personal information based on the identity of the person or organisation to whom information is disclosed; the source and nature of the information; and the purpose for which the information is to be used. Briefly, the use and disclosure provisions of Part IIIA deal with the following:

- s 18K places limits on the disclosure by credit reporting agencies of personal information contained in credit information files;
- s 18L places limits on the use by credit providers of personal information contained in credit reports;
- s 18N places limits on the disclosure by credit providers of personal information in 'reports relating to credit worthiness';
- s 18P places limits on the use or disclosure by mortgage insurers or trade insurers of personal information contained in credit reports; and
- s 18Q places limits on the use of personal information obtained from credit providers by: a corporation that is related to the credit provider; a corporation that proposes to use the information in connection with an assignment or purchase of debt; and a person who manages loans made by the credit provider.[1]

---

1 These provisions are summarised in more detail in Ch 49.

53.5 In sum, Part IIIA prescribes more than fifty different circumstances in which the use or disclosure of personal information is authorised. As the categories of permissible use and disclosure are exhaustive, all other use or disclosure of personal information covered by the ambit of the provisions is prohibited. Additional complexity arises because, in some instances, the provisions also limit the kinds of information that may be disclosed.[2]

53.6 Despite the extensive nature of these provisions, there may also be some gaps in their coverage. Notably, while the permitted contents of credit information files held by credit reporting agencies and the disclosure of personal information contained in those files are regulated in detail by ss 18E and 18L respectively, Part IIIA does not expressly limit the use of credit information files by credit reporting agencies.

Comparing Part IIIA and the NPPs

53.7 The Part IIIA provisions may operate to make use and disclosure of credit reporting information more or less restrictive than is the case under general privacy principles. The extent to which any particular category of use or disclosure permitted by Part IIIA would be permitted by the NPPs (or the proposed UPPs), however, is difficult to determine. The determination depends primarily on whether specific circumstances authorised by Part IIIA are related secondary purposes within the reasonable expectations of the individual.

53.8 The Issues Paper, *Review of Privacy—Credit Reporting Provisions* (IP 32) noted that how broadly an organisation can describe the primary purpose needs to be determined on a case-by-case basis and depends on the circumstances.[3] The OPC's *Guidelines to the National Privacy Principles* state that when an individual provides, and an organisation collects, personal information, they almost always do so for a particular purpose. This is 'the primary purpose of collection even if the organisation has some additional purposes in mind'.[4]

53.9 In IP 32, the ALRC stated that, even on a broad conception of the primary purpose, it is hard to argue that the disclosure of information by a credit provider to a credit reporting agency is for the primary purpose of collection. Disclosure does not directly serve purposes connected with the provision of finance by the credit provider to the particular individual. Rather, the information is disclosed so that it may be used

---

2 For example, s 18N(1)(be) permits the disclosure of personal information to a person or body supplying goods or services to an individual who intends to pay by credit card or electronic funds transfer. The information that may be disclosed is limited to information reasonably necessary to identify the individual, and as to whether the individual has access to funds sufficient to meet the payment concerned.

3 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [5.105]–[5.107], citing Office of the Federal Privacy Commissioner, *Guidelines to the National Privacy Principles* (2001), 35.

4 Office of the Federal Privacy Commissioner, *Guidelines to the National Privacy Principles* (2001), 35.

in the future, including by other credit providers in assessing other loan applications. This conclusion has not been contested.

53.10 In IP 32, the ALRC noted that, for the same reasons, disclosure to a credit reporting agency is unlikely to be considered a related secondary purpose for the purposes of NPP 2.1(a). This conclusion was contested in submissions. Nigel Waters of the Cyberspace Law and Policy Centre stated:

> It is suggested that it may be necessary for credit providers to obtain consent for disclosures involved in the credit reporting system because they would not fit within the alternative exception for secondary purposes … I submit that it is at least arguable that within the context of the well established operation of the credit market, disclosure to [credit reporting agencies] and other [credit providers] is both a related purpose and within reasonable expectations (NPP 2.1(a)).[5]

53.11 These comments serve to highlight the fact that different conclusions can be reached even on the most basic questions about how NPP 2 applies to credit reporting information. In this context, the provisions of Part IIIA can be seen as providing some certainty for existing finance industry practices, removing the need to determine whether, for example, the disclosure by a credit provider of personal information to a credit reporting agency; a mortgage insurer; the assignee of a debt to the credit provider and so on, are within the reasonable expectations of the individual concerned.

Use and disclosure of credit reporting information

53.12 In IP 32, the ALRC asked a number of questions about the provisions of Part IIIA that regulate the use and disclosure of credit reporting information.[6] Submissions contained a number of general comments on regulating use and disclosure.

53.13 The Australasian Retail Credit Association (ARCA) noted that it has developed a 'governing principle' for the operation of the credit reporting system. The ARCA governing principle states:

> Data are shared only for the prevention of over-commitment, bad debt, fraud and to support debt recovery and debtor tracing, with the aim of promoting responsible lending.[7]

53.14 This governing principle was expressly supported by some other stakeholders.[8] In the context of support for a more comprehensive credit reporting system, Veda Advantage submitted that, based on the ARCA principle, the rules governing use and disclosure should provide:

---

5 N Waters—Cyberspace Law and Policy Centre UNSW, *Submission PR 277,* 3 April 2007.

6 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), Questions 5–9 to 5–11; 5–16.

7 Australasian Retail Credit Association, *Submission PR 218,* 7 March 2007.

8 Veda Advantage, *Submission PR 272,* 29 March 2007; American Express, *Submission PR 257,* 16 March 2007.

> The purpose of collection is the promotion of good credit management, and transparency of credit practices. This includes but is not limited to the prevention of over commitment, bad debt, and fraud; identity verification and to support debt recovery and debtor tracing.[9]

53.15 Veda Advantage and others[10] submitted that limits on the use and disclosure of credit reporting information should be more flexible, especially with regard to possible new uses of personal information. The IMA stated that the limits on disclosure by credit reporting agencies are 'tight and often misunderstood'. The Institute of Mercantile Agents (IMA) contended that all parts of the 'credit continuum' (of which debt collection was said to be a major part), should have access to credit files 'where a need can be substantiated'.[11]

53.16 As Veda noted, the use of credit reporting information in other jurisdictions extends beyond credit risk assessment and into areas such as 'insurance underwriting, employment, tenancy, and licensing'.

> Data users have found that attributes of an individual's credit file correlate with other behaviour—like insurance risk. Whilst these uses may or may not be considered appropriate, there is no mechanism under the current framework for the assessment of such 'novel' use.[12]

53.17 Because the 'benefit to society and consumers from novel uses of credit data cannot be predicted', Veda Advantage submitted that the regulatory environment 'needs to provide a mechanism which will allow for the assessment and facilitation of new uses of credit data—subject to appropriate harm minimisation processes'. Veda submitted:

> Regulators should have a mechanism under which data controllers can assess and approve new or novel use of credit data in the context of an approved Data Governance Standard.[13]

53.18 The implications of more comprehensive credit reporting for the existing use and disclosure limitations were considered in submissions. The OPC submitted that any change to the personal information permitted to be used in credit reports under a more comprehensive credit reporting system does not imply or necessitate 'any change to who may access this information'.

