54.20 The TIO noted that it is not uncommon for consumers to have multiple contacts with a telecommunications service provider in order to make repayment arrangements. This can sometimes lead to multiple default listings, extending the period of adverse listing for the same debt.[22]

54.21 Nigel Waters of the Cyberspace Law and Policy Centre UNSW submitted that there could be an obligation on assignees to take reasonable steps to check whether the original credit provider has already listed an overdue payment, and an obligation on credit providers assigning debt to inform the assignee which if any of the assigned debts have been reported to a credit reporting agency. Waters added:

> All these suggested new requirements (and some existing ones) might be facilitated by a system of identifiers for loans (as opposed to borrowers). This should be explored with the finance industry.[23]

54.22 The CCLC considered that the law should clarify that changes to amounts owing should be made by updating the original default—that is, by altering rather than adding information.[24] Waters also suggested that

> a clear distinction could be made between marginal changes in the amount owing on a single debt (often as a result of fees and charges) and a second default on the same loan … separated by a period of 'normal' repayments. It is legitimate for such second defaults … to be listed separately whereas it is in no-one's interests for a single default to be reported and recorded multiple times.[25]

54.23 The Consumer Action Law Centre stated that multiple listings should be subject to a harsher penalty than other breaches of credit reporting regulation because multiple listings are

> damaging both to the individual concerned and to the integrity of the credit reporting system, while at the same time are preventable if credit providers and [credit reporting agencies] have the appropriate systems in place to ensure accurate data regarding matters such as account names and numbers.[26]

ALRC's view

54.24 In IP 32, the ALRC noted that the credit reporting provisions do not clearly prohibit multiple listing.[27] The OPC takes the view—based on the interaction between ss 18E and 18F—that multiple listings for the same default are not permitted by Part IIIA.[28]

54.25 The OPC supported, nevertheless, the introduction of a specific provision to prohibit multiple listings in relation to the same default. The OPC also suggested that credit reporting regulation should allow a credit provider to update the amount of the default on an individual's credit information file, without an additional listing being made.[29] This idea received support in other submissions.[30] For example, Legal Aid Queensland stated:

> A credit provider should be prohibited from listing the same debt on multiple occasions. Updating details as to the amount owing and current ownership of the debt should be encouraged but it is important to advise consumers who the original creditor was for them to determine whether they had any relationship with the creditor.[31]

54.26 The multiple listing of the same debt would probably constitute a breach of the requirements that credit reporting information be 'accurate' and 'not misleading'. A separate legislative prohibition on multiple listing may, therefore, not be necessary. Again, however, if industry self-regulation is not successful in addressing the existing problems with multiple listing further regulation should be considered.

Statute barred debts

54.27 Another data quality issue concerns the listing of statute barred debts. The *Credit Reporting Code of Conduct* states that a credit provider must not give to a credit reporting agency information about an individual being overdue in making a payment

where recovery of the debt by the credit provider is barred by the statute of limitations.[32]

54.28 Section 18E(1)(ba)(i) prevents statute barred debts from being listed against a guarantor's credit information file. There is, however, no parallel provision applying to the credit information files of other individuals. In IP 32, the ALRC noted that this anomaly may need to be addressed.[33]

54.29 A range of comments about statute barred debts were made in submissions. Min-it Software, which provides software for the micro-lending industry, stated that:

> we have seen instances where a default could have 4 or more references relating to it but each of which extends the statute barring period. It is our opinion this is an abuse of process by the credit reporting agencies. They have allowed this situation to occur simply because the listings are recorded by increasing date … One simple way around this would be to allocate a unique number to each default.[34]

54.30 MasterCard Worldwide (MasterCard) also proposed that legislation should require credit reporting agencies to delete default listings after a period of time has elapsed since the event occurred, rather than a period since the default was reported to the agency[35] as is currently the case under s 18F(2). Other submissions agreed that credit reporting regulation should prohibit expressly the listing of statute barred debts and ensure that borrowers and guarantors are treated consistently.[36]

ALRC's view

54.31 The rationales for statutory limitation periods on the enforceability of debts have been described as follows:

> First, as time goes by, relevant evidence is likely to be lost. Second, it is oppressive, even 'cruel', to a defendant to allow an action to be brought long after the circumstances which gave rise to it have passed. Third, people should be able to arrange their affairs and utilise their resources on the basis that claims can no longer be made against them … The final rationale for limitation periods is that the public interest requires that disputes be settled as quickly as possible.[37]

35 MasterCard Worldwide, *Submission PR 237,* 13 March 2007.

36 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007; N Waters—Cyberspace Law and Policy Centre UNSW, *Submission PR 277,* 3 April 2007; Consumer Action Law Centre, *Submission PR 274,* 2 April 2007.

37 *Brisbane South Regional Health Authority v Taylor* (1996) 186 CLR 541, 553 cited in Australian Securities and Investments Commission, *Collecting Statute-Barred Debts: An ASIC Report* (2005), 6.

54.32 While making an adverse credit listing is not to be equated with taking legal action to recover a debt, both actions may have negative consequences for the individual concerned and, with the passage of time, be more difficult to contest. Allowing the listing of statute barred debts on credit information files may be inconsistent with the public policy behind statutory limitation periods. The ALRC proposes that the *Privacy (Credit Reporting Information) Regulations* should prohibit expressly the listing of statute barred debts.

Proposal 54–1 The proposed *Privacy (Credit Reporting Information) Regulations* should prohibit expressly the listing of any overdue payment where the credit provider is prevented under any law of the Commonwealth, a State or a Territory from bringing proceedings against the individual to recover the amount of the overdue payment.

Schemes of arrangement

54.33 In IP 32, the ALRC noted that there is some ambiguity about the application of credit reporting provisions where the individual enters into a new arrangement with the credit provider to repay the debt, such as by entering into a scheme of arrangement.[38] Under the *Credit Reporting Code of Conduct*, a note indicating that a scheme of arrangement has been entered into by the individual and a credit provider may only be listed where an overdue payment or serious credit infringement has previously been listed.[39]

54.34 The OPC has stated, in its credit reporting advice summaries, that where a scheme of arrangement is entered into the 'new situation is not regarded as being information about the same default as the original entry'.[40] Therefore, if payments become overdue under the new arrangement, a new default entry may be listed and remain on the individual's credit information file for a further five year period. The OPC has recommended that this advice should be reviewed.[41]

54.35 The ALRC asked for comments on whether legislation should clarify the application of Part IIIA to payments under new arrangements with respect to the same

38 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [5.38].
39 Office of the Federal Privacy Commissioner, *Credit Reporting Code of Conduct* (1991), [2.10].
40 Office of the Privacy Commissioner, *Credit Reporting Advice Summaries* (2001), [9.3].
41 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

debt.[42] In response, the Energy and Water Ombudsman NSW (EWON) stated that it would support legislative clarification to

> ensure that if a credit provider (such as an energy retailer) re-lists the same debt (or part of the same debt) with a credit reporting agency, that any time the debt has already been listed for is deducted from the standard five year listing period.[43]

54.36 While MasterCard submitted that the position set out by the OPC should continue,[44] other submissions agreed that listing a default under a scheme of arrangement should not commence a new five year listing period.[45] Both these approaches may be criticised. If an overdue payment under a scheme of arrangement recommences a new five year listing period, an individual may be subject to adverse credit reporting information resulting from a default first made ten (or more) years ago. On the other hand, if a new listing period is not commenced, an individual's credit reporting information may not show that the individual is in default under a scheme of arrangement because the time period for the original debt has expired.

54.37 In the ALRC's view, the preferable position is that a new listing period should commence. This is consistent with the OPC's interpretation of the existing provisions of Part IIIA. Any other position may lead to confusion about what constitutes the 'same' debt, including for example, where several debts are consolidated.

54.38 The *Privacy (Credit Reporting Information) Regulations* should provide that where the individual has entered into a new arrangement with a credit provider to repay an existing debt, such as by entering into a scheme of arrangement with the credit provider, an overdue payment under the new arrangement may be listed and remain part of the individual's credit reporting information file for the full five year period permissible under the regulations.

54.39 For these purposes, a new credit arrangement should mean a formal written arrangement involving a substantial renegotiation of the terms of the loan. An arrangement would normally involve a significant variation of the individual's obligations with regard to one or more of the main elements of the contract such as the period of the loan, or the size and frequency of repayments.[46]

54.40 A related issue is whether regulation should permit a scheme of arrangement to be listed on an individual's credit information file without the need for a default to be listed first. It has been suggested that such a listing could be made subject to a shorter retention period than other adverse listings. The perceived advantage of such a reform

46 See Office of the Federal Privacy Commissioner, *Credit Reporting Code of Conduct* (1991), [55E]. This would include changes to a debtor's obligations under *Consumer Credit Code* ss 66–67.

is that it would encourage credit providers to assist individual consumers to manage potential default and avoid the detrimental implications of a default listing. The CCLC noted that any such proposal would need to 'balance the prevention of over-indebtedness with the desirability of preserving consumer options to reduce their financial difficulties by refinancing on more favourable terms'.[47]

54.41 The ALRC observes that such a move would also require a change to the existing permissible content of credit reporting information under s 18E of the *Privacy Act* and to the maximum permissible periods of retention set out in s 18F. The ALRC has not received any formal submissions in favour of such a reform, and is not convinced of its benefits.

Proposal 54–2 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that where the individual has entered into a new arrangement with a credit provider to repay an existing debt, such as by entering into a scheme of arrangement with the credit provider, an overdue payment under the new arrangement may be listed and remain part of the individual's credit reporting information file for the full five year period permissible under the regulations.

Improving data quality

54.42 A range of comments were made in submissions about ways to ensure or improve the data quality of credit reporting information; including audits of credit reporting information, and the imposition of new obligations on credit reporting agencies.

Auditing credit reporting information

54.43 The audit of credit reporting information may assist to ensure data quality. Under the Act, the Privacy Commissioner has the function of auditing credit information files and credit reports held by credit reporting agencies and credit providers.[48] As discussed in IP 32, no credit reporting audits have been conducted since 2003–04.[49] The OPC review of the private sector provisions of the *Privacy Act*

47 Consumer Credit Legal Centre (NSW) Inc, *Submission PR 255,* 16 March 2007; Consumer Credit Legal Centre (NSW) Inc, *Credit Reporting Research Report* (2007), 110, rec 26.

49 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [4.20]–[4.21].

noted that the priority given by the OPC to its complaint-handling functions has diverted resources from other areas of responsibility, including auditing.[50]

54.44 In IP 32, the ALRC asked how the Privacy Commissioner's powers to audit credit information files and credit reports operate in practice, and whether these audit powers are adequate.[51] In response, the Consumer Action Law Centre advocated strongly that the Australian Government allocate more resources to the OPC to perform its auditing functions.

> In the credit reporting regulatory scheme, the OPC is both the complaints handler and the regulator. It is therefore even more important that it identify systemic issues or incidents of non-compliance with the scheme and take action where appropriate. Undertaking audits is the key way in which information about non-compliance may be obtained proactively, with complaints received the key way in which such information is obtained reactively.[52]

54.45 Other submissions also emphasised the importance of the OPC's audit function in the credit reporting context.[53] The CCLC recommended that there should be 'adequate priority and resources' given to the audit functions of the OPC. The CCLC stated that, in addition to the importance of audits in identifying systemic issues,

> many aspects of the credit reporting system are essentially invisible because the interactions between the credit reporting agencies and their subscribers consist of private commercial arrangements and processes to which consumers or their representatives are not privy. There is considerable potential for the law to be breached without giving rise to any complaint because those affected (the end consumer of credit products) may have no awareness that a particular practice is happening. There is no effective way of monitoring compliance with these provisions apart from a system of regular, robust and independent audits.[54]

54.46 As discussed in Chapter 44, the power to audit is an important tool that the OPC should be able to use for a range of compliance purposes, not limited to credit reporting contexts. At present, however, the *Privacy Act* contains no general OPC power to audit the privacy compliance of organisations. The ALRC proposes that the *Privacy Act* be amended to provide for such a broader audit power,[55] which would encompass the existing powers to audit credit information files and credit reports held by credit reporting agencies and credit providers.

54 Consumer Credit Legal Centre (NSW) Inc, *Credit Reporting Research Report* (2007), 159.

55 Proposal 44–6.

54.47 Auditing credit reporting information in order, for example, to assess data quality, is complex and resource intensive. In practice, audit by a regulator may not be sustainable. One submission noted that given the scale of the credit reporting system 'it is unlikely that the OPC would ever have sufficient time, funding or resources to effectively carry out privacy audits'.[56] It was suggested that the solution

> is for third-parties to carry out the privacy audits on behalf of the OPC either under licence or as registered privacy auditors. This would allow the OPC to retain control of the privacy audit function while at the same time relieving it of the burden of trying to undertake such audits itself.[57]

54.48 International credit reporting agency Experian noted that, in the United Kingdom, the Information Commissioner does not have a specific right of audit of credit reporting agencies, and

> If they did it would be virtually impossible to conduct such an audit such is the complexity of the agreements and the operating systems both at lenders and credit reporting agencies.[58]

54.49 Another possibility, suggested in a number of submissions, is to place more formal obligations on credit reporting agencies to ensure the data quality of information provided by their subscribers, including through audit processes.[59] The CCLC recommended that credit reporting agencies should be 'required to bear the cost of regular, independent audits of their operations to ensure compliance with the law and data quality standards and to report the outcomes of such audits'.[60] The Australian Privacy Foundation submitted that credit reporting agencies should be required to include data quality obligations in subscriber agreements; monitor and conduct regular checks on quality; and investigate any possible breaches.[61]

54.50 Other submissions focused on self-auditing by credit providers. Legal Aid Queensland stated that self-audits would include:

- a requirement to document internal compliance mechanisms;
- internal compliance mechanisms would include manuals, training and an audit program; and

61 Australian Privacy Foundation, *Submission PR 275,* 2 April 2007.

- an obligation to develop systems to recognize and deal with and if necessary, report systemic breaches of the Act and any ancillary Code.[62]

54.51 The OPC stated that it supported the continuation of the Privacy Commissioner's power to conduct audits of credit reporting activities but also recommended 'the promotion of self-auditing for credit reporting compliance within the credit reporting industry'.[63]

Other means of improving data quality

54.52 A range of comments were made about other means to improve the data quality of credit reporting information. ARCA and Veda Advantage referred to the proposed implementation by credit providers and credit reporting agencies of new industry credit reporting software standards.[64]

54.53 Another observation was that a more comprehensive credit reporting system would help to improve data quality.[65] For example, MasterCard stated:

> Overseas evidence suggested that inaccuracies are 'washed out' by the more regular update of an individual's record. Indeed we understand that the vast bulk of credit record errors relate to the consumer's name (such as spelling) and address. With the implementation of more sophisticated screening software (as will be required to support comprehensive credit reporting), and greater competition in the credit reporting industry … such errors will be drastically reduced.[66]

54.54 Veda Advantage noted that increased 'consumer engagement' with their credit reports under more comprehensive reporting would enhance data quality.[67] GE Capital Finance Australasia Pty Ltd (GE Money) referred to improvements in data accuracy resulting from wider use of fully automated reporting systems. GE Money stated that increased transparency to consumers and improved data quality are 'likely to decrease disputed "negative" entries on credit files'.[68]

54.55 Credit reporting agencies and credit providers referred to the benefit, in terms of maintaining the accuracy of credit reporting information, of access to personal information in databases maintained by governments.[69] Submissions referred, for

example, to the value in collecting, and matching, personal information from drivers' licence databases; registers of births, deaths and marriages; and electoral rolls.[70]

54.56 A related issue concerns the linking of credit information files. Credit reporting information may be inaccurate because the individual has been misidentified and credit reporting agencies may seek to avoid misidentification by linking files. For example, Veda Advantage stated that, where an individual 'uses two or more sets of identity details to obtain credit, we will hold a file for each identity and link them via a cross reference segment'. Veda observed:

> Although there are many legitimate reasons for an individual to change their identity details, analysis shows that the presence of a cross reference is associated with a 37% higher probability that one or both files will contain derogatory data.[71]

54.57 In practical terms, the linking of files means that when an affected individual makes a credit application and the credit provider makes an inquiry, all the linked files can be accessed.[72] The OPC suggested that the ALRC consider whether there should be provisions to regulate the linking of credit information files.[73]

54.58 The OPC has expressed concern that individuals may not be notified when their credit information file has been linked, and are unlikely to become aware of the linkage unless they are refused credit.

> The Office has received several complaints about this issue. The practice of linking files in this way appears to be a gap in the privacy protections in Part IIIA. The Office also understands that credit reporting agencies may link personal information in credit files based on information supplied by third parties. However, these third-parties do not appear to have any obligations under Part IIIA of the *Privacy Act* to ensure the accuracy of the information that they supply to a credit reporting agency.[74]

Data quality obligations of credit reporting agencies

54.59 In IP 32, the ALRC noted suggestions that further obligations should be placed on credit reporting agencies to ensure the data quality of credit reporting information,[75] including that supplied to them by credit providers. The ALRC also noted that the New Zealand *Credit Reporting Privacy Code 2004* (the NZ Code) provided one model for

---

70 The ALRC proposes that the *Privacy (Credit Reporting Information) Regulations* should permit credit reporting information to include publicly available information (see Proposal 52–6). The disclosure of personal information from particular sources for credit reporting purposes should, however, continue to be regulated by the general provisions of the *Privacy Act* (and the proposed UPPs) or by state and territory privacy or other legislation, such as that dealing with registries of birth, deaths and marriages.

71 Veda Advantage, *Submission PR 272,* 29 March 2007.

72 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

73 Ibid.

74 Ibid.

75 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [5.55].

the imposition of such obligations.[76] Under the NZ Code, as part of a data quality rule applying to credit reporting agency, agencies must:

> (b) establish and maintain controls to ensure that, as far as reasonably practicable, only information that is accurate, up to date, complete, relevant, and not misleading is used or disclosed;
>
> (c) monitor information quality and conduct regular checks on compliance with the agreements and controls;
>
> (d) identify and investigate possible breaches of the agreements and controls;
>
> (e) take prompt and effective action in respect of any breaches that are identified; and
>
> (f) systematically review the effectiveness of the agreements and controls and promptly remedy any deficiencies.[77]

54.60 The Australian Privacy Foundation said that it agreed with the analysis of consumer groups that 'there are too few incentives, and too few sanctions to ensure compliance with the data quality obligations', and submitted that the imposition of obligations similar to those in the NZ Code is desirable.[78]

54.61 The OPC recommended the introduction of new obligations on credit reporting agencies to take reasonable and proactive steps to maintain the accuracy of credit reporting information. The OPC suggested that these provisions could be modelled on those that currently exist in the NZ Code. The OPC also suggested that it produce guidance for credit providers and credit reporting agencies about what measures are considered to be 'reasonable steps' to promote and maintain the accuracy of credit reporting information.[79]

54.62 The CCLC stated that the law should clearly define the responsibilities of credit reporting agencies, including in relation to data quality control.[80] The CCLC recommended, more generally, that 'all subscribers to the credit reporting system should be required to subscribe to a Code of Practice which addresses hardship policies and procedures in broad terms, is subject to monitoring and compliance mechanisms, and is taken into account in the decisions of an approved EDR Scheme'.[81]

54.63 In contrast, other submissions suggested that the existing obligations with regard to data quality are sufficient. EnergyAustralia stated that it 'is hard to see how further regulation could ensure greater accuracy on the part of credit providers', especially 'without a unique identifier or a database against which details can be cross-

---

76 The NZ Code requires credit reporting agencies to enter into subscriber agreements that comply with the provisions of a schedule to the Code: *Credit Reporting Privacy Code 2004* (NZ), r 8(3)(a), sch 3.

81 Ibid, rec 25.

checked'.[82] Dun and Bradstreet also stated that current regulation concerning the accuracy of credit information files is sufficient.[83]

ALRC's view

54.64 Much of the information contained in credit information files, and provided by agencies to their subscribers in credit reports, is reported to the agencies by credit providers. Credit reporting can be described, to some extent, as operating on an 'honour system'—in that credit reporting agencies do not check the accuracy of the information given to them by credit providers.[84]

54.65 Consumer groups have expressed concerns that there is no adequate incentive for credit reporting agencies or credit providers to correct systemic flaws in the credit reporting, in part because the cost of dealing with a small number of complaints is less than the cost of ensuring the data is accurate in the first place.[85]

54.66 The ALRC considers that it is important that credit reporting agencies take more responsibility for the ensuring the data quality. This imperative is recognised by agencies themselves. Veda Advantage stated, for example, that a statutory obligation on the credit reporting agencies to be satisfied that credit providers are able to comply with data quality obligations would 'help ensure regulatory objectives are met'.[86]

54.67 The ALRC proposes that the *Privacy (Credit Reporting Information) Regulations* impose obligations on credit reporting agencies to monitor the data quality of information provided to them by credit providers, including through audits. The ALRC considers that a provision containing similar obligations to those contained in the NZ Code should be included in the *Privacy (Credit Reporting Information) Regulations*, to encourage the development of audit and other processes to ensure data quality.

Proposal 54–3 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that credit reporting agencies must:

(a) enter into agreements with credit providers that contain obligations to ensure data quality in the information credit providers provide to credit reporting agencies;

82 EnergyAustralia, *Submission PR 229,* 9 March 2007.
83 Dun & Bradstreet (Australia) Pty Ltd, *Submission PR 232,* 9 March 2007.

85 See, eg, Ibid; Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 135.
86 Veda Advantage, *Submission PR 272,* 29 March 2007.

(b) establish and maintain controls to ensure that only information that is accurate, complete, up-to-date and relevant is used or disclosed;

(c) monitor data quality and audit compliance with the agreements and controls; and

(d) identify and investigate possible breaches of the agreements and controls.

Regulating data quality

54.68 As noted above, the data quality obligation in Part IIIA[87] and the proposed 'Data Quality' principle are similar. It may be argued that the proposed 'Data Quality' principle is adequate to cover credit reporting information without the need for separate provisions in the *Privacy (Credit Reporting Information) Regulations*.

54.69 Although these requirements are broadly similar, there remain some important distinctions. While s 18G(a) provides an additional requirement that personal information be 'not misleading', the 'Data Quality' principle provides an additional requirement that personal information be 'relevant'. The reasons for the formulation preferred in the UPPs are set out in Chapter 24. Whether this formulation is appropriate in the context of credit reporting information is another question.

54.70 Another issue is that s 18G requires credit reporting agencies to 'take reasonable steps' to ensure the accuracy of information. It may be suggested that, given the high volume of information handled by credit reporting agencies this may 'beg the question of what they may "reasonably" do'[88]—and whether more detailed obligations are required.

ALRC's view

54.71 The ALRC considers that the existing formulation of the data quality obligation set out in s 18G(a) should be retained in the *Privacy (Credit Reporting Information) Regulations*. In particular, the requirement that credit reporting information be 'not misleading' is significant. For general privacy protection purposes such a requirement may be too ill-defined and produce unnecessary dispute. In the credit reporting context, however, information may be 'accurate' but misleading in relation to the credit worthiness of an individual. This may be, for example, due to circumstances surrounding a default listing, such as a billing failure on the part of the credit provider. Further, the relevance requirement contained in the proposed 'Data Quality' principle

87 *Privacy Act 1988* (Cth) s 18G(a).

88 Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005), [5.11].

is unnecessary as the *Privacy (Credit Reporting Information) Regulations* will continue to prescribe the permissible content of credit reporting information.

54.72 There is consensus between industry and consumer groups about the importance of ensuring quality of credit reporting information. As stated by Abacus–Australian Mutuals, ensuring data quality is 'one of the biggest challenges for all users—consumers and business alike—of the credit reporting systems'.[89] The CCLC noted:

> Inaccuracies disadvantage consumers because they create the potential to be unfairly denied credit and pursued for debts that do not belong to them. It also disadvantages credit providers because they are less able to rely on credit report information as an accurate gauge of a person's creditworthiness and leads to inefficiencies in the credit system.[90]

54.73 There is less agreement about the extent of existing data quality problems, or what should be done to remedy them. Submissions from consumers and industry highlighted a range of problems with the accuracy, timeliness and completeness of credit reporting information. On the other hand, some degree of data inaccuracy may be expected in a high-volume and complex information processing environment such as credit reporting. Veda Advantage submitted:

> Despite the anecdotal evidence to the contrary, independent research demonstrates that the data quality is very high given the highly transactional nature of the data base with over 80,000 real time transactions a day.[91]

54.74 Determining whether particular credit reporting information is 'accurate, up-to-date, complete and not misleading' is not always a simple matter. For example, where a debt is disputed, the 'accuracy' of the information may be dependent on a determination of the legal rights of the parties. Information may be 'accurate' in terms of reflecting, for example, the amount owed by an individual at the time a credit report is issued, but not comply with data quality standards because the individual is not 60 days overdue, as required by the legislation.[92]

54.75 The concept of completeness is also problematic, for example, in relation to the timing of default reporting. There is a tension, in this context, between the use of credit reporting in credit risk assessment and debt management (and debt collection). At the risk assessment 'front-end', the concern of credit providers is that the credit report provides up-to-date and complete information relevant to the credit worthiness of the individual to whom it relates. Once an individual has gone into arrears, however, a

90 Consumer Credit Legal Centre (NSW) Inc, *Credit Reporting Research Report* (2007), 123.

91 Veda stated that a 2006 pilot study of 400 consumers who had recently obtained a copy of their credit information file showed: 95% of the credit file segments were entirely accurate; 4% contained a minor error, such as incorrect spelling of personal details; and 1% reported a major error with their file, such as an incorrect credit inquiry or default report listing: Veda Advantage, *Submission PR 272,* 29 March 2007.

92 *Privacy Act 1988* (Cth) s 18(1)(vi)(A).

credit provider's decision on whether to list the default may be subject to other considerations—including how best to encourage repayment or to manage overcommitment (for example, through a scheme of arrangement).

54.76 Privacy principles should ensure that credit reporting agencies and credit providers are obliged to take reasonable steps to ensure the data quality of credit reporting information. The complexity of data quality issues in credit reporting means that more prescriptive regulation is generally undesirable. Prescriptive requirements may unnecessarily increase the cost of compliance with the *Privacy Act* and transaction costs in the finance industry generally, without any significant benefit in terms of data quality.

54.77 Rather, with some exceptions—as in the case of the listing of statute barred debts—it is considered more appropriate to leave detailed data quality requirements to be dealt with in the proposed credit reporting industry code, developed with input from consumer groups and regulators. If the proposed review indicates that industry self-regulation is not successful in addressing data quality problems such as those discussed in this chapter, however, further regulation should be considered.

Proposal 54–4 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that credit providers and credit reporting agencies have an obligation to take reasonable steps to ensure that credit reporting information is accurate, up-to-date, complete and not misleading.

Proposal 54–5 The credit reporting industry code (see Proposal 50–11) should promote data quality by mandating procedures to ensure consistency and accuracy in the reporting of overdue payments and other personal information by credit providers. These procedures should deal with matters including:

(a) the timeliness of the reporting of personal information, such as overdue payments;

(b) the calculation of overdue payments for credit reporting purposes;

(c) obligations to prevent the multiple listing of the same debt;

(d) the updating of personal information reported, including where schemes of arrangement have been entered into; and

(e) the linking of credit reporting information where it is unclear whether the information relates to more than one individual with similar identifying details or to one individual who has used different identifying details.

Proposal 54–6 The proposed review of the *Privacy (Credit Reporting Information) Regulations* after five years' of operation (Proposal 51–3) also should consider whether further regulation is required to ensure the data quality of credit reporting information.

Deletion of credit reporting information

54.78 The proposed 'Data Security' principle provides that an agency or organisation must take reasonable steps to 'destroy or render non-identifiable personal information if it is no longer needed for any purpose permitted by the UPPs'. Part IIIA of the *Privacy Act*, in contrast, contains detailed provisions requiring credit reporting agencies to ensure that personal information contained in credit information files is deleted after the expiry of maximum permissible periods set out in s 18F.[93] For example:

- information about overdue payments must be deleted five years after the day on which the credit reporting agency was informed of the overdue payment concerned;[94]
- information that, in a credit provider's opinion, an individual has committed a specific serious credit infringement must be deleted seven years after the information was included in the credit information file;[95] and
- a record of a bankruptcy order must be deleted seven years after the order was made.[96]

54.79 In IP 32, the ALRC asked how the deletion of personal information in credit information files should be regulated.[97] In response, the Australian Privacy Foundation submitted that new credit reporting regulation should 'provide for, and in some cases mandate, earlier removal of default listings for smaller debts and in a range of other "mitigating" circumstances'.[98]

54.80 More generally, the Australian Privacy Foundation and Nigel Waters favoured a 'finer-grained' credit reporting regime, with differential collection and access rules.

---

93 These periods are summarised in Ch 49.
94 *Privacy Act 1988* (Cth) s 18F(2)(c).
95 Ibid s 18F(2)(g). The definition of 'serious credit infringement' is discussed in Ch 52.
96 Ibid s 18F(2)(f).
97 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), Question 5–4.
98 N Waters—Cyberspace Law and Policy Centre UNSW, *Submission PR 277,* 3 April 2007; Australian Privacy Foundation, *Submission PR 275,* 2 April 2007.

This regime, it was said, needs to be accompanied by a 'more graduated' set of retention periods.[99]

54.81 The OPC made a range of suggestions for more graduated retention periods, linked to the monetary amount of default listings.

> The provisions do not differentiate between adverse listings for minor sums and large sums. This means that in some cases even if the monetary amount in question is quite small the consequences for the individual in attracting an adverse credit listing could be serious as such a listing will persist for five or seven years.[100]

54.82 The OPC suggested that the listing period for defaults be reduced from five and seven years to periods of two and four years, respectively, for minor monetary amounts. The OPC also submitted that the ALRC consider shorter credit listing timeframes for minors.[101]

54.83 The CCLC recommended that, if telecommunications services providers are to retain access to the credit reporting system, default listings for non-credit services such as telecommunications should be removed after two years.[102]

54.84 One credit provider, ING Bank, expressed concern about the impact of the retention periods prescribed by s 18F of the *Privacy Act* on identity verification. Section 18F, it was said,

> will potentially exclude customers, who do not represent a money laundering/terrorist financing risk, from being electronically verified if they have not applied for credit in some years.[103]

ALRC's view

54.85 The retention periods prescribed by s 18F of the *Privacy Act* provide an important protection for consumers. The consequences of an adverse listing can be serious and it is important that, after some reasonable period of time, the information should be considered spent, allowing the individual to 'repair' their credit record.

54.86 It would not be appropriate, in this context, to rely on the general provisions of the 'Data Security' principle, as this would leave credit reporting agencies with too

103 ING Bank, *Submission PR 230,* 9 March 2007. See Ch 53 on the use of credit reporting information in electronic identity verification.

much discretion. One submission noted that the regulation of retention periods is 'an area in which more rather than less prescription is desirable'.[104]

54.87 The ALRC does not consider, however, that there is any compelling case for any major change to the existing retention periods. Credit reporting information technology systems are built around these retention periods and changes may involve significant transition costs. The ALRC proposes that the *Privacy (Credit Reporting Information) Regulations* should provide for the deletion of different categories of credit reporting information after the expiry of maximum permissible periods, based on those currently set out in s 18F.

54.88 One exception involves personal insolvency information. As discussed in Chapter 52, the ALRC proposes that *Privacy (Credit Reporting Information) Regulations* should permit credit reporting information to include personal insolvency information recorded on the National Personal Insolvency Index administered under the *Bankruptcy Regulations 1966* (Cth). The implementation of Proposal 52–4 would permit the collection of credit reporting information about all the types of personal insolvency administration available under the *Bankruptcy Act 1966* (Cth). These include voluntary arrangements with creditors under Part IX and Part X of the *Bankruptcy Act*.

54.89 The ALRC considers that information about voluntary arrangements with creditors under Part IX and Part X should be subject to a five year retention period, rather than the seven years applicable to bankruptcy.[105] An individual who has come to a voluntary arrangement with creditors should not be in a worse position than other individuals who have defaulted.

Proposal 54–7 The proposed *Privacy (Credit Reporting Information) Regulations* should provide for the deletion of different categories of credit reporting information after the expiry of maximum permissible periods, based on those currently set out in s 18F of the *Privacy Act*.

Proposal 54–8 The proposed *Privacy (Credit Reporting Information) Regulations* should provide for the deletion of information about voluntary arrangements with creditors under Part IX and Part X of the *Bankruptcy Act 1966* (Cth) five years from the date of the arrangement as recorded on the National Personal Insolvency Index.

Data security

54.90 The proposed 'Data Security' principle provides that an agency or organisation must take reasonable steps to 'protect the personal information it holds from misuse and loss and from unauthorised access, modification or disclosure'. In Part IIIA, credit providers and credit reporting agencies have an obligation under s 18G(b) to ensure that credit information files or credit reports are 'protected, by such security safeguards as are reasonable in the circumstances, against loss, against unauthorised access, use, modification or disclosure, and against other misuse'.

54.91 In IP 32, the ALRC noted that a range of concerns about the security of credit reporting information has been identified by the OPC in the conduct of its credit reporting auditing functions.[106] The security issues included: insufficient security of the manner in which passwords and user codes were provided to new subscribers; passwords of former employees not being automatically deactivated; and the poor security of passwords in the online environment, such as the storage of passwords by web browsers.[107] In addition, it was found that some credit providers did not have provisions in their service provider contracts regarding the security and confidentiality of information, even though these contractors can obtain access to personal information held by credit providers.[108]

54.92 The ALRC asked about issues raised by regulation dealing with the security of credit information files and credit reports and how these provisions operate in practice.[109] The ALRC received relatively little comment on data security issues. Dun and Bradstreet and the Australian Finance Conference submitted that the current provisions regarding data security obligations were adequate.[110] Members of the Queensland Law Society noted that, in the light of the inadequacies identified by the OPC, there should be no move towards more comprehensive credit reporting unless 'best financial services industry security practice' is implemented.[111]

ALRC's view

54.93 The existing data security obligation in s 18G(b) provides an additional requirement, as compared to the proposed 'Data Security' principle, that personal

information be protected from 'unauthorised use'. The proposed 'Data Security' principle does, however, refer to the 'misuse' of personal information, which seems broad enough to cover unauthorised use.

54.94 The ALRC considers that the proposed 'Data Security' principle is adequate to cover credit reporting information and no separate provision dealing with data security is needed in the *Privacy (Credit Reporting Information) Regulations*.

Proposal 54–9 The proposed *Privacy (Credit Reporting Information) Regulations* should contain no equivalent to s 18G(b) and (c), dealing with the security of credit information files and credit reports, as these obligations are adequately covered by the proposed 'Data Security' principle.

55. Rights of Access, Complaint Handling and Penalties

Time limits on disputed credit reporting information 1551
Penalties 1554

Introduction

55.1 This chapter discusses the existing provisions of Part IIIA of the *Privacy Act 1988* (Cth) dealing with individual rights of access to, and correction of, credit reporting information and makes proposals on how these matters should be dealt with under the proposed Unified Privacy Principles (UPPs)[1] and the *Privacy (Credit Reporting Information) Regulations*.

55.2 The chapter also examines complaint handling in credit reporting disputes by the Office of the Privacy Commissioner (OPC) and other complaint-handling mechanisms, and penalties for breach of the proposed *Privacy (Credit Reporting Information) Regulations*.

Access and correction

55.3 The proposed 'Access and Correction' principle provides that, subject to a range of exceptions:

> If an organisation holds personal information about an individual and the individual requests access to the information, it must respond within a reasonable time and provide the individual with access to the information …

1 See Part D.

55.4 The proposed 'Access and Correction' principle provides that if an organisation charges for providing access to personal information, those charges must not be excessive and must not apply to lodging a request for access.

55.5 In relation to correction rights, the proposed 'Access and Correction' principle provides that an organisation must take reasonable steps to correct personal information so that it is accurate, complete, up-to-date and relevant; and notify any other entities to whom the personal information has already been disclosed prior to correction, if requested to do so by the individual and provided such notification would be practicable in the circumstances.

55.6 Part IIIA contains similar provisions relating to personal information in credit information files and credit reports. Section 18H provides that credit reporting agencies and credit providers must take reasonable steps to ensure that individuals can obtain access to their credit information files and credit reports. Credit reporting agencies and credit providers must also take reasonable steps, under s 18J, to alter files or reports to ensure files and reports are accurate, up-to-date, complete and not misleading.

55.7 There are, however, significant differences between the rights of access and correction in Part IIIA and the proposed 'Access and Correction' principle. These differences include the absence of exceptions to the rights of access in Part IIIA; and the specific provisions in Part IIIA dealing with the inclusion of statements on the request of an individual.[2] While the proposed 'Access and Correction' principle (like NPP 6.4) provides that access charges 'must not be excessive', Part IIIA is silent on charging for access.

Access to credit reporting information

55.8 All major Australian credit reporting agencies provide individuals with access to their own credit reports on request and free of charge.[3] In the year ended June 2006, 236,168 consumers obtained a copy of their credit information file from Veda Advantage.[4] In many cases, an individual requests access to his or her credit information file because he or she has been refused credit.

55.9 Veda Advantage provides access free of charge by post within 10 working days; or for $27 within one working day by email, facsimile or mail.[5] Dun and Bradstreet provides access free of charge by post within 10 working days; or for $25 posted by express mail within one working day.[6] Tasmanian Collection Service provides access

---

2 Where a credit reporting agency or credit provider does not amend personal information as requested, the individual concerned may request the credit reporting agency or credit provider to include in a statement of the correction, deletion or addition sought: *Privacy Act 1988* (Cth) s 18J(2). Under s 18J(3) a credit reporting agency or credit provider may refer a statement considered to be of undue length in the circumstances to the Privacy Commissioner for a decision on alteration of the statement.

3 Ibid s 18H does not require that access be free of charge to the individual concerned.

to credit information files free of charge 'where the request relates to an individual's refusal of credit, or is otherwise related to the management of the individual's credit arrangements' and, otherwise, for $13.[7]

55.10 Some credit reporting agencies actively encourage individuals to obtain access to their own credit information files. The Veda Advantage website notes the benefits in doing so to 'ensure your information is accurate and up to date to avoid unwanted surprises when you next apply for credit'.[8] Veda also offers a service, named 'Credit Alert', that, for a fee, notifies an individual whenever someone obtains the individual's credit information file or there is an addition or change to the information included in the file.[9] It has been suggested that individuals should check their credit reports periodically to protect themselves against the consequences of credit fraud.[10]

55.11 In the Issues Paper, *Review of Privacy—Credit Reporting Provisions* (IP 32), the ALRC asked what issues are raised by the provisions of the *Privacy Act* dealing with individuals' rights of access to, and alteration of, information in credit information files and credit reports.[11]

Promoting individual access

55.12 Submissions referred to the importance of promoting individual access to credit reporting information in helping to ensure data quality and, more generally, in making the credit reporting system more transparent to consumers.[12] The Consumer Credit Legal Centre (NSW) Inc (CCLC) noted:

> As credit history information is collected by credit providers and held by credit reporting agencies, consumers are removed from any sense of ownership of the information held about them. Consumers do not have control over the type of information that is being held, they are reliant on the credit reporting agencies for access to the information, they do not control who else can have access to their information, and they do not have the authority to change and correct the information, yet the information can be used to their detriment.[13]

55.13 One way to address the absence of a 'sense of ownership' is to encourage individuals' awareness of credit reporting system and the content of credit reporting information about them. The CCLC recommended that credit reporting agencies and government, in consultation with consumer groups, should

13 Consumer Credit Legal Centre (NSW) Inc, *Credit Reporting Research Report* (2007), 69.

> ensure the public is better informed about credit reporting law and practice, the need to regularly check your individual credit report, how to dispute inaccuracies, and the possible ramifications of derogatory credit information.[14]

55.14 Westpac suggested the development of an education program designed to inform consumers that they can regularly check the accuracy of their credit report.[15] Information technology company Edentiti highlighted technology that is available to permit individuals to be given 'greater, real-time access to their records' and be 'informed whenever any activity occurs in relation to their records'.[16]

55.15 Each year around 1.5% of individuals who have credit information files obtain a copy of their file.[17] Veda Advantage have indicated a desire to see this figure increase to around 10% in five years. Veda Advantage noted, however, that achieving this target may require automated processes and access to electronic identity verification using government registries.[18]

Charging for access

55.16 Some stakeholders suggested that individuals should have a legislative right to obtain a copy of their credit reporting information free of charge.[19] The Consumer Action Law Centre stated that credit reporting information is 'important personal information and every person should have free access in order to ensure it is accurate and fair' and noted that the *Credit Reporting Act 1978* (Vic) provides for a right of access to a credit report at no cost.[20]

55.17 The CCLC noted that, in the United States, 'consumers get a free credit report every 12 months so there is more of a sense of control, and people feel more responsible for their credit data'.[21] The problems of such an approach may, however, include the cost and privacy concerns involved with sending a report to an individual's last known address. The CCLC recommended that credit reporting agencies should be obliged to provide a free copy of an individual's credit report to that individual and to 'publicise prominent information about how to get a free copy of your credit report'.[22]

55.18 The OPC submitted that legislation should 'contain provisions regarding when individuals should be granted access to their credit information file without charge'.[23]

Purposes of access

55.19 In 1992, Professor Graham Greenleaf warned that the right of access in s 18H might be used as a 'backdoor' means of access by organisations prohibited from obtaining credit reports.

> There is nothing in the legislation to prevent an employer, insurer, State Government licensing authority or real estate agent from requesting or requiring a person to supply a copy of their file as a condition of being considered for a position, licence, etc.[24]

55.20 The National Privacy Principles (NPPs) and state privacy legislation enacted since these comments were made,[25] provide some additional protection. For example, NPP 1 of the *Privacy Act* (like the proposed 'Collection' principle of the UPPs) provides that an organisation must not collect personal information unless the information is necessary for its functions or activities.

55.21 In IP 32, the ALRC asked whether there is any evidence that employers, insurers or government agencies request individuals to provide copies of their credit reports for employment, insurance, licensing or other purposes unrelated to the provision of credit and, if so, what steps should be taken to address this issue.[26]

55.22 In response, the OPC stated that it has received complaints and inquiries from individuals about this practice. The Office suggested that consideration be given to a legislative provision prohibiting the collection of an individual's credit information file by employers, insurers and government agencies.[27]

55.23 The CCLC expressed concern that legislative limitations on the use and disclosure of credit reporting information should not be 'subject to possible circumvention by forcing the individual to access and produce their own report'. The CCLC recommended that an offence should be created under the *Privacy Act* in relation to 'requiring an individual to provide a copy of his/her credit report in the course of any business or enterprise'.[28]

55.24 Other submissions considered that there should be less restriction on individuals providing access to their credit reporting information to third parties (that is, persons other than the individual, credit reporting agency or a credit provider for credit-related purposes). Veda Advantage stated:

> Individual consumers are also hampered by Part IIIA particularly those may wish to provide access to their credit files for a wider range of purposes than currently permitted, including accessing credit or employment overseas.[29]

55.25 The Institute of Mercantile Agents referred to

> a growing trend, especially by larger employers such as multi-nationals concerned about the prospects of fraudulent behaviour and seeing the provision of credit histories as a positive identification step. Similarly, insurers may well be keen in the face of a suspicious claim say for a vehicle theft or fire damage of premises to require a claimant to produce his/her personal credit history … If there are legitimate grounds for access, especially when initiated by the individual concerned, then access ought to be granted—with the credit history information recorded, the ability to provide low cost access should be not be at all difficult or onerous.[30]

55.26 Part IIIA places some specific constraints on direct access to credit reporting information by third parties. Section 18H(3) of the *Privacy Act* states that an individual's rights of access under the section

> may also be exercised by a person (other than a credit provider, mortgage insurer or trade insurer) authorised, in writing, by the individual to exercise those rights on the individual's behalf in connection with:
>
> (a) an application, or a proposed application, by the individual for a loan; or
>
> (b) the individual having sought advice in relation to a loan.

55.27 In Chapter 62, the ALRC concludes that the *Privacy Act* does not provide adequate discretion to agencies and organisations in dealing with informal arrangements concerning decision making under the Act, including in relation to access rights. The ALRC proposes reforms to deal more flexibly with circumstances in which privacy rights may be exercised on behalf of an individual by another person. These include the development of OPC guidelines for practices and procedures that allow for the involvement of third parties to assist with privacy decisions where the individual provides consent. These guidelines may encourage, for example, processes for obtaining consent by telephone.[31]

55.28 Section 18H(3), by requiring authorisation in writing and limiting the purposes in relation to which an individual's access rights may be exercised by another person, may be seen as contrary to the more flexible policy approach taken by the ALRC. On the other hand, the privacy risks involved with credit reporting information—including,

31 See Proposal 62–1.

for example, the risk of identity fraud—may justify the more stringent approach taken in s 18H(3).

ALRC's view

55.29 Part IIIA does not require that an individual consent to disclosure of information by a credit provider to a credit reporting agency and individuals have limited ability to control the subsequent use or disclosure of credit reporting information about them. The ALRC agrees that, in this context, individuals' access to credit reporting information about them should be promoted, including by ensuring that individuals have a right to obtain access free of charge.

55.30 The major credit reporting agencies already provide credit reports free of charge to the individuals concerned. Some concerns have been expressed about credit reporting agencies advertising fast access to reports for a fee but 'burying in the fine print the fact that you can get your credit report free of charge'.[32] In general, however, the ALRC's impression is that individuals' access to credit reports is being facilitated adequately. The ALRC is interested in further comment on whether the right to obtain a report free of charge should be included in the proposed *Privacy (Credit Reporting Information) Regulations* and, if so, in what form.

55.31 The ALRC is not convinced that there is a need for any new legislative provision prohibiting the collection of an individual's credit reporting information by third parties, such as employers, insurers or government agencies, through the individual concerned. The collection of credit reporting information for non-credit related purposes should be regulated adequately by the proposed 'Collection' principle of the UPPs and by proposed reforms in relation to the definition of 'consent' under the *Privacy Act*.

Question 55–1 Should the proposed *Privacy (Credit Reporting Information) Regulations* provide that individuals have the right to obtain a free copy of their credit reporting information?

Question 55–2 Should the proposed *Privacy (Credit Reporting Information) Regulations* provide an equivalent to s 18H(3) of the *Privacy Act*, so that an individual's rights of access to credit reporting information may be exercised by a person authorised in writing and for a credit-related purpose?

Correction of credit reporting information

55.32 In IP 32, the ALRC noted that consumer groups have claimed that there are, in practice, no adequate procedures to ensure that inaccurate information is removed from

32 Consumer Credit Legal Centre (NSW) Inc, *Submission PR 255,* 16 March 2007; Consumer Credit Legal Centre (NSW) Inc, *Credit Reporting Research Report* (2007), 49.

credit information files or credit reports at the request of the individual concerned.[33] Some of these difficulties were seen as arising from the dispute settling procedures for credit reporting. Others, however, were attributed to the drafting of s 18J.

55.33 In particular, s 18J(2) provides for the inclusion of a statement on the file or report in circumstances where the credit reporting agency 'does not amend' the information in accordance with an individual's request. It was submitted that:

> This poor drafting effectively provides no incentive for the credit reporting agency to comply with the requirement of ensuring that the credit report is accurate. In practice, all that the credit reporting agency is required to do under this section is to include a statement of the amendment sought and to notify people nominated by the individual of the amendment made, if any, or the statement of the amendment sought.[34]

55.34 In response to IP 32, the Australian Privacy Foundation submitted that, for the avoidance of doubt, the law should be amended to require correction where it is determined objectively that information is inaccurate, out of date, incomplete or misleading[35] (the terms used in s 18G of the *Privacy Act*). The ALRC agrees that this drafting problem should be remedied in the equivalent provision of the proposed *Privacy (Credit Reporting Information) Regulations*, consistently with the wording of the proposed 'Access and Correction' principle.[36]

Proposal 55–1 The proposed *Privacy (Credit Reporting Information) Regulations* should provide individuals with rights to access and correct credit reporting information based on the provisions currently set out in ss 18H and 18J of the *Privacy Act*.

Notification of adverse credit reports

55.35 Under s 18M, when an individual's application for credit is refused based wholly or partly on a credit report, the credit provider must give the individual written notice of that fact and advice about the individual's right to obtain access to his or her credit information file held by the credit reporting agency. In IP 32, the ALRC asked about the issues raised by this provision and what obligations should apply when an application for credit is refused based on a credit report.[37]

55.36 One issue raised in submissions concerns notification of credit scoring processes. If an individual is refused credit based on a credit score this fact will not be

apparent from the credit report. Credit scoring, as described in Chapter 48, may be described as the use of 'mathematical algorithms or statistical programmes that determine the probable repayments of debts by consumers, thus assigning a score to an individual based on the information processed from a number of data sources'.[38] A range of different data items, derived from credit reporting information or from a credit provider's own records, may be used in credit scoring.

55.37 The Australian Privacy Foundation submitted that

> there should be a clear statutory right of access to credit scores and other rankings held by [credit reporting agencies] and [credit providers], together with explanatory material on scoring systems and current thresholds for acceptance, to allow individuals to better understand how they are being assessed.[39]

55.38 The Foundation noted that the right of access provided by Part IIIA applies only to information in credit information files and credit reports[40] and a credit score is not permitted content under s 18E.[41] It stated that credit reporting agencies and credit providers rely on the 'evaluative information' exception in NPP 6.2 (retained in the proposed 'Access and Correction' principle),[42] to avoid giving individuals credit scores or rankings and provide an 'explanation' instead.[43]

55.39 In the United States, the *Fair Credit Reporting Act 1970* (US) (FCRA) requires credit reporting agencies to provide prescribed information to individuals about the use of credit scoring, on request. The FCRA provides:

> (1) *In general*. Upon the request of a consumer for a credit score, a consumer reporting agency shall supply to the consumer a statement indicating that the information and credit scoring model may be different than the credit score that may be used by the lender, and a notice which shall include--
>
> (A) the current credit score of the consumer or the most recent credit score of the consumer that was previously calculated by the credit reporting agency for a purpose related to the extension of credit;
>
> (B) the range of possible credit scores under the model used;
>
> (C) all of the key factors that adversely affected the credit score of the consumer in the model used, the total number of which shall not exceed four …
>
> (D) the date on which the credit score was created; and

> (E) the name of the person or entity that provided the credit score or credit file upon which the credit score was created.[44]

55.40 The ALRC does not consider that simply providing rights of access only to credit scores would serve any useful purpose. However, requiring the provision of explanatory material about the key factors that adversely affected the credit score of an individual where credit has been refused seems more worthwhile.

55.41 In the United States, credit reports provided to individuals include information about the factors that affect an individual's credit score adversely (or favourably). For example, a sample MyFICO score summary lists the following as negative factors:

- You have a public record and a serious delinquency on your credit report.
- You have multiple accounts showing missed payments or derogatory descriptions.
- The balances on your non-mortgage credit accounts are too high.

55.42 Factors listed as helping the credit score include:

- You have an established credit history.
- You have an established revolving credit history.
- You currently have a good number of credit accounts.[45]

55.43 The ALRC recognises that, as information relevant to some of these factors is not available from credit reporting agencies under current credit reporting regulation, different factors would apply under Australian credit scoring conditions. The ALRC proposes, nevertheless, that the proposed *Privacy (Credit Reporting Information) Regulations* should provide that the information to be given if an individual's application for credit is refused should include any credit score or ranking used by the credit provider, together with explanatory material on the scoring system used.

55.44 Apart from credit scoring, there may be other reasons for credit being refused that are based on credit reporting information, but not readily apparent from an individual's access to their credit report. The CCLC submitted, for example, that:

> The law should be clarified to ensure that individuals who are refused credit on the basis that their file has been cross-referenced to another file, or any other reason that is based on information held by a credit reporting agency that is not apparent from the copy of the file the individual would be given upon request, are entitled to be given adequate information to enable them to correct any inaccuracies or false assumptions attributable to the data held by the credit reporting agency. [46]

55.45 Concerns about the linking of credit information files generally are discussed in Chapter 54. The ALRC proposes that the credit reporting industry code[47] should promote data quality by mandating procedures dealing with, among other matters, the linking of credit reporting information.[48]

55.46 Concerns have also been addressed about automated decision making in risk assessment more generally. For example, the Australian Privacy Foundation stated:

> We understand that fully automated assessment of loan applications is common, using highly sophisticated credit scoring systems. However predictive and accurate these systems are, and however efficient they are compared to human judgement, they cannot be 'fair' in all individual cases.[49]

55.47 National Legal Aid also expressed concern that automated decision making in risk assessment 'poses a risk that any individual listing or inquiry or pattern of listings and inquiries recorded on the credit reference database may result in an automatic refusal of credit' and that the *Privacy Act* does not provide 'adequate safeguards against the unfairness that may result'.[50] The Australian Privacy Foundation and Nigel Waters of the Cyberspace Law and Policy Centre submitted that credit providers should be required to offer applicants an opportunity for a human review of any adverse decision.[51]

55.48 The OPC suggested that the *Privacy Act* be amended to include a more general requirement that agencies and organisations have in place adequate review mechanisms for automated decisions.[52] This idea is rejected by the ALRC, for reasons set out in Chapter 7. Rather, the ALRC proposes that the OPC issue guidance on when it may be appropriate for an agency or organisation to provide human review of a decision made by automated means.[53] In the context of credit reporting specifically, while it might be desirable to provide for rights to have an automated decision reviewed under an industry code, the ALRC does not consider it necessary to establish such a right in legislation.

Proposal 55–2 The proposed *Privacy (Credit Reporting Information) Regulations* should provide individuals with rights to be notified where a credit provider refuses an application for credit based wholly or partly on credit reporting information, based on the provisions currently set out in s 18M of the *Privacy Act*.

53 Proposal 7–5.

Proposal 55–3 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that the information to be given if an individual's application for credit is refused based wholly or partly on credit reporting information should include any credit score or ranking used by the credit provider, together with explanatory material on scoring systems, to allow individuals to understand how the risk of the credit application was assessed.

Complaint handling

55.49 The following section of this chapter examines aspects of complaint handling in relation to credit reporting. This material should be read in conjunction with Chapter 45, which deals with the investigation and resolution of privacy complaints generally. In Chapter 45, the ALRC makes a range of proposals intended to streamline and increase transparency in the resolution of privacy complaints, including in relation to credit reporting complaints. These proposals are intended, among other things, to:

- free up the Privacy Commissioner from dealing with individual complaints to enable more of a focus on systemic issues;
- give the Commissioner more discretion not to investigate complaints, including where an external dispute resolution (EDR) mechanism could handle the complaint;
- clarify the Commissioner's conciliation function in the *Privacy Act* and give complainants and respondents the power to compel a determination when conciliation has failed; and
- give the Commissioner power to remedy systemic issues, for example, by requiring an organisation, such as a credit reporting agency, to undertake prescribed action for the purpose of ensuring compliance with the proposed UPPs.

Complaint-handling bodies

55.50 Complaints about credit reporting may be handled by credit reporting agencies and credit providers, EDR schemes such as the Telecommunications Industry Ombudsman (TIO) and Banking and Financial Services Ombudsman (BFSO), or by the OPC under the *Privacy Act*.

Credit reporting agencies and credit providers

55.51 Under the *Credit Reporting Code of Conduct*, credit reporting agencies and credit providers must establish procedures to deal with disputes relating to credit

reporting.[54] Credit providers that are financial services providers under the *Corporations Act 2001* (Cth) are required to establish internal dispute resolution systems that comply with standards set by the Australian Securities and Investments Commission (ASIC).[55] Internal dispute resolution systems may also be required by industry codes, such as the *Code of Banking Practice*[56] or by the terms of membership of EDR schemes.

55.52 The *Credit Reporting Code of Conduct* makes credit reporting agencies responsible for attempting to resolve disputes between credit providers and individuals where the dispute involves the content of a credit report. The Code states:

> 3.3 A credit provider should refer to a credit reporting agency for resolution a dispute between that credit provider and an individual where the dispute concerns the contents of a credit report issued by the credit reporting agency.
>
> 3.4 In referring a dispute to a credit reporting agency, a credit provider must inform the individual of the referral and must provide the individual with the name and address of the credit reporting agency.
>
> 3.5 Upon receipt, from a credit provider, of a referral of a request for dispute resolution, a credit reporting agency must handle the request as if the request had been made directly to the agency by the individual concerned.
>
> …
>
> 3.7 Where a credit reporting agency establishes that it is unable to resolve a dispute it must immediately inform the individual concerned that it is unable to resolve the dispute and that the individual may complain to the Privacy Commissioner.[57]

55.53 After receiving a complaint about the content of a credit report, Veda Advantage recommends that the complainant first contact the credit provider responsible for the listing to resolve the issue. If that is unsuccessful, Veda conducts an investigation 'on the consumer's behalf'.[58] Veda Advantage advised that it 'completed 22,119 investigations on behalf of consumers' in the year ending June 2006.[59] Veda stated that:

> Approximately 34% of investigations require assistance from our subscribers before they can be resolved … Others involve reference to external parties such as the Insolvency and Trustee Service of Australia … 47% of complaints require minor investigation … or an internal check, usually on data quality issues …[60]

55.54 Submissions expressed some concern about the adequacy of internal dispute resolution by credit providers—and non-traditional credit providers, such as utilities and medical practices. The Consumer Action Law Centre stated:

---

54 Office of the Federal Privacy Commissioner, *Credit Reporting Code of Conduct* (1991), Part 3.
55 *Corporations Act 2001* (Cth) s 912A(2)(a).
56 Australian Bankers Association, *Code of Banking Practice* (1993).
57 Office of the Federal Privacy Commissioner, *Credit Reporting Code of Conduct* (1991).
58 Veda Advantage, *Submission PR 272,* 29 March 2007.
59 Ibid.
60 Ibid.

> These businesses often do not have credit reporting dispute resolution procedures in place as interaction with the credit reporting system may not be a major part of their operations. In fact, some have no dispute resolution systems at all. This problem takes on a larger dimension when it is remembered that the OPC routinely refers consumers with a complaint back to the credit provider for resolution.[61]

55.55 The BFSO submitted that all credit providers and credit reporting agencies should be required to have 'transparent, efficient and effective' internal dispute resolution processes and suggested that the new International Standard for internal complaints handling would be an appropriate model.[62]

External dispute resolution schemes

55.56 Many credit providers are members of EDR schemes, including financial services providers who are required by the *Corporations Act* to belong to an EDR scheme approved by ASIC.[63]

55.57 ASIC approved and other EDR schemes deal with some complaints about credit reporting. The TIO, for example, receives and resolves complaints concerning credit reporting by telecommunications service providers.[64] The TIO advised that, in the six months to December 2006, it received 1,437 complaints concerning credit reporting.[65]

55.58 The BFSO resolves some complaints concerning credit reporting by banks and their affiliates.[66] The BFSO stated that in a five-year period to December 2006, it closed 517 cases where 'privacy' or 'credit reporting' was recorded as a 'problem type'.[67] The BFSO noted, however, that problems with credit reporting commonly arise in the course of disputes about other matters such as debts, and the credit reporting aspect 'is not always captured by the BFSO data collection system if the credit reporting issue is incidental to the main issues in dispute'.[68]

55.59 Other utilities and finance industry ombudsmen—such as the Energy and Water Ombudsman NSW, the Credit Ombudsman Service and the Credit Union Dispute Resolution Centre—may also deal with credit reporting complaints.

The Office of the Privacy Commissioner

55.60 The *Privacy Act* provides an avenue for individuals to complain to the Privacy Commissioner about an act or practice that may be an interference with their privacy.[69] The Act sets out detailed provisions on how the Commissioner can receive, investigate and resolve complaints, including credit reporting complaints.[70] The investigation and resolution of complaints under Part V of the Act is discussed in detail in Chapter 45.

55.61 The OPC submitted that, as the credit reporting provisions of the *Privacy Act* protect the personal credit information of individuals, credit reporting complaints should continue to be handled as privacy complaints under the *Privacy Act*.[71] The OPC stated that, in the five-year period from 1 January 2002 to 31 December 2006, 17% of the complaints received by the OPC[72] concerned credit reporting issues. Of these credit reporting complaints cases, 87% had been closed as at 7 February 2007.

> Of those closed cases, approximately one third were closed following conciliation or where the credit provider had already taken steps to adequately deal with the matter. Resolutions in these cases commonly included the amending of records and, on occasion, also included the payment of compensation. Another third of the cases were closed on the basis that the respondent had not breached the Act.[73]

Complaint-handling processes

55.62 In IP 32, the ALRC noted a range of criticisms that have been made about the handling of credit reporting complaints.[74] These included concerns that:

- in order to initiate a credit reporting complaint with the OPC, complainants may be required to contact the credit reporting agency to obtain a copy of their credit information file and then to complain to the credit provider;[75]

- dispute resolution procedures established by credit providers and credit reporting agencies lack transparency and fail to address complaints in relation to repeated problems or possible systemic issues;[76] and

---

69 *Privacy Act 1988* (Cth) s 36(1).

70 Ibid s 6 defines a 'credit reporting complaint' as a complaint about an act or practice that, if established, would be an interference with the privacy of the complainant because: (a) it breached the Code of Conduct; or (b) it breached a provision of Part IIIA.

71 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

72 In the year to 30 June 2006, the OPC received a total of 1,183 complaints across all areas of its jurisdiction (1,275 were received in 2004–05): Office of the Privacy Commissioner, *The Operation of the Privacy Act Annual Report: 1 July 2005–30 June 2006* (2006), 29.

73 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

74 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [4.28]–[4.33].

75 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 139.

76 Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005), [5.11].

- dispute resolution procedures generally place the onus of proving that listings are inaccurate on individuals who lack any real negotiating power.[77]

55.63 In IP 32, the ALRC asked how the procedures under the *Privacy Act* and the *Credit Reporting Code of Conduct* for making and pursuing complaints about credit reporting operate in practice, and what other complaint-handling mechanisms would enhance compliance and the resolution of complaints.[78]

The 'complaint merry-go-round'

55.64 Submissions emphasised concerns[79] about what has been termed the credit reporting complaints 'merry-go-round'.[80] Section 41(1A) of the Act provides that the Commissioner must not investigate a complaint if the complainant did not complain to the respondent before making the complaint to the Commissioner. Consistently, the *Credit Reporting Code of Conduct* provides that:

> The Privacy Commissioner may decide not to investigate a complaint about a credit reporting dispute if the Commissioner considers that:
>
> (a) the dispute should first be dealt with by a credit reporting agency or credit provider; or
>
> (b) the dispute is being, or has been, dealt with adequately by the credit reporting agency or credit provider.[81]

55.65 Under the *Privacy Act*, the respondent to a complaint is the person who engaged in the act or practice that is the subject of the complaint.[82] In the case of credit reporting complaints, it is often unclear whether the problem has been caused by the credit provider or the credit reporting agency, making the respondent to the complaint hard to identify.[83]

55.66 The Consumer Action Law Centre observed that the most common way in which an individual discovers inaccurate information is when the individual obtains a copy of his or her credit report, usually after an application for a loan has been rejected on the basis of the credit report.

> This generally means that the consumer makes a complaint to the [credit reporting agency]. Under the Code, the [credit reporting agency] must try to resolve the dispute but, where it cannot, it is required to inform the individual concerned that it is unable

82 *Privacy Act 1988* (Cth) s 36(8).

83 Consumer Action Law Centre, *Submission PR 274,* 2 April 2007.

> to resolve the dispute and that the individual may complain to the OPC (not to the credit provider).
>
> Unfortunately, the practice of the OPC upon receipt of these complaints is to … refer the consumer to the relevant credit provider before it will take the complaint, even though the consumer has already complained to the [credit reporting agency] (and the [credit reporting agency] would most likely have dealt with the credit provider in its investigation of the complaint). If the credit provider cannot or does not resolve the complaint, under the Code they must refer it back to the [credit reporting agency] … It is no wonder that many consumers become confused by the process.[84]

55.67 The Consumer Action Law Centre submitted that, while this 'merry-go-round' is made possible by provisions of the *Credit Reporting Code of Conduct*, 'ultimately it occurs because the OPC does not use its discretion to accept complaints … nor accept that a complaint made to a [credit reporting agency] has been made to the respondent'.[85]

55.68 The Centre proposed minor changes to the Code, and possibly to the *Privacy Act*, to recognise that complaints may be made to a credit provider or a credit reporting agency:

> If a complaint was made to a [credit reporting agency], or a credit provider referred a complaint to a [credit reporting agency], the [credit reporting agency's] role would then be to assess and determine a complaint as between the consumer and the credit provider. If a [credit reporting agency] was unable to resolve a dispute, it could refer the consumer to either the OPC or the EDR scheme to which it is a member.[86]

55.69 The OPC supported requirements that individuals complain to the respondent before making a complaint to the OPC.[87] The ALRC agrees that credit reporting agencies and credit providers should deal with complaints in the first instance. As discussed in Chapter 45, such a requirement is consistent with other legislative complaint-handling regimes and with the terms of most EDR schemes.

55.70 The OPC acknowledged, however, that the complaints process in relation to credit reporting 'may sometimes be confusing for complainants' and that individuals could be better informed about where to direct an initial complaint. The OPC submitted that the complaint-handling process could be improved by amending the credit reporting provisions to include a requirement that complaint-handling information must be included with notices provided to individuals before their information is passed to a credit reporting agency; and when a credit reporting agency records adverse information about them.[88]

---

84 Ibid.

85 Ibid.

86 Ibid. The Act itself, in the Centre's view, might be amended to clarify that a consumer who has already made a complaint to the credit reporting agency has complained to the 'respondent'.

87 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007; Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

88 Office of the Privacy Commissioner, *Submission PR 281,* 13 April 2007.

ALRC's view

55.71 Under the *Credit Reporting Code of Conduct*, credit reporting agencies are responsible for resolving disputes between consumers and credit providers.[89] Notably, the Code provides that 'a credit provider should refer to a credit reporting agency for resolution a dispute between that credit provider and an individual where the dispute concerns the contents of a credit report issued by the credit reporting agency'.[90]

55.72 A focus on complaint handling by credit reporting agencies may be seen as 'logical given their central role in the credit reporting system'[91] but creates problems in practice. First, where a credit provider considers that information it disclosed to the agency is accurate, the credit reporting agency has limited capacity to 'look behind' the listing of its subscriber credit provider. Arguably, credit reporting agencies cannot resolve credit reporting complaints that require a determination of rights in specific consumer credit contexts. Secondly, an agency's commercial interests may conflict with the need to make decisions that may affect adversely the interests of its subscribers.

55.73 In contrast to what is stated in the *Credit Reporting Code of Conduct*, credit reporting agencies should refer complaints about the content of credit reporting information provided to the agency by a credit provider to that credit provider for initial dispute resolution. As currently set out in the explanatory notes to the Code, credit reporting agencies should be able to nominate an officer at each credit provider as the first point of contact for the handling of credit reporting complaints.[92]

55.74 Credit reporting agencies and credit providers need to establish effective complaint-handling mechanisms. In many instances, the involvement of a credit reporting agency and a credit provider will be necessary to deal with a credit reporting complaint. The credit provider may need, for example, to investigate the circumstances of an overdue payment and the credit reporting agency to amend its credit reporting information following the outcome of an investigation. Where credit reporting agencies and credit providers share the handling of a complaint, some potential for a complaint-handling 'merry-go-round' may remain.

55.75 This problem may be addressed, in part, by the provision of appropriate information to complainants about the respective roles of credit reporting agencies and credit providers, and access to EDR and OPC complaint-handling processes. In this context, the ALRC proposes that the *Privacy (Credit Reporting Information) Regulations* provide that notification of adverse credit reports should include information about the avenues of complaint available to the individual if he or she has

a complaint about the collection or handling of his or her credit reporting information.[93]

55.76 In addition, time limits on substantiating disputed credit reporting information and mandated EDR schemes (discussed below) should assist to ensure effective complaint handling for individuals who are contesting adverse credit reporting information.

Proposal 55–4 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that:

(a) credit reporting agencies and credit providers must handle credit reporting complaints in a fair, efficient and timely manner;

(b) credit reporting agencies and credit providers must establish procedures to deal with a request by an individual for resolution of a credit reporting complaint;

(c) a credit reporting agency should refer to a credit provider for resolution of a complaint about the content of credit reporting information provided to the agency by that credit provider; and

(d) where a credit reporting agency or credit provider establishes that it is unable to resolve a complaint it must immediately inform the individual concerned that it is unable to resolve the complaint and that the individual may complain to an external dispute resolution scheme or to the Privacy Commissioner.

Proposal 55–5 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that the information to be given if an individual's application for credit is refused based wholly or partly on credit reporting information should include the avenues of complaint available to the individual if he or she has a complaint about the content of his or her credit reporting information.

93 The ALRC also proposes that, at or before the time credit reporting information is collected, credit providers must ensure that the individual is aware of, among other things, the avenues of complaint available to the individual if he or she has a complaint about the collection or handling of his or her credit reporting information: See Proposal 52–9.

External dispute resolution

55.77 In IP 32, the ALRC asked about the role of external dispute resolution schemes in resolving credit reporting complaints.[94] The ALRC noted that suggestions for reform of the system for handling credit reporting complaints included that an industry-funded EDR scheme be established; and credit providers only be allowed access to the credit reporting system on demonstrating that they have satisfactory internal dispute resolution procedures and are members of the EDR scheme.[95]

55.78 As discussed above, many credit providers are already members of industry EDR schemes, notably those involving the BFSO and TIO. Veda Advantage, the leading consumer credit reporting agency, is also a member of the BFSO.[96] The Consumer Action Law Centre stated that, in its view:

> This gives consumers dealing with Veda Advantage an effective avenue for independent resolution of their complaint (and, we think, a real and effective alternative to the OPC).[97]

55.79 Submissions emphasised the desirability of access to EDR schemes in credit reporting complaint handling.[98] Regulatory requirements that credit providers be members of an EDR scheme were widely supported.

55.80 The Consumer Action Law Centre stated that credit providers should be members of an approved EDR scheme 'given the substantial problems with the current system and difficulties faced by consumers challenging inaccurate or incorrect listings'.[99] Case workers associated with Legal Aid Queensland's Consumer Protection Unit noted that the ASIC requirement for licensed financial services providers to belong to an approved EDR scheme 'has provided positive outcomes for many thousands of consumers who were unable to access court based solutions'.[100]

100 Legal Aid Queensland, *Submission PR 212,* 27 February 2007. See also Queensland Law Society, *Submission PR 286,* 20 April 2007.

55.81 Legal Aid Queensland submitted that all credit providers should belong to an EDR scheme that meets the ASIC standard, before having access to the credit reporting system.[101] The EDR scheme

> should initially determine all complaints by consumers relating to credit reporting, including the power to make a finding regarding the individual's liability for the debt …[102]

55.82 The BFSO suggested that a requirement to belong to an EDR scheme 'could be effected through a licensing system' similar to that under the *Corporations Act*. As many credit providers are already members of the BFSO or other ASIC approved schemes it may be possible

> to utilise the existing framework for external dispute resolution in the financial services sector to facilitate access to an appropriate industry-funded scheme for dispute resolution in the credit reporting industry … The utilisation of existing schemes in the financial services area would also avoid imposing a requirement on credit providers to become members of more than one scheme.[103]

55.83 National Legal Aid suggested that membership of an approved EDR scheme should be included within the definition of a 'credit provider'.[104] Similarly, the CCLC recommended:

> Only credit providers that are required by law to be member of an ASIC approved external dispute resolution scheme (or equivalent benchmark) should be permitted to contribute to, or access credit information from, credit reporting agencies.[105]

55.84 There was also some support for the establishment of a new specialist 'credit reporting ombudsman' to resolve disputes between individuals and credit providers.[106] Others opposed the establishment of any new credit reporting complaint-handling body.[107] The Australian Finance Conference stated that

> the Privacy Commissioner should maintain the role as the facilitator of disputes or complaints under the credit reporting provisions. Industry has a responsibility to have effective complaint handling processes in place, and given the relatively low level of privacy related complaints upheld supports the position that there would be limited value or benefit for the customer or the industry in imposing a further layer of external dispute resolution process in the equation.[108]

55.85 Stakeholders noted the importance of ensuring that any new EDR schemes dealing with credit reporting complaints do not duplicate existing dispute resolution services.[109] Veda Advantage also observed that

> the involvement of multiple parties in complaints resolution is one of the features of information networks, and demonstrates the challenges of effective consumer dispute resolution. The challenge is increased by additional cost each time a new organisation is added into the complaints resolution system.[110]

ALRC's view

55.86 EDR schemes are already a significant feature of credit reporting complaint handling. In particular, many credit providers are members of the BFSO and TIO schemes and Veda Advantage is a member of the BFSO.

55.87 The ALRC agrees with industry and consumer groups that the use of EDR in the handling of credit reporting complaints should be facilitated. The Australasian Retail Credit Association, for example, recommended the implementation of 'consumer complaint, dispute and hardship management procedures that integrate with and fully leverage existing [EDR schemes]'.[111] The Consumer Action Law Centre also noted that encouraging EDR in credit reporting complaint handling is 'consistent with developments in other industry areas, especially related areas such as financial services regulation and more recently, moves to implement such a requirement in the consumer credit arena'.[112]

55.88 The ALRC observes that concerns about the existing regulation of credit reporting have focused as much on how the complaints and enforcement provisions have operated in practice as on the substantive obligations. More effective complaint handling and enforcement is seen by many stakeholders as central in making a significant improvement to the existing regulatory framework. Lack of access to effective complaint-handling mechanisms can have serious consequences for individuals who may have no access to credit while, for example, a disputed default listing remains part of their credit reporting information.

55.89 In Chapter 45, the ALRC makes proposals intended to promote the use of EDR schemes. In credit reporting complaints, it is appropriate that EDR schemes provide the first line of dispute resolution beyond the credit provider or credit reporting agency. Such schemes are funded by industry and understand and have expertise in the commercial environment in which their members operate.

112 Consumer Action Law Centre, *Submission PR 274,* 2 April 2007. In 2006, the Victorian Government stated that it supports legislating to require all providers of consumer credit in Victoria to subscribe to an alternative dispute resolution scheme: Victorian Government, *Government Response to the Report of the Consumer Credit Review* (2006), 15.

55.90 The ALRC is concerned also to improve OPC conciliation and determination processes and to address the capacity of the OPC to identify and address systemic issues. Placing more of the frontline complaint-handling burden on EDR schemes should assist in achieving these aims.

55.91 The ALRC proposes, therefore, that the *Privacy (Credit Reporting Information) Regulations* provide that credit providers may only list overdue payment information where the credit provider is a member of an EDR scheme approved by the OPC. An alternative approach would be to make membership of an EDR scheme a precondition to any participation in the credit reporting system, rather than to the listing of overdue payment information. Dispute resolution seems needed most in relation to adverse listings. Membership of an EDR scheme can be expensive. The compliance burden may not justify imposing EDR obligations on credit providers who may, for example, wish to obtain credit reports in order to help decide whether to provide goods or services on credit, but do not list defaults.[113]

55.92 The OPC could be expected to approve those EDR schemes already approved by ASIC under the *Corporations Act* and those with another statutory basis, such as the TIO.[114] More broadly, the OPC could look at the ASIC standards[115] and other similar instruments for benchmarks in its approval process.

Proposal 55–6 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that credit providers may only list overdue payment information where the credit provider is a member of an external dispute resolution scheme approved by the Office of the Privacy Commissioner.

Time limits on disputed credit reporting information

55.93 In IP 32, the ALRC noted that in the United States, under the FCRA,[116] if the completeness or accuracy of information is disputed by a consumer, the credit reporting agency must conduct an investigation and, if not verified, the information must be deleted within 30 days.[117]

113 The separate issue of reciprocity obligations is considered in Ch 51.
114 *Telecommunications (Consumer Protection and Service Standards) Act 1999* (Cth).
115 Australian Securities and Investments Commission, *Approval of External Complaints Resolution Schemes: ASIC Policy Statement 139*, 8 July 1999.
116 *Fair Credit Reporting Act 1970* 15 USC § 1681 (US) s 1681i.
117 Australian Law Reform Commission, *Review of Privacy—Credit Reporting Provisions*, IP 32 (2006), [4.32].

55.94 All stakeholders who addressed the issue in submissions were in favour of requiring credit reporting agencies and credit providers to verify the accuracy of disputed credit reporting within a certain time period or delete the information.[118]

55.95 The Australian Privacy Foundation stated that it supported 'placing the burden of proof in relation to disputed listings more explicitly on the credit provider' and submitted that there should be a 'statutory moratorium on listing while a disputed debt is being resolved within an appropriate court or external dispute resolution (EDR) scheme'.[119] Similarly, the Consumer Law Action Centre submitted that:

> Disputed listings should be removed from credit information files pending resolution of the dispute. To allow them to remain on the file is unfairly prejudicial to the consumer's interests and pre-empts the resolution of the dispute.[120]

55.96 The CCLC made detailed recommendations on the procedures that should apply to the listing of disputed debts. It recommended:

> The onus of proof should be on the credit provider making a listing on a person's credit report to prove the accuracy of that information. If a person notifies a credit reporting agency that information held about that person is disputed, the credit reporting agency should correct the report if possible, or mark the listing as disputed and give credit provider who has listed the information 30 days to provide proof that the debt is owed. If the credit provider fails to provide satisfactory proof within 30 days, the listing should be removed.[121]

55.97 The CCLC also recommended that, where a credit provider has produced prima facie evidence that a listing is correct, and the individual concerned continues to dispute the listing, the credit reporting agency should either:

- Determine the dispute within 30 days on the evidence provided and remove the listing or not accordingly (for example where a person has provided evidence that they did not enter the contract in question, or provides proof of previous settlement or payment in full); or
- Refer the dispute to a dispute resolution scheme with appropriate jurisdiction (for example where a person raises a defence under the

> Consumer Credit Code which the credit reporting agency does not have the expertise or jurisdiction to determine the dispute).[122]

ALRC's view

55.98 The CCLC noted that a listing may be in dispute because

> either liability is itself in dispute (for example, mistaken identity and contractual disputes), or the consumer had no notice of the obligation and no opportunity to pay through no fault of their own (for example, creditor billing errors) …[123]

55.99 At present, individuals effectively have the burden of showing that a disputed debt is listed improperly because the listing will remain part of their credit reporting information until this is shown. The ALRC considers that this position is unfair given the relative positions of credit providers and individual consumers who may, for example, never have received a utilities bill.[124]

55.100 There should be an obligation on a credit provider to verify disputed credit reporting information. The ALRC proposes that if evidence substantiating the information is not provided within 30 days the credit reporting agency must delete the information on the request of the individual concerned. This will provide an incentive for appropriate record-keeping practices and speedy dispute resolution by credit providers and credit reporting agencies.

55.101 Where information is documented adequately by the credit provider, but remains disputed by the individual, the complaint should be referred to an industry-based EDR scheme or the OPC for resolution.

Proposal 55–7 The proposed *Privacy (Credit Reporting Information) Regulations* should provide that credit providers have an obligation to provide evidence to individuals and dispute resolution bodies to substantiate disputed credit reporting information, such as default listings, and that if the information is not provided within 30 days the credit reporting agency must delete the information on the request of the individual concerned.

Penalties

55.102 In IP 32, the ALRC asked whether the range of penalties and remedies available to enforce rights and obligations under the credit reporting provisions of the *Privacy Act* should be changed.[125]

55.103 As discussed in Chapter 49, Part IIIA creates a wide range of credit reporting offences. These include, for example, offences in relation to:

- credit providers using or disclosing personal information contained in credit reports other than as permitted;[126]
- credit reporting agencies or credit providers intentionally giving out a credit report that contains false or misleading information;[127]
- persons intentionally obtaining unauthorised access to credit information files or credit reports;[128] and
- persons obtaining access to credit information files or credit reports by false pretences.[129]

55.104 A range of views about penalties were expressed in submissions. Some stakeholders considered that the existing penalties are sufficiently broad or opposed any new penalty provisions.[130] Other stakeholders favoured the introduction of new civil or administrative penalties.[131]

55.105 The Consumer Action Law Centre expressed concern about the 'lack of flexible remedies and appropriate penalties and lack of enforcement action' in relation to credit reporting obligations. The Centre suggested that

> a range of new and flexible remedies should be considered for introduction into the Act. This would greatly assist in allowing the regulatory scheme to be properly implemented as intended … In particular, we consider that a broader range of civil and administrative remedies should be inserted into the Act to give the regulator options for dealing with different sorts of breaches in a flexible and proportionate manner.[132]

132 Consumer Action Law Centre, *Submission PR 274,* 2 April 2007.

55.106 The CCLC also recommended that there should be a wider range of penalties and remedies

> including but not limited to civil penalties (for individual complainants and systemic breaches), injunctions and adverse publicity orders to ensure that there are sufficient incentives for compliance, and adequate responses to noncompliance.[133]

55.107 The Consumer Law Action Centre stated that criminal penalties 'remain appropriate for the worst breaches, as reflected in the Act'.[134] Other stakeholders, however, questioned the utility of the existing offence provisions.[135] The Australian Privacy Foundation, for example, favoured

> the replacement of most of the criminal offence provisions in the Act with a strict liability civil penalty regime. The burden of proof required for successful criminal prosecutions is too high to be a realistic deterrent—we note that there have been no prosecutions to date under Part IIIA. Civil penalty regimes have proved far more effective for enforcement of financial services and consumer protection laws.[136]

55.108 Waters added that the current inclusion of criminal offence provisions in the *Privacy Act* is not consistent with the general approach to enforcement of information privacy laws through a strict liability civil penalty regime.[137]

55.109 Members of the Queensland Law Society also suggested the introduction of a new penalties regime for breaches of the credit reporting provisions and failure to report systemic breaches.[138] American Express stated, in the context of more comprehensive credit reporting, that privacy protection might be strengthened through the introduction of summary infringement notices issued by the OPC.[139]

55.110 Some stakeholders referred to the need for more effective avenues for compensation.[140] The BFSO suggested, for example, that the *Privacy Act* should provide that credit providers and credit reporting agencies are liable for 'financial and non-financial' loss to individuals 'demonstrated to have flowed from an error in listing'.[141]

141 Banking and Financial Services Ombudsman Ltd, *Submission PR 263,* 21 March 2007.

ALRC's view

55.111 Part IIIA creates a wide range of credit reporting offences. The extent to which these should be retained or replaced is dependent, in large part, on the ALRC's ultimate recommendations with respect to penalties under the *Privacy Act* generally. In Chapter 46, the ALRC proposes that the *Privacy Act* should be amended to allow a civil penalty to be imposed where there is a serious or repeated interference with the privacy of an individual.[142]

55.112 The ALRC understands that no prosecutions have ever been launched under the credit reporting offence provisions. At least some of the relevant conduct is covered, in any case, by other offences under Commonwealth legislation. The *Criminal Code*, for example, creates an offence in respect to unauthorised access to, or modification of, data held in a computer to which access is restricted.[143]

55.113 Since the enactment of the credit reporting provisions, civil penalty regimes have become a more common means to enforce consumer protection laws including, for example, under the financial services civil penalty provisions of the *Corporations Act*[144] and the uniform *Consumer Credit Code*.[145] The ALRC considers that a civil penalty regime is a more appropriate enforcement mechanism for breaches of credit reporting regulation than the suite of criminal offences currently provided for in the Act.