---

9 Veda Advantage, *Submission PR 272,* 29 March 2007.

10 Ibid; Institute of Mercantile Agents, *Submission PR 270,* 28 March 2007.

11 Institute of Mercantile Agents, *Submission PR 270,* 28 March 2007.

12 Veda Advantage, *Submission PR 272,* 29 March 2007. Veda stated that 'the use of credit information for identity verification is just one example of the use of third party collected credit data that is difficult to resolve within the current regulatory framework'. Identity verification is discussed in detail below.

13 Ibid. The 'data controller', in this context, would be the credit reporting agency itself. Data Governance Standards are described as 'binding, transparent and enforceable standards on the handling of data specific to an organisation', put in place by organisations and operating as a form of co-regulation similar to an industry code: Veda Advantage, *Submission PR 272,* 29 March 2007.

> Any system regulating credit reporting should limit the use and disclosure of personal credit information to that required to fulfil the purpose for which it was legally collected, unless the individual has given consent to further or alternate use of their personal credit information, or a use or disclosure is authorised or required by law.[14]

53.19 MasterCard Worldwide (MasterCard) noted that the additional information available under more comprehensive credit reporting means that 'permission to access the data should be limited and clearly defined'.[15] The OPC stated that 'as a general principle, only credit providers should be able to access information from credit information files unless there are cogent public interest reasons why other persons should'.[16]

53.20 Submissions also observed that credit reporting regulation could provide different levels of access to the information held by credit reporting agencies.[17] As stated by the Australian Privacy Foundation:

> The current regime includes a presumption that there is only a single level of access to consumer credit information files. We believe this is too simplistic. We submit that there needs to be a more nuanced debate about different levels of access: who needs access to what information for what purposes?[18]

ALRC's view

53.21 The use and disclosure of credit reporting information is potentially useful for a wide range of secondary purposes. Submissions provided detailed views in relation to specific use or disclosure of credit reporting information including, for example, internal credit management, mortgage and trade insurance, debt collection, law enforcement, direct marketing and identity verification. These views are discussed in more detail below.

53.22 As noted above, Part IIIA prescribes more than fifty different circumstances in which the use or disclosure of personal information is authorised; and the categories of permissible use and disclosure are exhaustive. It is hard to justify this level of prescription, which risks being overtaken by changes in credit industry practices.

53.23 The ALRC considers that there is room to simplify and consolidate the use and disclosure provisions of Part IIIA, for example, in relation to use and disclosure by

---

14 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

15 MasterCard Worldwide, *Submission PR 237,* 13 March 2007.

16 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007. In general, credit reporting agencies may disclose personal information contained in credit information files only to those persons who are 'credit providers', as that term is defined in the Act and OPC determinations: see Ch 49.

17 Australian Privacy Foundation, *Submission PR 275,* 2 April 2007; Veda Advantage, *Submission PR 272,* 29 March 2007.

18 Australian Privacy Foundation, *Submission PR 275,* 2 April 2007. See, however, ss 18N(1)(be), 18N(1)(c).

credit reporting agencies and credit providers for the purposes of credit risk assessment;[19] securitisation;[20] or credit assessment of a guarantor.[21]

53.24 A process of consolidation will be necessary, in any case, as a result of the ALRC's proposal that there should be no equivalent in the *Privacy (Credit Reporting Information) Regulations* of s 18N of the *Privacy Act* (see Proposal 53–4 below). Some of the circumstances in which the disclosure of information by credit providers is expressly authorised by s 18N may need to be preserved in the regulations, but with application to a more circumscribed category of information.[22]

53.25 In the ALRC's opinion, there should be an additional category of permissible use and disclosure of credit reporting information incorporating, expressly or by reference, the secondary use provision in the proposed 'Use and Disclosure' principle. That is, in addition to the use and disclosure authorised specifically by the *Privacy (Credit Reporting Information) Regulations*, the regulations should provide that other related use or disclosure within the reasonable expectations of the individual concerned is permitted. This would not extend, however, to direct marketing purposes (see Proposal 53–3 below).

Proposal 53–1 The proposed *Privacy (Credit Reporting Information) Regulations* should provide a simplified list of circumstances in which a credit reporting agency or credit provider may use or disclose credit reporting information, based on those uses and disclosures currently permitted under ss 18K, 18L and 18N of the *Privacy Act*.

Proposal 53–2 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that, in addition, a credit reporting agency or credit provider may use or disclose credit reporting information for related secondary purposes, as permitted by the proposed 'Use and Disclosure' principle.

Internal credit management

53.26 Section 18L(ba) permits a credit provider to use a credit report or personal information derived from the report for 'the internal management purposes of the credit provider, being purposes directly related to the provision or management of loans by the credit provider'.

---

19 See, *Privacy Act 1988* (Cth) ss 18K(1)(a), 18L(1).
20 See, Ibid ss 18K(1)(ac), 18L(1)(aa)–(ab).
21 See, Ibid ss 18K(1)(c), 18L(1)(b).
22 That is, credit reporting information, rather than personal information related to credit worthiness as defined by s 18N(9)(b).

53.27 The CCLC expressed concern about s 18L(ba), stating that the provision is 'unnecessarily wide' and 'should be narrowed down so that both the consumer and the credit provider are clear on the exact circumstances in which a credit report can be accessed'.[23]

53.28 The ALRC notes that the credit provider must have already obtained the credit report for the purposes of assessing an application for credit.[24] Section 18L(ba) does not appear to allow credit providers to obtain new information from the credit reporting agency for internal credit management unless there is a current credit application (or a default).[25]

Mortgage and trade insurers

53.29 Part IIIA contains a number of provisions relating to the disclosure of credit reporting information to mortgage and trade insurers;[26] and the use and disclosure of credit reporting information by mortgage and trade insurers.[27] In particular, under ss 18K(1)(d) and (e), a credit reporting agency may disclose personal information contained in a credit information file to a mortgage or trade insurer.

53.30 The OPC suggested that there should be good public policy reasons for mortgage insurers and trade insurers to have direct access to credit reports when other types of insurers do not have direct access. The OPC observed:

> Most credit providers have some discretionary power to approve applications for mortgage insurance. However, where a loan proposal does not meet certain criteria and mortgage insurance is required, for example, where the borrowers are self employed, the mortgage insurer will complete their own assessment of the loan proposal. This involves a complete assessment by the mortgage insurer i.e. they require all the documentary evidence provided to the credit provider such as bank statements and income statements and also request a credit check to complete their assessment.[28]

53.31 The OPC submitted that the ALRC should consider whether mortgage and trade insurers should have limited access to and use of individuals' credit information files through credit providers.[29] That is, the credit reporting provisions could be amended to allow credit providers (but not credit reporting agencies) to disclose an individual's credit report to a mortgage or trade insurer, where access to the report is required to assist in the assessment of the individual's credit worthiness.

---

24 That is, the credit report was obtained under *Privacy Act 1988* (Cth) s 18K(1)(a), (b) or (c).
25 That is, under Ibid s 18K(1)(f)–(g).
26 Ibid ss 18K(1)(d)–(e); 18N(1)(bb).
27 Ibid 18P.
28 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.
29 Ibid.

53.32 The ALRC is interested in further comment on this idea and, in particular, on the possible effects on current commercial practices in the mortgage and trade insurance industries.

Question 53–1 Should the proposed *Privacy (Credit Reporting Information) Regulations* allow credit providers (but not credit reporting agencies) to disclose an individual's credit reporting information to a mortgage or trade insurer, where access to the information is required to assist in the assessment of the individual's credit worthiness?

Debt collection

53.33 Credit providers may use credit reports to assist them in recovering overdue payments.[30] A credit provider, in this context, may include a debt collection agency that has purchased debts from a credit provider, or other assignee.

53.34 In addition, a credit provider may disclose certain items of personal information from a credit report to a debt collector for the purpose of collecting overdue payments. The information that may be disclosed is limited to identifying information about the individual; information about overdue payments; and information about court judgments and bankruptcy orders.[31]

53.35 In IP 32, the ALRC observed that mercantile agents and others engaged in debt collection and related activities have expressed concern that they are not permitted to obtain personal information on credit information files directly from credit reporting agencies (or to report information to them). This was said to hamper the ability of mercantile agents to locate debtors and, more generally, to assist small businesses in risk management.[32]

53.36 Where organisations engaged in debt collection do have direct access to the credit reporting system, other issues arise. These were said to include individuals being threatened with having a default listed as a 'collection tool'; the listing of defaults that are disputed by the individuals concerned or without proper notification; and the listing of individuals who are not able to be located as having committed a serious credit infringement.[33]

---

30 *Privacy Act 1988* (Cth) s 18K(1)(g) permits credit reporting agencies to disclose information to credit providers for this purpose.

31 Ibid s 18N(1)(c).

32 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [5.132].

33 Consumer Credit Legal Centre (NSW) Inc, *Report in Relation to Debt Collection* (2004), 62.

53.37 In IP 32, the ALRC asked what issues are raised by the use of the credit reporting system in debt collection and how the use of personal information contained in credit information files and credit reports for debt collection should be regulated.[34]

53.38 The IMA submitted that debt collectors should have direct access to credit information files, including overdue payment information; and be able to report and update information. More generally, the IMA noted that it operates in a commercial environment in which

> our industry is routinely the accounts receivable department of credit providers or alternatively now the assigned owner of debt as well concurrently being the debt collector for numerous clients … [35]

53.39 EnergyAustralia referred to the existing provisions of Part IIIA, which allow credit providers to disclose information to mercantile agents and stated that mercantile agents should be allowed to obtain this information directly from credit reporting agencies, rather than only through a credit provider.[36] Other submissions highlighted the need for direct access to the location information available on credit information files, particularly in the light of concerns about restrictions on access to other sources of location information, such as the electoral roll and other publicly available information.[37]

53.40 Other submissions considered that the debt collection provisions are appropriate, and there should be no direct access for debt collectors.[38] The OPC stated:

> In the case of mercantile agents, the Office is of the view that the current provision in s 18N(1)(c) of the Privacy Act is adequate as it permits a credit provider to disclose specific information from a credit information file (but not the credit file) to a mercantile agent for the purpose of collecting the specific debt that is owed. The restriction on access to an individual's credit information files for debt collection purposes in s 18N(1)(c) of the Privacy Act does not apply to debt collection activities carried out in-house by the credit provider.[39]

53.41 The OPC submitted, however, that mercantile agents that receive personal information from credit providers under the provisions of s 18N(1)(c) should be subject to a prohibition on the use and disclosure of that information for secondary purposes.[40]

38 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007; N Waters—Cyberspace Law and Policy Centre UNSW, *Submission PR 277,* 3 April 2007; Australian Privacy Foundation, *Submission PR 275,* 2 April 2007; Consumer Action Law Centre, *Submission PR 274,* 2 April 2007; Dun & Bradstreet (Australia) Pty Ltd, *Submission PR 232,* 9 March 2007.

39 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

40 Ibid.

53.42 The Australian Privacy Foundation noted that, as the *Privacy Act* already provides for debt collectors to receive information from credit providers, direct access could only be for more general 'tracing' purposes.[41] The Consumer Action Law Centre also expressed concerns about assignees.

> In terms of assignees, we understand that access to credit information files is more appropriate as they effectively 'stand in the shoes' of the original credit provider, unlike contracted mercantile agents and collection firms. However, it should be remembered that, in practice, assignees use credit reporting information for debt collection purposes as assignment is, in effect, the outsourcing of debts and debt collection. For this reason, we suggest the Commission consider if assignees could be given more limited access to credit information files.[42]

53.43 Submissions raised ongoing problems in relation to credit reporting and debt collection practices.[43] The Telecommunications Industry Ombudsman (TIO) noted complaints in relation to telecommunications debt collection activity confirm that

> collection activity, which may include a default or threat of a default, continues even though the consumer disputes the debt in question. The TIO can advise anecdotally that we receive complaints where consumers claim that collection agents advise them to first pay any disputed amount to avoid a default listing and to subsequently attempt to resolve the dispute.[44]

53.44 Members of the Queensland Law Society expressed concern about the possible 'trawling' of credit reporting databases by debt collectors for identity and location information.[45] In relation to assignees, the Banking and Financial Services Ombudsman (BFSO) stated that:

> In our experience, problems can arise where a debt has been sold some years after the last contact between the credit provider and the individual, because the individual has moved address. An assignee may send a letter to last known address and then list either a default or serious credit infringement if there is no response. It appears, in some circumstances, that the listing is used as a way to 'draw out' the debtor, so that the debt can then be collected.[46]

53.45 Veda Advantage acknowledged that 'the threat of default listings as a primary means of, or in the absence of other debt collection activity is of great concern to consumers and their advocates'. Veda considered, however, that such concerns about the use of credit reporting information can be addressed by means other than restricting

access—including through credit reporting agency subscription agreements and rules of reciprocity.[47]

ALRC's view

53.46 The use and disclosure of credit reporting information in connection with debt collection is widely accepted as being one of primary purposes of the credit reporting system. Access to credit reporting for debt collection is, on some views, essential for the efficient functioning of the credit market.[48] Through credit reporting, credit providers share information necessary to locate debtors and are made aware of defaults to other credit providers.

53.47 Concerns about debt collection appear to arise mainly where debt collection activity is outsourced from the original credit provider to debt collection businesses, which may also become the assignees of the debt.[49]

53.48 Where debt collectors are not the assignees of the debt, access by them to credit reporting information can be obtained only through the credit provider. Many of the credit providers for whom IMA members act, however, are not subscribers to the credit reporting system. The ALRC understands that part of the reason the IMA has been lobbying for direct access to the credit reporting system is to service those businesses that, for reasons including size and resources, cannot participate in it directly.

53.49 There seems no compelling reason for change to the rules governing access to credit reporting information by debt collectors. In any case, the existing barriers to access are not necessarily regulatory. Access may be affected by commercial decisions made by credit reporting agencies in relation to terms and conditions of access, including decisions about fees and the quality of data likely to be provided by potential subscribers.

53.50 Many of the issues raised in submissions are already canvassed in guidance issued by the Australian Competition and Consumer Commission (ACCC) and the Australian Securities and Investment Commission (ASIC), who are jointly responsible for administering consumer protection legislation in relation to the debt collection industry.[50]

53.51 The *Debt Collection: Guideline for Collectors and Creditors* reflects the views of the ACCC and ASIC about how provisions of the *Trade Practices Act 1974* (Cth)

---

47 Veda Advantage, *Submission PR 272,* 29 March 2007.

48 Ibid.

49 Corporations are regarded as credit providers if they acquire the rights of a credit provider with respect to the repayment of a loan (whether by assignment, subrogation or other means): Privacy Commissioner, *Credit Provider Determination No. 2006–3 (Assignees)*, 21 August 2006.