Proposal 55–8 The *Privacy Act* should be amended to:

(a) remove the credit reporting offences by repealing ss 18C(4), 18D(4), 18K(4), 18L(2), 18N(2), 18R(2), 18S(3) and 18T; and

(b) allow a civil penalty to be imposed where there is a serious or repeated breach of the proposed *Privacy (Credit Reporting Information) Regulations*.

Introduction

56.1 In 2004, the Australian Government Department of Health and Ageing (DOHA) stated that:

> Privacy is a fundamental principle underpinning quality health care. Without an assurance that personal health information will remain private, people may not seek the health care they need which may in turn increase the risks to their own health and the health of others. Indeed consumers regard health information as different to other types of information and consider it to be deeply personal.[1]

56.2 The personal health information of health consumers was traditionally protected by the ethical and legal duties of confidentiality. These duties are owed by health service providers—such as doctors, dentists, nurses, physiotherapists and pharmacists—to health consumers and prevent the use of personal health information for a purpose that is inconsistent with the purpose for which the information was provided. A legal duty of confidentiality may arise in equity, at common law or under contract. Health service providers are also often subject to confidentiality provisions in professional codes of conduct[2] and, if they are employed in the public sector, also may be subject to legislative secrecy provisions.

---

1 Australian Government Department of Health and Ageing, *Submission to the Office of the Privacy Commissioner Review of the Private Sector Provisions of the Privacy Act 1988*, December 2004.

2 See, eg, Australian Medical Association, *Code of Ethics* (2004), s 1.1(l). Confidentiality is also discussed in Chs 5, 12 and 57.

56.3 Duties of confidentiality recognise the dignity and autonomy of the individual,[3] as well as the public interest in fostering a relationship of trust between health service providers and health consumers to ensure both individual and public health outcomes.[4] Such duties are not absolute and there are circumstances in which the law permits, and sometimes requires, the disclosure of confidential personal health information.[5]

56.4 Where legislation establishes health agencies or provides the basis for health related functions to be carried out, officers of those agencies and others performing functions under the legislation frequently are subject to secrecy provisions that prohibit them from disclosing personal information about third parties except in the course of their duties.[6] There is also a range of disease-specific legislation that may include provisions intended to protect individuals' health information. For example, legislation dealing with HIV/AIDS generally requires the use of codes to link test results with individuals rather than including personal details on test request forms.[7]

56.5 More recently, privacy legislation has been introduced in a number of Australian jurisdictions specifically to regulate the handling of personal health information.[8] An overview of privacy regulation in the states and territories, including health privacy regulation, is provided in Chapter 2. Health service providers continue to be subject to secrecy provisions and duties of confidentiality. Although the regimes exist side by side, Marilyn McMahon has suggested that:

> In practice the less costly, more 'user friendly' complaint procedures offered under the privacy regimes may in fact mean that they increasingly 'cover the field' and that the traditional, common law remedies for protecting confidentiality become archaic.[9]

56.6 In its submission, DOHA noted the following changes to the health services context that may have implications for the way that health information is handled:

> There is an increasing focus on coordinated multi-team care through a mix of public and private providers. In delivering healthcare services in this environment, a large volume of information about individuals moves frequently between the public and private sectors, and across State and Territory boundaries. To provide an indication of the volume and frequency of these communications, there were 4.2 million in-patient

> discharges from public hospitals in 2003/04, with about one-half of these being on the 'same-day'. A number of information exchanges between providers in the public and private sectors may have been associated with each of these discharges, including for referral, discharge or enquiry with a patient's GP, and with contracted pathology or radiology diagnostic services.[10]

56.7 Technology is developing to help deal this challenge. DOHA went on to note that:

> Australia is on the threshold of major developments in national e-health systems and the use of telehealth services. The aim of these systems is to enable health information to be shared more reliably, securely and efficiently between healthcare providers with the aim of delivering safe care and better health outcomes for individuals. The use of these systems will increase the volume and frequency of communications and may mean the individual whom the information concerns is located in a different State or Territory to the holder of the information. New work systems and practices will emerge as e-health systems are developed and implemented, and the use of telehealth services expand.[11]

56.8 In this chapter, the ALRC considers how to meet these challenges, while ensuring that individuals' health information is handled appropriately. The chapter considers the need for greater national consistency in health privacy regulation as well as nationwide developments in relation to electronic health information systems. The consideration of national consistency in health privacy regulation is closely related and cross refers to the discussion of national consistency in privacy regulation more generally in Chapter 4.

National consistency

Issues and problems

56.9 Chapter 2 provides an overview of privacy regulation in Australia. The position is particularly complex in the area of health information for a number of reasons. In general terms, the *Privacy Act* regulates the handling of health information in the Australian Government and ACT public sectors and in the private sector. As noted above, a number of the states and territories also have passed legislation that regulates the handling of health information in the state or territory public sector and/or the private sector.[12] The following table provides a general view of the jurisdictional scope of some of the major pieces of health privacy legislation in Australia.

Other state and territory legislation may also impact on the handling of health information, for example, the New South Wales Government Department of Health, *NSW Health Privacy Manual (Version 2)* (2005) includes information on the *Health Administration Act 1982* (NSW); *Mental Health Act 1990* (NSW); *Public Health Act 1991* (NSW); *State Records Act 1989* (NSW); and the *Freedom of Information Act 1989* (NSW).

Northern Territory	*Information Act 2002* (NT)	*Privacy Act 1988* (Cth)

56.10 Although there is no specific privacy legislation regulating the handling of health information in the public sector in Queensland, Western Australia or South Australia, such information may be protected in other ways. In Queensland, the state government has introduced a privacy policy by administrative, rather than legislative means. *Information Standard 42 on Information Privacy*[13] is based on the Information Privacy Principles (IPPs) and *Information Standard 42A on Information Privacy for*

13 Queensland Government, *Information Standard 42—Information Privacy* (2001).

the Queensland Department of Health[14] is based on the National Privacy Principles (NPPs). Both standards are issued under the *Financial Management Standard 1997* (Qld).

56.11 In South Australia, the state government has also introduced a privacy policy by administrative, rather than legislative means. The *PC012—Information Privacy Principles Instruction* is based on the IPPs. The Department of Health *Code of Fair Information Practice* is based on the NPPs.

56.12 In Western Australia, no legislation or formal administrative arrangements are currently in place. The Information Privacy Bill 2007, however, was introduced into the Western Australian Parliament on 28 March 2007. The Bill proposes to regulate the handling of personal information in the state public sector and the handling of health information in the public and private sectors.[15] The Bill contains a set of eight Information Privacy Principles and 10 Health Privacy Principles.

56.13 As indicated in Table 56–1 above, both a federal Act and a state or territory Act regulate the handling of health information in the private sector in a number of jurisdictions. The New South Wales *Health Records and Information Privacy Act* and the Victorian *Health Records Act* contain a set of Health Privacy Principles (HPPs). The ACT *Health Records (Privacy and Access) Act* contains a set of Privacy Principles. Private sector health service providers in these jurisdictions are therefore required to comply with two sets of principles: the NPPs in the *Privacy Act* and the relevant set of HPPs or Privacy Principles. While the HPPs in New South Wales and Victoria are based on the NPPs, they are not identical and in some cases impose different standards. The ACT Privacy Principles are based on the IPPs, but have been modified to apply specifically to health information.[16]

56.14 The scope of the state and territory legislation may also differ from the federal legislation. For example, the Victorian *Health Records Act* covers small business operators and employee records—unlike the *Privacy Act*.

56.15 The New South Wales and Victorian HPPs and the ACT Privacy Principles also differ from each other, so that information passing from one jurisdiction to the other may become subject to a different set of rules. This causes particular difficulty for health service providers and researchers operating across jurisdictional borders or nationally.

---

14 Queensland Government, *Information Standard 42A—Information Privacy for the Queensland Department of Health* (2001).

15 A related Bill, the Freedom of Information Amendment Bill 2007 (WA), was introduced on the same day. This Bill provides the Privacy and Information Commissioner with powers to resolve FOI complaints by conciliation.

16 Explanatory Memorandum, Health Records (Privacy and Access) Bill 1997 (ACT).

56.16 Another problem arises in jurisdictions like Tasmania, where health information in the public sector is regulated by the *Personal Information Protection Act* and health information in the private sector is regulated by the *Privacy Act.* The *Personal Information Protection Act* contains a set of Personal Information Protection Principles (PIPPs) that are not identical to the NPPs.

56.17 In the health services context, individuals regularly move between public and private sector health service providers. For example, an individual may be referred by a private sector general practice for treatment in a public hospital. In some situations the public and private sector work side by side; for example: where an individual is treated as a private patient in a public hospital; or a research project is conducted on a multi-site basis, across the public sector/private sector divide. This means that health information may be subject to two different sets of privacy principles at the same time.

56.18 Some of the same problems arise because of the distinction in the *Privacy Act* between public sector agencies and private sector organisations. Agencies are bound by the IPPs and organisations are bound by the NPPs. There are circumstances in which an organisation or agency may be subject to both the IPPs and the NPPs. For example, an Australian Government contractor may be bound to comply with the NPPs as an organisation, but will also be bound by contract to comply with the IPPs in relation to information held pursuant to that contract.[17] These issues, including the need for a single set of principles in the *Privacy Act*, are considered in detail in Parts C and D.

56.19 The Office of the Privacy Commissioner review of the private sector provisions of the *Privacy Act 1988* (Cth) (the OPC Review) identified the following problems that arise because of this inconsistency and overlap:

- increased compliance costs, particularly where businesses are conducted across jurisdictional boundaries;
- confusion about which regime regulates particular businesses;
- forum shopping to exploit differences in regulation; and
- uncertainty among consumers about their rights.[18]

56.20 In its submission to the OPC Review, DOHA stated that:

> The co-existence of Commonwealth, state and territory health information privacy legislation has created a significant burden on private sector health care services in

---

17 See *Privacy Act 1988* (Cth) s 95B in relation to requirements for Commonwealth contracts; and s 6A(2)—no breach of an NPP if an act or practice of contracted service provider is authorised by a provision of the contract that is inconsistent with the NPP.

18 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 66–68. The costs of legislative inconsistency and regulatory fragmentation are considered in detail in Ch 11.

> understanding and meeting respective obligations, as well as confusion for health consumers affected by dual legislative instruments.[19]

56.21 In relation to health and medical research, the National Health and Medical Research Council (NHMRC) stated in its submission to the OPC Review that:

> There is evidence that legitimate and ethical activities (which in some cases are vital to the quality provision of health care or the conduct of important health and medical research) are being delayed or proscribed because some key decision-making bodies are unable to determine, with sufficient confidence, whether specific collections, uses and/or disclosures of information accord with legislative requirements. The adoption of a highly conservative approach is resulting in excessive administrative effort and a reluctance to approve the legitimate use and disclosure of health information for the purposes of health care, as well as health and medical research.[20]

56.22 Submissions to the OPC Review overwhelmingly expressed the view that the existing state of health privacy laws in Australia was unsatisfactory for health service providers, health and medical researchers and individuals.[21] Concern also was expressed that the problem would get worse as electronic health records become commonplace.[22]

56.23 In *Essentially Yours: The Protection of Human Genetic Information in Australia* (ALRC 96), the ALRC and the Australian Health Ethics Committee (AHEC) of the NHMRC recommended that:

> As a matter of high priority, the Commonwealth, States and Territories should pursue the harmonisation of information and health privacy legislation as it relates to human genetic information. This would be achieved most effectively by developing nationally consistent rules for handling all health information.[23]

A proposed solution

56.24 As discussed in Chapter 4, the *Privacy Act* expressly allows state and territory privacy legislation to operate to the extent that it is capable of operating concurrently with the *Privacy Act*. The OPC Review stated that:

> It is not clear whether section 3 of the *Privacy Act*, which provides that the operation of state and territory laws that are 'capable of operating concurrently with' the Act are not to be affected, covers the field or not. This provision determines whether or not a state or territory privacy law, or part of it, is or is not constitutional.

22 Ibid, 43.

23 Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), Rec 7–1.

> This lack of clarity leaves the way open to a state or territory to pass its own laws on the ground that there is no constitutional barrier to doing so. It certainly may be that state and territory legislation purporting to regulate health records is inconsistent at least to the extent that it imposes obligations on organisations covered by the *Privacy Act*. If so, it may be unconstitutional. Section 3 could be amended to make it clear that the *Privacy Act* was intended to cover the field.[24]

56.25 The OPC recommended that 'The Australian Government should consider amending section 3 of the *Privacy Act* to remove any ambiguity as to the regulatory intent of the private sector provisions'.[25]

56.26 Section 3 of the *Privacy Act* indicates the Australian Parliament's intention that the Act should not 'cover the field' in the constitutional sense and that state and territory legislation should be allowed to operate alongside the *Privacy Act*, to the extent that such laws are not directly inconsistent with the *Privacy Act*. Section 3 also makes clear that, where state and territory law is directly inconsistent with the *Privacy Act*—that is, it is not capable of operating concurrently with the Act—that law will be invalid to the extent of the inconsistency.[26]

Submissions and consultations

56.27 There was strong support in submissions and consultations for greater national consistency in the regulation of health information.[27] The NHMRC expressed the view that:

> the current state of privacy regulation in Australia is entirely unsatisfactory. Its complexity is impacting on the proper provision of health care and the conduct of important health and medical research, in addition to creating significant unnecessary compliance costs.
>
> The NHMRC considers that a solution to the current problem of an unnecessarily complex privacy regulatory regime needs to be identified and implemented as a priority.
>
> The NHMRC supports the development of a national set of privacy principles that apply to all health information uniformly across the public and private sectors.[28]

56.28 A number of insurance bodies discussed the difficulties that overlapping and inconsistent health privacy legislation posed for their national operations.[29] Other

stakeholders expressed concern about the difficulty of conducting research or providing health services across jurisdictional boundaries. It was noted that health consumers often shift between jurisdictions and should receive the same level of protection in every state and territory.[30]

56.29 The New South Wales Guardianship Tribunal noted that:

> It is not uncommon for people with disabilities to receive services from a range of private and government organisations. In many cases, the person's health information may need to be disclosed or collected to enable the appropriate services to be provided. Inconsistencies or complexities in the legal requirements about information handling add to the burden of pressures involved in working in the disability sector.[31]

56.30 The OPC expressed the view that:

> there is a strong need to clarify the application of the Privacy Act to private sector health service providers. Section 3 of the Privacy Act should be amended to make clear that the National Privacy Principles 'cover the field' for the regulation of private sector health service providers. This would address a key source of uncertainty and potential fragmentation in health privacy regulation in Australia.[32]

56.31 A number of stakeholders expressed support for a cooperative approach to achieving national consistency, rather than amending s 3 of the *Privacy Act* to exclude state and territory legislation.[33] The Government of South Australia did not support the Australian Government legislating to 'cover the field', expressing concern about the possibility that the *Privacy Act* might impact adversely on the operation of state legislation dealing with issues such as compulsory notification in relation to child abuse and notifiable diseases.[34]

56.32 The Western Australian Department of Health noted that:

> The regulation of health privacy has extensive implications for performance of State responsibilities in the delivery of health care and the management of health systems and should remain within State control. Significant local issues include:
>
> - the use of health information, for planning, funding and evaluation of health services and for health related research;
> - the management of Clinical Information Systems to facilitate continuity of care; and

- the sharing of information between agencies.[35]

56.33 The Office of the Health Services Commissioner in Victoria expressed the view that state health privacy legislation was important to allow health consumers access to local complaint handling bodies:

> As well as administering the *Health Records Act*, HSC [the Office of the Health Services Commissioner] also handles complaints about health services in Victoria. HSC is therefore familiar with the workings of the local health system. This is very important when handling complaints about possible breaches of health privacy. HSC receives a number of complaints where the person is complaining about the health service they received as well as a breach of health privacy. Both complaints are dealt with together, as there is often an overlap of issues.[36]

ALRC's view

56.34 The importance of national consistency in the handling of personal information is examined in detail in Chapter 4. Although the health information privacy legislation in New South Wales, Victoria and the ACT has highlighted the problems caused by overlapping and inconsistent legislation, the issue is not confined to the handling of health information. The ALRC's main proposals in relation to national consistency are framed in relation to personal information (including health information), and can be found in Chapter 4.

56.35 The ALRC has found that inconsistency and fragmentation in privacy regulation causes a number of problems, including unjustified compliance burden and cost and impediments to information sharing and national initiatives in the provision of health services and the conduct of research.[37] The ALRC has concluded that national consistency should be one of the goals of privacy regulation in Australia and that personal information should attract similar protection whether that personal information is being handled by an Australian Government agency, a state or territory government agency or a private sector organisation.

56.36 In Chapter 4, the ALRC proposes that the *Privacy Act* be amended to apply to the exclusion of state and territory laws dealing specifically with the handling of personal information in the private sector.[38] In particular, the following laws of a state or territory would be excluded to the extent that they apply to organisations: *Health Records and Information Privacy Act 2002* (NSW), *Health Records Act 2001* (Vic), and the *Health Records (Privacy and Access) Act 1997* (ACT).

56.37 Other state and territory laws may be introduced that seek to regulate the handling of personal information or health information in the private sector, for example, the Information Privacy Bill 2007 (WA). The ALRC therefore proposes that

---

35 Department of Health Western Australia, *Submission PR 139,* 23 January 2006.
36 Office of the Health Services Commissioner (Victoria), *Submission PR 153,* 30 January 2007.
37 See Ch 11.
38 Proposal 4–1.

the *Privacy Act* be amended to allow the making of regulations to exclude such laws, if necessary, in the future.[39]

56.38 The ALRC notes state and territory concerns about the interaction of the proposed amended *Privacy Act* with state and territory laws; for example, state and territory public health Acts requiring health service providers to collect and record certain information about health consumers with notifiable diseases, such as tuberculosis, Creutzfeldt-Jakob disease and HIV/AIDS.[40] Other state and territory laws contain provisions that require mandatory reporting when a child is suspected of being at risk of harm.[41]

56.39 While the proposed Unified Privacy Principles (UPPs) would accommodate most of these laws,[42] to ensure clarity the ALRC proposes that the *Privacy Act* should not apply to the exclusion of a law of a state or territory so far as the law deals with 'non-excluded matters' set out in the legislation. The Australian Government, in consultation with state and territory governments, should develop a list of specific 'non-excluded matters' for the purposes of the *Privacy Act*.[43]

56.40 In relation to the handling of personal information in the state and territory public sectors, the ALRC proposes an intergovernmental agreement. A major cause of inconsistency in Australian privacy laws is that the *Privacy Act* and state and territory privacy laws include similar, but not identical, privacy principles. It is the ALRC's view that the most effective method of dealing with these inconsistencies is the adoption of identical privacy principles across Australia. The intergovernmental agreement would provide that state and territory privacy legislation apply the proposed UPPs and the proposed *Privacy (Health Information) Regulations*, discussed further below and in Chapter 57, as in force under the *Privacy Act* from time to time.[44]

56.41 In addition, the ALRC proposes that definitions of key terms used in the *Privacy Act* (including 'personal information', 'sensitive information' and 'health information') should be adopted in state and territory privacy legislation.[45] The ALRC does not propose that the states and territories be required to develop legislation that exactly mirrors the *Privacy Act*. Apart from the specified elements, the states and territories would be free to develop legislation in relation to their public sectors that

43 Proposal 4–3.
44 Proposal 4–4.
45 Proposal 4–4.

accommodates existing state and territory information laws and compliance and enforcement mechanisms.

56.42 In Chapter 45 it is proposed that the *Privacy Act* be amended to allow the Privacy Commissioner to delegate his or her powers, including the power to handle complaints, to state and territory authorities.[46] For example, complaints against private sector health service providers in Victoria are currently handled by either the OPC or the Victorian Health Services Commissioner. The proposals discussed above would remove this jurisdiction from the state body. The ALRC recognises, however, that there are advantages to handling complaints at a local level. The local complaint handler often has contacts and relationships with local providers, and is in a better location to conduct conciliation conferences. Proposal 45–3 would allow the Privacy Commissioner to enter into an agreement with, for example, the Victorian Health Services Commissioner to allow the state body to handle complaints against Victorian private sector health service providers under the *Privacy Act*.

Proposal 56–1 The Privacy Commissioner should consider delegating the power to handle complaints under the *Privacy Act* in relation to interferences with health information privacy by organisations to state and territory health complaint agencies.

A separate set of Health Privacy Principles?

56.43 At the federal level, health information is generally treated as a sub-set of 'sensitive information' under the *Privacy Act*, although there are a number of provisions and principles that deal specifically with 'health information'. As noted above, three of the states and territories have taken a different approach. New South Wales, Victoria and the ACT have separate legislation—including a separate set of privacy principles—dealing specifically with health information.[47]

56.44 In considering the Privacy Amendment (Private Sector) Bill 2000 (Cth), the House of Representatives Standing Committee on Legal and Constitutional Affairs noted that the inclusion of health information was the most contentious aspect of the Bill.[48] Some stakeholders expressed the view that health information should not be included in the Bill because the:

- health sector is so different from other sectors that the attempt to incorporate it within the general framework of the Bill was misguided;

---

46 Proposal 45–3.

47 *Health Records and Information Privacy Act 2002* (NSW); *Health Records Act 2001* (Vic); *Health Records (Privacy and Access) Act 1997* (ACT).

48 Parliament of Australia—House of Representatives Standing Committee on Legal and Constitutional Affairs, *Advisory Report on the Privacy Amendment (Private Sector) Bill 2000* (2000), [6.2].

- rights contained in the Bill enabling individuals to access their own health information were inadequate; and

- Bill created inconsistent standards governing privacy rights in the public and private sectors.[49]

56.45 Other stakeholders expressed the view that health information should be included in the Bill on the basis that health information is held in a variety of contexts other than the health services context—such as insurance and employment—and that a different approach to the handling of health information would make it difficult to achieve a nationally consistent privacy framework. In addition, stakeholders expressed the view that the modifications made in relation to the handling of sensitive information in the NPPs provided an appropriate and workable framework for the handling of health information.[50]

56.46 The House of Representatives Standing Committee concluded that health information should be included in the Bill.[51] The Committee expressed concern, however, about 'the resulting plethora of principles that will then apply to both the public and private health sectors'.[52] The Committee recommended that:

> the Government encourage all relevant parties to reach an agreed position on the major issues raised in the evidence to this inquiry, such as the harmonisation of privacy principles applicable to the public and private sectors, as a matter of urgency.[53]

56.47 The issue of national consistency was central to these recommendations, but the Committee did not consider in any detail the argument that health information and the health context are so unique that they require a separate set of principles.

The Privacy Act 1988 (Cth)

56.48 As discussed in Chapter 3, the federal *Privacy Act* originally regulated the handling of personal information by Australian Government and ACT public sector agencies. The Act required agencies to apply the IPPs in handling all personal information, including health information. The IPPs do not draw a distinction between personal information and health information.[54]

56.49 The *Privacy Amendment (Private Sector) Act 2000* (Cth) and the NPPs set out in that Act, however, do draw a distinction between personal information and 'sensitive

54 The IPPs and NPPs are discussed in detail in Part D of this Discussion Paper.

information'. Sensitive information is defined to include 'health information about an individual' and is given a higher level of protection under the NPPs in the following ways. Sensitive information:

- may be collected only with consent, except in specified circumstances;[55]
- must not be used or disclosed without consent for a secondary purpose unless that purpose is directly related to the primary purpose of collection;[56]
- must not be used without consent for the secondary purpose of direct marketing;[57] and
- cannot be shared by 'related bodies corporate' in the same way that they may share other 'personal information'.[58]

56.50 The NPPs also make special and specific provision for the collection, use and disclosure of health information in some circumstances; for example, for the management, funding and monitoring of a health service and for the purposes of research, or the compilation of statistics, relevant to public health or public safety. The management, funding and monitoring of health services is discussed in Chapter 57 and research is discussed in detail in Chapter 58.

56.51 In addition, NPP 10.2 provides for the collection of health information without consent where the information is necessary to provide a health service to the individual. The information must only be collected as required or authorised by or under law, or in accordance with rules established by competent health or medical bodies that deal with obligations of professional confidentiality that bind the organisation.[59]

56.52 NPP 2.1(ea) deals specifically with genetic information that has been collected in the course of providing a health service to an individual and allows an organisation to use or disclose that information to a genetic relative where the organisation reasonably believes that the use or disclosure is necessary to lessen or prevent a serious threat to the life, health or safety of the genetic relative. NPP 2.1(ea) also provides that any such use or disclosure must be in accordance with guidelines issued by the NHMRC and approved by the Privacy Commissioner.[60]

59 NPP 10.2 is discussed further in Ch 57.
60 This provision implements Rec 21–1 of Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003). NPP 2.1(ea) is discussed further in Ch 57.

56.53 NPP 2.4 establishes a regime under which a health service provider may disclose an individual's health information to 'a person who is responsible for the individual' including certain family members, carers and legal guardians in some circumstances. These include where the individual is physically or legally incapable of giving consent to the disclosure.[61]

56.54 NPP 6.1(b) provides a special exception to the access principle in relation to health information. An organisation need not provide access to an individual's health information where providing access would pose a serious threat to the life or health of any individual. In these circumstances the organisation must, if reasonable, consider whether the use of mutually agreed intermediaries would allow sufficient access to meet the needs of both parties.[62]

The draft National Health Privacy Code

56.55 In June 2000, Australian Health Ministers established the Australian Health Ministers' Advisory Council (AHMAC) National Health Privacy Working Group. The purpose of the Working Group was to address the need for a nationally consistent framework for health information privacy. The AHMAC Working Group was made up of representatives of state and territory health authorities and the Australian Government Attorney-General's Department and was chaired by DOHA. The Health Insurance Commission, the Australian Institute of Health and Welfare and the OPC had observer status on the AHMAC Working Group and provided specialist advice.[63]

56.56 The framework developed by the AHMAC Working Group has become known as the draft *National Health Privacy Code*. In order to achieve national consistency, the draft Code was intended to apply to all health service providers and organisations that collect, hold or use health information across the public and private sectors in every Australian state and territory.[64] The draft Code contains 11 National Health Privacy Principles (NHPPs) and additional detailed procedures for providing individuals with access to their health information.

56.57 Following a public consultation process, a revised version of the Code, draft mandatory research guidelines and explanatory notes for the use or disclosure of genetic information were developed.[65] These have not, however, been made publicly available. Consequently, where provisions of the draft Code are discussed in this Discussion Paper, references are to the provisions of the draft Code released for public comment in 2003. While much of the content of the draft Code was finalised, as at

August 2006, it had not been formally endorsed at ministerial level[66] and an implementation mechanism had not been settled.[67]

56.58 Although the NHPPs have much in common with the NPPs, there are also numerous differences. In general, the NHPPs are more detailed and provide specific guidance on issues such as the handling of health information on the death of a health service provider or where a health service closes, is sold or amalgamates with another service. Some specific NHPPs differ from their equivalent NPPs. For example, while NPP 4 requires organisations to take reasonable steps to destroy or permanently de-identify personal information if it is no longer needed,[68] NHPP 4 requires health service providers to retain health information for at least seven years.[69]

State and territory health privacy legislation

56.59 The *Health Records and Information Privacy Act 2002* (NSW) regulates the handling of health information in the public and private sectors and includes a set of 15 Health Privacy Principles (HPPs). The HPPs expressly address issues such as: the use of health information without consent for the funding, management, planning or evaluation of health services;[70] for research;[71] and health records linkage.[72] The Act also includes detailed provisions on providing access to health information.

56.60 The *Health Records Act 2001* (Vic) also regulates the handling of health information in the public and private sectors and includes a set of 11 HPPs. The Victorian HPPs require the retention of health information records for at least seven years.[73] The HPPs also expressly address issues such as: the use of health information without consent in the funding, management, planning, monitoring, improvement or evaluation of health services;[74] the use of health information in research;[75] the transfer of health information when the consumer changes health service provider; and arrangements for the custody of health information when a health service provider closes.[76] As in New South Wales, the Act includes detailed provisions on providing access to health information.

56.61 The ACT *Health Records (Privacy and Access) Act 1997* regulates the handling of health information in the public and private sectors and includes a set of 12 Privacy Principles. These principles expressly address issues such as: the sharing of

information among members of a treating team;[77] transfer or closure of a health service provider's practice; and the transfer of a health consumer's health information from one health service provider to another when the consumer changes health service provider.[78] In common with New South Wales and Victoria, the Act includes detailed provisions on providing access to health information.

Submissions and consultations

56.62 In consultation, the Office of the Health Services Commissioner in Victoria expressed the view that health information does require a separate set of principles because of the intimate nature of the information and the fact that some health information—such as mental health information—can lead to stigmatisation or discrimination.[79] In its submission, the Office of the Health Services Commissioner also expressed the view that the draft *National Health Privacy Code* provided a good starting point:

> A great deal of important work and consultation with key stakeholders has already taken place. It would be a regrettable waste of public resources not to utilize the work involved in drafting the *National Code*. Mirror or applied legislation as set out in paragraph 8.43 of the Issues Paper are the most desirable and effective models for implementing the *National Code*.[80]

56.63 A number of other stakeholders agreed that health information and the health services context are unique and require a specific regulatory regime.[81] Support was also expressed for the draft *National Health Privacy Code.*[82]

56.64 The Australian Nursing Federation stressed the need for consistent and carefully crafted principles to assist health service providers to achieve the difficult balances that come up in their daily decision making. The Federation also noted the considerable investment in the development of the draft *National Health Privacy Code* and

expressed the view that the Code was an appropriate vehicle for developing a nationally consistent framework for the regulation of health information.[83]

56.65 The Centre for Law and Genetics[84] and the Caroline Chisholm Centre for Health Ethics referred to the need to gather familial and social information, including genetic health information, in the health services context:

> The relevant professional should be afforded the appropriate freedom and discretion to responsibly record such information and detail, without fear that there has been a breach of privacy. We believe the general privacy principles do not adequately accommodate such information handling and recording, transfer and sharing.[85]

56.66 The Western Australian Department of Health expressed support for a separate set of health principles, noting the need to use health information for continuity of care in relation to individuals and monitoring and protecting the community on public health issues. The Department noted, however, that a separate set of principles may lead to uncertainty in some contexts—such as child welfare—about which principles apply.[86]

56.67 Other stakeholders were of the view that, for simplicity and consistency, one set of privacy principles should apply to personal information, including health information. There was recognition, however, that there may be a need for supplementary principles or guidance on the detailed application of the principles in the health services context.[87]

56.68 The NHMRC expressed some support for the draft *National Health Privacy Code,* but stated that its preference

> is for a uniform national system for the regulation of personal information privacy, which incorporates specific requirements relating to the regulation of health information privacy, rather than a separate code for the regulation of health privacy. Failing this, our preference is for all jurisdictions to adopt and maintain the draft *National Health Privacy Code* for application across the public and private sectors.[88]

56.69 The OPC expressed the view that:

> Health privacy regulation could be enhanced by building upon existing provisions, without the necessity of an additional instrument or an entirely new set of principles.
>
> The Office understands that other stakeholders may hold differing views on this matter and would prefer a separate regulatory instrument specifically for the health sector. The Office submits that a uniform and coherent approach to privacy regulation is best served by incorporating privacy protections into a single body of regulation.
>
> A single body of regulation is also likely to reduce regulatory complexity for those agencies and organisations that handle both health and non-health information. The existence of separate sets of principles may create confusion by requiring agencies and organisations to refer to different instruments, depending on the type of personal information they are handling at any given time.[89]

56.70 In the course of the OPC Review, the OPC considered whether it would be possible to incorporate elements of the draft *National Health Privacy Code* into the NPPs. The OPC stated that

> the resulting principles would be longer and more complex. This option would require the insertion of multiple sub-principles and exceptions to the NPPs to take account of the code.
>
> This approach would run counter to the intent of delivering general, high-level principles for all business and government sectors. For instance, the approach would mean that non-health organisations and agencies would need to deal with a more complex set of privacy principles, where much of the content may not apply to them. This would not improve, and may even increase, regulatory complexity overall.[90]

56.71 In addition, the OPC stated in its submission to this Inquiry:

> The Office notes that in a number of significant areas, particularly concerning the collection, use and disclosure of health information, it is questionable whether the proposed NHPC would be likely to be equivalent to the protections of the NPPs … In addition, in a number of areas, the proposed code seems unwieldy, complex and overly prescriptive and, hence, inconsistent with the established light-touch approach to privacy regulation.[91]

56.72 The Australian Privacy Foundation stated that, while in principle the draft *National Health Privacy Code* could form the basis of more detailed principles for health information:

> One difficulty with the development of a separate code is that it encourages drafters and stakeholders to adjust the information privacy principles more than necessary, creating arbitrary or intricate differences that then create confusion. This is evident in the creation of the Health Records Act in Victoria, which adopts much of the

91 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

> information privacy principles that appeared in the State's Information Privacy Act but is more prescriptive and creates distinctions that may or may not be significant yet cause confusion. For example, the Health Records Act requires organisations in health privacy principle 1.3 to 'take steps that are reasonable in the circumstances to ensure that the individual is generally aware' about the purposes for which the information is collected. By contrast, information privacy principle 1.3 in the Information Privacy Act requires organisations to 'take reasonable steps to ensure the individual is aware' of the same things.[92]

ALRC's view

56.73 The ALRC recognises that handling health information does raise some unique issues and that these require additional consideration in the development of privacy principles, rules and guidelines. For example, in ALRC 96, the ALRC and AHEC noted:

> The collection of family medical history is an established part of medical practice. When providing a health service, health professionals may need to collect family medical history in order to diagnose a patient's condition accurately ... If this information is not collected the medical care or advice provided to the patient may be compromised.[93]

56.74 The ALRC also acknowledges the investment of time and effort that has gone into developing the draft *National Health Privacy Code* and the level of support the Code has among stakeholders. The ALRC's view is, however, that it is undesirable to have two sets of privacy principles, one set dealing with health information and one set dealing with other personal information.

56.75 In Chapter 11, the ALRC examines the impact of inconsistency and fragmentation in the privacy regime and notes that one cost is less sharing of information in appropriate circumstances. This is a particular problem in the health services context where appropriate sharing of health information between members of treating teams is essential to the wellbeing of health consumers.

56.76 In addition, the Taskforce on Reducing Regulatory Burdens on Business (the Regulatory Taskforce) noted that achieving nationally consistent privacy laws is an important factor in reducing compliance costs for business.[94] The Regulatory Taskforce recommended that the Australian Government ask the Standing Committee of Attorneys-General to endorse national consistency in all privacy-related legislation based on the concept of minimum effective regulation.[95] In its response to *Rethinking Regulation*, the Australian Government stated that:

---

92 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

93 Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), [21.4].

94 Regulation Taskforce 2006, *Rethinking Regulation: Report of the Taskforce on Reducing Regulatory Burdens on Business*, Report to the Prime Minister and the Treasurer (2006), [4.151].

95 Ibid, rec 4.47.

> The Australian Government agrees to the recommendation and supports the goal of national consistency in privacy-related legislation. At the April 2006 meeting of the Standing Committee of Attorneys-General, Attorneys-General agreed to establish a working group to advise Ministers on options for improving consistency in privacy regulation, including workplace privacy.[96]

56.77 In the ALRC's view, having one set of principles regulating the handling of health information and another set of principles regulating the handling of other personal information would not reduce compliance costs for business and would not be consistent with the goal of national consistency in privacy legislation. In particular, the provisions of the draft *National Health Privacy Code* are not consistent with the provisions of the *Privacy Act*, or with the proposed UPPs—and having two regimes running side by side would contribute to fragmentation, inconsistency and compliance costs for all stakeholders.

56.78 Health information is handled in a range of contexts, not only the health services context. In the ALRC's view, agencies and organisations that handle health information as well as other personal information should not be required to comply with two sets of principles. There is significant overlap in the basic approach to handling health information in state and territory legislation, the NHPPs and the proposed UPPs. For example, UPP 5 provides that sensitive information, including health information, may only be used for the purpose it was collected or a directly related secondary purpose where the individual would reasonably expect the information to be used in that way. This is consistent with the Victorian HPPs and the NHPPs. The NSW HPPs and the ACT privacy principles only require that the purpose be directly related to the purpose for which it was collected.

56.79 In the ALRC's view, the proposed UPPs provide a suitable basic framework for handling health information. With some health specific additions to the UPPs, a single legislative scheme could work effectively to regulate both health information and other personal information. These additions, including some health specific exceptions to the UPPs and a number of health specific additional privacy principles, are discussed in Chapter 57 and include some of the extra principles and exceptions developed for the purposes of the draft *National Health Privacy Code.*

56.80 The ALRC has considered whether the health specific principles and exceptions should sit within the UPPs or alongside the UPPs. Each approach has advantages and disadvantages. If the additional elements were included in the UPPs, the UPPs would be longer and more complex but agencies and organisations would only have to refer to one source of guidance in handling all personal information, including health information. On balance, however, the ALRC proposes that the additional health

---

96 Australian Government, *Rethinking Regulation: Report of the Taskforce on Reducing Regulatory Burdens on Business—Australian Government's Response* (2006), 26.

information principles and exceptions to the UPPs be set out in regulations to be called the *Privacy (Health Information) Regulations*. This means that, for those agencies and organisations that do not handle health information, the UPPs are concise and more accessible.

56.81 For those agencies and organisations that do handle health information, the ALRC proposes that the OPC publish a document setting out the UPPs as amended by the *Privacy (Health Information) Regulations*. This document will provide a complete set of privacy principles covering health information, as well as other personal information.

56.82 The other reason that the ALRC proposes that health information-specific principles and exceptions be included in regulations is that health is an area in which the application of the proposed UPPs may need to be modified or clarified from time to time. In 2006, for example, the NPPs were amended to provide for the use and disclosure of genetic information to lessen or prevent a serious threat to the life, health or safety of a genetic relative.[97] This kind of change is more easily achieved through regulation, than by amendment of the UPPs in the principal Act.

56.83 The draft *National Health Privacy Code* contains some material that, in the ALRC's view, should be included in the *Privacy (Health Information) Regulations*; that is, where the proposed UPPs need to be amended in relation to health information. This material is discussed in detail in Chapter 57.

56.84 Much of the material in the draft Code, however, is not of this nature. Chapter 15 examines the differences between principles-based regulation and prescriptive rules-based regulation. Principles-based regulation provides greater flexibility, enabling the regime to respond to new issues as they arise without having to create new rules. Rules-based regulation is less flexible and can impose requirements that are not always appropriate in every situation. The draft Code includes a significant amount of material that is closer in nature to rules than principles, setting out how health information is to be handled in particular situations. For example, the Code includes 17 clauses on access to health information. The ALRC's view is that this level of detail is not necessary for inclusion in high-level principles.

56.85 The proposed 'Access and Correction' principle provides a suggested framework for access to personal information. Much of the detail provided in the draft *National Health Privacy Code* in relation to access—for example, how a right of access may be exercised and in what form health information may be provided—is consistent with this principle and could be included in guidelines issued by the OPC. The guidelines could make clear, for example, that organisations may provide a copy of the health information to the individual or, if the individual agrees, an accurate

97 *Privacy Legislation Amendment Act 2006* (Cth).

summary of the health information.[98] The ALRC proposes that the OPC develop such guidelines in consultation with relevant stakeholders and is of the view that the draft Code would provide a valuable starting point in the development of such guidelines.

Proposal 56–2 Health information should continue to be regulated under the general provisions of the *Privacy Act* and the proposed Unified Privacy Principles (UPPs). Amendments to the proposed UPPs that relate specifically to the handling of health information should be promulgated in regulations under the *Privacy Act*—the *Privacy (Health Information) Regulations*.

Proposal 56–3 The Office of the Privacy Commissioner should publish a document bringing together the proposed UPPs and the amendments set out in the *Privacy (Health Information) Regulations*. This document will contain a complete set of the proposed UPPs as they relate to health information.

Proposal 56–4 The Office of the Privacy Commissioner—in consultation with the Australian Government Department of Health and Ageing and other relevant stakeholders—should develop guidelines on the handling of health information under the *Privacy Act* and the *Privacy (Health Information) Regulations.*

Electronic health information systems

56.86 Traditionally, health information has been collected and stored in paper-based systems, with information about one individual held in a number of disparate locations, such as, in general practitioners' records, hospital records, pathology laboratory records and medical specialists' records. Health information increasingly is collected, stored and transferred in electronic form and health information about large numbers of health consumers is collected into central databases, such as the Medicare database and cancer registers.

56.87 Another important trend is the move to integrate health information systems and to create shared electronic health records. Sharing and linking of health information about particular health consumers has the potential to achieve better health outcomes for consumers by allowing health service providers better access to health information, but have also given rise to privacy concerns.

98 National Health Privacy Working Group of the Australian Health Ministers' Advisory Council, *Draft National Health Privacy Code* (2003) pt 5, div 1, cl 3(1)(b).

Health*Connect* and NEHTA

56.88 In its submission to the OPC Review, DOHA stated:

> A major focus of work in the e-health area for the Department is on implementing Australia's national electronic health records network, Health*Connect*, designed to overcome the gaps in information flow at the point of clinical care. While there is wide acceptance of the benefits that Health*Connect* can deliver, particularly in the areas of patient safety and quality of care, there is also recognition that there are privacy and security risks that need to be managed to ensure such benefits are realised. Personal health information is sensitive information, and both consumers and providers will need to have trust in how their information is handled within and external to Health*Connect* ahead of participating in this system. In this context, privacy and security issues are consistently identified as a key building block for Health*Connect* among all stakeholders.[99]

56.89 A large number of electronic health information systems are being developed at the local, regional and national levels across Australia. For example, in March 2006 the New South Wales Government announced Health*elink*, an electronic health records system to be piloted in different parts of the state.[100] Health*Connect* South Australia is working on three major e-health initiatives including the development of an electronic planning and referral system for health consumers with chronic disease.[101] Health*Connect* Northern Territory has commenced implementation of a Shared Electronic Health Record Service.[102]

56.90 The Health*Connect* website notes that there are a number of developments currently underway that could be implemented nationally within the next 12 to 18 months; for example:

- e-prescriptions—prescriptions for medication being sent electronically from health care providers to pharmacies;
- e-referrals—referrals or requests being sent electronically from one health care provider to another (for example, from a doctor to a radiologist); and
- hospital discharge summaries—summaries of the treatment provided and the proposed future care plan being sent electronically from hospitals to doctors, specialists or aged care facilities.[103]

102 C Burns (Northern Territory Minister for Health), 'Connecting Health Services Territory-Wide' (Press Release, 1 November 2006).

103 Australian Government Department of Health and Ageing, *HealthConnect: FAQs* <www.healthconnect.gov.au> at 1 August 2007.

56.91 The National E-Health Transition Authority (NEHTA) was established in 2005 to set national standards, specifications and infrastructure requirements for electronically collecting and securely exchanging health information. NEHTA is funded jointly by the Australian, state and territory governments. The NEHTA Board is composed of the chief executive officers of the Australian, state and territory health departments. The aim is to ensure a common national approach, setting the necessary foundations for future electronic health systems across Australia.[104]

56.92 NEHTA is also developing a design for a national approach to Shared Electronic Health Records (SEHRs)—records that will contain selected health information about a health consumer, which can be shared among multiple authorised health service providers. An important precursor to SEHRs is the development of a Unique Healthcare Identifiers (UHIs) scheme for individuals and healthcare providers to ensure that information is attributed to the right patient and the right provider:

> Healthcare requires the constant collection, exchange and transmission of health information. This is usually in the context of information about a single patient being exchanged between multiple healthcare providers. It is critical for patient safety and privacy that this information exchange occurs reliably and securely.
>
> The Council of Australian Governments has committed Australia to a single, national approach to identifying individuals and healthcare providers for the purposes of health communications. This approach, being developed by NEHTA, is known as the Unique Healthcare Identification (UHI) Service.
>
> The UHI Service will involve the allocation, issuing and maintenance of unique identifiers for individuals (known as the Individual Healthcare Identifier or IHI) and healthcare providers (the Healthcare Provider Identifier or HPI).[105]

56.93 Unique identifiers are discussed in detail in Chapter 27. In that chapter the ALRC suggests that the proposed 'Identifiers' principle should apply to both agencies and organisations.

56.94 In December 2006, NEHTA released a *Privacy Blueprint—Unique Healthcare Identifiers*,[106] which discusses how NEHTA proposes to manage the privacy issues arising from the UHI Service. The *Privacy Blueprint* states that the Individual Healthcare Identifier (IHI) will be used only to identify individuals for health care and that individuals will not be required to produce an IHI to receive health care.[107] NEHTA notes that in developing national unique healthcare identifiers it will be necessary to assess Australia's privacy laws:

107 National E-Health Transition Authority, 'Privacy Blueprint—Unique Healthcare Identifiers Release Notes' (Press Release, 13 December 2006).

> which contain prohibitions and/or restrictions governing the creation and adoption of unique identifiers. These restrictions aim to prevent function creep of identifiers, discouraging their development as almost universal identifiers.[108]

56.95 NEHTA has expressed the view that legislation supporting the creation of the UHI Service would create greater legal certainty, particularly around the creation and distribution of unique identifiers. Other issues that might be covered in such legislation include governance arrangements and sanctions for misuse of the identifiers.[109]

56.96 A report on feedback to the *Privacy Blueprint—Unique Healthcare Identifiers*, noted that:

> Any unique personal identifier, especially where widely held in the community, raises a significant privacy risk of inappropriate datalinking and data-matching. The OPC noted that it will be important to ensure this risk is mitigated and that such a highly reliable identifier is not usurped for purposes beyond the health system and the clinical care of individuals.
>
> The UHI Service potentially holds a very large database on most, if not all, Australians and foreign residents who obtain healthcare. The OPC considered a unique aspect of the proposal is that access to UHI data will be available to a large number of health sector users, raising the risk of misuse or abuse of the data and access privileges, particularly to locate the home address of an individual for purposes unrelated to healthcare. Accordingly, the OPC welcomed NEHTA's detailed measures contained in the Privacy Blueprint directed at protecting individual privacy.[110]

56.97 The OPC Review recommended that:

> The Australian Government should consider developing specific enabling legislation to underpin any national electronic health records system. The legislation should be consistent with the National Health Privacy Code, but also include enhancing protections for matters such as the voluntariness of the system and limitations upon the uses of people's health records.[111]

Submissions and consultations

56.98 In IP 31, the ALRC asked whether electronic health information systems require specific privacy controls over and above those provided in the *Privacy Act* or the draft *National Health Privacy Code*.[112] In its submission, the Western Australian Department of Health noted that:

---

111 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 71.

112 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 8–5.

> Electronic health information systems pose risks to privacy because of the speed and reach of information transfer. However, they also provide new opportunities to increase individual control and to improve security and the ability to audit access to information. Arguably, the privacy issues with electronic systems are not different in kind from those relating to paper-based systems of information storage and general principles are usually appropriate. However, the principles must be informed by a thorough knowledge of electronic storage and transfer practices.[113]

56.99 The NHMRC expressed the view that:

> Despite these risks, we consider that the achievement of national interoperability is a key goal, which will improve the quality of health care offered to the Australian community. The *Privacy Act* needs to facilitate progress and accommodate change efficiently.[114]

56.100 The Office of the Information Commissioner Northern Territory agreed that privacy principles should be drafted at a high level in order to accommodate the handling of personal information in any form:

> The *Privacy Act* and privacy principles do not, and should not, attempt to prescribe detailed requirements for any particular project. They operate at a higher level. Likewise, a national code would operate at a high level and should be reviewed only infrequently. It would be inappropriate to single out electronic health systems for prescriptive treatment that may prove unable to cope with technological changes that appear in a few years time.[115]

56.101 The Office of the Health Services Commissioner in Victoria stated that the provisions of the *Health Records Act* deal adequately with electronic health information systems.[116]

56.102 In its submission, the OPC specifically considered the proposal to establish SEHRs and expressed the view that such systems 'should be accompanied by specific legislative measures to ensure community confidence that personal health information will be handled privately'.[117] The OPC's view is that such legislation should provide for:

- participation on an 'opt-in' basis;
- the primary uses of data;
- a designated authority and processes for approval of secondary uses of data;

117 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

- consent processes; and
- sanctions and complaint mechanisms.

56.103 The OPC also suggested that consideration be given to reform of the *Privacy Act* to address the standards by which an individual's health information may be disclosed to and collected from SEHRs.[118]

56.104 DOHA expressed the view that:

> National e-health systems such as Unique Health Identifiers (UHIs) and the Shared Electronic Health Record (SEHR) will significantly change the way health information is handled in the provision of healthcare services. They will lead to greater aggregation of health information which is more searchable. More information about an individual will be potentially available to many more people. The development of these systems will create new opportunities over time for examining this information for the benefit of the individual concerned and the community as a whole, but also carry the possibility of misuse.
>
> For these systems to realise their potential benefits, there must need to be a high level of public trust and confidence in their operation. Express legislative controls over their operation that provide clarity, certainty and predictability, but sufficient flexibility for growth as these systems evolve, are considered integral to building and maintaining this trust and confidence. Reliance on the interpretation and application of general principles is unlikely to be sufficient.
>
> Any legislation must clearly define the purposes for, and the permitted uses of, UHIs and the SEHR. The provisions needed to support the operation and management of key national e-health systems such as UHIs and SEHR services, as these develop, may include:
>
> - the establishment of a standing governance body or bodies to oversight the management and operation of specified e-health systems;
> - who has control over the information collected and how this will be exercised;
> - eligibility criteria, rights and requirements for participation in specified e-health systems by consumers and providers;
> - limitations on the personal information that may be collected in relation to specified e-health systems;
> - the rights of individuals to exercise control over information held about them and to access and correct this information;
> - restrictions on the use or disclosure of the information collected and any penalties for improper use or disclosure;
> - the rules and decision-making processes governing the secondary use of information;
> - the prohibitions on function creep or the mechanisms to authorise any changes in use;

118 Ibid.

- arrangements for ensuring data quality and security of records containing personal information;
- arrangements for access to records and audit logs by the individual concerned or their authorised representative;
- the remedies for improper access and use, including complaints mechanisms; and
- arrangements for enforcing compliance with the standards for interoperability in the healthcare sector that are proposed to be published by the National E-Health Transition Authority (NEHTA).[119]

56.105 NEHTA submitted that it may be desirable to develop specific legislation to support new initiatives that raise issues that fall outside the ambit of statutory privacy regimes, such as governance issues.[120]

ALRC's view

56.106 In the ALRC's view, the collection of health information into electronic health information systems does not require specific legislative control if the *Privacy Act* is updated and amended as proposed in this Discussion Paper. The collection of health information into electronic records and the use of electronic systems to share health information among health service providers treating an individual do not raise new or unique issues. The proposed UPPs and the *Privacy (Health Information) Regulations* are intended to be technology neutral and would satisfactorily regulate the handling of electronic health information.

56.107 However, the establishment of a national UHI scheme or a national SEHR scheme would require specific enabling legislation. The ALRC recognises the significant potential benefits to healthcare quality and safety that the establishment of such schemes may deliver. The schemes will work effectively, however, only if there is a sufficient degree of public trust and public confidence in the schemes and their administration. Further, national developments of such importance involving the establishment and use of unique identifiers for all Australians and the development of a national approach to SEHRs should be subject to public debate and parliamentary scrutiny.

56.108 The ALRC agrees with NEHTA that enabling legislation should deal with those issues that fall outside existing privacy regulation. Such enabling legislation should nominate or establish an agency or organisation with clear responsibility for managing the systems, including the personal information in the systems. There should be clear lines of accountability. The legislation should set out the permitted and

---

119 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007.
120 National E-health Transition Authority, *Submission PR 145,* 29 January 2007.

prohibited uses of UHIs and sanctions for misuse. Moreover, the legislation should make absolutely clear that certain safeguards are fundamental; for example, that it is not necessary to use a UHI to access health care.

56.109 The systems should remain subject to the *Privacy Act* and the proposed UPPs as amended by the proposed *Privacy (Health Information) Regulations*. For example, health information generally should only be collected for inclusion in an SEHR with consent. That information should only be used or disclosed for the purpose it was collected or a directly related secondary purpose where the individual would reasonably expect the agency or organisation to use or disclose the information for that purpose.

56.110 Under the proposed 'Identifiers' principle, it would be necessary to set out in regulations those agencies and organisations allowed to adopt, use and disclose UHIs, and the circumstances in which it was lawful for those agencies and organisations to adopt, use or disclose a UHI.

56.111 Exceptions in the UPPs and the regulations would apply so that, for example, it would be possible to use or disclose an individual's health information held in an SEHR if the agency or organisation reasonably believed that the use or disclosure was necessary to lessen or prevent a serious threat to an individual's life, health or safety or public health or public safety.

56.112 The proposals in Chapter 4 are aimed at achieving national consistency in privacy regulation and, in particular, one set of privacy principles applying across the private sector, and the federal, state and territory public sectors. Any legislation establishing the UHI and SEHR schemes also should apply nationally to ensure consistency between the public and private sectors and across all jurisdictions.

Proposal 56–5 The national Unique Healthcare Identifiers (UHIs) scheme and the national Shared Electronic Health Records (SEHR) scheme should be established under specific enabling legislation. The legislation should address information privacy issues, such as:

(a) the nomination of an agency or organisation with clear responsibility for managing the respective systems, including the personal information contained in the systems;

(b) the eligibility criteria, rights and requirements for participation in the UHI scheme and the SEHR scheme by health consumers and health service providers, including consent requirements;

(c) permitted and prohibited uses and linkages of the personal information held in the systems;

(d) permitted and prohibited uses of UHIs and sanctions in relation to misuse; and

(e) safeguards in relation to the use of UHIs; for example, that it is not necessary to use a UHI in order to access health services.

Medicare and Pharmaceutical Benefits

56.113 The Australian Government holds extensive electronic health records containing personal information collected in connection with claims under the Pharmaceutical Benefits Program and the Medicare Benefits Program. These databases are subject to specific privacy controls over and above those set out in the *Privacy Act*.

56.114 Section 135AA of the *National Health Act 1953* (Cth)[121] deals specifically with the personal information held in these databases. The section requires the Privacy Commissioner to issue written guidelines covering the storage, use, disclosure and retention of the information.[122] The section applies only to information stored in computer databases—principally those held by Medicare Australia and DOHA—and was introduced to ensure the functional separation of information collected in relation to Medicare claims and information collected in relation to pharmaceutical benefits claims.[123]

56.115 This separation was intended to

> accord with the individual patient's expectation that sensitive health information given in a particular context is used and managed by the recipient in a way that is consistent and in accordance with that context. It gives a practical expression, in the context of information storage systems, to the privacy principle that information should generally only be used for the purpose for which it was collected.[124]

56.116 While the information in the two databases is kept functionally separate, it is possible to disclose the information for research purposes, either with consent from the individuals who are the subject of the information or in accordance with guidelines

---

121 Inserted into the *National Health Act 1953* (Cth) by the *Health Legislation (Pharmaceutical Benefits) Amendment Act 1991* (Cth). In addition, s 27(1)(pa) of the *Privacy Act 1988* (Cth) provides that the issue of guidelines under the *National Health Act* is one of the functions of the Privacy Commissioner.

122 Section 27(1)(pa) of the *Privacy Act 1988* (Cth) provides that one of the functions of the Privacy Commissioner is to issue guidelines under s 135AA of the *National Health Act 1953* (Cth).

123 Commonwealth, *Parliamentary Debates*, House of Representatives, 30 May 1991, 4490 (P Staples—Minister for Aged Family and Health Services).

124 Office of the Federal Privacy Commissioner, *Medicare and Pharmaceutical Benefits Programs Privacy Guidelines: Issued under Section 135AA of the National Health Act 1953* (1997), Commissioner's Note on cl 1.1.

issued by the NHMRC under s 95 of the *Privacy Act*. The Western Australian Department of Health (WA) has noted that:

> Under current legislation and guidelines, it is possible to create linkable MBS and PBS datasets that contain common encrypted identifiers with ethics clearance. The [Data Linkage Unit] has created linkage keys for these datasets and for Residential Aged Care data from the Department of Health and Ageing that enable unidentifiable data to be provided to researchers in approved projects. Research projects are strictly regulated and 're-identification' and unauthorized linkages are forbidden.[125]

56.117 The Privacy Commissioner first issued the *Medicare and Pharmaceutical Benefits Program Privacy Guidelines* in 1993 and they were last amended in 2000.[126] The Guidelines are legally binding and any breach is an 'interference with privacy' that may provide the basis for a complaint to the Privacy Commissioner.[127] The Guidelines impose obligations on Australian Government agencies in addition to the IPPs in the *Privacy Act* and the secrecy provisions in the *National Health Act* and the *Health Insurance Act 1973* (Cth).

56.118 The Guidelines require that information collected in connection with the Medicare and Pharmaceutical Benefits Programs be stored separately, and specify the circumstances in which data from the two databases may be linked.[128] They modify or supplement the application of the IPPs in some circumstances. For example, the Guidelines modify the application of IPP 11 in relation to disclosure where there is to be linkage, comparison or combination of records from either of the regulated databases. These variations reflect the special sensitivity attached to linkage or comparison of records from the two databases.[129]

56.119 In November 2004, the Privacy Commissioner announced a major review of the Guidelines,[130] prompted by a number of factors, including: a request from DOHA; suggestions that the personal information covered by the Guidelines could be used more effectively by researchers; and suggestions that community attitudes and expectations regarding the handling of personal information—and in particular sensitive health information—may have changed since the Guidelines were issued.[131]

131 Office of the Privacy Commissioner, *Report of the Privacy Commissioner's Review of the Privacy Guidelines for the Handling of Medicare and PBS Claims Information* (2006), 11.

An issues paper[132] was released and 35 submissions were received in the course of the review. A number of open forums were held in late 2004 and a Consultative Group was established to assist the OPC in considering the issues raised in the review.

56.120 The major issues canvassed in the course of the review were the:

- separation of claims information collected under the Medicare and Pharmaceutical Benefits programs;
- circumstances in which claims information from each program may be linked;
- periods for which claims information may be retained;
- use of claims information for medical and other research purposes;
- handling by DOHA of claims information that does not identify individuals; and
- application of the Guidelines to agencies other than Medicare Australia and DOHA.[133]

56.121 The Privacy Commissioner's final report was released in August 2006 and includes 25 findings.[134] Some of these findings will be reflected in revised Guidelines and some set out the OPC's interpretation of matters relevant to the Guidelines. The final report lists the following as key findings:

- The Guidelines should be amended to permit an individual to consent to the linkage of their own claims information by Medicare Australia for the purpose of providing access to the information.[135]
- The prohibition against storing Medicare and Pharmaceutical Benefits claims information on the same database should apply to all agencies.[136]
- Changes should be made to the periods for which Medicare Australia may retain claims information in linked and unlinked form.[137]
- Some changes are required in the way DOHA may handle claims information.[138]

133 Office of the Privacy Commissioner, *Report of the Privacy Commissioner's Review of the Privacy Guidelines for the Handling of Medicare and PBS Claims Information* (2006), 14.
134 Ibid, 8–10.
135 Ibid, finding 2.
136 Ibid, finding 23.
137 Ibid, findings 6–8.
138 Ibid, findings 14–21.

56.122 In light of this recent comprehensive review, the ALRC does not consider it necessary to conduct another detailed study of the Guidelines.

Submissions and consultations

56.123 In IP 31,[139] the ALRC asked whether the role provided for the Privacy Commissioner under s 135AA of the *National Health Act* is an appropriate and effective one. The OPC has submitted that the role is appropriate.[140] Other stakeholders were also supportive.[141]

56.124 In contrast, the Australian Government Department of Human Services stated:

> There is a separate and fundamental question about whether there is still a requirement for section 135AA itself. The information in the Medicare and Pharmaceutical Benefits Scheme claims databases is subject not only to the *Privacy Act* but also to the secrecy provisions of the legislation administered by Medicare Australia. The appropriate application of the privacy principles and secrecy provisions to that information should provide sufficient protection, and as such there is a question about whether there continues to be a need for a separate regime for the handling of the information in those two databases.[142]

ALRC's view

56.125 Although the ALRC did not receive many submissions on this issue, it would appear that there is a role for the Privacy Commissioner in developing rules for handling personal information in major national databases, particularly where databases rely on the use of 'identifiers' such as the Medicare number.[143] Importantly, the current *Medicare and Pharmaceutical Benefits Programs Privacy Guidelines* vary the application of some of the IPPs, reflecting the special sensitivity attaching to, for example, linkage, comparison or combination of records from the two regulated databases. In these circumstances, it is the ALRC's view that it is appropriate for the Privacy Commissioner to be actively involved.

56.126 In Chapter 44, the ALRC considers the role of the Privacy Commissioner more generally in issuing non-binding guidelines and binding rules and expresses the view that the power to issue guidance is an important part of regulating a principles-based regime such as the *Privacy Act*. The ALRC proposes that where guidelines issued by the Privacy Commissioner are binding they should be renamed 'rules' and that the *Medicare and Pharmaceutical Benefits Programs Privacy Guidelines* issued

Access to health information	1633
Management, funding and monitoring	1643

Introduction

57.1 This chapter examines the way in which the *Privacy Act 1988* (Cth) regulates the handling of health information. The chapter considers relevant definitions, such as the definitions of 'health information' and 'health service', and the additions and exceptions in the privacy principles that relate specifically to health information. The chapter focuses on the use of health information in the health services context, including the provision of health care and the management, funding and monitoring of health services.[1]

Privacy Act 1988 (Cth)

57.2 The Information Privacy Principles (IPPs) in the *Privacy Act* do not distinguish between 'personal information', 'sensitive information' and 'health information'. Public sector agencies are required to deal with health information in the same way they deal with other personal information; that is, in accordance with the IPPs.

57.3 The National Privacy Principles (NPPs) provide a separate regime for 'sensitive information', including 'health information', and also deal specifically with the handling of health information in some circumstances. This regime applies to private

1 Ch 58 focuses on the use of health information in research.

sector organisations, including all organisations that hold health information and provide a health service that might otherwise be exempt from the provisions of the *Privacy Act* under the small business exemption.[2]

57.4 The NPPs require that health information be given a higher level of protection than other personal information. For example, health information generally may only be collected with consent.[3] It may be used or disclosed only for the purpose it was collected or a directly related secondary purpose—and only so long as the health consumer would reasonably expect the information to be used in this way.[4] There is also special provision in the NPPs for the:

- collection, use or disclosure of health information for research, or the compilation or analysis of statistics, relevant to public health or public safety;[5]
- collection of health information for the management, funding or monitoring of a health service;[6]
- collection of health information if necessary to provide a health service to the individual and the information is collected as required or authorised by or under law or in accordance with rules relating to professional confidentiality;[7] and
- disclosure of health information to a person who is responsible for the individual, for example, a member of the individual's family, where the individual is physically or legally unable to consent to disclosure.[8]

Definition of 'health information'

57.5 This section considers some of the key elements of the *Privacy Act* relating specifically to the handling of health information, including relevant definitions and exemptions.

57.6 The *Privacy Act* defines 'health information' as follows:

> (a) information or an opinion about:
>
> (i) the health or a disability (at any time) of an individual; or
>
> (ii) an individual's expressed wishes about the future provision of health services to him or her; or

---

2 *Privacy Act 1988* (Cth) s 6D(4)(b). The need for a single set of Unified Privacy Principles (UPPs) applying to both agencies and organisations is discussed in detail in Part D. The small business exemption is discussed in Ch 35.

3 Ibid sch 3, NPP 10.

4 Ibid sch 3, NPP 2.1(a)(i).

5 Ibid sch 3, NPPs 2.1(d), 10.3(a)(i). Research is discussed in detail in Ch 58.

6 Ibid sch 3, NPP 10.3(a)(iii).

7 Ibid sch 3, NPP 10.2.

8 Ibid sch 3, NPPs 2.4–2.6.

> (iii) a health service provided, or to be provided, to an individual;
>
> that is also personal information; or
>
> (b) other personal information collected to provide, or in providing, a health service; or
>
> (c) other personal information about an individual collected in connection with the donation, or intended donation, by the individual of his or her body parts, organs or body substances.[9]

57.7 In *Essentially Yours: The Protection of Human Genetic Information* (ALRC 96), the ALRC and the Australian Health Ethics Committee (AHEC) of the National Health and Medical Research Council (NHMRC) considered this definition, as well as the definition of 'sensitive information', and concluded that there were circumstances in which genetic information may not fall within the existing definitions.[10] This might arise where the information is not about health, disability or the provision of a health service—as in the case of parentage or forensic testing—or because it is not about the health or disability of an existing individual—as may sometimes be the case with genetic carrier testing, where the information is primarily about the health of future children.[11] On this basis, ALRC 96 recommended that:

> The Commonwealth should amend s 6 of the *Privacy Act 1988* (Cth) (*Privacy Act*) to define 'health information' to include genetic information about an individual in a form which is or could be predictive of the health of the individual or any of his or her genetic relatives.[12]
>
> The Commonwealth should amend s 6 of the *Privacy Act* to define 'sensitive information' to include human genetic test information.[13]

57.8 In September 2006, the *Privacy Legislation Amendment Act 2006* (Cth) was passed. The Act amends the definitions of 'health information' and 'sensitive information' in line with the ALRC and AHEC's recommendations. The amending Act provides that the following paragraph be added to the definition of 'health information':

> (d) genetic information about an individual in a form that is, or could be, predictive of the health of the individual or a genetic relative of the individual.[14]

57.9 The definition of 'health information' in the draft *National Health Privacy Code* includes a similar list of elements to the *Privacy Act* definition. The major difference in

13 Ibid, Rec 7–5.

14 *Privacy Legislation Amendment Act 2006* (Cth) sch 2 cl 2.

the draft Code definition is that it expressly includes information or opinion about 'the physical, mental or psychological health (at any time), of an individual'.[15]

57.10 The definitions of 'health information' in the New South Wales *Health Records and Information Privacy Act*, the Victorian *Health Records Act* and the Northern Territory *Information Act*[16] contain similar elements. The ACT *Health Records (Privacy and Access) Act* defines 'personal health information' more simply as follows:

> any personal information, whether or not recorded in a health record—
>
> (a) relating to the health, an illness or a disability of the consumer; or
>
> (b) collected by a health provider in relation to the health, an illness or a disability of the consumer.[17]

57.11 In the Issues Paper, *Review of Privacy* (IP 31) the ALRC asked whether the definition of 'health information' in the draft *National Health Privacy Code* was appropriate and effective and whether that definition should be adopted into the *Privacy Act*.[18]

Submissions and consultations

57.12 In its submission to the Inquiry, the Australian Government Department of Health and Ageing (DOHA) expressed support for the current definition in the *Privacy Act.* DOHA noted that the dictionary definition of health includes health of body and mind.[19] The *Macquarie Dictionary* defines 'health' as 'soundness of body; freedom from disease or ailment' or 'the general condition of the body or mind with reference to soundness and vigour'.[20] DOHA was of the view that the words 'physical, mental or psychological' included in draft *National Health Privacy Code*, were unnecessary.

57.13 The Office of the Privacy Commissioner (OPC) expressed the view that:

> The proposed NHPC expressly includes 'mental and psychological health' as categories of 'health information', though the existing definition of the *Privacy Act* would already appear to comfortably allow for such an interpretation. In the Office's view, a common sense interpretation of health information would include information relating to mental health.[21]

21 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

57.14 The NHMRC, however, stated in its submission that:

> The NHMRC is concerned to ensure that the definitions of 'health information' and 'health service' in the *Privacy Act* reflect contemporary and evolving concepts of health and wellbeing.
>
> While many stakeholders would consider that the term 'health' encompasses physical, mental and psychological elements, others draw a distinction between physical 'health' and mental/psychological 'wellbeing'. For clarity, therefore, we support incorporation in the *Privacy Act* of the more expansive definition included in the draft *National Health Privacy Code*.[22]

57.15 A number of other stakeholders also expressed support for the definition in the draft *National Health Privacy Code*.[23]

ALRC's view

57.16 The ALRC acknowledges that the dictionary definition of the term 'health' is broad enough to cover mental and psychological health as well as physical health. The ALRC notes, however, the NHMRC's comment that a distinction is sometimes drawn between physical health and mental or psychological health. The ALRC's view is that the *Privacy Act* should be clear on this point, especially given the sensitivity of personal information about mental or psychological health. It is preferable to clarify the point by amendment than to wait for the issue to arise in the context of a complaint.

Proposal 57–1 The definition of 'health information' in the *Privacy Act* should be amended to make express reference to information or an opinion about the *physical, mental or psychological* health or disability of an individual.

Definition of 'health service'

57.17 Another definition that is central to the way health information is handled under the *Privacy Act* is the definition of a 'health service'. The term is an integral part of the definition of 'health information' and is also used to limit the scope of the small business exemption, discussed below. The Act defines a 'health service' as follows:

> (a) an activity performed in relation to an individual that is intended or claimed (expressly or otherwise) by the individual or the person performing it:
>
> (i) to assess, record, maintain or improve the individual's health; or
>
> (ii) to diagnose the individual's illness or disability; or

22 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

23 Australian Government Department of Human Services, *Submission PR 136,* 19 January 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007.

> (iii) to treat the individual's illness or disability or suspected illness or disability; or
>
> (b) the dispensing on prescription of a drug or medicinal preparation by a pharmacist.[24]

57.18 The definition of 'health service' in the draft *National Health Privacy Code* has a number of differences, including express references to injuries, disability support services, palliative care services, and aged care services. The draft Code definition is as follows:

> 'health service' means—
>
> (a) an activity performed in relation to an individual that is intended or claimed (expressly or otherwise) by the individual service provider or the organisation performing it—
>
> (i) to assess, maintain or improve the individual's health; or
>
> (ii) to diagnose the individual's illness, injury or disability; or
>
> (iii) to treat the individual's illness, injury or disability or suspected illness, injury or disability; or
>
> (b) a disability service, palliative care service or aged care service; or
>
> (c) the dispensing on prescription of a drug or medicinal preparation by a pharmacist—
>
> but does not include a health service, or a class of health service, that is prescribed as an exempt health service or to the extent that it is prescribed as an exempt health service.

57.19 The definition in the Victorian *Health Records Act* is very similar to the definition in the draft Code.[25] The definitions in the ACT health records legislation and the Northern Territory *Information Act* have many of the same elements.[26] The New South Wales legislation, however, takes a different approach, setting out a non-exhaustive list of the services covered—such as medical, hospital and nursing services, dental services and mental health services—rather than describing them in more general terms.[27]

57.20 In IP 31 the ALRC asked whether the definition of 'health service' in the draft *National Health Privacy Code* was appropriate and effective and whether that definition should be adopted into the *Privacy Act*.[28]

Submissions and consultations

57.21 There was some support expressed in submissions for the definition of 'health service' in the draft *National Health Privacy Code*.[29] The NHMRC stated that:

> We are aware also that there is some debate in the Aged Care sector about whether residential aged care is a health service or a social/accommodation service. We support, therefore, the inclusion of a more expansive definition of 'health service' in the *Privacy Act*, incorporating reference to 'disability services', 'palliative care services', 'aged care services' and 'injury' explicitly, thereby avoiding any potential uncertainty.[30]

57.22 A number of other stakeholders agreed that the definition should be amended to cover the services that people with a disability, and those in palliative and residential aged care might use. These services provide care, supervision and assistance with daily life, rather than treatment.[31]

57.23 The Office of the Health Services Commissioner in Victoria expressed the view that:

> Organisations providing a broad range of services intended to benefit the health and well-being of individuals, should be subject to the same privacy standards. As an example, HSC has received health privacy complaints concerning alternative therapists, which are included in the definition of health service under the *Health Records Act* and the *National Code*. The problem with the New South Wales approach is that a non-exhaustive definition that focuses on conventional medical and health services may be interpreted to exclude some alternative therapists, which might leave the public vulnerable.[32]

57.24 The OPC raised a number of concerns with the definition of 'health service' in the draft *National Health Privacy Code*, including the fact that the definition does not refer to 'recording' an individual's health information. The draft Code definition also relies exclusively on the understanding of the health service provider as to whether or not a particular activity is intended or claimed to have health benefits. In contrast, the *Privacy Act* allows this to be judged from the perspective of the health service provider or the health consumer. The OPC did, however, express support for one element of the definition:

> The Office also notes that the word 'injury' is added in addition to illness and disability in (a)(ii) and (iii) of the proposed NHPC definition. The nature of an injury

> appears to be distinct from the inherent properties of an illness or a disability, and as such, the inclusion of this word may increase the clarity of the definition.[33]

ALRC's view

57.25 The ALRC agrees with stakeholders that the definition of 'health service' in the *Privacy Act* should be extended to cover disability services, palliative care services and aged care services. These services do not fall comfortably within the existing definition of 'health services'. They are, however, aimed at providing physical, mental and psychological care and support to individuals and often require the collection, use and disclosure of significant amounts of health information. The ALRC also agrees that an 'injury' is distinct from an 'illness' or a 'disability' and that the term should be expressly included in the definition of 'health service'.

57.26 It is unclear why the term 'record' is not included in the definition of 'health service' in the draft *National Health Privacy Code*. The ALRC's view is that it should remain in the definition in the *Privacy Act*. Some health monitoring may simply involve the recording of health information—for example, the recording of blood pressure, height and weight over time—with no further action taken in relation to the information unless a change occurs or the information indicates a problem.

57.27 The OPC noted that the definition of 'health service' in the draft *National Health Privacy Code* 'appears to remove the role of the individual's understanding and interpretation of whether or not they believed that a health service was being provided to them'. The ALRC did not receive any submissions indicating problems with the current approach in the *Privacy Act* and is not proposing a change at this time.

Proposal 57–2 The *Privacy Act* should be amended to define a 'health service' as:

(a) an activity performed in relation to an individual that is intended or claimed (expressly or otherwise) by the individual or the service provider to:

  (i) assess, record, maintain or improve the individual's health;

  (ii) diagnose the individual's illness, injury or disability; or

  (iii) treat the individual's illness, injury or disability or suspected illness, injury or disability; or

(b) a disability service, palliative care service or aged care service; or

33 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

(c) the dispensing on prescription of a drug or medicinal preparation by a pharmacist.

Agencies and organisations

57.28 Broadly speaking, Australian Government agencies are required to handle health information in accordance with the IPPs. Private sector organisations are required to handle health information in accordance with the NPPs. There are a number of significant exemptions in the *Privacy Act*, however, that mean that some agencies and organisations holding health information may not be subject to the Act in relation to that information.

57.29 Perhaps the most significant exemption in the context of health information is for small business operators. Section 6D of the *Privacy Act* defines a small business as one that has an annual turnover of $3 million or less in the previous financial year.[34] Small businesses operators that pose a higher risk to privacy have been brought back into the regime. In particular, small businesses are required to comply with the NPPs if they:

- provide a health service and hold health information, except where the information is held in an employee record;
- disclose personal information for a benefit, service or advantage; or
- provide a benefit, service or advantage to collect personal information.[35]

57.30 Small businesses that hold health information and provide a health service are, therefore, bound by the NPPs. This leaves open the possibility, however, that small businesses that hold health information but do not provide health services, do not pay to collect the information and are not paid to disclose the information—for example, health data registers that store health information for research purposes—may not be required to comply with the Act.

57.31 This possibility was considered in ALRC 96 in relation to genetic information. The ALRC and AHEC concluded that: (a) small businesses that hold genetic information should be subject to the provisions of the *Privacy Act*, whether or not they provide a health service; and (b) there was sufficient doubt about the coverage of

---

34 Ch 35 examines the small business exemption in detail.

35 *Privacy Act 1988* (Cth) s 6D(4). Note that s 6D(7)–(8) of the *Privacy Act* provides that small businesses trading in personal information may not be required to comply with the NPPs if they have the consent of the individuals concerned or if the collection or disclosure of personal information is required or authorised by law.

Privacy Act to justify amending the Act to make it clear that all small businesses that hold genetic information are subject to its provisions.[36]

57.32 The Australian Government did not support this recommendation. The Government considered that the existing provisions provided sufficient protection for the privacy of genetic information held by small businesses, while at the same time ensuring that small businesses were not burdened unfairly by the costs and processes of complying with privacy legislation.[37]

57.33 The draft *National Health Privacy Code*, by way of contrast, is expressed to apply to 'every organisation that is a health service provider or collects, holds or uses health information'.[38] The Victorian *Health Records Act* also applies to organisations that are health service providers or collect, hold or use health information.[39] The Act does not exempt small business operators. On the other hand, the New South Wales *Health Records and Information Privacy Act* exempts small business operators by reference to the *Privacy Act.*[40]

57.34 In IP 31, the ALRC asked whether the *Privacy Act* should be amended to ensure that all agencies and organisations that collect, hold or use health information are required to comply with the Act.[41]

Submissions and consultations

57.35 In its submission DOHA noted that:

> It is considered that given its characteristics and sensitivities, individuals need reassurance that their health information will be handled appropriately by whoever holds it. Any misuse will heighten concerns about disclosing this kind of information, and unwillingness to disclose this information in a healthcare setting could result in detriment to the individual concerned or to the community as a whole.[42]

57.36 DOHA expressed the view that the handling of health information should be subject to appropriate privacy regulation across both the public and private sectors, although noting the need for some exemptions for agencies and organisations such as the courts. Other stakeholders agreed that appropriate privacy regulation should apply

in both the public and private sectors and regardless of the size of the business involved.[43]

57.37 In its submission, the NHMRC stated that:

> The NHMRC cannot identify any relevant policy rationale for excluding the majority of small businesses from compliance with the *Privacy Act*. We consider that it is vitally important that the protections currently provided for health information apply to all agencies and organisations that handle health information (including genetic information) and to all agencies and organisations that handle genetic information that is not health information.[44]

ALRC's view

57.38 Part E examines the policy basis for each of the exemptions from the *Privacy Act* and makes proposals for change where necessary. In Chapter 35, the ALRC proposes the removal from the *Privacy Act* of the small business exemption. The ALRC is not convinced that an exemption for small business is either necessary or justifiable. The fact that comparable overseas jurisdictions—including the United Kingdom, Canada and New Zealand—do not have an exemption for small business is a relevant consideration. In addition, the removal of the exemption may assist in achieving adequacy under the *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data* (EU Directive) and facilitate trade with EU organisations. Removal of this exemption will mean that it is no longer necessary to bring small businesses that handle health information back into the regime.

57.39 In Chapter 36, the ALRC further proposes the removal from the Act of the employee records exemption. This will extend privacy protections to health information held in private sector employee records for the first time.

57.40 The ALRC's view is that, once implemented, the proposals in Parts D and E will ensure that personal information—and, in particular, health information—will receive appropriate protection in the Australian Government public sector and the private sector. The proposals in Chapter 4, aimed at achieving national consistency, will extend this protection into state and territory public sectors. These proposals in

combination will mean that the handling of health information is regulated consistently and appropriately throughout Australia.

Provision of health services

57.41 The following section deals with the impact of the *Privacy Act* on the provision of health services to health consumers. It was suggested in consultations that the *Privacy Act* impeded the provision of health services to consumers by, for example, interfering with the appropriate sharing of an individual's health information between members of the team of health professionals treating the individual.[45] This may be a result of problems with the *Privacy Act*, which are discussed below in relation to particular privacy principles, or it may be for other reasons. For example, there may be a chilling effect on the sharing of information based on a misunderstanding of, or an overly cautious approach to, the Act or the privacy principles rather than a correct application of the Act and principles.

57.42 In its submission to the Office of the Privacy Commissioner review of the private sector provisions of the *Privacy Act* (the OPC Review),[46] the NHMRC stated that:

> The NHMRC considers that the application and/or interpretation of the *Privacy Act* is impairing the quality, effectiveness and timeliness of management of health information. In their efforts to ensure compliance with the law, health care professionals and administrators are experiencing considerable difficulty in developing and implementing practical policies that do not 'over-interpret' their obligations and do not impair the legitimate flow of information between providers for patient care purposes.
>
> The NHMRC also considers that the overall public interest and the interests of the majority of individual patients are served by the efficient transfer of all necessary clinical information between health care providers for the purposes of the current care of an individual patient. There is, in fact, considerable potential for individual harm as a result of a privacy regime which results in individual health care providers being uncertain about their legal obligations, afraid of breaking the law by transferring health information without explicit consent, and implementing ineffective and inefficient procedures in their efforts to comply with the law.[47]

57.43 The OPC Review recommended the development of further guidance in relation to the use and disclosure of health information in the health services context under the NPPs.[48]

Submissions and consultations

57.44 In its submission to the Inquiry, DOHA stated that:

> It is not possible to point to specific evidence of incidents where the present regulatory environment for health information has impeded the provision of health service delivery. Anecdotally, in handling enquiries on privacy matters Departmental officers are aware of instances where callers have complained about a request for information being refused 'because of the Privacy Act'. In discussions with private medical practitioners, frustration has been expressed about not being able to easily obtain information from a public hospital about a recent admission of one of their patients for the purpose of treatment. These kinds of responses and perceptions often result from a misunderstanding of the privacy regulation, something that is not helped by the inconsistencies, complexities and confusion that results from the present regulatory environment.[49]

57.45 This is consistent with comments in other submissions that indicate that the problem is not the content of the privacy principles themselves but a lack of understanding of relevant legislation and principles.[50] The Western Australian Department of Health also suggested that part of the problem lies in changing clinical practice that now involves multiple health service providers from a greater range of institutions in the treatment of one individual. The Department noted the need for communication and education to manage this transition.[51]

57.46 The NHMRC expressed the view that the principles could be made clearer:

> The NHMRC has significant anecdotal evidence and survey responses indicating that disclosure of health information for the purposes of current treatment is being impeded by the privacy regulatory regime. We consider that disclosure of relevant health information for current treatment purposes should be permitted provided there is no indication to the disclosing organisation that such disclosure is or would be unacceptable to the patient; and there are no other circumstances which could reasonably be expected to alert the disclosing organisation that the patient would object to disclosure. We consider that this issue is of sufficient significance to warrant recognition, through a binding determination, legislative or regulatory change, of the circumstances in which disclosure can be made for the purposes of ongoing clinical care.[52]

57.47 The OPC, however, expressed the view that the NPPs are consistent with best practice and professional ethical standards in the health services context. The OPC suggested that the major impediments to appropriate information flow between health service providers was uncertainty created by regulatory complexity and overlapping

52 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

and inconsistent legislation regulating the handling of health information in different jurisdictions.[53]

57.48 The Office of the Victorian Health Services Commissioner was of the view that the Health Privacy Principles (HPPs) in the *Health Records Act* were based on good standards of health service delivery and did not cause problems of the type discussed above. The Office suggested that the problem arose from a different source:

> As a result of the introduction of privacy legislation, individuals who believe their privacy has been breached have somewhere to complain, and this makes some health providers more cautious in their dealings with individuals. Some health service providers have interpreted privacy to mean secrecy. The solution is training, resources and support.[54]

ALRC's view

57.49 While there was some evidence in submissions and consultations that the regulation of health information in Australia is causing problems for health service providers, there was very little evidence that the problem lies with the IPPs or NPPs. The problems identified included confusion caused by regulatory complexity and a lack of understanding of some of the principles and how they might apply in the health services context. The ALRC's view is that the proposals in Chapter 4 aimed at achieving national consistency in privacy regulation, in combination with proposals for one set of Unified Privacy Principles (UPPs) and a rationalisation of the exceptions and exemptions in the *Privacy Act*, will go a long way towards resolving the uncertainty and confusion caused by the existing regime.