50 Australian Competition and Consumer Commission and Australian Securities and Investment Commission, *Debt Collection Guideline: For Collectors and Creditors* (2005).

and *Australian Securities and Investment Commission Act 2001* (Cth) apply to conduct in debt collection. In relation to credit reporting, the guidelines advise:

> [g] Do not state or imply that you intend to list a debt with a credit reporting service when:
>
> - you do not have a genuine belief that the debtor is liable for the debt;
> - you have no instructions to list the debt, and/or it is not your intention to do so;
> - listing is not permitted by law or under a mandatory code;
> - the debt has already been listed.
>
> [h] Equally, while it is appropriate to point out the possible consequences of a credit listing, you must not make misleading representations about those consequences.
>
> [i] Generally, it is not appropriate to make an adverse credit listing:
>
> - when you are in the process of investigating a debtor's claim that a debt is not owed;
> - if you are aware that the debtor has filed process with a tribunal or court disputing liability for the debt.[51]

53.52 It may not be effective or appropriate for the *Privacy (Credit Reporting Information) Regulations* to deal with issues that primarily concern debt collection practices. Debt collection practices that involve credit reporting are, however, related to broader concerns about data quality, which are discussed in Chapter 54. For example, consistent reporting of defaults, governed by industry protocols, would lessen the opportunity for debt collectors to threaten listing in order to obtain payment.

Direct marketing

53.53 Direct marketing involves the promotion and sale of goods and services directly to consumers. The application of privacy principles to direct marketing is discussed in more detail in Chapter 23. The proposed 'Direct Marketing' principle in the UPPs permits personal information to be used in direct marketing with consent or where it is impracticable for the organisation to seek the individual's consent and the organisation otherwise complies with the requirement of the principle. In contrast, Part IIIA does not permit the use or disclosure of personal information for the purpose of direct marketing, with or without the consent of the individual concerned.

53.54 Those opposed to more comprehensive credit reporting have highlighted concerns that it brings the risk that 'such comprehensive, centralised databases may be mined for data by credit providers and other reporting agencies for marketing

---

51 Ibid, Guideline 19[g]–[i].

purposes'.[52] Concerns about the possible use by competitors of credit providers' customer lists may also have been a brake on the existing credit reporting system.[53]

53.55 GE Capital Finance Australasia (GE Money), a proponent of more comprehensive reporting, noted that the perceived risk of smaller credit providers or new entrants to the credit marketing 'cherry picking' good customers directly from credit reporting agency lists was one reason for an initial lack of support for more comprehensive reporting in the United Kingdom.[54]

53.56 In submissions, proponents of more comprehensive credit reporting emphasised the need to maintain restrictions on the use or disclosure of credit reporting information for direct marketing,[55] at least in relation to 'positive' data.[56]

53.57 On the other hand, there was support for the idea that credit providers should be able to use credit reports to 'exclude' individuals from direct marketing offers to increase credit limits or refinance loans (pre-screening).[57] Dun and Bradstreet stated '[m]aking this a permissible use would be a significant step towards an environment in which unaffordable and unsustainable credit was not offered'.[58] MasterCard noted the importance in the credit card industry of decisions to extend credit limits and submitted that:

> As is current practice, credit report information should be accessible for *excluding* individuals from credit increase offers … It should be noted that this is very different from using credit reports to identify individuals for marketing purposes who should be approached to be offered additional credit. MasterCard opposes the selling of credit information for proactive marketing.[59]

53.58 Some submissions expressly opposed the use of credit reporting information in pre-screening.[60] The Australian Privacy Foundation stated that the experience of consumer organisations in this area is that many credit providers 'use any additional information they can acquire to increase the total volume of offers, inevitably leading

to at least some inappropriate offers and to some excessive or unconscionable lending'.[61]

ALRC's view

53.59 Submissions and consultations indicated broad agreement that credit reporting regulation should ensure that credit reporting information is not able to be used for direct marketing. There appear to be different views, however, on what constitutes direct marketing and support among credit reporting agencies and credit providers for pre-screening of credit offers.

53.60 It has been argued that pre-screening is permissible under Part IIIA because, where a credit provider's information is simply 'cleaned' against credit reporting agency information, there is no use or disclosure of personal information (by the credit provider) or disclosure (by the credit reporting agency). Others consider that Part IIIA does not permit the pre-screening of lists.

53.61 The ALRC questions whether there is a significant difference between the use of credit reporting information for pre-screening and for direct marketing. It may be observed that, given individuals may have several current credit providers, the potential for marketing credit, if credit providers can 'pre-screen' using credit reporting information, is significant.

53.62 The ALRC considers that the *Privacy (Credit Reporting Information) Regulations* should prohibit the use or disclosure of credit reporting information in direct marketing. There seems no compelling reason why such a prohibition should not extend to pre-screening lists by credit providers. The ALRC would, however, welcome further comment on this point.

Proposal 53–3 The proposed *Privacy (Credit Reporting Information) Regulations* should prohibit the use or disclosure of credit reporting information for the purposes of direct marketing.

Question 53–2 Should credit providers be permitted to use credit reporting information to 'pre-screen' credit offers? If so, should credit providers be required to allow individuals to opt out, or should credit providers only be permitted to engage in pre-screening if the individual in question has expressly opted in to receiving credit offers?

61 Australian Privacy Foundation, *Submission PR 275,* 2 April 2007.

Identity verification

53.63 In IP 32, the ALRC noted the potential use of credit reporting information in identity verification. Credit providers and other businesses have statutory obligations to verify the identity of their customers, including under the *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth) (the AML/CTF Act).[62]

53.64 The AML/CTF Act covers the financial sector, gambling sector, bullion dealers and other professionals or businesses ('reporting entities') that provide particular 'designated services'. The Act imposes a number of obligations on reporting entities when they provide designated services. These include obligations with respect to customer identification and verification of identity, record-keeping, establishing and maintaining an AML/CTF program, and ongoing customer due diligence and reporting.

53.65 The customer identification procedures required of reporting entities are set out in Part B of the *Anti-Money Laundering and Counter-Terrorism Financing Rules Instrument 2007 (No. 1)* (the AML/CTF Rules). For example, with respect to individuals and where the money laundering and terrorism financing risk is medium or lower, the AML/CTF Rules provide for an 'electronic-based safe harbour procedure'.[63]

53.66 In brief, this 'safe harbour' (in terms of compliance with the AML/CTF Rules) is available to reporting entities if they collect the customer's full name; the customer's date of birth; the customer's residential address; and verify:

(a) the customer's name and the customer's residential address using reliable and independent electronic data from at least two separate data sources; and either

(b) the customer's date of birth using reliable and independent electronic data from at least one data source; or

(c) that the customer has a transaction history for at least the past 3 years.[64]

53.67 One obvious source of electronic data in this context is credit reporting information held by credit reporting agencies. The use and disclosure of credit reporting information for these purposes, however, is not authorised by Part IIIA of the *Privacy Act*. Sections 18K and 18L place detailed limits on the disclosure of personal information by credit reporting agencies and use by credit providers respectively, and make no express provision for identity verification. The fact that credit reporting information might be used in electronic identity verification that complies with the AML/CTF Act is not sufficient to render disclosure for this purpose by a credit

---

62 The AML/CTF Act and its relationship with the *Privacy Act* is also discussed in Ch 13. Identity verification may also be required under other legislation such as the *Telecommunications Act 1997* (Cth): see, eg, Australian Communications and Media Authority, *Telecommunications (Service Provider—Identity Checks for Pre-paid Public Mobile Telecommunications Services) Determination 2000*.

63 See, *Anti-Money Laundering and Counter-Terrorism Financing Rules Instrument 2007 (No 1) 2007* (Cth) pt 4.2, [4.2.12]–[4.2.13].

64 See, Ibid pt 4.2, [4.2.13].

reporting agency 'required or authorised by or under law' for the purposes of Part IIIA.[65]

53.68 A related issue concerns anti-fraud services provided by businesses that maintain databases of personal information provided on credit and similar application forms that have been identified as suspicious. These databases are used to compare details on new credit applications (such as name, address and drivers' licence numbers) with those from previous suspect applications and provide a report back to the credit provider. IP 32 noted that these anti-fraud services may constitute a 'credit reporting business' for the purposes of Part IIIA—but this may not be widely appreciated.[66]

53.69 In IP 32, the ALRC asked what issues are raised by the possible use of credit information files for electronic identification and verification and how the use of credit information files for these purposes should be regulated.[67]

53.70 A number of stakeholders submitted that the *Privacy Act* or the AML/CTF Act should be amended to provide for the use and disclosure of credit reporting information for identification verification or in preventing or detecting identity fraud.[68]

53.71 Abacus–Australian Mutuals (Abacus) stated that the AML/CTF regulator, the Australian Transaction Reports and Analysis Centre (AUSTRAC) has confirmed that access to credit reporting agency records for electronic identity verification is 'not possible due to prohibitions contained in the Privacy Act 1988 and the status of the AML/CTF Rules as subordinate legislation'. Abacus submitted that, in light of this, an exception to allow the use of the credit reporting system may be warranted.[69]

53.72 ING Bank submitted that in order to facilitate the safe harbour contained in the AML/CTF Rules, the *Privacy Act* should be amended to allow the disclosure by a credit reporting agency, and the use by a credit provider, of credit reports in identity verification.[70] ING Bank noted that consumer credit reports are used to verify identity in the United States and the United Kingdom.

> One of the advantages of electronic verification is the ability to use several data sources to create a match. Information contained within the credit bureau is a critical data source as it provides a source to strengthen the match of a customer's identity through confirmation of date of birth and transaction history.[71]

53.73 Veda Advantage stated that electronic identity verification has been a significant focus of attention in the development of the AML/CTF Act and that the use of credit reporting information for identity verification has a clear public benefit in protecting consumers and business from harm. The company sought 'urgent measures to permit the use of credit reporting data in electronic verification for the purposes of AML/CTF laws'. In this context, Veda noted that it has developed 'a data process using public number directory, electoral roll and credit information to perform real time electronic identity verification'.[72]

53.74 The role of more comprehensive credit reporting in addressing identity verification and related issues was highlighted by GE Money, which submitted that it would 'greatly enhance credit providers' ability to detect and prevent money laundering and fraudulent activities'.[73] Others have also suggested that more comprehensive reporting may 'enable identity fraud to be detected sooner, due to improved information flows'.[74]

53.75 There is support from credit reporting agencies and credit providers for the inclusion of new categories of publicly available information in credit information files and credit reports, including for identity verification and the prevention of identity fraud. For example, it has been suggested that credit reporting agencies should be able to collect information from the electoral roll[75] and state government births, deaths and marriages registries in order to combat identity fraud.[76]

53.76 GE Money submitted that, under a more comprehensive credit reporting system, credit reporting agencies should collect more 'application form or demographic data items'—which GE Money referred to as 'extended credit application summary' (ECAS) data.

> The list of ECAS data items should be unconstrained by legislation (other than by it being fit for money-laundering or fraud prevention purposes by way of comparison to previous applications) … [77]

53.77 It was suggested that ECAS data should include at least the following items: time with employer; time with the relevant credit provider; date of birth; drivers'

licence number; number of dependents; home and work telephone numbers; time at previous address and residential status.[78]

53.78 Other submissions opposed the use or disclosure of credit reporting information for electronic identity verification,[79] or considered that any proposal to permit such use or disclosure would be premature.[80] The OPC stated that

> expansion into activities such as identification verification by credit reporting agencies would appear to be a type of 'function-creep'. The Attorney General at the time the credit reporting provisions were introduced into the *Privacy Act* highlighted the need to limit what information is allowed to be held under the credit reporting provisions. The rejection of comprehensive credit reporting by the Attorney General at the time was seen as a way of avoiding 'function-creep' arising.[81]

53.79 The Australian Privacy Foundation and Nigel Waters submitted that this issue needs to be discussed more widely, as part of broader concerns about identity management, before any proposal is made. The Australian Privacy Foundation stated that identity verification and credit reporting needs to be approached

> in the wider context of developments such as the proposed Document Verification Service, the due-diligence requirements of financial services legislation including the AML-CTF Act 2006 and similar statutory identification obligations such as under the *Telecommunications Act 1997*. No express provision should be made for credit information files to be used for identification outside the credit reporting context pending the outcome of those wider discussions.[82]

ALRC's view

53.80 The ALRC recognises the force of arguments in favour of allowing credit reporting information to be used and disclosed for identity verification and related purposes. Credit providers are concerned that, while new statutory identity verification obligations have been imposed under the AML/CTF Act, they are not authorised to obtain electronic data that would enable them to comply efficiently. In particular, the ALRC understands that credit reporting information is potentially an important source of date of birth, which is not generally available from public sector databases.

53.81 On the other hand, the AML/CTF Rules provide considerable flexibility with regard to the means of identity verification. Verification of information collected about

81 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

82 Australian Privacy Foundation, *Submission PR 275,* 2 April 2007.

a customer may be based on: reliable and independent documentation; reliable and independent electronic data; or a combination of these.[83]

53.82 A range of sources of information could be used potentially for electronic verification. These sources include those that are currently available, such as the electronic Whitepages telephone directory and registers maintained by ASIC; and those subject to regulation that acts to restrict use in electronic identity verification, such as the electoral rolls and the Integrated Public Number Database maintained by Telstra.

53.83 The use of credit reporting information for identity verification is not an entirely new idea. A credit report was worth 35 points under the 100 point identity verification test provided for under the *Financial Transaction Reports Act 1988* (Cth).[84] Such reports, however, were provided directly to institutions by the individuals concerned, with consent. The ALRC does not propose that the *Privacy (Credit Reporting Information) Regulations* prevent the disclosure by individuals of their own credit reporting information for identity verification purposes.

53.84 The use and disclosure of credit reporting information for identity verification would still constitute a significant 'function creep' and needs to be authorised specifically by legislation. There was opportunity during the legislative process that led to the enactment of the AML/CTF Act and the issuing of the AML/CTF Rules, to provide specific authorisation, but this was not done. Rather, the Government deferred consideration of the use and disclosure of credit reporting information for identity verification until after the completion of the ALRC's Inquiry.

53.85 There are arguments that, if existing electronic sources of personal information are insufficient to meet the needs of reporting entities, the Government, having imposed identity verification obligations, should look to facilitate access to government databases[85] before looking to private sector databases, such as those held by credit reporting agencies.

53.86 The ALRC needs more information about the risks, benefits and possible alternatives before making any recommendation that the use and disclosure of credit reporting information for identity verification should be authorised. The issue needs to be considered in the light of many recent developments, including the proposed Document Verification Service and the due diligence requirements of financial services legislation and other similar statutory identification obligations. Ultimately, however, the balance between privacy and the need to combat money-laundering and the

85 Including, for example, databases relating to the proposed access card. The Exposure Draft Human Services (Enhanced Service Delivery) Bill 2007 (Cth) cl 105 permits the disclosure of access card information to a person other than the individual concerned, if the individual consents to the disclosure.

financing of terrorism in this context is a policy decision. The following question is designed to assist the ALRC to formulate a recommendation in this regard.