57.50 As discussed in Chapter 15, a principles-based privacy regime focuses on high-level, broadly stated principles rather than detailed, prescriptive rules. This is intended to shift the regulatory focus from process to outcomes. Principles-based regulation facilitates regulatory flexibility through a statement of general principles that can be applied to new and changing situations. This is considered entirely appropriate and workable in the health services context.

57.51 The proposed UPPs provide that health information generally must be collected with consent, although that consent may be express or implied. Health information may be used or disclosed for the purpose for which it was collected and any other directly related purpose, within the reasonable expectations of the individual health consumer. These principles provide extensive scope for exchange of information among members of treatment teams, while encouraging good communication with health consumers about the collection, use and disclosure of their health information. The principles do not require written consent from the health consumer for every collection, use or disclosure. The principles do not prevent the sharing of health information among the members of a team of health service providers treating a health consumer. There was

---

53 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

54 Office of the Health Services Commissioner (Victoria), *Submission PR 153,* 30 January 2007.

no evidence provided to the Inquiry that these basic principles were inappropriate or unworkable, in practice.

57.52 In addition, there are a number of exceptions to the principles that, while applying broadly to personal information, are relevant to the handling of health information in the health services context. These include the exceptions in the:

- proposed 'Collection' principle, which allows the collection of sensitive information, including health information, without consent where the collection is necessary to prevent or lessen a serious threat to the life or health of any individual, where the individual whom the information concerns is incapable of giving consent; and

- proposed 'Use and Disclosure' principle, which allows the use or disclosure of personal information, including health information, if the agency or organisation reasonably believes that the use or disclosure is necessary to lessen or prevent a serious threat to an individual's life, health or safety or to public health or public safety.

57.53 Finally, there are a number of principles and exceptions that apply only to health information. In Chapter 56, the ALRC proposes that these principles and exceptions should sit in the *Privacy (Health Information) Regulations*. Each of these principles and exceptions is considered below.

57.54 The OPC has recommended the development of further guidance in relation to the use and disclosure of health information in the health services context.[55] The ALRC supports this approach. In light of the comments from stakeholders noted above, it seems clear that there is a need for further guidance and training for health service providers to ensure a better understanding of the intent and application of principles-based regulation and the privacy principles. It may also be that this issue requires further focus from providers of education and training in the health services context. The ALRC notes, however, that in a principles-based regime there always will be a need for the exercise of judgement and discretion by agencies and organisations handling health information.

Consent

57.55 Consent is a central concept in the *Privacy Act* and is of particular importance in dealing with health information because of the sensitive nature of that information. Consent provisions allow individual health consumers a measure of control over the collection, use and disclosure of their health information. This contributes to an

55 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), recs 77, 78.

environment in which the autonomy and dignity of the individual are respected, and supports the public interest in health consumers seeking advice and assistance from health service providers when needed, with the assurance that they will be able to maintain appropriate control of their personal information. It is important to note in the context of the *Privacy Act* that the issue under consideration is consent to the handling of health information and not consent to medical treatment.

57.56 The role of consent in the privacy regime generally, including issues such as the definition of consent and the use of 'bundled consent', is considered in detail in Chapter 16. In this chapter the ALRC will consider the role of consent in dealing with health information.

57.57 The OPC *Guidelines on Privacy in the Private Health Sector* (OPC Guidelines) state that the key elements of consent are:

- it must be provided voluntarily;
- the individual must be adequately informed; and
- the individual must have the capacity to understand and communicate their consent.[56]

Consent in the IPPs and the NPPs

57.58 In general terms, both the IPPs and the NPPs attempt to align consent requirements with what health consumers would reasonably expect in relation to the handling of their health information.

57.59 Consent is generally required when collecting health information under the NPPs.[57] Consent is not, however, required when collecting health information under the IPPs.[58] Consent is not required for use under the NPPs or the IPPs if health information is used for the purpose for which it was collected or any other directly related purpose and, in the case of the NPPs, individuals would reasonably expect the organisation to use health information in that way.[59]

57.60 Consent is not required for disclosure under the IPPs if the individual was reasonably likely to have been aware that such disclosures are usually made.[60] Consent is not required for disclosure under the NPPs if the information is disclosed for the

---

59 Ibid s 14, IPP 10.1; sch 3, NPP 2.1.
60 Ibid s 14, IPP 11.1.

purpose for which it was collected or a directly related purpose and individuals would reasonably expect the organisation to disclose health information in that way.[61]

57.61 There are a number of exceptions to these general rules. For example, health information may be used without consent under both the IPPs and the NPPs where the use is: necessary to lessen or prevent a serious and imminent threat to an individual's life or health;[62] required or authorised by law;[63] or reasonably necessary to enforce the criminal law.[64]

57.62 There is also a regime established to allow health information to be used without consent for research in some circumstances, with the approval of a Human Research Ethics Committee (HREC). This regime is discussed in detail in Chapter 58.

Express and implied consent

57.63 'Consent' is defined in the *Privacy Act* as 'express or implied consent'.[65] Express consent 'refers to consent that is clearly and unmistakably stated'.[66] It may be stated orally, in writing, electronically or in any other form, so long as the consent is clearly communicated. Implied consent also requires communication and understanding between health service providers and health consumers. The OPC has stated that:

> If the discussion has provided the individual with an understanding about how their health information may be used, then it would be reasonable for the health service provider to rely on implied consent.[67]

Specific and general consent

57.64 Consent runs along a spectrum from the very specific to the very general. In some cases consent is sought to a wide range of uses and disclosures of personal information without giving individuals an opportunity to distinguish between those uses and disclosures to which they consent and those to which they do not. This is a particular problem where some of the uses and disclosures bundled together do not relate to the primary purpose of collection. This is referred to as 'bundled consent' and is discussed in Chapter 16.

57.65 In relation to sensitive information, such as health information, it may be reasonable to seek consent to a range of things at the same time—for example, collection into a health record maintained by the health service provider that will be

retained for some period into the future; disclosure to and use by a pathology laboratory for testing purposes; and disclosure to a medical specialist for expert advice. Consent, however, should not be so general as to undermine the requirements that it be voluntary and adequately informed.

Capacity

57.66 Significant issues arise when individuals do not have the capacity to understand and communicate their consent to the way in which their health information is handled. For example, an adult's decision-making capacity may be impaired temporarily or permanently by injury, illness or disability. This issue is discussed in detail in Chapter 61. Children and young people may have limited capacity to understand and consent. This issue is discussed in Chapter 60.

57.67 The draft *National Health Privacy Code* provides detailed provisions in relation to the powers of an 'authorised representative'. These provisions include powers to consent to collection, use and disclosure of health information on behalf of an individual who is incapable of giving consent, as well as powers to access and correct health information.[68]

57.68 In IP 31, the ALRC asked whether the *Privacy Act* provides an appropriate and effective regime for handling health information in those circumstances where an individual has limited capacity to give consent.[69] The ALRC also asked whether there are any other issues relating to consent to deal with health information in the health services context that the ALRC should consider.[70]

Submissions and consultations

57.69 In its submission, DOHA stated that:

> Where the individual lacks capacity, it should be permissible for a person who is authorised under general law to make decisions on behalf of the individual, such as a parent, legal guardian or a person with an enduring power of attorney, to give consent, or to exercise rights of access or correction.[71]

57.70 A number of stakeholders expressed the view that detailed guidance was required in this area.[72] There was some support for the approach adopted in the draft *National Health Privacy Code.*[73] The National E-Health Transition Authority (NEHTA) commented, however, that although the draft Code included provision for an

'authorised representative' to make decisions on behalf of an individual, the Code did not allow for less formal arrangements. NEHTA's view was that it was important to allow sufficient flexibility for alternative decision making in the health services context.[74]

ALRC's view

57.71 Chapter 16 discusses the concept of consent in detail, including what amounts to valid consent and the problem of 'bundled consent'. In that chapter the ALRC proposes that the OPC provide further guidance about what is required of agencies and organisations to obtain an individual's consent for the purposes of the *Privacy Act* in specific contexts, and on when it is or is not appropriate to use the mechanism of 'bundled consent'.[75]

57.72 Chapter 61 considers in detail the issue of adults with a decision-making disability. In that chapter the ALRC proposes adopting the concept of 'authorised representative' from the draft *National Health Privacy Code* into the *Privacy Act* with some amendments. Where an individual is incapable of giving consent, making a request or exercising a right under the Act, an 'authorised representative' may give the consent, make the request or exercise the right on behalf of the individual. An individual is considered incapable of giving consent under the Act if, despite the provision of reasonable assistance by another person, he or she is incapable of understanding the general nature and effect of giving the consent or is incapable of communicating consent or refusal to consent.[76]

57.73 The ALRC proposes that the term 'authorised representative' be defined as: a guardian appointed under law; a guardian appointed under an enduring guardianship appointment; an attorney under an enduring power of attorney; a person who has parental responsibility for the individual if the individual is under the age of 18; or a person otherwise empowered under law to perform any functions or duties as agent or in the best interests of the individual.[77]

57.74 The ALRC's view is that these proposed provisions, in combination with the proposed UPPs, will provide an appropriate and effective regime for handling health information in those circumstances where an individual has limited capacity to give consent. In emergency situations, paragraph 2.6(c) of the proposed 'Collection' principle—which allows the collection of health information without consent where the collection is necessary to prevent or lessen a serious threat to the life or health of any individual—and paragraph 5.1(c) of the proposed 'Use and Disclosure' principle—which allows the use or disclosure of health information where necessary to lessen or

prevent a serious threat to an individual's life, health or safety or to public health or public safety—will operate. In other circumstances, an 'authorised representative' may act on behalf of the individual.

Privacy (Health Information) Regulations

57.75 In this section the ALRC considers existing and proposed privacy principles and exceptions to the privacy principles that deal specifically with the handling of health information. As discussed in Chapter 56, the ALRC's view is that these principles and exceptions should be set out in *Privacy (Health Information) Regulations*.[78]

57.76 The ALRC's view is that, for those agencies and organisations that do not handle health information, it is important to keep the UPPs shorter and more accessible. For those agencies and organisations that do handle health information, the ALRC proposes that the OPC publish a separate document setting out the UPPs as amended by the *Privacy (Health Information) Regulations*. This document will provide a complete set of privacy principles covering health information, as well as other personal information.

Collection of health information

Collection of family medical history information by health service providers

57.77 NPP 10.1 provides that, subject to a number of exceptions, an organisation must not collect sensitive information without consent. This requirement is also included in the 'Collection' principle in the proposed UPPs.[79] On 21 December 2001, the Privacy Commissioner made two Temporary Public Interest Determinations (TPIDs) in response to concerns that the long standing and accepted practice of collecting health information about third parties—for example, family members—without their consent for inclusion in the social and medical histories of health consumers may breach the NPPs.

57.78 The TPIDs were given effect for up to 12 months, to permit the Privacy Commissioner to conduct consultations on the issue. Over 60 submissions were received during the consultation period, and a conference was held in August 2002 to consider a draft determination.[80] The Privacy Commissioner formed the view that the collection of health information about third parties without consent in the course of delivering a health service was a breach of NPP 10.1, and that the act or practice should nevertheless be allowed to continue. In the Privacy Commissioner's view, the public interest in its continuation substantially outweighed the public interest in adhering to NPP 10.1:

---

78 Proposal 56–2.

79 The IPPs do not require that agencies have consent before collecting health information and so the same issue did not arise.

80 *Privacy Act 1988* (Cth) s 76 provides for a conference to be held to consider a draft determination on the Privacy Commissioner's initiative.

> The collection of family, social and medical history information is a critical part of providing assessment, diagnosis and treatment to individuals. The Commissioner acknowledged that obtaining the consent of third parties to collect their information, and notifying those individuals about these collections, would be impractical, inefficient and detrimental to the provision of quality health outcomes.[81]

57.79 In October 2002, the Privacy Commissioner made two public interest determinations (PIDs)—PID 9 in relation to the particular health service provider that made the original application and PID 9A in relation to health service providers generally—to replace the TPIDs. PIDs 9 and 9A were tabled in the Australian Parliament and took effect on 11 December 2002 for a period of up to five years. Under PIDs 9 and 9A health service providers may collect health information from health consumers about third parties without consent when both of the following circumstances are met, the:

- collection of the third party's information into a health consumer's social, family or medical history is necessary to enable health service providers to provide a health service directly to the consumer; and

- third party's information is relevant to the family, social or medical history of that consumer.[82]

57.80 A review of the PIDs is to take place by October 2007, or sooner, if the Commissioner becomes aware of any matter incidental to or affecting the performance or operation of the PIDs.

57.81 In the course of the OPC Review, a number of issues were raised in relation to PIDs 9 and 9A. The first was whether the effect of the PIDs should be made permanent by an amendment to the *Privacy Act*. A number of submissions to the OPC Review commented on the effectiveness and importance of PIDs 9 and 9A and expressed support for such an amendment.[83]

57.82 National Health Privacy Principle 1 (NHPP 1) of the draft *National Health Privacy Code* specifically provides for the collection of health information without consent where

the information is a family medical history, social medical history or other relevant information about an individual, that is collected for the purpose of providing a person (including the individual) with a health service, and is collected by a health service provider:

(i) from the person who is to receive that service; or

(ii) from a relative or carer of the individual;[84] or

(iii) in any other situation, in accordance with any guidelines issued for the purposes of this paragraph.[85]

Submissions and consultations

57.83 A number of stakeholders, including the OPC, expressed support for amending the *Privacy Act* to give statutory effect to PIDs 9 and 9A.[86] The OPC noted that the PIDs are due to expire on 11 December 2007 and that no submissions to the OPC Review were critical of the content of the PIDs. The OPC suggested, however, that consideration might be given to limiting the provision to exclude genetic information and information in electronic health records, given the potential detail in such sources.[87]

57.84 In its submission, the OPC expressed a preference for the wording of the PIDs over the wording of NHPP 1 of the draft *National Health Privacy Code* on the basis that the health sector has been working with the wording of the PIDs for a number of years. The OPC suggested, however, that there may be merit in including the provision from the draft Code allowing collection of health information about third parties from 'a relative or carer of the individual'.[88] A number of other stakeholders expressed a preference for the wording in NHPP 1 of the draft Code.[89]

57.85 The NHMRC suggested that an amendment was also needed to the notification requirements in NPP 1.5. NPP 1.5 requires that, where an organisation collects personal information about an individual from someone else, it must take reasonable steps to ensure that the individual is or has been made aware of the matters listed in

---

84 This paragraph would apply, for example, where the individual was a child or an adult with a decision-making disability. Handling the health information of children, young people and adults with a decision-making disability is discussed further in Part I of this Discussion Paper.

NPP 1.3, such as the identity of the organisation and the purpose for which the information was collected. The NHMRC submitted that:

> NPP 1 should be amended to clarify that there may be circumstances in which it is reasonable for organisations to take no steps to ensure that an individual is:
>
> - notified of the fact that personal information about them has been collected from a third party; and/or
> - made aware of the specified matters relating to the collection and/or disclosure of that personal information.[90]

57.86 The NHMRC noted that the Privacy Commissioner had not included an exemption from the notification requirements in PIDs 9 and 9A. Instead, the Privacy Commissioner confirmed that, in the normal course of events, a health service provider will not be required to notify third parties that their health information has been collected for inclusion in the family, social or medical history of another individual.

> The NHMRC submits that it would be unreasonable to require notification in such circumstances. While notification in any individual case may be feasible, notification in relation to the vast number of patient encounters at which such information is collected would be administratively burdensome and practically impossible in many cases. In addition, a notification requirement would be likely, in many circumstances, to impair the provision by consumers to their health care providers of sensitive information about family members, which may be vital to their own health care.[91]

ALRC's view

57.87 The ALRC's view is that PIDs 9 and 9A should be given statutory effect by being promulgated in the *Privacy (Health Information) Regulations*. The collection of health information about family members and others is routine practice and essential to provide appropriate health care to individuals.

57.88 The proposed regulation should not expressly exclude genetic information or information in electronic health records. Genetic information, because of its familial nature, is particularly important in family medical histories. The proposed regulation should, however, be limited to collection of health information about third parties from the individual health consumer or a person who is 'responsible for' the individual, as discussed further below. This will limit the amount and type of health information collected about third parties.

57.89 A regulation along these lines would not, for example, allow health service providers to collect health information from third party genetic samples. In addition, an individual health consumer will not generally have access to comprehensive genetic or electronic health records about third parties without their consent, and so will not be

---

90 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.
91 Ibid.

able to provide these to health care providers without the knowledge and consent of the third party.

57.90 The ALRC agrees that, in general, PIDs 9 and 9A are preferable to NHPP 1. In relation to the collection of third party information from relatives and carers, however, the ALRC's view is that NHPP 1 makes a valuable addition to the PIDs. For example, it may be necessary to collect third party information from parents attending a health service with a child or from a spouse or partner where the health consumer is unconscious. The concept of a 'responsible person' is discussed in detail below but would include a family member, carer or 'authorised representative'. The ALRC proposes, therefore, that a health service provider be able to collect third party information from a health consumer, or a person responsible for the health consumer, where the collection of the third party's information is necessary to enable the health service provider to provide a health service to the consumer and the third party's information is relevant to the health consumer's family, social or medical history.

57.91 The ALRC notes the concerns raised by the NHMRC in relation to the notification requirements in NPP 1.5. The ALRC agrees that it is unreasonable to require health service providers to notify third parties that personal information about them has been collected in the context of taking a family medical history. Under the proposed 'Specific Notification' principle, where an agency or organisation collects personal information from an individual about a third party, the agency or organisation is only required to take reasonable steps to notify the third party in circumstances where a reasonable person would expect to be notified. The ALRC's view is that a reasonable person would not expect to be notified when his or her personal information was collected by a health service provider in these circumstances.

Proposal 57–3 The *Privacy (Health Information) Regulations* should provide that a health service provider may collect health information from a health consumer, or a person responsible for the health consumer, about third parties without consent when:

(a) the collection of the third party's information into a health consumer's social, family or medical history is necessary to enable health service providers to provide a health service directly to the consumer; and

(b) the third party's information is relevant to the family, social or medical history of that consumer.

Collection of family medical history information by insurance companies

57.92 The second issue raised in the OPC Review was the collection of third party health information without consent by insurance companies. In ALRC 96, the ALRC and AHEC noted that:

> Insurance companies routinely collect family medical history information and use it in underwriting. The collection and use is based on the long recognised fact that certain diseases have a hereditary component, and that information about the medical history of family members is relevant in assessing the applicant's risk.[92]

57.93 The public interest issues to be considered in relation to the collection of this information by insurers are not the same as those considered in the development of PID 9 and PID 9A, which focused on collection by health service providers. The ALRC and AHEC expressed the view that it would be appropriate to consider the specific issues that arise in the insurance context in the course of a PID process. The ALRC and AHEC recommended that:

> Insurers should seek a Public Interest Determination under the *Privacy Act 1988* (Cth) in relation to the practice of collecting genetic information from applicants about their genetic relatives for use in underwriting insurance policies in relation to those applicants.[93]

57.94 The OPC Review noted that, to date, the Privacy Commissioner had not considered an application for a PID in these terms[94] and recommended that:

> The Australian Government should consider undertaking consultation on limited exceptions or variations to the collection of family, social and medical history information, particularly with regard to genetic information and the collection practices of the insurance industry.[95]

57.95 In IP 31, the ALRC asked whether the *Privacy Act* should be amended to allow insurance companies to collect health information about third parties without their consent in similar circumstances to those set out in Public Interest Determinations 9 and 9A.[96]

Submissions and consultations

57.96 The Insurance Council of Australia expressed support for amending the *Privacy Act* to allow insurance companies to collect health information about third parties without their consent, noting that, 'in some instances health information of a third party is relevant to the medical history of a claimant and therefore required to properly manage and understand a claim'.[97] The Investment and Financial Services Association

97 Insurance Council of Australia, *Submission PR 110,* 15 January 2007.

(IFSA) and a number of other stakeholders also expressed support for a specific exception.[98]

57.97 The Office of the Health Services Commissioner in Victoria noted that an amendment would be desirable to ensure that insurance companies are using third party information only for the purpose of processing individual insurance contracts and claims, and in compliance with the *Privacy Act*. The Office submitted that 'clarity is needed in this area, and a working group should be set up to consult with stakeholders to come up with a suitable position on the issue'.[99]

57.98 By contrast, the OPC and other stakeholders did not support an exception to allow insurance companies to collect third party information without consent.[100] The OPC noted that the nature of the interests involved in the provision of health services and the provision of insurance differ considerably. While PIDs 9 and 9A concern the collection of third party information for the preservation of life and health, the collection of such information by insurance companies involves actuarial decision making and loss distribution. The OPC expressed the view that, while important, 'the latter arguably lacks the compelling policy considerations necessary to warrant potentially lessening privacy protections'.[101]

57.99 The OPC noted that the IFSA *Family Medical History Policy* provides a practical solution to compliance with the *Privacy Act*. The Policy states 'insurers will not collect family medical history information in an identifiable format'.[102] The OPC expressed support for this approach, which allows the insurance industry to collect relevant third party health information while complying with the requirements of the *Privacy Act*.

ALRC's view

57.100 The ALRC notes that the insurance industry has not, to date, applied to the Privacy Commissioner for a PID in relation to the collection of family medical history information without consent. IFSA's *Family Medical History Policy* appears to indicate that it is feasible for insurers to collect and use health information about family members that does not identify those family members. If this is so, then amending the *Privacy Act* is unnecessary. If information collected by insurance companies is not 'about an individual whose identity is apparent, or can reasonably be ascertained, from

98 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007; Investment and Financial Services Association, *Submission PR 122,* 15 January 2007.

the information' it does not fall within the definition of 'personal information' and is not covered by the *Privacy Act.*

57.101 The ALRC notes, however, that the accompanying commentary in the IFSA *Family Medical History Policy* states that 'Family medical history information collected will be done so [sic] on a de-identified basis, that is name and date of birth of the relative will not be collected.'[103] Collecting information without names and date of birth attached may not be sufficient to ensure that information is not 'about an individual whose identity is apparent, or can reasonably be ascertained, from the information'. If, for example, it is apparent from the information collected that the family member is the mother or father of the individual applying for insurance, the individual's identity can reasonably be ascertained from the information. In order to comply with the existing provisions of the *Privacy Act*, insurance companies must ensure that any third party health information they collect without consent is not about an individual whose identity is apparent or can reasonably be ascertained.

57.102 The ALRC is concerned that, although names and date of birth are not collected, family member's identities may be reasonably ascertainable from other information collected. If this is the case, insurance companies are collecting third party health information in breach of the *Privacy Act*. The ALRC is of the view that if this is the case, insurers should seek a PID under the *Privacy Act* in relation to the practice. This is consistent with the relevant recommendation in ALRC 96,[104] discussed above.

Collection of health information as required or authorised by or under law

57.103 As noted above, NPP 10.1 provides in part that an organisation must not collect sensitive information, including health information, without consent except in a number of specified situations. One of those is where 'the collection is required by law'.

57.104 NPP 10.2 provides a further exception to the general rule that health information must not be collected without consent. NPP 10.2 provides:

> Despite subclause 10.1, an organisation may collect health information about an individual if:
>
> (a) the information is necessary to provide a health service to the individual; and
>
> (b) the information is collected:
>
> (i) as required or authorised by or under law (other than this Act); or

103 Ibid, [10.2.1].

104 Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), Rec 28–3.

> (ii) in accordance with rules established by competent health or medical bodies that deal with obligations of professional confidentiality which bind the organisation.

57.105 NPP 10.2 recognises that health service providers may have legal obligations to collect certain health information without consent in the course of providing a health service. The OPC Guidelines note that 'law' includes Commonwealth, state and territory legislation, as well as the common law.[105] State and territory public health Acts, for example, require health service providers to collect and record certain information about health consumers with 'notifiable diseases', such as, tuberculosis, Creutzfeldt-Jakob disease and HIV/AIDS.[106]

57.106 It is unclear, however, why the language in NPP 10.1—'unless the collection is required by law'—and NPP 10.2—'where the information is collected as required or authorised by or under law'—is different. NHPP 1 of the draft *National Health Privacy Code* provides that health information may be collected without consent where the collection is 'required, authorised or permitted, whether expressly or impliedly, by or under law'.

57.107 The OPC did not support the approach in NHPP 1 on the basis that the formulation was too wide. The legal authority to collect health information without an individual's consent should be 'relatively narrow, transparent and subject to a clear statement from a Parliament'.[107]

57.108 The OPC expressed the view that the existing provisions in NPP 10.2—that allow health information to be collected without consent where necessary to provide a health service to the individual 'as required or authorised by or under law'—were appropriate. The OPC noted that the Prescription Shopping Information Service (PSIS)—established by Medicare Australia to allow registered medical practitioners to ring and find out if health consumers are 'prescription shopping' or acquiring medicines in excess of medical needs—is an example of collection that is authorised, rather than required, by or under law.[108]

57.109 DOHA expressed the view that

> as a matter of general principle it should not be considered an interference with privacy for an agency or organisation to collect health information where 'the collection is required or authorised by law'.

107 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

108 *National Health Act 1953* (Cth) s 135AC.

ALRC's view

57.110 The proposed 'Collection' principle, discussed in detail in Chapter 18, provides that sensitive information, including health information, must not be collected without consent except where 'the collection is required or specifically authorised by or under law'. The ALRC's view is that the *Privacy Act* should not fetter a government's discretion to require or authorise that personal information, including health information, be handled in a particular way;[109] however, in relation to sensitive information, the authority to collect such information without consent should be express, rather than implied. This proposed exception should replace the exceptions currently set out in NPP 10.1(b) and NPP 10.2. This will eliminate the problem of inconsistency between these two existing provisions.

Binding rules established by health or medical bodies

57.111 NPP 10.2 also provides that health information may be collected without consent if the information is collected in order to provide a health service to the individual and in accordance with binding rules established by 'competent health or medical bodies that deal with obligations of professional confidentiality'. The draft *National Health Privacy Code* does not include this exception.

57.112 The OPC Review recommended that:

> The Australian Government should consider amending NPP 10.2(b)(ii) to clarify the nature of the binding rules intended to be covered by this provision, particularly with regard to the substantive content of such rules.[110]

57.113 In its submission, the OPC considered the exception provided by NPP 10.2(b)(ii). The OPC expressed the view that such rules would need to:

- be formally adopted by a state/territory medical board as a statement of appropriate professional practice;
- prescribe the circumstances in which the collection can or cannot occur without the patient's consent;
- define or regulate obligations of professional confidentiality in relation to the information collected; and
- provide a mechanism for sanctions for breach.

---

109 See Ch 13 for a detailed discussion of this issue.

110 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 84.

57.114 The OPC stated that:

> NPP 10.2(b)(ii) is intended to provide a mechanism to allow collection by health service providers where necessary to provide a health service, and in accordance with binding rules of professional confidentiality. However, it is the Office's view that no current rules fit the terms of 10.2(b)(ii) in such a way that it could be confidently relied upon.[111]

57.115 The NHMRC also were of the view that no such rules existed and that the provision should be deleted.[112]

ALRC's view

57.116 The ALRC notes that neither the OPC nor the NHMRC are aware of any existing 'rules established by competent health or medical bodies that deal with obligations of professional confidentiality' that would fulfil the requirements of NPP 10.2(b)(ii). The ALRC proposes to drop the reference to this mechanism from the proposed 'Collection' principle.

Inconsistency between the collection, use and disclosure principles

57.117 Another issue raised in IP 31 was the lack of consistency between NPP 2 on use and disclosure of health information and NPP 10 on collection of health information.[113] In many communications of health information, there is both a disclosure and a collection. For example, a general practitioner collects health information for the primary purpose of providing a health service to a health consumer. The general practitioner may disclose that information to a number of other health service providers involved in treating the consumer, for example, a pathologist and a specialist.

57.118 Such disclosures are consistent with NPP 2 if they are directly related to the primary purpose of collection and within the reasonable expectations of the individual health consumer. NPP 10 requires that health information be collected with consent, although that consent may be express or implied. The issue is whether the pathologist and the specialist in the above example can rely on the implied consent of the health consumer to collect the consumer's health information.

57.119 In relation to the inconsistency between use and disclosure of health information under NPP 2 and collection of health information under NPP 10, the OPC suggested that NPP 10 should be amended to allow the collection of health information where necessary for providing a health service and where the collection was within the expectations of a reasonable person:

112 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.
113 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), [8.160].

> In the Office's view, option 3 would appear to offer an appropriate and transparent mechanism for reforming NPP 10.2(b)(ii), and would cause the least interference with current good practice in the health sector. This option would provide greater alignment between the disclosure and collection provisions of the NPPs, and resolves the possible uncertainty surrounding collection by members of a treating team and other similar scenarios.[114]

57.120 A number of other stakeholders also suggested that this matter should be clarified.[115]

ALRC's view

57.121 The ALRC notes that health information must generally be collected with consent and that consent, to be valid, must be voluntary and informed.[116] If health information is used or disclosed for the primary purpose of collection or for a directly related secondary purpose and the individual would reasonably expect the health service provider to use or disclose the information in that way, the ALRC's view is that the resulting collection by another member of the treating team, for example, a pathologist or specialist, is likely to be consistent with the express or implied consent provided at the point of original collection. Good communication between health service providers and consumers at the point of original collection would put this beyond doubt.

57.122 The ALRC recognises, however, that it is important to facilitate information flow in the health services context among members of treatment teams. The ALRC is interested in receiving further submissions on whether the proposed *Privacy (Health Information) Regulations* should provide that health information may be collected without consent where it is necessary to provide a health service to the individual and the individual would reasonably expect the agency or organisation to collect the information. A regulation of this nature would bring the proposed 'Collection' principle, as it applies to health information, more into line with the proposed 'Use and Disclosure' principle.

Question 57–1 Should the proposed *Privacy (Health Information) Regulations* provide that health information may be collected without consent where it is necessary to provide a health service to the individual and the individual would reasonably expect the agency or organisation to collect the information for that purpose?

116 See Ch 16 for a detailed discussion of consent.

Use and disclosure of health information

Background

57.123 IPPs 10 and 11 and NPP 2 regulate the use and disclosure of personal information. IPP 10 provides that information, including health information, may be used for the particular purpose it was collected or a directly related purpose. If it is to be used for any other purpose the person who wishes to use the information must have the consent of the individual concerned. IPP 11 provides that information may not be disclosed to a person, body or agency unless the individual concerned is reasonably likely to have been aware that information of that kind is usually passed to that person, body or agency. If it is to be disclosed in other circumstances, the person who wishes to disclose the information must have the consent of the individual concerned. There are a number of exceptions to these rules, including where use or disclosure of the information is necessary to prevent or lessen a serious and imminent threat to the life or health of the individual concerned or another person.

57.124 NPP 2 provides that sensitive information, including health information, may not be used or disclosed for a secondary purpose unless the secondary purpose is directly related to the 'primary purpose of collection' and the individual concerned would reasonably expect the organisation to use or disclose the information for that secondary purpose. If it is to be used for any other purpose the person who wishes to use the information must have the consent of the individual concerned. There are a number of exceptions to this rule, including where the organisation reasonably believes that the use or disclosure is necessary to lessen or prevent a serious and imminent threat to an individual's life, health or safety or a serious threat to public health or public safety.

57.125 NPP 2.4 makes special provision for the disclosure of health information to a person who is 'responsible' for the individual where the individual is physically or legally incapable of giving consent to the disclosure or physically cannot communicate consent to the disclosure. Such disclosures only may be made by health service providers in the health services context. The health service provider must be satisfied that the disclosure is necessary to provide appropriate care or treatment to the individual or the disclosure must be made for compassionate reasons. The disclosure must not be contrary to any wish expressed by the individual before the individual became unable to give or communicate consent of which the health service provider is aware or could reasonably be expected to be aware. The disclosure must be limited to that information that it is reasonable to disclose in the circumstances.

57.126 A person is defined as 'responsible' for an individual if the person is:

- a parent of the individual;
- a child or sibling of the individual and at least 18 years old;
- a spouse or de facto spouse of the individual;

- a relative of the individual, at least 18 years old and a member of the individual's household;
- a guardian of the individual;
- exercising an enduring power of attorney granted by the individual that is exercisable in relation to decisions about the individual's health;
- a person who has an intimate personal relationship with the individual; or
- a person nominated by the individual to be contacted in case of emergency.[117]

57.127 The *Privacy Legislation Amendment Act 2006* (Cth), passed in September 2006, amended NPP 2.1 to allow the use or disclosure of genetic information about an individual to a genetic relative in circumstances where the genetic information may reveal a serious threat to the genetic relative's life, health or safety. Any such use or disclosure will have to be done in accordance with guidelines relating to the use and disclosure of genetic information, currently under development. Section 95AA of the *Privacy Act* provides that these guidelines are to be issued by the NHMRC and approved by the Privacy Commissioner.[118]

57.128 Concern was expressed in the course of the Senate Legal and Constitutional References Committee inquiry into the *Privacy Act* (Senate Committee privacy inquiry)[119] and the OPC Review[120] that the concept of 'primary purpose of collection' in NPP 2 may be interpreted in a narrow way that might impede the provision of holistic health care and the appropriate management of an individual's health.

57.129 In its submission to the OPC Review, the Australian Medical Association (AMA) expressed the view that the primary purpose of collection should generally be 'to provide for the person's health care and general well being … unless another meaning is specifically agreed to between the doctor and the patient'. The AMA also noted that the primary purpose should not be limited to a particular episode of care:

> The care of a patient's health and well being is not achieved by episodic care. The process is not static, nor can it be temporally defined. One's past health and well being impacts on one's current health and well being which in turn influences one's

---

117 The terms 'child', 'parent', 'relative' and 'sibling' are defined in NPP 2.6.

118 This amendment was intended to implement, in part, Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), Rec 21–1.

119 Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005), [5.63].

120 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 264–265.

> future health and well being. Health care is an on-going process that spans from conception through to death.[121]

57.130 The OPC Review stated that:

> There is an intentionally close relationship between the primary purpose and the directly related purpose provisions at NPP 2.1(a), which in this context means that with open communication between a health service provider and an individual (something to be expected in the delivery of quality health care), a holistic approach to care can be agreed either explicitly or implicitly. In other words, where the individual expects their health information to be used in the delivery of health care to them in a holistic manner, it is permissible under NPP 2.[122]

57.131 The OPC Review stated that the OPC would work with the health sector to develop further guidance about the operation of NPP 2 as it specifically relates to the issue of primary and secondary purpose in the health services context.[123]

57.132 The regime established for using and disclosing health information in NHPP 2 of the draft *National Health Privacy Code* is similar to NPP 2 in that it allows the use and disclosure of health information for the primary purpose of collection and directly related secondary purposes within the reasonable expectations of the health consumer. However, NHPP 2 also allows the use of health information without consent where all of the following apply:

> (i) the organisation is a health service provider providing a health service to the individual; and
>
> (ii) the use is for the purpose of the provision of further health services to the individual by the organisation; and
>
> (iii) the organisation reasonably believes that the use is necessary to ensure that the further health services are provided safely and effectively; and
>
> (iv) the information is used in accordance with guidelines, if any, issued for the purposes of this paragraph.

Submissions and consultations

57.133 In IP 31, the ALRC asked whether guidance by the OPC was an appropriate and effective response to concerns about the provisions of NPP 2 and the use and disclosure of health information.[124]

57.134 In its submission, the NHMRC described a number of situations in which health service providers might be unclear about their obligations under the *Privacy Act*.

---

121 Australian Medical Association, *Submission to the Office of the Privacy Commissioner Review of the Private Sector Provisions of the Privacy Act 1988*, 21 December 2004.

122 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 263.

123 Ibid, recs 77–78.

124 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 8–17.

> For example, a patient is admitted to a hospital for acute care, and the hospital contacts the patient's general practitioner and asks him or her to disclose health information about the patient for the purpose of ongoing clinical care. There is not a serious and imminent threat to the patient's life, health or safety. The general practitioner does not have direct access to the patient to obtain consent to the disclosure of their health information. Nevertheless, good clinical practice requires its timely disclosure.[125]

57.135 The NHMRC stated that, while use or disclosure in these circumstances might well be a directly related secondary purpose, it will not always be clear to general practitioners whether individuals would reasonably expect their health information to be disclosed in these circumstances. The NHMRC was therefore of the view that use and disclosure to other health care providers of health information for the purposes of the current care of an individual health consumer should be permitted explicitly without any additional requirement that the health consumer would reasonably expect the information to be used or disclosed in this way.[126]

57.136 The Australian Nursing Federation (ANF) was of the view, however, that if health information is collected with consent and appropriate information is provided to individuals, 'then there should be little impediment to the appropriate management of the individual's health'.[127]

57.137 The OPC remained of the view that NPP 2 sits comfortably with the 'relationships of trust and good communication that are the hallmark of good practice in the health sector' and that NPP 2 does not require amendment. In its submission, the OPC suggested that it is not always, or even usually, necessary for health service providers to seek the consent of an individual before using or disclosing their health information to other members of a treatment team.[128]

57.138 The OPC also stated its view that an holistic approach to the provision of health services can be accommodated by the 'directly related secondary purpose within the reasonable expectations of the individual' test in NPP 2. The OPC noted that this test is consistent with the ethical principles set out in the AMA's Code of Ethics,[129] including respect for the individual; health care as a collaboration between doctor and patient; and patient confidentiality. The OPC did not agree that the primary purpose of collection should be broadly defined as providing 'for the person's health care and general well being', as this would allow use and disclosure of health information without taking the health consumer's reasonable expectations into account or, alternatively, seeking consent.

128 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
129 Australian Medical Association, *Code of Ethics* (2004).

57.139 The OPC was not of the view that NHPP 2 provided a better framework for the use and disclosure of health information. The OPC stated that NHPP 2 was unnecessarily lengthy and complex, and that the discretions conferred by the provision did not give adequate weight to individuals' wishes and expectations about the way that their health information is used and disclosed. A number of other stakeholders, however, were more supportive of NHPP 2.[130]

57.140 The OPC reiterated the recommendations from its review that further guidance on the operation of NPP 2 in the health services context would be provided:

> This may include updating information sheets, providing greater access to these and other Office resources, and publishing articles in prominent health sector publications. A clearer understanding of how these terms operate would allow health service providers to be more confident in using and disclosing patients' information for appropriate and mutually anticipated purposes, and ensure individuals receive enough information to retain control over the direction of their healthcare.[131]

57.141 A number of other stakeholders agreed that further guidance was necessary and appropriate.[132]

ALRC's view

57.142 The ALRC supports the OPC Review recommendations that further guidance be developed for health care providers on the use and disclosure of health information in the provision of health services. There does appear to be a lack of clarity on the meaning of the principles among health service providers. This is undesirable, particularly if it is preventing the flow of health information from one health service provider to another in appropriate circumstances.

57.143 The ALRC notes the NHMRC's concern that it is unclear whether the use of an individual's health information for ongoing care would fall within the reasonable expectations of the individual. The ALRC's view is that a reasonable individual would expect their general practitioner to disclose their health information to a hospital that was providing health services to the individual in an acute care situation if the individual was not capable of giving consent. If the individual was capable of giving consent, the situation could be clearly resolved by asking the individual.

57.144 The ALRC agrees with the OPC that the situation also could be clarified with health consumers at the time that health information is originally collected, if general practitioners had concerns in this regard. The test set out in NPP 2 and incorporated in

131 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

132 Australian Nursing Federation, *Submission PR 205,* 22 February 2007; Office of the Health Services Commissioner (Victoria), *Submission PR 153,* 30 January 2007; Department of Health Western Australia, *Submission PR 139,* 23 January 2006; A Smith, *Submission PR 79,* 2 January 2007.

the proposed 'Use and Disclosure' principle—that any secondary purpose must be directly related to the primary purpose of collection and within the reasonable expectations of the individual—is considered appropriate and workable in this context. An individual's health information should not be used without consent and outside the reasonable expectations of the individual.

Disclosure of health information to a person 'responsible'

57.145 NPPs 2.4, 2.5 and 2.6—which allow disclosure in the health services context to a person 'responsible' for an individual in certain circumstances—did not attract comment in submissions and consultations. The ALRC proposes a number of changes to the provisions, however, including as a consequence of the proposals put forward in Chapter 61 in relation to adults with a decision-making disability. The first change is that these provisions should be moved to the *Privacy (Health Information) Regulations*. The provisions deal only with health information in the health services context and, as discussed in Chapter 56, the ALRC's view is that such provisions should not be included in the text of the proposed UPPs.

57.146 The second change concerns the term 'physically or legally incapable of giving consent to the disclosure or physically cannot communicate consent to the disclosure'. In Chapter 61, the ALRC proposes that the *Privacy Act* define what it means to be incapable of giving consent, making a request or exercising a right under the Act. The proposed *Privacy (Health Information) Regulation* should simply state that an agency or organisation that provides a health service to an individual may disclose health information about the individual to a person who is responsible for the individual if the individual is 'incapable of giving consent'.

57.147 The remaining proposals relate to the definition of a 'responsible' person. In Chapter 61, the ALRC proposes that the *Privacy Act* be amended to include an 'authorised representative' mechanism. Where an individual is incapable of giving consent, making a request or exercising a right under the Act, then an authorised representative of that individual may do this on behalf of the individual.[133]

57.148 The definition of 'responsible person' should be amended to include a reference to 'authorised representative'. To avoid duplication, those elements that fall within the proposed definition of 'authorised representative'—such as a guardian appointed under law or an attorney appointed under an enduring power of attorney—should be omitted from the definition of 'responsible person'. As the proposed definition of 'authorised representative' only includes a person with parental responsibility for the individual if the individual is under 18, the definition of a person 'responsible' should continue to include a reference to a parent of the individual to ensure that parents of individuals over 18 are not excluded.

---

133 Proposal 61–1.

57.149 The remaining elements of the definition of 'responsible person' should be set out expressly. In order to provide consistency across federal legislation, the reference to 'de facto spouse' should be changed to 'de facto partner', in line with recommendations made in the report, *Uniform Evidence Law* (ALRC 102).[134]

Use and disclosure of genetic information

57.150 In relation to NPP 2.1(ea)—which allows the use or disclosure of genetic information where the organisation reasonably believes that the use or disclosure is necessary to lessen or prevent a serious threat to the life, health or safety of a genetic relative—the ALRC's view is that the provision should be moved to the proposed *Privacy (Health Information) Regulations*. The proposed regulation should be expressed to apply to both agencies and organisations.

57.151 NPP 2.1(ea) provides that any use or disclosure must be in accordance with guidelines issued by the NHMRC and approved by the Privacy Commissioner. Consistent with proposals in Chapter 44, the ALRC suggests that this provision be amended to provide that any use or disclosure is in accordance with binding rules issued by the Privacy Commissioner.[135] The Privacy Commissioner would be free to develop the rules in consultation with the NHMRC and other relevant stakeholders.

Proposal 57–4 The provisions of National Privacy Principle 2 dealing with the disclosure of health information in the health services context to a person responsible for an individual should be moved to the *Privacy (Health Information) Regulations*. The proposed regulation should:

(a) be expressed to apply to both agencies and organisations;

(b) provide that an agency or organisation that provides a health service to an individual may disclose health information about the individual to a person who is responsible for the individual if the individual is 'incapable of giving consent' to the disclosure and all the other circumstances currently set out in NPP 2.4 are met;

(c) include a definition of a person 'responsible' for an individual amended to incorporate the term 'authorised representative'; and

(d) refer to 'de facto partner' rather than 'de facto spouse'.

134 Australian Law Reform Commission, New South Wales Law Reform Commission and Victorian Law Reform Commission, *Uniform Evidence Law*, ALRC 102 (2005), Rec 4–4.

135 Proposal 44–2.

Proposal 57–5 National Privacy Principle 2.1(ea) on the use and disclosure of genetic information should be moved to the *Privacy (Health Information) Regulations* and amended to apply to both agencies and organisations. Any use or disclosure under the proposed regulation should be in accordance with binding rules issued by the Privacy Commissioner.

Access to health information

Background

57.152 In *Breen v Williams*,[136] the High Court of Australia unanimously held that health consumers do not have a right of access to their medical records at common law. Consequently, health consumers must rely on legislation, including the *Privacy Act*, to provide them a right of access to the health information held in medical records.

57.153 IPP 6 provides in relation to agencies that:

> Where a record-keeper has possession or control of a record that contains personal information, the individual concerned shall be entitled to have access to that record, except to the extent that the record-keeper is required or authorised to refuse to provide the individual with access to that record under the applicable provisions of any law of the Commonwealth that provides for access by persons to documents.

57.154 The extent of the exceptions to IPP 6 are somewhat unclear but include, for example, those situations in which a record-keeper is required or authorised to refuse access under the FOI Act and the *Archives Act 1983* (Cth). Chapter 12 considers how this legislation, including the exemptions set out in the legislation, interacts with the *Privacy Act*.

57.155 NPP 6 provides that organisations must provide individuals with access to their personal information on request, subject to a number of exceptions. In the case of health information, organisations are not required to provide access if doing so would pose a serious threat to the life or health of any individual.[137] The list of exceptions also includes situations in which: providing access would have an unreasonable impact on the privacy of other individuals;[138] the information relates to existing or anticipated legal proceedings between the organisation and the individual, and the information would not be accessible by the process of discovery;[139] and denying access is required or authorised by or under law.[140]

---

136 *Breen v Williams* (1996) 186 CLR 71.
137 *Privacy Act 1988* (Cth) sch 3, NPP 6.1(b).
138 Ibid sch 3, NPP 6.1(c).
139 Ibid sch 3, NPP 6.1(e).
140 Ibid sch 3, NPP 6.1(h).

57.156 Both health consumers and health service providers appear to have concerns relating to access to health information. Of the 330 complaints under the NPPs against health care providers received by the OPC between 21 December 2001 and 31 January 2005, roughly half (163) concerned a refusal of access to health records.[141]

Breakdown in therapeutic relationship

57.157 In the course of the OPC Review, the AMA and the Mental Health Privacy Coalition expressed concern that, in the health care context, there are occasions when providing access to medical records could cause harm to the health consumer or interfere with the therapeutic relationship between a health consumer and a health service provider.[142] The OPC Review stated that:

> There is no doubt that there are circumstances when access to records may cause a breakdown in a therapeutic relationship and that the breakdown in the therapeutic relationship may constitute a serious risk to the patient's health.[143]

57.158 In addition, the OPC expressed the view that NPP 6.1(c)—which allows an organisation to deny access where it would have an unreasonable impact on the privacy of someone else—might be relied upon to protect health service providers' views in some circumstances. The OPC did not address expressly the situation in which access would cause a breakdown in the therapeutic relationship that did not pose a serious threat to the life or health of an individual. The OPC did not recommend an amendment to NPP 6 but expressed the view that more guidance was necessary.[144]

57.159 The draft *National Health Privacy Code* provides very detailed provisions on the process for providing access to health information and for dealing with situations in which access is refused. As discussed in Chapter 56, the ALRC's view is that this level of detail should not be included in a principles-based regime. The grounds provided in NHPP 6 for refusing access are essentially the same as those provided in NPP 6. NHPP 6 also provides, however, that where access is denied on the basis that it would pose a serious threat to the life or health of any person or would have an unreasonable impact on the privacy of other individuals, the refusal must be in accordance with guidelines, if any, issued for the purposes of the specific provisions.[145]

57.160 In IP 31, the ALRC asked whether the exception in NPP 6.1(b)—that allows access to be denied if it would pose a serious threat to the life or health of any person—was appropriate. The ALRC asked whether the exception should be extended to allow a health service provider to deny access to health information if providing access

would pose a threat to the therapeutic relationship between the health service provider and the health consumer.[146]

Submissions and consultations

57.161 There was strong support among stakeholders for the existing exception in NPP 6.1(b) and little support for extending the exception to include threats to the therapeutic relationship alone.[147] A number of submissions noted that denying access to health information also can damage therapeutic relationships and that health consumers are always at liberty to change health service providers if the relationship does break down. The ANF was strongly of the view that:

> This exception should **NOT** be extended to allow a health service provider to deny access to health information if providing access to the information would pose a threat to the therapeutic relationship between the health service provider and the health consumer. If the therapeutic relationship is so fragile then it is not going to be improved if the health service provider refuses to provide access. There is also the potential for a person to deny access for an improper purpose eg the information reveals an adverse event, inappropriate care or treatment or other information that a person may be entitled to have.[148]

57.162 The OPC stated that NPP 6.1(b) is an appropriate and effective exception, and should not be extended to include threats to the therapeutic relationship alone.

> The fact that the threat must be 'serious' reflects the principle that access to one's own personal information should be the rule, rather than the exception. At the same time the exception is broad enough to encompass serious threats to any relevant person (including threats to mental health), such as the individual themselves, other patients, practitioners and staff, and the individual's family. Similar language is used in the equivalent exceptions under NSW and Victorian health records legislation.[149]

57.163 The OPC suggested, however, that the phrase 'would pose a serious threat' requires a degree of certainty that may not always be achievable in clinical environments. It is not always possible to predict how a health consumer will react to being granted access to their health information. On this basis, the OPC suggested an alternative test of 'reasonably likely to pose a serious threat'.

149 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

ALRC's view

57.164 There was very little support for extending the exception in NPP 6.1(b) to include a threat to the therapeutic relationship. The ALRC is not, therefore, proposing this change.

57.165 The ALRC agrees with the OPC that the current test—'providing access would pose a serious threat to the life or health of any individual'—requires a level of certainty that may be very difficult to establish. The proposed 'Access and Correction' principle, discussed in detail in Chapter 26, has adopted the approach suggested by the OPC. The proposed principle provides in part that, if an individual requests access to personal information held by an organisation, the organisation must respond within a reasonable time and provide the individual with access to the information—except to the extent that providing access would be reasonably likely to pose a serious threat to the life or health of any individual.[150]

57.166 It is also important to note that the proposed 'Access and Correction' principle is limited to personal information held by organisations. The ALRC has formed the view that the rules relating to access and correction in respect of personal information held by agencies should be set out in a separate Part of the *Privacy Act*. These proposed provisions are discussed in detail in Chapter 12.

Use of intermediaries

57.167 The IPPs do not provide a mechanism for dealing with the situation in which access to information is denied. A consumer denied access to health information by an agency could, however, lodge a complaint with the Privacy Commissioner under s 36 of the *Privacy Act*.

57.168 By contrast, NPP 6.3 sets out a process involving the use of intermediaries to assist in situations in which access is denied.

> If the organisation is not required to provide the individual with access to the information because of one or more of paragraphs 6.1(a) to (k) (inclusive), the organisation must, if reasonable, consider whether the use of mutually agreed intermediaries would allow sufficient access to meet the needs of both parties.

57.169 The OPC Review noted that this right is very limited.[151] Organisations are only required to consider whether the use of an intermediary would meet the needs of the parties but are not required to take any action. There is a stronger right to the use of an intermediary in the draft *National Health Privacy Code* where access is refused on the ground that providing access would pose a serious threat to the life or health of the individual. A health service provider may offer to discuss information with the consumer or nominate a suitably qualified health service provider to discuss the

150 Proposal 26–6.

151 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 117.

information with the individual. If this does not occur, or the health consumer is not satisfied with the process, the health consumer may nominate a health service provider to act as intermediary.

57.170 Once an intermediary has been appointed, the health service provider must provide the intermediary with the individual's health information. The intermediary may then, among other things, consider the validity of the refusal to grant access and, if he or she thinks it appropriate to do so, discuss the content of the health information with the individual.[152]

Submissions and consultations

57.171 The ANF expressed the view that:

> There remains significant resistance across the health system in granting access to health consumers to their personal health information that will require major culture change. Whether it is in relation to fear of revealing litigable conduct or health professional censure; or is part of the characteristic paternalism that is linked to benevolence that has been a feature of the provision of health services over many years, is neither here nor there. It does, however indicate that there needs to be significant efforts made to inform and actively assist that culture to change.[153]

57.172 Although the OPC was generally of the view that the provisions in the draft *National Health Privacy Code* dealing with access to health information were overly complex and prescriptive, the OPC did express support for stronger provisions around the use of intermediaries to assist with access to health information.[154]

57.173 The NHMRC also expressed support for amending the *Privacy Act* to provide a more explicit right to the use of an intermediary.[155]

ALRC's view

57.174 The proposed 'Access and Correction' principle, discussed in Chapter 26, provides that where an organisation denies an individual access to personal information because of one or more of the exceptions set out in the proposed principle, 'the organisation must take reasonable steps to reach an appropriate compromise, involving the use of a mutually agreed intermediary, provided that the compromise would allow for sufficient access to meet the needs of both parties'. This formulation is stronger than the existing provisions in NPP 6.3 as it requires organisations to take reasonable steps to reach a compromise involving the use of a mutually agreed intermediary,

---

152 National Health Privacy Working Group of the Australian Health Ministers' Advisory Council, *Draft National Health Privacy Code* (2003) pt 5 div 3.

153 Australian Nursing Federation, *Submission PR 205,* 22 February 2007.

154 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

155 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

rather than simply requiring the organisation to consider the use of a mutually agreed intermediary.

57.175 In the health services context, the ALRC's view is that a more detailed and stringent procedure in relation to the use of intermediaries should be provided. The ALRC notes that almost half of the complaints lodged with the OPC against health service providers were in relation to access to health information and that there appears to be some resistance among health service providers to allowing health consumers access to their health information. This situation could be improved substantially if health service providers were required to refer the requested health information to a registered medical practitioner for a second opinion in relation to the question of access.

57.176 The proposed regulation, set out below, provides that where an organisation denies an individual access to his or her own health information on the ground that providing access would be reasonably likely to pose a serious threat to the life or health of any individual, the organisation must advise the individual that he or she may nominate a registered medical practitioner to be given access to the health information. Once the individual has nominated a registered medical practitioner, the organisation must provide the medical practitioner with access to the individual's health information. The medical practitioner may then assess the grounds for denying access to the health information and may provide the individual with access to the information if he or she is satisfied that to do so would not be likely to pose a serious threat to the life or health of any individual.

57.177 The proposed regulation does not currently require that the nominated medical practitioner be mutually agreed upon. The ALRC would be interested in receiving feedback on whether an organisation should have the opportunity to object to the individual's choice of nominated medical practitioner before providing access to the individual's health information.

Proposal 57–6 The *Privacy (Health Information) Regulations* should provide that, if an organisation denies an individual access to his or her own health information on the ground that providing access would be reasonably likely to pose a serious threat to the life or health of any individual, the:

(a) organisation must advise the individual that he or she may nominate a registered medical practitioner to be given access to the health information;

(b) individual may nominate a registered medical practitioner and request that the organisation provide access to the information to the nominated medical practitioner;

(c) organisation must provide access to the health information to the nominated medical practitioner; and

(d) nominated medical practitioner may assess the grounds for denying access to the health information and may provide the individual with sufficient access to the information to meet the individual's needs if he or she is satisfied that to do so would not be likely to pose a serious threat to the life or health of any individual.

Health service is sold, transferred or closed

57.178 The OPC Review also considered the issue of access to personal health information where an organisation providing health services is sold or ceases to operate, for example, where a medical practitioner retires or a practice closes.[156] In some jurisdictions, specific provision is made for the retention of medical records in these circumstances. In New South Wales, for example, outgoing medical practitioners must make reasonable efforts to ensure that medical records are kept by the medical practitioner taking over the practice or that they are provided to the patient to whom they relate.[157]

57.179 In Victoria, HPP 10 imposes express obligations on health service providers when the organisation providing the health service is to be sold, transferred or closed. These obligations include advertising in local newspapers indicating that the organisation is to be sold, transferred or closed and what the organisation proposes to do with the health information it holds.[158]

57.180 The draft *National Health Privacy Code* includes detailed provisions for dealing with health information on the transfer or closure of the practice of a health service provider. NHPP 10 requires health service providers to take reasonable steps to let health consumers know about the transfer or closure and to inform consumers about the proposed arrangements for the transfer or storage of consumers' health information.

57.181 The OPC Review noted that where a health service ceases to operate, this may also raise issues relating to data security under NPP 4. There is a risk that 'abandoned' records may not be afforded adequate levels of storage and security.[159] It is also

156 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 123.
157 *Medical Practice Regulation 2003* (NSW) reg 8.
158 *Health Records Act 2001* (Vic) s 19, HPP 10.
159 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 123.

important to ensure that health information is available to health consumers seeking health services in the future.

57.182 The OPC considered that this was an important issue that should be addressed and made the following recommendations:

> The Australian Government should consider adopting the AHMAC code as a schedule to the Privacy Act. This will address the issue of access to health records when a health service ceases to operate. (See also recommendations 13, 29 and 33.)[160]
>
> The Australian Government should consider, if the AHMAC Code is not adopted into the Privacy Act, amending the NPPs to include a new principle along the lines of National Health Privacy Principle 10 in the AHMAC Code.[161]

Submissions and consultations

57.183 The Victorian Office of the Health Services Commissioner expressed support for a provision dealing expressly with the transfer or closure of health service practices and noted that:

> Distressed consumers have contacted HSC advising they rang their doctor to find they had closed their practice and left no forwarding contact number. Some consumers have advised HSC they last saw their doctor two or three weeks earlier, and had no notice of the closure.[162]

57.184 The OPC reiterated its view that:

> Amendment to the Privacy Act to introduce a privacy principle with a similar purpose as NHPP 10, would usefully clarify the obligations of health service providers and establish reasonable expectations for individuals on the handling of their health information in these circumstances.[163]

57.185 The NHMRC stated that:

> We strongly endorse the provisions in the draft *National Health Privacy Code* which address the management of health information on the transfer or closure of the practice of a health service provider. We understand that consumers are particularly concerned about the privacy of their health information when health care practices are acquired by larger corporate providers.
>
> We consider that maintenance of health care records is vital for the future quality health care of individuals and we also are cognisant of the risk to security of records if they are 'abandoned'.[164]

163 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
164 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

57.186 Other stakeholders agreed that the provisions of NHPP 10 dealing with the transfer or closure of a health service practice would be a useful addition to the *Privacy Act.*[165]

ALRC's view

57.187 The ALRC recognises that it is important to ensure that health information is handled appropriately when a health service is sold, amalgamated or closed or a health service provider dies. Health consumers should be notified when an event of this nature occurs to ensure that they continue to have access to the information and that the information is not lost or left without appropriate protection.

57.188 The regulation proposed below is based on NHPP 10 and requires health service providers, or their legal representatives, to ensure that individuals are aware of the sale, amalgamation or closure of the health service, or the death of the health service provider. Individuals must be informed about the proposed arrangements for the transfer or storage of their health information.

Proposal 57–7 The *Privacy (Health Information) Regulations* should provide that where a health service practice or business is sold, amalgamated or closed down and a health service provider will not be providing health services in the new practice or business, or the provider dies, the provider, or the legal representative of the provider, must take all reasonable and appropriate steps to:

(a) make individual users of the health service aware of the sale, amalgamation or closure of the health service or the death of the health service provider; and

(b) inform them about proposed arrangements for the transfer or storage of individuals' health information.

Transfer of health information

57.189 The *Privacy Act* does not deal specifically with the transfer of health information from one health service provider to another when a health consumer changes provider. In Victoria, HPP 11 in the *Health Records Act* imposes an obligation on health service providers to provide 'a copy or written summary of the individual's health information' to another provider if requested to do so by the individual or by the new provider on behalf of the individual. NHPP 11 of the draft *National Health*

165 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007; Australian Nursing Federation, *Submission PR 205,* 22 February 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007.

Privacy Code is in similar terms. Providing a mechanism of this sort ensures that the new health service provider has access to the health consumer's health information history and means that the health consumer does not have to rely on right of access provisions.

57.190 The OPC Review recommended that the NPPs be amended to include a new principle along the lines of NHPP 11.[166]

Submissions and consultations

57.191 The Victorian Office of the Health Services Commissioner noted that:

> Situations often occur where a medical practitioner or other health provider leaves a practice and their patients or clients follow them to their new practice. This can sometimes result in hundreds of requests for transfer of records made to the provider's old practice, and hostility between the two practices can emerge. HSC attempts to assist providers to deal with these situations, and sometimes negotiates between two practices to resolve difficulties that arise. Therefore specific provisions in relation to the transfer of health information are very important and assist in the continuity of care of the health consumer.[167]

57.192 The OPC expressed the view that introducing a provision into the *Privacy Act* along the lines of NHPP 11 would be appropriate as it would meet community expectations and would be consistent with good clinical care and continuity of treatment.[168] Other stakeholders also expressed support for including a provision in the *Privacy Act* dealing with the transfer of health information from one health service provider to another.[169]

57.193 DOHA agreed, noting that:

> The transfer of information from one health service provider to another, where an individual changes provider, is an important issue in the healthcare sector. It is consistent with good professional practice for a health service provider to respond positively to an individual's request to supply the individual's new provider with their original records (or a copy) or with a summary of the information in their records. This practice facilitates the continued availability of important health information when an individual changes health service provider, subject to the choices the individual exercises, thereby helping to ensure safe and effective healthcare for the individual.[170]

170 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007.

ALRC's view

57.194 The ALRC notes the difficulties that can arise in relation to the transfer of health information from one health service provider to another when a health consumer changes provider. Health consumers should have a right to have their health information transferred in these circumstances to ensure continuity of care. The ALRC proposes, therefore, the inclusion in the *Privacy (Health Information) Regulations* of a provision along the lines of NHPP 11. The proposed regulation should provide that where an individual requests that his or her health information be transferred from one health service provider to another, the information must be transferred in full or summary form. The individual also may ask a health service provider to make the request on his or her behalf.

Proposal 57–8 The *Privacy (Health Information) Regulations* should provide that if an individual:

(a) requests that a health service provider, or the health service provider's legal representative, make the individual's health information available to another health service provider; or

(b) authorises a health service provider to request that another health service provider transfers the individual's health information to the requesting health service provider,

the health service provider must transfer the individual's health information as requested. The health information may be provided in summary form.

Management, funding and monitoring

57.195 In its submission to the OPC Review, the NHMRC stated that health information was important in three areas: the provision of health services; management activities related to the provision of health services; and the conduct of research. The NHMRC noted that management activities include, for example: quality assurance; quality improvement; policy development; planning; evaluation; and cost benefit analysis and added that:

> The availability of health information without consent for quality assurance, research, and related activities is crucial to the safety and quality of clinical care, now and in the future. These activities, while similar in nature and intent, are currently subject to complex and different requirements under the *Privacy Act*, depending on the setting in

which they are conducted and whether they are characterised as quality assurance or research.[171]

Management, funding or monitoring of a health service under the NPPs

57.196 The NPPs go some way towards acknowledging the public interest in allowing the use of health information in the management activities of health service providers and by researchers. NPP 10.3 allows the collection of health information without consent in limited circumstances for:

- research relevant to public health or public safety;
- the compilation or analysis of statistics relevant to public health or public safety; or
- the management, funding or monitoring of a health service.

57.197 Although there is some overlap between these three areas, this chapter will focus on the third—that is, the management, funding and monitoring of health services. Research is discussed in the next chapter. The compilation and analysis of statistics relevant to public health or public safety can be conducted for research purposes or for management, funding or monitoring purposes. The ALRC does not propose to deal with this issue separately in this chapter on the basis that, where the compilation or analysis of statistics is done for the purposes of the management, funding or monitoring of a health service, the activity can be subsumed in the provisions dealing with management, funding and monitoring activity.

57.198 Health information only may be collected without consent for management, funding and monitoring activities in the following circumstances. An organisation must consider whether it could use de-identified information to achieve its purpose. If this is not possible, it must be impracticable for the organisation to seek the consent of all the individuals involved. Finally, the information must be collected:

- as required by law;
- in accordance with rules established by competent health or medical bodies that deal with obligations of professional confidentiality which bind the organisation; or
- in accordance with guidelines approved by the Privacy Commissioner under s 95A of the *Privacy Act*.[172]

---

171 National Health and Medical Research Council, *Submission to the Office of the Privacy Commissioner Review of the Private Sector Provisions of the Privacy Act 1988*, 10 December 2004.

172 *Privacy Act 1988* (Cth) sch 3, NPP 10.3.

As required by law

57.199 NPP 10.3(d)(i) allows for collection of health information without consent where the collection is required by law, for example, under public health notifiable diseases legislation. The proposed 'Collection' principle allows the collection of sensitive information, including health information, without consent where the collection is required or specifically authorised by or under law.[173] The proposed 'Use and Disclosure' principle allows the use and disclosure of health information without consent where the use or disclosure is required or authorised by or under law.[174] It is not necessary, therefore, to include these elements specifically in the provision dealing with collection, use and disclosure of health information without consent for the funding, management, planning, monitoring, improvement or evaluation of a health service.

In accordance with rules on professional confidentiality

57.200 NPP 10.2 also makes reference to the requirement for 'rules established by competent health or medical bodies that deal with obligations of professional confidentiality which bind the organisation'. The OPC suggested that any such rules would need to:

- be formally adopted by a state/territory medical board as a statement of appropriate professional practice;
- prescribe the circumstances in which the collection can or cannot occur without the patient's consent;
- define or regulate obligations of professional confidentiality in relation to the information collected; and
- provide a mechanism for sanctions for breach.

57.201 The OPC stated that it was not aware of any existing binding rules in the health sector that would meet these criteria.[175]

In accordance with s 95A Guidelines

57.202 Section 95A allows the Privacy Commissioner to approve guidelines issued by the NHMRC in relation to the collection of health information under NPP 10.3(d)(iii) for the purposes of research, or the compilation or analysis of statistics, relevant to public health or public safety or the management, funding or monitoring of a health service. Section 95A also allows the Privacy Commissioner to approve guidelines on

---

173 See Ch 18.
174 See Ch 22.
175 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

the use and disclosure of health information under NPP 2.1(d)(ii) for the purposes of research, or the compilation or analysis of statistics, relevant to public health or public safety. Before approving any such guidelines, the Privacy Commissioner must be satisfied that the public interest in the collection, use or disclosure of health information without consent for these purposes substantially outweighs the public interest in maintaining the level of privacy protection afforded by the NPPs.

57.203 Currently, the guidelines issued under s 95A require HREC approval for management, funding or monitoring activities conducted relying on NPP 10.3(d)(iii). The NHMRC has noted that it is often difficult to distinguish management activities such as quality assurance in the health care context from research[176] and is of the view that, where such activities amount to research, they should always be conducted in accordance with the Section 95A Guidelines and be subject to review by a HREC.[177] For example, a hospital may collect information about surgical mortality rates for quality assurance purposes, but that information may also form the basis of a research project by hospital staff or others. The NHMRC has published some guidance on how to make the distinction between quality assurance activities and research but suggests that even in relation to quality assurance activities that 'could infringe ethical principles that guide human research, independent ethical scrutiny of such proposals should be sought.'[178]

57.204 While NPP 10 expressly provides for the collection of health information for management, funding or monitoring of a health service, NPP 2 does not expressly provide for the use or disclosure of health information for the same purpose. NPP 2 does, however, allow for the use and disclosure of health information without consent for a purpose directly related to the primary purpose for which the information was collected where the person would reasonably expect the organisation to use or disclose the information for that purpose. The OPC Review expressed the view that disclosure of health information for management activities would generally be within people's reasonable expectations.[179] In response to concerns that the position is not clear, however, the OPC Review recommended that the OPC issue guidance to clarify when organisations can disclose health information for the management, funding and monitoring of a health service.[180]

178 National Health and Medical Research Council, *When Does Quality Assurance in Health Care Require Independent Ethical Review?* (2003), 3. For the purposes of this Discussion Paper, it is necessary to distinguish between the need for compliance with privacy legislation and the need for ethical review. Ethical review may include an analysis of privacy and confidentiality issues but is also concerned with the welfare and other rights of participants.

179 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 210.

180 Ibid, Rec 61.

Management, funding or monitoring of a health service under the IPPs

57.205 Management activities are undertaken in both the public and the private health sectors. The IPPs, however, do not make specific reference to management, funding and monitoring activities and so it is necessary to interpret the basic principles to decide whether it is possible to use health information in the public sector for such activities.

57.206 The use of health information for management activities may involve collection, use or disclosure of the information. IPP 1 allows collection of health information so long as it is for a lawful purpose, directly related to the activities of the agency. IPP 1 does not require consent to collect information, including health information. This would seem to allow collection of health information by public sector health service providers for management, funding and monitoring activities directly related to the agency's activities.

57.207 IPP 10 allows use of health information without consent for the primary purpose for which it was collected and any directly related secondary purpose. In *Information Sheet 9: Handling Health Information for Research and Management*, the OPC states that:

> Some management, funding and monitoring purposes are likely to be 'directly related' to the purpose of collection, where the primary purpose of collecting information was to provide particular health services to a person.[181]

57.208 IPP 11 allows disclosure of health information without consent where the individual concerned is reasonably likely to have been aware that health information was usually disclosed to the particular person, body or agency. As noted above, the OPC considers that disclosure of health information for management activities would generally be within people's reasonable expectations.

State and territory legislation

57.209 Both the New South Wales *Health Records and Information Privacy Act* and the Victorian *Health Records Act* make express provision for the use or disclosure of health information without consent in the public and private sectors for the funding, management, planning, monitoring, improvement or evaluation of health services or training provided by a health service provider to its employees or others working with the organisation.[182] Any such use or disclosure is subject to certain criteria, for example, it must be impracticable to seek individuals' consent and reasonable steps must be taken to de-identify the information. Use or disclosure of health information

---

181 Office of the Federal Privacy Commissioner, *Handling Health Information for Research and Management*, Information Sheet 9 (2001).

182 *Health Records and Information Privacy Act 2002* (NSW) sch 1, HPP 10; *Health Records Act 2001* (Vic) sch 1, HPP 2.2.

for management activities under these Acts does not depend on establishing that it is a directly related secondary purpose or that it would be within the individual's reasonable expectations.

Submissions and consultations

57.210 The OPC expressed the view that the *Privacy Act* already allows for the collection, use and disclosure of health information without consent for management, monitoring and funding activities by agencies and organisations. This position is in part based on the view that such activities are directly related to the primary purpose of collection and that individuals would reasonably expect their health information to be used and disclosed in this way. As noted above, the OPC has undertaken to issue further guidance on the matter.[183]

57.211 The NHMRC submitted, however, that:

> The complexity of these provisions has not been resolved for NHMRC stakeholders by the guidance provided to date by the Office of the Privacy Commissioner, partly because of the restrictions imposed by the 'reasonable expectation' requirement on the circumstances in which health information can be used or disclosed for quality assurance and related activities, and partly because of the underlying inconsistencies in relation to disclosure on the one hand and collection on the other. Much greater clarity of the status of these important activities is required.[184]

57.212 A number of other stakeholders also expressed the view that further guidance from the OPC would not be an adequate response to the lack of clarity in this area. These stakeholders supported amending the *Privacy Act* to deal expressly with the collection, use and disclosure of health information for management activities.[185]

57.213 The NHMRC also expressed the view that:

> The use of health information by or on behalf of an agency or organisation in which it has been collected, for the purposes of quality assurance and related activities (including management, funding, monitoring, policy development, planning, evaluation and cost-benefit analysis) should be permitted explicitly by the *Privacy Act* as an activity that is in the overall public interest, even in circumstances where it is not possible to conclude that such use is within the reasonable expectation of the person to whom the information relates.

57.214 The NHMRC and the Australian Commission on Safety and Quality in Health Care (ACSQHC) suggested that collection, use and disclosure of health information without consent for management activities be allowed where it is conducted in accordance with guidelines issued by the Privacy Commissioner or, alternatively, a PID issued by the Privacy Commissioner. Both stakeholders also expressed the view

---

183 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

184 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

185 Office of the Health Services Commissioner (Victoria), *Submission PR 153,* 30 January 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007; Department of Health Western Australia, *Submission PR 139,* 23 January 2006.

that some of this activity could legitimately proceed without being subject to review by an HREC.[186]

57.215 The Australian Privacy Foundation expressed concern that

> management, funding and monitoring of health services are too broad concepts for an exception to the normal requirements for consent, express legal authority etc. Almost any activity could be encapsulated by these three terms, and they effectively allow governments to use detailed health information about individuals for a wider range of secondary purposes for which de-identified information should suffice.[187]

57.216 In its submission, the ACSQHC highlighted the importance of linking existing health information data sets to enable trends and indicators of the quality and safety of health care to be calculated and monitored. The submission notes that, for most quality and safety indicators, a probabilistic matching process can be used, and individuals are not uniquely identified. For example, it is not necessary for the purposes of data analysis to be able to say, with 100 percent accuracy, that there is a definite match between hospital admission data and death registry data.[188]

57.217 A final issue that was raised by the Australian Health Insurance Association (AHIA) was the use of health information to report on the charging practices and performance of health service providers.

> At present the National Privacy Principles (NPPs) are interpreted to mean that health funds must have the consent of practitioners to disclose their billing practices or information on the number and types of procedures and other services they perform. This can be regarded as business rather than personal information and it must be questioned whether this was the intended effect of the privacy laws and NPPs.[189]

57.218 The OPC has stated that if an individual's identity can be determined from business information, then the information is personal information for the purposes of the *Privacy Act*. Where this information is sensitive information, including health information, it will generally have to be collected with consent.[190]

57.219 The AHIA noted the following recommendations of the Taskforce on Reducing the Regulatory Burden on Business:

---

186 Australian Commission on Safety and Quality in Health Care, *Submission PR 252,* 14 March 2007; National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

187 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

188 Australian Commission on Safety and Quality in Health Care, *Submission PR 252,* 14 March 2007.

189 Australian Health Insurance Association, *Submission PR 161,* 31 January 2007.

190 Office of the Privacy Commissioner, *Frequently Asked Questions: When is Business Information Covered by the Privacy Act?* <www.privacy.gov.au/faqs/bf/q8.html> at 30 July 2007.

> The Australian Government should facilitate the publication of industry-wide data on the charging practices of individual medical specialists.[191]
>
> The Australian Government should amend laws to enable data on hospital treatment outcomes to be published.[192]

57.220 In August 2006, the Australian Government agreed in principle with these recommendations and undertook to improve the information available to health consumers. It made clear, however, that:

> Information about doctors' fees needs to be considered sensitively as it relates directly to the charging practices of medical specialists, and impacts directly on the interface between the medical provider and the consumer … [and] proposals to publish data on hospital treatment outcomes need to be considered sensitively as they relate to the clinical outcomes of decisions made by health care providers.[193]

57.221 Although the *Privacy Act* impacts on the publication of this kind of information, the issue is not, primarily, a privacy issue. As noted in the Australian Government response to *Rethinking Regulation*, the publication of detailed information on the charging practices and performance of health service providers is likely to have industry wide implications and any proposed reform will need to take these implications into account. A detailed consideration of these issues falls outside the terms of reference for this Inquiry. While the *Privacy Act* would not stand in the way of this kind of regulatory reform, in the absence of such reform the *Privacy Act* will apply to such information.[194]

ALRC's view

57.222 In the ALRC's view, there is a public interest in allowing the collection, use and disclosure of health information for the funding, management, planning, monitoring, improvement or evaluation of health services in defined circumstances. The ALRC agrees that, generally, these activities can and should be conducted either on the basis of consent or using health information that does not identify individuals. The proposal below makes clear that identifiable health information only may be used where the purpose cannot be achieved using information that does not identify individuals. In addition, it must be impracticable to seek the individuals' consent and any collection, use or disclosure must be conducted in accordance with binding rules issued by the Privacy Commissioner.

57.223 The ALRC is not persuaded that individuals generally would be aware that or expect their health information to be collected, used and disclosed without consent for such activities. This gives rise to uncertainty as to whether such activity is currently

194 This issue is also discussed in Chs 3 and 50.

allowed by the IPPs and NPPs. The issue should be clarified in the proposed UPPs, as amended by the *Privacy (Health Information) Regulations.* The ALRC has adopted the more detailed description of management, funding and monitoring activities from the draft *National Health Privacy Code*—that is, funding, management, planning, monitoring, improvement or evaluation of health services—to make clear that health information can also be used to evaluate and improve the provision of health services.[195]

57.224 The proposed rules to be issued by the Privacy Commissioner are intended to replace the provision in NPP 10.3(d)(ii) that allows collection of health information without consent for management, funding or monitoring of a health service where it is conducted 'in accordance with rules established by competent health or medical bodies that deal with obligations of professional confidentiality'. The ALRC notes that the OPC is not aware of the existence of any such binding rules in the health sector.

57.225 The proposed rules are intended to replace, in some circumstances, the provision in NPP 10.3(d)(iii) allowing collection of health information without consent for management, funding or monitoring of a health service where it is conducted in accordance with guidelines issued by the NHMRC and approved by the Privacy Commissioner under s 95A of the *Privacy Act*. The NHMRC has noted that some management activity does not amount to research and does not require review by an HREC.[196] In the ALRC's view, in these circumstances the activity should be able to proceed simply on the basis of rules issued by the Privacy Commissioner.

57.226 The proposed rules could address issues such as: who may collect, use and disclose identified health information without consent for management activities; limits on further use and disclosure of the information; requirements to destroy information, and requirements to render health information non-identifiable before publication of any papers or reports.

57.227 The ALRC notes that some funding, management, planning, monitoring, improvement and evaluation of health service activities also may be characterised as research. Where particular activities can be characterised as both management activities and research the ALRC is of the view that the activity should be conducted in accordance with the proposed rules issued by the Privacy Commissioner and should also be subject to the provisions relating to research, discussed in the following chapter. The proposed research provisions, like the s 95 and s 95A guidelines, provide for review of research proposals by an HREC.

195 National Health Privacy Working Group of the Australian Health Ministers' Advisory Council, *Draft National Health Privacy Code* (2003) NHPP 2.2(f)(i).

196 National Health and Medical Research Council, *When Does Quality Assurance in Health Care Require Independent Ethical Review?* (2003), 5.

57.228 Finally, it is also possible that some management activity, while not amounting to research, may still require ethical review. The NHMRC has provided guidance on when this might be necessary, for example, where a proposed quality assurance activity poses risks for, or imposes burdens on, health consumers beyond those of their routine care.[197] The ALRC notes this advice, although the broader issue of ethical review of management activities is outside the Inquiry's terms of reference.

57.229 The New South Wales and Victorian health privacy legislation and the draft *National Health Privacy Code* allow the use of health information without consent for training purposes in some circumstances.[198] In the ALRC's view, the public interest balance in relation to training activities is not the same as the public interest balance in ensuring the quality and safety of healthcare. Health information used in the training context should be used in accordance with the proposed UPPs and special provision should not be made for this activity.

57.230 Finally, health consumers should be made aware, as far as possible, that their health information may be used without consent for the funding, management, planning, monitoring, improvement or evaluation of a health service.

Proposal 57–9 The *Privacy (Health Information) Regulations* should make express provision for the collection, use and disclosure of health information without consent where necessary for the funding, management, planning, monitoring, improvement or evaluation of a health service where:

(a) the purpose cannot be achieved by the collection, use or disclosure of information that does not identify the individual;

(b) it is impracticable for the agency or organisation to seek the individual's consent before the collection, use or disclosure; and

(c) the collection, use or disclosure is conducted in accordance with rules issued by the Privacy Commissioner.

Proposal 57–10 The *Privacy Act* should be amended to empower the Privacy Commissioner to issue rules in relation to the handling of personal information for the funding, management, planning, monitoring, improvement or evaluation of a health service.

Introduction

58.1 This chapter examines the special arrangements in place under the *Privacy Act 1988* (Cth) to allow for the use of personal information in health and medical research. The Act currently provides for the use of personal information, including health information, without consent, for health or medical research where the research is conducted in accordance with guidelines issued by the National Health and Medical Research Council (NHMRC) and approved by the Privacy Commissioner. These arrangements recognise that, in some circumstances, the public interest in allowing particular research projects to proceed outweighs the public interest in maintaining the level of privacy protection provided by the Information Privacy Principles (IPPs) and the National Privacy Principles (NPPs).

58.2 These arrangements are currently limited to the use of personal information for medical research under the IPPs, and the use of health information for research, or the compilation or analysis of statistics, relevant to public health or public safety under the NPPs. The chapter considers whether the arrangements should be extended to include

the use of personal information in other sorts of research in areas such as criminology and sociology.

The current arrangements

Health and medical research

58.3 The Hon Tony Abbott MP, Minister for Health and Ageing, noted in 2004 that:

> Australia is a world leader in health and medical research. On a per capita basis, our research output is twice the OECD average, even though we spend much less, per capita, than the UK or the USA.
>
> Investment in health and medical research makes good economic and health sense. It generates significant returns both in terms of health benefits—longevity and increased quality of life for Australian people generally; and economic benefits, through increased knowledge based jobs and economic activity.[1]

58.4 There is strong community support for health and medical research. 90% of voters in a survey conducted for Research Australia in 2006 thought that health and medical research would play an important role in Australia's future. Survey participants ranked health and medical research equal sixth on a list of 24 issues the Australian Government should be focusing on alongside reducing crime and improving law and order and increasing funding for preventive health care.[2]

58.5 The NHMRC plays an important role in fostering health and medical research in Australia. The NHMRC is a statutory authority, within the portfolio responsibilities of the Minister for Health and Ageing, established by the *National Health and Medical Research Council Act 1992* (Cth) (the NHMRC Act). The Act provides that the role of the NHMRC is to:

- raise the standard of individual and public health throughout Australia;
- foster the development of consistent health standards between the various states and territories;
- foster medical research and training and public health research and training throughout Australia; and
- foster consideration of ethical issues relating to health.[3]

58.6 The NHMRC is also the peak funding and advisory body for health and medical research in Australia and makes recommendations to the Minister for Health and Ageing on funding of health and medical research and training. Australian Government

3 *National Health and Medical Research Council Act 1992* (Cth) s 3.

funding of health and medical research is primarily provided from the Medical Research Endowment Account established under the NHMRC Act.[4] Some funding is also provided through the Australian Research Council and other schemes. The NHMRC notes that the Australian Government has more than doubled investment in health and medical research since 1999.[5] Funding in 2006–07 was $627.2 million.[6]

58.7 In a 2004 report, the Investment Review of Health and Medical Research Committee estimated that, in 2000–01, of the $1.7 billion invested in Australian health and medical research, 47% was provided by the Australian Government, 44% by the private sector and 9% by state and local government.[7]

58.8 The report noted that the bulk of Australian Government investment in this period was directed to the higher education sector, although some of this research was then performed by, or in conjunction with, other institutions. Smaller amounts were spent by the Australian Government directly through agencies such as the Department of Health and Ageing (DOHA) and the Commonwealth Scientific and Industrial Research Organization (CSIRO), or channelled to businesses or non-profit groups. State governments spent the bulk of their investment in their own institutions, including state departments of health, medical research institutes and public hospitals. The business sector largely funded its own research. The non-profit sector funded half of its research from its own fund raising, and the other half through investment from the Australian Government, state governments and business.[8]

58.9 The NHMRC noted in its submission to the Office of the Privacy Commissioner's (OPC) review of the private sector provisions of the *Privacy Act* (the OPC Review) that:

> Consistent with patterns of the provision of clinical care, the conduct of health and medical research in the Australian health care system frequently spans the public and private sectors.
>
> Much health and medical research is multi-site or multi-jurisdictional, involving participants who move between the public and private health sectors.[9]

58.10 Under the NHMRC Act, the Australian Health Ethics Committee (AHEC)—a principal committee of the NHMRC—has responsibility for developing guidelines for

the ethical conduct of medical research.[10] The primary set of guidelines for human research, developed jointly by the NHMRC, the Australian Research Council and the Australian Vice Chancellors' Committee (AVCC), is the 2007 *National Statement on Ethical Conduct in Human Research*[11] (the National Statement). This National Statement replaces the 1999 *National Statement on the Ethical Conduct in Research Involving Humans* and was developed following extensive public consultation and debate.

58.11 The National Statement sets out ethical principles relevant to research involving humans and guidance on the formation, membership and functions of Human Research Ethics Committees (HRECs). It is important to note that, while the guidelines in the National Statement that are applicable to the conduct of health and medical research involving humans are issued by the NHMRC in fulfilment of its statutory obligations, the National Statement applies to all research involving humans, not just health and medical research.

58.12 The National Statement provides that any research proposals involving more than a low level of risk to participants must be reviewed and approved by an HREC. It also sets out requirements to be followed by:

- institutions or organisations in establishing HRECs;
- researchers in submitting research proposals to HRECs; and
- HRECs in considering and reaching decisions regarding research proposals and in monitoring the conduct of approved research.

58.13 Although the National Statement is not legally binding, the Statement stipulates that it must be used to inform the design, ethical review and conduct of human research that is funded by, or takes place under the auspices of, the NHMRC, the Australian Research Council or the AVCC. Compliance with the National Statement is a condition of NHMRC grants of research funds.[12] In order for an institution to apply to be an NHMRC Administering Institution for the purposes of applying for, and subsequently administering, NHMRC research funds, all research conducted within the institution, whether funded by the NHMRC or not, must comply with the National Statement.[13]

12 Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), [14.1]–[14.8]. The power to withdraw funding is the most important and direct mechanism by which the NHMRC may induce compliance with the National Statement. As noted above, however, not all health and medical research is funded by the Australian Government on the advice of the NHMRC. The issue of enforcing compliance with the National Statement was considered in detail in ALRC 96, Ch 14.

13 National Health and Medical Research Council, *Administering Institutions Policy*, 6.

58.14 As discussed below, the *Privacy Act* regime incorporates the HREC approval process established by the National Statement to ensure that where research is conducted using personal information without consent, that research is conducted with due regard for the protection of that information.

Consent

58.15 The conduct of health and medical research frequently involves the collection and use of personal information about individuals. Generally, individuals who participate in research projects do so on the basis of consent and, in these circumstances, it is possible to handle participants' personal information in compliance with the IPPs or the NPPs. The National Statement makes clear that:

> Respect for human beings involves giving due scope to people's capacity to make their own decisions. In the research context, this normally requires that participation be the result of a choice made by participants—commonly known as 'the requirement for consent'. This requirement has the following conditions: consent should be a voluntary choice, and should be based on sufficient information and adequate understanding of both the proposed research and the implications of participation in it.[14]

58.16 The *Privacy Act*, however, like the National Statement, recognises that in some circumstances it is very difficult or impossible to conduct research that may be in the public interest—for example, epidemiological studies of the distribution and determinants of disease in large populations—in a way that complies with the IPPs and the NPPs. As CSIRO has noted:

> Informed consent and opt-in is a good model for clinical trials, for example, where the risk is normally predominantly to the participating individual. However, in the case of population health research, the findings will often be implemented for the whole population. In these cases informed consent and opt-in may not be good models because non-participation can introduce bias and therefore affect the applicability of the results.[15]

58.17 The *Privacy Act* provides a mechanism to allow such research to go forward, subject to guidelines issued by the NHMRC and approved by the Privacy Commissioner. The concept of consent under the *Privacy Act* is discussed in detail in Chapter 16.

58.18 The *Privacy Act* provides for two sets of binding guidelines in the area of health and medical research: one set of guidelines binding on public sector agencies made under s 95 of the Act, and one set of guidelines binding on private sector organisations made under s 95A. Sections 95 and 95A both require the Privacy Commissioner to be

15 CSIRO, *Submission PR 176,* 6 February 2007.

satisfied before approving the guidelines that the public interest in the relevant research outweighs to a substantial degree the public interest in maintaining the level of privacy protection provided by the IPPs and NPPs.

Information Privacy Principles

58.19 The IPPs themselves do not refer to the use of personal information for health and medical research. Section 95 of the *Privacy Act*, however, provides as follows:

> (1) The CEO of the National Health and Medical Research Council may, with the approval of the Commissioner, issue guidelines for the protection of privacy in the conduct of medical research.
>
> (2) The Commissioner shall not approve the issue of guidelines unless he or she is satisfied that the public interest in the promotion of research of the kind to which the guidelines relate outweighs to a substantial degree the public interest in maintaining adherence to the Information Privacy Principles.
>
> (3) Guidelines shall be issued by being published in the *Gazette*.
>
> (4) Where:
>
> (a) but for this subsection, an act done by an agency would breach an Information Privacy Principle; and
>
> (b) the act is done in the course of medical research and in accordance with guidelines under subsection (1);
>
> the act shall be regarded as not breaching that Information Privacy Principle.
>
> (5) Where the Commissioner refuses to approve the issue of guidelines under subsection (1), an application may be made to the Administrative Appeals Tribunal for review of the Commissioner's decision.

58.20 The current *Guidelines under Section 95 of the Privacy Act 1988*[16] (Section 95 Guidelines) were issued in 2000. Once these guidelines were approved by the Privacy Commissioner and published in the Australian Government *Gazette*, they gained the force of law. If an agency does an act in the course of medical research that would have breached the IPPs but is consistent with the Section 95 Guidelines, the act is regarded as not breaching the IPPs.

National Privacy Principles

58.21 The NPPs, unlike the IPPs, specifically provide for the use of health information in research. NPPs 2 and 10 provide that health information may be collected, used and disclosed where necessary for research or the compilation or analysis of statistics, relevant to public health or public safety where:

---

16 National Health and Medical Research Council, *Guidelines under Section 95 of the Privacy Act 1988* (2000).

- the purpose cannot be served by the collection of information that does not identify the individual;[17]

- it is impracticable for the organisation to seek the individual's consent to the collection, use or disclosure;[18]

- the information is collected, used and disclosed in accordance with guidelines approved under s 95A;[19]

- in the case of disclosure—the organisation reasonably believes that the recipient of the health information will not disclose the health information, or personal information derived from the health information;[20] and

- the organisation takes reasonable steps to permanently de-identify the information before it discloses it.[21]

58.22 Section 95A of the *Privacy Act* provides a similar mechanism to s 95. The current *Guidelines Approved under Section 95A of the Privacy Act 1988*[22] (Section 95A Guidelines) were issued in 2001.

Section 95 and 95A Guidelines

58.23 Both the Section 95 and 95A Guidelines provide a detailed framework within which HRECs must consider the privacy implications of research proposals involving the use of individuals' personal or health information. HRECs may approve research proposals seeking to use identifiable personal or health information without consent only on the basis that the public interest in the research substantially outweighs the public interest in maintaining the level of privacy protection provided by the IPPs and the NPPs.

58.24 The guidelines also address issues such as procedures to be followed in preparing a proposal for approval by an HREC and procedures to be followed in the collection, use or disclosure of personal or health information for research or the compilation or analysis of statistics.

58.25 The Section 95 and 95A Guidelines do not apply to the collection, use and disclosure of health information by agencies or organisations that are not covered by

17 *Privacy Act 1988* (Cth) sch 3, NPP 10.3(b).
18 Ibid sch 3, NPPs 2.1(d)(i), 10.3(c).
19 Ibid sch 3, NPPs 2.1(d)(ii), 10.3(d).
20 Ibid sch 3, NPP 2.1(d)(iii).
21 Ibid sch 3, NPP 10.4.
22 National Health and Medical Research Council, *Guidelines Approved under Section 95A of the Privacy Act 1988* (2001).

the *Privacy Act*. For example, the *Privacy Act* does not apply to state public sector entities, including public teaching hospitals and associated research bodies, where such bodies are established for a public purpose under a law of a state.[23] These organisations, however, may be covered by state legislation.[24]

58.26 Because the Section 95 and 95A Guidelines relate to the IPPs and the NPPs, respectively, and because of differences in the enabling provisions, the guidelines are not identical. The OPC Review noted stakeholder views that having two sets of guidelines gives rise to inconsistency and confusion leading to conservative and incorrect decision making.[25] The NHMRC expressed the view that this was hindering the conduct of effective health and medical research.[26]

58.27 A number of stakeholders, including the NHMRC, expressed strong support for a single set of principles and a single set of guidelines regulating health information in the conduct of health and medical research.[27] In response, the OPC Review stated that 'the *Privacy Act* is not intended to restrict important medical research'[28] and made the following recommendation:

> As part of a broader inquiry into the *Privacy Act* (see recommendation 1), the Australian Government should consider … how to achieve greater consistency in regulating research activities under the *Privacy Act*.[29]

58.28 As discussed in Chapter 56, between 2000 and 2004, the Australian Health Ministers' Advisory Council (AHMAC) National Health Privacy Working Group developed a draft *National Health Privacy Code* that includes a set of National Health Privacy Principles (NHPPs). The draft Code provides a single regime for the collection, use and disclosure of health information for 'research, or the compilation or analysis of statistics, in the public interest'. For example, NHPP 1 provides in relation to collection of health information that:

> An organisation must not collect health information about an individual unless the information is necessary for one or more of its functions or activities and at least one of the following applies—
>
> … if the collection is necessary for research, or the compilation or analysis of statistics, in the public interest—

> (i) that purpose cannot be served by the collection of information that does not identify the individual or from which the individual's identity cannot reasonably be ascertained; and
>
> (ii) it is impracticable for the organisation to seek the individual's consent to the collection; and
>
> (iii) the information is collected in accordance with guidelines issued for the purposes of this sub-paragraph.[30]

58.29 NHPP 2 provides similar criteria for the use and disclosure of health information for research with some additional safeguards around disclosure.[31] The revised draft Code also included draft mandatory guidelines for research.[32] As discussed in Chapter 56, the Code was intended to apply to all health service providers, agencies and organisations that collect, hold or use health information across the public and private sectors, and in every Australian state and territory, including in the field of health and medical research. Under this proposed regime, one set of principles and one set of guidelines would regulate health and medical research across Australia.

Submissions and consultations

58.30 Submissions and consultations made clear that having two different regimes regulating health and medical research under the IPPs and the NPPs and, in particular, two sets of guidelines, the Section 95 and 95A Guidelines, creates confusion and adds significantly to the cost and complexity of seeking approval to conduct research. There was clear support in submissions and consultations for the development of a unified regime to regulate health and medical research, including a single set of guidelines.[33]

58.31 The CSIRO stated that:

> The current policy environment regarding privacy of personal information is complex and difficult to navigate. It is quite time-consuming to ensure that a given project will be compliant with all of the relevant legislation and codes of practice. This can add significantly to the set up costs of research projects, particularly where they involve health data. In addition, and most importantly, it also means that there is a delay of up to two years in initiating research projects, and a corresponding delay in the Australian people and society's acquisition of the benefits of the research outcomes.[34]

34 CSIRO, *Submission PR 176,* 6 February 2007.

58.32 In its submission DOHA stated that:

> Recent reports on the operation of the *Privacy Act* and on research have both concluded that the present fragmentation and inconsistency in privacy regulation is proving to be a major impediment to health and medical research.
>
> The Department supports the development of a single set of guidelines regulating health information in the conduct of research, to support these activities at the institutional, multi-institutional and national levels. In keeping with the objective of achieving national consistency, there should also be alignment between the privacy principles covering research and the NHMRC's *National Statement on Ethical Conduct in Human Research* (National Statement).[35]

ALRC's view

58.33 The ALRC agrees that the arrangements under the *Privacy Act* for conducting research using identifiable personal information without consent should be streamlined. The issues of complexity, fragmentation and inconsistency in the privacy regime are discussed in detail in Part C of this Discussion Paper. Chapter 4 includes a number of proposals aimed at achieving greater national consistency. Part D proposes a single set of Unified Privacy Principles (UPPs) applying to agencies and organisations. A nationally consistent privacy regime applying to both agencies and organisations and including a single set of UPPs would eliminate the need for two sets of guidelines.

58.34 In Proposals 58–8 and 58–9, below, the ALRC suggests that the proposed 'Collection' principle and the proposed 'Use and Disclosure' principle in the UPPs should include exceptions for the conduct of research using identified or identifiable personal information without consent. These proposed exceptions provide that such research be subject to HREC review and, in addition, that such research be conducted in accordance with binding rules to be issued by the Privacy Commissioner.

58.35 In Chapter 44, the ALRC examines in detail the powers of the Privacy Commissioner to issue binding rules and non-binding guidelines and expresses the view that the *Privacy Act* should clearly distinguish between those that are advisory only and those that operate as mandatory rules. The Chapter notes that binding rules will be appropriate where it is necessary to supplement the UPPs with higher or more prescriptive standards. The ALRC proposes that where 'guidelines' are binding they should be renamed 'rules'.[36]

58.36 The ALRC notes that stakeholders did not raise concerns about the fact that the Section 95 and 95A Guidelines are binding. The ALRC is of the view that the proposed rules to regulate the collection, use and disclosure of personal information without consent for research under the UPPs should also be binding. It is the ALRC's intention that there be a single set of rules issued by the Privacy Commissioner in relation to the

---

35 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007.
36 Proposal 44–2.

conduct of research and that these rules would replace the Section 95 and 95A Guidelines.

Proposal 58–1 The Privacy Commissioner should issue one set of rules under the proposed exceptions to the 'Collection' principle and the 'Use and Disclosure' principle in the Unified Privacy Principles (UPPs) to replace the *Guidelines Under Section 95 of the Privacy Act 1988* and the *Guidelines Approved Under Section 95A of the Privacy Act 1988.*

Research other than health and medical research

58.37 NPP 10.3 currently provides an exception for the collection of health information without consent where necessary for research, or the compilation or analysis of statistics, relevant to public health or public safety. NPP 2.1(d) provides an exception for the use and disclosure of health information without consent where necessary for research, or the compilation or analysis of statistics, relevant to public health or public safety. Section 95 of the *Privacy Act* provides an exception from the IPPs for acts done by agencies 'in the course of medical research'.

58.38 Despite the differences between the exceptions in the NPPs and the exception in relation to the IPPs, it is clear that the general intention is to limit the exceptions to the field of health and medical research. The OPC Review recommended that the Australian Government consider whether there was a need to permit the use and disclosure of personal information for research that does not involve health information.[37] The ALRC asked a number of questions in the Issues Paper, *Review of Privacy* (IP 31)[38] about expanding the existing exceptions to include other types of personal information or other fields of research.

58.39 The Council of Europe Committee of Ministers has recognised that the public interest in a range of research—including, but not restricted to, health and medical research—may outweigh the public interest in maintaining privacy protections:

> Any exception to that rule [that where sensitive personal information is collected for statistical purposes, it should be collected in non-identifiable form] can only be justified by major public interest, as where statistical information is needed to contain epidemics, combat the evil of drug taking, investigate the scale and pattern of sexual assaults on minors or develop aid to social groups in difficulty. Such examples, to which many more might be added, relate to matters which affect society's essential interests and in which the state has responsibilities. In such cases the guarantees on

> protection of sensitive data must be adapted to the objective information needs arising from the public interest.[39]

58.40 Canadian privacy legislation allows private sector organisations to use or disclose personal information without consent where it is for 'statistical, or scholarly study or research'.[40] Canadian privacy legislation also allows public sector agencies to disclose personal information to any person or body for 'research or statistical purposes' in specified circumstances.[41]

58.41 The *Information Privacy Act 2000* (Vic) allows state agencies to use and disclose personal information where necessary for 'research, or the compilation or analysis of statistics, in the public interest'.[42] The *Personal Information Protection Act 2004* (Tas) has a similar provision.[43]

Submissions and consultations

58.42 In its submission to the Inquiry, the OPC expressed support for allowing the collection, use and disclosure of non-health information for health and medical research. This was on the basis that health and medical research may be advanced by the linking of health information with other forms of personal information. The OPC, however, did not support expanding the existing arrangements to cover other areas of research. The OPC expressed the view that the public interest in non-health and medical research was generally less compelling than the public interest in health and medical research.[44]

58.43 Where the public interest in a particular research proposal outside the health and medical field was likely to outweigh the public interest in maintaining the level of protection provided by the privacy principles, the OPC suggested that a Public Interest Determination (PID) should be sought in relation to the proposal.[45] To date, two such PIDs have been granted by the Privacy Commissioner:

- PID 5 Disclosure of personal information contained in homicide files in the ACT to the Australian Institute of Criminology for research purposes;[46] and

- PID 8 Disclosure of personal information contained in certain Commonwealth Director of Public Prosecution files that relate to serious incidences of fraud,

> dishonesty and deception to the Australian Institute of Criminology for research purposes.[47]

58.44 There was strong support among other stakeholders, however, for expanding the *Privacy Act* arrangements to include other fields of research so long as safeguards, similar to those currently in place in relation to health and medical research, were applied.[48]

58.45 The Australian Bureau of Statistics (ABS) noted that:

> More generally, through its work on health and social statistics, the ABS is aware that the community expects its information to be used effectively both at the point of service provision for the individual, and also in research for the public good. In balancing privacy against public benefit of research, there is a need to recognise this broad, but not necessarily vocal, community support for using information to achieve better social outcomes.[49]

58.46 The CSIRO noted that:

> It can be difficult at times to draw a clear line between 'health' and 'non-health' information and 'health' and 'social sciences' research. Further, researchers are increasingly seeking to integrate health and non-health personal information to facilitate the answering of more complex questions. For example, health and education experiences are fundamental to the outcomes of children and youth—in combination rather than separately …
>
> We believe that extending the federal privacy principles to allow agencies and organisations to collect non-health related sensitive information for purposes including research and statistics is highly desirable. This is because researchers are seeking to address increasingly complex questions involving health and lifestyle information, for example to determine how environmental factors influence genetic predisposition to disease.[50]

58.47 The Western Australian Department of Health also expressed the view that it is often difficult to distinguish health and medical research from other research and that social indicators are increasingly being used to understand health outcomes.[51] The

Australian Federal Police (AFP) pointed to the importance of research in the criminal justice field and noted that PID 5 provided an example of this.[52]

58.48 The Government of South Australia expressed support for expanding the arrangements to include social science research, as well as criminological research:

> Social science research on key social issues is of critical importance to the community. There is a growing recognition of the importance of evidence-based practice in the social services and the use of research and evaluation in improving policy and service planning. Robust research, based on quality data, is required to provide the necessary evidence and directions for dealing with significant social issues, such as child abuse, family violence or homelessness. Data held by government and NGOs can contribute to better understanding of such issues and the development of effective solutions. Whilst obtaining individuals' consent would be desirable it is often not possible, particularly from those clients who are highly transient and harder to engage, are in a non-voluntary relationship (for example, child protection) or in the case of large-scale studies (such as population-based data matching).[53]

ALRC's view

58.49 The ALRC's view is that there is no in-principle reason to limit the arrangements for research under the *Privacy Act* to health and medical research. Other areas of research, such as sociology and criminology, have a strong public interest basis because of their potential to lead to significant positive outcomes for the community. In addition, the ALRC notes comments from several stakeholders that research is becoming increasing multi-disciplinary, that non-health information is often crucial to health and medical research and that, in any event, it is sometimes difficult to define what amounts to health and medical research and what does not.

58.50 The ALRC notes that the National Statement and its oversight mechanisms, including review by HRECs, is designed to cover all human research, that is, research 'conducted with or about people, or their data or tissue'. The existing regime in relation to health and medical research under the *Privacy Act* relies to a certain extent on the safeguards provided by the National Statement and, in particular, on review of research proposals by HRECs. Those safeguards also can be applied to research more generally.

58.51 In addition, the *Privacy Act*, itself, can and should include a range of limits and safeguards to ensure that personal information is only used without consent for research purposes in appropriate circumstances, for example: where the research cannot be undertaken using personal information that does not identify individuals; it is impracticable to seek individuals' consent to the collection, use or disclosure of their information; and the research is conducted in accordance with rules issued by the Privacy Commissioner. These safeguards are discussed in more detail below.

---

52 Australian Federal Police, *Submission PR 186,* 9 February 2007.

53 Government of South Australia, *Submission PR 187,* 12 February 2007.

58.52 The ALRC proposes, therefore, that the *Privacy Act* be amended to extend the arrangements relating to the collection, use and disclosure of personal or health information in health and medical research to include the collection, use and disclosure of personal information in human research more generally.

Proposal 58–2 The *Privacy Act* should be amended to extend the existing arrangements relating to the collection, use or disclosure of personal information without consent in the area of health and medical research to cover the collection, use or disclosure of personal information without consent in human research more generally.

Definition of research

58.53 Given this proposed expansion of the arrangements relating to research under the *Privacy Act*, it is necessary to consider defining the term 'research' for the purposes the Act. Section 6 of the *Privacy Act* currently states that '*medical research* includes epidemiological research', but the term is not otherwise defined.

58.54 The IPPs do not refer to health or medical research, but s 95 of the *Privacy Act*[54]—which establishes the research exception under the IPPs and provides for the development of the Section 95 Guidelines—refers to 'medical research'. The NPPs refer to research, or the compilation or analysis of statistics, relevant to public health or public safety. It is therefore necessary to show that research or the compilation or analysis of statistics is relevant to public health or public safety to bring the activity within the existing regime established by the NPPs and the Section 95A Guidelines. The NHMRC has expressed the view that there is no obvious rationale for the differences between the approach to research taken by s 95 of the *Privacy Act* and the NPPs.[55]

58.55 The National Statement makes the point that

> There is no generally agreed definition of research; however, it is widely understood to include at least investigation undertaken to gain knowledge and understanding or to train researchers.[56]

---

54 Section 73 of the *Privacy Act*, which deals with applications for Public Interest Determinations by the NHMRC, also refers to 'medical research'.

55 National Health and Medical Research Council, *Submission to the Office of the Privacy Commissioner Review of the Private Sector Provisions of the Privacy Act 1988*, 10 December 2004.

56 National Health and Medical Research Council, Australian Research Council and Australian Vice Chancellors' Committee, *National Statement on Ethical Conduct in Human Research* (2007), 7.

58.56 Rather than attempting to define 'research', the National Statement adopts a contextual approach. It attempts to define those activities that should fall under the National Statement, by asking the following two questions:

- What is *human* research?
- When and by what means does human research, or other activities such as quality assurance or improvement, or clinical audit, need ethical review?

58.57 As noted above, human research is defined broadly in the National Statement as research 'conducted with or about people, or their data or tissue'. The National Statement then sets out the circumstances in which such research requires ethical review:

> Research with more than a low level of risk (as defined in paragraph 2.1.6, page 18) must be reviewed by an HREC. Research involving no more than low risk may be reviewed under other processes described in paragraphs 5.1.18 to 5.1.21 (page 79). Institutions may also determine that some human research is exempt from ethical review (see paragraphs 5.1.22 and 5.1.23, page 79).[57]

58.58 Risk is defined as potential for harm, discomfort or inconvenience and involves:

- the likelihood that a harm (or discomfort or inconvenience) will occur; and
- the severity of the harm, including its consequences.[58]

Submissions and consultations

58.59 DOHA noted in relation to the draft *National Health Privacy Code*[59] that:

> In relation to the definition of the term 'research', as outlined above the approach taken in NHPP 1 of the draft Code was to leave the term undefined, but to refer to the activities of 'research or the compilation or analysis of statistics'. There is room within the guidelines designed to support the application of this principle, to provide guidance on the meaning of the term 'research'. Such an approach would appear to be appropriate and effective.[60]

58.60 The OPC also expressed the view that the *Privacy Act* should not attempt to define the term 'research'.[61]

---

57 Ibid, 8.
58 Ibid, 15.
59 National Health Privacy Working Group of the Australian Health Ministers' Advisory Council, *Draft National Health Privacy Code* (2003).
60 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007.
61 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

58.61 Some stakeholders, however, felt it was important to include a definition.[62] Others expressed support for the approach adopted in the National Statement.[63] The NHMRC was also of this view, noting that there was no obvious rationale for the differences in the IPPs and the NPPs and that there is very worthwhile research occurring in the health and medical sector that may not fit within the current descriptions of 'medical research' or 'research … relevant to public health or public safety'.[64] The Office of the Health Services Commissioner in Victoria expressed the view that any definition should be consistent with the National Statement as the recent review and redrafting of that document had been a very thorough process.[65]

58.62 The Western Australian Department of Health expressed the view that the principle purpose of defining the term research in the *Privacy Act* would be to distinguish those activities that must be given independent review by an HREC.[66]

ALRC's view

58.63 The ALRC's view is that the term 'research' in the *Privacy Act* should not be defined except by reference to the National Statement. The existing regime in relation to health and medical research under the *Privacy Act* and the Section 95 and 95A Guidelines relies on safeguards set out in the National Statement and, in particular, on review of research proposals by HRECs. The ALRC proposes, above, to extend the arrangements relating to the use of personal information in health and medical research to include the use of personal information in research involving humans more generally. The ALRC agrees with stakeholders that, because the proposed research regime to be established under the *Privacy Act* will continue to rely on review by HRECs, it will be important to ensure that research covered by the *Privacy Act* exceptions falls comfortably within the limits of research activities subject to review by HRECs under the National Statement. The role of HRECs in this process is discussed further, below.

58.64 Currently the NPPs refer to research or the compilation or analysis of statistics. The National Statement does not refer to the compilation or analysis of statistics but HRECs are asked to review research proposals consisting of the compilation or analysis of statistics or including statistical elements. It is possible to argue that the term 'research' is broad enough to include the compilation or analysis of statistics but this is not universally accepted. In order to put the matter beyond doubt for the

66 Department of Health Western Australia, *Submission PR 139,* 23 January 2006.

purposes of the *Privacy Act*, the ALRC proposes the Act should expressly state that the term 'research' includes 'the compilation and analysis of statistics'.

58.65 Finally, and as discussed in Chapter 57, the ALRC notes that some funding, management, planning, monitoring, improvement and evaluation of health service activity may also be characterised as research. Where particular activities can be characterised as both management activities and research the ALRC is of the view that the activity should be conducted in accordance with the proposed rules issued by the Privacy Commissioner in relation to management activities and should also be subject to the provisions relating to research, including review by an HREC.

Proposal 58–3 The *Privacy Act* should be amended to provide that 'research' is any activity, including the compilation or analysis of statistics, subject to review by a Human Research Ethics Committee under the *National Statement on Ethical Conduct in Human Research* (2007).

The public interest balance

58.66 In the second reading speech for the Privacy Amendment (Private Sector) Bill, the then Attorney-General, the Hon Daryl Williams AM QC MP, stated that:

> The balance between the interests of privacy and the need to facilitate medical research was an issue that the Privacy Commissioner and the government looked at closely. The bill provides that, where information is collected for research purposes, it must be collected with consent or, where this is not practicable, in accordance with strict safeguards set out in the bill. In addition, researchers must take reasonable steps to de-identify personal information before the results of research can be disclosed.[67]

58.67 As noted above, the *Privacy Act* requires the Privacy Commissioner to be satisfied before approving guidelines under ss 95 or 95A that the public interest in the relevant research outweighs to a substantial degree the public interest in maintaining the level of privacy protection provided by the IPPs and NPPs.

58.68 The Section 95 and 95A Guidelines include a similar public interest test. Where research may breach the IPPs or NPPs, the Guidelines provide that the research must be approved by an HREC. Before approving a particular research proposal under the Guidelines, HRECs are required to consider whether the public interest in the research substantially outweighs the public interest in the protection of privacy.[68] In considering the public interest balance, HRECs are required to consider certain specified matters including:

---

67 Commonwealth, *Parliamentary Debates*, House of Representatives, 12 April 2000, 15749 (D Williams—Attorney-General).

68 National Health and Medical Research Council, *Guidelines under Section 95 of the Privacy Act 1988* (2000), Guideline 3.2; National Health and Medical Research Council, *Guidelines Approved under Section 95A of the Privacy Act 1988* (2001), Guideline D.4.

- the value and public importance of the research;
- the likely benefits to the participants;
- whether the research design can be modified;
- the financial costs of not proceeding with the research;
- the type of personal information being sought;
- the risk of harm to individuals; and
- the extent of a possible breach of privacy.

58.69 A number of the submissions to the OPC Review expressed the view that the *Privacy Act* and the Section 95 and 95A Guidelines fail to achieve an appropriate public interest balance. In his submission—the text of an address to the Australian Epidemiological Association—Dr Richie Gun of the Department of Public Health, University of Adelaide, discussed the particular difficulties faced by epidemiologists, and the problems he has faced in gaining access to data in cancer registries. He states that:

> In Australia we are now in a uniquely advantageous position to carry out such research, as we have mandatory registration of cancers in every State and Territory. We therefore have almost complete enumeration of all invasive cancers occurring in Australia, with the potential to carry out epidemiological studies on cancer incidence equal to or better than anywhere else in the world. Unfortunately privacy laws are impeding access to cancer registry data, so that it is becoming increasingly hard to carry out the linkage of cancer registrations with exposure data.[69]

58.70 The OPC Review stated that:

> There is considerable evidence that key researchers, especially epidemiological researchers, consider that the current balance between privacy and the public benefit of research is too heavily weighted in favour of individual privacy to the detriment of research. By gaining access to population data and data linkage, the research might considerably benefit disadvantaged groups that are currently under researched.[70]

58.71 The OPC Review noted that consumer research on attitudes in this area have produced mixed results. Research conducted by the OPC indicated that individuals were concerned about their personal information being used, even in a de-identified form, for research purposes. Almost two thirds (64%) of respondents felt that consent

---

69 University of Adelaide, *Submission to the Office of the Privacy Commissioner Review of the Private Sector Provisions of the Privacy Act 1988*, 21 December 2004.

70 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 210.

should be obtained before de-identified information derived from personal information was used for research purposes. One third (33%) of respondents felt that permission was not necessary.[71]

58.72 The Australian Consumers' Association, in its submission to the OPC Review, expressed the view that when consumers go to the doctor, they provide health information on the basis that it will be used only for the purposes of their clinical care:

> They don't expect that third parties will be trawling through their health records; even if it is in de-identified form. In this sense third party access to data without the consumers' knowledge is something of a breach of trust.[72]

58.73 On the other hand, DOHA research suggests that, although consumers express strong reservations about identified personal information being made available for purposes other than their own clinical care, they are generally very accepting of the notion of sharing de-identified health information amongst health planners and researchers.[73] Research conducted by the NHMRC indicated that there was considerable support among the general public (66%) and health consumers (64%) for approved researchers to match information from different databases. There was an even higher level of support for approved researchers to access health information from databases where health information was identified by a unique number rather than a name.[74]

58.74 A number of submissions to the OPC Review noted that the issue of consumer support could be addressed by greater efforts to increase public awareness and acceptance of the use of health information for research, and in particular epidemiological research. Such efforts could include the publishing of research findings and public health outcomes in the popular media, and holding forums that highlight the need for this kind of research.[75] It would also be possible to raise awareness about the application of the *Privacy Act* in the research context.

58.75 The OPC Review recommended that:

> As part of a broader inquiry into the Privacy Act (see recommendation 1), the Australian Government should consider … where the balance lies between the public interest in comprehensive research that provides overall benefits to the community,

> and the public interest in protecting individuals' privacy (including individuals having choices about the use of their information for such research purposes).[76]

Submissions and consultations

58.76 In its submission to the Inquiry, the OPC expressed the view that the current public interest test was appropriate, that is, where research proposes to use identifiable personal or health information without consent, the public interest in the research must substantially outweigh the public interest in the protection of privacy. The OPC noted that, in general

> individuals expect to be given the opportunity to consent to the handling of their health information for research purposes. The section 95 and 95A mechanisms provide a way of ensuring that important health and medical research can be undertaken in circumstances where the community's expectations around consent cannot be met. The mechanisms provide a sound framework of accountability and oversight of the handling of health information without consent.[77]

58.77 The OPC also noted that

> privacy safeguards are necessary for research to remain effective. If individuals do not feel that their personal information is going to be appropriately protected, they may avoid treatment, or may supply partial or inaccurate information to the detriment of their clinical well-being and the ultimate quality of any research which may utilise their health information.[78]

58.78 In its submission to the Inquiry, DOHA stated that:

> The Department considers that the appropriate test for a HREC, considering a research proposal, is that the Committee must be satisfied that the public interest in the proposed activity 'substantially outweighs' the public interest in the protection of privacy ... Health information collected in the delivery of healthcare services is subject to a legal duty of confidence. In order to comply with this duty, express consent would normally be required before health information was disclosed for research purposes. It would not appear sufficient to discharge this duty by 'finely' balancing the public interests. The balance should be 'clearly' in favour of the research.[79]

58.79 A number of other stakeholders also expressed support for maintaining the current public interest test.[80]

---

76 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 60.

77 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

78 Ibid.

79 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007.

80 Australian Nursing Federation, *Submission PR 205,* 22 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007; Department of Health Western Australia, *Submission PR 139,* 23 January 2006.

58.80 On the other hand, there was also support for modifying the test.[81] The Office of the Health Services Commissioner in Victoria stated that the "current definition with the use of the words 'substantially outweighs' has lead to ethics committees taking an overly conservative approach" and suggested that the approach adopted in the draft *National Health Privacy Code* would be more appropriate.[82] NHPP 1 of the draft Code provides that research must be in the public interest in order for it to proceed, but that it must proceed in accordance with rules issued for the purpose.

58.81 The NHMRC was very clearly of the view that

> the current requirement in the *Privacy Act* and the Section 95 and Section 95A Guidelines that the public interest in research 'substantially outweighs' or 'outweighs to a substantial degree' the public interest in maintaining the level of privacy protection provided by the IPPs and NPPs is unbalanced and is limiting the conduct of important health and medical research …
>
> In undertaking an assessment for the purposes of determining the balance of public interests, an HREC routinely assesses a range of issues, which are detailed in the Issues Paper. This assessment provides a robust framework and in our view protects the reasonable interests of individuals. It is clear that an assessment would not favour research that has the potential to cause significant harm to individuals.
>
> We consider that a more appropriate and effective test that would accord with community sentiment would simply be that the balance of public interests favours the research proceeding.[83]

58.82 In response, the OPC expressed the view that the difficulty for researchers was not the current public interest test but rather that the

> difficulties reported by the researchers arise from the complexity of interactions between national and state legislation, the complexity of HREC processes and possibly a need for additional education within the research community about working within the privacy framework. It has also been suggested that uncertainty introduced by the complexity of the section 95 and 95A mechanisms may result in HREC's being somewhat over cautious in their approval of research proposals. These difficulties do not result from an imbalance embedded within the *Privacy Act* itself.[84]

ALRC's view

58.83 The ALRC agrees with the OPC that other elements of the current regime regulating the use of personal information in the research context also give rise to difficulty and some confusion. These issues are addressed by other proposals in this Discussion Paper including the proposals in Chapter 4 aimed at national consistency and Proposal 15–2 on the establishment of a single set of Unified Privacy Principles.

---

81 Australian Government Department of Human Services, *Submission PR 136,* 19 January 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007; Queensland Institute of Medical Research, *Submission PR 80,* 11 January 2006.

82 Office of the Health Services Commissioner (Victoria), *Submission PR 153,* 30 January 2007.

83 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

84 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

58.84 Currently ss 95 and 95A of the *Privacy Act* require that the Privacy Commissioner must not approve guidelines issued under these sections unless the Commissioner is satisfied that the public interest in research outweighs to a substantial degree the public interest in maintaining adherence to the IPPs or the NPPs. The ALRC is of the view that there is a demonstrable public interest in allowing some research involving the collection, use and disclosure of personal information without consent to proceed and that this is a matter for the Australian Parliament to consider in deciding whether to establish an exception to the UPPs for research. It is unnecessary for the Privacy Commissioner to consider this issue before approving guidelines or, in the ALRC's proposed regime, issuing rules. Instead, the balance of the public interest needs to be considered by an HREC in relation to each individual research proposal within the framework established by the Australian Parliament in the *Privacy Act*.

58.85 As to the test itself, the ALRC is concerned that the current test may be leading to overly conservative decision making by HRECs that is not in the overall public interest. If the public interest in a particular research proposal going forward outweighs the public interest in maintaining the level of privacy protection provided by the privacy principles, then there is an argument that the research should be allowed to proceed.

58.86 In considering this issue, it is important to keep in mind the other limits and safeguards that apply to research using personal information without consent under the *Privacy Act* and the Section 95 and 95A Guidelines. For example, HRECs must consider whether the research could proceed using information that does not identify individuals including the impact this would have on the research and the cost implications. If the researcher can establish that it is necessary to use identified personal information, issues HRECs are required to consider include: whether access to the information is restricted to appropriate personnel involved in the research; the procedures in place to ensure that personal information is permanently de-identified before the publication of results; and the procedures in place to ensure the security of the information and when it will be destroyed or returned to the original data custodian.[85] In addition, it must be impracticable for the researcher to seek consent from individuals to use their information. 'Impracticable to seek consent' is discussed further below, but must involve concrete and substantial obstacles, as opposed to mere inconvenience.

58.87 The ALRC has carefully considered the divergent views on this important issue. Chapter 1 examines the right to privacy in some detail and notes that the right is not absolute. The public interest in protecting this private right must be considered in the context of other rights and other public interests. The ALRC's view is that it is not the

---

85 National Health and Medical Research Council, *Guidelines under Section 95 of the Privacy Act 1988* (2000), 3.3; National Health and Medical Research Council, *Guidelines Approved under Section 95A of the Privacy Act 1988* (2001), D.5.

degree to which one public interest outweighs another—whether slightly or substantially—that should be at issue. If, taking all relevant factors into account, the public interest in one course of action outweighs the public interest in another course of action, the ALRC is of the view that the appropriate course of action is clear.

58.88 The ALRC has proposed above that the areas of research and the kinds of personal information available to researchers should be broadened. The ALRC is of the view that the public interest test should be the same for all human research.

58.89 Proposals 58–8 and 58–9, below, set out proposed research exceptions to the 'Collection' and 'Use and Disclosure' principles in the UPPs. These exceptions require an HREC to review research that proposes to collect sensitive information without consent, or to use or disclose personal information without consent and be satisfied that the public interest in the activity outweighs the public interest in maintaining the level of privacy protection provided by the UPPs. The Section 95 and 95A Guidelines include guidance for HRECs in considering the balance of public interests. The ALRC is of the view that the rules to be issued by the Privacy Commissioner under the research exceptions should also address this issue.

Proposal 58–4 The research exceptions to the proposed 'Collection' principle and the proposed 'Use and Disclosure' principle should provide that before approving an activity that involves the collection, use or disclosure of sensitive information or the use or disclosure of other personal information without consent, Human Research Ethics Committees must be satisfied that the public interest in the activity outweighs the public interest in maintaining the level of privacy protection provided by the proposed UPPs.

Impracticable to seek consent

58.90 NPP 10 and NPP 2 allow the collection, use and disclosure of health information for research without consent where it is *impracticable* for the organisation to seek the individual's consent before the collection, use or disclosure. The Section 95 Guidelines allow the collection, use or disclosure of personal information by agencies without consent when it is reasonable for the research to proceed without this consent.[86]

58.91 The 1999 National Statement provided that an HREC may approve access to data without consent where it was satisfied that: it was impossible in practice, due to the quantity, age or accessibility of the records to be studied to obtain consent, or the procedures required to obtain consent were likely either to cause unnecessary anxiety for those whose consent would be sought or to prejudice the scientific value of the

86 National Health and Medical Research Council, *Guidelines under Section 95 of the Privacy Act 1988* (2000), [3.2(a)].

research; and the public interest in the research outweighed to a substantial degree the public interest in privacy.[87]

58.92 In its submission to the OPC Review, the NHMRC expressed the view that the consent provisions of the National Statement and the *Privacy Act* should be consistent. The *Privacy Act* regime should allow the use and disclosure of health information in health and medical research where seeking consent may prejudice the scientific value of the research, or where the procedures necessary to obtain consent are likely seriously and adversely to affect the well being, including the psychological health, of the individual.[88] A number of other submissions to the OPC Review expressed the view that the circumstances in which the NPPs allow the collection, use and disclosure of health information without consent are too narrow.[89]

58.93 In ALRC 96, the ALRC and AHEC recommended that:

> The NHMRC, as part of its review of the National Statement in the 2003–2005 triennium, should ensure that the provisions of the National Statement relating to waiver of consent and reporting of decisions are consistent with privacy laws and, in particular, with guidelines issued under s 95 and s 95A of the *Privacy Act 1988* (Cth).[90]

58.94 The 1999 *National Statement on the Ethical Conduct in Research Involving Humans*, to which this recommendation relates, has been revised and redrafted following extensive consultation and debate. The 2007 *National Statement on Ethical Conduct in Human Research*[91] provides detailed provisions relating to consent, including provisions dealing with the qualifying or waiving of consent requirements in some circumstances. The revised National Statement makes clear that HRECs or other ethical review bodies may waive the requirement for consent if satisfied that:

> (a) involvement in the research carries no more than low risk (see paragraphs 2.1.6 and 2.1.7, page 18) to participants;
>
> (b) the benefits from the research justify any risks of harm associated with not seeking consent;

> (c) it is impracticable to obtain consent (for example, due to the quantity, age or accessibility of records);
>
> (d) there is no known or likely reason for thinking that participants would not have consented if they had been asked;
>
> (e) there is sufficient protection of their privacy;
>
> (f) there is an adequate plan to protect the confidentiality of data;
>
> (g) in case the results have significance for the participants' welfare there is, where practicable, a plan for making information arising from the research available to them (for example, via a disease-specific website or regional news media);
>
> (h) the possibility of commercial exploitation of derivatives of the data or tissue will not deprive the participants of any financial benefits to which they would be entitled;
>
> (i) the waiver is not prohibited by State, federal, or international law.[92]

Submissions and consultations

58.95 In its submission to the inquiry the CSIRO noted that:

> Some investigations have been done on the possibility that consent processes may lead to bias in the makeup of study groups, and that this in turn may jeopardise the quality of the results.[93]

58.96 The OPC Review also noted evidence that requiring consent to participate in some research projects significantly reduces the participation rate—and therefore the scientific value and integrity of the research.[94]

58.97 A number of stakeholders expressed support for the existing framework providing for the use of personal information in research where obtaining consent is impracticable.[95] The Australian Nursing Federation expressed the view that the framework was appropriate but that further guidance was needed as to the meaning of 'impracticable'.[96] A number of stakeholders expressed support for the proposition that the *Privacy Act* and the National Statement should be consistent.[97]

58.98 One stakeholder felt that 'impracticable' was too vague and set the bar too low.[98] The NSW Council for Civil Liberties expressed the view that where information

was to be used without consent this should be approved by the Privacy Commissioner, as well as by an HREC.[99]

58.99 The NHMRC expressed the view that:

> The NHMRC considers that impracticability of consent is one of many criteria that should be considered when an assessment is being made of the balance of public interests in the collection, use or disclosure of personal information without consent for research purposes. Given the large number of criteria, including impracticability of consent, that need to be assessed to determine the balance of public interests, we propose that specific reference to 'impracticability of consent' as a precondition to referral for consideration under the Research Guidelines is removed from the NPPs but continues to be incorporated into the associated Research Guidelines as one of the important criteria to be assessed. The criteria detailed in the Research Guidelines for assessment of the balance of public interests generally should reflect those included in the draft *National Statement*.[100]

58.100 In its submission, the OPC expressed the view that the framework contained in the NPPs for the use of health information in research without consent is appropriate and effective and did not support amendments in this area. The OPC noted that whether it is impracticable to seek consent depends on the particular circumstances of the case, and that the OPC has issued guidance on the issue.[101] The OPC is of the view that researchers are required to take reasonable steps to seek consent. There must be compelling justification to support the collection, use or disclosure of health information without consent and this means concrete and substantial obstacles, as opposed to mere inconvenience.[102]

58.101 The OPC provided the following examples of situations that might give rise to impracticality for the purposes of the *Privacy Act*:

- individuals may be uncontactable due to death or relocation (this particularly arises in relation to old records);
- individuals of interest may be part of a demographic group that is difficult to contact (for example, remote/indigenous groups);
- the number of records involved may cause logistical problems; or

- the objective of the investigation may need to be concealed from subjects in order to minimize various forms of bias. For example, having to obtain consent in blind trials could compromise the integrity of the research.[103]

58.102 The OPC also commented that:

> Organisations suggesting that consent is impracticable on the grounds that it would invalidate the research methodology should consider if this is the conclusion that a reasonable person, independent of the research project, would come to. As the Office stated in its Information Sheet on the subject, 'Impracticability' should be something more than incurring some expense or effort in seeking an individual's consent.[104]

ALRC's view

58.103 The ALRC has formed the view that, although there is room for interpretation in regard to what amounts to 'impracticable' to seek consent, it is an appropriate element of the framework permitting the use of personal information without consent for research. It provides a flexible test that can be applied in a variety of situations. The ALRC's view is that it does not set the bar too low. Impracticable means 'more than incurring some expense or effort in seeking an individual's consent'. The obstacles to seeking consent must be real and they must be significant.

58.104 The ALRC agrees with stakeholders that it is important to maintain a certain level of consistency between the *Privacy Act* and the National Statement. The ALRC notes that the revised National Statement includes 'impracticable to obtain consent' as one of the criteria an HREC or other review body must consider in determining whether to grant waiver of consent to use personal information in research.[105] The ALRC is not concerned that the National Statement also includes other criteria in this list. The *Privacy Act* provides preliminary criteria that must be satisfied before a research proposal can proceed without consent, and the National Statement provides a more detailed list of matters HRECs and other review bodies must consider in deciding whether to allow a proposal to proceed without consent. This approach is not incompatible with the *Privacy Act*.

58.105 The proposed research exception to the UPPs, discussed below, retains the requirement that it must be impracticable for an agency or organisation to seek the individual's consent to the collection, use or disclosure of personal information in research. The proposed exception to the UPPs also requires that an HREC be satisfied that the public interest in the collection, use or disclosure outweighs the public interest in maintaining the level of privacy protection provided by the UPPs. The criteria set out in the National Statement are relevant to this decision on the balance of public interests.

103 Ibid.

104 Ibid.

105 National Health and Medical Research Council, Australian Research Council and Australian Vice Chancellors' Committee, *National Statement on Ethical Conduct in Human Research* (2007), [2.3.6(c)].

58.106 The proposed research exception to the UPPs also requires that any such research is conducted in accordance with rules issued by the Privacy Commissioner. It is expected that the Privacy Commissioner will develop these rules in consultation with stakeholders, including the authors of the National Statement: the NHMRC, the Australian Research Council and the AVCC. This will provide an opportunity to ensure that the framework established under the *Privacy Act* to allow research that is in the public interest to proceed without consent is consistent with the framework established by the National Statement to allow HRECs and other review bodies to grant waiver of consent for such research.

Proposal 58–5 The Privacy Commissioner should consult with relevant stakeholders in developing the rules to be issued under the research exceptions to the proposed 'Collection' principle and the proposed 'Use and Disclosure' principle, to ensure that the approaches adopted in the rules and the *National Statement on Ethical Conduct in Human Research* (2007) are compatible.

Human Research Ethics Committees

58.107 Institutions that undertake research 'with or about people, their data or tissue'[106] are responsible for ensuring that research they conduct, or for which they are responsible, is ethically reviewed in accordance with the National Statement.[107] Institutions may establish their own processes for ethical review or use those of another institution.[108]

58.108 The National Statement provides that ethical review can be undertaken at various levels depending on the degree of risk involved in the research. Research involving 'negligible risk' and the use of existing collections of data or records that contain only non-identifiable information may be exempt from review.[109] Research involving 'no more than a low level of risk' may be reviewed by a non-HREC ethical review body.[110] Non-HREC ethical review includes review by a head of department, a departmental committee, or a subcommittee of an HREC.[111] Research involving more than a low level of risk must be reviewed by an HREC. The National Statement expressly provides that research proposing to use personal information in medical research without consent and research using health information without consent must

106 Ibid, 8. This is the definition of 'human research' used in the National Statement.
107 Ibid, [5.1.1].
108 Ibid, [5.1.3].
109 Ibid, [5.1.22].
110 Ibid, [5.1.7].
111 Ibid, [5.1.20].

be reviewed by an HREC.[112] These provisions reflect the existing exceptions for research under the IPPs and NPPs.

58.109 HRECs must be composed and function in accordance with the National Statement.[113] The minimum membership of an HREC is eight: a chairperson; at least two lay people (one man and one woman) who have no affiliation with the institution; at least one person with knowledge of and experience in the professional care, counselling or treatment of people; at least one person who performs a pastoral care role in the community; at least one lawyer; and at least two people with current research experience.[114] The primary responsibility of HREC members is to decide whether a proposal meets the requirements of the National Statement and is ethically acceptable.[115]

58.110 Both the Section 95 and 95A Guidelines provide a detailed framework within which HRECs must consider the privacy implications of research proposals involving the use of individuals' personal or health information. In particular, HRECs must consider, and may approve, research proposals seeking to use personal or health information without consent, on the basis that the public interest in the research substantially outweighs the public interest in maintaining the level of privacy protection provided by the IPPs and the NPPs.

58.111 The Guidelines require that, before making a decision, an HREC must assess whether it has sufficient information, expertise and understanding of privacy issues, either amongst the members of the HREC or otherwise available to it, to make a decision that takes proper account of privacy.[116] The Section 95A Guidelines note that it may be necessary to appoint additional members with specific expertise in some circumstances. It is important to note that, although an HREC may give approval for a research proposal to proceed, the final decision to release personal information to researchers is not made by an HREC but by the relevant data custodian.

58.112 The Guidelines also require HRECs to record their decisions, including details of the agency or organisation from which information will be sought, the information sought, the number of records involved, and the IPP or NPP likely to be infringed.[117] AHEC is in turn required to report annually to the NHMRC in relation to HRECs generally, and to provide a compliance report setting out decisions taken by

117 National Health and Medical Research Council, *Guidelines under Section 95 of the Privacy Act 1988* (2000), [3.4]; National Health and Medical Research Council, *Guidelines Approved under Section 95A of the Privacy Act 1988* (2001), [D.6].

HRECs under the Guidelines.[118] AHEC is also required to provide the compliance report to the Privacy Commissioner[119] and to report where there has been a breach of the Guidelines.[120]

58.113 Submissions to the OPC Review suggested that the reporting obligations imposed on HRECs by the guidelines are detailed and unnecessarily onerous, for example, the requirement to list those IPPs and NPPs that may be breached by the research proposal.[121] The OPC Review considered this issue and made the following recommendation:

> The Office will work with the National Health and Medical Research Council to simplify the reporting process for human research ethics committees under the section 95A guidelines.[122]

58.114 A number of other issues were identified in the course of the OPC Review, including the tendency of HRECs to make conservative decisions, refusing access to health information if there is any risk of being in breach of the law; and the need to involve a number of HRECs in decision making in relation to research proposals, particularly national proposals.[123] Concern was also expressed about inconsistencies in the way HRECs balance the public interests in research and privacy,[124] and in relation to membership of HRECs.[125] Similar issues were raised in the course of the current Inquiry.[126]

58.115 In ALRC 96, the role and function of HRECs in the context of genetic research was considered in detail, and a range of recommendations to improve HREC

decision making and to support HRECs in their work were made. In particular, Recommendation 17–1 states that:

> The National Health and Medical Research Council (NHMRC) should develop and implement procedures to promote consistency, efficiency, transparency and accountability in the review of human genetic research by Human Research Ethics Committees (HRECs). In developing such procedures, the NHMRC should initiate a systematic quality improvement program that addresses:
>
> - consolidation of ethical review by region or subject-matter;
> - the membership of HRECs and, in particular, the balance between institutional and non-institutional members;
> - the need for expertise of HRECs in considering proposals for human genetic research;
> - on-going monitoring of approved human genetic research projects;
> - the education and training of HREC members;
> - payment of HREC members for their work in reviewing research proposals;
> - independent audit of HREC processes; and
> - standardised record keeping and reporting to the NHMRC, including in relation to commercial arrangements.[127]

58.116 The ALRC and AHEC also recommended that:

> The NHMRC, in strengthening the level of training and other support provided to HRECs in accordance with Chapter 17 of this Report, should ensure that adequate attention is given to: (a) the interpretation of the waiver of consent provisions of the National Statement; and (b) HREC decision making in relation to such waiver.[128]

58.117 A number of initiatives are under way to address these issues. In particular, the CSIRO noted in its submission that:

> At the October 2006 meeting of the Australian Health Ministers Advisory Council, agreement was reached on establishing a nationally harmonised system of scientific and ethics review of multi-centre health and medical research. The national coordinating body will be the NHMRC, which is tasked with creating a national harmonized system based on mutual recognition by all jurisdictions of the single review undertaken by recognised human research ethics committees in any jurisdiction …
>
> A key development in removing impediments to such multi-centre research has been the National Ethics Application Form (NEAF)13, available for public use since May 2006. This Application Form is an electronic, web based form for use by researchers

128 Ibid, Rec 15–3.

> in any research discipline when submitting research proposals to one or more Human Research Ethics Committee (HREC) for review.[129]

58.118 The NHMRC was awarded $5.6 million in the 2007 federal budget to establish a national system for single ethical review of cross-jurisdictional and multi-centre research by establishing national committees to conduct a single review of such research.[130] In addition, the National Statement has been extensively revised and redrafted.[131] The New South Wales Department of Health has developed its own model of single ethical review of multi-centre research in the New South Wales public sector. The model was implemented on 1 July 2007.[132] The Victorian Government Department of Human Services is also working on a project to implement a centralised system of ethical review for multi-centre research.[133]

58.119 Given these recent comprehensive reviews and developments, the ALRC does not propose to reconsider the HREC decision-making process in detail. In IP 31, however, the ALRC asked whether HRECs are the most appropriate bodies to make decisions about the collection, use and disclosure of personal information without consent in the context of health and medical research. In addition, the ALRC asked whether the requirements imposed on HRECs by the Section 95 and 95A Guidelines are appropriate and effective.[134]

Submissions and consultations

58.120 In its submission to the Inquiry, the NHMRC urged

> the ALRC to reconsider the role of HRECs in decisions about the privacy implications of the collection, use or disclosure of health information in research. The NHMRC is of the view that these considerations could be managed without intervention by an HREC although we have not identified a replacement mechanism at this stage.[135]

58.121 One other stakeholder suggested that the establishment of a centralised, national approval process would improve the efficiency and consistency of decision making.[136] Having asked the ALRC to reconsider the issue, however, the NHMRC also expressed the view that HRECs are, in general, appropriately constituted to enable

them to perform the role assigned to them under the *Privacy Act* and Section 95 and 95A Guidelines.

58.122 The NHMRC also expressed concern about the reporting requirements imposed on HRECs by the Section 95 and 95A Guidelines. The NHMRC noted that the complexity of the regulatory regime and the detailed reporting requirements have resulted in an excessive administrative burden associated with those responsibilities. The NHMRC suggested a reporting framework that involved less detailed, commentary-based reporting on privacy issues that arise during a reporting period, and an exception-based reporting framework for specific privacy concerns that come to the attention of HRECs during a reporting period.[137]

58.123 In its submission to the Inquiry, the OPC expressed the view that HRECs are the most appropriate bodies to make decisions about the collection, use and disclosure of health information without consent in the health and medical research context. The OPC reiterated that it would work with the NHMRC to simplify the reporting requirements under the Section 95 and 95A Guidelines.[138]

58.124 There was strong support from other stakeholders for the role of HRECs in reviewing proposals under the *Privacy Act* and the s 95 and s 95A Guidelines.[139] The Centre for Law and Genetics stated that:

> We are strongly of the view that Human Research Ethics Committees are the most appropriate bodies to make decisions about the collection, use and disclosure, without consent, of health information in the context of health and medical research. This model of ethical review, based on the collective wisdom of an interdisciplinary group, has proved in general to be very effective in practice.[140]

58.125 The Centre for Law and Genetics also expressed support for the recommendations relating to HRECs in ALRC 96.[141] The Caroline Chisholm Centre for Health Ethics noted the need for adequate funding, training and education of HRECs and their members.[142]

58.126 The Australian Institute of Health and Welfare (AIHW) noted that:

> The AIHW would see no difficulty with NHMRC guidelines being extended to govern use and disclosure in the broad field of health and welfare information (ie, beyond health, narrowly construed). Indeed, that is the position that the AIHW has previously put to the Privacy Commissioner and is in fact already the way that the AIHW Ethics Committee arrangements operate.[143]

ALRC's view

58.127 The ALRC has considered the role of HRECs in the privacy regime and is of the view that HRECs remain the most appropriate bodies to make decisions about the collection, use and disclosure of personal information without consent in the health and medical research context. Such review is only required when researchers propose to use identified or reasonably identifiable personal information without consent. The ALRC is of the view that this raises privacy as well as ethical issues and that such issues are appropriately considered by HRECs. The ALRC notes that there was widespread support for the role of HRECs in this area.

58.128 The National Statement and its oversight mechanisms, including review by HRECs, is not limited to health and medical research, but is intended to cover all research involving humans. The ALRC proposes, above, extending the existing arrangements relating to the collection, use and disclosure of personal information in health and medical research to include the collection, use or disclosure of personal information in research involving humans more generally. The ALRC's view is that HRECs should be required to review and approve all such activities.

58.129 The National Statement provides that only an HREC may approve research that proposes to use personal information without consent in medical research, or personal health information without consent.[144] In addition, the National Statement provides that only an HREC may approve research that involves more than a low level of risk.[145] In the context of extending the arrangements for research under the *Privacy Act*, the National Statement may also require amendment. The ALRC is of the view that any research that requires:

- the collection of identified or reasonably identifiable sensitive information without consent;
- the use or disclosure of such information without consent for a purpose that is not directly related to the purpose of collection and within the reasonable expectations of the individual; or

145 Ibid, 8.

- the use or disclosure of identified or reasonably identifiable non-sensitive information without consent for a purpose that is not related to the purpose of collection and within the reasonable expectations of the individual,

is likely to involve more than a low level of risk for individuals and should always be reviewed by an HREC. In these circumstances, researchers will be relying on the research exceptions in the proposed 'Collection' principle and the proposed 'Use and Disclosure' principle, discussed further below. The ALRC proposes that the National Statement be amended to require that, where a research proposal seeks to rely on the research exceptions in the *Privacy Act*, it must be reviewed and approved by an HREC.

58.130 The ALRC notes developments in relation to the harmonisation and simplification of ethical review and the development of a National Ethics Application Form. In Proposal 58–1, above, the ALRC suggests that the Section 95 and 95A Guidelines be replaced by a single set of rules issued by the Privacy Commissioner. The ALRC's view is that the adoption of a single set of UPPs and a single set of rules relating to research, to be developed in consultation with stakeholders, will have a significant impact on reducing regulatory complexity and the regulatory burden on HRECs.

58.131 The development of the rules to be issued by the Privacy Commissioner in relation to research will provide an opportunity to review the reporting requirements currently imposed on HRECs and on AHEC. The ALRC's view is that any reporting requirements should have clear goals and should impose the minimum possible administrative burden to achieve those goals. This might be achieved, for example, by minimal first tier reporting of the number of proposals considered and the number approved and rejected, while allowing for follow-up by the Privacy Commissioner if these reports raised concerns or indicated undesirable trends.

Proposal 58–6 The *National Statement on Ethical Conduct in Human Research* (2007) should be amended to require that, where a research proposal seeks to rely on the research exceptions in the *Privacy Act,* it must be reviewed and approved by a Human Research Ethics Committee.

Proposal 58–7 In developing the rules to be issued in relation to research under the proposed 'Collection' principle and the proposed 'Use and Disclosure' principle, the Privacy Commissioner, in consultation with relevant stakeholders, should review the reporting requirements currently imposed on the Australian Health Ethics Committee and Human Research Ethics Committees. Any new reporting mechanism should aim to promote the objects of the *Privacy Act*, have clear goals and impose the minimum possible administrative burden to achieve those goals.

An exception to the proposed Unified Privacy Principles

58.132 Part D of this Discussion Paper sets out a proposed set of Unified Privacy Principles. In this section the ALRC proposes exceptions to the proposed 'Collection' principle and the proposed 'Use and Disclosure' principle to allow research using identified or reasonably identifiable personal information without consent to proceed, where the public interest in allowing the research to go forward outweighs the public interest in maintaining the level of privacy protection provided by the UPPs.

58.133 Currently, NPP 10.3 provides in part that health information may be collected without consent where necessary for research, or the compilation or analysis of statistics, relevant to public health or public safety, where:

- the purpose cannot be served by the collection of information that does not identify the individual or from which the individual's identity cannot reasonably be ascertained; and

- it is impracticable for the organisation to seek the individual's consent to the collection; and

- the information is collected as required by law; or in accordance with rules established by competent health or medical bodies that deal with obligations of professional confidentiality which bind the organisation; or in accordance with guidelines approved under s 95A.

58.134 In addition, NPP 10.4 provides that if an organisation collects health information about an individual in accordance with NPP 10.3, the organisation must take reasonable steps to permanently de-identify the information before the organisation discloses it.

58.135 As discussed in Chapter 57, the proposed 'Collection' principle would allow the collection of sensitive information without consent where the collection is required or specifically authorised by or under law. It is not necessary, therefore, to include this element specifically in the provision dealing with collection of sensitive information without consent for research. In addition, and as discussed in Chapter 57, the OPC is not aware of any existing rules established by competent health or medical bodies that would fulfil the requirements of NPP 10.3. The ALRC, therefore, proposes to drop the references to these two mechanisms from the proposed research exception.

58.136 NPP 2.1(d) provides that an organisation may use or disclose health information without consent where necessary for research, or the compilation or analysis of statistics, relevant to public health or public safety where:

- it is impracticable for the organisation to seek the individual's consent before the use or disclosure;

- the use or disclosure is conducted in accordance with guidelines approved by the Commissioner under s 95A for the purposes of this subparagraph; and

- in the case of disclosure—the organisation reasonably believes that the recipient of the health information will not disclose the health information, or personal information derived from the health information.

58.137 The ALRC is of the view that a similar regime should be established under the UPPs, and should apply to both agencies and organisations.

58.138 The Section 95 and 95A Guidelines are issued by the NHMRC and approved by the Privacy Commissioner. Once approved and gazetted the guidelines become binding. Because of the proposed expanded scope of the research exception, the ALRC is of the view that it is no longer appropriate to rely on the NHMRC alone to develop guidelines for the conduct of research. The ALRC proposes, therefore, that the research exception to the UPPs simply provides that the rules to guide the conduct of research should be issued by the Privacy Commissioner. The Commissioner will, of course, be free to consult with stakeholders, including the authors of the National Statement, in developing the rules. It is anticipated that the rules would address similar issues to those addressed in the existing guidelines, discussed above.

58.139 The ALRC's view is that the requirement for an HREC to review and approve research proposals, and the public interest test to be applied in that review, should be included expressly in the UPPs. Both these elements are fundamental to the exception for research and, while HRECs are currently required to review and approve research proposals seeking to rely on the research exceptions in the *Privacy Act*, the requirement for this to occur is not expressly included in the Act. Instead, it is set out in the Section 95 and 95A Guidelines.

58.140 In contrast to NPP 1, the proposed 'Collection' principle deals with the collection of both sensitive and non-sensitive information. The proposed 'Collection' principle does not require consent for the collection of non-sensitive information. Subclause 2.6 of the proposed 'Collection' principle does, however, require consent for the collection of sensitive information. Therefore, the research exception to the proposed 'Collection' principle is limited to the collection of sensitive information.

58.141 The ALRC is of the view that the wording of NPP 10.4 should be amended so that the provision no longer requires that reasonable steps be taken to 'permanently de-identify' information before it is disclosed. The ALRC's view is that it is sufficient to require agencies and organisations that collect sensitive information under the research exception to the proposed 'Collection' principle to take reasonable steps to ensure that the information is not disclosed in a form that would identify the individual or from which the individual would be reasonably identifiable. This approach is more

consistent with the proposed definition of 'personal information' discussed in Chapter 3[146] and meets concerns raised by stakeholders, and discussed further below, in relation to the term 'de-identified'. Where information is not about an identified or reasonably identifiable individual, it will no longer fall within the definition of personal information and so will no longer covered by the *Privacy Act*.

Proposal 58–8 The research exception to the proposed 'Collection' principle should state that, despite subclause 2.6, an agency or organisation may collect sensitive information about an individual where:

(a) the collection is necessary for research;

(b) the purpose cannot be served by the collection of information that does not identify the individual;

(c) it is impracticable for the agency or organisation to seek the individual's consent to the collection;

(d) a Human Research Ethics Committee has reviewed the proposed activity and is satisfied that the public interest in the activity outweighs the public interest in maintaining the level of privacy protection provided by the UPPs; and

(e) the information is collected in accordance with rules issued by the Privacy Commissioner.

Where an agency or organisation collects sensitive information about an individual in accordance with this provision, it must take reasonable steps to ensure that the information is not disclosed in a form that would identify the individual or from which the individual would be reasonably identifiable.

Proposal 58–9 The research exception to the proposed 'Use and Disclosure' principle should state that despite the other provisions of the Use and Disclosure principle, an agency or organisation may use or disclose personal information where:

(a) the use or disclosure is necessary for research;

(b) it is impracticable for the agency or organisation to seek the individual's consent to the use or disclosure;

146 Proposal 3–5.

(c) a Human Research Ethics Committee has reviewed the proposed activity and is satisfied that the public interest in the activity outweighs the public interest in maintaining the level of privacy protection provided by the UPPs;

(d) the information is used or disclosed in accordance with rules issued by the Privacy Commissioner; and

(e) in the case of disclosure—the agency or organisation reasonably believes that the recipient of the personal information will not disclose the personal information in a form that would identify the individual or from which the individual would be reasonably identifiable.

Identifiable personal information

58.142 'Personal information' for the purposes of the *Privacy Act* is defined as

> information or an opinion (including information or an opinion forming part of a database), whether true or not, and whether recorded in a material form or not, about an individual whose identity is apparent, or can reasonably be ascertained, from the information or opinion.[147]

58.143 The OPC *Guidelines on Privacy in the Private Health Sector* indicate that the *Privacy Act* does not apply to 'de-identified information or statistical data sets, which would not allow individuals to be identified'.[148] The OPC has also stated that information is de-identified when it is not possible 'to reasonably ascertain' the identity of a person from the information and that this may depend on the resources available to an organisation to re-identify the information. Whether information is de-identified so that it no longer falls within the protection of the *Privacy Act* will depend on context and circumstances.[149]

58.144 The OPC Review identified a number of problems with the concept of 'de-identified'. The NHMRC stated that stakeholders are experiencing difficulty in determining whether a person's identity is 'apparent or can be reasonably ascertained' and recommended that the OPC provide guidance on this phrase so that it is clear when information is not subject to the *Privacy Act* or the HREC approval process.[150] The AIHW also pointed to problems with determining when data is de-identified and

150 National Health and Medical Research Council, *Submission to the Office of the Privacy Commissioner Review of the Private Sector Provisions of the Privacy Act 1988*, 10 December 2004.

indicated that there is a need for more guidance.[151] The Australian Nursing Federation expressed the view that greater clarity is needed, in particular, around the de-identification of electronic data and the point at which it is adequately de-identified for the purposes of the *Privacy Act.*[152]

58.145 In response, the OPC Review stated that:

> As part of a wider inquiry into the *Privacy Act*, the issue of what is or is not de-identification could be considered. This is an important threshold issue which determines whether or not information is protected. Developments in technology have made it increasingly difficult to determine whether information is de-identified or not. In the meantime, the Office could provide guidance on this, which would help HRECs and researchers in their decision making.[153]

58.146 In Chapter 3 of this Discussion Paper, the ALRC proposes that the *Privacy Act* be amended to provide that 'personal information' is defined as 'information or an opinion, whether true or not, and whether recorded in a material form or not, about an identified or reasonably identifiable individual'. In addition, the ALRC considers the meaning and application of the terms 'identified' and 'reasonably identifiable' and proposes that the Privacy Commissioner issue guidance on the matter.[154] In this chapter, the ALRC considers when information has been de-identified so that it is no longer about an identified or reasonably identifiable individual. Although this issue is considered here in the context of research, the central question is of wider application, that is, does information fall within the definition of 'personal information' in the *Privacy Act.*

58.147 There is a strong public interest in the collection, use and disclosure of personal information that has been 'de-identified' for activities such as research. That is not to say that individuals have no interest in de-identified personal information about them, but that the individual's interest in the information may at some point give way to the public interest in being able to use the information freely.

58.148 A report prepared for the UK Information Commissioner notes that:

> The identity and privacy of the individual are traditionally seen as well protected by the anonymisation of personal data, thereby placing it beyond the scope of the

154 Proposal 3–5.

> Directive as non-personal data incapable of identifying the individual subject … The broader effect of anonymisation on dignity is, however, not widely discussed.[155]

58.149 The report goes on to state that:

> 'Indirect' identification, where a person could be identified from the data or the data and other data, can only be made workable by a concept of reasonableness, as in Recital 26 [of the EU Directive], but conceptually it threatens the possibility of anonymising or pseudonymising data effectively to remove it from 'personal data'.[156]

58.150 The EU Directive states:

> Whereas the principles of protection must apply to any information concerning an identified or identifiable person; whereas, to determine whether a person is identifiable, account should be taken of all the means likely reasonably to be used either by the controller or by any other person to identify the said person; whereas the principles of protection shall not apply to data rendered anonymous in such a way that the data subject is no longer identifiable; whereas codes of conduct within the meaning of Article 27 may be a useful instrument for providing guidance as to the ways in which data may be rendered anonymous and retained in a form in which identification of the data subject is no longer possible.[157]

58.151 The NHMRC, the Australian Research Council and the AVCC have considered this issue in the context of revising the National Statement. The National Statement makes a distinction between individually identifiable data, re-identifiable data and non-identifiable data as follows:

> Data may be collected, stored or disclosed in three mutually exclusive forms:
>
> - individually identifiable data, where the identity of a specific individual can reasonably be ascertained. Examples of identifiers include the individual's name, image, date of birth or address;
> - re-identifiable data, from which identifiers have been removed and replaced by a code, but it remains possible to re-identify a specific individual by, for example, using the code or linking different data sets;
> - non-identifiable data, which have never been labelled with individual identifiers or from which identifiers have been permanently removed, and by means of which no specific individual can be identified. A subset of non-identifiable data are those that can be linked with other data so it can be known that they are about the same data subject, although the person's identity remains unknown.
>
> This National Statement avoids the term 'de-identified data', as its meaning is unclear. While it is sometimes used to refer to a record that cannot be linked to an individual ('non-identifiable'), it is also used to refer to a record in which identifying information has been removed but the means still exist to re-identify the individual.

156 Ibid, 7.

157 European Parliament, *Directive on the Protection of Individuals with Regard to the Processing of Personal Data and on the Free Movement of Such Data*, Directive 95/46/EC (1995), recital 26.

> When the term 'de identified data' is used, researchers and those reviewing research need to establish precisely which of these possible meanings is intended.[158]

58.152 In IP 31, the ALRC asked whether definitions of this kind should be included in the *Privacy Act* and whether a distinction should be drawn between identifiable personal information and re-identifiable personal information in the research context.[159]

Submissions and consultations

58.153 DOHA noted the need for guidance on the meaning of terms such as 'identified', 're-identifiable', 'non-identifiable' and 'de-identified' but did not believe the terms needed to be defined in the *Privacy Act*.[160] Other stakeholders felt that definitions would be helpful, with some noting the importance of maintaining consistency with the National Statement.[161]

58.154 Some stakeholders expressed the view that no distinction should be drawn between 'identifiable' and 're-identifiable' personal information in the context of the *Privacy Act*.[162] The Australian Privacy Foundation stated that:

> Health researchers have constructed elaborate mechanisms to allow data linkage, which provide a degree of protection but do not amount to de-identification. Information either is or is not actually or potentially identifiable. The ALRC should be wary about legitimizing the idea that there can be an intermediate category.[163]

58.155 The Western Australian Department of Health expressed the view that:

> No distinction is necessary between the two categories 'identifiable' and 're-identifiable or potentially re-identifiable' data for the purposes of the *Privacy Act* since the privacy principles should apply to both.[164]

162 Australian Nursing Federation, *Submission PR 205,* 22 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

163 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

164 Department of Health Western Australia, *Submission PR 139,* 23 January 2006. Other stakeholders were also of this view: Office of the Health Services Commissioner (Victoria), *Submission PR 153,* 30 January 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007.

58.156 The Department went on to suggest that, in the context of the *Privacy Act*, there are only two relevant categories of personal information:

- reasonably identifiable personal information; and
- non-identifiable personal information.[165]

58.157 The Department expressed the view that 'reasonably identifiable personal information' includes information linked with an individual's name, image, date of birth or address; information that contains a unique personal identifier when the holder of the information also has the master list linking the identifiers to individuals; information that the holder can merge or link to other information they already hold, enabling them to identify individuals; and aggregated information where individuals can be identified because of the small number of individuals in particular fields of information.

58.158 The Department stated that 'non-identifiable personal information' includes information that has never been labelled with individual identifiers or from which they have been permanently removed; and information that contains a unique personal identifier where the holder cannot link the information to a specific individual because they do not hold the master list linking the identifiers to individuals.[166]

58.159 The Department also made the point that identifiability is contextual: information that is identifiable to the original holder of the information may be unidentifiable to a recipient of the information. For example, information that contains a unique personal identifier is not identifiable to a recipient who does not hold the master list. This is the basis of the data linkage protocol adopted by the Western Australian Data Linkage Unit (DLU), discussed further below. Other stakeholders agreed that the use of independent intermediaries in this way should mean that the information in the hands of data recipients is no longer classified as 're-identifiable' and, for the purposes of the *Privacy Act,* should be considered 'non-identifiable'.[167]

58.160 The Department of Human Services explained that, in deciding whether to disclose de-identified personal information to researchers, Medicare Australia carefully considered what was released in order to ensure that individuals could not be identified or re-identified. This consideration included examining what other information researchers were collecting and considering whether that information could be linked with information released by Medicare Australia in a way that would enable researchers to identify individuals.[168]

168 Australian Government Department of Human Services, *Submission PR 136,* 19 January 2007.

58.161 A number of other stakeholders also suggested that it was necessary to consider each disclosure on a case-by-case basis to avoid releasing information that might identify an individual, for example, because of the small number of individuals in the data set.[169] The ABS stated in its submission that:

> When the ABS publishes statistics, or releases information, it cannot do so in a manner that is likely to enable the identification of a particular person. In order to ensure the ABS complies with this requirement, the ABS has developed statistical methods to prevent the disclosure of identifiable information, while allowing sufficiently detailed information to be released to make the statistics useful.[170]

58.162 The ABS considers disclosures on a case-by-case basis and considers a range of issues, including what other information may be available to the data recipient that might allow identification through matching. The National Statistical Service Handbook, which provides guidance on these matters for Australian and state and territory government agencies notes that:

> The generation and release of statistical information from administrative record collections usually includes data that are available at a detailed level both in terms of the characteristics of individuals and their geographic location such as postcode. Although personal information such as name and address may be removed, identification of individuals may occur by putting together information already known with the data provided.
>
> The issue for agencies to address is what level of aggregation of data is required to avoid compromising the confidentiality of the individual's information and still produce meaningful data.[171]

58.163 The ABS and other agencies employ a range of techniques to minimise the risk of disclosing information that might be used to identify individuals. These include data suppression, data rounding and category collapsing. Detailed categories such as country of birth or industry or occupation can be collapsed to a less detailed level to avoid the risk of identification. Such techniques, however, can have a negative impact on the usefulness of data as some detailed data may need to be suppressed or modified.[172]

58.164 The CSIRO noted in its submission that the meaning of de-identified is often unclear. On the one hand, it may mean simply that nominated identifiers such as name, address, date of birth and Medicare number have been removed from the data. On the other hand, CSIRO refers to the extremely detailed guidance provided in s 164.[514] of

172 Ibid, App 4 Confidentiality and Privacy.

the *Health Insurance Portability and Accountability Act 1996* (US) (HIPA Act), which provides a number of tests to determine when health information is not 'individually identifiable health information'. The first test allows 'a person with appropriate knowledge of and experience with generally accepted statistical and scientific principles and methods for rendering information not individually identifiable' to determine that the risk is very small that the information could be used, alone or in combination with other reasonably available information, to identify an individual who is a subject of the information.[173]

58.165 An alternative test in the legislation expressly sets out a long list of identifiers that must be removed to render the information not individually identifiable. The list includes: names; all geographic subdivisions smaller than a State; all elements of dates related to an individual apart from year; telephone and fax numbers; electronic mail addresses; social security numbers; medical record numbers; web Universal Resource Locators (URLs); Internet Protocol (IP) address numbers; and so on. In addition, the relevant entity must not have actual knowledge that the information could be used alone or in combination with other information to identify an individual.[174]

ALRC's view

58.166 The ALRC has considered the definitions of 're-identifiable data' and 'non-identifiable data' in the National Statement and has formed the view that it is unnecessary to include definitions of these terms in the *Privacy Act.* The issue of whether information is identified, reasonably identifiable, re-identifiable or non-identifiable is contextual and so must be considered on a case-by-case basis. This includes making a distinction between information that may be re-identifiable in a particular context—for example, where an agency or organisation holds information identified by a unique identifier and also holds the master list—but is not reasonably identifiable for the purposes of the Act in another context—for example, where an agency or organisation holds information identified by a unique identifier but does not hold and does not have access to the master list.

58.167 The ALRC notes that this last category of information falls into the National Statement's 'non-identifiable' category. For the purposes of the *Privacy Act*, however, it is sufficient to regard the information as 'not reasonably identifiable'. If the risk of identification from particular information in a particular context is very small, a decision will have to be taken as to whether, on objective grounds, the information is 'reasonably identifiable'. Agencies and organisations will be required to make such decisions and will need to ensure that they have the appropriate knowledge and experience to be able to do this.

---

173 *Health Insurance Portability and Accountability Act of 1996* Pub L 104–191, 110 Stat 1936 (US) s 164.514(b)(1).

174 Ibid s 164.514(b)(2).

58.168 The ALRC's view is that guidance provided by the Privacy Commissioner would be of great value to those making decisions on a case-by-case basis on these matters. Such guidance might refer to or include guidance of the sort provided in the National Statistical Service Handbook[175] or the provisions of the HIPA Act discussed above. The ALRC is of the view that providing guidance rather than legislative rules allows a more flexible and nuanced response to particular situations.

58.169 In ALRC 96, the ALRC and AHEC considered the use of independent intermediaries to hold codes linking genetic samples or information with identifiers. ALRC 96 concluded that use of an independent intermediary (such as a 'gene trustee') is an effective method of protecting the privacy of samples and information held in human genetic research databases. The system maintains the privacy of samples and information, while allowing donors to be contacted if necessary. It ensures that anyone who obtains access to samples and information is unable to re-identify them without the authorisation of the gene trustee.[176]

58.170 The ALRC's view is that this kind of arrangement might also provide appropriate protection in relation to other personal information, but this will depend on the arrangements established between data custodians, intermediaries and data recipients. If appropriate arrangements are put in place, such that data recipients are not able to identify individuals, the ALRC is of the view that the information held by the data recipient is likely to be not reasonably identifiable in that context and no longer 'personal information' for the purposes of the *Privacy Act.*

Proposal 58–10 The Privacy Commissioner should provide guidance on the meaning of 'not reasonably identifiable'.

Databases and data linkage

Establishing databases

58.171 Health databases and registers may be established for a number of reasons in both the health services and the health and medical research contexts. The National Health Information Management Group has defined a 'health register' as follows:

> For the purposes of these guidelines, a health register is a collection of records containing data about aspects of the health of individual persons. The subjects will typically be patients or clients of a health service or health program, from which the data are collected. Health registers are characterised by being:

175 National Statistical Service, *National Statistical Service Handbook* <www.nss.gov.au/nss/home.NSF/pages/NSS+Resources?OpenDocument> at 1 August 2007.

176 Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), [18.102]–[18.117].

> *personal data* each record represents a person, not a set of aggregated data;
>
> *identified* each record in the register is identified to a particular subject;
>
> *population-based* the register aims to include a record of all persons within its defined scope; populations may be broadly or narrowly defined, e.g. Australia wide, regionally based or clients of a local service; and
>
> *ongoing* collection is not restricted to a particular period of time.[177]

58.172 Dr Roger Magnusson defines health registers as 'discrete repositories of information separate from clinical records' but notes that the distinction between clinical records and data registers is likely to diminish as health records gradually become databases.[178] The establishment and management of electronic health information systems and shared electronic health records in the health services context are discussed in Chapter 56.

58.173 A number of health information databases and registers have been established by legislation. As noted above, the Australian Government maintains the Medicare and Pharmaceutical Benefits Program databases. State and territory governments in Australia have established databases that include information collected under mandatory reporting requirements in public health legislation. For example, the *Public Health Act 1991* (NSW) requires health service providers to notify the cervical cancer register of cervical cancer screening tests performed and the results of those tests. The Act states that the purpose of the register is to reduce the incidence of, and mortality from, preventable cervical cancer.[179]

58.174 A wide range of non-statutory databases collect information on a voluntary basis and may be established and maintained by hospitals, universities, research bodies and others. For example, the Australian and New Zealand Dialysis and Transplant Registry (ANZDATA) records the incidence, prevalence and outcome of dialysis and transplant treatment for patients with end stage renal failure.[180] The Menzies Centre for Population Research maintains a research database comprising extensive genealogical data, genetic samples, and health information supplied by donors, to search for genetic causes of disease. All material is provided with consent specifically for the Centre's research projects.

58.175 Health service providers, such as hospitals, also maintain extensive databases established in the course of delivering health services and for management, funding and monitoring purposes.

179 *Public Health Act 1991* (NSW) s 42G.

180 ANZDATA is located at The Queen Elizabeth Hospital in South Australia.

58.176 In its submission to the OPC Review, the NHMRC noted that access to health information in such registers is crucial to the conduct of public health research but expressed concern that the *Privacy Act* does not provide an appropriate regime for the establishment, maintenance and use of such registers.