Question 53–3 If the use and disclosure of credit reporting information for identity verification purposes is not authorised under the proposed *Privacy (Credit Reporting Information) Regulations*, what other sources of data might be used by credit providers to satisfy obligations under the *Anti-Money Laundering and Counter-Terrorism Financing Act 2006* (Cth) and similar legislation? What are the advantages and disadvantages of the alternate sources of data?

Disclosure of reports relating to credit worthiness

53.87 Section 18N applies to information contained in 'reports relating to credit worthiness'. A 'report' is defined, for the purposes of the section, as

> (a) a credit report; or
>
> (b) …any other record or information, whether in a written, oral or other form, that has any bearing on an individual's credit worthiness, credit standing, credit history or credit capacity;
>
> but does not include a credit report or any other record or information in which the only personal information relating to individuals is publicly available information.[86]

53.88 Consequently, s 18N(9) protects a broader category of information than other provisions of Part IIIA, which protect information contained in a 'credit report' or 'credit information file'. For example, while the disclosure by a credit provider of this broader category of information is protected,[87] credit providers' obligations to ensure the accuracy and security of information under s 18G apply only to information in a credit report—that is, information provided by a credit reporting agency.

53.89 In IP 32, the ALRC asked for comments on the existing statutory limits on the disclosure by credit providers of personal information contained in reports relating to credit worthiness. In particular, the ALRC asked what issues are raised by the application of s 18N of the *Privacy Act* to 'reports' and whether information relating to credit worthiness that is not contained in a credit report should covered only by the NPPs.[88]

---

86 *Privacy Act 1988* (Cth) s 18N(9).

87 See, eg *F v Credit Provider* [2003] PrivCmrA 4, where a store breached s 18N by disclosing to a customer's former partner that her account with the store was in arrears.

88 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), Questions 5–18 and 5–19.

53.90 The ALRC received relatively few comments on the regulatory reach of this provision. The CCLC submitted that definition of 'report' in s 18N(9) 'is unnecessary and must be deleted unless the appropriate consumer protections are put in place and evidence is produced that this wider definition is in the public interest'.[89] In contrast, the OPC suggested that to 'promote consistency and reduce complexity',

> Part IIIA should regulate not only the uses of personal information from a credit report by credit providers but also the uses of credit worthiness information in its entirety rather than aspects of it as currently the case. This proposal also has the benefit of making the legislation clearer so that it assists businesses to understand their legal obligations and help consumers understand their rights.[90]

ALRC's view

53.91 In effect, s 18N creates a comprehensive regime with regard to the disclosure by credit providers of personal information that may have no connection with the credit reporting system. The section applies to personal information that has 'any bearing' on an individual's credit worthiness, credit standing, credit history or credit capacity. This category of information seems broad enough to include information about, for example, an individual's income, expenditure and employment and even his or her family or school connections.

53.92 The reach of s 18N is anomalous within Part IIIA, which otherwise applies only to personal information in 'credit information files' or 'credit reports' as those terms are defined in s 6(1).[91] In this context, the second reading speech indicated that the purpose of the Bill was to establish a privacy framework for the regulation of the 'consumer credit reporting industry'.

> All records of personal information held at credit reporting agencies and information from central agencies held by credit providers such as banks, credit unions, finance companies and major retailers will be covered by the new legislation.[92]

53.93 There was no reference to the establishment of a regime regulating the disclosure of all credit worthiness information held by credit providers. This resulted from the insertion of an extended definition of 'report' following amendments to the Bill proposed by the Government in 1990.

53.94 Arguably, the extended reach of s 18N can be understood as eventuating because Part IIIA was enacted before the NPPs. Section 18N was needed to ensure there was no way to avoid the application of the new credit reporting provisions by, for example, disclosure between credit providers directly, without the intermediary of a credit reporting agency. This rationale no longer applies.

90 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

91 With the exception of *Privacy Act 1988* (Cth) s 18Q, which applies to information obtained from credit providers by certain persons.

92 Commonwealth, *Parliamentary Debates*, Senate, 16 June 1989, 4216 (G Richardson).

53.95 The ALRC is not aware of any other jurisdiction that regulates personal information relating to credit worthiness in this way. In New Zealand, for example, the *Credit Reporting Privacy Code 2004* (NZ) regulates the use and disclosure of 'credit information' by the 'credit reporters' and the definition of credit information is limited to the information that credit reporters are permitted to collect.

53.96 While credit providers are well used to considering compliance with the rules for disclosing personal information in credit reporting contexts, the scope of s 18N may not be well-known (or observed) by financial institutions and other credit providers, especially non-traditional lenders. In particular, while s 18N(1)(b) permits disclosure of information relating to credit worthiness to another credit provider for a particular purposes with the specific agreement of the individual concerned, there is no general consent exception.

53.97 While the ALRC is interested in further comment on the purposes served by s 18N, there are strong arguments that the handling of personal information relating to credit worthiness should be regulated by general privacy principles and not by the *Privacy (Credit Reporting Information) Regulations*.

53.98 In Chapter 50, the ALRC proposes that the *Privacy (Credit Reporting Information) Regulations* should apply to the handling by credit reporting agencies and credit providers of personal information maintained by credit reporting agencies and used by credit providers in assessing an individual's credit worthiness (see Proposal 50–5). Consistently, there should be no equivalent in the *Privacy (Credit Reporting Information) Regulations* of s 18N of the *Privacy Act*.

Proposal 53–4 There should be no equivalent in the proposed *Privacy (Credit Reporting Information) Regulations* of s 18N of the *Privacy Act*, which limits the disclosure by credit providers of personal information related to credit worthiness. The use and disclosure limitations should apply only to personal information maintained by credit reporting agencies and used in credit reporting.

Consent and credit reporting

53.99 While the credit reporting provisions of the *Privacy Act* do not generally require the agreement of individuals to the use or disclosure of credit reporting information about them provided notification has been given, consent is required in some contexts, which are discussed below.

Consent to disclosure of information

53.100 Part IIIA contains provisions that require the agreement of an individual to the disclosure of his or her personal information. Under s 18K, an individual's agreement, sometimes in writing, is required in relation to the disclosure by a credit reporting agency of information contained in a credit report to a:

- credit provider for the purpose of assessing an application for commercial credit;[93]
- credit provider for the purpose of assessing whether to accept an individual as a guarantor;[94]
- trade insurer for the purpose of assessing insurance risks in relation to commercial credit;[95] and
- credit provider for the purpose of collecting payments overdue in respect of commercial credit.[96]

53.101 Section 18L(4) requires an individual specifically to have agreed to a credit provider using information concerning commercial credit in assessing an application for consumer credit. Finally, under s 18N, an individual must have 'specifically agreed' to the disclosure of a credit report or other credit-worthiness information by a credit provider to another credit provider for the particular purpose;[97] to a guarantor for a loan given by the credit provider to the individual concerned;[98] and to a person considering whether to offer to act as a guarantor.[99]

Disclosure to a credit reporting agency

53.102 Part IIIA does not require that an individual consent to disclosure of information by a credit provider to a credit reporting agency.[100] An individual's consent may be required, however, by the NPPs or by common law duties of confidence owed by some credit providers to their customers.

95 Ibid s 18K(1)(e).
96 Ibid s 18K(1)(h).
97 Ibid s 18N(1)(b).
98 Ibid s 18N(1)(bg).
99 Ibid s 18N(1)(bh).
100 A credit provider must not, however, give personal information to a credit reporting agency unless the individual concerned has been informed that the information might be disclosed to a credit reporting agency: Ibid s 18E(8).

53.103 Consent to disclosure may be required—at least where the credit provider is a bank[101]—to avoid breaching the duty of confidence owed by banks to their customers. This common law duty was defined in *Tournier v National Provincial and Union Bank of England*.[102] This duty is reflected in the Australian Bankers' Association's *Code of Banking Practice*, which provides that, in addition to a bank's duties under legislation, it has a general duty of confidentiality towards a customer except in the following circumstances: where disclosure is compelled by law; where there is a duty to the public to disclose; where the interests of the bank require disclosure; or where disclosure is made with the express or implied consent of the customer.[103]

'Bundled' and 'true' consent in credit reporting

53.104 Chapter 16 discusses the role of consent in privacy regulation generally. As noted in Chapter 16, problems arise where an individual's capacity to give true consent is hampered. This issue is seen most commonly in the context of 'bundled consent'—the practice of bundling together consent to a wide range of uses and disclosures of personal information without giving individuals the option of selecting which uses and disclosures they agree to.

53.105 In IP 32, the ALRC noted concerns over the use of bundled consent whereby consent to disclose personal information to a credit reporting agency is 'bundled' into a group of other consents in credit or loan applications.[104] For credit reporting agencies and credit providers, the consents may include those required under the credit reporting provisions and the NPPs. The ALRC asked what issues are raised by the practice of credit providers seeking 'bundled consent' to a number of uses and disclosures of personal information, including in relation to credit reporting.[105]

53.106 The practice of bundled consent in the context of credit reporting was criticised in a number of submissions.[106] For example, the BFSO stated:

> We do not think that consumers can be made properly aware of their rights if consent for these purposes is bundled together with other consents. In our view, all privacy

> notifications should be clear and separate from other contractual provisions and consent for privacy purposes should not be bundled with consent for other purposes.[107]

53.107 The Australian Privacy Foundation submitted that, in credit reporting, it is particularly important that consent for secondary purposes such as marketing be clearly separated from any notification of, or consent in relation to, disclosures involved in credit risk assessment.[108] Similarly, Legal Aid Queensland noted that, in credit reporting, 'unless consents are unbundled and not impliedly linked to the provision of services, consents do not provide adequate protection for the security of a person's financial information'.[109] The CCLC submitted that the law should be clarified to ensure that

> consumers are required to consent to the credit provider accessing their credit information from a credit reporting agency and to reporting information to a credit reporting agency, including derogatory information, at the time of applying for credit, even if such consent may be a condition of securing credit. Such consents, however, should be clearly delineated into 'consents which are necessary for you to get this loan' and consents that are optional ('you may elect not to sign/consent to any of the following').[110]

53.108 Submissions from industry emphasised that bundled consent is a practical necessity in the current regulatory environment.[111] For example, the Mortgage and Finance Association of Australia (MFAA) considered that bundled consent is the 'only practical and efficient type of consent' and is needed to 'allow the financial markets to work efficiently'.

53.109 The MFAA agreed, nevertheless, that disclosure statement can be 'unreadable', but suggested that 'the creation of safe harbour provisions and a wide pro forma general consent will overcome these problems'.[112] American Express also commented on the 'longwinded' and 'cumbersome' language required on consent forms.[113]

Consent and notification

53.110 Leaving aside issues about the nature of consent and the context in which it is obtained, there are questions about whether reliance on the principle of consent to

protect the privacy of personal information in credit reporting is effective or whether alternative approaches are preferable.[114]

53.111 It was noted in submissions that, in view of the relative bargaining positions of the parties, consent obtained in a credit application process is not 'true' consent.[115] The Australian Privacy Foundation and Waters suggested that the requirements for agreement in ss 18K and 18L should be replaced with requirements for notice.

> This would acknowledge the reality that all credit providers routinely make 'agreement' to disclose a condition of loan applications. It is not therefore free and informed consent in that individuals cannot in practice proceed with an application for credit without giving their agreement to disclosure. In these circumstances it is more 'honest' and accurate to impose only an obligation to notify – as has already been done [under s 18E(8)(c)].[116]

53.112 The Consumer Action Law Centre commented that consent requirements are largely ineffective, as terms providing that the consumer consents to the disclosure of personal information for credit reporting purposes are 'included as a matter of course in standard-form credit applications'. The Centre stated:

> For this reason, the more effective way to protect consumers from inappropriate conduct is to regulate the notification of disclosure of, and the use of, personal information.[117]

ALRC's view

53.113 Concerns about the ability of individuals to make an informed and free choice about the use or disclosure of personal information have particular relevance in credit reporting. Consent, in this context, is often a condition of assessing or granting a credit application. Access to credit, whether for a housing mortgage or mobile telephone plan, is a matter of great importance to individuals and there may be significant consequences for individuals if credit is not available.

53.114 In Chapter 16, the ALRC proposes that the OPC should provide further guidance as to how an individual's consent under the *Privacy Act* may be obtained, including in credit reporting and other financial contexts.[118] This proposal responds to a need for greater clarity as to the meaning of 'consent'.

117 Consumer Action Law Centre, *Submission PR 274,* 2 April 2007.

118 Proposal 16–1.

53.115 At present, no consent is required for the collection of credit reporting information. The ALRC considers that this position should continue under the *Privacy (Credit Reporting Information) Regulations*. However, as discussed in Chapter 52, the *Privacy (Credit Reporting Information) Regulations* should provide new notification requirements.

53.116 In drafting the *Privacy (Credit Reporting Information) Regulations*, the existing provisions requiring the agreement of the individual to specific use or disclosure should be reviewed to determine whether a notification, rather than a consent, requirement may be more appropriate where true consent is not able to be given.

53.117 It should be noted, however, that some of the existing provisions apply in circumstances where consent is more appropriate than notification, particularly where consent may be requested after credit has been granted. For example, the individual concerned may have a genuine choice about whether the disclosure will be made where asked to consent to a disclosure to another credit provider,[119] or to a guarantor or prospective guarantor.[120]

Introduction

54.1 This chapter discusses the existing provisions of Part IIIA of the *Privacy Act* dealing with the data quality and security of credit reporting information and makes proposals on how these matters should be dealt with under the proposed Unified Privacy Principles (UPPs)[1] and the proposed *Privacy (Credit Reporting Information) Regulations*.

54.2 The quality of information in credit information files is of fundamental importance to individuals, given the significant consequences that may flow, in terms of future access to credit, from an adverse credit report. Data quality, in the context of credit reporting, has a number of important aspects.

1 See Part D.

- Credit reporting information may be inaccurate because the individual has been misidentified (that is, cases of mistaken identity); or information may be 'about' the correct individual, but inaccurate for other reasons.

- Credit reporting information may be accurate in objective terms, but not comply with regulatory standards relating to data quality, such as those prescribing the permitted content of credit information files.[2]

- The consistency of data reported by credit providers is an important aspect of data quality because if the same information is reported inconsistently, it may be misinterpreted more easily.