58.177 The NHMRC stated that the use or disclosure of health information without consent for the purposes of establishing or maintaining a register is unlikely to comply with the NPPs. Such use and disclosure is unlikely to be a directly related secondary purpose or to be within the reasonable expectations of health consumers. The NHMRC noted that getting consent from all relevant health consumers for their health information to be included in a register is likely to be impracticable and that incomplete data sets substantially impair the utility of such registers.[181]

58.178 The NHMRC noted that such registers would appear to require approval by an HREC, according to the Section 95A Guidelines, but that it would be difficult for an HREC to decide where the balance of interests lay in relation to an individual register, in the absence of specific information about the proposed future use of the register. The NHMRC noted that health information registers raise significant privacy concerns, but considered that the registers should be permitted within a rigorous ethical and privacy framework that appropriately protects the public interest.[182]

58.179 In ALRC 96, the ALRC and AHEC gave detailed consideration to the regulation of human genetic research databases, including the issue of consent to future unspecified use of information held in such databases. ALRC 96 made a number of recommendations in this regard, including:

> The National Health and Medical Research Council (NHMRC), as part of its review of the *National Statement on Ethical Conduct in Research Involving Humans* (the National Statement) in the 2003–2005 triennium, should amend the National Statement to provide ethical guidance on the establishment, governance and operation of human genetic research databases. The amendments (whether by means of a new chapter or otherwise) should include specific guidance on obtaining consent to unspecified future research.[183]

58.180 The 2007 National Statement does include a chapter on 'databanks'.[184] The chapter discusses establishing databanks and using the information stored in databanks

for research purposes. The National Statement discusses consent requirements for collection of information into databanks, including: 'specific consent' that is limited to a specific research project; 'extended consent' for the use of information in future research projects that are closely related to the original project or in the same general area of research; and 'unspecified consent' for the use of information for any future research. The National Statement includes specific guidance on obtaining such consent and notes the possibility that a researcher may seek permission from an ethical review body to proceed without consent.[185]

Submissions and consultations

58.181 In its submission, the OPC acknowledged that seeking approval to establish a health register through the HREC mechanism may present difficulties:

> In the absence of a clearly identified purpose, HRECs would be unable to assess where the public interest lay in relation to the register. It may be difficult for researchers to clearly identify all prospective uses of that data at the time of submitting a research proposal. As the NHMRC put it in their submission to the OPC review, 'by the time the questions are obvious, the opportunity to identify the person to whom the information relates or to gain consent to use the health information may be lost'.[186]

58.182 The OPC expressed the view that specific legislative provision should be made for the establishment of health data registers and that enabling legislation would bring the activity within the 'required or authorised by law' exception in NPP 10. The OPC stated that establishing such registers under specific legislation would offer 'the certainty, parliamentary oversight and scrutiny needed to sustain community confidence'.[187]

58.183 In addition to reiterating its concern that the *Privacy Act* does not provide an appropriate and effective regime for the establishment and use of health data registers, the NHMRC also stated in its submission to this Inquiry that:

> We consider that there is an urgent need for the development of a binding National Standard for the Establishment and Management of Health Information Registers and Data Linkage, addressing, amongst other issues, the collection, use (including linking) and disclosure of health information for research purposes, in the absence of consent.[188]

58.184 The AIHW agreed with the NHMRC that the existing provisions of the *Privacy Act* do not provide an appropriate regime for the establishment, maintenance and use of health registers. The AIHW was also of the view that such registers should

---

187 Ibid.

188 National Health and Medical Research Council, *Submission PR 114,* 15 January 2007. The Queensland Institute of Medical Research, *Submission PR 80,* 11 January 2006 expressed support for this approach.

be able to be developed and used without consent within a strict privacy and ethical framework.[189]

58.185 The Western Australian Department of Health expressed the view that:

> Guidelines are needed to assist HRECs with the application of the public interest test to research infrastructure projects such as long term data bases or biobanks. In these cases the benefits of the research cannot be effectively evaluated because particular research projects are prospective and have not yet been developed. The value of the research is therefore speculative. Factors relevant to evaluating the public interest in these applications should include the administrative procedures for managing and securing the data over the life of the data bank or biobank, the provision of information to participants, the criteria for access and the procedures for protecting privacy.[190]

58.186 DOHA was of the view that, where collection of personal information into a research database was to be mandatory and done without consent, the database should be established by specific legislative provisions.[191]

ALRC's view

58.187 In Chapter 57, the ALRC proposes that the *Privacy (Health Information) Regulations* make express provision for the collection, use and disclosure of health information without consent where necessary for the funding, management, planning, monitoring, improvement or evaluation of a health service where:

- the purpose cannot be achieved by the collection, use or disclosure of information that does not identify the individual;
- it is impracticable for the agency or organisation to seek the individual's consent before the collection, use or disclosure; and
- the collection, use or disclosure is conducted in accordance with rules issued by the Privacy Commissioner for the purposes of the regulations.[192]

58.188 This provision would allow the establishment of health information databases and registers in the health services context where it is necessary to collect identified information and it is not practicable to seek consent. Establishing a database under this proposed provision would not require approval by an HREC, although it would have to be done in accordance with rules issued by the Privacy Commissioner.

189 Australian Institute of Health and Welfare, *Submission PR 170,* 5 February 2007.
190 Department of Health Western Australia, *Submission PR 139,* 23 January 2006.
191 Australian Government Department of Health and Ageing, *Submission PR 273,* 30 March 2007.
192 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Proposal 57–9.

58.189 The ALRC notes that it will continue to be possible to establish particular databases or registers in the health services context or the research context by legislation, as has been done in the case of the New South Wales cervical cancer register. It will also continue to be possible to establish databases or registers on the basis of consent, including specific, extended or unspecified consent as set out in the National Statement.

58.190 Where such a database is to be established for research purposes and the information is to be collected, used or disclosed without consent, this will also be possible under the proposed research exceptions to the UPPs, but will require the approval of an HREC and will have to be done in accordance with rules issued by the Privacy Commissioner.

58.191 The ALRC notes the NHMRC's concern that it is sometimes difficult for an HREC to decide where the balance of interests lies in relation to an individual register, in the absence of specific information about the proposed future use of the register. Proposals 58–8 and 58–9, above, provide that HRECs consider the public interest in a proposed collection, use or disclosure of health information without consent where it is 'necessary to research', and be satisfied that the public interest in the activity outweighs the public interest in maintaining the level of privacy protection provided by the UPPs. The language used in the proposals is deliberately broad, referring to the review of 'activities necessary for research', rather than review of specific research proposals in order to allow the review of activities preliminary to research, such as the establishment of registers or sample acquisition, discussed below.

58.192 In addition, Proposal 58–3 suggests that the definition of research should include the 'compilation and analysis of statistics'. The establishment of a database or register for research purposes might also be characterised as the 'compilation of statistics' and reviewed on that basis.

58.193 The ALRC is of the view, however, that such databases or registers should not be established in the research context in the absence of legislation or ethical review. Both these mechanisms provide a degree of scrutiny and balancing of public interests that is appropriate where personal information, including sensitive information such as health information, is to be collected, used and disclosed without consent by researchers. The ALRC's view is that researchers proposing to establish databases or registers for research purposes should be able to describe the potential future uses and benefits of the database at some level and to provide an HREC with enough information to allow the HREC to consider whether the public interest in establishing the database outweighs the public interest in maintaining the level of privacy protection provided by the UPPs. If the public interest in establishing the database cannot be demonstrated, the ALRC is of the view that the UPPs should prevail. In these circumstances it may be more appropriate to proceed on the basis of consent.

58.194 The ALRC notes that it would also be possible to seek a PID from the Privacy Commissioner to allow the establishment for research of databases or registers, or a particular database or register. This process would also provide scrutiny and the opportunity to weigh the competing public interests.

58.195 The ALRC's view is that the rules to be issued by the Privacy Commissioner under the research exception to the UPPs should address the process by which an HREC might review a proposal to establish a database or register for research purposes, as well as the matters an HREC should take into account in considering the public interest balance. The ALRC is of the view that the rules should make clear that where a database or register is established without consent on the basis of HREC approval, that approval does not extend to future unspecified uses. Any future uses of the database or register for research would require separate consideration.

58.196 The rules to be issued by the Privacy Commissioner in relation to the collection of sensitive information without consent for research might include standards for the establishment and management of health information registers as suggested by the NHMRC. It would be open to the Privacy Commissioner to develop such standards in consultation with stakeholders.

Proposal 58–11 The Privacy Commissioner should address the following matters in the rules to be issued under the research exceptions to the proposed 'Collection' principle and the proposed 'Use and Disclosure' principle:

(a) the process by which a Human Research Ethics Committee should review a proposal to establish a health information database or register for research purposes;

(b) the matters a Human Research Ethics Committee should take into account in considering whether the public interest in establishing the health information database or register outweighs the public interest in maintaining the level of privacy protection provided by the UPPs; and

(c) the fact that, where a database or register is established on the basis of Human Research Ethics Committee approval, that approval does not extend to future unspecified uses. Any future proposed use of the database or register for research would require separate review by a Human Research Ethics Committee.

Using and linking information in databases

58.197 Databases of health information provide the opportunity to link data more effectively. Dr Roger Magnusson notes that:

> Future improvements in public health will increasingly depend on the more effective use of health data resources: in order to monitor trends in health status, to investigate the causal roles of 'lifestyle', environmental and other risk factors … to measure and improve the quality and performance of health care services and to develop 'best practice' for prevention and care. Epidemiologists and population health researchers, in particular, are keen to unlock the public health value of clinical data …[193]
>
> Identifying and investigating the relationships between risk factors and disease frequently requires researchers to accurately match longitudinal data relating to the same individual.[194]

58.198 The National Health Information Management Group Guidelines note that:

> Most [health registers] will be intended to facilitate further research, for example, through record linkage to other data sets or establishing a sample frame for a more detailed study of a health problem or for clinical trials.[195]

58.199 The National Collaborative Research Infrastructure Strategy (NCRIS) is an Australian Government program announced in 2004 with funding of $542 million to 'provide researchers with major research facilities, supporting infrastructure and networks necessary for world-class research'.[196] One major focus of the Strategy is population health and clinical data linkage:

> Australia is an international leader in the scope and extent of health-related data collected at the population level. With new technologies, the potential exists to integrate and link data sets, providing a valuable new resource for monitoring the health of the population and the effectiveness of health services, and for research.
>
> The NCRIS *Population health and clinical data linkage* capability aims: to enhance the linkage and integration of health-related data collected in Australia; to provide improved accessibility to these data for the research sector; and to support the development of improved data collection systems.[197]

58.200 The *Privacy Act*, like the National Statement, recognises that in some circumstances it is very difficult or impossible to conduct this kind of research in a way that complies with the IPPs and NPPs. As discussed above, the *Privacy Act* provides a mechanism to allow such research to go forward on the basis of approval by an HREC. The National Statement also requires that, where information in a databank is stored in identified or identifiable form, any research proposing to make use of the information be ethically reviewed.

58.201 In its submission to the OPC Review, the NHMRC noted that some HRECs appear to reject research proposals automatically where they involve data linkage of

197 Ibid.

health information without consent, apparently in the 'mistaken belief that such linkage is not ethically or legally acceptable'.[198] The revised National Statement makes clear that approval may be given to use such data even in the absence of consent, for example, where the research involves linkage of data sets and the use of identifiable data is necessary to ensure that the linkage is accurate.[199]

58.202 The NHMRC also highlighted a particular problem for researchers in gaining access to data registers in order to identify health consumers with specific characteristics relevant to a research proposal. This activity, described as 'sample acquisition', may pre-date the development of a formal research proposal and, in the NHMRC's view, is unlikely to be consistent with the IPPs or NPPs. The NHMRC considers, however, that sample acquisition is important and should be facilitated by the *Privacy Act*.[200]

Submissions and consultations

58.203 One stakeholder noted that the process of linking health information for research could be distinguished from the linking of health information for clinical purposes. Those delivering clinical care need to know the identity of the individual and to have access to that individual's health information. Researchers generally do not need to know the identity of the individual, simply that certain health information relates to the same individual. This can be achieved through processes whereby those who perform the linking of information do not have access to the health information and researchers have access to the linked health information but not the identity of the individual.[201]

58.204 In ALRC 96, the ALRC and AHEC considered the use of independent intermediaries to hold codes linking genetic samples or information with identifiers. ALRC 96 concluded that use of an independent intermediary (such as a 'gene trustee') is an effective method of protecting the privacy of samples and information held in human genetic research databases. The system maintains the privacy of samples and information, while allowing donors to be contacted if necessary. It ensures that anyone who obtains access to samples and information is unable to re-identify them without the authorisation of the gene trustee.[202] ALRC 96 recommended that:

> The NHMRC, in revising the National Statement in accordance with Recommendation 18–1, should provide guidance on the circumstances in which the

> use of an independent intermediary is to be a condition of: (a) registration of a human genetic research database; or (b) approval by an Human Research Ethics Committee of research involving a human genetic research database.[203]

58.205 In its submission to this Inquiry, the NHMRC expressed support for these conclusions and noted that they also applied more broadly to non-genetic research databases.[204]

58.206 In its submission, the CSIRO noted the development of the DLU in Western Australia and the New South Wales/ACT Centre for Health Record Linkage and noted that such units are likely to increase through the NCRIS Population Health and Clinical Data Linkage program.[205]

58.207 The DLU is a co-operative scheme between the Information Collection and Management Branch at the Western Australian Department of Health, the Centre for Health Services Research at the University of Western Australia, the Division of Health Sciences at Curtin University of Technology, and the Telethon Institute for Child Health Research. The DLU was established in 1995 to develop and maintain a system of linkages connecting health information about individuals in Western Australia. The DLU's website states that:

> These linkages are created and maintained using rigorous internationally accepted privacy-sensitive protocols, probabilistic matching and extensive clerical review. The core Data Linkage System consists of links within and between the State's seven core population health datasets, spanning 35 years. This is augmented through links to an extensive collection of external research and clinical datasets. Data can be requested for ethically approved research, planning and evaluation projects, which aim to improve the health of Western Australians.[206]

58.208 In its submission, the Western Australian Department of Health noted that the:

> DLU uses a two stage data linkage protocol that allows linkage infrastructure (or linkage keys) to be created using identifying information. Linkable datasets containing encrypted identifiers can then be provided to researchers by data custodians with minimal risk of re-identification or unauthorized linkage to another data source. The linkage infrastructure is updated and managed separately from any clinical or service information. The DLU acts as an intermediary similar to a 'gene trustee'. Ethics clearance is required for the creation of new linkages and use of the linkage infrastructure.[207]

58.209 The DLU has now entered into an arrangement with the Australian Government to allow access to Australian Government held aged care information as

207 Department of Health Western Australia, *Submission PR 139,* 23 January 2006.

well as information in the Medicare Benefits Scheme and the Pharmaceutical Benefits Scheme databases. The Western Australian Department of Health and DOHA have entered into a Memorandum of Understanding (MOU) formalising the arrangements and a 'best practice protocol' has been developed to address privacy concerns and other issues.[208]

58.210 In its submission,[209] however, the OPC expressed the view that the method employed by the DLU would not be consistent with NPP 10.4, which provides:

> If an organisation collects health information about an individual in accordance with subclause 10.3, the organisation must take reasonable steps to permanently de-identify the information before the organisation discloses it.

58.211 The OPC's view is based on the requirement that the information is 'permanently de-identified'. The maintenance of the linkage infrastructure means that information is not permanently de-identified even though a researcher takes reasonable steps to ensure that the information is not disclosed in a form that would identify individuals or from which individuals could be reasonably identifiable. The linkage infrastructure can technically be used to re-identify the information, although this could only be done with the cooperation of the DLU. In ALRC 96, the ALRC and AHEC concluded that maintaining the linkage infrastructure can be important in order to allow individuals to be contacted if research produces information that is of importance to the future health of those individuals.[210]

58.212 The Centre for Health Record Linkage is a co-operative scheme established by NSW Health, the Cancer Institute NSW, the Clinical Excellence Commission, the University of Sydney, the University of New South Wales, the University of Newcastle, ACT Health and The Sax Institute. The Centre, like the DLU, will create master linkage keys allowing researchers to link information about particular individuals in different databases in New South Wales and the ACT without being able to identify the individuals.

58.213 In its submission, the CSIRO discussed another data linkage model that offered researchers access to information within a privacy protective environment:

> In recognition of the widespread challenge of generating information from databases which include personal information and at the same time not compromising standards of privacy and confidentiality, CSIRO has been developing new privacy-enhancing technologies, including:

---

209 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

210 Australian Law Reform Commission and Australian Health Ethics Committee, *Essentially Yours: The Protection of Human Genetic Information in Australia*, ALRC 96 (2003), Ch 16.

- Health Data Integration™ (HDI™)—software which enables linking of patient records from different data repositories without requiring identifying information to be revealed to any other party. Any external release of the data through HDI™ is controlled by the data custodian, and can be stopped at any time.
- Privacy-Preserving Analytics™ (PPA™)—software developed for analysing confidential data without compromising confidentiality. The PPA techniques allow analysis of confidential raw data, but filter the outputs delivered to the researcher in order to protect the privacy of individuals and organisations and to respect data custodians' responsibilities not to release confidential information.[211]

58.214 There are also other models being used around Australia such as the Bio21: Molecular Medicine Informatics Model (MMIM) currently being piloted in Victoria, that aims to allow authorised researchers to conduct research 'confident that ethics, privacy, security and IP issues are addressed'. The Bio21: MMIM website states that the model will provide

> clinical research collaborators from universities, research institutes and teaching hospitals with ethical approval [with] access [to] secure, privacy protected research information, that spans multiple disease groups and multiple organisations.[212]

58.215 The Department of Human Services suggested that:

> There is little guidance in the *Privacy Act* for these issues, which leads to differing interpretations being made by organisations dealing with health registers. A set of minimum standards should be developed to facilitate effective/safe linkage processes to allow important research to be conducted, without identifying particular individuals where no consent has been obtained. Medicare Australia believes the example presented by the Cross-Jurisdictional Linkage of Administrative Health Data project, underpinned by an MoU between DoHA and WA Department of Health, could be a good model on which to base the set of minimum standards.[213]

58.216 In relation to sample acquisition, that is, the examination of health information databases to identify health consumers with characteristics relevant to a possible research proposal, the OPC noted that the research exceptions in NPPs 2 and 10 cover activities *necessary* for research, and expressed the view that sample acquisition was such an activity and would be covered by the exceptions. The OPC noted, however, that sample acquisition might not be covered by the 'conduct of medical research' exception to the IPPs.[214]

ALRC's view

58.217 The ALRC agrees that 'sample acquisition' is an activity necessary for research and should be supported by the provisions of the *Privacy Act.* The ALRC

---

211 CSIRO, *Submission PR 176,* 6 February 2007.

212 Melbourne Health, *Molecular Medicine Informatics Model* (2007) <mmim.ssg.org.au/> at 1 August 2007.

213 Australian Government Department of Human Services, *Submission PR 136,* 19 January 2007.

214 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

notes the OPC's advice that this activity is allowed under the existing provisions of NPPs 2 and 10. The ALRC's view is that the proposed research exceptions to the 'Collection' principle and the 'Use and Disclosure' principle set out in Proposals 58–8 and 58–9 clarify the position, as the proposed exceptions apply to 'activities necessary for research'.

58.218 The ALRC is of the view that the rules to be issued by the Privacy Commissioner under the research exceptions to the UPPs could address the process by which an HREC might review a sample acquisition proposal, as well as the matters an HREC should take into account in considering the public interest balance.

58.219 Proposal 58–8, above, also includes a suggested amendment to the wording of NPP 10.4, so that the provision no longer requires that reasonable steps be taken 'to permanently de-identify' information before it is disclosed. The ALRC's view is that it is sufficient to require agencies and organisations that collect sensitive information under the research exception to the proposed 'Collection' principle to take reasonable steps to ensure that the information is not disclosed in a form that would identify the individual or from which the individual would be reasonably identifiable.

58.220 An amendment of this kind would allow researchers to access information through independent intermediaries without requiring the destruction of the linkage infrastructure. As noted above, however, it will be necessary to consider the arrangements established between data custodians, intermediaries and data recipients. If appropriate arrangements are put in place, for example, intermediaries are sufficiently independent and data recipients only receive information that does not identify individuals, the ALRC's view is that the information held by the data recipient will be adequately protected for the purposes of the *Privacy Act*.

58.221 There are a number of different models being adopted around Australia to allow researchers to have access to and to link personal information in ways that do not identify individuals. The ALRC has not formed a view that one model should be preferred over another. It is possible that each of the various models provide sufficient protection to ensure that the schemes they support comply with the *Privacy Act*. That will depend, however, on the details of the various models, their technical specifications and their governance arrangements.

58.222 Some high level guidance on these issues may be included in the rules to be issued by the Privacy Commissioner under the proposed research exceptions to the UPPs, but in the final analysis whether a particular model meets the requirements of the *Privacy Act* will have to be decided on a case-by-case basis. These issues will need to be considered by HRECs in reviewing proposals to collect, use or disclose personal information without consent.

58.223 The ALRC is also of the view that agencies or organisations seeking to establish systems or infrastructure to allow the linkage of personal information for research purposes, should consult the OPC to ensure that the systems or infrastructure they are developing meet the requirements of the *Privacy Act*.

Proposal 58–12 The Privacy Commissioner should address the following matters in the rules to be issued under the research exceptions to the proposed 'Collection' principle and the proposed 'Use and Disclosure' principle:

(a) the process by which a Human Research Ethics Committee should review a proposal to examine a health information database or register to identify potential participants in research; and

(b) the matters a Human Research Ethics Committee should take into account in considering whether the public interest in allowing the examination of the health information database or register outweighs the public interest in maintaining the level of privacy protection provided by the proposed UPPs.

Proposal 58–13 Agencies or organisations developing systems or infrastructure to allow the linkage of personal information for research purposes should consult the Office of the Privacy Commissioner to ensure that the systems or infrastructure they are developing meet the requirements of the *Privacy Act*.

Privacy education for children and young people 1748

Introduction

59.1 During the early stages of this Inquiry, the ALRC was told anecdotally that young people think of privacy differently from older generations. If this is true, there may be consequences for the development of proposals for privacy that meet the current and future needs of Australians. It was therefore important that the Inquiry make some effort to capture the attitudes to privacy of Australian children and young people, highlight the issues about which they have concerns, and consider the implications for the broader reform of privacy law.

59.2 This chapter will set out the methods the ALRC used to consult with children and young people, and the findings of those consultations and other research. This

information has led to a number of proposals, the first of which is the need for a longitudinal study of the privacy attitudes of Australians, including young people, to underpin future policy making in this area.

59.3 One of the areas of concern that arose during consultations and in research was the participation of young people in online social networking. The ALRC has identified this as an area where improved education and awareness of privacy issues will assist young people to make appropriate choices in the online environment. The ALRC has made a number of proposals aimed at achieving this outcome.

59.4 Another area of concern is the taking of photographs and other images and, in particular, the online publication of photographs and other images. This issue raises problems of a criminal nature as well as concerns regarding invasion of privacy. With a focus on the privacy aspects of the issue, this chapter canvasses a number of reform options, but does not make any specific proposals relating to the taking and publishing of photographs and other images. Instead, the chapter links to discussion and proposals in other chapters which the ALRC considers will provide the most effective remedies. Such proposals include a statutory cause of action for invasion of privacy, and the consideration of using take-down notices to remove online content that is considered to be an invasion of privacy.

59.5 In this chapter, the term 'child' refers to a person under the age of 13. The term 'young person' encompasses people aged 13 to 25. Chapter 60 deals specifically with issues about individuals under the age of 18 making decisions in relation to the *Privacy Act 1988* (Cth).

Generational difference

59.6 In the past few years the phenomenon of Generation Y, the label given to the generation of people born between 1980 and 1994, has generated a great deal of discussion. As they enter adulthood and the workforce, social researchers are trying to understand the psyche of this group of young people. While not privacy specific, this research can help to develop an understanding of how this group might perceive privacy issues in the wider context of their experiences, needs, and ambitions.

59.7 Generational definitions are, by necessity, broad brush generalisations. There always will be individuals who do not fit the stereotype merely because of they were born in a particular year. Generational definitions, however, may be useful to gain a sense of the key social drivers and expectations across certain sections of the population.

Table 59.1: Australia's Generations[1]

Description	Born	Age	Pop'n	(% of Pop'n)
Builders	Before 1946	62+	3.5m	17%
Boomers	1946–1964	43–61	5.3m	26%
Generation X	1965–1979	28–42	4.4m	21.5%
Generation Y	1980–1994	13–27	4.2m	20.5%
Generation Z	1995–2009	Under 13	3.1m	15%

59.8 Generations traditionally have been defined by intervals of time between the birth of a parent and birth of the offspring. Social researchers today, however, focus on cohorts of people born and shaped by a particular span of time, with demographical and sociological definitions. When carrying out social research in Australia, McCrindle Research has used Australian Bureau of Statistics data to map birth rate rises and declines to mark distinct generational definitions. Social changes and trends affecting these cohorts provide context for the generational definition.

59.9 Some of the key characteristics often attributed to Generation Y are as follows:[2]

- While older generations have adapted to new technology, Generation Y lives and breathes the internet, email, instant messaging and mobile technologies that have revolutionised communications. Generation Y have never known a world without these conveniences, and their social world and expectations are integrated with the existence of such technology.

- Having experienced (either themselves or through their friends) split households and working parents, social networks of friends have become the most important element of the lives of Generation Y, and they keep in touch constantly using technology.

- Generation Y lives in a global village, where you can communicate across the globe through a variety of instantaneous media, and is considered the most embracing, non-racist, non-gender biased generation yet.

---

1 Table 59–1 is based on a similar table in McCrindle Research, *New Generations at Work: Attracting, Recruiting & Training Generation Y* (2006), 8. In the United States, the Builders are often referred to as the 'Silent Generation'.

2 See, eg, Ibid; R Huntley, *The World According to Y: Inside the New Adult Generation* (2006); N Howe and W Strauss, *Millennials Rising: The Next Great Generation* (2000).

- Generation Y have very high levels of optimism, high expectations and confidence they will achieve those expectations. This can be compared to Generation X which is viewed as being apathetic and pessimistic.

- On the back of high self confidence, Generation Y is considered fickle and demanding, and willing to move quickly to take up new opportunities.

59.10 A common counter to generational research is that many of the attributes applied to young people at any given time are really factors associated with youth itself, not the particular generation. For example, the dependence on friends as social networks is a normal part of the teenage years, but it is said that Generation Y are taking it with them into the adult years and honestly believe that those friends will remain friends for life. Generation X was labelled by their elders as apathetic and pessimistic, or 'slackers', and such behaviour was seen as a normal part of teenage development. It is said that the difference between Generation X and Baby Boomer attitudes has persisted as Generation X has come to full adulthood. In contrast, teenage Generation Y is considered a 'selfless' generation, with a strong community service ethic.[3]

59.11 Australian social researcher Hugh Mackay has contrasted the attitudes of 19 year olds in 1980 and 2000, finding a distinct attitude shift from pessimism to optimism.[4] The 1980 cohort were pre-occupied with the state of the world, the threat of nuclear annihilation, widespread terrorist activity, growing economic dislocation and recurring industrial trouble, while the 2000 cohort were utterly confident about their own, and the world's, long-term survival. Even after the events of 11 September 2001, the 2002 Bali bombings and the 2006 London bombings, Dr Rebecca Huntley suggests that today's young adults have a sense of optimism and confidence and are either more capable of facing the world's problems or more effective at ignoring them.[5]

> In Australia, Generation Y's anger around [September] 11 was less about the event itself than the reaction of the United States government and its allies. Many young adults have reacted negatively to the media hype around the tragedy and the relentless and insensitive use of images of death and destruction to sell papers and increase TV ratings. And whilst this was Generation Y's first exposure to international terrorism on a grand scale, most Yers were aware that in so many other places around the world this kind of stuff happens all the time. For many of them now, September 11 intensified their desire to enjoy life right now.[6]

59.12 While commentators can make generalisations about the attitudes of Generation Y, it remains unknown whether those attitudes are wide-spread and will remain with these young people as they enter their late 20s, 30s and 40s and experience different stages of their lives. What can be said is that their experiences will be

different from those of generations before because they have started from a different place in space and time.

Attitudes of young people

Australian research

59.13 The ALRC is not aware of any available Australian research which focuses on the attitudes of young people to privacy.[7] However, a number of general surveys on attitudes to privacy provide some indication of how the 18–24 age group perceive privacy.

59.14 The Office of the Privacy Commissioner (OPC) has conducted three surveys of community attitudes on privacy, but all of these involved only adult respondents.[8] The 2001 and 2004 surveys, however, did separate data by age groups. The following sets out some of the key points from the 2004 survey:

- Young people were as likely as the rest of the adult population to claim they know very little about their rights to protect their personal information—but the percentage of this age group making the claim dropped significantly from 52% in 2001 to 36% in 2004.[9]

- Young people were less likely than other age groups to claim to be aware of federal privacy laws and the federal Privacy Commissioner.[10]

- Young people were less concerned about providing financial details than older respondents (30% of 18–24 group compared with 42% of 35–49 group and 45% of 50+ group), but much more concerned about providing contact details such as home address (18% of 18–24 group compared with 6% of 35–49 group and 4% of 50+ group) or email address (7% of 18–24 group compared with 5% of 35–49 group and 3% of 50+ group).[11]

- Young people were much more likely to provide personal information to an organisation in order to receive a discount or a more efficient and personalised service. The percentages dropped steadily through the age groups. For example,

---

7 An online survey aimed at young people was commenced in June 2007 by the United Nations Youth Association in South Australia, the Flinders Law Students Association, and the Adelaide Law Students Society. Outcomes of the survey will be provided to the ALRC when available.

8 Roy Morgan Research, *Community Attitudes Towards Privacy 2004 [prepared for Office of the Privacy Commissioner]* (2004); Roy Morgan Research, *Privacy and the Community [prepared for Office of the Federal Privacy Commissioner]* (2001). A similar survey was conducted by Roy Morgan in 1999.

9 Roy Morgan Research, *Community Attitudes Towards Privacy 2004 [prepared for Office of the Privacy Commissioner]* (2004), 11.

11 Ibid, 25.

to obtain a personalised service 66% of the 18–24 group indicated they would provide the personal information, while only 32% of the 50+ group agreed.[12]

- While young people were as likely as other age groups to agree to allocation of a health number to track health services, they were more likely than older age groups to feel inclusion of health records on a database should be voluntary.[13]

- Young people were much more likely to have engaged in online behaviour that can protect privacy, such as providing false information when filling out a form online, using a spam filter or using temporary email accounts.[14]

59.15 A 2005 survey of the use of the internet and some other forms of technology by Australian children and young people, particularly those aged 8 to 13, is also of interest.[15] The survey found that, while Australian children are not accessing the internet as frequently as children in Hong Kong or the United Kingdom, the frequency of use has increased. Thirty seven per cent of children with a home internet connection reportedly log on daily, and a further 34% log on at least two or three times a week. The survey also showed that frequency of use increased with age; and that girls and older children were more likely to use the internet as a communication resource (for email and instant messaging) than boys and younger children—who were more focused on access for entertainment purposes (games, websites, music).

59.16 While not focused on privacy, the survey does indicate that large numbers of Australian children and young people are making regular use of online technology, in some cases with limited or no supervision. A more recent 2006 survey by the Australian Bureau of Statistics echoes the significant use of the internet by children aged 5 to 14 years. Sixty five per cent of this age group access the internet, with 73% of the online group accessing it more than once a week.[16]

Overseas research

59.17 One example of overseas research focusing on attitudes of young people to privacy is a 2005 survey by the Hong Kong Federation of Youth Groups and the Hong Kong Office of the Privacy Commissioner for Personal Data which included respondents aged 15 to 29.[17] There is no comparative survey for older people. While it was a limited survey, with a particular emphasis on online transactions, the results indicate that young people in Hong Kong appear to have similar attitudes to privacy as

12 Ibid, 36–37.
13 Ibid, 48–49.

17 Hong Kong Federation of Youth Groups, *2005 Survey of Youth Attitudes and Perceptions Towards Personal Data Privacy* (2005).

young people in Australia—that is, they have an awareness of privacy law, have concerns about certain privacy issues, but many also consider certain types of initiatives, such as a patient medical records database, to be worth participating in. Of particular interest in the survey were two questions regarding the taking of photographs by strangers. 14.4% of respondents admitted to having taken a photo of a stranger without first asking permission, and 21.3% disagreed or strongly disagreed with the suggestion that taking a photo of a person in a public place without permission is an invasion of personal data privacy rights.[18] There was no age breakdown of responses to these questions to see if responses differed according to age.

59.18 Privacy issues for young people have also been addressed in the United States as part of a broader study of 'the lives of young Americans as they make the transition to adulthood'.[19] Surveying 1,021 adults aged 18–24 years in April 2006, the researchers reported that the respondents generally valued privacy, but evenly weighed it with the ease and convenience the internet provides.[20] Seventy-eight percent indicated that they had a personal website, webpage or blog and regularly participated in online communities such as MySpace or Facebook. Those who did not belong to online communities were more likely to place a higher value on privacy over convenience.

59.19 The research suggested that Generation Y balances privacy and convenience concerns by taking personal responsibility for safe behaviour and self-censoring the type of personal information made available online. At the same time, many from older generations would blanche at the level of detail and the types of information young people feel comfortable about sharing, including 16% posting their home address online and 78% posting photos (often unflattering or 'sexy' photos). The concerns of young people in the online environment appeared to be more closely linked to identity theft and receiving spam than stalking and harassment (although the latter worries their parents).

59.20 A more focused survey of United States teenagers aged 12 to 17, and their parents, was conducted in 2006 to examine how teenagers manage their online identities and personal information when using online social networks.[21] Some of the key findings of the survey were:

- 93% of American teenagers use the internet (increased from 87% in 2004), and 55% of them have online profiles.

21 A Lenhart and M Madden, *Teens, Privacy & Online Social Networks* (2007) Pew Internet & American Life Project.

- 66% of the teenagers with online profiles indicate they limit access to the profile in some way.

- 82% of teenagers with online profiles include their first name, and 79% have photos of themselves. Varying percentages include information such as the name of the city or town (61%), the name of their school (49%), email address (29%), last names (29%) and mobile phone numbers (2%).

- Boys are more likely than girls to post false information, which can be for privacy reasons but also to be playful or silly, and older teens are more likely than younger teens to disclose more personal information.

- 41% of teenagers accessing the online environment believe their online activity is monitored by their parents (an increase from 33% in 2004), while 65% of parents reported monitoring of their teenager's online activity.

59.21 One of the key questions the survey tried to answer was, 'Are today's teens less concerned about their privacy because the internet gives them so many opportunities to socialize and share information?'. The researchers found that

> there was a wide range of views among teens about privacy and disclosure of personal information. Whether in an online or offline context, teenagers do not fall neatly into clear-cut groups when it comes to their willingness to disclose information or the way they restrict access to the information that they do share. For most teens, decisions about privacy and disclosure depend on the nature of the encounter and their own personal circumstances. Teen decisions about whether to disclose or not involve questions like these: Do you live in a small town or big city? How did you create your network of online 'friends'? How old are you? Are you male or female? Do your parents have lots of rules about internet use? Do your parents view your profile? All these questions and more inform the decisions that teens make about how they present themselves online. Many, but not all, teens are aware of the risks of putting information online in a public and durable environment. Many, but certainly not all, teens make thoughtful choices about what to share in what context.[22]

59.22 There also appear to be differing standards depending upon the type of privacy under consideration. In a United States poll, the government's policy of eavesdropping on suspected terrorists' phone calls and emails without a warrant was considered wrong by 56% of 18–29 year olds (compared to 53% of 50–64 year olds who said it was the right thing to do).[23] Those young people criticising government surveillance include some who otherwise share intimate details in the online environment. It may seem illogical to be blasé about one kind of privacy but adamant about protecting another. The distinction, however, seems to be based upon control of the flow of

information. According to one young adult, 'what I get concerned about is when that control gets compromised without my consent'.[24]

ALRC consultations with young people

59.23 Given the paucity of literature on the attitudes of Australian young people to privacy, the ALRC determined there is a need to see if similar attitudes to those identified overseas prevail in Australia. The usual consultation and submission process undertaken by the ALRC does not preclude the participation of young people. Experience indicates, however, that young people do not traditionally engage in these processes without specific prompting. To complement other consultation initiatives undertaken in this Inquiry to reach a wider cohort of Australians,[25] the ALRC developed a number of processes particularly aimed at young people.

Talking Privacy website

59.24 In early 2007, the ALRC developed a website called 'Talking Privacy', which is accessible from the ALRC's home page. Designed specifically to appeal to young people, the website contains information about the Privacy Inquiry, links to further information about privacy law, and encourages young people to send in comments to the ALRC about their privacy issues or experiences. The site also contains information aimed particularly at teachers and students considering law reform or privacy as part of a school curriculum.

59.25 The aim of the Talking Privacy website was to engage young people using a familiar and well-used medium. As at the end of July 2007, the front page of the website had received 3,277 hits. Only a small number of young people had taken the further step of submitting comments for consideration by the ALRC, but these were insightful and of interest to the Inquiry. One young submitter to the Inquiry said:

> Generation Y may be optimistic, but to say care-free is a stretch. We are concerned that people in authority may abuse our rights in regards to privacy. Concerns about privacy for people in my age bracket is primarily in relation to our developing autonomy from parental control. Thus issues such as medical problems, school issues, social issues, sexual matters, and especially issues involving police, are all privacy issues from Generation Y. I am not overly concerned about the government and privacy, it is more a matter of privacy in relation to my autonomy from my parents, and other authority figures, eg teachers.[26]

59.26 As a further step, an age indicator box was placed on all pages which allow people to submit a comment to the Privacy Inquiry via the ALRC websites. While

---

24 Ibid.
25 See the description of all consultation processes undertaken in this Inquiry in Chapter 1.
26 J Boggs, *Submission PR 245,* 8 March 2007.

optional, this indicator has been useful to determine if there is a difference between comments depending upon the age bracket of the submitter.

Youth workshops

59.27 As noted in Chapter 1, the ALRC held a number of public forums as part of the Inquiry. In addition, in order to ensure that the views of young people were captured as part of the consultation process, the ALRC developed a workshop format for young people aged 13 to 25. The workshop provided young people with an opportunity to discuss general issues about privacy, and to provide comments and views in relation to set case studies which raise privacy issues in contexts relevant to young people.

59.28 A trial youth workshop was conducted in Sydney with a group of Year 10 and 11 students from Dubbo College Senior Campus. Youth workshops were then conducted in Perth, Brisbane and Hobart.[27]

59.29 The two hour workshops varied in size from five to 20 participants, with a total of 44 participants. The age of the participants ranged from 15 to mid-20s. The workshops were generally well received by the participants and were effective in involving young people and capturing their views on the relevant issues. The ALRC intends to conduct further youth workshops following release of this Discussion Paper.

59.30 The outcomes of workshops held to date have indicated a consistency with the research and literature in this area. Young people are aware of privacy issues and have certain concerns about their privacy. The issues of concern to them, however, may not necessarily coincide with the issues of concern to older Australians. As could be expected, most of the issues of concern centred around their experiences, and focused on issues directly affecting them.

59.31 The issue of privacy of personal space was raised a number of times by young people. This mostly related to searches of bags and lockers, privacy within the home, and privacy of meeting places such as religious halls. Issues about public surveillance were rarely raised. However, as the ALRC Privacy Inquiry is focused on personal information rather than personal space, the personal space issues were not fleshed out further in the workshops.

59.32 The type of information which young people considered to be sensitive were consistent with the current definitions in the *Privacy Act*, including information about sexual orientation, political views, ethnicity and religion. Health information, and in particular mental health information, and criminal records were also considered to be sensitive personal information.

---

27 The Perth workshop was supported by the Western Australian Office for Children and Youth; Brisbane was supported by the TC Beirne School of Law, University of Queensland, and Hobart was supported by the Commissioner for Children, Tasmania.

59.33 The focus of much of the discussion on privacy was the ability for the individual to choose what information about themselves they should disclose, and to whom. There was also an assumption that disclosure of personal information to a person or body did not mean that the person or body could use the information for a different purpose. This assumption is consistent with the existing privacy principles and the proposed Unified Privacy Principles. It is also consistent with past consultations conducted by the New South Wales Commission for Children and Young People.[28] The Commission provided a quote from one young person which sums up a typical reaction to privacy: 'Privacy matters because it is up to me whether or not I share information and who I share it with'.

59.34 At the same time, most young people accepted that there are many situations where it is necessary to disclose information for a greater public good—including to employers, police and government. Young people considered, however, that there should be clear rules and limitations on when mandatory disclosure can take place. There were a range of views as to the appropriate extent of the limitations.

59.35 The issue that raised the most concern was the disclosure to parents and others of health information of a person under the age of 18. There was a sophisticated understanding of the competing issues: that is, the need to provide confidential medical advice to young people; the need to ensure the ongoing safety and well being of the young patient; the interests and responsibilities of parents; and the professional obligations of the medical professional. Generally, however, there was an expectation that any young person who sought medical advice on their own should be entitled to confidentiality on the part of the medical professional. There was general agreement that any decision by the medical professional to disclose the information to parents, other medical professionals, or other people, should first be discussed with the patient.

59.36 Young people also expected confidentiality from the counselling profession, including school counsellors. There was strong support for the proposition that counselling services should be confidential, except in very limited circumstances where it was necessary to disclose information for the safety and wellbeing of the young person. A number of young people indicated that their understanding and experience of school counselling services is that they are not confidential.

59.37 Another prominent issue in discussions was the taking, and online posting, of photographs. Many young people had personal experience of such situations, and most had practical responses to the issues. In general, young people thought that it was good practice to obtain consent before taking a photograph of a person and posting it on the internet. Where the photographer is working for financial gain, they should be required to get consent and 'share' some of the financial gains with the person in the

28 NSW Commission for Children and Young People, *Submission PR 120,* 15 January 2007.

photograph. It was accepted, however, that it is impossible to get the consent of every person in every photograph, particularly where the photograph captures a number of people in a public place. Most considered the rules which are in place in certain public spaces which limit or prohibit the taking of photographs, such as swimming pools and swimming carnivals, to be sensible.

59.38 It was accepted that it is often difficult to stop individuals from posting unauthorised photographs. Some young people went so far as to say there is implied consent—if you pose for a photograph it may be posted on the internet. This suggestion gets a negative reaction from most older Australians, and is indicative of the way in which young people are developing different norms around the use of the internet for communication purposes. Despite acknowledging difficulties with archiving of sites and permanent removal of website content, most young people considered that an individual should be able to have a photograph removed from a website if they did not consent to its posting. This was seen as a suitable remedy, and more practical than putting laws in place to prevent the posting.

59.39 One noticeable feature of the youth workshops and the discussion concerning the online posting of photographs was the varying levels of understanding of the ramifications of online posting. While the younger participants were the most likely to have experience of posting, or to have been the subject of posting, their understanding of the possible privacy implications for themselves or their friends was more limited.

59.40 Other issues which have raised concerns among older audiences were not seen by young people as controversial. Government access to school records to verify compliance with Youth Allowance requirements was seen by most as appropriate and fair. Covert collection of personal information by website operators that is later used to send spam was seen as annoying but an everyday part of life, and more open to practical, technology-based solutions than legal remedies. In one workshop the proposed Health and Social Services Access Card was considered appropriate, although further detail around the limitations on how information on the card can be used was considered desirable. While some participants were concerned about the reach of recent anti-terrorism legislation, many others considered it appropriate and did not consider their own freedoms had been affected.

Submissions and other consultations

59.41 The ALRC made other efforts to include young people and consult with representatives of children and young people as part of its general consultation processes. Roundtables were held in Sydney and Melbourne with key representatives of children and young people's interests, with the Sydney roundtable also attended by a number of young people. Meetings were held with each of the children's commissioners in New South Wales, Queensland and Tasmania, and submissions were received from a number of youth representative bodies. Many aspects of the submissions and consultations focused on issues around decision making by individuals under the age of 18, and are addressed in detail in Chapter 60. A broader

range of submissions dealt with the particular issue of taking and online posting of photographs, and these are examined in more detail below.

59.42 The ALRC did not include general questions in IP 31 about young people's perceptions of privacy, and submissions did not address this broader issue. The Youth Affairs Council of Victoria (YACVic) indicated that while young people's privacy is protected well enough by law, effective protection relies on a range of factors.

> The issues that impact on the actual level of protection that an individual receives could include a lack of personal or community understanding about young people's rights to privacy; difficulties in accessing complaints mechanisms and the power imbalance between a young person and 'professional' often inherent in a situation in which a young person's personal information is being collected.
>
> YACVic believes that young people's privacy is protected well enough in law, but that a range of other measures can be put in place or initiatives taken in order to ensure young people enjoy the highest level of protection and are not disadvantaged.[29]

59.43 One of the areas on which the ALRC received comment in submissions and consultations was the potential for young people's use of technology to have an impact on the privacy of others. For instance, a number of Australian schools have recently clamped down on online posting of inappropriate material, including video footage of fights involving school pupils.[30] The ALRC heard complaints about pupils posting pictures and comments on sites encouraging sexual assaults against teachers.

59.44 Another major concern is bullying using technology which, because of the ability to have constant communication at any time of the day or night, has the potential to be even more serious than face to face bullying.[31] A United States survey has indicated that one in three teenagers using the internet say they have been targets of a range of annoying and potentially menacing online activities, including receiving threatening messages, having private emails forwarded without consent, having embarrassing pictures posted without permission, or having rumours spread about them online.[32]

32 A Lenhart, *Data Memo: Cyberbullying and Teens* (2007) Pew Internet & American Life Project.

59.45 Mobile phones, which are used by a very high proportion of children and young people, often without parental supervision,[33] are considered to pose a particular privacy risk by exposing young people to non-stop contact. As the newer third generation (3G) handsets also provide access to the internet, there are further opportunities for children and young people to be exposed to competitions, quizzes and direct marketing strategies.[34] The incorporation of cameras and video cameras into mobile phones was also raised as a concern due to the ability to 'hide' the action of taking an image behind the accepted behaviour of holding a mobile phone to make a call or send a message.

59.46 The ALRC did not ask a question about online social networking in IP 31. This issue has, however, continued to receive attention in the media. The growth of Australian participants in online social networking led the ALRC to explore the issue in consultations with young people. As a result, the ALRC has decided there are privacy concerns around the practice, and that these need further consideration.

Online social networking

Privacy concerns about online social networking

59.47 The past few years has seen an explosion of academic papers, media articles and online postings discussing the phenomenon of social networking. Social networking sites—such as MySpace, Facebook and YouTube—provide a forum for young people to promote themselves, and share their thoughts and experiences with like-minded young people—whether located next door or on the other side of the globe. Profiles on such websites often include photographs and video images as well as text.

59.48 On the one hand, there is a recognition that the explosion in the use of social networking sites is part of a cultural shift in the way in which people interact with others. Until recently, the internet has been used primarily as a source of information, but is now used by many, and particularly by young people, as a means of communication and an important part of social relations.[35]

59.49 On the other hand, there are concerns that participants in online social networking may be exposing themselves to dangers such as commercial exploitation and sexual predation. Of particular concern to many is the disclosure of participants' personal information to a worldwide audience, and whether participants fully understand the consequences of this disclosure. All of these concerns are heightened

---

33 A 2005 survey reported that mobile phone use was increasing in Australia, with one quarter of children aged 8 to 13 using a mobile phone regularly, and one third of parents of children in this age group reporting total lack of involvement with their child's use of mobile phones: Netratings Australian Pty Ltd, *kidsonline@home: Internet Use in Australian Homes [prepared for Australian Broadcasting Authority and NetAlert Limited]* (2005).

35 J Wyn and others, *Young People, Wellbeing and Communication Technologies [Prepared for Victorian Health Promotion Foundation]* (2005) Youth Research Centre, University of Melbourne.

when discussing children and young people as participants in online social networking, due to their more limited capacity to understand the consequences.[36]

59.50 It should also be noted that not all online social networking is done by young people. MySpace Australia has three million members, 50% of whom are over the age of 25.[37] A survey of 2,000 working adults in the United States indicated that just under half participated in online social networking, and over half of these participants were over the age of 35.[38] Many companies and individuals seeking to promote themselves in the online world now participate in key online social networks. For example, following the lead of presidential candidates in the United States, Australian politicians are being encouraged to develop their own MySpace profiles to engage better with younger voters.[39] There is also a growing number of social networking sites aimed at children as young as 6 or 7.[40]

59.51 There is, however, evidence to suggest that young people use the social networking sites differently to older people. In 2007, market research company YouGov undertook research in the United Kingdom on behalf of social network Viadeo to find out what kind of personal information people place online.[41] The results of the survey of adults showed that those in the 18–24 year old group were more likely to post information about themselves than those in older age groups. Interestingly, 54% of 18–24 year olds indicated that others had posted information about them with or without their consent. This all contributes to what is called a person's 'NetRep', a personal online brand, that others contribute to whether we like it or not.

59.52 Online social networking throws up two issues for consideration. The first is young people choosing to disclose information about themselves. This chapter focuses on this issue. The second issue surrounding personal information on social networking sites is the ability for third parties to post, alter or remove personal information about another. This issue is discussed below in relation to photographs, and also in Chapter 8.

Choosing to disclose

59.53 Many commentators (and parents) have lamented the fact that young people post large amounts of detailed personal information about themselves on websites. This is the first generation to have their 'sexual adventures, drug taking, immature opinions and personal photographs … indelibly recorded electronically'.[42] It has become a typical way in which young people can explore their identities, and regularly post personal musings, philosophies and opinions as well as more prosaic descriptions of everyday events and the latest snapshots of themselves and friends.[43]

59.54 This does not, however, mean that young people do not value privacy. As has been found in many surveys and the ALRC's own consultations, young people do value the right to privacy but they also value the right to choose to disclose information about themselves. A recent United States study of teen use of social networks, which focused on privacy issues, found that many teenagers appear more privacy savvy than commentators may have thought.

> Most teenagers are taking steps to protect themselves from the most obvious areas of risk. The new survey shows that many youth actively manage their personal information as they perform a balancing act between keeping some important pieces of information confined to their network of trusted friends and, at the same time, participating in a new, exciting process of creating content for their profiles and making new friends. Most teens believe some information seems acceptable—even desirable—to share, while other information needs to be protected.[44]

59.55 As noted above, the ability to control the disclosure of personal information is seen as an important element of the respect for privacy. This concern about control is reflected in the reaction of members of the popular social networking site Facebook when the site introduced a feature automatically broadcasting changes made to a member's profile.[45] Facebook is predicated on controlling the privacy of your profile by determining who can see your profile, ie, who can be your 'friend'. Even though the changes to member profiles were only automatically broadcast to those listed as 'friends', there was a huge backlash from members who threatened to boycott the site. Facebook hastily added controls so that members can choose to hide profile changes. It seems that young people will consider what information they share depending upon the rules of the community, and changing the rules of the community, or changing the membership of the community, may lead to a breach of privacy. Facebook's chief privacy officer, Chris Kelly, has been quoted as saying that the classic notion of the

right of privacy as the right 'to be left alone' has changed to the notion of 'I want control over my information'.[46]

59.56 Some have noted that, while the right to choose to disclose is important, there is also a need to be able to change your mind.[47] The medium in which social networks are contained, however, does not make it easy to change your mind, and we are only just beginning to see what some of the consequences for later life choices might be.

> The potential harm from out-of-date, conflicting and inaccurate information on the Web is amplified by the fact that internet search engines such as Google store or cache Webpages which makes the information available online even after the author has removed the information in question. This makes it very difficult to remove or correct wrong or compromising information, which could be harmful to a person's career chances.[48]

59.57 The 2007 survey by YouGov, noted above, also asked recruitment managers and directors whether they are using personal information on websites to inform recruitment decisions. While only 18% of the respondents indicated they had found information online about a prospective employee, 59% of those said it had impacted on their decision whether to employ the person, including 15% having a negative impact as a result of the online information.[49] Media stories are beginning to emerge of people who have lost job opportunities as a result of their earlier online disclosures,[50] and some of the young people consulted by the ALRC reported disciplinary outcomes as a consequence of their online activity.

59.58 There are also safety concerns about disclosing personal information in a public space. Just as chat rooms have been a concern in the past, there are now concerns that social networking sites are being used by sexual predators. Two New South Wales Members of Parliament have proposed laws banning convicted sex offenders from internet chat rooms and social networking sites, although the mechanism for achieving this is still under consideration.[51] Young people are generally well rehearsed on the 'stranger danger' elements of online activity in chat rooms, but the ALRC consultations indicated that not all young people have got the message that the world of social networking is a public one, and holds safety traps and pitfalls.

Regulatory options

59.59 Concerns about the dangers and possible adverse consequences for children and young people using social networking sites has led to consideration by some legislators and commentators of appropriate regulatory options to eliminate, or at least alleviate, the concerns.

59.60 It should be noted that many of the social networking sites already build in some age restrictions as a condition of joining their online network. For example, the most popular social networking site, MySpace, requires users to be aged 14 or over. The terms and conditions specify that profiles of members believed to be under 14 years of age may be deleted,[52] and many of the tips to users and parents encourage reporting of under-age profiles. Facebook was originally only open to high school and college students, but is now open to any high school or college student aged 13 to 17, or any person over the age of 18. The terms of entry to the site specify that profiles of under-age users may be deleted.[53]

59.61 As described in Chapter 60, the *Children's Online Privacy Protection Act* (US) (COPPA) applies to operators of commercial websites and online services directed to children under the age of 13 that collect personal information from children, and to operators of general websites with 'actual knowledge' that they are collecting information from children under the age of 13. One of the requirements is for website operators to provide notice to parents and obtain verifiable parental consent before collecting personal information of a child under the age of 13. The Federal Trade Commission (FTC), which enforces COPPA, has a sliding scale approach to obtaining verifiable parental consent, with the requirements for obtaining consent more rigorous where the intended use of the information involves disclosure to third parties rather than internal use. Where the information is to be used for internal purposes only, verifiable parental consent can be obtained through the use of an email message to the parent, coupled with additional steps to provide assurances that the person providing the consent is, in fact, the parent. More rigorous methods specified include: fax- or mail-back forms; credit card transactions; staffed toll-free numbers; digital certificates using public key technology; and emails accompanied by Personal Identification Numbers or passwords. While generally COPPA has been considered a successful measure,[54] there has been criticism that the age verification mechanisms are easy to circumvent.[55]

55 M Hersh, 'Is COPPA a Cop Out? The Child Online Privacy Protection Act as Proof that Parents, Not Government, Should be Protecting Children's Interests on the Internet' (2001) 28 *Fordham Urban Law Journal* 1831, 1870.

59.62 It has been suggested that using something like COPPA, with a higher age barrier, would be an appropriate way to regulate social networking sites.[56] COPPA has already been used to alter the practices of social networking site Xanga.com, which was penalised US$1 million for collecting, using and disclosing personal information from children under the age of 13 without first notifying parents and obtaining their consent. In order to comply with COPPA, it is common practice of United States and many other international social networking sites to ask participants to check a box certifying they are 13 years or older before they can create a profile and, as noted above, some have voluntarily set the age barrier higher. Xanga.com included such a check box, but then allowed users under the age of 13 to create a profile with clarification of their age status. The consent order imposed on Xanga.com by the FTC, which sets out steps to be taken to comply with COPPA, is considered to be 'best practice' for social networking sites.[57] It includes a requirement to place links to information about protecting children's online privacy in privacy policies on websites, any information collection point on websites and in notices sent directly to parents.

59.63 A number of legislators in the United States have proposed protective measures aimed at prohibiting or limiting access by young people to social networking sites. The proposed Deleting Online Predators Act 2007 is presently before the United States Congress, and seeks to prohibit student access to social networking sites in schools and libraries unless under adult supervision. A number of states in the United States have passed or proposed laws requiring social networking website operators to verify the age of every user; requiring parental permission for those under the age of 18. The effectiveness of the proposals has been questioned given the absence of effective online age verification mechanisms.[58] To provide any form of protection, the verification mechanism must involve more than an assumption that the user is honestly disclosing his or her age.[59]

59.64 There is also a question as to whether stopping young people from engaging in online social networking is the most appropriate regulatory approach. These networks have become an integral part of the way that young people express themselves and communicate with each other.

59 Age verification and parental consent verification mechanisms are further discussed in Ch 60.

> Before we can solve the social networking dilemma, we must first grasp the cultural nuances of virtual communities and the potential implications of any new proposals. Otherwise, our rush to respond may fail to fully address those important concerns.[60]

The need for education

59.65 In contrast to a regulatory mechanism, others have highlighted the need for education of students to inform them of the possible pitfalls in sharing information online.[61] The need for education is supported by the reported reaction of many young people when they are informed that schools, police, parents and employers may be reading their online profiles. It has been suggested that they do not think of the internet as a public place, or that their personal profile is a highly accessible, public document.[62] Even where sites provide privacy control options for profiles (and many do), many young people choose a public profile in order to maximise their potential for making friends, not necessarily understanding the reality of what it means to be 'public' on the internet. Others are knowingly using social networking sites for self-promotion—but again some question whether that self-promotion is undertaken with a full, mature understanding of the consequences. As one commentator has noted, 'the teenagers chattering away online are media literate, but they are not media wise'.[63]

59.66 American academics Dr Ilene Berson and Dr Michael Berson have written extensively on the protection of children's privacy in the digital age. They note that children today are often the subject of parental publishing of their life experiences from birth, and from quite young ages learn to interact in digital spaces. The proliferation of online personal information, however, has also desensitised young people, and they remain oblivious to ways to maximise privacy in their online activities.[64] Berson and Berson discuss the need to teach all young people 'digital literacy', a concept which

> emphasizes the capacity to fully participate as a responsible member of a technologically engaged society and refers to the skills that people need to understand and constructively navigate the digital media that surrounds them. It addresses safety and security while fostering broader preparation for digitized and networked environments.[65]

59.67 Berson and Berson note that it is essential to teach digital literacy, as while young people are often proficient in using the tools of the digital world, 'they have typically not acquired the proficiency to function responsibly as members of networked

communities'.[66] An important element of learning to apply critical analysis skills and make ethical decisions in this environment is to control disclosure of personal information. At present, as many parents are themselves either unable to operate, or inexperienced at operating, in this environment, most of these skills are being learned from the young person's peers. While it is clear that the technical skills are being learned, it is questionable whether the decision-making skills are developed effectively before too many mistakes are made.

Photographs and other images

Background

59.68 One of the key issues that arose in consultations with young people is the regulation of unauthorised photographs. The accessibility and uptake of social networking sites has led to increased posting of photographs and video footage by individuals, and some of the concerns about privacy and social networking are linked to concerns about posting of online photographs and videos. The concerns, however, go beyond the use of photographs and other images on social networking sites.

59.69 The *Privacy Act* protects personal information that is held, or collected for inclusion, in a 'record'. A 'record' is defined to include a photograph or other pictorial representation of a person.[67] Thus, if an individual's identity is apparent, or can reasonably be ascertained, from a photograph or other image, then the collection, use and disclosure of that image is covered by the *Privacy Act*. This extends to video images as well as still photographs. The rest of this chapter uses the term 'image' to cover photographs and moving images. All of the privacy principles applicable to the collection and disclosure of personal information will also apply to the taking and publication of images.

59.70 As with other forms of personal information, the coverage of images is limited by the scope of the *Privacy Act.* For example, an image is not covered by the *Privacy Act* if it was taken by an individual who is acting in their private capacity. The image is also not covered if the image was taken by someone acting on behalf of a small business.[68] Similarly, images taken by a person acting on behalf of a state or territory agency are not covered by the *Privacy Act*, although they may be covered by a similar state or territory law.[69]

---

66 Ibid, 142.

67 *Privacy Act 1988* (Cth) s 6. For more detailed discussion of the definitions of 'record' and 'personal information', see Ch 3.

68 Although see Proposal 35–1 which seeks to bring small business under the coverage of the *Privacy Act*.

69 See Ch 2 for an overview of applicable state and territory privacy laws and the ALRC's proposals in Ch 4 for introduction of harmonised privacy laws.

59.71 The taking of images without consent has raised significant concerns in the past few years. While the issues are not limited to images of children and young people, many of the examples have related to children and young people. These have included: the taking of photographs of young male rowers and footballers and posting them on a website containing links to what the media described as a 'gay website'; discovery of a website containing hundreds of images of children taken at recreational sites in Queensland, and thought to be used for sexual gratification; and examples of 'upskirting'—the covert taking of photographs underneath clothing—in a number of public places.[70]

59.72 Mobile phone cameras and mobile phone video cameras seem to have heightened these concerns, due to their small size and increasing availability in the community. However, the issues of unauthorised taking of images extends beyond any one type of technology. One author has noted that concerns about covert taking of photographs have existed since the 1890s, and reappeared on a regular basis as different forms of cameras became available.[71] Most recently, the concerns about unauthorised images have exploded with the ease and open accessibility of online publication. The issues are the same, however, regardless of the medium of publication.

59.73 Community concerns have led the Standing Committee of Attorneys-General (SCAG) to consider the issue. A discussion paper released for public comment in August 2005 set out the concerns and raised a number of options for reform.[72] While the paper was particularly focused on the posting of unauthorised photographs on the internet, much of the discussion addressed the issue of taking photographs generally. The SCAG discussion paper includes extensive comment on the issue of giving consent to the taking of a photograph. The discussion paper notes that the absence of consent may affect whether the taking of a photograph is considered to be unauthorised and, if consent was obtained, whether the subsequent use is connected with any consent that was given at the time the photograph was taken.[73] The issue continues to be discussed in SCAG, with some jurisdictions pushing for uniform criminal laws.[74]

74 K Ngyuen, 'Law Chiefs have their Eyes on Voyeurs', *The Age* (online), 28 July 2006, <www.theage .com.au>.

59.74 The Victorian Law Reform Commission has also commenced an inquiry on surveillance in public places. It is expected that a number of issues concerning the taking and use of unauthorised photographs will arise in that inquiry. The Victorian Law Reform Commission is planning to release a consultation paper on the inquiry later in 2007.

Submissions and consultations

59.75 A number of submissions raised concerns about the lack of clarity of the existing law in relation to photographing children. A number of stakeholders expressed particular concern about the ease of taking and disseminating photographic images using mobile technology.[75]

59.76 The need to safeguard the safety and privacy of children from people with no legitimate purpose for taking and publishing photos was highlighted.[76] The ALRC was presented with evidence about the harm that can be done to children where they are the victims of using photographs for sexual gratification, even where the photograph itself was not sexually explicit in nature.[77] One caller to the ALRC indicated that the fear and insecurity of not knowing how photographs will be used has led to changes in community behaviour, and an intolerance towards strangers taking photographs around children. The Queensland Commission for Children and Young People and Child Guardian indicated that it regularly receives phone calls from concerned parents, managers of sporting associations and others who believe it is against the law to take photos of children at events.[78] One submitter lamented that this is the 're-engineering of society by stealth and misinformation'.[79] The Office of the Privacy Commissioner considered that developing social protocols that make it acceptable to ask a person to refrain from using a camera on a beach or outside of a school is a positive step.[80]

59.77 The issues around unauthorised images are not limited to safety concerns about children and young people. As noted above, the ALRC's consultations with young people indicated that the online publication of images without the consent of the subject of the photograph is a common occurrence—whether the image itself was taken with or without the subject's consent. The posting itself was taken for granted by some, and the ease of its publication accepted as a reality by most. While the posting may not

be criminal in nature, the possible consequences of unauthorised posting can include bullying, ridicule, embarrassment and generally a breach of privacy.

59.78 Overall, concerns about taking and using unauthorised images, particularly of children, led some to consider the need for stricter regulation.

> Sadly, there is now good reason for the existence of clear guidance through the Privacy Act governing limitations on the broadcasting of identifying images of children, restricting the ability of organisations to publicly display a photo of a child in their care, without the express consent of the parent or guardian.[81]

59.79 Generally, however, there was not widespread support for a blanket ban on taking of images of children without express consent. Instead, there were calls for a clearer regime which balances effectively the need to protect children from exploitation for sexual and commercial purposes with the need not to place undue restrictions on the taking of images by parents, family and friends.[82] While there are some individuals who offend others through inappropriate behaviour, these are in the minority and the vast majority of appropriate users should not be restricted from using photography in appropriate ways.[83] Some considered that privacy laws are an appropriate method for regulating this issue.[84]

59.80 In contrast, the Arts Law Centre of Australia was opposed to any law which requires photographers or documentary filmmakers to obtain the consent of individuals before taking a photograph or film footage.[85] The concerns of the artistic community in relation to privacy laws preventing use of a person's image are addressed in more detail in Chapter 5.

Options for reform

59.81 In the SCAG discussion paper on unauthorised photographs, a number of reform options were discussed:

- possible criminal offences regarding unauthorised use of photographs of children;

- take down provisions for online content;
- possible civil rights regarding unauthorised publication of images of people; and
- education campaigns.

Criminal law

59.82 There are a number of existing criminal laws that address the taking and use of unauthorised images for offensive purposes. Some of these include:

- use of surveillance devices to record a 'private activity' without consent;[86]
- filming for indecent purposes;[87]
- making an image of a child engaged in a private act for prurient purposes;[88]
- making indecent visual images of a child under the age of 16;[89]
- committing indecent or offensive acts in a public place;[90]
- child pornography offences;[91] and
- using a telecommunications network or carriage service to facilitate certain offences.[92]

59.83 There is concern that a number of new activities involving taking and publication of images are not covered by existing criminal offences. A combination of offences, such as stalking, using optical devices without consent and indecent behaviour, have been used successfully to prosecute instances of crimes such as

---

86 See, eg, *Surveillance Devices Act 1999* (Vic) ss 6–7; *Surveillance Devices Act 2000* (NT) s 5; *Surveillance Devices Act 1998* (WA) ss 5–6. Not all of the surveillance devices legislation in Australia, however, has a general prohibition on the use of surveillance devices without authorisation or consent: see, eg, in South Australia the prohibition is limited to listening devices: *Listening and Surveillance Devices Act 1972* (SA) s 4.

87 See, eg, *Summary Offences Act 1988* (NSW) pt 3B. In some jurisdictions, however, the offence only applies where the indecent material is produced for the purpose of sale: see, eg, *Summary Offences Act 1953* (Qld) pt 7.

92 See, eg, *Criminal Code* (Cth) s 474.14 (using a telcommunications network to commit a serious offence); s 474.17 (using a carriage service to menace, harass or cause offence); ss 474.19–474.20 (using a carriage service to intentionally access, transmit or make available child pornography material); ss 474.22–474.23 (using a carriage service to intentionally access, transmit or make available child abuse material).

'upskirting'. While acknowledging that 'upskirting' conduct could be, and has been, successfully prosecuted using existing criminal offences, the Victorian Attorney-General will introduce a bill to the Victorian Parliament to criminalise specifically the act of photographing up a woman's skirt without her knowledge, and to ban the distribution of such images by email or SMS.[93]

59.84 As noted in the SCAG discussion paper, a number of situations of concern do not fit neatly into the existing laws. Most of the criminal offences involve elements of 'private activity' or a 'private act', so that any activity carried out in a public environment, or at least an act which is not considered an act where you would expect to be afforded privacy—such as rowing, or playing in a public playground—is not covered by the particular offence. There is therefore a question of whether criminal offences should extend to the making of images without consent in any public or private situation where the purpose for making the image is to provide for sexual arousal or sexual gratification.

59.85 Another concern that has been raised is that a number of the criminal offences in the states and territories do not cover images of children that are not sexually explicit in nature, but that may be used for purposes of sexual gratification. The Queensland Police Service provided the ALRC with a number of case studies involving images of children in socially appropriate situations and attire that had been taken and used for sexual gratification.[94] Due to the existing definitions of 'child exploitation material', 'child abuse material' and 'child pornography' material in Commonwealth and Queensland legislation, the Police have had only limited success in prosecuting the individuals involved, and even greater difficulties in having the images removed from the internet as they were not considered to be offensive content.

59.86 One suggestion is to have a wider offence which is not restricted to private acts, but covers the taking or publication of an image where the use or intended use is one which a reasonable adult would find exploitative or offensive, or the use or intended use was for the purpose of sexual gratification.[95] While some of the suggestions have been limited to images of children under a set age, an expansion of the offence to cover images of adults taken or used without consent could be considered.[96] Expanding the offence to include what a reasonable adult would find exploitative or offensive would be a significant step, and further consideration would need to be given to the kind of

94 Queensland Police Service, *Submission PR 222,* 9 March 2007.

95 Standing Committee of Attorneys-General, *Unauthorised Photographs on the Internet and Ancillary Privacy Issues*, Discussion Paper (2005), 33. A similar suggestion was made by Queensland Police Service, *Submission PR 222,* 9 March 2007.

96 A 'voyeurism' offence applicable to adults was suggested in the SCAG discussion paper, but was limited to situations where there was an expectation of privacy, similar to the NSW offence: Standing Committee of Attorneys-General, *Unauthorised Photographs on the Internet and Ancillary Privacy Issues*, Discussion Paper (2005), 34.

uses that might be captured by such a formula, and whether it is appropriate to ascribe criminal conduct to these uses.

59.87 It is clear that there are gaps in the existing criminal law and not all inappropriate conduct relating to the taking and use of unauthorised images is presently covered in all jurisdictions.[97] As this Inquiry is focused on the *Privacy Act* and related privacy laws, the ALRC will not focus on the gaps in the criminal law. It is expected that this issue will receive further attention within SCAG. The ALRC notes, however, that the submissions made to, and the consultations held, in this Inquiry have not expressed support for making it a criminal offence to take an image of a child or an adult without consent. Any proposed criminal offences should not be unduly restrictive and must still provide for family, friends, community bodies, schools, media, the artistic community and others to take and publish appropriate images.

Take down notices for online content

59.88 In consultations with young people, the ability to have unauthorised internet content removed upon request was considered an appropriate and practical remedy.

59.89 Chapter 8 describes the co-regulatory scheme administered by the Australian Communications and Media Authority (ACMA) for the regulation of internet content.[98] As indicated in that chapter, the scheme is dependent on the *National Classification Code* and decisions of the Classification Board to determine what is prohibited content that can be the subject of a take down notice.

59.90 Chapter 8 also asks a question about whether the take down notice scheme should be expanded beyond the existing definitions of prohibited content, and possibly allow for an additional circumstance where the content may constitute an invasion of an individual's privacy. Such a remedy would be useful for removing unauthorised images from the internet where a breach of privacy existed. As noted in the chapter, however, such a move would be likely to be opposed by some with an interest in maintaining freedom of expression in the online environment. The ALRC will consult on this issue further before completion of the final Report.

Civil rights

59.91 It has already been noted above that the community in general does not support a complete ban on the taking of images without consent. Neither does the ALRC consider this to be a viable option for reform. There are valid concerns, however, that

---

97 For a good overview of the existing laws and the limitations of each, see Ibid, app 1.

98 The online regulation scheme is at present set out in *Broadcasting Services Act 1992* (Cth) sch 5, although it is proposed to be expanded by the Communications Legislation Amendment (Content Services) Bill 2007 to cover live streamed content services, mobile phone-based services and services that provide links to content, and to move the entire scheme to a new sch 7 of the Act.

there are some types of publication that may not be criminal in nature, but still affect an individual's privacy interests.

59.92 The SCAG discussion paper looked at the use of copyright law enacted in The Netherlands to eradicate the trade in video recordings showing children on beaches and nudist beaches where the recording is made without the parents' or child's consent.[99] As part of the civil response to the issue, the *Copyright Act 1912* (Netherlands) was amended to provide that the publication of a photographic or video portrait made without a commission is not permitted if this would be contrary to the reasonable interests of the person shown in the photograph or video. The Act provides that a child or his or her legal representative may apply to the courts for an injunction to restrain publication. A number of submissions made in response to the SCAG discussion paper supported this kind of 'reasonable interests' approach, but questioned whether amendment to Australian copyright law was the best response.[100]

59.93 Chapter 5 of this paper gives detailed consideration to the introduction of a statutory cause of action for invasion of privacy. The ALRC, supporting a proposal of the New South Wales Law Reform Commission, proposes the introduction of such a cause of action to protect individuals from unwanted intrusions into their private lives or affairs in a broad range of contexts. This will include publication of images that are considered to be an invasion of privacy.

59.94 Chapter 5 also discusses the proposed elements for the cause of action. To fall within a definition of what is considered 'private', there must be both a reasonable expectation of privacy in all the circumstances, and the act complained of must be, in all the circumstances, sufficiently serious to cause substantial offence to a person of ordinary sensibilities. There are also a number of proposed defences to the cause of action, including where the information disclosed was a matter of public interest or was a fair comment on a matter of public interest. A wide range of remedies is also proposed.

59.95 The ALRC considers that appropriate implementation of the statutory cause of action will capture a range of activities relating to the publication of images which are currently considered to be inappropriate, but unregulated. This includes online publication by individuals of images taken, or at least published, without consent where there is an invasion of personal privacy.

59.96 It is not expected that every invasion of privacy will be pursued through the courts. As discussed in Chapter 5, however, the introduction of a cause of action,

accompanied by appropriate information made available to the public, is likely to raise consciousness within the community and assist with the development of appropriate standards of behaviour.

Conditional rights

59.97 Many bodies have begun to include as part of conditions of entry to premises, or participation in an event, that cameras, video cameras or mobile phones incorporating cameras or video cameras, are not to be brought onto the premises or used. This has become typical in change rooms and private gyms, where people expect an element of privacy, but has been more controversial when applied to public events and places such as life saving and sports carnivals, or public swimming pools.[101]

59.98 The ALRC is not making any proposals about banning or restricting the taking of images in such places. Decisions regarding imposing such conditions of entry or participation should be left to the bodies owning the premises or organising the events. The ALRC notes, however, the general opposition in the community to a complete ban on photography in public places, as well as the concerns about protection of privacy, and in particular the protection of children. These attitudes need to be balanced appropriately in making such decisions.

Education

59.99 The activity of taking images appears to many members of the community to be under siege. Conversely, others have concerns about guaranteeing the privacy and safety of children in the community. Clearly there is confusion as to what is acceptable, what is legal, and when inappropriate behaviour can be stopped or punished. It is also an area where community attitudes and behaviours are changing.

59.100 There is a need for further information to be made available to the community to clarify the laws in this area. The Privacy Commissioner of Victoria has published a fact sheet on mobile phones with cameras covering many of the issues of concern and the legal protections in place.[102] The Queensland Commissioner for Children and Young People and Child Guardian is developing a similar fact sheet on photography and video footage, with a particular emphasis on children's and young people's right to privacy. This kind of information needs to be more readily available in order to educate the community, provide information on what is appropriate and inappropriate behaviour, inform the public about available remedies, and facilitate an informed debate about future law reform in this area.

ALRC's view

An ongoing study of attitudes to privacy

59.101 The research and consultation undertaken by the ALRC in relation to the attitudes of children and young people to privacy suggest that the existing framework for the protection of personal information, reformed in accordance with the proposals of the ALRC in this Discussion Paper, adequately reflects the expectations of Australian young people. While young people have slightly different privacy concerns and experiences when compared to older Australians, the differences are not so great as to warrant a reconsideration of the basic framework of the *Privacy Act*. Many of the proposed changes to the framework aimed at greater clarity, national consistency and improved enforcement, however, will be of benefit to all Australians and in accordance with the expectations of young Australians.

59.102 The ALRC notes that there are differences in opinion among young people—and between young people and older Australians—on some issues related to privacy. A key example is the regulation of privacy issues in the online environment, with young people often able to recognise the practicalities and impracticalities of regulation in this environment due to their familiarity and ease with the use of the technology. Young people have suggested that individual control is a more viable regulatory option than technical legal solutions. Another area of interest is the level of acceptance of government interference with privacy rights in the name of the public good. While not unanimous in their support of government, many younger people were more open than many older Australians to accepting a certain level of curtailment of individual privacy.

59.103 These shifts in attitudes are to be expected as Australian society and the world around us continues to change. In undertaking the current Inquiry, the ALRC is mindful that the existing *Privacy Act* is largely based on a previous ALRC inquiry conducted in the late 1970s and early 1980s. The current Inquiry is being conducted in a very different world, where technology has greatly changed the way in which we hold and exchange information, governments have contracted out a wide range of services, and the threat of terrorism on Australian soil has placed security concerns high on the public agenda. In trying to gauge whether expectations of privacy law have changed, however, the ALRC had little Australian research to draw on.

59.104 As indicated in Chapter 7, even with the implementation of the ALRC's final recommendations for reform, the *Privacy Act* will continue to operate in a changing environment and would benefit from future review to ensure it continues to meet its objectives. Additionally, privacy impact assessments conducted by agencies and organisations will need to take into account current attitudes of Australians towards privacy and the acceptable level of interference with individual privacy. Any such review or assessment would be best made with the assistance of accurate and up-to-date data on community attitudes to privacy. It is the ALRC's preliminary view that the Australian Government fund a longitudinal study of the attitudes of Australians to

privacy. The study should be representative of the Australian population, and include participants under the age of 18.

59.105 As is noted above, the OPC has commissioned three surveys on community attitudes to privacy, and each was conducted by Roy Morgan Research: in 1994, 2001 and 2004.[103] The 2004 survey was a partial replication of the 2001 survey, and these were similar to, but not directly comparable with, the 1994 survey.[104] The surveys were quantitative in nature, involving telephone interviews with adult respondents representative of the adult population nationwide. While Roy Morgan undertook some qualitative research as part of the 2001 survey, there was no report on the outcome of that research.

59.106 These surveys have provided some useful information on community attitudes, but are not a substitute for a proper longitudinal study encompassing both quantitative and qualitative research. Qualitative research, while more difficult to conduct and analyse, is more likely to explain experiences and beliefs in terms of the wider contexts of peoples' lives. A longitudinal study will help to answer whether the attitudes of Generation Y today will persist over time, if they are attributable to youth more generally, and whether generations which follow will have different attitudes.

59.107 At this point, the ALRC does not consider that the OPC is the appropriate body to conduct, or even commission, a longitudinal study. It is appropriate, however, that the Australian Government provide funding for the project given that the outcomes will have direct relevance to national policy development.

59.108 It may be possible for researchers to obtain funding for a longitudinal privacy attitudes study through the Australian Research Council. Funding under the *Discovery Projects* scheme, for example, might suit this kind of project. It is noted, however, that an effective longitudinal study requires ongoing funding beyond the five year limit provided by the *Discovery Projects* scheme.[105]

---

103 The 1994 survey was commissioned by the Human Rights and Equal Opportunity on behalf of the Privacy Commissioner—this was prior to the establishment of the Office of the Privacy Commissioner. In 2001 the OPC also commissioned surveys on business attitudes and government agency attitudes to privacy. These surveys were not replicated in 2004.

104 The 2001 survey included a comparison between results from the 1994 and 2001 surveys: Roy Morgan Research, *Privacy and the Community [prepared for Office of the Federal Privacy Commissioner]* (2001), Attachment B.

105 Funding for projects can be awarded for one to five years. Fellowships are awarded for three to five years, depending upon the type of fellowship: Australian Research Council, *Discovery Projects: Selection Report for Funding Commencing in 2007* (2007) <www.arc.gov.au> at 31 July 2007.

Proposal 59–1 The Australian Government should fund a longitudinal study of the attitudes of Australians, including young Australians, to privacy.

Online social networking

59.109 The ALRC is aware there are concerns about the way in which young people are using social networking sites. Consistent with its approach to online regulation generally,[106] the ALRC is not making a proposal to regulate social networking sites. The ALRC is, however, making a more general proposal in Chapter 60 to establish age verification and parental consent mechanisms to ensure that decisions under the *Privacy Act* regarding the personal information of children and young people aged 14 and under are made by an authorised representative of the child or young person.

59.110 The ALRC notes that, as a result of the activities of the FTC in implementing COPPA in the United States, and a measure of self-regulation in the growing market, many social networking sites are developing standards for their terms of participation which set age limits and encourage parental monitoring and reporting of under-age use. This approach is to be encouraged, but is unlikely to stop curious children and young people from avoiding simple age verification mechanisms.

59.111 In the ALRC's view, the most effective measure that can be taken at present is to educate children, young people, and their teachers and parents, about social networking sites, their dangers and pitfalls, and how to use them safely and appropriately. The need for education in this area is discussed further below.

Photographs and other images

59.112 In concert with community attitudes on the subject, the ALRC is not proposing a blanket ban on the taking of images without consent. This is not seen as a practical or desirable option. The ALRC notes, however, that there is confusion and concern around issues of taking and publishing images in inappropriate circumstances. The ALRC believes that a multifaceted approach is required to alleviate these concerns.

59.113 The criminal law is an important aspect of the regulation of the more severe forms of inappropriate behaviour. Further consideration must be given to what types of behaviour the community wants to label as criminal, but it is clear that merely taking an image without consent should not be considered a criminal act. It is outside the scope of this Inquiry to examine and improve criminal laws to ensure that the full range of inappropriate behaviour relating to the making and using of offensive images is dealt with effectively in criminal offences. This issue should be progressed further by SCAG to ensure uniformity across the jurisdictions.

---

106 See Ch 8.

59.114 The ALRC notes that, under the proposals in this Discussion Paper, the *Privacy Act* will apply to people acting on behalf of a business, including a small business, and thus cover the collection of images for commercial purposes. However, individuals taking and publishing images for personal use are not covered under the Act.

59.115 As indicated above, the ALRC is giving further consideration to the use of take-down notices to remove online content that is considered to be an invasion of privacy. This could be a practical, cost-effective remedy for individuals faced with publication of offensive material, including images, relating to themselves. It would enable individuals to exercise some control over how images of themselves are published when they are taken without consent. As discussed in Chapter 8, however, there are a number of competing arguments against extension of the existing take-down notice scheme.

59.116 From a privacy perspective, it is the preliminary view of the ALRC that the introduction of a statutory cause of action for invasion of privacy is the most effective way to regulate the issue. This will provide a remedy in cases where there is serious harm arising from the invasion of privacy, and also provide a message to the community in general about what constitutes acceptable behaviour. As discussed in Chapter 5, a statutory cause of action will contain appropriate defences, in particular a public interest defence, which will balance the right of privacy with competing rights, such as freedom of expression. Combined with appropriate criminal offences to deal with the most unacceptable actions, a statutory cause of action allows a balanced way forward to allow indivuals to continue to photograph and video friends and family, and to allow the artistic community to use this medium of artistic expression in an acceptable way, while providing some limits on the invasion of personal privacy.

59.117 It is clear, however, that further information about the laws relating to the taking of images is required in the community. In conjunction with proposals for the introduction of a statutory cause of action for invasion of privacy, the ALRC proposes that the OPC should provide information to the public concerning the statutory cause of action. As the publication of images, particularly in the online environment, is an issue of particular concern to the community, such information should cover the issue of images, and include discussion of when publication of an image is likely to be considered an invasion of privacy.

59.118 Similarly, the proposal below to provide further education to children and young people on privacy issues should include consideration of issues around taking and publishing images, particularly in the online environment.

Privacy education for children and young people

59.119 The ALRC has identified a need to inform and educate young people about privacy issues so that they are better equipped to protect their own privacy and respect the privacy of others. This is particularly so for operating in the online environment, but is relevant more generally to interaction with government, organisations and other individuals. This proposal is intended to equip young people with the necessary information and analytical skills to make appropriate decisions about withholding or disclosing personal information.

59.120 The ALRC has given consideration to who should provide the education and the educational materials. Many adults do not understand adequately their privacy rights.[107] Further, although many adults are starting to use social networking sites, they are often less sophisticated about privacy in this environment than their younger counterparts.[108]

59.121 The ALRC proposes that greater awareness of privacy rights, protection of personal information, and respect for the privacy of others, should be incorporated into primary and secondary schools. Privacy issues should arise when teaching about computers and online safety, in various commerce and legal studies areas, and generally in civics and citizenship education. To facilitate privacy education, state and territory education departments should incorporate privacy issues, and in particular privacy in the online environment, into school curricula. Teachers should be able to draw on educational materials proposed in this chapter, as well as existing material available online.