- Overdue payment information may be considered inaccurate because the debt to which the payment relates is disputed; because information relating to the same debt has been reported multiple times; or the debt has been paid but repayment has not been recorded.

54.3 In the Issues Paper *Review of Privacy—Credit Reporting Provisions* (IP 32), the ALRC noted that consumer groups and regulators have identified ongoing problems with the quality of credit information files and credit reports.[3] Submissions in response to IP 32 provided further perspectives on the extent and nature of data quality problems in the credit reporting system. These submissions are referred in the discussion below, which highlights a number of specific issues concerning data quality before discussing means to ensure and improve data quality more generally.

54.4 Where specific concerns about data quality are serious and well-defined, and the solution is reasonably clear, it may be appropriate to deal with them through specific provisions of the *Privacy (Credit Reporting Information) Regulations*. In other cases, matters may be dealt with more effectively through detailed data quality requirements in the proposed credit reporting industry code,[4] subject to the overriding obligation to ensure that credit reporting information is accurate, up-to-date, complete and not misleading.

Data quality

54.5 The proposed 'Data Quality' principle in the UPPs provides that:

> An agency or organisation must take reasonable steps to make sure that the personal information it collects, uses or discloses is, with reference to a purpose of collection permitted by the UPPs, accurate, complete, up-to-date and relevant.

---

2 *Privacy Act 1988* (Cth) s 18E.

3 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [5.48]–[5.52].

4 Proposal 50–11.

54.6 In Part IIIA, s 18G(a) provides that credit providers and credit reporting agencies have an obligation to take reasonable steps to ensure that personal information in a credit information file or credit report is 'accurate, up-to-date, complete and not misleading'.

54.7 In addition, the *Credit Reporting Code of Conduct* provides for the steps to be taken by a credit reporting agency when it becomes aware that information supplied by a credit provider may be inaccurate. If the agency believes that other credit information files may contain similar inaccurate listings it must, as soon as practicable, notify the credit provider and request the credit provider to investigate the accuracy of other files that may be similarly affected.[5]

Default reporting—timing and calculation

54.8 Section 18E(1)(b)(vi) permits the inclusion in credit information files of information about credit where the individual is at least 60 days overdue in making a payment and the credit provider has taken steps towards recovery of the amount outstanding. There is no maximum period of time before which an overdue payment must be listed.[6]

54.9 The default reporting practices of credit providers vary considerably.[7] Submissions emphasised the need for more consistency in relation to the timing of default reporting; and in calculating the amount of the debt reported. For example, the Consumer Credit Legal Centre (NSW) Inc (CCLC) expressed concern that credit providers may list overdue payments or other debts 'a few months, weeks or even days' before they become statute barred.

> The effect of this is to extend the adverse consequences of the default nearly five (or seven in the case of a listing for a 'serious credit infringement') years beyond the limitation period. This is inconsistent with the policy prohibiting the listing of statute barred debts and should not be allowed.[8]

54.10 Several submissions suggested that regulation should provide for a maximum period of time before which an overdue payment must be listed.[9] In this context, the Telecommunications Industry Ombudsman (TIO) noted that, in its experience, there can be a significant delay (of three years or more in some cases) between a payment

9 Legal Aid Queensland, *Submission PR 292,* 11 May 2007; Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007; Consumer Credit Legal Centre (NSW) Inc, *Submission PR 255,* 16 March 2007; Consumer Credit Legal Centre (NSW) Inc, *Credit Reporting Research Report* (2007), rec 12; Telecommunications Industry Ombudsman, *Submission PR 221,* 8 March 2007.

falling due and a telecommunications provider reporting the default to a credit reporting agency.[10]

54.11 The Consumer Action Law Centre, CCLC and Legal Aid Queensland all recommended that regulation provide that defaults must be listed within 12 months.[11] Legal Aid Queensland stated that one benefit of such a limitation was that this 'would prevent a debt collector taking assignment of a debt relisting the debt'.[12]

54.12 Submissions also commented on uncertainty about the amount of debt that should be reported. As AAPT explained:

> The issue of the 'oldest debt rule' is unclear. To give an example, if a customer currently owed us $30, and $50 was owing over 30 days, and $200 was owing over 60 days, once the 60 days passed, it is our understanding that only the $200 debt can be listed. Some suppliers consider that the entire debt owing at that 60 day point can be listed, and this is an issue that we would like to see addressed in the legislation.[13]

54.13 The position is complicated by the fact that some credit contracts have acceleration clauses. An acceleration clause is a term of a contract providing that on the occurrence or non-occurrence of a particular event (such as an overdue payment), the credit provider becomes entitled to immediate payment of all, or a part of, an amount under the contract that would not otherwise have been immediately payable.[14]

54.14 The OPC confirmed its view that, under s 18E(1)(b)(vi), 'the aggregate components of the listed amount must all be 60 days overdue'. The OPC suggested, nevertheless, that this provision may 'need to be re-drafted to make this position clearer'.[15] The BFSO also submitted that credit reporting regulation should provide clearly that the total amount of debt reported must be 60 days overdue at the time the listing is made.[16]

54.15 Legal Aid Queensland noted that the requirement for overdue payments to be more than 60 days overdue before listing has 'created problems for consumers who question why the amount shown on their credit report is different to that demanded by the creditor'.

> We would support changes so that if a person is 60 days in arrears on a payment and the whole of the debt is capable of being called up, then the totality of the debt should be listed rather than a further overdue payment. This would more accurately reflect

ALRC's view

54.16 The ALRC understands that credit providers, through the Australasian Retail Credit Association (ARCA), have been examining ways to reconcile differences between credit providers' internal accounting and reporting procedures and the default reporting allowed by the credit reporting provisions of the *Privacy Act*. ARCA's aim is to encourage credit providers to move to a consistent default reporting standard, based on reporting the full amount outstanding at the time of listing.[18]

54.17 The ALRC agrees that consistency in the timing and calculation of default reporting is a matter that should be pursued through a credit reporting industry code. It is more likely than not that an attempt to prescribe approaches to these matters by regulation would create other difficulties and ambiguities, as shown by the experience of s 18E(1)(b)(vi). Nevertheless, if industry self-regulation is not successful in addressing the existing problems, further regulation should be considered—at least with respect to some basic elements of default reporting, such as time limits and requirements to report the full amount outstanding at the time of listing.

Multiple listing

54.18 Multiple adverse listings in respect of the same debt on credit information files may occur for a range of reasons. In IP 32, the ALRC noted the following examples:[19]

- A credit provider lists an overdue payment and then makes further listings to update the amount or record another overdue payment for the same debt. This can extend the period that an overdue payment listing remains on a credit information file—potentially to the maximum term of the loan plus the five year period prescribed by s 18F(2)(c).

- A credit provider assigns a debt and the assignee automatically lists the overdue payments without checking whether the credit provider has already listed the debt; or because the assignee uses information different from that used by the original credit provider—making it difficult to determine whether the debt is the same debt.

- A credit provider lists an overdue payment and later lists a serious credit infringement with respect to the same debt. This can extend the period that an

> adverse listing remains on a credit information file—potentially to five years plus the seven year period prescribed by s 18F(2)(g).

54.19 Submissions confirmed a continuing problem with multiple listings.[20] For example, Legal Aid Queensland stated that:

> A common complaint by consumers is that a debt was relisted when it was sold to an assignee. Unless they have a copy of their credit report from the relevant time period, they are unable to show that the listing was made twice. [21]