59.122 There are a number of websites which provide information and in some cases software tools to assist with controlling privacy in the online environment.[109] The Australian Communications and Media Authority provides advice and guidance to children, young people and parents on a number of telecommunications issues, such as safe use of mobile chat services and not providing identifiable photographs when using these services.[110] Many of the social networking sites include extensive tips and suggestions for controlling privacy of individual profiles, and have protocols for reporting abusive behaviour. Young people are primarily learning their online social networking skills from peers, however, and peers do not always know or pass on the important safety and privacy awareness tips that need to be learned. For this reason the ALRC considers that an introduction to these issues within the school environment will

---

107 In the 2004 Australian survey of community attitudes to privacy, 35% indicated they had some level of knowledge, 34% indicated very little, and 4% said they had no knowledge of their rights when it comes to protecting personal information—only 22% indicated they had an adequate amount of knowledge, and 4% said they had a lot of knowledge: Roy Morgan Research, *Community Attitudes Towards Privacy 2004 [prepared for Office of the Privacy Commissioner]* (2004), 11.

108 See, eg, D Devlin, *Baby Pics on the Net: Public or Private?* (2007) Yahoo? Tech <tech.yahoo.com/blogs/devlin/11228> at 1 August 2007 and comments posted at that site.

109 See Ch 6 for a full discussion of privacy enhancing tools for the online environment.

110 Australian Communications and Media Authority, *Submission PR 268,* 26 March 2007.

help to equip young people with the necessary skills to identify and manage privacy and safety issues.

59.123 There has already been some recognition of the need to provide specific education about social networking sites to young people. In October 2006, the Information and Privacy Commissioner of Ontario, in conjunction with Facebook, launched a pamplet about selecting and using social networking sites.[111] Aimed at college students, who, until recently, were the primary users of Facebook, the pamphlet addresses some of the key issues to consider when developing profiles and operating in the social networking environment. More recently, the Australian Privacy Commissioner noted concerns about privacy awareness for participants of social networking sites as part of the launch of an international privacy competition for secondary students.[112]

59.124 The ALRC considers there to be a role for the OPC more generally to develop educational material about privacy aimed at children and young people. The Human Rights and Equal Opportunity Commission provides a range of resources on its website for students and teachers to incorporate human rights issues and case studies into lesson plans. The OPC presently has a range of web pages and information sheets aimed at individuals to provide guidance on the operation of the *Privacy Act*. However, the development of material aimed at a younger audience, and geared towards school curricula, would make the information more accessible to children and young people. The ALRC has found this approach useful in developing its *Talking Privacy* website for this Inquiry. The incorporation of OPC materials into student lessons may also help to raise the profile of the OPC among young people, better enabling them to access further information and the complaint handling processes available to them.

59.125 Another body that should be involved in developing educational material covering privacy issues in the online environment is NetAlert, Australia's internet safety advisory body. Established in 1999 by the Australian Government, it is a not-for-profit community organisation that provides advice and education on internet safety issues. In addition to information for parents and teachers, the NetAlert website includes a number of interactive educational programs on internet safety, including: Netty's World aimed at young children to age 7; CyberQuoll aimed at upper primary school students; Cybernetrix aimed at secondary school students; and Wise Up To IT aimed at young people aged 16 and over.[113]

---

111 Information and Privacy Commissioner of Ontario, 'Think About Your Privacy When Selecting a Social Networking Site: Commissioner Cavoukian' (Press Release, 12 October 2006). See also brochure Information and Privacy Commissioner of Ontario and Facebook, *When Online Gets Out of Line—Privacy: Make an Informed Online Choice [pamphlet]* (2006).

112 B Smith, 'Prizes on Offer for Privacy Week', *The Age* (Melbourne), 28 May 2007, 3.

113 All of the sites are linked from NetAlert, *Website* <www.netalert.com.au> at 1 August 2007.

59.126 The educational materials are of high quality, and in an age-appropriate way cover topics such as inappropriate content, cyber bullying, stalking and paedophile activity, computer security, and identity theft. All of the material focuses on the dangers of chat sites, but has not yet addressed the newer realities of social networking sites.[114] CyberQuoll, for example, aimed at younger students, provides a good scenario on the dangers of posting photographs online, and considers the consequences of peer use of the photographs as well as paedophile activity. At present, the older age group Cybernetrix program does not give much information on social networking sites, although it does alert young people to the dangers of providing personal information online and provides links to the OPC website. The Wise Up To IT site has a more limited breadth of material.

59.127 As a body whose educational material is already used extensively in the school and home environment, NetAlert would be ideally placed to develop material about social networking and ensure that the relevant safety and privacy issues are introduced to children and young people. The ALRC proposes that NetAlert update its existing educational material or introduce new material to cover online social networking issues for a range of age groups.

Proposal 59–2 The Office of the Privacy Commissioner should develop and publish educational material about privacy issues aimed at children and young people.

Proposal 59–3 NetAlert should include specific guidance on using social networking sites as part of its educational material on internet safety.

Proposal 59–4 In order to promote awareness of personal privacy and respect for the privacy of others, state and territory education departments should incorporate education about privacy, and in particular privacy in the online environment, into school curricula.

114 However, the NetAlert site contains some limited information on social networking sites, including some safety tips: NetAlert, *What Are Social Networking Web Sites?* <www.netalert.com.au/03604-What-are-social-networking-web-sites.asp> at 1 August 2007.

Introduction

60.1 There is no federal legislation specifically addressing the privacy of children and young people. While the *Privacy Act 1988* (Cth) applies to individuals under the age of 18, there is no provision dealing explicitly with the particular needs of children and young people. It is not always clear how the Act applies to these individuals, or who can and should make decisions about privacy on behalf of an individual under the age of 18.

60.2 The need for the *Privacy Act* to address children's privacy was discussed at the time of passage of the *Privacy Amendment (Private Sector) Act 2000* (Cth). The Opposition moved amendments that would require a 'commercial service' to obtain the consent of a child's parent before collecting, using or disclosing personal information

concerning a child aged 13 or under.[1] While the amendment was not agreed to, the Government indicated that the issue would be investigated further.[2]

60.3 In 2001, the then Attorney-General, the Hon Daryl Williams MP, announced the establishment of a consultative group on children's privacy, convened by the Attorney-General's Department.[3] The consultative group met twice but, despite plans for publication of a discussion paper on children's privacy, the matter has not progressed.[4]

60.4 Children's privacy was exempted specifically from the review of the private sector provisions of the *Privacy Act* that was completed by the Office of the Privacy Commissioner (OPC) in 2005.[5] The 2005 review of the *Privacy Act* by the Senate Legal and Constitutional References Committee did not examine children's privacy and made no recommendations on the issue.[6]

60.5 This chapter considers a number of issues about decision making by and for individuals under the age of 18, and what, if any, changes are needed in the *Privacy Act* or other legislation to clarify these matters. Generally, the ALRC supports the existing approach that individuals under the age of 18 should be assessed individually to determine whether they have the capacity under the Act to make a decision. To support this assessment, the ALRC proposes that the Act be amended to define more clearly the meaning of capacity. The ALRC also proposes a range of mechanisms, including guidance from the OPC and training and education for staff in agencies and organisations, aimed at ensuring that appropriate assessments are undertaken.

60.6 The ALRC has also recognised, however, that there are many situations where individual assessment is not possible, and proposes an age at which an individual is presumed to have capacity to make a decision on his or her own. After considering the latest research on child development and the brain development of adolescents, and community debates about ages of capacity, the ALRC proposes that the age be set at 15. Below this age, it is proposed that an individual who has not been assessed individually should be considered incapable of making a decision under the *Privacy*

---

1 The amendment was headed 'Special protection for children': Commonwealth of Australia, *Parliamentary Debates*, Senate, 30 November 2006, 20302 (N Bolkus). The amendment was supported by the Australian Democrats: Commonwealth of Australia, *Parliamentary Debates*, Senate, 29 November 2000, 20162 (N Stott Despoja), 20165.

2 The Government acknowledged that the notion of children's privacy had merit, but that the form of the amendment needed consultation before it could be accepted: Commonwealth of Australia, *Parliamentary Debates*, Senate, 30 November 2000, 20304 (A Vanstone—Minister for Justice and Customs).

3 D Williams (Attorney-General), 'First Meeting of Consultative Group on Children's Privacy' (Press Release, 4 June 2001).

4 Australian Government Attorney-General's Department, *Fact Sheet on Privacy in the Private Sector—Children's Privacy* (2000) <www.ag.gov.au> at 1 August 2007.

5 The terms of reference for that review stated that children's privacy was one of 'certain aspects of the private sector provisions [which] are currently, or have recently substantively been, the subject of separate review': Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 22, App 1.

6 Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005).

Act. The ALRC proposes a number of new provisions for the *Privacy Act* to implement this policy, and to define who is capable of making a decision on behalf of an individual who is not capable of making a decision under the Act.

60.7 The ALRC considered proposing the introduction of additional protections for children and young people under the *Privacy Act*. The primary area of concern was the interaction between direct marketers and children in the online environment. In the ALRC's view, however, the *Privacy Act*, if amended in accordance with the proposals in this Discussion Paper, would operate to provide adequate protection for the personal information of children and young people.

60.8 Other areas considered in this chapter are schools and the media. While the ALRC does not propose any legislative change to address concerns relating to the handling of personal information of students in schools, it is proposed that schools clarify certain issues in their Privacy Policies; in particular, the disclosure of student information to parents, and the responsibilities of school counsellors to disclose information to school management and parents. Consistent with proposals made in Chapter 38 on the media exemption, the ALRC proposes that the privacy of children and young people be given particular consideration when assessing the adequacy of media privacy standards for the purposes of the media exemption.

Privacy rights of children and young people at international law

60.9 Chapter 1 notes the recognition of privacy as a human right in a number of international conventions. The specific right of privacy for children is also set out in art 16 of the United Nations *Convention on the Rights of the Child 1989* (CROC).[7]

> 1. No child shall be subjected to arbitrary or unlawful interference with his or her privacy, family, home or correspondence, nor to unlawful attacks on his or her honour and reputation.
>
> 2. The child has the right to the protection of the law against such interference or attacks.

In addition, art 40(2)(b)(vii) of CROC refers to the specific need to have respect for the privacy of a child accused or found guilty of a criminal offence.

60.10 The articles deal with information privacy, including such things as rights to confidential advice and counselling, and control of access to information stored about the child in records or files. The articles have also been interpreted to cover 'privacy' in terms of physical environment and the privacy of relationships and communications

---

7 *Convention on the Rights of the Child*, 20 November 1989, [1991] ATS 4, (entered into force generally on 2 September 1990). 'Child' is defined in the Convention as a person under the age of 18.

with others.[8] For example, a concern of the United Nations Committee on the Rights of the Child is the personal space provided to, and the regulation of communications of, children and young people in institutional care, including in juvenile justice facilities and immigration detention.[9]

60.11 CROC was adopted by the United Nations in November 1989 and ratified by Australia in December 1990, coming into effect in Australia in January 1991.[10] It is the most universally accepted international convention.[11] Any federal, state or territory legislation, policy or practice that is inconsistent with CROC places Australia in breach of its international obligations, and could have consequences at the international level.[12]

60.12 A number of other international guidelines relating to the rights of children make reference to the need to protect privacy, including the *United Nations Standard Minimum Rules for the Administration of Juvenile Justice 1985* (the Beijing Rules)[13] and the *United Nations Rules for the Protection of Juveniles Deprived of Their Liberty 1990*.[14] Although not necessarily binding on Australia at international law, these rules represent internationally accepted minimum standards and are important reference points in developing policy.

60.13 CROC has aroused significant misgivings within some sections of the Australian community, and in other countries, about the interaction between the rights of children and governments and the rights of parents to raise their family in the way

8 UNICEF, *Implementation Handbook for the Convention on the Rights of the Child* (fully revised ed, 2002).

9 J Doek—Chairperson UN Committee on the Rights of the Child, *Consultation PM 14*, Sydney, 18 August 2006.

10 While CROC has been ratified by Australia, it has not been fully implemented into Australian domestic legislation. Australia's international law obligations are relevant to the interpretation of Australian statutes, and Australian courts generally will interpret legislation to reach a result that is inconsistent with Australia's international law obligations only if there is 'a clear indication that the legislature has directed its attention to the rights or freedoms in question, and has consciously decided upon abrogation or curtailment': *Plaintiff S157/2002 v Commonwealth* (2003) 211 CLR 476, [30]. For a detailed exposition of the influence of international law (and especially international human rights law) on Australian municipal law, see R Piotrowicz and S Kaye, *Human Rights: International and Australian Law* (2000).

11 Many countries have placed reservations and declarations on a number of articles. Australia has a reservation in relation to art 37(c) based on physical size and population distribution difficulties in ensuring the separation of young offenders and adult offenders while enabling young offenders to maintain contact with their families: Australian Law Reform Commission and Human Rights and Equal Opportunity Commission, *Seen and Heard: Priority for Children in the Legal Process*, ALRC 84 (1997), [20.102].

12 Except in relation to art 37(c).

13 *United Nations Standard Minimum Rules for the Administration of Juvenile Justice (the Beijing Rules)*, UN Doc A/RES/40/33 (1985). See in particular rule 8, which is discussed below in relation to access to court records.

14 *United Nations Rules for the Protection of Juveniles Deprived of Their Liberty*, UN Doc A/RES/45/113 (1990). See in particular rule 19 on records.

they believe to be most appropriate.[15] These concerns were also present during the drafting of the Convention, and led to the inclusion of art 5, which reads:

> States Parties shall respect the responsibility, rights and duties of parents or, where applicable, the members of the extended family or community as provided for by local custom, legal guardians or other persons legally responsible for the child, to provide, in a manner consistent with the evolving capacities of the child, appropriate direction and guidance in the exercise by the child of the rights recognized in the present Convention.

60.14 CROC embodies a balancing exercise, recognising that the family is the fundamental unit of society, but that children are individuals who are not wholly subsumed by family. The rights set out in CROC are the rights of children which should be respected by their families, communities and governments. Article 5 clearly anticipates that, while a child should be guided appropriately by parents and others in exercising his or her rights, a child will also become more independent of family as his or her capacities develop. It is at this point—where a child becomes a young person with needs and wishes separate from his or her parents—that difficulties may arise in determining whether a child should be able to exercise rights on his or her own behalf. Article 12 of CROC, which refers to a child's right to be heard in matters affecting the child, makes a similar assumption regarding the evolving capacity of children.[16]

60.15 Consistent with CROC, most rights and responsibilities in Australian law refer to a person as an adult when he or she turns 18 years of age.[17] While historically the law has generally assumed that children do not have the capacity to participate in legal processes on their own behalf, more recent psychological studies have provided a greater understanding of children's cognitive abilities and prompted a re-evaluation of rules regarding children's capacity.[18] Increasingly, the common law and particular statutes are recognising the ability of young people at an age lower than 18 to make decisions on their own behalf, even where this may conflict with the wishes of their parents.

The research is discussed in more detail below.

Existing Australian laws relating to privacy of individuals under the age of 18

Privacy Act

60.16 The personal information of individuals under the age of 18 is regulated by a number of laws. The laws that apply will depend upon who holds the information, although generally personal information held by Commonwealth and ACT agencies or their contactors, or held by non-government bodies not otherwise exempt from the operation of the Act, is regulated by the *Privacy Act*.[19] Many of the ALRC's proposals to streamline and clarify the operation of the *Privacy Act* and other privacy laws in Australia will also improve the handling of personal information of individuals under the age of 18.[20] In particular, the ALRC proposes that the Information Privacy Principles (IPPs) that apply to agencies, and the National Privacy Principles (NPPs) that apply to organisations, be replaced with a single set of principles, referred to in this paper as the Unified Privacy Principles (UPPs).[21]

60.17 Many aspects of the IPPs and NPPs, and the proposed UPPs, may require an individual to provide consent to the collection, use or disclosure of personal information about him or her. The Act also establishes a number of situations where an individual can make a request or exercise a right. Each of these situations has a decision-making element. These include:

- consenting to the collection of sensitive information;[22]
- consenting to a particular use or disclosure of personal information, including consent to use such information for the purpose of direct marketing;[23]
- consenting to the transfer of personal information outside of Australia;[24]
- requesting not to receive further direct marketing communications from an organisation;[25]
- requesting access to personal information held by an organisation;[26]

---

19 For a more detailed analysis of the scope of existing privacy laws in Australia, see Ch 2.

20 These proposals include harmonisation of information privacy laws across jurisdictions (Proposals 4–1, 4–2, 4–3, 4–4, 4–5), amendment of the Act to achieve greater logical consistency, simplicity and clarity (Proposal 3–2), and inclusion of an objects clause in the Act (Proposal 3–4).

21 See Proposal 15–2.

22 See proposed 'Collection' principle and discussion in Ch 18.

23 See proposed 'Use and Disclosure' principle and 'Direct Marketing' principle and discussion in Chs 22 and 23.

24 See proposed 'Transborder Data Flows' principle and discussion in Ch 28.

25 See proposed 'Direct Marketing' principle and discussion in Ch 23.

26 See proposed 'Access and Correction' principle and discussion in Ch 26. It is proposed that access to personal information held by an agency should be governed by a separate Part of the *Privacy Act*.

- opting for anonymity or pseudonymity in transacting with an agency or organisation;[27] and

- making a complaint against an agency or organisation.[28]

60.18 A number of other requirements set out in the proposed UPPs aim to provide information to the individual to alert him or her to the circumstances of the collection, use and disclosure of personal information about him or her.[29] In some cases, this information will assist an individual in deciding whether to provide or withhold consent to a particular collection, use or disclosure, or to make a request under the Act.

60.19 The *Privacy Act* sets no minimum age at which an individual can make decisions regarding his or her own personal information. Guidelines developed by the OPC provide some assistance in dealing with children and young people. The *Guidelines to the National Privacy Principles* suggest that each case must be considered individually, and give guidance as to when a young person may have the capacity to make a decision on his or her own behalf.

> As a general principle, a young person is able to give consent when he or she has sufficient understanding and maturity to understand what is being proposed. In some circumstances, it may be appropriate for a parent or guardian to consent on behalf of a young person; for example if the child is very young or lacks the maturity of understanding to do so themselves.[30]

60.20 The *Guidelines on Privacy in the Public Health Sector* stress that where a young person is capable of making his or her own decisions regarding personal information, he or she should be allowed to do so.[31] The Guidelines further suggest that, even if the young person is not competent to make a decision, his or her views should still be considered.[32]

---

27 See proposed 'Anonymity and Pseudonymity' principle and discussion in Ch 17.

28 See discussion in Ch 45.

29 See, eg, proposed 'Specific Notification' principle, which requires an agency or organisation to take reasonable steps to ensure the individual is aware of a list of factors relating to the collection and use of their personal information, and proposed 'Openness' principle, which requires agencies and organisations to create a Privacy Policy: Chs 20, 21.

30 Office of the Federal Privacy Commissioner, *Guidelines to the National Privacy Principles* (2001), 21. Guidelines relating to the IPPs are more ambivalent, noting it may not be appropriate to rely on consent given by another person if a person under the age of 18 years is sufficiently old and mature to consent on their own behalf: Office of the Federal Privacy Commissioner, *Plain English Guidelines to Information Privacy Principles 8–11: Advice to Agencies about Using and Disclosing Personal Information* (1996), 29.

31 Office of the Federal Privacy Commissioner, *Guidelines on Privacy in the Private Health Sector* (2001), 33.

32 Ibid, 34.

60.21 At present, only one of the NPPs and IPPs, and no other provision of the *Privacy Act*, sets up a structure for making decisions on behalf of an individual unable to make a decision concerning the privacy of his or her personal information. This structure relates to disclosure of health information in limited circumstances.[33] It is assumed that parents are responsible for making decisions on behalf of children or young people incapable of making the decision themselves.[34]

Other privacy legislation

60.22 Some states and territories have legislation or administrative practices that regulate the privacy of certain personal information held by state or territory public sector agencies.[35] Most apply specifically to health information and these are discussed in more detail in Chapter 2.

60.23 Generally, these statutes and schemes adopt the same approach to children and young people as the *Privacy Act* in that individuals under the age of 18 are given the same rights and protections as adults, and there are no specific protections or additional provisions relating to children or young people.

60.24 Unlike the *Privacy Act*, however, some of the legislation provides statutory guidance regarding when a child or young person will be considered capable of making decisions without a parent or guardian regarding his or her own personal information. For example, s 85(3) of the *Health Records Act 2001* (Vic) states:

> (3) For the purposes of sub-sections (1) and (2), an individual is incapable of giving consent, making the request or exercising the right of access if he or she is incapable by reason of age, injury, disease, senility, illness, disability, physical impairment or mental disorder of—
>
> (a) understanding the general nature and effect of giving the consent, making the request or exercising the right of access (as the case requires); or
>
> (b) communicating the consent or refusal of consent, making the request or personally exercising the right of access (as the case requires)—
>
> despite the provision of reasonable assistance by another person.[36]

---

33 NPP 2.4 allows disclosure of health information to a 'responsible' third party in the event that an individual is incapable of giving or communicating consent for disclosure, and the disclosure is necessary for the care or treatment of the individual or for compassionate reasons: *Privacy Act 1988* (Cth) sch 3, NPP 2.4. A 'responsible' person is defined to include a parent of the individual: *Privacy Act 1988* (Cth) sch 3, NPP 2.5.

34 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 213.

35 For an overview of privacy regulation in the states and territories, see Ch 2.

36 If the child is incapable, the giving, making or exercising of the consent, request or right may be provided by a parent or other authorised representative of the child: *Health Records Act 2001* (Vic) s 85(6). Part 4 cl 4(3) of the draft *National Health Information Code* is an identical provision, and the *Health Records and Information Privacy Act 2002* (NSW) s 7 has a similar operation.

60.25 In the *Health Records (Privacy and Access) Act 1997* (ACT), the test of capacity is linked to the ability to understand the nature of, and give consent to, a health service.[37] Some legislation also includes express provisions on how, and by whom, decisions can be made on behalf of a child or young person unable to make his or her own decisions.

Assessing the decision-making capacity of children and young people

Child development and brain development research

60.26 There is clear evidence that children differ from adults in their capacity to make decisions.[38] It is not clear, however, at what age an individual should be regarded as having the capacity to make a decision regarding his or her own personal information. The following provides an overview of the research on the issue.

Ages of development

60.27 There is a general consensus in the literature on child development that the capacity of children to make voluntary and rational decisions increases with both age and the development of cognitive skills.[39] Decision making is a skill that develops over time together with the development of certain cognitive skills, including the capacity for logical thought, the ability to understand cause and effect, and the analysis of consequences of decisions. Jean Piaget, a leading child psychologist, identified four stages of cognitive development through which all children pass and the typical ages at which this development occurs.[40] It is during the fourth stage—the 'formal operations' period—that a child demonstrates adult-like thinking abilities such as a comprehension of abstract logic, a capacity to reason, the use of deductive and inductive reasoning, making of intelligent choices, and the ability to hypothesise. According to Piaget, a child aged between 11 and 15 is generally in this stage.

60.28 Piaget's typology, including the allocation of typical ages at which certain developments occur, resonates with research about the decision-making capacities of

37 'Young person' is defined as a person under 18 years of age other than a person 'who is of sufficient age, and of sufficient mental and emotional maturity, to (a) understand the nature of a health service; and (b) give consent to a health service', and the rights of a young person are to be exercised by a parent or guardian: *Health Records (Privacy and Access) Act 1997* (ACT) s 25, Dictionary.

38 T Kuther, 'Medical Decision-Making and Minors: Issues of Consent and Assent' (2003) 38 *Adolescence* 343, 349.

39 Ibid, 348. A child's competency, however, may not necessarily increase in direct relation to his or her age: S Ramsey, 'Representation of the Child in Protection Proceedings: The Determination of Decision-Making Capacity' (1983–1984) 17 *Family Law Quarterly* 287, 315.

40 D Singer and T Revenson, *A Piaget Primer: How A Child Thinks* (revised ed, 1996), 20–26.

children.[41] In her examination of the literature on the capacity of minors to provide voluntary consent to medical treatment, Dr Tara Kuther notes:

> During the adolescent years, minors become better able to consider information and opinions from diverse sources, and capable of owning their judgements. Between the ages of 15 and 17, most adolescents become capable of providing voluntary consent that is not unduly influenced by others.[42]

60.29 Kuther also discusses the way in which children exercise more independence in making decisions as they become older. In particular she notes:

> Young children tend to view authority figures such as physicians and parents as legitimate and powerful, and are likely to comply with their requests because of differences in perceived social power. With increasing age, authority figures tend to be viewed as cooperative and orientated toward promoting social welfare; adolescents are more likely to question demands that seem unreasonable and are less susceptible to coercive influence.[43]

60.30 Many commentators argue that young people that have reached a certain age have the same capacity as adults to consent to decisions. The area that has received the most attention is the capacity of an individual to consent to medical treatment. In a study comparing the competency of individuals aged 9, 14, 18 and 21 to make informed decisions about medical treatment, Drs Lois Weithorn and Susan Campbell found that, in general, 14 year olds demonstrated the same level of competence as those aged 18 years and over.[44] The researchers used four standards of competency to test the making of hypothetical medical decisions: (1) evidence of choice; (2) reasonable outcome; (3) rational reasons; and (4) understanding.[45] Weithorn and Campbell noted that while 9 year olds were less competent to make a rational decision, even they were able to comprehend the basics of what is required of them when they are asked to give a preference for treatment.[46]

41 S Ramsey, 'Representation of the Child in Protection Proceedings: The Determination of Decision-Making Capacity' (1983–1984) 17 *Family Law Quarterly* 287, 312–313.

42 T Kuther, 'Medical Decision-Making and Minors: Issues of Consent and Assent' (2003) 38 *Adolescence* 343, 348, citing C Lewis, 'Minors' Competence to Consent to Abortion' (1987) 42 *American Psychologist* 84 and T Grisso and L Vierling, 'Minors' Consent to Treatment: A Developmental Perspective' (1978) *Professional Psychology* 412.

43 T Kuther, 'Medical Decision-Making and Minors: Issues of Consent and Assent' (2003) 38 *Adolescence* 343, 347, citing W Damon, 'Measurement and Social Development' (1977) 6(4) *Counselling Psychologist* 13 and R Thompson, 'Vulnerability in Research: A Developmental Perspective on Research Risk' (1990) 61 *Child Development* 1.

44 L Weithorn and S Campbell, 'The Competency of Children and Adolscents to Make Informed Treatment Decisions' (1982) 53 *Child Development* 1589.

45 The four hypothetical dilemmas were diabetes, epilepsy, depression and enuresis.

46 Weithorn and Campbell cautioned, however, that their findings are limited in so far as their subjects were 'normal, white, healthy individuals of higher intelligence and middle-class background and that the situations they considered were hypothetical': L Weithorn and S Campbell, 'The Competency of Children and Adolscents to Make Informed Treatment Decisions' (1982) 53 *Child Development* 1589, 1596.

60.31 Based on her research, Kuther suggests that young people aged 15 can make decisions concerning medical treatment.[47] Sarah Ramsey suggests somewhere between 14 and 16.[48]

60.32 Although the evidence suggests that decision-making abilities are linked to age, the evidence also suggests that it is not possible to identify an age above which *all* children are competent to make decisions and below which *all* children are not competent.

Brain development and psychosocial factors

60.33 In addition to the more traditional child development research, there is a growing body of research into the brain development of adolescents and the relationship between brain development and the capacity of adolescents to make decisions. This research does not necessarily contradict the earlier research on the stages of child development, but adds an additional element to an understanding of the process and outcomes of decision making by adolescents.

60.34 The frontal lobe of the brain is responsible for functions such as organising thoughts, setting priorities, planning and making judgments. Scientists have discovered that the frontal lobe of the brain undergoes significant change during adolescence, in which it produces a significant amount of 'grey matter' (the brain tissue responsible for thinking) and then undergoes a period in which it rapidly thins or 'prunes' the grey matter and develops 'white matter' (the brain tissue responsible for making the brain operate precisely and efficiently).[49] The research suggests that the frontal lobe, and therefore an individual's decision-making capacity, has not reached full maturity until some time in a person's early twenties.[50]

60.35 Other research looking at how different parts of the brain interrelate has led researchers to conclude that adolescents rely more heavily than adults on the parts of the brain that react to emotion than on the more logical frontal lobe, possibly because

the frontal lobe is still maturing.[51] As a result, it has been suggested that adolescents allow their emotional responses to situations to determine their course of action and do not fully evaluate the consequences of a particular course of action before commencing it.[52] One study has shown that age differences in decision making and judgment become most apparent when the decisions of adolescents in emotionally charged or highly social situations are compared with the decisions of adults in similar situations. For example, it has been found that adolescents take more risks when in the presence of their peers than do adults.[53]

60.36 While some have cautioned against jumping to conclusions about adolescent decision-making capacity based on the latest brain research,[54] the findings and suggestions are consistent with a review of the studies by Elizabeth Cauffman and Professor Laurence Steinberg on the susceptibility of adolescents to influence. Cauffman and Steinberg identify three themes that emerge from research on age difference in decision-making priorities:

- in comparison to adults, adolescents view long-term consequences as less important than short-term consequences;
- 'sensation seeking' is a higher priority for adolescents than it is for adults; and
- social status among peers is an important factor for many adolescents.[55]

60.37 Cauffman and Steinberg argue that the big difference between decision making by individuals under the age of 18 and adults is that psychosocial factors can influence the use of cognitive skills by young people during the decision-making process.[56] Three components make up these psychosocial factors:

- *responsibility*, including health autonomy, clarity of identity and self-reliance;
- *perspective*, which is the 'ability to acknowledge the complexity of a situation and see it as part of a broader context'; and

56 Ibid, 1770.

- *temperance*, which is the 'ability to limit impulsive and emotional decision making, to evaluate situations thoroughly before acting … and to avoid decision-making extremes'.[57]

60.38 This is not to suggest that adolescents are unable to make decisions on their own. The results of the research are consistent, however, with the approach that stresses that an individual's capacity to make a decision cannot be determined by age alone: it also depends on the maturity of the individual, his or her social development, including his or her relational style with authority and cultural and religious background,[58] and sense of self.[59] Importantly, an individual's capacity to make a decision also depends on the particular decision that needs to be made, its complexity and the gravity of the consequences.[60] This makes an adolescent's maturity of judgment for making a decision highly situation-specific.[61] In the context of making medical decisions, Assistant Professor Leanne Bunney has noted:

> merely because a child may not have the capacity to make decisions in one area does not necessarily imply that he or she would be unable to make decisions in relation to other treatment.[62]

Evolving capacity and the need for individual assessment

60.39 The research suggests, therefore, that the capacity of a child or young person to make a decision is evolving and dependent on a number of considerations relevant to the individual and the particular decision. As discussed above, this understanding of capacity is reflected in art 5 of CROC.

60.40 An individual approach to assessing the capacity of a child or young person has been adopted in case law. The House of Lords decision in *Gillick v West Norfolk and Wisbech AHA* (*Gillick*), and the High Court of Australia decision in *Department of Health and Community Services (NT) v JWB* ('*Re Marion*'), reflect the concept of evolving capacities and the need for individual assessment.[63] In *Re Marion*, Deane J stated that:

> the legal capacity of a young person to make decisions for herself or himself is not susceptible of precise abstract definition. Pending the attainment of full adulthood, legal capacity varies according to the gravity of the particular matter and the maturity and understanding of the particular young person.[64]

60.41 The words of Deane J, and the individual approach to assessing capacity of a minor, were adopted by the Full Court of the Family Court of Australia in *B and B v Minister for Immigration and Multicultural and Indigenous Affairs*, which considered the capacity of a minor voluntarily to terminate migration detention.[65] Unlike the *Gillick* approach, however, which requires a positive inquiry as to the capacity of a minor to make a particular decision, it has been argued that the Court's approach in *B and B* suggests that capacity is presupposed in some matters, although may be found to be lacking due to certain factors.[66] The Court listed a number of factors, which, in its opinion, may affect the competence of a child, including 'isolation, English language skills, schooling, access to resources and administrative barriers'.[67] Age was considered to be just one factor to take into consideration. This approach has not as yet been followed in other cases.

Assisting children and young people to make decisions

60.42 In addition to developing decision-making abilities with age, children also develop the capacity to make decisions by being involved in decision-making processes.[68] Dr Mary Ann McCabe argues that 'children's preferences and capacity for involvement in medical decision making will be heavily influenced by their prior experience with taking responsibility in decisions'.[69] McCabe suggests that such experience includes children making different types of decisions in their everyday lives, such as the time they will go to bed.[70]

60.43 Some researchers argue that children have the ability to comprehend difficult concepts that are important for making decisions when the concepts are presented to

them in ways that are 'developmentally appropriate'.[71] Nigel Thomas and Claire O'Kane argue that, unless the views of children are sought in ways that enable them to use their competence, children may erroneously be considered incompetent.[72]

Health information

60.44 The provision of health services to, and the handling of health information about, children and young people is an area that has received more attention than others when considering the decision-making capacity of individuals under the age of 18.

60.45 Consent to the handling of health information about children and young people is related to, but different from, the issue of consent to medical treatment by or on behalf of a child or young person. Although some statutory provisions deal with consent to medical treatment,[73] until the late 20th century the common law assumed that a person under 18 years of age did not have the capacity to make a decision to consent to medical treatment on his or her own behalf. This position has changed. The pivotal case in this area is *Gillick*,[74] which was followed by the High Court of Australia in *Re Marion*.[75]

60.46 These cases affirmed the capacity of 'mature minors' to make their own decisions about medical treatment without parental involvement and reflect the concept of evolving capacities, which is evident in CROC.[76] Neither *Gillick* nor *Re Marion*, however, cover what should be done when a child or young person is assessed as not having capacity to consent to medical treatment, but asks that his or her health information not be disclosed to a parent.[77]

See also New South Wales Law Reform Commission, *Minors' Consent to Medical Treatment*, IP 24 (2004).

74 *Gillick v West Norfolk and Wisbech AHA* [1986] AC 112. This case addressed the issue of whether a minor under the age of 16 years could give consent to contraceptive treatment without the parents' knowledge or consent.

75 *Department of Health and Community Services (NT) v JWB* (1992) 175 CLR 218. This case involved an application before the Family Court of Australia for the sterilisation of an intellectually disabled minor, and addressed the issue of limitations on a parent's right to consent to such treatment. For a discussion of the two cases, see P Parkinson, 'Children's Rights and Doctors' Immunities: The Implications of the High Court's Decision in Re Marion' (1992) 6 *Australian Journal of Family Law* 101.

76 See also United Nations Committee on the Rights of the Child, *General Comment No 4: Adolescent Health and Development in the Context of the Convention of the Rights of the Child* (2003).

77 J Loughrey, 'Medical Information, Confidentiality and a Child's Right to Privacy' (2003) 23 *Legal Studies* 510, 512.

60.47 The ability of young people to keep information from their parents and others is often an important consideration when deciding whether to seek medical treatment. This issue is often discussed as 'confidentiality', but the *Privacy Act* and relevant state and territory health information legislation also regulate the disclosure of health information.

60.48 Young people experience a number of barriers in accessing health services, and lack of confidentiality (or a perceived lack of confidentiality) has been identified as a key problem.[78] A US study of high school students indicated that a majority of adolescents have health concerns they wish to keep confidential from their parents, and 25% reported that they would not seek health services because of confidentiality concerns.[79]

60.49 When a doctor sees a patient who is a young person without the attendance of a parent or guardian, the doctor must also assess the young person's capacity to provide consent to the recommended medical treatment.[80] Factors that will be considered by the doctor include the maturity of the young person; the capacity to understand and appreciate the proposed procedure and the consequences of the treatment (as well as possible consequences of not receiving treatment); the gravity of the presenting illness and treatment; and family issues.[81] In most cases involving sensitive or serious health concerns, it is suggested that parental involvement be encouraged, and in many cases the involvement of supportive parents may be a key element of successful treatment.[82] It is not always possible or desirable, however, to involve a parent or guardian in this way.

60.50 Similar factors must be taken into consideration by a doctor when deciding whether information can be disclosed to a parent without the consent of the child or young person. The Australian Medical Association (AMA) has taken the position that

82 T Stutt and L Nicholls, *Submission PR 40,* 11 July 2006.

if a young person is able to make autonomous decisions regarding medical treatment and wishes the treatment to remain confidential, his or her doctor must respect and maintain that confidentiality.[83] There will, of course, be situations in which the doctor is required to disclose information. Even for adults, there are ethical, statutory and common law exceptions to the duty of confidentiality that require disclosure of information in certain circumstances.[84] Outside of these exceptions, some have argued that confidentiality should be maintained for any young person seeking treatment even if assessed to be incapable of consenting to the appropriate treatment.[85]

60.51 The issue of disclosure of health information to parents sparked public debate in 2003 when the Health Insurance Commission[86] changed its privacy policy to require young people aged 14 and over to give consent before their parents can access their Medicare records.[87] Medicare records include health information such as the identity and speciality of the health service provider, the type of service received, and may also reveal that the individual suffers from certain conditions such as asthma, diabetes, or mental health conditions.[88] The Medicare policy on access to records of an individual under 18 states that:[89]

- if a child or young person of any age has his or her own Medicare card, no information related to the use of the card can be released to a parent or guardian without the consent of the child;[90]

86 Now known as Medicare Australia.

87 This policy change, which raised the age from 12 to 14, was based on legal advice: L Sanci and others, 'Confidential Health Care for Adolescents: Reconciling Clinical Evidence with Family Values' (2005) 183 *Medical Journal of Australia* 410. Legal advice to the Australian Government indicated that any further increase of the age would require legislative amendment: T Abbott (Minister for Health and Ageing), 'Parents' Access to Their Children's Medicare Records' (Press Release, 13 November 2003).

88 ABC Radio 891 Adelaide, 'Children's Access to Medicare Cards: Interview with AMA Vice President Dr Mukesh Haikerwal', *Drive with Kevin Naughton*, 6 November 2003.

89 The policy is set out on the Medicare Australia form 'Request for Obtaining Medicare and/or PBS Claims History for a Child'.

90 A young person aged 15 and over can apply for a separate Medicare card without parental approval. A child or young person under the age of 15 can apply for a separate Medicare card with parental approval.

- for a young person aged 14 or 15 on his or her parent's Medicare card, information will not generally be released without the young person's consent, but a parent or guardian may request Medicare Australia to approach any treating medical practitioner to determine if the practitioner will disclose to the parent or legal guardian any information they hold about the young person's treatment; and

- disclosure of information relating to a young person aged 16 and over on his or her parent's Medicare card will only be made available to a parent or legal guardian with the young person's consent.[91]

60.52 Following publication of the changed privacy policy on Medicare records, public debate was split between support for young people's privacy and those concerned that parental rights and family values were being abandoned.[92] The Australian Government announced its intention to introduce the Health Legislation Amendment (Parental Access to Information) Bill to raise the age to 16 and over.[93] Following staunch opposition from certain backbenchers, the AMA and others, however, introduction of the Bill was deferred.[94] It has not since been introduced.

60.53 Discussion on the issue has surfaced more recently in conjunction with the Australian Government's proposed Health and Social Services Access Card. The exposure draft of the Human Services (Enhanced Service Delivery) Bill 2007 (Cth) specifies that an individual under the age of 18 is not entitled to an access card, leading some commentators to express concerns about young people's access to medical benefits and services. Supporting literature issued by the Office of the Access Card notes that, consistent with existing practices, people aged between 15 and 18 years of age will be able to be issued with their own access card without seeking parental

---

91 There are limited exceptions to the non-disclosure principle where a young person is under the age of 18 and on the same card as the requesting parent, including access to a Medicare Financial Taxation Statement which shows a total benefit paid for the year but no details of medical services provided, and access to information about the progress of a Medicare claim made by the parent on behalf of the young person.

92 See, eg, Catholic Health Australia, 'CHA Calls for an Informed Public Discussion, Not Political Point Scoring Over Parental Access to Teenagers' Medical Visits' (Press Release, 10 June 2004). The AMA position is that a person aged 15 or over should have the right to keep his or her Medicare records confidential, as at that age people are making independent decisions about their lives, with some leaving school and entering the workforce. The AMA addressed this as a key health issue in the 2004 federal election: Australian Medical Association, 'Youth Health—The Forgotten Area of Health Policy' (Press Release, 9 September 2004); ABC Radio 666 2CN, 'Medicare Under 16 Legislation: Interview with AMA President Dr Bill Glasson', *Morning with Louise Maher*, 15 June 2004.

93 The announcement included funding in the 2004–05 Budget for implementation of the Bill: Australian Government Department of Health and Ageing, *Budget 2004–2005 Health Fact Sheet 5: A Health System Evolving Through Technology* (2004). See also AAP, 'Abbott Backflips on Teen Medical Records', *Sydney Morning Herald* (online), 15 June 2004, <www.smh.com.au>.

94 T Abbott (Minister for Health and Ageing), 'Parental Access Bill' (Press Release, 15 June 2004); P Hudson, 'Backbencher Fears for Teen Lives', *The Age* (online), 13 June 2004, <www.theage.com.au>; D Wroe, 'Abbott Pulls Teen-Health Records Bill', *The Age* (online), 16 June 2004, <www.theage .com.au>.

permission.[95] It is assumed that individuals aged 15 and over will be given a class exemption as provided for in the Bill.[96]

60.54 The *Privacy Act* and other Australian health information laws reflect the approach taken in medical practice and do not prescribe an age at which a young person is assumed to have, or not have, the capacity to make decisions on his or her own behalf regarding their personal information.[97] The NPPs dealing with sensitive information (which includes health information) require the capacity of a young person to make decisions relating to disclosure of his or her health information to be assessed on a case-by-case basis.[98] This may not be possible where there is not a one-on-one personal relationship between the information holder and the individual, and this is reflected in Medicare Australia's age-based policy for disclosure of records of young people.

Submissions and consultations

Reference to children and young people in the Privacy Act

60.55 Some stakeholders indicated they were comfortable with the absence of a specific reference to children and young people in the *Privacy Act*, although considered that detailed guidance was required to clarify the Act's application to individuals under the age of 18.[99] There was, however, support for specific provisions in the Act covering children and young people.[100] The Queensland Commission for Children and Young People and Child Guardian suggested that it was necessary to recognise in legislation that children and young people have a right to privacy that is separate from the rights of their parents.[101]

60.56 The New South Wales Council for Civil Liberties considered that a separate set of privacy principles applicable to individuals under the age of 18 was necessary due to the unique issues involved.[102] The Legal Aid Commission of New South Wales provided cautious support for the introduction of special provisions for children, so

long as they did not weaken the principle of equal privacy rights for all.[103] On the other hand, Telstra was opposed to the creation of different rights and obligations for children, as this, arguably, leads to further fragmentation and adds to the regulatory burden on businesses and the community.[104]

Balancing rights of children and young people and parents

60.57 A number of submissions touched on the issue of balancing the rights of children and young people with the rights of parents. The Youth Affairs Council of Victoria (YACVic) noted that the recognition of the evolving capacity of a child is set out in art 5 of CROC, but indicated that an education strategy and appropriate guidelines are required to address the 'grey' areas where it is not clear whether capacity exists.[105] The New South Wales Commissioner for Children and Young People also emphasised that children and young people do not necessarily exclude parents from decision-making processes even as they increase their own involvement.

> Many children and young people tell the Commission that they want their parents to be involved in their lives and to assist them when needed and so want to share their personal information with their parents. However, as young people grow older and seek assistance with more intimate issues they want to choose if and when their parents are involved. Therefore, laws on how information is collected and disclosed need to reflect this need for flexibility.[106]

60.58 One individual suggested that parents should not always be seen as 'baddies' from whom young people need to be protected.[107] It was also noted, however, that the right to access health information of their own child cannot be afforded blindly to all parents. The New South Wales Council for Civil Liberties suggested that there is no automatic right of parents to know about the medical or educational problems of their children, and that the age of the child and the nature of the problem need to be considered.[108] The Caroline Chisholm Centre for Health Ethics also noted the varying quality of child and parent relationships.

> In familial settings there are wide ranging situations where it could be argued that the parent abdicates certain rights that accompany parental responsibility because of neglect, emotional, psychological and physical abuse, or their own drug use, or other harmful behaviour which negatively impacts on the child … It is therefore not possible to argue that it is always in the child's best interest for the parent to be able to access the health information of the child, where the child has independently sought

medical, welfare or social services care, and because of fear or parental reaction, has decided to conceal this information from the parental figure(s).[109]

Capacity of children and young people to make their own decisions

60.59 The existing mechanism in the *Privacy Act*, which does not set an age limit for determining the capacity of an individual under the age of 18, was supported in submissions.[110] The flexible, individual assessment approach was seen as consistent with a rights-based approach to privacy, ensuring the individuality, differing maturity levels and best interests of each child or young person are recognised and considered.[111] The Queensland Commission for Children and Young People and Child Guardian suggested a clear process for making the assessment, which included an onus on the practitioner carefully to explain the consequences of the proposed collection, use or disclosure of the personal information.[112]

60.60 In order for an individual assessment process to work effectively, it was noted that there is a need to provide education to ensure that those making the assessment have the appropriate skills.[113] Consistent with CROC, it was also suggested that children and young people should be involved in decision making, and their views considered, even where the child or young person is considered incapable of making the decision alone.[114]

60.61 There were some who recognised that it is not always possible to make an individual assessment. It was suggested in one submission that unless an assessment can be made about a child's capacity, an agency should refrain from dealing with personal information concerning that child or young person unless legislative provisions permit or require it to do so, or it is otherwise in the best interests of the child.[115] A number of others considered it appropriate to consider setting a specific age

at which an individual is deemed to be capable of making decisions regarding his or her own personal information.[116] Setting an age would ensure consistency of application across the various jurisdictions and the media involving interaction with children and young people.[117] The Australian Health Insurance Association noted that an individual assessment is not realistic in the health insurance setting, and that there is a need to set a sensible age to determine when a child or young person can be responsible for his or her own health information.[118] The National Children's and Youth Law Centre agreed that it is necessary to set an age at which capacity is assumed for those situations where it is not practical to undertake an independent assessment, but considered that there should be a discretion to rebut the assumption that a child does not have capacity if evidence to the contrary is made available.[119]

60.62 A specific age was suggested in a few submissions. The Obesity Prevention Policy Coalition and Young Media Australia suggested 14 as an appropriate cut-off age in relation to the use of personal information for direct marketing purposes.[120] In youth workshops conducted by the ALRC, there were varying suggestions about the age at which most young people should be able to control access to their health information, although it was generally placed around the age of 14 to 16.[121] The Australian Health Insurance Association suggested that if a lower age cannot be agreed upon, then the age of 18 should be specified in legislation.[122]

60.63 It was also suggested that, where a child or young person does not have the capacity to make appropriate decisions about the handling of personal information, responsibility for making the decisions should fall to the parents.[123]

Health information

60.64 The collection and disclosure of health information raised high levels of concern for young people involved in the ALRC youth workshops. There was a sophisticated understanding of the balancing issues: the need to provide confidential medical advice to young people; the need to ensure the ongoing safety and well being of young patients; the interests and responsibilities of parents; and the professional obligations of the medical profession. There was generally an expectation, however, that any young person who made a decision to seek medical advice on his or her own should be able to assume that the medical professional would maintain confidentiality. Concern was expressed in a number of submissions that individuals under the age of 18 would be

unable to obtain the proposed Health and Social Services Access Card. Such a cut-off would affect access to health services.[124]

60.65 Decisions about the collection and disclosure of personal information in the context of medical advice and treatment were clearly seen as areas where individual assessment of the decision-making capacity of the child or young person is appropriate.[125] There was support for the guidance set out in the OPC's *Guidelines on Privacy in the Public Health Sector*, which highlights individual assessment of the capacity of children and young people to make privacy decisions.[126] There were also concerns, however, that education and training are required to ensure appropriate implementation of the guidelines.[127]

60.66 There was some support for the position of the AMA that, if a child or young person can make autonomous decisions regarding medical treatment and wishes that treatment to remain confidential, the doctor should respect that decision.[128] The National Health and Medical Research Council suggested this approach should be a legislative requirement.[129] It was stressed in some submissions, however, that the assessment of an individual's capacity to consent to medical treatment must be considered separately to a decision regarding disclosure of his or her personal information. The individual may be unable to consent to the medical treatment (particularly where it is of an invasive nature or has serious consequences), but have the capacity to determine that the practitioner should not disclose the fact and details of the visit.[130]

60.67 This distinction is considered to be even more crucial in the move to a national electronic health record, which may involve decisions to opt in or opt out of the system, or relating to who should have access to the record.

> The requirement of health practitioners to assess the capacity of a young person to consent to an electronic health record has raised particular concerns. Assessing a young person's capacity to make decisions about the handling of their personal and health information … is different to assessing a young person's capacity to make decisions about their healthcare or medical treatment. Therefore is the use of 'standard clinical practice' appropriate? The distinction between capacity to make decisions about privacy, and capacity to make decisions about healthcare needs to be more clearly articulated in any electronic health record implementation.[131]

Possible models for assessing capacity

60.68 The New South Wales Law Reform Commission (NSWLRC) is dealing with similar issues in its current inquiry on the consent of minors to medical treatment. The NSWLRC has identified problems, in particular what some see as a lack of clarity and certainty, with the existing common law position. An individual under the age of 18 can legally consent to medical treatment if he or she is capable of comprehending the nature and consequences of the treatment.[132] The NSWLRC set out five alternate models involving the assessment of consent:

- according to each young person's capacity to understand;
- by fixing a general cut-off age;
- according to the young person's age *and* capacity to understand—for example, by deeming that young people over a certain age have legal capacity, and under a certain age do not have capacity, and for an age bracket in between which would require individual assessment of capacity;
- according to the type of medical treatment—for example, by setting certain ages of legal capacity in relation to treatments such as contraception, termination of pregnancy, drug and alcohol services, or mental health; or
- according to specific groups of young people—for example, by deeming young people who are married, parents themselves, living independently or homeless to have legal capacity.[133]

60.69 A selection of these elements could be combined in an alternative model. The NSWLRC has yet to choose which model, if any, to recommend.[134]

60.70 While this Inquiry is not focusing on consent to medical treatment, the same options arise in relation to assessing capacity to make decisions about an individual's

134 The NSWLRC is expected to complete its report on this project by the end of 2007.

personal information. As the circumstances and consequences of these decisions may differ greatly, a different approach may be justifiable under the *Privacy Act*.

60.71 Research on the decision-making capacities of children and young people, international law as reflected in CROC, and recent case law all support individual assessment of capacity. This approach is consistent with the existing regime understood and applied under the *Privacy Act,* and in other privacy legislation in Australia. There is also strong support in the community for continuing this approach. Further, a model that involves communicating with a child or young person to help him or her to understand the nature and consequences of a decision is the best model for involving children and young people in decision-making processes, even where the child or young person is found to be incapable of making the decision on his or her own. The assessment process lends itself to involving parents, guardians or other support adults, so that the child or young person receives support whether he or she is capable or incapable of making an independent decision.

60.72 The ALRC was also made aware, however, that there are practical limitations and difficulties with this approach. Individual assessment presupposes that it is possible to engage with the individual. It also requires that the person making the assessment is suitably qualified to provide support and make an appropriate judgment about the capacity of the individual to understand the nature and consequences of the decision. While such a situation generally exists in a doctor-patient relationship, it does not exist in a wide variety of circumstances involving decisions regarding an individual's personal information. Such circumstances include:

- completing an online form with personal information in order to access subscriber-only parts of a website, where the conditions of access (set out on the website) include allowing the company to use the personal information for marketing purposes;

- providing staff at a gym with a form containing details of medical conditions suffered by an individual;

- agreeing over the phone to participate in a survey, and disclosing personal information during the phone interview;

- completing a form agreeing to the use by an organisation of an individual's personal information held by the organisation for research purposes; or

- sending a letter or email to an agency, or completing an online form, requesting access to a record containing the individual's personal information.

60.73 In many of these situations, the agency or organisation may not be aware of the age of the individual it is engaging with, let alone able to make an assessment

regarding the capacity of the individual to understand the nature and consequences of the decision. While the individual in each scenario may appear to consent to the collection or disclosure of, or access to, his or her personal information, the agency or organisation does not know whether the individual understands fully the consequences that may arise from the decision. At present, in the absence of making a one-on-one assessment concerning the capacity of an individual under the age of 18, there is no guidance on how to handle personal information in these situations.

60.74 Setting a minimum age at which individuals are assumed to be able to make decisions under the *Privacy Act* would enhance clarity and simplicity. So long as an agency or organisation can establish that an individual is over the cut-off age, no assessment of capacity would be required. The agency or organisation would still be subject to the relevant requirements to inform individuals of certain circumstances relating to collection in accordance with the proposed 'Specific Notification' principle, but further inquiry as to whether the individual understands the nature and consequences of the decision would not need to be undertaken.

60.75 Setting a minimum age also would have the benefit of protecting those under that age, by requiring an authorised representative to make decisions on their behalf.[135] This would be appropriate where there are serious or possibly negative consequences of a decision regarding personal information, and the child or young person is not capable of giving appropriate consideration to those consequences. An authorised representative would be required to make, or refuse to make, the decision on behalf of the child or young person, and ensure the child or young person is supported in all the circumstances.

60.76 The simplicity of the minimum age solution, however, also has the potential to cause injustice. It has been suggested that the application of any age-based legislative provision is arbitrary, and may breach the principle of equality before the law.[136] It is inevitable that, wherever the age barrier is placed, there will be some over the age barrier that do not really have the required capacity in relation to all decisions, and there will be some under the age barrier that would have the required capacity in some situations.

60.77 If a minimum age solution is desirable, the next step is to determine the appropriate age. Research on child development and brain development suggests that the cognitive ability to make independent decisions is generally in place by the age of 14 to 16, but this cognitive ability has not fully matured and individuals of this age will continue to be more susceptible than adults to psychosocial factors. These psychosocial factors will have a differing impact depending on the circumstances in which the

---

135 The term 'authorised representative', and who may be an authorised representative, are discussed further below.

136 J Morss, 'But for the Barriers: Significant Extensions to Children's Capacity' (2004) 11 *Psychiatry, Psychology and Law* 319, 321–322.

decision must be made and the potential consequences of the decision, as well as the circumstances of the individual, including his or her stage of social development, socio-economic status, and the support available and accepted by the individual.

60.78 As canvassed by the NSWLRC, it may be appropriate to consider setting age cut-offs at different points depending on the nature of the personal information involved. For example, decisions regarding health information may require a higher level of capacity than decisions regarding disclosure of an email address for direct marketing purposes.[137] The *Privacy Act* already makes a distinction between sensitive information and other personal information and applies additional protection to sensitive information.[138] It may be appropriate to set a higher minimum age for making decisions relating to sensitive information than to other personal information. While this approach is likely to cause some confusion for agencies, organisations and individuals, the fact that differing requirements already apply to the handling of sensitive information suggests it is possible to implement this approach.

60.79 The NSWLRC also considered that certain categories of young people should be deemed to possess legal capacity, particularly those who, in practice, act independently of parents and guardians. Any situation requiring such individuals to have a responsible person to make a decision on their behalf may be impractical. It would be possible to include such an approach under the *Privacy Act*, although it may not be easy to define the categories and it would require additional administrative steps to prove a certain individual falls within a particular category.

Models used in other jurisdictions

60.80 Most privacy legislation overseas takes the same approach as Australian privacy legislation in assuming all individuals, regardless of age, have the same privacy rights. Some overseas legislation makes provision, however, for determining when a child or young person may make decisions in his or her own right, or for determining who may make decisions on behalf of the child or young person.

60.81 The *Privacy Act 1985* (Canada) and the *Personal Information Protection and Electronic Documents Act 2000* (Canada) are similar to Australian legislation in not making age distinctions. Both Acts provide that rights or actions may be exercised or performed on behalf of a minor by an authorised person. It is assumed that an individual assessment model is used in practice, although there is no guidance on the issue.

---

137 It should be noted that the consequences of access to, and disclosure of, health information may differ from decisions regarding health treatment. This is discussed below.

138 The ALRC proposes retaining this distinction for sensitive information. For the definition of sensitive information, see Ch 3. See Ch 19 for a discussion of the provisions relating to sensitive information in the proposed UPPs.

60.82 The United Kingdom uses a combined individual assessment and minimum age model. Guidance has specified that an individual aged 12 or more is presumed to be of sufficient age and maturity to have the required understanding to exercise a right under the *Data Protection Act 1998* (UK), but that an assessment of capacity should be made.[139]

60.83 The *Privacy Act 1993* (NZ) also uses a combined individual assessment and minimum age approach. The Act gives an agency the power to refuse to disclose information requested by an individual under the age of 16 if the disclosure would be contrary to the individual's interests.[140] There is no further guidance in the legislation or otherwise about assessing the capacity of a child or young person to make decisions under the Act, although an individual assessment approach can be assumed. The exception is in the *Health Information Privacy Code 1994* (NZ), issued under the Act, which provides that, where an individual is under the age of 16, the individual's parent or guardian may make decisions regarding the collection, use and disclosure of health information.[141] As the provision is permissive, it does not preclude a younger individual from making a decision in his or her own right, but suggests that a decision by a parent or guardian will take precedence over that of the individual under the age of 16.

60.84 The *Personal Health Information Protection Act 2004* (Ontario) has a number of interesting provisions relating to capacity, which combine an individual assessment and minimum age approach. Essentially it establishes a regime that assumes a person aged 16 or over can consent to the collection, use or disclosure of personal information in his or her own right. It goes on to provide that a parent, children's aid society or other person with parental responsibility may provide consent on behalf of an individual who is under the age of 16, but not if the information relates to medical treatment about which the individual has made his or her own decision, or child and family services counselling in which the individual has participated on his or her own.[142] However, the provision that parents or others may provide consent on behalf of an individual under the age of 16 is further qualified: if the individual is considered to

---

139 This position is set out in the Act only in relation to Scotland, which otherwise deems that an individual does not have legal capacity until the age of 16: *Data Protection Act 1998* (UK) s 66. This also means that in Scotland an individual aged 16 has legal capacity, and no assessment is required. It was not considered necessary to spell out this position in the legislation in relation to Wales, England and Northern Ireland: United Kingdom Government Information Commissioner's Office, *Data Protection Act 1998 Legal Guidance* (2001), 52.

140 *Privacy Act 1993* (NZ) s 29(1)(d). This also means that there is no power to refuse if the individual is aged 16 or over.

141 *Health Information Privacy Code 1994* (NZ) cl 3.

142 *Health Information Protection Act 2004* (Ontario) s 23(2). Each of these exceptions applies to sensitive areas that are regulated by other legislation dealing with the capacity of the individual to provide consent or participate in his or her own right, namely the *Health Care Consent Act 1996* (Ontario) and the *Child and Family Services Act 1990* (Ontario).

be capable of consenting on his or her own, then the decision of the individual prevails over a conflicting decision of the parent or other substitute decision-maker.[143]

ALRC's view

Combining individual assessment and minimum age approaches

60.85 Based on the scientific research and a human rights approach, the ALRC believes that a system of individual assessment is the fairest and most appropriate way to determine if an individual under the age of 18 has the capacity to make a decision. As far as possible, a system of individual assessment should remain in the *Privacy Act*.

60.86 The ALRC is alert, however, to the impracticalities of imposing an across the board individual assessment approach. Decisions relating to personal information arise in a wide variety of contexts, many of which do not allow for individual assessment by the relevant agency or organisation. At present, in these situations it is assumed that an individual who completes a form, makes a phone call or ticks a box has the capacity to make the required decision regarding his or her personal information. However, the consequences of the decision to allow collection or disclosure of personal information can be significant. In particular, the ALRC considers that, as younger children interact increasingly in the online environment, there is a need to set some limits regarding decision making without assessment of the individual's capacity.

60.87 The ALRC proposes a model that combines individual assessment and a minimum age. In all circumstances where an individual assessment is possible, any individual under the age of 18 should be assessed to determine if he or she has the capacity to make a decision to give consent, make a request or exercise a right of access under the Act. Where individual assessment is not possible, there should be a set age at which a presumption of legal capacity exists, and under which it is presumed the individual cannot make a decision in his or her own right. Even if a presumption is initially adopted, at any time an individual assessment may be conducted and the presumption overridden.

60.88 Where legal capacity is found, either by assessment or by operation of the presumption, the individual has the ability to make decisions in his or her own right, to the exclusion of any other person. Where there is no legal capacity, an authorised representative must make a decision on behalf of the individual. Who this authorised representative should be is discussed below.

60.89 The ALRC considers that this approach has two benefits. First, the individual assessment element brings flexibility and recognises the ways in which cognitive

143 Ibid s 23(3).

capacity develops. Secondly, it provides certainty and practical operation in those situations where individual assessment is not available.

Setting the age of presumption

60.90 In many jurisdictions, the age of presumption of legal capacity has been set at 16, with individual assessment below that age. In the United Kingdom it is 12, with individual assessment to be conducted above that age. If the ALRC's proposals are implemented, the set age will apply where individual assessment is not possible. The set age must provide appropriate recognition of the capacity of the vast majority of people above a certain age, without exposing a large number of individuals to the potential consequences of decision making they are not equipped to deal with.

60.91 The balance between parental authority and the evolving capacities of young people to make decisions on their own also must be considered. The recognition of legal capacity will allow young people above a certain age to refuse to consent to disclosure of personal information to others, including their parents.[144] The recent debate concerning parental access to health information records, outlined above, shows that this topic evokes strong feelings in the Australian community.

60.92 Some overseas and Australian legislation and policies that are focused on the protection of children have set a minimum age at 13, under which parental authority or consent is required before personal information can be collected.[145] These statutes and policies impose protections for children that are in addition to the general privacy principles—the need for such additional protections is discussed below. The ALRC does not consider, however, that 13 is an appropriate age at which to expect all young people to take on the responsibilities and consequences of decision making without supervision.

60.93 Given previous debate in the Australian community, and the latest research which highlights the impact of psychosocial factors on adolescent decision making, the ALRC proposes that the minimum age be set at 15. Fifteen is the age at which a young person is entitled to access a separate Medicare card without parental permission.[146] Under the ALRC's proposal, where an individual assessment is not possible, individuals aged 15 and over will be assumed to have the capacity to make decisions under the *Privacy Act*. Individuals under the age of 15 must have an authorised representative make the decision on their behalf.

---

144 The disclosure will be permissible if this is expected as part of the primary purpose of collection, or a related secondary purpose. See the discussion on this point in relation to school reports below.

145 See, eg, *Children's Online Privacy Protection Act 1998* 15 USCA § 6501 (US); Internet Industry Association, *Internet Industry Privacy Code of Practice: Consultation Draft 1.0* (2001). The Australian Labor Party's proposed amendment to the *Privacy Amendment (Private Sector) Act 2000* (Cth) headed 'Special protection for children' also adopted this cut-off age: Commonwealth of Australia, *Parliamentary Debates*, Senate, 30 November 2006, 20302 (N Bolkus).

146 Note the discussion above, which indicates the Government's intention that this will remain the case following introduction of the proposed Health and Social Services Access Card.

60.94 This will have implications for agencies and organisations that deal with young people. Such agencies and organisations may have to establish a system for verifying the age of the individual and, if the individual is under the age of 15, establish alternative methods for communicating directly with an authorised representative. These implications are discussed further below.

Encouraging and facilitating appropriate individual assessment

60.95 The ALRC is aware that setting an age of presumption in the legislation may have a negative effect on the system of individual assessment and, in practice, suggest a general presumption for all decisions regarding personal information. The age of presumption is intended to be a fall back position, only to be imposed where an individual assessment is not possible. To ensure that this approach is adopted, there is a need for guidance that encourages individual assessment to be undertaken properly.

60.96 The first step is to have clearer guidance on the meaning of 'capacity' to make a decision under the *Privacy Act*. A number of other information privacy Acts include provisions that make this kind of statement. The ALRC proposes that the *Privacy Act* include a provision, based on that in the *Health Records Act 2001* (Vic) and draft *National Health Privacy Code*,[147] that clarifies the meaning of capacity. The provision should state that an individual under the age of 18 is considered to be incapable of giving consent, making a request or exercising a right if, despite the provision of reasonable assistance by another person, he or she is incapable of:

- understanding the general nature and effect of giving the consent, making the request or exercising the right; or

- communicating such consent or refusal of consent, making the request or personally exercising the right of access.

60.97 One of the important aspects of the proposed provision is the requirement to provide reasonable assistance to the individual to help him or her understand the nature and effect of the decision and to communicate his or her decision. This reflects the need to involve children and young people in the decision-making process and support them to ensure that their capacity is recognised to its full potential, consistent with arts 5 and 12 of CROC. Often such assistance will be provided as part of the assessment, such as during a doctor-patient consultation, or in an information session about participation in a research project. The assistance does not have to be provided directly by the agency or organisation—in some cases, it may be provided by a parent—but there is an onus on the agency or organisation to ensure that reasonable assistance is available.

---

147 *Health Records Act 2001* (Vic) s 85(3); National Health Privacy Working Group of the Australian Health Ministers' Advisory Council, *Draft National Health Privacy Code* (2003) pt 4, cl 4(3).

60.98 The ALRC considers that the OPC should develop and publish guidelines on the handling of personal information of individuals under the age of 18. The guidance should stress that individual assessment is the preferred way to determine capacity under the *Privacy Act*. The guidance may suggest particular scenarios where individual assessment should be used and how an appropriate assessment practice can be established. Further guidance on applying the criteria set out in the proposed legislative provision for determining an individual's capacity would also be useful for agencies and organisations.

60.99 There will also be a need to assist agencies and organisations to understand their obligations to provide reasonable assistance to individuals in understanding and communicating decisions. This should include considering how best to involve parents and others in the decision-making process to support the child or young person.

Making decisions for a child or young person without capacity

60.100 The *Privacy Act* does not provide any mechanism for making decisions on behalf of an individual under the age of 18 who is found to be incapable of making a decision on his or her own behalf. It is assumed that parents or guardians will make these decisions. The ALRC considers there is a need to clarify the position in legislation and ensure that an appropriately defined category of persons is entitled to make decisions on behalf of a child or young person who lacks capacity.

60.101 Chapter 61 looks at adults who are incapable of making decisions on their own behalf under the *Privacy Act*. The ALRC proposes adopting the concept of an 'authorised representative', which is used in the *Health Records Act 2001* (Vic) and draft *National Health Privacy Code*.[148] As discussed in Chapter 61, it is necessary to define clearly the categories of person that may act as an authorised representative of an individual. These categories should include, in relation to a person under the age of 18, a person with 'parental responsibility' for the individual.[149] The term 'parental responsibility' will include parents, guardians and other persons who have parenting responsibilities for the child or young person but exclude a parent who, as a result of a court order, no longer has parental responsibility.[150]

Implementing the age of presumption

60.102 Establishing an age of presumption in the absence of the ability to make an individual assessment under the *Privacy Act* will have implications for agencies and organisations. In such situtations, an authorised representative must be found to make a decision on behalf of the individual. This means the establishment of appropriate

---

148 The term 'authorised representative' is defined in *Health Records Act 2001* (Vic) s 85(6); National Health Privacy Working Group of the Australian Health Ministers' Advisory Council, *Draft National Health Privacy Code* (2003) pt 4, cl 1.

149 This category is incorporated into the definition of 'authorised representative' set out in Proposal 61–2.

150 The concept of parental responsibility is used in the *Family Law Act 1975* (Cth). An effective definition of 'parental responsibility' to define a person entitled to act on behalf of a child is set out in Exposure Draft Human Services (Enhanced Service Delivery) Bill 2007 (Cth) cl 4.

mechanisms to determine the age of an individual, and to engage with the authorised representative.

60.103 The experience in the United States with the *Children's Online Privacy Act 1998* (COPPA) and the use of parental consent verification mechanisms for online engagement with individuals under the age of 13 has been largely positive.[151] The system involves a sliding scale that heightens the stringency of the verification requirement where the intended use and disclosure of the personal information involves third parties rather than internal use by the organisation.

60.104 Age and parental consent verification systems are not foolproof. In Australia, most online age verification systems are used in conjunction with sites meant for adults only, such as pornography or liquor sales sites. Some security experts have suggested that any technical solution tough enough to keep children safe would penalise legitimate users who could not be verified.[152] Based on its experience, however, the United States Federal Trade Commission (FTC) considers that COPPA has been effective in providing greater protection to children's personal information online.[153] A number of new initiatives in the United States aimed at protecting children are exploring the use of similar age verification mechanisms.[154]

60.105 Requirements for the operation of age and parental consent verification mechanisms and other aspects of the regime are set out in a Rule made under COPPA. There are extensive penalties for non-compliance with the Rule and the FTC puts significant resources into monitoring and enforcing the Rule.

60.106 At this point, the ALRC does not consider it appropriate to prescribe in legislation how to implement the age of presumption in the *Privacy Act*. Neither is it feasible for the OPC to spend significant resources monitoring compliance by agencies and organisations. It would, however, be an issue for consideration as part of any complaint about a breach of the Act, or as part of an audit of compliance. It is the preliminary view of the ALRC that the OPC should provide guidance to agencies and organisations to assist them to establish appropriate mechanisms and practices for implementing the age of presumption, including establishing appropriate age verification mechanisms and facilitating decision making by authorised representatives on behalf of incapable children and young people.

---

151 Further details of COPPA are set out below in a discussion on children and young people as online consumers.

152 'Trying to Keep Children Safe Online', *The Canberra Times* (Canberra), 7 August 2006, 14.

153 United States Government Federal Trade Commission, 'FTC Retains Children's Online Privacy Protection (COPPA) Rule Without Changes' (Press Release, 8 March 2006).

154 See, eg, the proposed US federal Debit and Check Card Consumer Protection Act, which aims to protect against the theft of children's identities: M Bosworth, 'Sen Clinton Targets Child Identity Theft', *ConsumerAffairs.Com*, 31 October 2006, <www.consumeraffairs.com>. The Bill was not passed.

60.107 While the OPC should encourage the establishment of age verification mechanisms, the ALRC also notes that they are not without problems. For this reason, the ALRC proposes that the *Privacy Act* contain an appropriate limitation on the liability of agencies and organisations when dealing with individuals aged 14 or under where no individual assessment of capacity has been undertaken. The ALRC considers that if the agency or organisation does not know, or could not reasonably be expected to have known from the information available, that an individual was aged 14 or under, the agency or organisation should be able to rely upon the consent.

60.108 This proposal should not be interpreted as allowing agencies and organisations to plead ignorance in every case due to a failure to establish appropriate age verification mechanisms. Consistent with the approach of the COPPA Rule, it would be appropriate for all agencies and organisations that operate services directed to individuals aged 14 and under—or that otherwise have 'actual knowledge' that they handle the personal information of individuals aged 14 and under—have either a system for individual assessment of capacity, or an age verification mechanism. The proposed limitation on the liability of an agency or organisation would cover the situation where the individual deliberately avoided or misled the agency or organisation, or where an agency or organisation that does not usually handle the personal information of children and young people interacts with an individual under the age of presumption, but there is no information available to suggest the individual is under that age. The ALRC considers the proposed limitation is an appropriate balance that allows for practical implementation by agencies and organisations.

Obligations on agencies and organisations

60.109 One of the themes highlighted in submissions and consultations was a lack of knowledge and experience on the part of agencies and organisations when dealing with children and young people. The ALRC proposes, therefore, a number of practical solutions for raising the level of awareness of the proposed provisions and improving the practical application of the provisions.

60.110 In Chapter 21, the ALRC proposes that agencies and organisations should be required to develop and publish a Privacy Policy that sets out how the agency or organisation manages personal information and how personal information is collected, held, used and disclosed.[155] Agencies and organisations that handle the personal information of individuals under the age of 18 should address how such information is managed in their Privacy Policies. This would include addressing issues such as whether an individual assessment of capacity is carried out and by whom, what age verification mechanisms (if any) are used, and how an authorised representative may act on behalf of an incapable child or young person.

155 See Proposals 21–1, 21–2, 21–4.

60.111 The ALRC also considers that agencies and organisations that regularly handle the personal information of individuals under the age of 18 should ensure that their staff are trained adequately to assess the decision-making capacity of children and young people. Where individual assessments are not routinely undertaken, staff should be made aware of the steps to be taken to determine if an individual is over the age of presumption, and what must occur if an individual is under the age of presumption. It may be appropriate that such training is offered by industry associations, possibly as part of broader training programs aimed at improving staff awareness and practices in relation to personal information.

Proposal 60–1 The *Privacy Act* should be amended to provide that:

(a) an individual aged 15 or over is presumed to be capable of giving consent, making a request or exercising a right of access unless found to be incapable (in accordance with the criteria set out in Proposal 60–2) of giving that consent, making that request or exercising that right;

(b) where it is practicable to make an assessment about the capacity of an individual aged 14 or under to give consent, make a request or exercise a right of access, an assessment about the individual's capacity should be undertaken; and

(c) where it is not practicable to make an assessment about the capacity of an individual aged 14 or under to give consent, make a request or exercise a right of access, then the consent, request or exercising of the right to access must be provided by an authorised representative of the individual.

Proposal 60–2 The *Privacy Act* should be amended to provide that an individual aged under 18 is incapable of giving consent, making a request or exercising a right if, despite the provision of reasonable assistance by another person, he or she is incapable, by reason of maturity, injury, disease, illness, cognitive impairment, physical impairment, mental disorder, any disability or any other circumstance, of:

(a) understanding the general nature and effect of giving the consent, making the request or exercising the right; or

(b) communicating such consent or refusal of consent, making the request or personally exercising the right of access.

Where an individual under the age of 18 is considered incapable of giving consent, making a request or exercising a right, then an authorised representative of that individual may give the consent, make the request or exercise the right on behalf of that individual.

Proposal 60–3 The Office of the Privacy Commissioner should develop and publish guidance for applying the provisions relating to individuals under the age of 18, including on:

(a) the involvement of children, young people and their authorised representatives in decision-making processes;

(b) situations where children and young people are capable of giving consent, making a request or exercising a right on their own behalf;

(c) practices and criteria to be used in determining whether a child or young person is incapable of giving consent, making a request or exercising a right on his or her own behalf;

(d) the provision of reasonable assistance to children and young people to understand and communicate decisions; and

(e) the requirements to obtain consent from an authorised representative of a child or young person in appropriate circumstances.

Proposal 60–4 The *Privacy Act* should be amended to provide that an agency or organisation will not be considered to have acted without consent if it did not know, and could not reasonably be expected to have known from the information available, that an individual was aged 14 or under, and the agency or organisation acted upon the consent given by the individual.

Proposal 60–5 An agency or organisation that handles the personal information of individuals under the age of 18 should address in its Privacy Policy how such information is managed.

Proposal 60–6 An agency or organisation that regularly handles the personal information of individuals under the age of 18 should ensure that its staff are adequately trained to assess the decision-making capacity of children and young people.

Specific privacy issues affecting children and young people

60.112 In the Issues Paper, *Review of Privacy* (IP 31), the ALRC identified a number of areas where privacy issues arise for children and young people.[156] The particular issue of photographs is dealt with in Chapter 59.

Online consumers and direct marketing issues

60.113 Personal information collected in the online environment is subject to the same laws as any other personal information. This chapter focuses on personal information collected in the online environment, such as through registration pages, survey forms, order forms, and online contests. Chapter 6 deals with technology that can be used to capture personal information in ways that are not obvious to the online consumer, such as by using cookies or web bugs, and security issues in the online environment. Chapter 59 deals more specifically with the situation where a child or young person, or a third party, chooses to disclose personal information on a social networking site.

60.114 The internet is an integral part of modern marketing techniques. Given their familiarity and high usage of the internet, and their significant consumer power,[157] it is not surprising that this medium is used to target children and young people.

> The World Wide Web has provided children with abundant new opportunities for learning, communicating and playing. But parents and children need to be aware that the Internet has joined television, radio and print as a key component of today's marketing campaigns and many use consumer information to build individual relationships. Children are often more cyber-savvy than their parents. But they also have a trusting and curious nature that may lead them to give out personal information without realising it.[158]

60.115 There is extensive literature that addresses the particular susceptibilities of children as consumers.[159] When combined with a medium that is often used by children and young people with little or no supervision, concerns arise about the privacy of children and young people as consumers using the internet.

Online privacy regulation in Australia

60.116 The *Privacy Act* does not distinguish between the application of privacy principles in the online environment and their application in any other area. All agencies and organisations subject to the *Privacy Act* must comply with the IPPs or NPPs in relation to the handling of personal information over the internet. There is some criticism, however, of the operation of the privacy principles in the online environment.

> The fact is that, under existing Australian law, individuals have almost no privacy 'rights' in the online environment and even the few rights they allegedly have are not protected adequately and are difficult, sometimes impossible, to have enforced. The lack of rights arises from a combination of factors, including but not limited to, uncertainty regarding the definition of 'personal information'; no requirement to obtain consent before collecting personal information; use of bundled 'consents' including to disclose information to unspecified 'partners'; the small business exemption; and/or technological developments.[160]

60.117 The more general issue of regulation of the internet is addressed in Chapter 6. The ALRC does not propose, however, that privacy in the online environment be regulated separately from other environments. The same set of UPPs is proposed to apply regardless of the medium. The proposed UPPs will have the flexibility and adaptability to apply to the multitude of circumstances in which agencies and organisations must take account of individuals' privacy rights, including technological developments that impact on privacy.

60.118 It is also possible for industries to develop their own standards or guidelines, consistent with the *Privacy Act*, that address particular online privacy practices, including with respect to the privacy of children and young people. For example, the following initiatives relating to online privacy have been developed in Australia:

- The OPC has issued *Guidelines for Federal and ACT Government World Wide Websites* which encourage best privacy practice for websites.[161] Guideline 1 recommends that a privacy policy be prominently displayed on the website.

- The Internet Industry Association (IIA) has developed a Privacy Code of Practice, which is currently under consideration by the OPC.[162] The Code includes a specific provision requiring that a legal guardian provide consent on

---

160 Electronic Frontiers Australia Inc, *Submission to the Office of the Privacy Commissioner Review of the Private Sector Provisions of the Privacy Act 1988*, 22 December 2004.

161 Office of the Federal Privacy Commissioner, *Guidelines for Federal and ACT Government World Wide Websites* (1999). Similar guidelines exist in relation to Victorian, South Australian and Northern Territory government agencies: Office of the Victorian Privacy Commissioner, *Website Privacy—Guidelines for the Victorian Public Sector* (2004); Privacy Committee of South Australia, *Privacy Guidelines for South Australian Government World Wide Websites*; Northern Territory Government Department of Corporate and Information Services, *NT Government Website Guidelines* (2001).

162 The 2001 draft version of the Code, which was circulated for consultation prior to submission to the OPC in March 2003, can be found at <www.iia.net.au>.

behalf of an individual under the age of 13 prior to disclosure of sensitive information collected from or about the child.[163]

- The Australian Direct Marketing Association publishes tips on helping parents to safeguard a child's privacy online, and plans to introduce guidelines on children's privacy that will be compulsory for its members.[164]

60.119 Individuals may adopt various informal methods to avoid improper use of their personal information collected in the online environment, such as providing false information when filling in forms, using pseudonyms and using temporary email accounts.[165]

Online privacy regulation in the United States

60.120 While the United States does not have federal legislation for the online privacy of adult consumers, it does have federal online privacy legislation dealing specifically with children. Based on the recommendations of the FTC,[166] COPPA was passed by the United States Congress in 1998 with a requirement that the FTC issue and enforce rules concerning children's online privacy.

60.121 The COPPA Rule, which came into effect in April 2000, aims to give parents control over what information is collected from their children online. The Rule applies to operators of commercial websites and online services directed to individuals under the age of 13 that collect personal information from children, and to operators of general websites with 'actual knowledge' that they are collecting information from individuals under the age of 13. Foreign run websites must comply with COPPA if they are directed to children in the United States. Under the Rule, operators are required to:

- post a clear and comprehensive privacy policy on their websites;

- provide notice to parents and, with limited exceptions, obtain verifiable parental consent before collecting personal information;

---

163 Internet Industry Association, *Internet Industry Privacy Code of Practice: Consultation Draft 1.0* (2001), [6.7]. The term 'child' is defined in [5.1].

164 Australian Direct Marketing Association, *Children and the Internet* (2005) <www.adma.com.au> at 1 August 2007.

165 In a 2004 Australian survey of community attitudes towards privacy, three in ten respondents admitted to having provided false information when filling out a form online, with 53% of 18–24 year old respondents admitting to this behaviour. Thirty-eight per cent of all respondents, and 67% of 18–24 year olds, indicated they use temporary email accounts: Roy Morgan Research, *Community Attitudes Towards Privacy 2004 [prepared for Office of the Privacy Commissioner]* (2004), 64, 66. The ALRC proposes greater recognition of the choice to remain anonymous or use a pseudonym: see Proposals 17–2, 17–3.

166 United States Government Federal Trade Commission, *Privacy Online: A Report to Congress* (1998).

- give parents the choice to consent to the collection and use of personal information about their child;

- provide parents with access to their child's personal information to review or have it deleted;

- give parents the opportunity to prevent further collection or use of the information; and

- maintain the confidentiality, security and integrity of information they collect from children.

60.122 The FTC has a sliding scale approach to obtaining verifiable parental consent, with the requirements for obtaining consent becoming more rigorous where the intended use of the information involves disclosure to third parties rather than internal use. Where the information is to be used for internal purposes only, verifiable parental consent can be obtained through the use of an email message to the parent, coupled with additional steps to provide assurances that the person providing the consent is, in fact, the parent. More rigorous methods specified in the Rule include: fax- or mail-back forms; credit card transactions; staffed toll-free numbers; digital certificates using public key technology; and emails accompanied by a PIN or passwords.

60.123 Website operators who violate the COPPA Rule can be liable for civil penalties of up to US$11,000 per violation. The FTC has undertaken an active enforcement approach to COPPA, including 11 successful enforcement cases between 2000 and 2004,[167] and the publication of a survey of the compliance levels of 144 key United States websites.[168] In March 2006, after a public review of the Rule, the FTC announced that the COPPA Rule had succeeded in providing greater protection to children's personal information online, and that the Rule—complete with the sliding scale—was to be retained without amendment.[169]

---

167 All of these cases were settled. For details see the FTC website: United States Federal Trade Commission, *Privacy Initiatives* <www.ftc.gov/privacy/privacyinitiatives/children_enf.html> at 23 August 2007. See also details of a recent settlement against social networking site Xanga.com: D Caterinicchia, 'Xanga Settles with FTC for $1 Million', *Houston Chronicle* (online), 7 September 2006, <www.chron.com>.

168 Conducted one year after commencement of the COPPA Rule, the FTC found that 90% of the surveyed websites provided a privacy policy that complied with the basics of the Rule. However, more than half of the websites did not fully implement other aspects of the Rule—for instance, the prohibition on operators making a child's participation in an online activity conditional on the child providing more information than is reasonably necessary to participate in that activity, and the provision requiring parents to be informed of rights to review, delete and refuse further collection and use of their child's personal information: United States Government Federal Trade Commission, *Protecting Children's Privacy Under COPPA: A Survey on Compliance* (2002), i–ii.

169 United States Government Federal Trade Commission, 'FTC Retains Children's Online Privacy Protection (COPPA) Rule Without Changes' (Press Release, 8 March 2006).

60.124 There have, however, been criticisms of the COPPA Rule and how it has operated in practice. These include that:

- non-profit organisations are not covered by COPPA;[170]
- operators of general websites do not have to comply with COPPA without 'actual knowledge' of the age of the child, and so can circumvent the Rule merely by not asking the age of the person submitting personal information;[171]
- it is easy for children to circumvent the law by lying about their age, or opening email accounts in their parents' names and giving consent on their own behalf;[172]
- the substantial burden of complying with COPPA has forced many websites simply to eliminate children's programming;[173] and
- even those websites complying with the COPPA Rule do not necessarily comply with the spirit of the law, and most existing privacy policies are too complex for children or parents to understand.[174]

Submissions and consultations

60.125 Few submissions dealt directly with the issue of children as consumers using the internet, and whether there should be any particular provisions for the protection of young consumers in the online environment.[175] The Queensland Commission for Children and Young People and Child Guardian considered that children and young people should be required to give informed consent before any personal information is collected from them online.

60.126 The Obesity Prevention Policy Coalition and Young Media Australia (OPPC and YMA) provided a submission that focused on the problems of direct marketing aimed at children and young people.[176] Although the concerns about direct marketing arise regardless of the media involved, the increasing use of technology to engage with children and young people was seen as a concern.

176 Obesity Prevention Policy Coalition and Young Media Australia, *Submission PR 144,* 25 January 2007.

> In our view, protecting children from interference with their privacy through direct marketing is becoming increasingly important in light of children's increasing use of the internet, email and SMS, and advertisers' widespread use of these technologies to market products directly to children … We are particularly concerned about direct marketing using these technologies because, unlike television, these technologies enable marketers to interact directly with children. Direct marketing using these technologies intrudes directly into children's personal space, and provides marketers with unsupervised access to children.[177]

60.127 The OPPC and YMA cited research indicating that children are more susceptible to commercial influence, and that they are unfairly manipulated by direct marketing.[178] Many children and young people do not have the capacity to make appropriate decisions regarding the disclosure of personal information in a direct marketing context. Further, direct marketers are unlikely to have the kind of contact with children or young people required to make any individual assessment about capacity. It was also noted that direct marketers have a vested interest in assuming that consent is informed and freely given.

60.128 The OPPC and YMA therefore suggested that direct marketers should be prohibited from collecting or using information without the express, verified consent of the child's parent if they know, or would be reasonably likely to know, that it is about an individual under the age of 14. It was proposed that the express, verified consent should be able to be provided through a signed form sent by mail or fax, provision of a credit card number or electronic signature, or calling a toll-free number staffed by trained personnel. It was also suggested that there be a prohibition on making consent to use personal information for direct marketing purposes a condition of entry to a competition, promotion or other activity if the entrant is under the age of 14. The OPPC and YMA provided a number of examples where this condition of entry has been used in competitions or clubs aimed at children in Australia.

ALRC's view

60.129 Given the concerns raised about collection of personal information about children and young people for direct marketing purposes, particularly in the online environment, there is a need to consider whether the *Privacy Act* or related legislation should contain additional protections for children and young people that modify the general application of the privacy principles.

60.130 One option is to adopt a model based on COPPA. Many aspects of COPPA apply general privacy regulatory measures that are necessary due to the absence of general information privacy legislation in the US. These requirements, including posting privacy policies on websites, rights of access and correction, and obligations to maintain the confidentiality, security and integrity of collected personal information,

---

177 Ibid.

178 See, in particular, D Kunkel and others, *Report of the APA Task Force on Advertising and Children* (2004) American Psychological Association.

will apply under the proposed UPPs to all personal information, not only to personal information about children.[179]

60.131 The major additional protections provided by COPPA, which appeal to some in the Australian community, are the requirements to obtain verifiable parental consent before collecting any personal information from an individual under the age of 13, and giving parents the opportunity to prevent further collection or use of the information. This was the basis of the proposed amendment for the 'special protection for children' put forward by the Australian Labor Party during debate on the Privacy Amendment (Private Sector) Bill 2000 (Cth), although the proposal was not limited to online activity as it is in COPPA.[180]

60.132 The suggestion for additional protections when collecting personal information from children stems from concerns that children are unable to make an informed choice before providing personal information to an agency or organisation. For example, a child is more likely than an adult to complete an online form and provide personal information in order to continue to play a game or enter a competition without giving appropriate consideration to the intended use of the personal information. Even where a child stops to consider the consequences, he or she is less likely than an adult to find and understand the agency's or organisation's privacy policy. Combined with the knowledge that children are interacting regularly in the online environment, sometimes without adult supervision, this is seen as a concern by some stakeholders.

60.133 Under the proposed UPPs, it is not necessary to obtain an individual's consent to collect his or her personal information except in relation to sensitive information where no other exception allows for collection without consent. While consent is not required for collection of non-sensitive personal information, an individual can often choose to take steps to prevent an agency or organisation from collecting that personal information. This contributes to the ALRC's proposal that agencies and organisations should be required to collect personal information directly from an individual wherever reasonable and practicable.[181] The ALRC also makes a number of proposals aimed at improving the extent and clarity of information made available to individuals about how their personal information will be handled.[182] These proposals, however, will not be of assistance to a child who is incapable of understanding and synthesising the information so as to make informed choices.

---

179 See Ch 21.

180 Commonwealth of Australia, *Parliamentary Debates*, Senate, 30 November 2006, 20302 (N Bolkus).

181 Proposal 18–1. This requirement exists in NPP 1.4 in relation to organisations, and the ALRC proposes extending the requirement to apply to agencies.

182 See Ch 20.

60.134 On the other hand, there are practical reasons why the general privacy principles do not require consent to every collection of personal information. There needs to be a balance between privacy protection and the practical operation of services and businesses. The proposed UPPs are designed to build in protections where they are required while still allowing for the appropriate flow of information. This may require agencies and organisations to seek consent from individuals where there are particular risks, such as before the collection of sensitive information, and before a use or disclosure that is not consistent with the primary purpose of collection, or otherwise covered by the carefully crafted exceptions to the proposed 'Use and Disclosure' principle. General protections relating to data quality and security apply to all personal information regardless of the way in which it was captured.

60.135 In general, it is the preliminary view of the ALRC that the balance provided in the proposed UPPs between privacy protection and the free flow of information is appropriate and gives adequate protection to personal information about children. In addition, the ALRC's proposal to require the assessment of the capacity of an individual to provide consent or otherwise to require an authorised representative to provide consent on behalf of an individual aged 14 or under provides protections that are not available at present.[183]

60.136 The ALRC notes particular concerns about direct marketing, and that some organisations running competitions aimed at children require consent to use personal information for direct marketing purposes as a condition of entry to the competition. There is, however, a limitation in relation to the use by organisations of personal information about children for direct marketing purposes. While consent is not required to collect personal information, it is required before personal information can be used for direct marketing purposes. In practice, this consent to use is generally obtained at the point of collection and, if consent is refused, would often leave an organisation with little reason to collect the personal information. Under the ALRC's proposals, the consent of an authorised representative will be required if the individual is aged 14 or under. While the proposed 'Direct Marketing' principle allows an organisation to use personal information for direct marketing purposes where obtaining consent is impracticable, the ALRC suggests that guidance should indicate clearly that the need to establish an age and parental consent verification mechanism should not be considered impracticable if the organisation is knowingly handling the personal information of individuals aged 14 and under.

60.137 Questions may be raised about whether direct marketing to children is, of itself, undesirable. The OPPC and YMA presented evidence highlighting that children, for developmental reasons, are less able to resist commercial influence and that the risks to children are heightened when combined with technology that enables organisations to contact children directly. The proposals in this Discussion Paper would help to protect the privacy of personal information about children, and would

183 See Proposal 60–2 above.

assist to limit unsupervised contact by direct marketers. It is not appropriate, however, to prohibit direct marketing to children through information privacy law.

60.138 On balance, it is the preliminary view of the ALRC that there is no need to enact additional privacy protections for children. Further guidance is needed, however, to clarify the operation of the proposed 'Direct Marketing' principle to ensure that appropriate protection and requirements to obtain consent from an authorised representative are implemented in relation to individuals aged 14 and under.[184]

Schools

60.139 School is the most significant institution in the lives of the majority of children and young people. Schools collect and hold a vast array of personal information regarding children and young people, including names, addresses, family information, subjects studied, grades and behavioural information. Schools will often hold health information about children and young people, either collected directly from the child or young person (or their parents or guardians), or collected as part of a service offered within the school, such as visits to a school dentist, nurse or counsellor. Photos and videos of children and young people taken by the school also fall within the definition of personal information.

60.140 With the exception of the ACT, government schools are not covered by the *Privacy Act* but are subject to any state or territory privacy legislation or scheme covering the public sector. Some states and territories have a privacy policy or privacy code that applies to all of their schools.[185] Further, many schools have developed policies or practices dealing specifically with the publication on their websites of photographs or videos depicting children and young people.[186]

60.141 Private schools are covered by the *Privacy Act* unless they fall within the small business exemption.[187] Even smaller private schools are likely to be partly covered by the *Privacy Act*: information relating to the provision of a health service, which includes physical education classes or fitness instruction as well as services provided by nurses and other health professionals, is regarded as 'health information'

---

184 Guidance of this kind is proposed in Proposal 23–6.

185 See, eg, South Australian Government Department of Education and Children's Services, *SA Government Schools and Children's Services: Information Privacy Statement* which sets out that the disclosure of personal information is regulated by the South Australian *Information Privacy Principles* and that access to information about a person may be requested by that person or a parent or guardian of that person.

186 See, eg, Curriculum Materials Information Services, *Protecting Student Privacy* Department of Education and Training Western Australia <www.det.wa.edu.au/education/cmis> at 1 August 2007, which suggests that parental consent should be sought when photographs or digital images of students are to be used outside the classroom environment, eg, in the local community newspaper, or on a website or CD-ROM promoting the school.

187 Note that the ALRC proposes the removal of the small business exemption from the *Privacy Act*: see Proposal 35–1.

and is regulated by the Act.[188] The OPC takes the view that, in most instances, private schools and colleges are covered by the Act and should comply with the NPPs.[189]

60.142 One of the key issues relating to access to the records of a child or young person is whether the school can disclose a record to a parent or guardian. In the private school context, it is generally the parents or guardians who enter a contract with the school to provide a service. Schools subject to the NPPs, however, must only disclose personal information regarding the child or young person consistently with the NPPs.

60.143 Advice from the OPC suggests that most personal information collected by a private school may be disclosed to parents as, under NPP 2.1(a), students would, in most cases, reasonably expect disclosure of the information to parents. The OPC indicates that disclosure of school reports and also material not related to education, such as health information or counselling records, would generally be expected.[190] For older students, however, these expectations may differ in relation to some records containing sensitive information. The OPC suggests that it is good practice, particularly in respect of older students, for schools to have a policy on disclosure of records that is made available to parents and students.[191] A number of policies relevant to government schools suggest that parents should have access to their child's records, at least until the child turns 18.[192]

60.144 School counselling is an area where privacy concerns arise. Most secondary schools provide a school counsellor on a full-time or part-time basis, and most primary schools have access to a school counsellor. While school counsellors are an important resource for young people, research suggests that a key reason why young people do not use them is because of concerns regarding confidentiality.[193] Policies regarding the confidentiality of school counselling services vary. All counsellors in any environment are subject to restrictions on the confidentiality of their communications, including mandatory reporting obligations under child protection and communicable diseases

laws. As employees of a school or education department, however, many counsellors are torn between maintaining confidentiality and the demands of principals and teachers who feel they have the right to know what is affecting a particular student.[194]

Submissions and consultations

60.145 A number of bodies that act on behalf of children and young people made submissions highlighting concerns about privacy in schools. The concerns included:

- inconsistencies in privacy practices at different schools;[195]
- increasing amounts of personal information being collected by schools for risk management purposes. It has been suggested that while the collection is being done with consent, there are increased dangers of inappropriate disclosure;[196]
- examples of private schools contracting away a student's right to privacy in a standard form agreement with fee paying parents for the provision of education to the student;[197]
- intrusive practices that breach privacy, sometimes supported by school policies;[198]
- the interpretation of NPP 2 by schools to justify disclosure of personal information about students to parents without consent on the basis that it is a disclosure reasonably expected by the student—the views, age and maturity of each student should be taken into consideration, and the student given the opportunity to object to disclosure in particular circumstances;[199]
- the need for funding for schools to develop and implement clear privacy policies, including informing parents of the privacy rights of students, and development of a school privacy audit tool to measure how effectively students' privacy is being respected and protected;[200] and

- the need for stronger sanctions for schools failing to adhere to privacy laws.[201]

60.146 The Australian Privacy Foundation raised concerns about the increasing use of technology in schools involving collection and storage of personal information, such as fingerprinting for school library services, swipe cards for monitoring attendance, and the use of closed-circuit television (CCTV) for security purposes.[202] The Foundation noted these are often introduced for administrative convenience with little regard for privacy concerns, and that further consultation on such developments should be undertaken before they are introduced.

60.147 The National Catholic Education Commission (NCEC) and the Independent Schools Council of Australia (ISCA) provided the ALRC with a copy of their *Privacy Compliance Manual*, which was developed in conjunction with the OPC.[203] The NCEC and ISCA indicated that the Manual has been an effective tool in assisting non-government schools to comply with the *Privacy Act*, and that there have been very few expressions of concern to those bodies about infringements of privacy.

60.148 The NCEC and ISCA indicated that schools rely on the consent of a parent (regardless of the age of the student) to collect such information. On the issue of disclosure of personal information about students to parents, the NCEC and ISCA indicated that, in many circumstances, personal information collected about a student will be disclosed to parents where the disclosure is normally expected given the primary or related secondary purpose for which the information was collected.[204] It was also noted, however, that there may be circumstances where the information is not disclosed to parents, such as the results of psychological testing, or where there are allegations of domestic abuse. The NCEC and ISCA suggested that schools use a test of what is in the best interests of the student to determine whether personal information should be disclosed.

60.149 The NCEC and ISCA stated that it should be recognised that there are a number of primary factors dictating how personal information may be used and disclosed in a particular situation, including contracts with parents, the welfare of the particular student, and the discharge of the school's duty of care towards the student and other students.[205]

Between them, the NCEC and ISCA represent around 2,800 schools in Australia with over 1,000,000 students enrolled in those schools.

204 National Catholic Education Commission and Independent Schools Council of Australia, *Submission PR 85,* 12 January 2007.

205 Ibid.

60.150 The NCEC and ISCA raised a number of other issues regarding the operation of the *Privacy Act* and the NPPs that make it difficult for schools to comply with privacy laws. They suggested that the existing exceptions to allow refusal of access to an individual's record were too limited to cover the full range of circumstances in which access should be able to be refused.[206] They suggested extended circumstances include where providing access:

- would be inconsistent with the school's duty of care to other students and staff;
- may be detrimental to the safety or well being of a child;
- will be likely to discourage free flow of information between a school and parents or a school and its pupils; and
- may discourage people from providing information in a court of inquiry about possible unlawful activities or other inquiries affecting the well being of pupils.

60.151 The NCEC and ISCA also noted new provisions in New South Wales and Queensland legislation that authorise the transfer between schools of personal information about a student, without consent of the student or parent or guardian, before enrolment of the student in a new school.[207] The purpose of the provisions is to allow the new school properly to assess behavioural issues and consider the health and safety of the transferring student and other students in the school. In the past, this kind of information was not always disclosed to the new school due to privacy concerns. The NCEC and ISCA suggested that such a provision should be included in the *Privacy Act* with the aim of having uniform operation across all Australian states and territories, and in particular covering interstate transfer of students.[208]

60.152 The ALRC notes that a national protocol has been developed through the Ministerial Council on Education, Employment, Training and Youth Affairs (MCEETYA) to provide for transfer of data when students transfer interstate, encompassing both government and non-government schools.[209] The protocol does not

---

206 Ibid.

207 *Education Act 1990* (NSW) pt 5A inserted by the *Education Legislation Amendment Act 2006* (NSW)—the provisions have not yet been proclaimed and are not in operation at present; *Education (General Provisions) Act 2006* (Qld) ss 383–389. The Queensland provisions require that copies of the transferred information be provided to the parent of a student or, in appropriate cases, just to the student, but no consent is required prior to transferring the information: *Education (General Provisions) Act 2006* (Qld) ss 387.

208 National Catholic Education Commission and Independent Schools Council of Australia, *Submission PR 85,* 12 January 2007.

209 The protocol was developed and agreed on by the Australian Government, state and territory education authorities, the independent and Catholic education sectors through MCEETYA. The requirement to use the Interstate Student Data Transfer Note (ISDTN) is set out in the *Schools Assistance (Learning Together—Achieving Through Choice and Opportunity) Act 2004* (Cth) s 31(m). Details of the ISDTN

apply to intrastate transfers. The protocol provides for transfer of personal information from a government school only with the consent of the parent or guardian and, where the student is aged 16 or over, the consent of the student. Consistent with information privacy laws in most Australian jurisdictions, the protocol suggests that transfer may be possible without consent if required to prevent a serious risk to the student or public health and safety. The protocol establishes that consent is not required if a non-government school has a data collection notice that complies with the NCEC and ISCA *Privacy Compliance Manual* advising parents, guardians and students that personal and sensitive information may be disclosed to other schools for administrative and educational purposes.[210]

60.153 The duties of school counsellors was another school-related issue raised in submissions and consultations, and gave rise to conflicting views. Young people involved in the ALRC's youth workshops were adamant that a visit to a school counsellor should be confidential, although many indicated that their impression or experience of school counselling was that it had only limited confidentiality, either because of the physical limitations of seeking advice from counsellors situated within the school, or because of what was seen as 'a breach of confidence' because information had been disclosed to someone else during the experience.[211]

60.154 The NCEC and ISCA considered that counsellors employed by schools and related bodies (such as a Catholic welfare agency retained by the school to provide counselling services) have a duty to inform the school principal if the counsellor becomes aware of information that may affect the health or well being of the pupil, and is relevant to the school performing its contractual duties to provide schooling. The NCEC and ISCA also believed that the records of school counsellors are the same as any other school record, and that the counsellor could be directed to disclose the contents of a discussion to the school principal.[212] The NCEC and ISCA indicated that some counsellors have suggested that this situation should be changed by legislation. The NCEC and ISCA opposed any such change.

are available at Ministerial Council on Education Employment Training and Youth Affairs, *Interstate Student Data Transfer Note* <www.mceetya.edu.au/mceetya/default.asp?id=12095> at 1 August 2007.

210 National Catholic Education Commission and National Council of Independent Schools' Associations, *Privacy Compliance Manual* (revised 2004 ed, 2001), [7.10.1]. As indicated in the *Privacy Compliance Manual*, the standard form data collection notice is intended to ensure that the individual is reasonably aware of the matters specified in NPP 1.3 and to obtain consent for use and disclosure of personal information that may not be regarded as being for primary or secondary related (or directly related) purposes.

211 This issue was also raised at Children and Young People Issues Roundtable, *Consultation PC 121*, Sydney, 7 March 2007.

212 National Catholic Education Commission and Independent Schools Council of Australia, *Submission PR 85,* 12 January 2007. This is set out in National Catholic Education Commission and National Council of Independent Schools' Associations, *Privacy Compliance Manual* (revised 2004 ed, 2001), 75.

ALRC's view

Privacy policies in schools

60.155 Concerns raised about the handling of personal information in schools appear to stem from a combination of poor practices that are inconsistent with privacy principles, and school policies that provide sometimes questionable interpretations of the privacy principles. The ALRC considers that the proposed UPPs are capable of operating effectively in the school environment and that no specific additional rules are required. There is, however, a need to clarify aspects of the operation of the privacy principles and to ensure appropriate implementation.

60.156 Most schools, education departments and independent bodies representing schools, have privacy policies or more detailed privacy manuals in place. These are essential to provide guidance and some level of certainty regarding the requirements for the handling of personal information to individual schools, and to teachers, students, parents and guardians within the school community. Proposal 21–1 will make development of a Privacy Policy a requirement for every school subject to the *Privacy Act*, and the ALRC supports the development of privacy manuals to provide additional guidance. The ALRC is concerned, however, that some of the content of existing policies and manuals is not wholly consistent with the proposed UPPs and the *Privacy Act*.

60.157 Privacy Policies and manuals in schools should reflect the general approach set out in the ALRC's proposals that individual assessment of a child or young person is the most appropriate way to determine his or her decision-making capacity. Some situations in the school environment should allow for individual assessment—particularly where the information and situation are unique—rather than impose a general administrative rule for all students within the school. Where individual assessment is not appropriate, the ALRC's proposed age of 15 should be adopted as the age from which it is presumed that the young person has the capacity to make a decision regarding his or her personal information.

60.158 This is not to say that every student aged 15 or over should be able to withhold all personal information from his or her parents or guardians. Existing privacy policies and privacy manuals note appropriately that much of the personal information held by schools can be disclosed to parents or guardians as this is expected, either as part of the primary purpose of collection, or a related secondary purpose. School reports are a prime example, and guidance from the OPC supports this interpretation of the privacy principles.[213] School privacy policies should clearly

213 Federal legislation requires, as a condition of federal funding, that schools provide parents of each student school reports twice a year on the progress and achievements of the student: *Schools Assistance (Learning Together—Achieving Through Choice and Opportunity) Act 2004* (Cth) s 32.

describe the kinds of personal information that are collected, the purpose of collection, and situations where the information will be disclosed routinely to parents and guardians.

60.159 This does not mean, however, that the privacy rights of students can be overridden by a Privacy Policy. The ALRC has particular concerns about suggestions that some schools assume that contracts between parents and a school displace the privacy rights of the student. Any Privacy Policy must be consistent with the proposed UPPs and the *Privacy Act* more generally. It is possible that contractual arrangements between parents and a school may contextualise the purpose for which certain information is collected by the school. Use and disclosure must, however, be undertaken consistently with the operation of the proposed UPPs. Privacy Policies can assist to clarify the purpose of collection and, therefore, the intended use and disclosure of certain types of personal information.

60.160 Some concerns were raised that non-compliant schools are not dealt with effectively under the existing regime. This is of concern if, as has been suggested to the ALRC, some school privacy policies and practices are not consistent with the *Privacy Act*. The ALRC has made a number of proposals aimed at improving compliance of agencies and organisations subject to the Act. These proposals would also apply to schools subject to the Act.[214]

Suggested school-specific changes to the Privacy Act

60.161 The NCEC and ISCA made a number of other suggestions for changes to the *Privacy Act* and the privacy principles better to take into account situations that arise in schools. The ALRC has considered some of these suggestions as part of its broader consideration of the 'Access and Correction' principle in Chapter 26. The ALRC's general approach is to ensure that the proposed UPPs have a broad general application with high-level principles wherever possible. Where there is a need for more specific obligations, the ALRC proposes the development of primary or subordinate legislation that covers a particular aspect of privacy or the handling of personal information.[215] The ALRC has identified this need in the areas of credit reporting, health services and research, and in the telecommunications industry.

60.162 The ALRC considers that the proposed UPPs adequately cover the handling of personal information in schools, and there is no need for school-specific provisions in the *Privacy Act* that add to or derogate from the UPPs. The appropriate interpretation of the principles in a school situation can be set out in manuals developed by peak bodies, individual schools or education departments.

---

214 See Chs 42, 46.
215 See Proposal 15–3.

60.163 The ALRC notes the concerns raised by the NCEC and ISCA concerning the transfer of personal information between schools. Steps have been taken to alleviate the problems encountered by schools, through the national protocol developed by MCEETYA for interstate transfers, which clarifies the circumstances in which personal information can be transferred, and the statutory provisions adopted in Queensland and New South Wales, which allow for transfer of personal information without consent of the student or person with parental responsibility. The ALRC acknowledges, however, that outside of Queensland and New South Wales, schools are often unable to transfer personal information without student or parental consent unless the disclosure falls under one of the other exceptions within the proposed 'Use and Disclosure' principle—such as where disclosure is necessary to lessen or prevent a serious threat to an individual's life, health or safety.[216] While the ALRC agrees with the NCEC and ISCA that this situation would best be remedied through a national approach, the ALRC does not consider that the inclusion of sector-specific amendments to the *Privacy Act* is appropriate, or that it would achieve the desired national consistency.

60.164 It is, however, appropriate to incorporate information about the operation of the MCEETYA interstate protocol for transfer of student data, and any state or territory provision providing for intrastate transfer, into the privacy policies of schools to inform students and those with parental responsibility about the operation of rules for the transfer of personal information.

School counselling

60.165 A particular area where there appears to be conflict and inconsistencies in approach is in relation to the obligations on counsellors to disclose personal information to school management and parents. Counsellors, and students, want as few limitations as possible on the confidentiality of the service, enabling counsellors to develop a level of trust with students and provide an effective service in which the students have confidence. This must be balanced, of course, with the needs of the employer school to meet its obligations to provide support for the individual student, and to protect that student and the broader student body.

60.166 The ALRC considers that the *Privacy Act* and the proposed UPPs contain appropriate exceptions that allow disclosure of personal information without consent of the individual, including in circumstances where there is a serious threat to an individual's life, health or safety; or to public health or public safety. The exceptions do not use school-specific language, but the ALRC considers that they adequately cover situations likely to be encountered in schools.

---

216 Note that the proposed exception differs from the existing exception by removing the requirement that the threat be both serious *and imminent*: see Ch 22 and Proposal 22–3.

60.167 School privacy policies should set out clearly the limits of the confidentiality of school counselling services, and indicate circumstances—consistent with the proposed UPPs and any additional legislative obligations—in which personal information collected by school counsellors will be disclosed to the school management, persons with parental responsibility, and others.

Proposal 60–7 Schools should clarify in their Privacy Policies how the personal information of students will be handled, including when personal information:

(a) will be disclosed to, or withheld from, persons with parental responsibility; and

(b) collected by school counsellors will be disclosed to the school management, persons with parental responsibility, or others.

Child care services

60.168 A growing number of Australian children come into contact with formal child care prior to commencing school.[217] As with schools, child care services collect a vast amount of personal information about a child, and his or her family, in order to provide a service.

60.169 A wide range of formal child care services are available, and each has a different structure. They include community-based non-profit services, services administered by local councils, individuals providing care in their own homes, privately owned and managed centres (including some owned by publicly listed companies), and services provided by employers attached to the workplace of parents. Regulation of the sector is shared between the Australian Government and the states and territories.

60.170 The application of privacy laws to the child care sector is confusing.[218] Larger private or non-profit businesses running child care centres are subject to the NPPs, but many smaller centres, most non-profit services and individuals running a service within their own home are exempt from the operation of the *Privacy Act* as a

217 In 2005, 53% of three year olds were receiving some form of formal child care. Overall, for children aged 0–11, formal care (either alone or in combination) was used by 23% of children, up from 19% in 2002 and continuing the upward trend observed since 1996: Australian Bureau of Statistics, *Child Care, Australia, 2005*, 4402.0 (2006).

218 Until 2000, child care service providers that received Commonwealth funding had to enter a contract with the Commonwealth and thus provided services under contract to the Commonwealth, attracting the application of the IPPs. Due to a change in funding arrangements, this is no longer the case.

small business.[219] Some otherwise exempt small businesses, however, may fall within the definition of a health service provider under the *Privacy Act* or state health information legislation. Services operated by a state, territory or local council are subject to any relevant state or territory privacy legislation or scheme.[220]

60.171 National standards have been developed for child care services, and have been utilised to inform child care regulations, funding guidelines and information resources.[221] The degree of implementation has varied between jurisdictions. Each set of standards includes a standard on maintenance of records listing the information (most of which would fall within the definition of personal information) that must be kept confidential, although they differ on when that information may be disclosed.[222] Some child care centres have their own privacy policies in place to govern the collection, use and disclosure of personal information.

60.172 For the administration of payments for the Child Care Benefit scheme, child care services are required to transfer information about child attendances to the Australian Government Department of Families, Community Services and Indigenous Affairs (FaCSIA). It is expected that these requirements will become more rigorous as part of the new Child Care Management System, which is designed to make the industry more accountable.[223] Information held by the Department is subject to the

---

219 Note that the ALRC proposes the removal of the small business exemption from the *Privacy Act*: see Proposal 35–1.

220 For a discussion of the different privacy regimes that may be applicable to a child care service, see K Flanagan, *Privacy in NSW Children's Services* (2002) Community Child Care Co-operative <www.ccccnsw.org.au/facts> at 1 August 2007.

221 See Children's Services Sub-Committee, *Standards for Centre Based Long Day Care* (1993) Australian Government Department of Families, Community Services and Indigenous Affairs; Children's Services Sub-Committee, *National Standards for Family Day Care* (1995) Australian Government Department of Families, Community Services and Indigenous Affairs; Children's Services Sub-Committee, *National Standards for Outside School Hours Care* (1995) Australian Government Department of Families, Community Services and Indigenous Affairs. All of the Standards can be found at <www.facsia.gov.au>. These Standards are currently under review.

222 The Standards for centre-based long day care indicate that records should be kept up-to-date and in a 'safe and secure area', that they 'remain confidential' and only made available 'to those who have a genuine interest' in obtaining the record: Children's Services Sub-Committee, *Standards for Centre Based Long Day Care* (1993) Australian Government Department of Families, Community Services and Indigenous Affairs, 5.3.1. The Standards for family day care are similar but only allow that records be made available 'to those who have a lawful right to them': Children's Services Sub-Committee, *National Standards for Family Day Care* (1995) Australian Government Department of Families, Community Services and Indigenous Affairs, 4.3.1. The Standards for outside of school hours care are silent on the issue of disclosure: Children's Services Sub-Committee, *National Standards for Outside School Hours Care* (1995) Australian Government Department of Families, Community Services and Indigenous Affairs, 5.3.2.

223 The National Child Care Management System will be implemented progressively across child care services from 1 July 2007 to 30 June 2009: Australian Government Department of Families Community Services and Indigenous Affairs, *Child Care Management System* (2007) <www.facs.gov.au> at 1 August 2007.

Privacy Act, and staff are also subject to the confidentiality provisions of the *A New Tax System (Family Assistance)(Administration) Act 1999* (Cth).[224]

Submissions and consultations

60.173 FaCSIA submitted that the specific privacy and secrecy provisions in family assistance law provide adequate privacy protection for personal information transferred to it by child care services.[225] The National Children's and Youth Law Centre indicated that the application of privacy laws is confusing in the area of child care services, given the variety of services, varying regulatory mechanisms and the possible range of applicable privacy laws.[226] The Centre supported a national strategy to review privacy policies and standards in child care services.

ALRC's view

60.174 Most of the concerns about the handling of personal information in child care services stem from the broad range of services available, the varying regulatory structures applied to the services, and the resulting confusion as to the applicable privacy requirements. The ALRC's proposals to harmonise information privacy laws across federal, state and territory jurisdictions will help to reduce the confusion by ensuring that consistent privacy principles apply regardless of the regulatory structure in place for the particular child care service. In the absence of more specific concerns about the handling of personal information in child care services, the ALRC does not propose specific reform in this area.

Media

60.175 In Australia, the acts and practices of a media organisation in the course of journalism are exempt from the operation of the *Privacy Act* if the organisation is publicly committed to observe privacy standards that have been published in writing either by the organisation, or by a person or body representing a class of media organisation.[227] Currently, there are broadcasting codes and standards, which include privacy standards or principles, published separately by the commercial television industry, commercial radio industry, the Australian Broadcasting Corporation, SBS, the Australian Subscription Television and Radio Association and the Community Broadcasting Association of Australia. The Australian Communications and Media Authority (ACMA) has published *Privacy Guidelines for Broadcasters*, which are 'intended to assist broadcasters and members of the public to better understand the operation of the privacy provisions in the various codes of practice'.[228]

---

224 The Department has developed a policy for the disclosure of protected information relating to child care services: Department of Family and Community Services, *Child Care Service Handbook 2005–2006* (2005), App 1.

225 Australian Government Department of Families Community Services and Indigenous Affairs, *Submission PR 162,* 31 January 2007.

226 National Children's and Youth Law Centre, *Submission PR 166,* 1 February 2007.

227 *Privacy Act 1988* (Cth) s 7B(4). For further discussion of the 'media exemption', see Ch 38.

228 Australian Communications and Media Authority, *Privacy Guidelines for Broadcasters* (2005), 1.

60.176 The only set of Australian broadcasting standards or principles that deal specifically with the privacy of children is the *Commercial Television Industry Code of Practice*.[229] For the purposes of the Code, a 'child' means a person under 16 years.[230] Section 4.3.5.1 states that:

> licensees must exercise special care before using material relating to a child's personal or private affairs in the broadcast of a report of a sensitive matter concerning the child. The consent of a parent or guardian should be obtained before naming or visually identifying a child in a report on a criminal matter involving a child or a member of a child's immediate family, or a report which discloses sensitive information concerning the health and welfare of a child, unless there are exceptional circumstances or an identifiable public interest reason not to do so.

60.177 Two cases in New Zealand in 1999 heightened awareness of the privacy issues involved in filming and broadcasting of children.[231] Both of these cases involved filming and broadcasting of a child with parental permission, although in circumstances many people considered to be inappropriate. The cases led the Broadcasting Standards Authority of New Zealand to amend the privacy principles that are imposed on broadcasters in that country to include an additional privacy principle relating especially to children.[232] A reworded principle similar to that inserted in 1999 still exists in the 2006 version of the principles, with an additional principle that defines 'child'.

> Children's vulnerability must be a prime concern to broadcasters, even when informed consent has been obtained. Where a broadcast breaches a child's privacy, broadcasters shall satisfy themselves that the broadcast is in the child's best interests, regardless of whether consent has been obtained.
>
> For the purpose of these Principles only, a 'child' is defined as someone under the age of 16 years. An individual aged 16 years or over can consent to broadcasts that would otherwise breach their privacy.[233]

60.178 In a 1984 statement on identifying and interviewing children, then Federal President of the Australian Journalists' Association, John Lawrence, concluded that children under 12 should not be interviewed in circumstances where the adults caring

---

229 Although the ACMA *Privacy Guidelines for Broadcasters* (2005) make reference to the *Commercial Television Industry Code of Practice* and reproduce in appendices relevant sections from that Code relating to children.

230 *Commercial Television Industry Code of Practice* (2004) s 4.3.5.2.

231 One case involved a television broadcast of an eight year old boy with Attention Deficit Disorder (ADD) who clearly did not want to be filmed and the problems his mother faced trying to look after him. In the other case, a television broadcast showed a six year old boy, together with his parents, finding out who his father was after a paternity test. See M des Tombe, '"Get that Camera Out of My Face!" A Look at Children, Privacy and the Broadcasting Standards' (2000) 31 *Victoria University of Wellington Law Review* 577; K Ridley, 'Children and the Broadcasting Media: Respect for the Integrity and Rights of the Child?' (2000) 15(May) *Social Work Now* 6.

233 New Zealand Government Broadcasting Standards Authority, *Privacy Principles* (2006).

for them are under stress.[234] This approach has not been incorporated into any guidelines issued within the industry.

Submissions and consultations

60.179 With the exception of the treatment of individuals accused of or charged with criminal offences, few submissions touched on the way in which the media use the personal information of children and young people.[235] Some examples were given of cases where a breach of privacy of a young person had been found, but there were minimal consequences for the media organisations involved.[236]

60.180 The New South Wales Commission for Children and Young People suggested that the existing media exemption does not protect adequately the privacy rights of children and young people, and that there should be a legislative requirement that broadcasters include, within their industry privacy standards, a standard that relates to children and young people specifically.[237] It considered that the standard should require broadcasters to consider the best interests of the child or young person, even where informed consent has been obtained from the child or his or her parent. This approach was considered to balance the desire of the industry to set its own standards, while sending a clear message about the industry's responsibilities to children and young people.[238] The New South Wales Commission for Children and Young People also supported OPC involvement in considering the adequacy of the industry standards. The Queensland Commission for Children and Young People and Child Guardian is currently developing guidelines for responsible portrayal of children in the media.[239]

ALRC's view

60.181 As noted in Chapter 38, submissions and consultations generally indicated that the exemption of media from the *Privacy Act* is necessary to provide for the free flow of information to the public. The exemption must be balanced, however, by providing an alternative mechanism to ensure adequate safeguards for the handling of personal information. Given the absence of extensive complaints about current media practices, the ALRC supports the retention of the media exemption. This should remain subject to the requirement that a media organisation observe privacy standards published by the organisation or a person or body representing a class of media organisations.

---

234 S Castell-McGregor, 'Children's Rights and the Media' (1985) 37 *Media Information Australia* 52, 53.
235 Issues relating to identification of individuals in relation to criminal matters are dealt with below.
236 Youth Issues Roundtable, *Consultation*, Melbourne, 7 February 2007.
237 NSW Commission for Children and Young People, *Submission PR 120,* 15 January 2007.
238 Ibid.
239 Queensland Government Commission for Children and Young People and Child Guardian, *Submission PR 171,* 5 February 2007.

60.182 The ALRC sees a need, however, to improve the quality of media privacy standards, which at present impose varying privacy requirements and are lacking in detail. The ALRC proposes, therefore, that the OPC, in consultation with ACMA and peak media representative bodies, establish criteria for assessing the adequacy of media privacy standards.[240]

60.183 Given the particular vulnerabilities of children and young people, the ALRC considers that the privacy of children and young people should be addressed in media privacy standards. The ALRC proposes, therefore, that the criteria for assessing the adequacy of media privacy standards include consideration of the privacy of children and young people.

60.184 The ALRC has considered the possibility of requiring media organisations to obtain consent from a person with parental responsibility for the child or young person under a certain age before identifying or otherwise publishing personal information about the child or young person. Thought has also been given to imposing an additional obligation on media organisations to consider the best interests of the child or young person, even where parental consent is obtained.

60.185 Given the ALRC's approach to the media exemption in general, it is the preliminary view of the ALRC that it is not appropriate to impose particular obligations on media organisations in respect of children and young people. While concerns have been raised in submissions and consultations, they are not so extensive as to warrant legislative imposition of obligations inconsistent with the general media exemption. The ALRC considers that its proposals to improve the adequacy of privacy standards adhered to by media organisations, which will have to make specific reference to children and young people, are an appropriate response to the concerns raised. It is appropriate, however, that media organisations and bodies developing media privacy standards give consideration to issues regarding parental consent when handling the personal information of children and young people; and consider the best interests of the child or young person even where parental consent is obtained.

Proposal 60–8 The Office of the Privacy Commissioner should include consideration of the privacy of children and young people in the proposed criteria for assessing the adequacy of media privacy standards for the purposes of the media exemption.

240 See Proposal 38–2. The ALRC also proposes clarification of the terms 'journalism' and 'publicly committed': Proposals 38–1, 38–3.

Identification in criminal matters and in court records

60.186 Information held by courts, including case files, judgments, and case management systems, often identify children and young people who are somehow associated with proceedings. They may be a party to a civil or administrative proceeding, a defendant or victim in a criminal matter, a child involved in a family law dispute, a witness, or merely mentioned as part of the proceedings.

60.187 The judicial records of courts are presently exempt from the *Privacy Act*.[241] Courts have traditionally been responsible for governing access to these records, and policies vary from court to court. As noted in Chapter 8, however, the advent of online access to court records opens up the possibility of these records being accessed easily by a large number of people for a variety of purposes. Given the extent of personal information that may be contained in court records, this raises significant privacy concerns.

60.188 The privacy of children and young people inside the court room has attracted more judicial and legislative protection than the privacy of children in other circumstances.[242] Both CROC and the Beijing Rules refer specifically to a young person's right to privacy at all stages of juvenile justice proceedings, whether accused or found guilty.[243] Rule 8.1 of the Beijing Rules notes that this is 'in order to avoid harm being caused to her or him by undue publicity or by the process of labelling'. The rule is explained in the official commentary.

> Young persons are particularly susceptible to stigmatization. Criminological research into labelling processes has provided evidence of the detrimental effects (of different kinds) resulting from the permanent identification of young persons as 'delinquent' or 'criminal'. Rule 8 also stresses the importance of protecting the juvenile from the adverse effects that may result from the publication in the mass media of information about the case (for example, the names of young offenders, alleged or convicted).[244]

60.189 Concerns also have been raised about the psychological damage that a child or young person involved in, or associated with, other kinds of cases might experience if identified in the media. This could include particularly difficult family law cases, child welfare cases, or high profile criminal law cases where the defendant has children who might suffer as a result of publication of the name or image of the accused.[245]

---

241 The ALRC does not propose to change this situation: see discussion in Ch 32.

245 See, eg, R Taylor, 'Re S (A Child) (Identification: Restrictions of Publication) and A Local Authority v W: Children's Privacy and Press Freedom in Criminal Cases' (2006) 18 *Child and Family Law Quarterly* 269.

Stigma may attach to other cases such as immigration cases involving refusal of visas or applications for government payments.[246]

60.190 Based on the fundamental rule that proceedings take place in open court, the common law has developed principles regarding a court's power to suppress publication of certain details of evidence before the court, balancing certain public interests against the interests of open justice. One such public interest includes protecting the interests of children.[247] Many Australian courts and tribunals have specific powers to make suppression orders under their establishing legislation.[248]

60.191 Legislation relating to child welfare and criminal matters before children's courts in most jurisdictions have prohibitions on the publication of identifying information about a child who is involved in proceedings.[249] The *Family Law Act* has a more general prohibition in relation to any person who is a party, related to or associated with a party, or is a witness to proceedings.[250] The extent of the prohibitions vary, and in most cases the legislation permits, or a judge may permit, publication in certain circumstances.[251] One exception is the Northern Territory legislation relating to juvenile offenders, which has as its starting point that there is no prohibition on publication, but gives the court a discretion to order that a report, information relating to proceedings or the results of proceedings, not be publicised.[252]

Submissions and consultations

60.192 There was support for retaining the purpose-built provisions preventing the disclosure of the identity of a child or young person in relation to juvenile justice

---

246 For example, the case of *Le and Secretary, Department of Education, Science and Training* (2006) 90 ALD 83 involved a rejected application for Austudy at the student homeless rate, including addresses and details of the applicant's relationship with his parents. Note that *Migration Act 1958* (Cth) s 91X prohibits the publication of names of applicants for protection visas in the High Court of Australia, Federal Court of Australia or Federal Magistrates Court.

247 *Johnston v Cameron* (2002) 124 FCR 160, 167. It should be noted that in the United Kingdom, following the introduction of the *Human Rights Act 1998* (UK), much of the debate is now centred around competing rights such as the right to privacy versus the right to free speech: H Fenwick, 'Clashing Rights, the Welfare of the Child and the Human Rights Act' (2004) 67 *Modern Law Review* 889; I Cram, 'Minors' Privacy, Free Speech and the Courts' (1997) *Public Law* 410.

248 See, eg, *Federal Court of Australia Act 1976* (Cth) s 50; *Administrative Appeals Tribunal Act 1975* (Cth) s 35(2).

249 See, eg, *Children and Young Persons (Care and Protection) Act 1998* (NSW) s 105. The ALRC has recently recommended that federal sentencing legislation should prohibit the publication of a report of criminal proceedings involving a young person where the details would lead to, or be likely to lead to, the identification of the young person: Australian Law Reform Commission, *Same Crime, Same Time: Sentencing of Federal Offenders*, ALRC 103 (2006), [27.62]–[27.66], Rec 27–1.

250 *Family Law Act 1975* (Cth) s 121.

251 See, eg, the power of the court to order that the name and identity of certain young convicted offenders be made public in *Juvenile Justice Act 1992* (Qld) s 234.

252 *Youth Justice Act 2005* (NT) s 50. See also discussion of a number of examples of media reporting in the Northern Territory in ABC Radio National, 'Naming and Shaming Juvenile Offenders', *Law Report*, 3 October 2006.

proceedings in the specific legislation in each jurisdiction.[253] The absence of such a provision in the Northern Territory, however, was seen as an area in need of reform.[254]

60.193 Some young people allegedly involved in criminal behaviour were named, or publicly identified through publication of their photograph, in the media following the Cronulla riots in December 2005.[255] It was suggested in a number of submissions that the provisions that restrict disclosure of the identity of children and young people should be extended to cover criminal investigations, as well as court proceedings, because the policy reasons for this protection apply at all stages of the criminal process.[256]

60.194 The ALRC did not receive any submissions suggesting there were problems with the handling of court records involving children and young people. Broader issues regarding privacy of court records are discussed in Chapters 8 and 32.

ALRC's view

60.195 In this Discussion Paper, and in a previous ALRC report,[257] the ALRC has noted the public policy reasons behind prohibiting the public identification of young people involved in criminal proceedings, in particular the rehabilitative aims of the juvenile justice system. It is of particular concern that the Northern Territory has no automatic limitation on publication of court proceedings that identify a young person. To protect the privacy of children and young people, the ALRC recommended in the report, *Same Crime, Same Time: Sentencing of Federal Offenders*, the enactment of a provision prohibiting the publication of a report of criminal proceedings that identifies, or is likely to lead to identification of, a child or young person.[258] The ALRC believes that such a prohibition remains appropriate, and is hopeful this recommendation will be implemented following government consideration of the entire report.

60.196 The ALRC also encourages consideration of broader provisions relating to public identification of a child or young person alleged to have committed a crime, applying throughout the criminal investigation and proceedings, whether in a court or alternative diversionary option. The ALRC considers that these kinds of provisions are situated most appropriately in relevant state and federal legislation dealing with child welfare or criminal matters. While related, this issue lies beyond the scope of this Inquiry and the ALRC has not made a proposal on the issue.

256 National Children's and Youth Law Centre, *Submission PR 166,* 1 February 2007; Youthlaw, *Submission PR 152,* 30 January 2007; NSW Commission for Children and Young People, *Submission PR 120,* 15 January 2007.

257 Australian Law Reform Commission, *Same Crime, Same Time: Sentencing of Federal Offenders*, ALRC 103 (2006), [27.62]–[27.66].

258 Ibid, Rec 27–1. Due to the scope of the terms of reference of that inquiry, the recommendation was limited in application to the sentencing, administration and release of federal offenders.

Family law

60.197 Children and young people are often involved in counselling or family dispute resolution services undertaken as part of a family law dispute. Counselling and family dispute resolution services in association with family law disputes are now offered by private sector services (including not-for-profit services) which, unless they fall within an exemption, are subject to the NPPs.[259] The *Family Law Act 1975* (Cth) includes provisions governing the confidentiality of such services.[260] While an adult can give permission to have his or her information disclosed for any purpose, information provided by an individual under the age of 18 can be disclosed only with the agreement of each of the persons with parental responsibility for the child, or the approval of the court.[261] The exception that allows disclosure of information for research purposes specifically excludes the disclosure of personal information as defined in the *Privacy Act*.[262]

Submissions and consultations

60.198 Generally, submissions and consultations did not raise any issues of concern about the operation of the *Family Law Act* or the privacy policies in operation in the Family Court of Australia, Family Court of Western Australia or the Federal Magistrates Court.

60.199 The exception was the National Children's and Youth Law Centre, which indicated that the operation of ss 10D(3) and 10H(3) of the *Family Law Act*, which provide that information about a child may be disclosed if each of the persons with parental responsibility for the child agrees, operate contrary to the rights-based approach in the *Privacy Act* by excluding the involvement of the child in the decision-making process.[263]

ALRC's view

60.200 The ALRC agrees that ss 10D(3) and 10H(3) of the *Family Law Act* are not consistent with the proposed approach under the *Privacy Act* and the general principals of involvement of children and young people in decision making processes as set out in CROC. It would be appropriate to review these provisions, giving consideration to an improved process for involving a child or young person in the decision. The ALRC suggests that the Family Law Council would be the appropriate body to give further consideration to this issue.

---

259 Until 1 July 2006, confidential counselling and family dispute resolution services were also provided by specialised staff of the Family Court of Australia who are subject to the IPPs. These staff are now called 'family consultants' and no longer provide confidential services.

260 *Family Law Act 1975* (Cth) ss 10D, 10H. These provisions became operational on 1 July 2006.

261 Ibid ss 10D(3), 10H(3).

262 Ibid ss 10D(5), 10H(5).

263 National Children's and Youth Law Centre, *Submission PR 166,* 1 February 2007.

Child welfare and juvenile justice

60.201 Child welfare and juvenile justice jurisdictions are state and territory based. Children and young people who come into contact with either the child welfare or juvenile justice systems often have large amounts of personal information collected about them, much of it of a sensitive nature. Legislation in each jurisdiction deals with the handling of records in that jurisdiction containing personal information of children and young people.[264]

60.202 A privacy-related issue that has arisen in the area of child welfare is the sharing of information between agencies where the safety of children and young people is at issue. All states and territories have laws in place that, in practice, provide exceptions to privacy laws by allowing or requiring disclosure of personal information in certain circumstances. A number of bodies, however, have identified instances where a child has been seriously injured or killed by a parent where disclosure of information about the parent's behaviour to appropriate service providers could have helped to prevent the injury or death.[265]

60.203 The ALRC did not receive any submissions raising concerns about the handling of child welfare or juvenile justice records. However, issues surrounding the sharing of information in appropriate circumstances were raised as matters of concern.

ALRC's view

60.204 The issue of sharing information in child welfare and other contexts is considered in Chapter 11. The ALRC's proposed 'Use and Disclosure' principle, as discussed in Chapter 22, seeks to improve the balance between the need for information sharing in child protection while still maintaining an appropriate level of privacy protection. It is considered that the proposed changes to the existing disclosure principles, together with improved clarity of privacy laws generally and better information sharing practices, should alleviate many of the concerns raised in this context.

Introduction

61.1 This chapter considers existing laws and practices applying to the privacy of adults incapable of making decisions under the *Privacy Act 1988* (Cth). An incapacity may be temporary or permanent, and can be caused by many different circumstances, including disability, injury, illness or cognitive impairment.

61.2 There is a need to balance protecting this group of vulnerable individuals and ensuring that they are not marginalised or disadvantaged in accessing benefits and services. The ALRC proposes a number of new provisions for the *Privacy Act* to clarify rights and obligations when handling personal information about an individual incapable of making a decision under the Act, including by establishing and defining the term 'authorised representative' for a person able to make decisions on behalf of an incapable individual. The ALRC also proposes reforms aimed at facilitating practical implementation of these provisions for the benefit of incapable individuals and their authorised representatives.

61.3 This chapter focuses on circumstances in which an individual is incapable of making a decision, and a formal representative is required to make a decision on behalf of the individual. Chapter 62 deals with a broader range of circumstances where an individual requires assistance to make or communicate decisions under the Act, but does not require a substitute decision maker. This includes informal care arrangements as well as situations involving interpreters, counsellors and legal representatives.

61.4 Issues concerning sharing of information to improve the provision of services to vulnerable adults and others are dealt with in Chapter 11.

Equality and the presumption of capacity

61.5 This chapter deals with a range of circumstances in which an individual may be found to lack capacity to make a decision under the *Privacy Act*. In many cases, however, the individual will lack capacity because of a particular disability. Although an adult with a particular disability may not have the capacity to make decisions about how his or her personal information is handled, there is a need to ensure that his or her rights are protected.

> Personal information privacy is fundamental to a person's ability to enjoy their human dignity and autonomy. While everyone must compromise a reasonable level of their information privacy in order to live in society, people with decision-making disabilities are often expected to make far greater compromises than other people. Some compromises are reasonable so that a person can receive adequate services to meet their personal, health, financial or other needs and wishes. At the same time, people with decision-making disabilities are entitled to the same privacy rights as anyone else …[1]

61.6 In December 2006, the United Nations adopted the *Convention on the Rights of Persons with Disabilities*.[2] The Convention does not create new rights, but expresses existing rights in a manner that addresses the needs and situations of persons with disabilities.[3] Article 22 of the Convention deals with respect for the right of privacy.

> 1. No person with disabilities, regardless of place of residence or living arrangements, shall be subjected to arbitrary or unlawful interference with his or her privacy, family, home or correspondence or other types of communication or to unlawful attacks on his or her honour and reputation. Persons with disabilities have the right to the protection of the law against such interference or attacks.
>
> 2. State Parties shall protect the privacy of personal, health and rehabilitation information of persons with disabilities on an equal basis with others.

2 *Convention on the Rights of Persons with Disabilities*, 30 March 2007, UN Doc A/61/611 (not yet in force).

3 United Nations, *International Convention on the Rights of Persons with Disabilities: Why a Convention?* (2006) <www.un.org/disabilities/convention/about.shtml> at 1 August 2007.

61.7 The Australian Government participated in all negotiating sessions of the Convention's working group,[4] and was one of the first countries to sign the new Convention when it opened for signature on 30 March 2007.[5] If ratified by Australia, all legislation, policies and practices will need to be consistent with the new Convention.[6]

61.8 The New South Wales Disability Discrimination Legal Centre argued that the principle of autonomy of people with a disability is reflected in a range of international and domestic legal frameworks. It is not always easy to implement, however, as the person's capacity can change and alter over time and in relation to each issue.[7] The need for a case by case approach to determining capacity was stressed in a number of submissions.[8]

> Capacity is decision specific and impairment of decision-making capacity for some matters (that is, a person has impaired capacity for some types of financial or personal decisions and not others) only is typical. Adults with mental illness will typically have an episodic impairment of their capacity for decision-making. Even during periods when they are unwell, they will typically have capacity for decision-making about some types of matters but not others. Adults with acquired brain injury typically do not identify themselves as having a disability and often present well unless their plausibility is tested, but nevertheless they may have markedly impaired decision-making capacity as a result of gross impulsivity. Again, however, they may be able to make some types of decisions. Adults with dementia typically progress from early dementia, when they may retain or have fluctuating capacity for decision-making for many matters, but progressively become incapable of making decisions about matters.[9]

61.9 The concern is that some people may perceive automatically that an individual with a disability is incapable of making a decision under the *Privacy Act*. It may also be that some people will consider that an individual found to be incapable of making a decision at one point in time is incapable of making other decisions in the future. Legal Aid Queensland relayed its experience of individuals who, once it is disclosed that they have some form of intellectual disability, are required by certain organisations to produce a signed power of attorney or guardianship order and have all decisions made

---

4 Human Rights and Equal Opportunity Commission, 'Disability to Make UN Top Ten' (Press Release, 26 August 2006).

5 Australia did not sign the Optional Protocol to the Convention which deals with the competence of the Committee on the Rights of Persons with Disabilities to receive and consider communications from or on behalf of individuals or groups of individuals.

6 The Convention does not come into force until 30 days after the 20th instrument of ratification or accession is lodged. To date, 99 countries have signed but only one country has ratified the Convention.

7 NSW Disability Discrimination Legal Centre (Inc), *Submission PR 105,* 16 January 2007.

8 Office of the Victorian Privacy Commissioner, *Submission PR 217,* 28 February 2007; Office of the Public Advocate Queensland, *Submission PR 195,* 12 February 2007; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

9 Office of the Public Advocate Queensland, *Submission PR 195,* 12 February 2007.

by the authorised third party.[10] This approach is, in effect, discriminatory and undermines the privacy rights of the individual.

61.10 The *Disability Discrimination Act 1992* (Cth) provides broad protections against discrimination on the basis of an actual or perceived disability.[11] The Act's coverage extends to determining an individual's capacity to make a decision under the *Privacy Act*. If an individual considers he or she was treated unfairly by an agency or organisation because of his or her disability, a complaint can be made to the Human Rights and Equal Opportunity Commission under the *Disability Discrimination Act*.[12]

61.11 One approach that could be adopted is to specify clearly in the *Privacy Act* that there is a presumption that every individual aged 18 and over is capable of making a decision under the Act unless found to be incapable. This approach is adopted in guardianship and administration legislation in some jurisdictions.[13]

ALRC's view

61.12 The ALRC notes concerns about possible discrimination against people with a disability, and agrees that individuals aged 18 and over should be presumed to have capacity to make decisions under the *Privacy Act* unless found to be incapable of making that particular decision. The ALRC notes, however, that the fact that people with a disability are subjected to discrimination in relation to determining their capacity to make decisions under the Act was raised in only one submission to this Inquiry.

61.13 While agreeing with the application of the presumption in practice, the ALRC questions whether there is a need to set out the presumption in the *Privacy Act*. The ALRC proposes, below, that the Office of the Privacy Commissioner (OPC) develop and publish guidance for applying provisions relating to the determination of the capacity of individuals aged 18 and over.[14] Such guidance would note the possible fluctuating nature of the capacity of individuals, and the need to apply a presumption that an individual has capacity until found to not have capacity for a particular decision.

---

10 Legal Aid Queensland, *Submission PR 212,* 27 February 2007.

11 'Disability' is given a broad definition in the Act, encompassing physical, intellectual, psychiatric, sensory, neurological and learning disorders, illnesses, diseases, malfunctions or disabilities, as well as physical disfigurement and the presence in the body of disease-causing organisms: *Disability Discrimination Act 1992* (Cth) s 4.

12 Each state and territory also has anti-discrimination legislation and complaints bodies that cover discrimination on the basis of disability or impairment, although the detail of the laws differ: *Anti-Discrimination Act 1977* (NSW); *Equal Opportunity Act 1995* (Vic); *Anti-Discrimination Act 1991* (Qld); *Equal Opportunity Act 1984* (WA); *Equal Opportunity Act 1984* (SA); *Anti-Discrimination Act 1998* (Tas); *Discrimination Act 1991* (ACT); *Anti-Discrimination Act 1992* (NT).

13 See, eg, *Guardianship and Administration Act 2000* (Qld) sch 1, s 1.

14 Proposal 61–3.

61.14 The proposed guidance should set out how to make decisions in practice regarding capacity, and that the *Disability Discrimination Act* provides an appropriate mechanism for complaint if discrimination occurs. The ALRC is interested in further comment on whether there is a need for a legislative presumption, and whether there would be any adverse consequences of including such a presumption in the *Privacy Act*.

Question 61–1 Should the *Privacy Act* be amended to provide expressly that all individuals aged 18 and over are presumed to be capable of giving consent, making a request or exercising a right of access unless found to be incapable of giving that consent, making that request or exercising that right?

Problems with the *Privacy Act*

61.15 General concerns were raised in submissions about the balance between protecting vulnerable adults from unnecessary interference with their privacy and ensuring that people gain access to required services and benefits.[15]

> The particular circumstances of people with a decision-making disability can mean that many aspects of their lives are unnecessarily exposed to others, and their privacy is compromised. However, it is important that protection of privacy does not have an undesired effect of creating further barriers to necessary service provision, which would result in poorer outcomes and reduced quality of life for the individuals concerned.[16]

61.16 The most significant issue raised in submissions is the need to ensure that privacy legislation enables appropriate third parties to act on behalf of others who cannot act for themselves. It was noted that there are inadequate alternative decision-making mechanisms in the *Privacy Act* to facilitate an exchange of information where an individual is unable to provide consent.[17] Examples were given of individuals experiencing difficulties in accessing a range of services or communicating with service providers because of real or perceived conflicts with the *Privacy Act*.[18] The most common concerns involved dealings with telecommunication corporations, utilities and financial institutions—organisations that individuals must deal with in

their everyday life for essential services. Problems arose when individuals attempted to make payments or defer payments on behalf of another individual, change account details, and access health information about adult relatives, particularly in relation to mental health. It was noted that it is often easy to enter into contracts or arrangements with organisations, but privacy concerns sometimes make it difficult to complain about a service or change service arrangements.[19] Similar concerns were raised in stakeholder forums conducted as part of the OPC review of the private sector provisions of the *Privacy Act* in 2005 (OPC Review).[20]

61.17 In 2003–04, the Australian Guardianship and Administration Committee (AGAC) undertook a small survey designed to determine whether there have been any unanticipated adverse consequences as a result of privacy legislation for people who have a decision-making disability. While finding that the legislation generally worked well, the AGAC concluded that there was 'significant room for improvement in how a range of service providers interpret and apply the legislation in cases involving people who have a decision-making disability and their family members and allies'.[21] The AGAC reiterated this view in a submission to this Inquiry.[22]

61.18 Most of the concerns raised by the AGAC related to inflexible interpretation and application of privacy legislation by frontline staff involved in providing services. The AGAC speculated that problems arise primarily because organisations, in an attempt to comply with the *Privacy Act*, require individuals expressly to authorise another person to transact business on their behalf.

61.19 The problems are most acute where there are informal arrangements in place for making decisions on behalf of an adult, such as where a family member, carer or friend makes decisions or assists in decision making. The existence of informal arrangements is consistent with the philosophy underpinning Australian guardianship and administration legislation. This legislation seeks to maximise involvement in decision making by the individual and ensure that the least restrictive decision-making processes are available. Formal guardianship or administration orders are made as a last resort where informal arrangements have broken down.[23] One view is that it would not be appropriate to require a formal guardian appointment merely to deal with privacy decisions because such an appointment places significant restrictions on the

autonomy of the individual.[24] The Government of South Australia has particular concerns about individuals who do not have an active guardian.[25]

61.20 Concerns have been raised that, even in situations where a power of attorney or a formal guardianship or administration order is in place, these orders are not always respected.[26] There may be confusion about the information required before an organisation can be satisfied that an individual has consented to the disclosure to a third party of personal information.[27]

61.21 The New South Wales Disability Discrimination Legal Centre stated that the difficulties that have emerged in the implementation of privacy law for people with a decision-making disability have principally arisen because of three factors:

> first, the adoption of a narrow interpretation of the principle by utilities and service providers (such as water and electricity utilities, banks and insurance companies); second, a private and public sector culture at the level of 'front line workers' of 'risk minimisation' in approaching privacy laws; and third, the reliance on 'informal' arrangements in supported decision making, where a family member, friend, or carer acts as a supported substitute decision maker for a person with impaired decision making capacity without formal authorisation.[28]

61.22 A more specific concern was raised by the Office of the Public Advocate Victoria which noted problems concerning requirements to notify individuals if personal information is collected from someone other than the individual.[29] The Office noted that the requirement is problematic when dealing with an individual with a significant cognitive impairment. In some cases, people have had to be engaged especially to help explain the content of the notification to an individual. Apart from the added expense, this expands the number of people who have access to the personal information.

28 NSW Disability Discrimination Legal Centre (Inc), *Submission PR 105,* 16 January 2007.

29 Office of the Public Advocate Victoria, *Submission PR 141,* 24 January 2007. At present, there is an onus on an organisation to take 'reasonable steps' to provide the notification, and the only exception to this requirement is where the notification would pose a serious threat to the life or health of any individual: *Privacy Act 1988* (Cth) sch 3, NPP 1.5.

Suggestions for reform

Broader exceptions to the privacy principles

61.23 As discussed in Chapter 60, the *Privacy Act* may require decisions to be made or actions to be taken by an individual at various points in the information-handling cycle. These include:

- consenting to the collection of sensitive information;[30]
- consenting to a particular use or disclosure of personal information, and in particular, consenting to use for the purposes of direct marketing;[31]
- consenting to the transfer of personal information outside of Australia;[32]
- requesting not to receive further direct marketing communications from an organisation;[33]
- requesting access to personal information held by an organisation;[34]
- opting for anonymity or pseudonymity in transacting with any agency or organisation;[35]
- making a complaint against an agency or organisation.[36]

61.24 In situations where consent of the individual is required, there are carefully crafted exceptions that allow an agency or organisation to undertake the action without consent. The OPC Review indicated that the 'authorised by law' exception in a number of the existing Information Privacy Principles (IPPs) and National Privacy Principles (NPPs) enables the collection of sensitive information from, or disclosure of personal information to, a third party where a formal guardianship or administration order is in place.[37] These 'authorised by law' exceptions have been included in the ALRC's

30 See proposed 'Collection' principle and discussion in Ch 18.
31 See proposed 'Use and Disclosure' principle and 'Direct Marketing' principle and discussion in Chs 22 and 23.
32 See proposed 'Transborder Data Flows' principle and discussion in Ch 28.
33 See proposed 'Direct Marketing' principle and discussion in Ch 23.
34 See proposed 'Access and Correction' principle and discussion in Ch 26. It is proposed that access to personal information held by an agency should be governed by a new Part of the *Privacy Act 1988* (Cth): see Proposal 12–6.
35 See proposed 'Anonymity and Pseudonymity' principle and discussion in Ch 17.
36 See discussion in Ch 45.
37 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 214–215.

proposed Uniform Privacy Principles (UPPs).[38] The OPC Review also stated that a third party is able to exercise a right on behalf of an individual where a formal guardianship or administration order is in place, despite the absence of an express provision to that effect in the Act.[39]

61.25 Detailed provisions exist in relation to the disclosure of health information about persons incapable of giving consent. NPPs 2.4, 2.5 and 2.6 establish a scheme that facilitates, within certain limits, disclosure of health information to 'responsible' persons. The disclosure of health information is only permissible where the individual is incapable of providing consent, and the carer providing the health service is satisfied that either the disclosure is necessary to provide appropriate care or treatment, or the disclosure is to be made for compassionate reasons.[40] The disclosure must not be contrary to any wish expressed by the individual before they were incapacitated, and the disclosure must be limited to the extent reasonable and necessary for the purpose of disclosure.[41] 'Responsible' person is defined to include a:

- parent of the individual;
- child or sibling of the individual and at least 18 years old;
- spouse or de facto spouse of the individual;
- relative of the individual, at least 18 years old and a member of the individual's household;
- guardian of the individual;
- person exercising an enduring power of attorney granted by the individual that is exercisable in relation to decisions about the individual's health;
- person who has an intimate personal relationship with the individual; and
- person nominated by the individual to be contacted in case of emergency.[42]

---

38 Note that the relevant exception in the proposed 'Collection' principle has been narrowed so that sensitive information can be collected without consent where 'required or *specifically* authorised by law': see Proposal 19–2.

39 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 215.

40 *Privacy Act 1988* (Cth) sch 3, NPP 2.4(a), (b).

41 Ibid sch 3, NPP 2.4(c), (d).

42 Ibid sch 3, NPP 2.5. The terms 'parent', 'child', 'relative' and 'sibling' are defined in NPP 2.6.

61.26 While the *Privacy Act* currently provides for agencies and organisations to deal with formal guardianship and carer arrangements, concerns about the implementation of existing provisions indicate the need for clearer provisions and improved practices. With the exception of disclosure of health information in limited circumstances, informal care arrangements are not recognised by the *Privacy Act* or in practice.

61.27 One option for reform, recommended by the OPC Review, is to amend the exceptions to the proposed UPPs to expand the circumstances in which a third party may provide consent on behalf of an incapable individual, or access information about that individual.[43] In particular, the OPC Review recommended amending the 'Use and Disclosure' NPP to permit a disclosure of non-health information in a similar way to disclosure of health information under NPP 2.4. As in NPP 2.4, the purpose and circumstances of the disclosure could be limited appropriately. The OPC Review suggested that disclosure should be permitted only where an organisation considers the disclosure necessary for the management of the affairs of an individual with decision-making disabilities, in a way that his or her financial or other interests are safeguarded.[44]

61.28 There is a question as to whether exceptions to other UPPs, in particular the proposed 'Sensitive Information' principle, should be expanded to facilitate better decision making by a substitute decision maker where an individual is incapable of making a decision under the *Privacy Act*.

61.29 There was some support in submissions for extending the exception in NPP 2.4 to other personal information.[45] The New South Wales Guardianship Tribunal considered that the provisions in NPP 2.4 are too restrictive and place too great an onus on the person providing the health service to make an assessment about a number of potentially difficult matters before disclosure can be made.[46] The Tribunal did, nevertheless, support extension of this kind of approach to non-health information.

61.30 On the other hand, the New South Wales Disability Discrimination Legal Centre opposed extending the exception to other personal information.[47] While acknowledging the problems faced by informal representatives, the Centre considered that the solution should not be achieved through dilution of the protections of the *Privacy Act*, which might leave a vulnerable person open to abuse, in particular, financial abuse. The Office of the Public Advocate Queensland submitted that the threat of abuse is real, and pointed to research estimating that 4.6% of older people experience physical, sexual or financial abuse. It is thought that, in most cases, the perpetrators of abuse are

family members or someone who is in a duty of care relationship with the older person.[48]

61.31 While generally not supporting the OPC Review's recommendation, the New South Wales Disability Discrimination Legal Centre made suggestions about how any extension of the disclosure exception to non-health personal information might be restricted.[49] The Centre suggested that, to be permissible, the disclosure should be reasonable, related to an authorised purpose, and derogate from the individual's right to privacy as little as a reasonable person would consider acceptable. The Council of Social Service of New South Wales similarly noted that it is 'imperative that the information accessed or made available to the guardian/carer must only be information that contributes or assists in the management of the present situation'.[50]

An authorised representative mechanism

61.32 An alternative approach is to establish separate provisions in the *Privacy Act* that acknowledge a process for substitute decision makers. This kind of approach is adopted in the *Health Records and Information Privacy Act 2002* (NSW), the *Health Records Act 2001* (Vic) and the draft *National Health Privacy Code*. While some of the details differ, each of the Acts and the Code have separate provisions that:

- provide guidance on determining the capacity of an individual;
- establish that an authorised representative may act and make decisions on behalf of an individual who does not have capacity; and
- define who may act as an authorised representative.[51]

61.33 A similar mechanism in the *Privacy Act* would avoid the need to craft specific exceptions in the proposed UPPs to cover authorised representatives and substitute decision making. The provisions relating to determination of capacity would provide greater clarity for agencies and organisations making these assessments. A number of stakeholders supported the 'authorised representative' and determination of capacity provisions in the New South Wales and Victorian Acts and the draft *National Health Privacy Code*.[52]

Defining authorised representative

61.34 The draft *National Health Privacy Code* defines an authorised representative as a person who is:

> (a) a guardian of the individual appointed under law; or
>
> (b) an attorney for the individual under an enduring power of attorney; or
>
> (c) a person who has parental responsibility for an individual who is a child; or
>
> (d) otherwise empowered under law to perform any functions or duties as an agent or in the best interests of the individual—
>
> except to the extent that acting as an authorised representative of the individual is inconsistent with an order made by a court or tribunal.[53]

61.35 In relation to adults, this list is fairly narrow and reflects a level of formality in appointing or empowering the third party to act as an authorised representative.

61.36 As noted above, some stakeholders urged that the need to reduce barriers for vulnerable adults and their carers justified acknowledging a broad category of people able to act on behalf of others without capacity. The Office of the Public Advocate Queensland supported recognition of substitute decision makers who are not formally appointed, but suggested more stringent requirements where serious consequences may flow from disclosure of personal information.[54] This would apply both to the requirements to determine if a person has capacity, and the identification and authorisation of the substitute decision maker. For example, the Office suggested more stringent identification requirements for financial matters, where there is a greater risk of abuse, and a limit of $5,000 on the amount of the financial transaction.

61.37 In the health area, while there was overall support for the authorised representative mechanism used in the *Health Records Act* and draft *National Health Privacy Code*, some were concerned about the existing definition. The National E-health Transition Authority (NEHTA) considered the definition too narrow.

> Through NEHTA's consultation activities, it is clear that health consumers and healthcare providers alike seek sufficient flexibility in privacy law to allow the right person to stand in for another to make decisions, when appropriate, about the handling

---

(Victoria), *Submission PR 153,* 30 January 2007; National E-health Transition Authority, *Submission PR 145,* 29 January 2007; Office of the Public Advocate Victoria, *Submission PR 141,* 24 January 2007; Department of Health Western Australia, *Submission PR 139,* 23 January 2006; Australian Government Department of Human Services, *Submission PR 136,* 19 January 2007; Centre for Law and Genetics, *Submission PR 127,* 16 January 2007; National Health and Medical Research Council, *Submission PR 114,* 15 January 2007.

53 National Health Privacy Working Group of the Australian Health Ministers' Advisory Council, *Draft National Health Privacy Code* (2003) pt 4 cl 1. The definitions in the *Health Records and Information Privacy Act 2002* (NSW) and *Health Records Act 2001* (Vic) are very similar, although these Acts make specific reference to particular state legislation relating to guardianship and administration and, in Victoria, agents acting within the meaning of the *Medical Treatment Act 1988* (Vic).

54 Office of the Public Advocate Queensland, *Submission PR 195,* 12 February 2007.

> of their personal and health information. Such flexibility must be balanced against an organisation's need for confidence (and management of liability risk), requiring the person acting for the individual concerned to have verifiable authority to act. Professional judgement exercised by a healthcare provider is generally considered to be a valuable decision-making tool, able to take account of the specific facts and circumstances at hand.[55]

61.38 The Office of the Health Services Commissioner (Victoria) suggested incorporating the definition of 'person responsible' as set out in the *Guardianship and Administration Act 1986* (Vic), which includes a hierarchy of specific persons such as unpaid primary carers and relatives but gives greater certainty than a broad 'catch all' provision.[56]

61.39 The Australian Bankers' Association (ABA) was concerned about being able to recognise appropriate substitute decision makers. While acknowledging that an enduring power of attorney is likely to suffice in most circumstances, subject to appropriate identification checks, the ABA considered it would be safer 'for all concerned' if an order or authority were obtained under guardian and administration legislation for the purposes of the *Privacy Act*.[57] There is evidence to suggest that enduring powers of attorney are often a catalyst for a significant amount of financial abuse.[58] The ABA noted that its members are also bound by the bankers' duty of confidentiality.

> While supporting flexibility and maintaining reasonable informality for these agency relationships is needed to be effective, there is a unique issue for banks due to the banker's duty of confidentiality. To comply with this duty a bank must be satisfied that an agent is duly authorised to act for the principal before the bank can disclose details of the customer relationship to the agent. Express authorisation is often required from the customer … The central issue here is not the practical difficulties of such persons accessing and engaging in banking transactions and services but having in place an adequate level of protection to prevent financial abuse and criminal behaviour to the detriment of the customer.[59]

61.40 The ABA stated that it would consider processes involving greater informality in authorising substitute decision makers if organisations were provided with appropriate protections against liability.[60]

58 Office of the Public Advocate Queensland, *Submission PR 195,* 12 February 2007.

59 Australian Bankers' Association Inc, *Submission PR 259,* 19 March 2007.

60 Ibid.

61.41 Achieving an appropriate balance between privacy protection and facilitating transactions is not easy. As noted by the Office of the Public Advocate Queensland:

> The task of appropriately providing a privacy regime which supports the adults where the substitute decision-maker seeks to act informally is far from straight-forward. Desirably, information should be made available to the substitute decision-maker when this is appropriate, but not, when it is not. This seems obvious, but the practicality of designing an appropriate scheme and its implementation are both problematic.[61]

Improved practices

61.42 The experiences and frustrations of individuals indicate that there are inconsistent practices in place in agencies and organisations, and in some cases practices that are not necessarily in accordance with the *Privacy Act*.

> It seems to me that many businesses hide behind the Act so that they do not have to do anything about the request being made to them and so just refuse point blank to even listen or make any attempt to try to solve the dilemma that you find yourself in. People should be treated with dignity at all times and should not be intimidated and belittled. Both the person who is making the request and the person from whom the request came should be respected and treated as a human being and not as a nuisance and a hindrance to the running of the business.[62]

61.43 To meet the needs of its clients better, Centrelink has adopted a nominee arrangement which allows individuals to nominate a third party to do the following on behalf of the individual:

- make enquiries only (person permitted to enquire);
- receive payments (payment nominee); or
- act and make changes generally (correspondence nominee).[63]

61.44 Nominee arrangements can be voluntary, and authorise any person to be the nominee with the consent of the individual. These arrangements are also used by Centrelink to recognise formal care relationships including powers of attorney, court or tribunal orders, and guardianship and administration orders. Each type of nominee has a different level of responsibility, and payment and correspondence nominees have an obligation to act in the best interests of the individual he or she represents.

---

61 Office of the Public Advocate Queensland, *Submission PR 195,* 12 February 2007.

62 K Bottomley, *Submission PR 10,* 1 May 2006.

63 The same person or organisation may be authorised as both a payment and correspondence nominee, or two different people or organisations may be authorised as separate nominees.

61.45 Centrelink's nominee arrangements are underpinned by legislation,[64] but it has been suggested that similar arrangements could operate administratively, as the Centrelink arrangements have in the past.[65] The Office of the Public Advocate Queensland noted that without the operation of the nominee arrangement at Centrelink, many people with an impaired capacity would not have received benefits to which they were entitled.[66] Centrelink's nominee arrangements have recently been revised to clarify the role and strengthen the accountability of the nominee, and to allow for removal of the nominee in appropriate circumstances.[67] A number of other agencies and organisations have adopted some version of a nominee arrangement.[68]

61.46 The OPC Review recommended the creation of more guidance to assist in the development of appropriate decision-making practices consistent with the law. In particular, it pointed to the best practice documentation in relation to people with decision-making disabilities developed by Privacy NSW.[69] The need for detailed guidelines to improve awareness of the law and provide guidance on assessing capacity and recognising legitimate relationships between individuals with an incapacity and their carers was highlighted in a number of submissions.[70]

ALRC's view

Changes to the proposed UPPs

61.47 The ALRC does not consider it appropriate to provide for substitute decision making through exceptions in the proposed UPPs. The ALRC has adopted the approach of developing high level principles that are flexible and adaptable to the multitude of circumstances in which agencies and organisations must take account of individuals' privacy rights. The principles are also resilient to change.[71] Any exceptions contained in the UPPs will have broad application. While it is possible to develop particular exceptions to rectify some of the issues concerning individuals

71 The ALRC's general approach to the development of the proposed UPPs is discussed in Ch 15.

without capacity, their general application could have unforeseen consequences. To avoid this, the exceptions would need to be drafted with a level of detail the ALRC is generally trying to avoid in the proposed UPPs.

61.48 The ALRC proposes, therefore, that mechanisms for dealing with authorised representatives should be set out in separate provisions in the *Privacy Act* and have application across all of the proposed UPPs and other provisions of the Act.

61.49 The ALRC has, however, given careful consideration to the needs of individuals with limited or no capacity when developing each of the proposed UPPs. In particular, the exceptions to consent set out in the proposed 'Sensitive Information' and 'Use and Disclosure' principles must have regard to circumstances where consent cannot be obtained from the individual or an authorised representative. In Chapter 19, the ALRC asks whether there is a need to expand the circumstances in which sensitive information can be collected without the consent of the individual to include situations that involve provision of an essential service for the benefit of the individual.[72]

61.50 It also may be appropriate to provide for particular circumstances in which certain types of personal information can be collected or disclosed without the consent of the individual. The ALRC considers that the existing provisions of NPPs 2.4 and 2.5 provide an appropriate exception in relation to disclosure of health information to the widely defined 'responsible' person in the limited circumstances provided. The ALRC proposes, therefore, to incorporate this exception into the proposed *Privacy (Health Information) Regulations*, which will apply only to health information.[73]

Specific notification

61.51 The ALRC notes the concerns expressed by the Office of the Public Advocate Victoria regarding notification requirements where the individual involved has a significant cognitive impairment. The ALRC has given careful consideration to the notification requirements, and has proposed a number of amendments to the existing NPP 1.5 to be incorporated into the proposed 'Specific Notification' principle.[74] In particular, the requirement will only apply in circumstances where a reasonable person would expect to be notified.[75] The existing exception, that notification is not required where this would pose a serious threat to the life or health of any individual, has been retained.

61.52 Beyond these exceptions, the ALRC considers it is appropriate to take steps to explain the notification to individuals with a cognitive impairment. The notification requirement exists as an important mechanism for an individual to retain some control

---

72 Question 19–1.

73 See discussion of the proposed *Privacy (Health Information) Regulations* and their intended operation in Chs 56, 57.

74 The principle and its application are discussed in Ch 20.

75 Proposal 20–5.

over the quality of personal information about them. The requirement to take steps to explain the notification is consistent with the proposal in this chapter that requires agencies and organisations to provide assistance to individuals to understand and communicate decisions that must be made under the *Privacy Act*. There will be circumstances in which it is acceptable to involve a third party to assist individuals to understand their rights and responsibilities under the Act, even where this may result in disclosure to a third party of personal information about the individual.[76]

61.53 Where the cognitive impairment is so severe that the individual will not be able to understand the notification even with assistance, it would be consistent with the proposed 'Specific Notification' principle and the proposals in this chapter to provide notification to the authorised representative if one exists. Guidance on this issue could be set out in the proposed guidance on the handling of personal information about individuals with a temporary or permanent incapacity.[77]

Adopting an authorised representative mechanism

61.54 The ALRC proposes that the *Privacy Act* should be amended to incorporate provisions that define the concept and role of authorised representatives in decision making. The ALRC considers that the *Health Records Act* and the draft *National Health Privacy Code* should be used as a model.[78]

61.55 The first step is to establish the circumstances in which an authorised representative is required or authorised to make a decision on behalf of an individual. The ALRC considers that an authorised representative should only be able to make a decision on behalf of an individual where the individual has been assessed as incapable of making the particular decision.[79] At present, the *Privacy Act* does not provide any guidance on what it means to have capacity. The ALRC proposes the introduction of a provision similar to s 85(3) of the *Health Records Act*, which reads:

> For the purposes of sub-sections (1) and (2), an individual is incapable of giving consent, making the request or exercising the right of access if he or she is incapable by reason of age, injury, disease, senility, illness, disability, physical impairment or mental disorder of—
>
> (a) understanding the general nature and effect of giving the consent, making the request or exercising the right of access (as the case requires); or

---

76 See discussion about involvement of third parties with the consent of the individual in Ch 62.

77 See Proposal 61–3 below.

78 The *Health Records and Information Privacy Act 2002* (NSW) provisions have similar operation, but are set out slightly differently. The ALRC proposals are based more closely on the provisions in the *Health Records Act 2001* (Vic) and the draft *National Health Privacy Code*.

79 It is not intended that the concept of authorised representative be applied to a deceased individual: see Ch 3.

> (b) communicating the consent or refusal of consent, making the request or personally exercising the right of access (as the case requires)—
>
> despite the provision of reasonable assistance by another person.[80]

61.56 The ALRC considers that the term 'senility' should be replaced with 'cognitive impairment', which covers a wider range of impairments and includes senility. The ALRC also considers that the descriptive list is not intended to be finite, and suggests that the words 'or any other circumstance' should be included to cover any circumstance that has led to a temporary or permanent incapacity.

61.57 In Chapter 60 the ALRC proposes to adopt the same test for determining incapacity of an individual under the age of 18. In that case, the term 'maturity' also should be incorporated into the list of circumstances that may be the basis of the incapacity.

61.58 The ALRC considers that the requirement to provide reasonable assistance to the individual to understand and communicate his or her decision is an important component of the proposed provision. Direction on what is considered to be 'reasonable assistance' should be included in the proposed guidance, to be developed by the OPC, on applying the provisions relating to adults with a temporary or permanent incapacity.[81]

Defining authorised representative

61.59 There are conflicting views on who the *Privacy Act* should recognise as an authorised representative. On the one hand, there is a need for flexibility so as not to disenfranchise adults who may have an impaired capacity or other disability that makes it difficult for them to communicate directly with agencies and organisations. On the other, it is important to ensure that the privacy of vulnerable adults is given appropriate protection. As access to personal information about an individual can also expose the individual to risk of financial or other abuse, it is important to ensure the right balance is provided in the *Privacy Act*.

61.60 The concept of the authorised representative is only intended to operate where an individual is found to be lacking the capacity to make a particular decision under the *Privacy Act*. It is the preliminary view of the ALRC that a broad definition of authorised representative would dilute the protections provided by the *Privacy Act*. There must be an appropriate framework for determining who can act on behalf of an individual incapable of making a decision in his or her own right.

61.61 The ALRC proposes to introduce a definition of authorised representative based on that in the draft *National Health Privacy Code*. This Code was developed to have

---

80 National Health Privacy Working Group of the Australian Health Ministers' Advisory Council, *Draft National Health Privacy Code* (2003) pt 4 cl 4(3) is identical.

81 See Proposal 61–3 below.

national coverage, and makes no reference to specific legislation, but is similar to the legislation operating in New South Wales and Victoria. The ALRC considers that the definition appropriately covers the categories of persons that should be recognised as an authorised representative for the purposes of the *Privacy Act*, with one exception—the term 'enduring guardian' should be added to the list to capture the full range of appointments available in each state and territory. A number of states provide for the appointment of an enduring guardian, rather than an enduring power of attorney, to make decisions in relation to medical or lifestyle matters.[82] A provision should also be incorporated into the *Privacy Act* to clarify that an authorised representative is not to act in any way that is inconsistent with an order made by a court or tribunal, in contravention of the terms of any appointment under law, or beyond the powers provided for in an enduring power of attorney.

61.62 The ALRC proposes the retention of provisions, based on those in NPPs 2.4 and 2.5, which allow for disclosure of health information in specific situations where the individual is unable to provide consent.[83] 'Responsible' person is broadly defined, and the ALRC considers this appropriate in relation to disclosure of health information where emergency situations are common and linked to decisions regarding medical treatment.

61.63 The ALRC is also attracted to the operation of nominee arrangements in place in a number of agencies and organisations. The ALRC considers that appropriate acknowledgement and implementation of such arrangements would prove beneficial for informal care arrangements where the individual has full, partial, or intermittent capacity. Nominee arrangements are considered in detail in Chapter 62.

61.64 It may also be appropriate to incorporate the concept of a nominee into the definition of authorised representative to cover situations where individuals know they have an intermittent capacity, or are entering a situation where they know they will lose capacity temporarily or permanently—such as prior to surgery or the onset of a debilitating illness. It may be appropriate in such circumstances to recognise a person who was nominated by the individual at a time when he or she had capacity. This would provide flexibility and control for the individual to choose his or her own representative without the need for formal appointment. Some process would, however, be required to inform the relevant agency or organisation of the nomination, and ensure that the individual had the true capacity to make the nomination at the time.

---

82 See, eg, *Guardianship Act 1987* (NSW) pt 2; *Guardianship and Administration Act 1993* (SA) pt 3; *Guardianship and Administration Act 1995* (Tas) s 32. A good overview of the various types of power of attorney by state and territory is provided in Credit Union Services Corporation, *Powers of Attorney: Making Your Own Decisions* (2002), 5.

83 See Ch 57.

61.65 It could be argued that state and territory legislation that provides for the appointment of an enduring power of attorney or an enduring guardian already fulfils the purpose of nominating a person prior to the loss of capacity. The state and territory legislation establishes proper processes for making such an appointment and imposes appropriate obligations on the appointed attorney or guardian. As enduring powers of attorney and enduring guardians are already recognised in the proposed definition of 'authorised representative', it is open for discussion whether a less formal nomination mechanism should be recognised. The ALRC is seeking further input on this question.

Limitations on liability of agencies and organisations

61.66 If agencies and organisations do not give appropriate recognition to authorised representatives of individuals incapable of making decisions under the *Privacy Act*, the privacy of these individuals may be compromised, and their access to essential services and benefits may be affected. Agencies and organisations must, however, take steps to ensure that only appropriate third parties have access to personal information about individuals. The guidance and training initiatives proposed below should help agencies and organisations to meet their obligations.

61.67 The ALRC is conscious of the responsibility imposed on agencies and organisations by the authorised representative mechanism. As under some other legislation, the ALRC considers it appropriate to set some limits on the responsibilities of agencies and organisations when dealing with authorised representatives.

61.68 Agencies and organisations should be required to take reasonable steps to validate the authority of an authorised representative. Guidance should set out what are considered to be reasonable steps. The Office of the Public Advocate Queensland suggested that a certified copy of the document or order should be produced, together with a statutory declaration confirming that the appointee is not aware of any subsequent appointment.[84] The agency or organisation should check to ensure that the decision or action being taken by the authorised representative falls within the authority of the document or order.

61.69 Where reasonable steps are taken, the ALRC does not consider that agencies and organisations should be responsible for relying on the decision or action of the authorised representative if it is later found that the authorised representative was not properly appointed, or exceeded the authority of his or her appointment. In these circumstances, the agency or organisation should not be considered to have engaged in conduct constituting an interference with the privacy of an individual under the *Privacy Act*.

84 Office of the Public Advocate Queensland, *Submission PR 195,* 12 February 2007.

Guidance and improved practices

61.70 Many submissions pointed to inconsistent and improper practices of agencies and organisations handling personal information about individuals with an impaired capacity, or communicating with these individuals and their representatives. While the ALRC's proposals should help to clarify the obligations of agencies and organisations, there will be a need to ensure that they are aware and understand the operation of the provisions. The ALRC proposes, therefore, a number of practical measures to raise the level of awareness and improve the application of the provisions in practice. These proposals are similar to proposals made in Chapter 60 in relation to the handling of personal information about individuals under the age of 18.

61.71 The ALRC proposes that the OPC develop and publish guidance for agencies and organisations concerning the handling of personal information about individuals with a temporary or permanent incapacity. Much of the guidance will be about the appropriate way to communicate with individuals and their representatives. This should include guidance on the responsibility to provide reasonable assistance to individuals to assist them to understand and communicate decisions under the *Privacy Act*, enhancing their capacity to make decisions. Guidance on applying the criteria for determining an individual's capacity would also be useful to agencies and organisations. Guidance should also deal with what are considered to be 'reasonable steps' in determining the authority of a person to act as an authorised representative.

61.72 In Chapter 21, the ALRC proposes that all agencies and organisations subject to the *Privacy Act* develop and publish a Privacy Policy that sets out how the agency or organisation manages personal information and how personal information is collected, held, used and disclosed.[85] Agencies and organisations that handle personal information about adults incapable of making decisions under the Act should address in their Privacy Policies how such information is managed. This would include addressing issues such as the requirement to communicate with authorised representatives where an individual is found to be incapable, and how to identify authorised representatives.

61.73 The ALRC also considers that agencies and organisations that regularly handle personal information about individuals with a temporary or permanent incapacity should ensure that their staff are trained adequately to assess the capacity of individuals. Staff should be made aware of the steps to be taken to identify an authorised representative, and how to communicate appropriately with the individual and the authorised representative. Training should also encompass any nominee arrangements established by the agency or organisation.[86] It may be appropriate that such training is offered by industry associations, possibly as part of broader training

85 See Proposals 21–1, 21–2, 21–3, 21–4.

86 See the discussion of nominee arrangements in Ch 62.

programs aimed at improving staff awareness and practices in relation to personal information.

Proposal 61–1 The *Privacy Act* should be amended to provide that an individual aged 18 or over is incapable of giving consent, making a request or exercising a right under the Act if, despite the provision of reasonable assistance by another person, he or she is incapable by reason of injury, disease, illness, cognitive impairment, physical impairment, mental disorder, any disability, or any other circumstance, of:

(a) understanding the general nature and effect of giving the consent, making the request or exercising the right; or

(b) communicating such consent or refusal of consent, making the request or personally exercising the right of access.

Where an individual is considered incapable of giving consent, making a request or exercising a right under the Act, then an authorised representative of that individual may give the consent, make the request or exercise the right on behalf of the individual.

Proposal 61–2 The *Privacy Act* should be amended to introduce the concept of 'authorised representative', defined as a person who is, in relation to an individual:

(a) a guardian of the individual appointed under law;

(b) a guardian for the individual under an appointment of enduring guardianship;

(c) an attorney for the individual under an enduring power of attorney;

(d) person who has parental responsibility for the individual if the individual is under the age of 18; or

(e) otherwise empowered under law to perform any functions or duties as agent or in the best interests of the individual.

The *Privacy Act* should state that an authorised representative is not to act on behalf of the individual in any way that is inconsistent with an order made by a court or tribunal, in contravention of the terms of any appointment under law, or beyond the powers provided for in an enduring power of attorney.

Question 61–2 Should the definition of 'authorised representative' include a person who was nominated by the individual at a time when the individual had the capacity to make the nomination?

Proposal 61–3 The *Privacy Act* should be amended to provide that an agency or organisation that has taken reasonable steps to validate the authority of an authorised representative will not be considered to have engaged in conduct constituting an interference with privacy of an individual merely because it acted upon the consent, request or exercise of a right by that authorised representative, if it is later found that the authorised representative:

(a) was not properly appointed; or

(b) exceeded the authority of his or her appointment.

Proposal 61–4 The Office of the Privacy Commissioner should develop and publish guidance for applying the provisions relating to individuals aged 18 and over incapable of giving consent, making a request or exercising a right on their own behalf, including on:

(a) the provision of reasonable assistance to individuals to understand and communicate decisions; and

(b) practices and criteria to be used in determining whether an individual is incapable of giving consent, making a request or exercising a right on his or her own behalf.

Proposal 61–5 Agencies and organisations that handle personal information about people incapable of making a decision should address in their Privacy Policies how such information is managed.

Proposal 61–6 Agencies and organisations that regularly handle personal information about adults incapable of making a decision should ensure that their staff are trained adequately to assess the decision-making capacity of individuals.

62. Other Third Party Assistance

Contents

Introduction	1839
Problems with the *Privacy Act* in practice	1839
Existing third party arrangements	1841
ALRC's view	1844

Introduction

62.1 This chapter considers practices allowing third parties to assist or act on behalf of individuals when making decisions under the *Privacy Act*.[1] It looks at individuals who require, or choose to seek, assistance with their decision making. The need for the assistance may be because of a failing or fluctuating capacity to make decisions, to facilitate communication for non-English speakers or persons with a communicative disability, or merely for the convenience of the individual. The third parties involved may be carers, spouses, parents, adult children, interpreters, counsellors, legal representatives or any other person chosen by the individual. The arrangements may be temporary, one-off or short term arrangements, or permanent.

62.2 The establishment of such third party arrangements, with the consent of the individual, is consistent with the operation of the *Privacy Act*. There are concerns, however, that such arrangements are not consistently implemented or recognised by agencies and organisations. The ALRC proposes that the Office of the Privacy Commissioner (OPC) provide further guidance on appropriate practices and procedures that allow for the involvement of third parties to assist with making and communicating privacy decisions. This chapter also discusses whether there is a need to give arrangements involving decision making by third parties a legislative basis to ensure their recognition and provide additional protection for the individuals and third parties involved.

Problems with the *Privacy Act* in practice

62.3 A number of stakeholders noted examples of situations where third parties were denied access to the personal information of another individual, or otherwise stymied

1 Chapter 61 focuses on individuals who are incapable of making decisions.

in communicating with an agency or organisation, because of conflict, or perceived conflict, with the *Privacy Act*. These included:

- a person unable to assist a sick friend to make payments or defer payments on a phone service while the friend was in hospital;[2]
- widows and widowers having difficulties in changing financial details on joint accounts with banking institutions;[3]
- organisations refusing to accept a verbal authorisation of the individual to release personal information to lawyers, financial counsellors and interpreters;[4]
- a friend assisting an individual who speaks English as a second language, being denied access to personal information despite being in the same room as the consenting individual at the time a phone call was made;[5] and
- other third party assistants, including lawyers, financial counsellors and social workers, authorised to speak on behalf of the individual to negotiate suitable outcomes, but unable to access personal information about the individual.[6]

62.4 As discussed in Chapter 61, the Australian Guardianship and Administration Committee (AGAC) undertook a small survey in 2003–04 to determine whether there have been any unanticipated adverse consequences as a result of privacy legislation for people who have a decision-making disability.[7] Most of the concerns raised by AGAC related to the inflexible interpretation and application of privacy legislation by frontline staff involved in providing services. The New South Wales Disability Discrimination Centre suggested that narrow interpretation of privacy principles and a culture of 'risk minimisation' by frontline staff contribute to difficulties for people with a decision-making disability.[8]

62.5 Concerns and complaints about the impact of the *Privacy Act* on the ability of partners to assist each other with account facilitation and payments were also common comments received during the ALRC's National Privacy Phone-in held in June 2006.[9] One online contributor to the Phone-in stated:

> Current privacy laws are so heavily weighted against information flow that it is difficult for a modern family to operate effectively. What is classed as protection to some, is a hindrance to others. As a married man with children the levels of

> frustration my wife and I incur when trying to make enquiries or to alter contracts for phones, electricity, etc or anything really is way over the top. The amount of paper work that organisations claim to need under the umbrella of privacy is extreme. The number of times I am asked to put my wife on the phone or vice versa is an insult to us and hits at our own integrity … Privacy laws need to have some way of lifting all the restrictions married couples etc have to incur. It is not good enough to have a system where there are provisions for heaps of paperwork to be prepared. We are a family and should be treated as such.[10]

Existing third party arrangements

62.6 On its website, the OPC confirms that the *Privacy Act* does not prevent an agency or organisation from dealing with a third party authorised by an individual to act on his or her behalf.[11] The OPC goes on to note that different organisations have different procedures to ensure appropriate authorisation, including identity validation procedures. The OPC suggests that some organisations with existing customer verification procedures for telephone services may use such procedures for authorisation of third parties. The OPC also notes, however, that sometimes an organisation may decide that the circumstances and risk require a more robust authorisation process, such as the provision of written authorisation. Further guidance is not provided, although it is stated that the

> Privacy Commissioner would expect that if a customer was to follow the security and identification procedures an organisation uses in its ordinary dealings, and give their consent, a third party may be able to act on that customer's behalf.[12]

62.7 A number of agencies and organisations have adopted third party arrangements as part of their normal course of business. For example, Optus has a procedure for establishing a third party authority nominated by the account holder to act on his or her behalf. A nominated person can request, change and supply information regarding the account. A nominated person cannot, however, do any action that requires the account holder's signature or verbal electronic authorisation, including changing personal details or activating a new service.[13] Optus notes that, in some cases, third party access is the primary form of communication between Optus and the customer, especially for customers with a disability or those from a non-English speaking background.[14] Telstra

12 Ibid.

13 A full list of actions that cannot be undertaken by a nominated person are set out at Optus, *Personal—Mobile Account Access* <www.optus.com.au> at 17 July 2007 and Optus, *Small Business—Third Party Access* <www.optus.com.au> at 17 July 2007. Where a power of attorney is granted for general purposes, and the legal document establishing the power of attorney is sighted by an Optus customer service representative, the nominated person will have the same level of access to an account as the account holder.

14 Optus, *Personal—Mobile Account Access* <www.optus.com.au> at 17 July 2007; Optus, *Small Business—Third Party Access* <www.optus.com.au> at 17 July 2007.

also has a system for naming an 'authorised representative' who is able to access information about an account on behalf of the legal lessee.[15] MBF Health has an option for nominating a person to undertake membership transactions, collect benefits, or both, on behalf of the primary member. The nominee has the same rights and obligations as the primary member, including access to the health information of all persons on the membership.[16]

62.8 As noted in Chapter 61, Centrelink has nominee arrangements that are underpinned by legislation.[17] Individuals can nominate any third party to act on their behalf in one or more of the following ways: to make enquiries only; to receive payments (payment nominee); or to act and make changes generally (correspondence nominee). Forms and processes for nominee arrangements are also used by Centrelink to recognise formal decision-making relationships for individuals without capacity.

62.9 The Centrelink nominee arrangements have operated administratively in the past, although were given a legislative basis in 2002. On introduction of the provisions, the need for a legislative basis was explained as follows:

> The amendments relating to nominees form a part of the measures being undertaken to give effect to the Government's commitment to implement a simpler and more coherent social security system.
>
> Nominees are particularly relevant to youth allowance, age pension and disability support pension recipients who have difficulty managing their own financial affairs.
>
> Currently, the law only provides for a payment nominee and arrangements relating to correspondence are dealt with administratively. Similarly, the current law does not clearly set out the duties and obligations of nominees. With an ageing population the use of nominees is likely to increase so it is considered appropriate to address these issues now.[18]

62.10 Part 3A of the *Social Security (Administration) Act 1999* (Cth) provides the detail for the operation of the nominee arrangements, including the functions and responsibilities of nominees. In particular, the payment or correspondence nominee has a duty to act at all times in the best interests of the principal beneficiary.[19] There is also provision for the suspension or revocation of nominee appointments.[20]

20 Ibid s 123E.

62.11 These examples of nominee arrangements generally facilitate an ongoing relationship between the individual and the nominated third party. They do not cover one-off or short term relationships. Such relationships could include a professional service provider, such as a counsellor, legal representative, or interpreter, where the professional is involved to assist the individual to make a decision, rather than make the decision on behalf of the individual. It may be necessary, however, for the service provider to have access to appropriate personal information about the individual in order to provide the required assistance. Other circumstances may involve one-off or short term arrangements made by an individual during a particular period—perhaps because of an illness or overseas trip.

62.12 In all of these circumstances, the *Privacy Act* provides for disclosure of personal information about an individual where the individual has provided consent. There is no reason why an agency or organisation could not provide a mechanism for acknowledging the consent of the individual and disclosing the necessary personal information to the nominated third party in accordance with that consent. This would cover circumstances where the third party is assisting the individual, but the individual makes decisions based on the information.

62.13 There may be complications, however, where there is a need to recognise a third party able to make decisions on behalf of the individual. There is no existing mechanism in the Act which provides for a third party, even with the consent of the individual, to make a decision under the Act on behalf of the individual. As noted above, the OPC has stated that it sees no barrier to organisations dealing with third parties authorised by the individual.[21]

62.14 In Chapter 61, the ALRC proposes the establishment of an 'authorised representative' mechanism that allows an appropriate third party to make decisions on behalf of an individual who is not capable of making the decision.[22] The ALRC is examining whether the definition of an authorised representative should include a person nominated by the individual to make decisions on his or her behalf before becoming incapable of making a decision.[23] The ALRC's proposed authorised representative mechanism is, however, only intended to operate where, despite assistance being given, the individual is found not to be capable of making the decision. This is to ensure that individuals are given the maximum opportunity to be involved in decisions about themselves and, wherever possible, make their own decisions. The mechanism has appropriate safeguards built in to protect the most vulnerable individuals. It is not intended to cover the circumstance of a nominated third

22 Proposals 61–1, 61–2.

23 Question 61–2.

party making decisions on behalf of an individual who is capable of making decisions under the Act.

62.15 Even if the *Privacy Act* recognised the ability of a nominated third party to make decisions under the Act with the consent of the individual, this would not necessarily allow the third party to make all decisions concerning a particular service or transaction with an agency or organisation. Agencies and organisations may be subject to other obligations, such as the bankers' duty of confidentiality or particular legislative provisions, which do not allow for third party decision making. Each agency and organisation must give consideration to the extent to which it is able to recognise and act upon decisions made by a nominated third party. Some circumstances require a more rigorous process for nomination and verification than others due to the potential consequences of the disclosure of personal information or the transaction involved.

ALRC's view

62.16 The ALRC considers that appropriate implementation of third party arrangements is a practical way to provide flexibility for individuals—to ensure that individuals continue to receive the protections offered by the *Privacy Act* while not unduly inhibiting communication with, and access to benefits and services from, agencies and organisations. The *Privacy Act* does not prevent the operation of such arrangements. There is, however, evidence to suggest that third party arrangements are not being implemented properly. This is contributing to the perception that the *Privacy Act* is often a barrier to accessing benefits and services.

62.17 A common theme in submissions and consultations is that frontline staff do not understand fully the operation of the *Privacy Act*, and often adopt risk averse behaviour to ensure their obligations under the Act are met. Unfortunately, while well intended, such behaviour can lead to frustration for individuals and their nominated third parties, and infringe the rights of the individual by hindering access to personal information about him or her.

62.18 A number of the ALRC's proposals are intended to clarify the provisions of *Privacy Act* and improve understanding for agencies, organisations and individuals about how the Act should operate in practice.[24] This is an area, however, where the ALRC sees the need for particular guidance to be developed and published by the OPC. The guidance should provide direction on appropriate practices and processes recognising and providing for third party arrangements that should be adopted by agencies and organisations. It should cover short term and long term arrangements, and situations where the third party is merely assisting the individual as well as where the nominated third party can make decisions on behalf of the individual. An assortment of

24 These proposals include harmonisation of information privacy laws across jurisdictions (Proposals 4–1, 4–2, 4–3, 4–4, 4–5), amendment of the Act to achieve greater logical consistency, simplicity and clarity (Proposal 3–2), inclusion of an objects clause in the Act (Proposal 3–4), and a variety of proposals for the OPC to undertake particular education campaigns (see summary in Ch 44).

processes could be adopted, including over the phone consent and identification verification, online verification and written nomination processes. The guidance should assist agencies and organisations to recognise the kinds of processes that might be suitable for a particular situation. Such guidance would provide agencies and organisations with the confidence to introduce appropriate arrangements that are consistent with the *Privacy Act*, and ensure that staff are trained appropriately to implement the arrangements.

62.19 There is a solid basis in the Act for allowing disclosure of personal information to third parties with the consent of the individual. The ALRC questions, however, whether the *Privacy Act* gives sufficient recognition to nominated third parties making decisions on behalf of a capable individual. The *Privacy Act* does not prevent the recognition of nominated third parties. Express recognition in the Act of nominated third parties, however, would provide further impetus and confidence for agencies and organisations to implement appropriate third party arrangements that involve decision making.

62.20 The ALRC is interested in receiving further input on whether it is desirable to enact a legislative provision that provides for nominated third parties making decisions on behalf of capable individuals, and whether the provision should set out the obligations of a nominated third party.

Proposal 62–1 Practice and procedures allowing for the involvement of third parties to assist an individual to make and communicate privacy decisions should be developed and published in guidance issued by the Office of the Privacy Commissioner.

Question 62–1 Should the *Privacy Act* be amended expressly to allow a third party nominated by the individual to give consent, make a request or exercise a right of access on behalf of the individual, either for one-off or long term arrangements?

A redraft of the Part 1899

Introduction

63.1 Telecommunications providers collect personal information about their customers in order to supply them with services such as landline telephone services, mobile telephone services and internet services. Before the introduction of the private sector provisions of the *Privacy Act 1988* (Cth), the use and disclosure of information collected and held by telecommunications providers was regulated by industry-specific

legislation[1] and instruments.[2] Since the introduction of the private sector provisions, however, the handling of personal information by telecommunications providers is governed by both the *Telecommunications Act 1997* (Cth) and the *Privacy Act*, as well as other industry-specific instruments, such as licences and codes.

63.2 A number of recent inquiries have considered the interaction between the telecommunications industry-specific regulation and the *Privacy Act.* In 2005, the Office of the Privacy Commissioner (OPC) considered this interaction as part of its review of the private sector provisions of the *Privacy Act* (OPC Review).[3] The OPC's recommendations on this issue are discussed throughout this chapter.

63.3 In 2005, the Senate Legal and Constitutional References Committee concluded an inquiry into the *Privacy Act* (Senate Committee privacy inquiry). One of its recommendations was that the ALRC conduct a comprehensive review of privacy that considered, among other things, the interaction between the *Privacy Act* and the *Telecommunications Act*.[4] In addition, in 2006 a review of the regulation of business in Australia concluded that the need to clarify and harmonise the relationship between the *Privacy Act* and the *Telecommunications Act* should be considered as part of a wider review of privacy laws.[5]

63.4 On 8 May 2006, the ALRC received a letter from the Attorney-General, the Hon Philip Ruddock MP, stating that it would be desirable for the ALRC to consider the interaction between the *Privacy Act* and the *Telecommunications Act* during the course of this Inquiry.

63.5 This chapter first considers whether telecommunications-specific privacy legislation is still required. The next section examines how the *Telecommunications Act* interacts with the *Privacy Act*. The chapter then looks at whether the *Telecommunications Act* provides adequate protection of personal information. The final section of the chapter considers the role of the OPC and the Australian Communications and Media Authority (ACMA) under the *Telecommunications Act*.

63.6 Chapter 64 considers the *Spam Act 2003* (Cth), *Do Not Call Register Act 2006* (Cth), *Telecommunications (Interception and Access) Act 1979* (Cth) and the functions of the various bodies with responsibility for privacy in the telecommunications industry. The privacy of internet users and users of wireless technologies is discussed more generally in Chapter 6.

Telecommunications Act 1997 (Cth)

63.7 The *Telecommunications Act* regulates the activities of a number of participants in the telecommunications industry, including 'carriers' and 'carriage service providers'. The statutory definitions of these terms are complex. Essentially, a 'carrier' is the holder of a 'carrier licence'[6]—a type of licence required before certain infrastructure can be used to carry communications by means of guided and/or unguided electromagnetic energy.[7] A 'carriage service provider' is a person who makes use of the infrastructure owned by a carrier to carry these types of communications.[8]

63.8 Part 13 of the *Telecommunications Act* regulates the use and disclosure of information obtained by certain bodies during the supply of telecommunication services. It makes it an offence (punishable by up to two years imprisonment) for certain participants in the telecommunications industry—namely, carriers, carriage service providers, telecommunications contractors and employees of carriers, carriage service providers and telecommunications contractors; eligible number-database operators;[9] and emergency call persons—to use or disclose information relating to the:

- contents of a communication carried, or being carried, by a carrier or carriage service provider;
- carriage services supplied or intended to be supplied by a carrier or carriage service provider; or
- affairs or personal particulars (including any unlisted telephone number or any address) of another person.[10]

63.9 The Act specifies a number of exceptions to these 'primary use/disclosure offences'.[11] The Act also regulates the secondary use and disclosure of protected information.[12] For example, a person to whom information was disclosed because the disclosure was required or authorised by law is prohibited from using or disclosing the information, unless the further use and disclosure is also required or authorised by law.[13] A person who contravenes the secondary use and disclosure provisions is also guilty of an offence punishable by up to two years imprisonment.[14]

63.10 Part 6 of the *Telecommunications Act* deals with the development of industry codes and standards for particular industry activities. Industry codes and standards

developed under the Act can deal with privacy, including the protection of personal information.[15] An industry code or standard cannot, however, derogate from the requirement of the *Privacy Act* or a privacy code approved under the *Privacy Act*.[16]

63.11 The *Telecommunications Act* requires telecommunications providers to record and report to ACMA on certain disclosures of information under the Act.[17] In 2005–06, participants in the telecommunications industry made 944,367 reported disclosures pursuant to exceptions under Part 13 of the *Telecommunications Act*. This was an increase of 58,901 or 6.23% cent over the previous reporting year.[18] ACMA reported that, while the overall trend has been towards increasing disclosures, in 2005–06 disclosures in most categories decreased marginally.[19]

63.12 Among the major carriers, Telstra makes more reported disclosures than the other carriers, both because of its market share and because of its role as the Integrated Public Number Database Manager. In 2005–06, Telstra made 74% of the disclosures reported under Part 13 of the *Telecommunications Act*. Among the other carriers, Virgin Mobile made 7%, Vodafone made 6%, Optus made 5% and other carriage service providers made 8%.[20]

63.13 The *Privacy Act* regulates many aspects of the handling of personal information by telecommunications providers. For example, a telecommunications provider that is not a small business will have to collect information in compliance with National Privacy Principle 1 (NPP 1), and will have to take reasonable steps to make sure that the personal information it collects, uses or discloses is accurate, complete and up-to-date as required under NPP 3. Thus, both Part 13 of the *Telecommunications Act* and the NPPs regulate the use and disclosure of personal information. The interaction between these provisions is discussed further below.

63.14 In 1999, the Australian Communications Industry Forum (ACIF) (now Communications Alliance), a body that represents the interests of the communications industry, developed and registered the *Industry Code—Protection of Personal Information of Customers of Telecommunications Providers* (the Code) under Part 6 of the *Telecommunications Act*.[21] The Code expanded on the privacy protections of Part 13 and addressed matters that are not dealt with in the Part, such as how information should be collected, stored and handled. These requirements were based on the National Principles for the Fair Handling of Personal Information, which later became

the NPPs under the *Privacy Act*. The Code was considered to be unnecessary when the private sector provisions of the *Privacy Act* came into force and was deregistered in 2001.

Are two privacy regimes necessary?

63.15 A threshold question is whether two privacy regimes are necessary in the telecommunications industry, or whether the industry should be regulated under telecommunications-specific privacy laws or the *Privacy Act*.

Submissions and consultations

63.16 It was argued in a number of submissions that telecommunications-specific privacy laws are necessary. Some stakeholders noted that Part 13 of the *Telecommunications Act* and the *Privacy Act* have different purposes. While the *Privacy Act* sets out various rights of individuals in relation to the handling of their personal information, Part 13 is directed more towards deterrence and punishment.[22]

63.17 Stakeholders also noted that Part 13 deals with many aspects of the telecommunications industry that are not addressed by the *Privacy Act*. For example, the Australian Government Department of Communications, Information Technology, and the Arts (DCITA) submitted that the content and substance of communications and unlisted numbers require industry-specific privacy regulation because they will not always be protected under the *Privacy Act*.[23] It was also noted that the telecommunications industry has access to vastly more information about individuals than most organisations, including information about their own customers and other members of the general public. Such information includes the content of their communications.[24]

63.18 The Office of the Victorian Privacy Commissioner (OVPC) submitted that telecommunications regulation is an area where fragmentation is a positive thing.

> Care should be taken not to ask or expect all things from generic privacy laws or from a single regulator. Here, separate regulation with purpose-built protections is desirable as it covers intrusive activities (eg listening in to telephone conversations) that may not generate any records. Privacy legislation is essentially about protecting documents or records, not transmissions.[25]

63.19 It was submitted that the *Telecommunications Act* permits the use and disclosure of personal information where it is necessary for the efficient functioning of the

telecommunications industry. For example, the telecommunications sector relies on the interconnection of different telecommunication networks in order to enable a consumer to communicate with any other user, regardless of the networks to which those end-users are connected. Accordingly, exceptions under Part 13 of the *Telecommunications Act* that go beyond those available under the *Privacy Act* are necessary to enable industry networking arrangements to work efficiently and effectively.[26]

63.20 It was noted in other submissions, however, that much of the information used and disclosed in the telecommunications industry could be regulated under the *Privacy Act*. It was submitted that in most cases the personal information collected by telecommunications providers is no different to personal information collected in other sectors. This information will often be obtained in the course of business but will not be related directly to the carriage of telecommunications services.[27] For example, personal information held by a telecommunications company, a bank or an electricity provider in relation to any given customer is likely to be broadly similar—it would include identifying information such as the individual's name, address, telephone number and other contact information; as well as other information such as billing history, credit card details and likely income level.[28]

63.21 A number of submissions also noted that due to technological and market 'convergence',[29] the boundaries between the telecommunications industry and other related industries are starting to blur.

> Increasingly, communications and related services will rely on a range of intermediate services and databases. If differences in the treatment of personal information persist between 'telecommunications' services and other businesses, the potential for unintended outcomes and for difficulties in administration across regulatory boundaries will increase markedly. This will become increasingly problematic as communications becomes embedded in more and more services.[30]

63.22 The communications industry is also experiencing business diversification, specialisation and the entry of new niche industry participants. The lower cost of creating and distributing digitalised content and communications is lowering barriers to market entry and resulting in the emergence of new online services and environments.[31]

26 Australian Government Department of Communications Information Technology and the Arts, *Submission PR 264,* 22 March 2007.

27 Australian Communications and Media Authority, *Submission PR 268,* 26 March 2007.

28 Australian Government Department of Communications Information Technology and the Arts, *Submission PR 264,* 22 March 2007.

29 'Convergence' refers to a range of different technologies performing similar tasks. An example of a 'convergent device' is the mobile phone and other mobile communications devices that can act as multimedia platforms and, in particular, deliver audiovisual content. See Australian Communications and Media Authority, *ACMA Communications Report 2005–06* (2006), 21; Australian Government Department of Communications Information Technology and the Arts, *Review of the Regulation of Content Delivered Over Convergent Devices* (2006).

31 Australian Communications and Media Authority, *ACMA Communications Report 2005–06* (2006), 22.

63.23 Stakeholders outlined a number of options for reform. It was suggested in one submission that the development of an instrument focused on telecommunications privacy would be appropriate.[32] The European Union has taken steps to regulate specifically the handling of data by the telecommunications industry. For example, the 2002 Directive on privacy and electronic communications requires Member States to, among other things, enact legislation to ensure the confidentiality of telecommunications and telecommunications data,[33] and to ensure that subscribers to telecommunication services are given the opportunity to determine whether their personal data are included in a public directory.[34] The 2006 data retention Directive aims to ensure that telecommunications data are retained for a certain period in case they are required for law enforcement purposes.[35] It also requires Member States to ensure that data are stored securely, and destroyed at the end of the retention period.[36]

63.24 Another stakeholder argued that the deregistration of the ACIF *Industry Code—Protection of Personal Information of Customers of Telecommunications Providers* has resulted in regulatory gaps in the protection of personal information in the telecommunications industry. It was also noted that deregistration of the Code has resulted in a number of small telecommunications businesses not being regulated by any privacy rules as they are not covered by the *Privacy Act*.[37] AAPT suggested that one option would be the development of an overarching document, whether a code, guide or separate piece of legislation, that provides a comprehensive overview of telecommunications privacy.[38] Others submitted, however, that the development of a telecommunications specific industry privacy code is likely to result in additional compliance cost and a greater overlap with existing regulation.[39]

63.25 The OPC submitted that consideration should be given to removing the exceptions under Part 13 (while keeping the Part 13 offence provisions), and allowing the *Privacy Act* to regulate use and disclosure under that Part. Others suggested that Part 13 could be moved into the *Privacy Act*, perhaps as an industry-specific section of the Act.[40] Stakeholders also suggested that privacy regulation applying to the telecommunications sector should be aligned with the general privacy provisions contained in the *Privacy Act*, particularly in the area of exemptions and penalties.[41] The

OPC Review noted the possibility of amending the *Telecommunications Act* and the *Privacy Act* to ensure the highest of the two standards always operates.[42]

ALRC's view

63.26 The ALRC considers that both the *Telecommunications Act* and the *Privacy Act* should regulate privacy in the telecommunications industry. The telecommunications industry handles sensitive personal information. In addition to information such as financial information, telephone numbers and other contact information, telecommunications providers hold information about when, how and with whom individuals communicate, and the content of those communications. In the ALRC's view, it is appropriate that the use and disclosure of this information is subject to more stringent laws than the *Privacy Act*.

63.27 The *Telecommunications Act* protects a broader category of information than the *Privacy Act*. The *Privacy Act* regulates only personal information held in a 'record'.[43] In contrast, Part 13 of the *Telecommunications Act* regulates information that may or may not be held in a 'record', including information that relates to the contents or substance of a communication.[44] Further, Part 13 of the *Telecommunications Act* does not regulate all stages of the information-handling cycle. These matters are dealt with under the *Privacy Act*. The ALRC considered whether it would be appropriate for the regulation of 'personal information' to be removed from *Telecommunications Act*. The ALRC believes, however, that this would only create confusion and further fragment the regulation of the telecommunications industry.

63.28 The ALRC also notes that specific exemptions to the offence provisions which go beyond those available under the *Privacy Act* are necessary to enable industry networking arrangements to work efficiently and effectively. The ALRC considered whether telecommunication-specific exceptions under the *Privacy Act* could accommodate these uses and disclosures. It is the ALRC's view, however, that this would add another layer of complexity to privacy regulation in the telecommunications industry.

63.29 In the ALRC's view, the interaction between the *Telecommunications Act* and the *Privacy Act* should be clarified. The ALRC's approach to reform in this area involves:

- clarification of the interaction between the *Telecommunications Act* and the *Privacy Act*;

---

42 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007. Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 60.

43 See the *Privacy Act 1988* (Cth) s 16B. 'Record' is defined under s 6 of the *Privacy Act 1988* (Cth).

44 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

- clarification of the scope of the exceptions to the use and disclosure offences under the *Telecommunications Act*;

- the alignment of the exceptions to the use and disclosure offences under the *Telecommunications Act* with the exceptions under the proposed 'Use and Disclosure' principle in the *Privacy Act*;

- ensuring that all participants in the telecommunications industry are subject to privacy regulation;

- the development of guidance relating to privacy in the telecommunications industry that addresses the interaction between the *Telecommunications Act* and the *Privacy Act*; and

- greater cooperation between the bodies with responsibility for privacy regulation in the telecommunications industry.

63.30 The ALRC acknowledges the need for telecommunications regulation to respond to a convergent communications environment. This has been a theme in a number of recent reports and inquiries.[45] In Australia there are currently a number of regulatory frameworks that apply to information according to the communications platform over which it is delivered.[46]

63.31 In the ALRC's view, issues related to convergence extend beyond the terms of reference for this Inquiry. The ALRC, therefore, proposes that the Australian Government should initiate a review to consider the extent to which the *Telecommunications Act* continues to be effective in light of technological developments (including technological convergence), changes in the structure of communication industries and shifting community perceptions and expectations about communication technologies.[47] This review should consider other legislation that regulates the telecommunications industry and how it interacts with the *Telecommunications Act*, including the *Telecommunications (Interception and Access) Act.*[48]

63.32 The proposed review should also consider the extent to which the activities regulated under the *Telecommunications Act* and the *Telecommunications (Interception and Access) Act* should be regulated under general communications legislation or other

46 See, eg, *Telecommunications Act 1997* (Cth); *Broadcasting Services Act 1992* (Cth).

47 See Senate Environment Communications Information Technology and the Arts References Committee, *A Lost Opportunity? Inquiry into the Provisions of the Australian Communications and Media Authority Bill 2004 and Related Bills and Matters* (2005), rec 1.

48 The *Telecommunications (Interception and Access) Act 1979* (Cth) is discussed in Ch 64.

legislation; and the roles and functions of the various bodies currently involved in the regulation of the telecommunications industry, including ACMA, the Attorney-General's Department, the OPC, the Telecommunications Industry Ombudsman (TIO), and Communications Alliance. The ALRC notes that the amalgamation of key broadcasting and telecommunications regulators in the United Kingdom provided the opportunity to establish a new regulatory framework under the *Communications Act 2003* (UK).

Proposal 63–1 The Australian Government should initiate a review to consider the extent to which the *Telecommunications Act 1997* (Cth) and the *Telecommunications (Interception and Access) Act 1979* (Cth) continue to be effective in light of technological developments (including technological convergence), changes in the structure of communication industries and changing community perceptions and expectations about communication technologies. In particular, the review should consider:

(a) whether the Acts continue to regulate effectively communication technologies and the individuals and organisations that supply communication technologies and communication services;

(b) how the Acts interact with each other and with other legislation;

(c) the extent to which the activities regulated under the Acts should be regulated under general communications legislation or other legislation; and

(d) the roles and functions of the various bodies currently involved in the regulation of the telecommunications industry, including the Australian Communications and Media Authority, the Australian Government Attorney-General's Department, the Office of the Privacy Commissioner, the Telecommunications Industry Ombudsman, and Communications Alliance.

Does the *Telecommunications Act* provide adequate privacy protection?

63.33 In IP 31, the ALRC asked whether the *Telecommunications Act* provides adequate and effective protection for the use, disclosure and storage of personal information.[49] The ALRC also asked whether any issues are raised by the interaction between the *Privacy Act* and the *Telecommunications Act*.[50]

49 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), Question 10–1.
50 Ibid, Question 10–2.

63.34 One stakeholder submitted that the *Telecommunications Act* operates effectively in tandem with the *Privacy Act*.[51] Other stakeholders, however, raised a range of issues related to telecommunications privacy regulation including: confusion about how the two Acts interact; lack of clarity around the exceptions to the use and disclosure offences; inadequate protection of personal information held on public number directories; regulatory gaps caused by the small business exemption; the impact of new privacy-invasive technologies; and the role and function of the various bodies with responsibility for telecommunications privacy.

Interaction between the *Privacy Act* and the *Telecommunications Act*

63.35 The *Privacy Act*, and in particular the NPPs, continue to regulate many aspects of the handling of personal information by telecommunications providers. For example, a telecommunications provider can only collect personal information that is necessary for one or more of its functions or activities, such as to enable the provision of telecommunication services to a customer and to facilitate the billing for those services.[52] In addition, a telecommunications provider must take reasonable steps to ensure that an individual is aware of certain matters at or around the time of collection, such as the types of organisations to which the provider usually discloses the information.[53]

63.36 NPP 2 and Part 13 of the *Telecommunications Act* regulate the use and disclosure of personal information. As noted above, Part 13 makes it an offence to use or disclose certain information, subject to a number of exceptions. These exceptions provide the *only* circumstances in which it is lawful for those regulated by the *Telecommunications Act* to use or disclose that information. Therefore, the exceptions under NPP 2 that permit uses and disclosures that are not permitted under Part 13 will not apply.

63.37 On the other hand, an organisation that uses or discloses personal information in a way that is authorised under the *Telecommunications Act* will not be in breach of NPP 2. An act or practice engaged in pursuant to any of the exceptions under Part 13 is an act or practice that is 'authorised by or under law' for the purposes of NPP 2 and the proposed 'Use and Disclosure' principle.[54] This is confirmed by s 303B of the *Telecommunications Act,* which provides that a use or disclosure permitted under that Act is a use or disclosure that is 'authorised by law' for the purposes of the *Privacy Act.*[55]

---

51 Telstra, *Submission PR 185,* 9 February 2007.
52 *Privacy Act 1988* (Cth), sch 3, NPP 1.1.
53 See Ibid sch 3, NPPs 1.3, 1.5.
54 See Ch 22.
55 *Telecommunications Act 1997* (Cth) s 303B.

63.38 Conversely, if a participant in the telecommunications industry engages in an act or practice that does not comply with one of the exceptions under Part 13, the act or practice would not be 'authorised by or under law' and so may breach NPP 2 and the proposed 'Use and Disclosure' principle.[56] This is supported by s 303C of the *Telecommunications Act*, which provides that a prosecution for an offence relating to the use or disclosure of protected information under the *Telecommunications Act* does not prevent civil proceedings or administrative action being taken under the *Privacy Act* for the same breach.[57]

Exceptions to the use and disclosure offences

63.39 The exceptions under Part 13 of the *Telecommunications Act* provide for a range of circumstances in which carriers and carriage service providers may use or disclose personal information. It has been argued that many of the exceptions are unnecessarily broad and do not provide a sufficient level of protection of personal information in the telecommunications industry.[58] This section of the chapter considers a number of issues raised in submissions relating to these exceptions and whether they can be aligned more closely with the exceptions to the proposed 'Use and Disclosure' principle.

Performance of person's duties

63.40 Sections 279 and 296 of the *Telecommunications Act* provide that the primary and secondary use and disclosure of information is permitted if the use or disclosure is made in the performance of that person's duties as an employee[59] or contractor.[60] It has been noted that the exception is necessary for 'the myriad of day-to-day communications between employees about connecting, disconnecting and billing customers'.[61]

63.41 AAPT submitted that the exception seems to imply that as long as someone is an employee of a supplier, and is embarking on duties associated with that employment, then they can use and disclose personal information in any way they see fit.

---

56 An act or practice that is prohibited under the *Telecommunications Act* may also be permitted under one of the other exceptions to NPP 2. This does not permit the act or practice as Part 13 still applies to the use or disclosure of that information.

57 *Telecommunications Act 1997* (Cth) s 303C.

58 Electronic Frontiers Australia Inc, *Submission to the Office of the Privacy Commissioner Review of the Private Sector Provisions of the Privacy Act 1988*, 22 December 2004, [30]–[51]. See also AAPT Ltd, *Submission PR 87,* 15 January 2007.

59 An employee of a carrier, carriage service provider, telecommunications contractor, number-database operator, number-database contractor, a person who operates an emergency call service or an emergency call contractor: *Telecommunications Act 1997* (Cth) s 279(1), (3), (5).

60 A telecommunications contractor, number-database contractor or an emergency call contractor: Ibid s 279(2), (4), (6).

61 Explanatory Memorandum, Telecommunications Bill 1996 (Cth), vol 2, 6. An eligible person or an eligible number-database person is not required to report to ACMA the number of disclosures they make under ss 279 and 296: *Telecommunications Act 1997* (Cth) s 306(1).

> We are confident that this is not the intended reading of this section, and it is entirely at odds with the *Privacy Act 1988* and its requirements when it comes to the use and disclosure of personal information.
>
> The Act also leaves itself open to interpretation about what we consider are key privacy consumer protection mechanisms. This includes not allowing Sales and Marketing people to use the detail of a call to attempt to market to these customers based on these details.[62]

63.42 The ALRC acknowledges that an exception to this effect is necessary to enable industry networking arrangements to work efficiently and effectively. In the ALRC's view, however, the scope of the present exception is unclear. One option would be to amend ss 279 and 296 to confine the exception to certain duties of an employee or contractor, including connecting and disconnecting telecommunication services or billing.

63.43 Another option would be a requirement that a use or disclosure by a person made for the purpose of performing that person's duties must be related to the primary purpose of collection. This would bring the exception more closely into line with the proposed 'Use and Disclosure' principle, under which an agency or organisation may use or disclose personal information for a purpose (the secondary purpose) other than the primary purpose of collection if both of the following apply, the:

- secondary purpose is related to the primary purpose of collection and, if the personal information is sensitive information, directly related to the primary purpose of collection; and
- individual would reasonably expect the agency or organisation to use or disclose the information for the secondary purpose.[63]

63.44 The ALRC is interested in stakeholder views on this issue.

Question 63–1 Sections 279 and 296 of the *Telecommunications Act 1997* (Cth) permit the use or disclosure by a person of information or a document if the use or disclosure is made 'in the performance of the person's duties' as an employee or contractor. Is the exception too broadly drafted? Is it resulting in the inappropriate use or disclosure of personal information? If so, how should the exception be confined?

Required or authorised by or under law

63.45 Sections 280(1)(b) and 297 provide that a primary or secondary use or disclosure of information or document is permitted if the use or disclosure is required

62 AAPT Ltd, *Submission PR 87,* 15 January 2007.
63 See Ch 22.

or authorised by or under law. NPP 2 and the proposed 'Use and Disclosure' principle provide for a similar exception.[64] ACMA has reported that 13,634 disclosures were made under s 280 in 2005–06.[65]

63.46 Submissions highlighted that one possible interpretation of s 280(1)(b) is that a telecommunications company could rely on the exceptions under NPP 2 to disclose information (for example, for direct marketing) in addition to those under Part 13 of the *Telecommunications Act*.[66] The OPC submitted that both the *Privacy Act* and the *Telecommunications Act* should be amended to ensure that the *Privacy Act* cannot be used to lower the standard of privacy protection provided by the *Telecommunications Act*.[67]

63.47 In the ALRC's view, ss 280(1)(b) and 297 should be amended to clarify that the exception does not authorise a use or disclosure that would be permitted by the proposed 'Use and Disclosure' principle under the *Privacy Act* if that use or disclosure would not be otherwise permitted under Part 13 of the *Telecommunications Act*.

63.48 In Chapter 13, the ALRC considers the scope of the 'required or authorised by or under law' exception in the context of the *Privacy Act*. In that chapter the ALRC notes that the scope of the exception requires clarification. The ALRC notes that legislation should set out clearly whether it is intended to require or authorise an act or practice for the purposes of the exception. The ALRC also discusses the compilation of a list of provisions in other legislation that require or authorise acts or practices for the purposes of the exception. The ALRC is interested in hearing stakeholder views on whether this option would help to clarify the scope of the exception under ss 280(1)(b) and 297.

Proposal 63–2 Sections 280(1)(b) and 297 of the *Telecommunications Act 1997* (Cth) should be amended to clarify that the exception does not authorise a use or disclosure that would be permitted by the proposed 'Use and Disclosure' principle under the *Privacy Act* if that use or disclosure would not be otherwise permitted under Part 13 of the *Telecommunications Act*.

---

64 Rule 6.1(c)(f) of the Australian Communications Industry Forum, *Industry Code—Protection of Personal Information of Customers of Telecommunications Providers*, ACIF C523 (1999) provided an identical exception. The scope of the 'required or authorised by or under law' exception in the context of the *Privacy Act 1988* (Cth) is discussed in Chapter 13.

65 Australian Communications and Media Authority, *ACMA Communications Report 2005–06* (2006), 145.

66 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; Electronic Frontiers Australia Inc, *Submission PR 76,* 8 January 2007.

67 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007; Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 2.4.8.

Law enforcement and the protection of public revenue

63.49 Section 282 of the *Telecommunications Act* provides that the use or disclosure by a person of information is not prohibited if the use or disclosure is reasonably necessary for certain law enforcement purposes, including the enforcement of the criminal law, the enforcement of a law imposing a pecuniary penalty or the protection of public revenue.[68] This exception requires the relevant person, for example an employee of the telecommunications provider, to make a judgement as to whether the disclosure or use is necessary for that purpose. The Explanatory Memorandum to the Telecommunications Bill 1996 (Cth) noted that this exception is necessary

> to allow disclosure where a carrier employee comes across information which clearly is relevant to enforcement of the criminal law in the course of performing his or her duties and the information has not been requested by a law enforcement agency.[69]

63.50 The Explanatory Memorandum notes, however, that the exception had created difficulties for employees who are not in a position to be able to make an objective judgment about whether disclosure is reasonably necessary because they do not know the details of the investigation. The *Telecommunications Act* therefore introduced a new test which enables an eligible person to disclose information where an authorised officer has certified that the disclosure is reasonably necessary for the enforcement of the criminal law, a law imposing a pecuniary penalty or for the protection of the public revenue.[70] In these cases, it is the relevant authorised certifying officer, not the telecommunications provider, who makes the judgement as to whether the disclosure is necessary.[71] Section 283 of the *Telecommunications Act* provides a similar exception in relation to disclosures made to the Australian Security and Intelligence Organisation (ASIO). ACMA has reported that 944,367 disclosures were made under the 'enforcement of law' exception under s 282 of the *Telecommunications Act* in 2005–06.[72]

63.51 Under s 282(6) a certificate cannot authorise the disclosure of information or a document relating to the contents or substance of a communication that has been carried, or is in the process of being carried, by a carrier or carriage service provider. This indicates a legislative intention that such information can only be obtained by a warrant under the *Telecommunications (Interception and Access) Act*.

63.52 In 2005, a report on a review of regulation of access to communications conducted by Mr Anthony Blunn (the Blunn Report) observed of s 281(1) and (2):

72 Australian Communications and Media Authority, *ACMA Communications Report 2005–06* (2006), 145. In 2004–05, there were 885,466 disclosures—an increase of 26% from the previous financial year: Australian Communications and Media Authority, *Telecommunications Performance Report 2004–05* (2005), 186.

> In as much as they require the eligible person to form an opinion that disclosure is 'reasonably necessary' for the enforcement of the criminal law or the protection of the public revenue they appear inappropriate and sit oddly with the requirement established by subsections 282(3), (4) and (5) for a certificate from the requesting agency in which case access to content or substance is precluded.[73]

63.53 The Blunn Report acknowledged that there is obviously a case for enabling employees of telecommunications providers who do come across information in the course their employment which they consider relevant to security or law enforcement to report that to an appropriate authority. The Report concluded, however, that from a privacy perspective the provisions as presently drafted are inadequate. It was recommended that they be reviewed with a view to clarifying the objective and better identifying the process to be followed.[74]

63.54 On 14 June 2007, the Telecommunications (Interception and Access) Amendment Bill 2007 was introduced into the Australian Parliament House of Representatives. The Bill implements a number of the recommendations of the Blunn Report.[75] The Bill seeks to introduce a new Chapter 4 into the *Telecommunications (Interception and Access) Act* and will transfer ss 282 and 283 of the *Telecommunications Act* to the *Telecommunications (Interception and Access) Act*. In contrast to Part 13 of the *Telecommunications Act*, the proposed Chapter 4 deals with permitted access to 'telecommunications data'. The Bill does not set out a definition of 'telecommunications data'. The proposed s 172 provides that the provisions in Chapter 4 do not permit the disclosure of the 'contents or substance of a communication'. Subject to this limitation, Chapter 4, like the exceptions under Part 13, will authorise access to 'information or a document'.[76]

63.55 Chapter 4 of the Act will establish a two tier access regime for particular officers of ASIO or an enforcement agency to authorise lawfully the disclosure of telecommunications data without breaching the general prohibitions on the disclosure of information or documents under ss 276, 277 and 278 of the *Telecommunications Act*. The first tier allows access to existing telecommunications data.[77] The second tier, which is limited to a narrower range of agencies and requires a higher threshold of authorisation, allows for access to future telecommunications data.[78] Proposed sections 174 and 177 deal with voluntary disclosures of telecommunications data. Requests from agencies for telecommunications data are dealt with under ss 175, 176 and 178–180.

76 See, eg, Telecommunications (Interception and Access) Amendment Bill 2007 (Cth) sch 1, proposed s 175.

77 Ibid sch 1, proposed ss 175, 178, 179.

78 Ibid sch 1, proposed ss 176, 180.

63.56 The Bill contains a number of safeguards in relation to access to telecommunications data. For example, authorisations must be retained for a period of three years.[79] The head of an enforcement agency must report the number of authorisations to the Attorney-General of Australia on an annual basis, and this report must be tabled in Parliament.[80] A new s 306A, based on s 306 of the *Telecommunications Act*, provides for records of prospective authorisations made under the *Telecommunications (Interception and Access) Act* to be kept by carriers, carriage service providers and number-database operators.

63.57 On 21 June 2007, the Senate referred the provisions of the Telecommunications (Interception and Access) Amendment Bill 2007 to the Legal and Constitutional Affairs Committee for inquiry and report (Senate Committee Inquiry). Submissions to the Senate Committee Inquiry raised a range of privacy issues including:

- The meaning of telecommunications data—the Australian Privacy Foundation and Electronic Frontiers Australia expressed concern about potential access to information about web browsing and chat room sessions, and that the distinction between the content or substance of a message and other data was particularly unclear in relation to email header data.[81]

- Access to prospective telecommunications data—it was suggested in some submissions that the controls over access to prospective telecommunications data do not go far enough. For example, the Law Council of Australia and Electronic Frontiers Australia submitted that access to prospective mobile telephone data should be subject to more stringent control than authorisation by ASIO officers or officers of a criminal law enforcement agency.[82]

- Secondary disclosure provisions—the Police Federation of Australia held concerns regarding how the secondary disclosure provisions might impact on the privacy of police officers, especially those involved in disciplinary proceedings. The NSW Ombudsman, however, argued that the restrictions on secondary disclosure are too narrow.[83]

- Consideration of privacy implications—proposed s 180(5) requires an authorised officer to have regard to likely interference with the privacy of individuals when authorising access to prospective telecommunications data. Submissions from a number of stakeholders, including the OPC, suggested

79 Ibid sch 1, proposed s 185.

83 Ibid, [3.28]–[3.31].

providing greater guidance on how the privacy implications of an authorisation should be considered and documented.[84]

- Destruction of data—the OPC submitted that proposed ss 174 and 177 should include positive obligations on law enforcement agencies to destroy in a timely manner irrelevant material containing personal information and information which is no longer needed.[85]

- Oversight—the Inspector-General of Intelligence and Security submitted that there may be a role for his office in monitoring authorisations by ASIO officers to access prospective telecommunications data.[86]

63.58 The Senate Committee Inquiry released its report on 1 August 2007. The Committee recommended that the Telecommunications (Interception and Access) Amendment Bill be passed, subject to a number of recommendations. These recommendations included that the:

- Inspector-General of Intelligence and Security incorporate into his regular inspection program oversight of the use of powers to obtain prospective telecommunications data by ASIO;[87] and

- Attorney-General's Department arrange for an independent review of the operation of the *Telecommunications (Interception and Access) Act* within five years.[88]

63.59 Attached to the Committee's report is the minority report by the Australian Democrats.[89] The Australian Democrats conclude that the Bill 'confirms privacy as a valued norm but does not do enough to protect Australians' private conversations and communications'.[90] The report includes five recommendations that differ from the findings of the Senate Committee Inquiry. The Democrats recommend:

- clear language outlining whether or not specific technologies qualify as 'telecommunications data';

- clear language specifying that 'real time data, in other words location information, can only be accessed by enforcement agencies with a warrant', as opposed to access by intra-agency written authorisation;

- access to mobile telephone location information is limited to fourteen days, non-renewable unless relevant information is gathered from the source within the original fourteen day period, and then only for an additional twenty days;

- a requirement that enforcement agencies consult with the Public Interest Monitor before they apply for an authorisation under the Act;[91] and

- a positive obligation on law enforcement agencies and ASIO to warn communication carriers' employees that they are not legally obliged to make 'voluntary disclosures'.[92]

ALRC's view

63.60 The ALRC agrees with the findings of the Blunn Report and the Senate Committee Inquiry that the exceptions in ss 282 and 283 of the *Telecommunications Act* are better located in the *Telecommunications (Interception and Access) Act*. To this extent, the ALRC supports the transfer of those provisions under the Telecommunications (Interception and Access) Amendment Bill 2007. In light of the recent Senate Committee Inquiry, the ALRC does not propose to conduct another detailed study of the Bill. The ALRC does, however, share a number of the concerns raised in submissions to the Senate Committee Inquiry, including those relating to the destruction of irrelevant material containing personal information, and the need for further oversight of ASIO's powers to obtain prospective telecommunications data.

Question 63–2 Does the Telecommunications (Interception and Access) Amendment Bill 2007 provide adequate protection of personal information that is used or disclosed for law enforcement purposes? For example, should the Bill be amended to:

(a) define 'telecommunications data';

(b) provide greater guidance on how the privacy implications of an authorisation should be considered and documented under proposed s 180(5);

(c) include positive obligations on law enforcement agencies to destroy in a timely manner irrelevant material containing personal information and information which is no longer needed; and

91 The role of a 'Public Interest Monitor' is discussed in Ch 64.

92 Parliament of Australia—Senate Legal and Constitutional Affairs Committee, *Telecommunications (Interception and Access) Amendment Bill 2007* (2007), Minority Report by the Australian Democrats.

(d) provide that the Inspector-General of Intelligence and Security monitor the use of powers by the Australian Security Intelligence Organisation to obtain prospective telecommunications data?

Threat to person's life or health

63.61 Sections 287 and 300 of the *Telecommunications Act* provides that a primary or secondary use or disclosure of information is permitted if the information or document relates to the affairs or personal particulars (including any unlisted telephone number or any address) of another person, and the first person believes on reasonable grounds that the use or disclosure is reasonably necessary to prevent or lessen a serious and imminent threat to the life or health of a person. ACMA has reported that 4,085 disclosures were made under this exception in 2005–06.[93]

63.62 The guidance notes to the deregistered ACIF *Industry Code—Protection of Personal Information of Customers of Telecommunications Providers* stated that this provision is aimed at emergency situations.

> A threat to life or health would be interpreted to include threats to safety—bush fires, industrial accidents etc. Health would include mental as well as physical health, although appeals to the threat of stress or anxiety would not generally be sufficient. The rules require the threat is serious and imminent.[94]

63.63 NPP 2 contains a similar exception. It allows an organisation to use or disclose personal information about an individual for a purpose (the secondary purpose) other than the primary purpose of collection if the organisation reasonably believes that the use or disclosure is necessary to lessen or prevent a serious and imminent threat to an individual's life, health or safety, or a serious threat to public health or public safety.

63.64 In Chapter 22, the ALRC notes that a large number of stakeholders are of the view that this exception is too narrow. There is considerable concern that the requirement that the threat must be both serious *and* imminent is too difficult to satisfy and that it can lead to personal information not being used or disclosed in appropriate circumstances.

63.65 The ALRC proposes that the exception should apply where the relevant threat is serious, but not necessarily imminent.[95] This approach would allow an agency or

Rules 6.1(d) and 7.1(c) of the Australian Communications Industry Forum, *Industry Code—Protection of Personal Information of Customers of Telecommunications Providers*, ACIF C523 (1999) provided for a similar exception.

95 Proposal 22–3.

organisation to take preventative action to stop a threat from developing to a point where the danger is likely to eventuate. The ALRC believes that this formulation strikes an appropriate balance between respecting the privacy rights of an individual and the public interest in averting threats to people's life, health and safety.

63.66 In the ALRC's view, the same considerations apply to the exception under the *Telecommunications Act*. The ALRC therefore proposes that the exception under ss 287 and 300 of the *Telecommunications Act* provide that a use or disclosure by a person of information or a document is permitted if the information or document relates to the affairs or personal particulars (including any unlisted telephone number or any address) of another person; and the person reasonably believes that the use or disclosure is necessary to lessen or prevent a serious threat to a person's life, health or safety; or public health or public safety.

Proposal 63–3 Sections 287 and 300 of the *Telecommunications Act 1997* (Cth) should be amended to provide that a use or disclosure by a person of information or a document is permitted if:

(a) the information or document relates to the affairs or personal particulars (including any unlisted telephone number or any address) of another person; and

(b) the person reasonably believes that the use or disclosure is necessary to lessen or prevent a serious threat to:

  (i) a person's life, health or safety; or

  (ii) public health or public safety.

Knowledge of person concerned

63.67 Section 289(1)(b)(i) of the *Telecommunications Act* provides that the use or disclosure by a person of information or a document is permitted if the information or document relates to the affairs or personal particulars (including any unlisted telephone number or any address) of another person, and the other person is reasonably likely to have been aware or made aware that information or a document of that kind is usually disclosed, or used, as the case requires, in the circumstances concerned.

63.68 ACMA has reported that disclosures made under s 289 rose sharply from 75,422 in 2004–05 to 133,765 in 2005–06 (a 77% increase). ACMA has stated that this increase can be explained in part by carriers disclosing customer details for credit-worthiness checks.[96]

96 Australian Communications and Media Authority, *ACMA Communications Report 2005–06* (2006), 145.

63.69 NPP 2.1(a) contains a similar exception where an individual would reasonably expect an organisation to use or disclose the information for a purpose (the secondary purpose)[97] other than the primary purpose of collection. NPP 2, however, contains the added protection that the secondary purpose is related to the primary purpose of collection and, if the personal information is sensitive information, directly related to the primary purpose of collection.

Submissions and consultations

63.70 Electronic Frontiers Australia noted that s 289 and NPP 2.1(a) offer very different levels of protection:

> In the case of use or disclosure for the primary purpose of collection, the *Telecommunications Act* (s 289) is more protective than the *Privacy Act* (NPP 2). The TA restricts use or disclosure for the primary purpose to circumstances of which the individual is 'reasonably likely to have been aware' or has consented. In contrast, NPP 2 does not restrict use or disclosure for the primary purpose at all.
>
> However, in the case of use or disclosure for a secondary purpose of collection, the *Telecommunications Act* is significantly less protective than the *Privacy Act*. NPP 2.1 prohibits use or disclosure unless both 'the secondary purpose is related to the primary purpose of collection' (and directly related if sensitive information) and 'the individual would reasonably expect the organisation to use or disclose the information for the secondary purpose' (or has consented).[98]

63.71 Electronic Frontiers Australia submitted that either the *Privacy Act* or *Telecommunications Act* must be amended to require businesses in the telecommunications sector to comply with NPP 2.1(a) in relation to use and disclosure for secondary purposes. Electronic Frontiers Australia also noted that the existing protection under s 289 in relation to use and disclosure for the primary purpose must not be removed or made any weaker.[99] The OPC noted that this exception appears to be more permissive than NPP 2, and it was concerned that this exception may lower the threshold of privacy protection in the telecommunications sector.[100]

ALRC's view

63.72 In Chapter 22, the ALRC considers various reformulations of the reasonable expectation exception, but suggests that the exception under NPP 2 provides the appropriate level of protection for an individual's personal information. The term 'reasonable expectation' imports an objective test of what a hypothetical reasonable individual would expect in the relevant circumstances. The ALRC notes that this condition is an important, but not particularly onerous, protection against the misuse of an individual's personal information.

---

97 According to the OPC, this means that 'the secondary purpose must be something that arises in the context of the primary purpose': Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

98 Electronic Frontiers Australia Inc, *Submission PR 76,* 8 January 2007.

99 Ibid.

100 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

63.73 The ALRC also believes that the requirement that the secondary purpose is related to the primary purpose of collection (and, if the personal information is sensitive information, directly related to the primary purpose of collection) is appropriate in the telecommunications context. An individual is more likely reasonably to expect the use or disclosure of their personal information if the use or disclosure is related, or in the case of sensitive information directly related, to the primary purpose of collection.

Proposal 63–4 Section 289 of the *Telecommunications Act 1997* (Cth) should be amended to provide that a use or disclosure by a person of information or a document is permitted if the information or document relates to the affairs or personal particulars (including any unlisted telephone number or any address) of another person; and

(a) the other person has consented to the use or disclosure; or

(b) if the use or disclosure is for a purpose other than the primary purpose for which the information was collected (the secondary purpose):

  (i) the secondary purpose is related to the primary purpose and, if the information or document is sensitive information (within the meaning of the *Privacy Act 1988* (Cth)), the secondary purpose is directly related to the primary purpose of collection; and

  (ii) the other person would reasonably expect the person to use or disclose the information.

Consent

63.74 Section 289(1)(b)(ii) provides that the use or disclosure by a person of information is permitted if the information relates to the affairs or personal particulars (including any unlisted telephone number or any address) of another person and the other person has consented to the use or disclosure. Consent is also an exception under NPP 2.1(b) and the proposed 'Use and Disclosure' principle.[101]

63.75 The *Telecommunications Act* does not provide a definition of 'consent' for the purposes of s 289 or other provisions.[102] Section 6 of the *Privacy Act* defines 'consent' as 'express consent or implied consent'. Although s 290 of the *Telecommunications Act* suggests that consent may be express or implied, this is not stated expressly. In the interest of clarity, and consistency with the *Privacy Act*, the ALRC proposes that

101 See also Australian Communications Industry Forum, *Industry Code—Protection of Personal Information of Customers of Telecommunications Providers*, ACIF C523 (1999) rr 6.1(b), 7.1(b).

102 See discussion of s 290 below.

Part 13 of the *Telecommunications Act* should be amended to provide that 'consent' means 'express consent or implied consent'.

63.76 In Chapter 16, the ALRC considers various options for reform of the definition of consent. In the ALRC's view, however, the specific requirements of consent—particularly as regards the requisite level of voluntariness—are highly dependent on the context in which the personal information is collected, used or disclosed. In other words, what may be required to obtain valid consent in one situation may differ, sometimes significantly, from what is required to obtain consent in another situation.

63.77 In the ALRC's view, the OPC should provide further guidance on the meaning of consent. In Chapter 64, the ALRC proposes that the OPC, in consultation with ACMA, Communications Alliance and the TIO, should develop and publish guidance relating to privacy in the telecommunications industry. This guidance should explain how consent may be obtained in certain contexts that are of particular importance—such as, when an individual is entering an agreement for the provision of services with a telecommunications provider. This guidance should also include advice on when it is appropriate to use the mechanism of bundled consent.

Proposal 63–5 Part 13 of the *Telecommunications Act 1997* (Cth) should be amended to provide that 'consent' means 'express or implied consent'.

Implicit consent

63.78 Section 290 of the *Telecommunications Act* provides that the use or disclosure by a person of information is permitted if the information relates to the contents of a communication made by another person, and having regard to all the relevant circumstances, it might reasonably be expected that the sender and the recipient of the communication would have consented if they had been aware of the use or disclosure.[103] The Explanatory Memorandum to the Telecommunications Bill 1996 (Cth) states that this exception is intended to allow disclosure of public communications, for example, where a carrier discusses the content of an online bulletin board, or the content of a pay-television program carried on a cable network.[104]

63.79 The OPC noted that this exception appears to be more permissive than NPP 2, and it was concerned that this exception may lower the threshold of privacy protection in the telecommunications sector.[105] Electronic Frontiers Australia stated that the scope of the exception is unclear and does not protect adequately personal information of third parties referred to in a communication. Electronic Frontiers Australia submitted

103 *Telecommunications Act 1997* (Cth) s 306(1).

104 Explanatory Memorandum, Telecommunications Bill 1996 (Cth), vol 2, 10. See also Australian Communications Industry Forum, *Industry Code—Protection of Personal Information of Customers of Telecommunications Providers*, ACIF C523 (1999), 21.

105 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

that s 290 should be amended to ensure that personal information about third parties cannot be disclosed based on an assumption that the sender and recipient would have consented.[106]

63.80 The ALRC agrees that the intent of s 290, as expressed in the Explanatory Memorandum to the Telecommunications Bill 1996, is not reflected clearly in the wording of the section. It is the ALRC's preliminary view that the provision should be amended to clarify that it relates only to public communications. Prior to making a proposal, the ALRC is interested in stakeholder's views on how the provision could be clarified.

Question 63–3 How does s 290 of the *Telecommunications Act 1997* (Cth) operate in practice? Is the exception resulting in the inappropriate use or disclosure of personal information? If so, how should the exception be confined?

Business needs of other carriers or service providers

63.81 Sections 291 and 302 of the *Telecommunications Act* provide that the primary and secondary use or disclosure by a person of information is permitted if: it is made by or on behalf of a carrier or carriage service provider for the purposes of facilitating another carrier or service provider providing a service to the person who is the subject of the information or document; and that person has been or is a customer of the disclosing carrier or carriage service provider or the other carrier or service provider.

63.82 The provision also contains rules that allow the use or disclosure of information or a document about customers for a purpose connected with a carriage service intermediary arranging the supply of a carriage service by a carriage service provider to a third person.[107]

63.83 This provision is designed to allow uses and disclosures that are 'triggered' by some action or request by a customer such as dialling an access code to make use of another carrier. It does not provide for uses and disclosures of subscriber information for speculative activity such as marketing by other carriers or service providers.[108]

63.84 Submissions raised a number of issues in relation to this exception. These issues related to the scope of the exception and whether it permitted the use and disclosure of silent numbers, calling number display or location-based information.[109] Submissions also raised concerns that telecommunications providers have interpreted s 291 and

106 Electronic Frontiers Australia Inc, *Submission PR 76,* 8 January 2007.
107 Explanatory Memorandum, Telecommunications Bill 1996 (Cth), vol 2, 10–11.
108 Australian Communications Industry Forum, *Industry Code—Protection of Personal Information of Customers of Telecommunications Providers*, ACIF C523 (1999), 20–21.
109 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

other provisions under Part 13 to allow the use or disclosure of credit reporting information and credit worthiness information.

Silent numbers and calling number display

63.85 Electronic Frontiers Australia submitted that, since 21 December 2001 when the private sector provisions commenced and the ACIF *Industry Code—Protection of Personal Information of Customers of Telecommunications Providers* was deregistered, a number of telecommunications providers have been disclosing calling line identification (CLI) to some of their internet service provider (ISP) customers. CLI provides these ISPs with caller identification information regardless of whether permanent or per call blocking has been enabled on these lines. That is, the default blocking of calling number display (CND) for unlisted numbers and caller initiated blocking of CND are not operative by virtue of the arrangement of these carriers.

63.86 Electronic Frontiers Australia noted that it had made a complaint to the Australian Communications Authority (ACA) (now ACMA) and the OPC about this issue.[110] Both the ACA and the OPC found that this use and disclosure was permitted under s 291 of the *Telecommunications Act*. Electronic Frontiers Australia submitted that telecommunications service providers are relying on s 291 to use and disclose personal information in circumstances that would otherwise be in breach of NPP 2. It was submitted that this is contrary to previous interpretations of s 291 made publicly available by the ACA and TIO. For example, the Australian Communications Authority manual *Telecommunications and Law Enforcement* states that this exception would permit a carriage service intermediary to pass on the details of a customer to a network operator so as to permit connection. Disclosures would also be permitted where a customer changes his or her carriage service provider.[111]

63.87 The TIO *Position Statement—Customer's Personal Information Passed to Another Provider* currently states:

> Section 291 of Part 13 of the *Telecommunications Act 1997* allows the provider who has the customer's details to disclose the customer's information to another provider so that it can bill for the calls made, even if the customer's telephone service is not with that particular provider. Information can be forwarded in this way even where the number is silent; however, mutual arrangements between companies should prevent silent line information appearing in any directory services.[112]

63.88 Electronic Frontiers Australia submitted that either the *Telecommunications Act* or the *Privacy Act* should be amended so that all businesses in the telecommunications services industry are required to comply with NPP 1 in relation to necessary collection and NPP 2 in relation to use and disclosure. This would mean that ss 291 and 302 could not be interpreted or applied in a way that is inconsistent with the *Privacy Act*. It

---

110 Electronic Frontiers Australia Inc, *Submission PR 76,* 8 January 2007.

111 Australian Communications Authority, *Telecommunications and Law Enforcement* (1998), 22.

112 Telecommunications Industry Ombudsman, *Position Statement—Customer's Personal Information Passed to Another Provider* <www.tio.com.au> at 2 August 2007.

was submitted that compliance with the NPPs would not prevent service providers collecting, using and disclosing information for necessary purposes, such as those stated by the ACA and TIO above.[113]

63.89 The ALRC notes that the scope of ss 291 and 302 is unclear. Although NPP 2 would allow a use and disclosure for the purpose of s 291 because it would be 'required or authorised by or under law', there is no equivalent to s 291 under NPP 2. It could be argued that it lowers the level of protection offered under the *Privacy Act*. In the ALRC's view, the scope of the exception should be clarified.

63.90 One option would be to amend ss 291 and 302 to confine the exception to certain duties of an employee or contractor, including connecting and disconnecting telecommunications services, and limit expressly the circumstances when silent and other blocked calling numbers can be used or disclosed. Another option would be to subject the exception to a requirement that a use and disclosure by a person made for the purpose of performing that person's duties must be related to the primary purpose of collection. The ALRC is interested in stakeholder views on whether it is practical to limit this exception in this way.

Question 63–4 Is the exception that permits the use or disclosure of information or a document for certain business needs of other carriers or service providers (s 291 and s 302 of the *Telecommunications Act 1997* (Cth)) resulting in the inappropriate use or disclosure of personal information? If so, how should the exception be confined? Should the exception be amended to provide that silent and other blocked calling numbers can only be used or disclosed with a person's consent?

Location-based services

63.91 Electronic Frontiers Australia submitted that it is not clear whether s 291 of the *Telecommunications Act* provides adequate protection of location-based information.[114] Location-based services have been used for some time. For example, certain numbers starting with '13' (such as those used by taxi services or food delivery chains) involve the use of location-based technology. 'Triple 0' emergency calls also capture location information. There are a range of commercially offered location-based services. These are broadly divided into two categories:

- 'active' or 'pull' services that are initiated by an action, such as an SMS, from the consumer requesting that a taxi be sent to the person's present location; and

113 Electronic Frontiers Australia Inc, *Submission PR 76,* 8 January 2007.
114 Ibid.

- 'passive' or 'push' services that are not requested by the consumer. These may take the form of marketing distributed to consumers according to their whereabouts, or they may take the form of 'tracking' services initiated by third parties interested in the location of other consumers. Passive location-based services are not currently offered in Australia.[115]

63.92 DCITA considered location-based services in its review of the regulation of content delivered over convergent devices.[116] It noted that the use of active location-based services is likely to be taken as constituting informed consent. The review was concerned, however, that passive location-based services could be misused for illegal or inappropriate purposes if offered without appropriate safeguards.[117]

63.93 DCITA noted that s 291 of the *Telecommunications Act* may operate in certain circumstances to allow for the use and disclosure of location information without a user's consent or knowledge. DCITA found that this application of s 291 suggests that an alternative means of protecting against the privacy and safety issues associated with passive services should be pursued. The review found that it would be appropriate to require the consent of an account holder prior to the use or disclosure of location information relating to any handsets operated under an account.[118] It was noted that this approach was consistent with the requirements under the EU *Directive Concerning the Processing of Personal Data and the Protection of Privacy in the Electronic Communications Sector*.[119]

63.94 The *Communications Legislation Amendment (Content Services) Act 2007* (Cth) will implement the DCITA recommendations. This Act will amend s 291 to provide that the use or disclosure by a person of information or a document is permitted if the information or document relates to the location of a mobile telephone handset or any other mobile communications device, and the person has consented to the disclosure, or use. The Act is due to commence on 20 January 2008.[120]

Credit reporting information and credit worthiness

63.95 Concerns were raised in a number of submissions about whether Part 13 of the *Telecommunications Act* permitted the use and disclosure of credit information and

117 Ibid, 102.

118 Ibid, 104–105.

119 Ibid, 105. See European Parliament, *Directive Concerning the Processing of Personal Data and the Protection of Privacy in the Electronic Communications Sector*, Directive 2002/58/EC (2002), arts 6–9. While this approach would provide sufficient safeguards to prevent abuse of passive location-based services with respect to adults, DCITA concluded that further measures will be required where services are offered that would identify the location of minors: Australian Government Department of Communications Information Technology and the Arts, *Review of the Regulation of Content Delivered Over Convergent Devices* (2006), 104–105. Communications Alliance also considered privacy issues related to location-based services: Communications Alliance Ltd, *Submission PR 198,* 16 February 2007.

120 *Communications Legislation Amendment (Content Services) Act 2007* (Cth) sch 1, pt 1.

credit worthiness information that would otherwise not be permitted under the *Privacy Act*.

63.96 Telstra noted that a number of provisions in the *Privacy Act* prohibit disclosure of credit information except where disclosure 'is required or authorised by or under law'.[121] In Telstra's view, a disclosure which falls within one of the exceptions in Part 13 of the *Telecommunications Act* will be 'authorised by law' under Part IIIA and the NPPs in the *Privacy Act*.

63.97 The OPC expressed concern that the exceptions under ss 289, 290 and 291 of the *Telecommunications Act* appear to permit additional uses and disclosures in relation to consumer credit.[122] The OPC noted that ACMA has published advice on its website stating that ss 289 and 290 may permit the disclosure of affairs or personal particulars of another person in relation to a debt sold to a debt collection agency or when a carrier or carriage service provider does credit card checks with a credit card company.[123] The OPC submitted that this interpretation of ss 289 and 290 creates two problems.

> First, these exceptions appear to go beyond what a credit provider is permitted to do under the credit reporting provisions in Part IIIA of the *Privacy Act*. However, because of s 303B of the *Telecommunications Act* … such uses and disclosures are taken to be authorised by law for the purposes of the *Privacy Act*, when undertaken by telecommunications businesses covered by Part 13.
>
> Second, sections 289 and 290 appear to create more permissive conditions for use and disclosure of personal information related to consumer credit for those credit providers that operate in the telecommunications sector, compared to those that operate in other industries.[124]

ALRC's view

63.98 In the ALRC's view, Part 13 of the *Telecommunications Act* should be amended to provide that use or disclosure by a person of credit reporting information is to be handled in accordance with the *Privacy Act.*[125] Adverse personal credit listings can have a significant impact on the life and opportunities of an individual. As outlined in Part G, the ALRC believes that credit reporting information requires a specific level of detail to ensure that credit providers, credit reporting agencies and individuals understand their obligations and rights. This information should not be regulated under general provisions such as ss 289, 290 and 291 of the *Telecommunications Act*. There

122 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

123 Australian Communications and Media Authority, *Disclosure of Customer Details under Part 13 of the Telecommunications Act 1997 FAQs* <www.acma.gov> at 15 August 2007.

124 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

125 See Ch 50 for a discussion of 'credit reporting information' and information about the credit worthiness of another person. In that chapter, the ALRC proposes that the proposed *Privacy (Credit Reporting Information) Regulations* should apply only to the handling by credit reporting agencies and credit providers of personal information maintained by credit reporting agencies and used by credit providers in assessing an individual's credit worthiness. This category of personal information should be defined as 'credit reporting information'.

is no reason why organisations in the telecommunications industry should be subject to more permissive credit reporting rules than organisations in other industries.

Proposal 63–6 Part 13 of the *Telecommunications Act 1997* (Cth) should be amended to provide that use or disclosure by a person credit reporting information is to be handled in accordance with the *Privacy Act*.

Integrated public number database

63.99 Currently, Telstra's carrier licence requires it to provide and maintain an 'integrated public number database' (IPND).[126] The IPND, which was established in 1998, is a database of all listed and unlisted telephone numbers and associated customer data—namely, the name and address of the customer, the customer's service location, the name of the carriage service provider, and whether the telephone is to be used for government, business, charitable or private purposes.[127]

63.100 Section 472(1) of the *Telecommunications Act* allows the Minister (currently the Minister for Communications, Information Technology and the Arts)[128] to determine that a person other than Telstra should provide and maintain an IPND. Any such determination has no effect while Telstra's carrier licence requires it to provide and maintain an IPND,[129] however, and to date, no such determination has been made.

63.101 The *Telecommunications Act* requires carriage service providers to provide Telstra with as much information as is reasonably required to provide and maintain the IPND.[130] Accordingly, disclosure of telecommunications information for inclusion in the IPND is not an offence under Part 13 of the Act because it is 'required or authorised by or under law'.[131]

63.102 Telstra reported that the IPND contained 45,999,620 connected records at 30 June 2006, an increase of 2,413,787 records (or 9.5%) over the previous 12 month period. At 30 June 2006, 31 carriers and carriage service providers were listed as data providers to the IPND, compared with 24 in the previous 12 month period.[132]

126 *Carrier Licence Conditions (Telstra Corporation Limited) Declaration 1997*.
127 Ibid, cl 10(4).
128 Commonwealth of Australia, *Administrative Arrangements Order*, 21 September 2006 [as amended 30 January 2007], sch pt 3.
129 *Telecommunications Act 1997* (Cth) s 472(5).
130 Ibid s 101, sch 2 pt 4.
131 Ibid s 280.
132 Australian Communications and Media Authority, *ACMA Communications Report 2005–06* (2006), 147. At 30 June 2005, 24 carriage service providers provided data to the IPND and the IPND contained approximately 43.6 million records: Australian Communications and Media Authority, *Telecommunications Performance Report 2004–05* (2005), 184.

63.103 Telstra's carrier licence limits the purposes for which information in the IPND can be used and disclosed.[133] It can only be disclosed to a carriage service provider to enable the provider to: provide directory assistance, operator assistance or operator services; produce a public number directory; provide location dependent carriage services; or assist emergency call services and enforcement agencies.[134]

63.104 Telstra's carrier licence also provides that access to information in the IPND is subject to Part 13 of the *Telecommunications Act*.[135] Section 285 of the Act allows use or disclosure of IPND information about the affairs or personal particulars of a person for purposes connected with the: provision of directory assistance services by or on behalf of a carriage service provider; publication or maintenance of a directory of public numbers; or matter raised by a call to an emergency service number.

63.105 Where the *Privacy Act* applies to a person who discloses or uses IPND information, the disclosure or use of such information will not breach the *Privacy Act* so long as the disclosure or use occurs in accordance with sections 285 and 299A of the *Telecommunications Act*. That is, the disclosure or use will be authorised by law for the purposes of the *Privacy Act*.[136]

63.106 In November 2003, the ACA announced its intention to develop an industry standard to articulate clearly the uses that may be made of information provided by customers to telecommunications providers. It stated that an industry standard was required because investigations had revealed that information in the IPND was being used for purposes other than those envisaged by Part 13 of the *Telecommunications Act*. These purposes included 'database enhancement', 'data cleansing', 'data verification', and 'list management'.[137]

63.107 In March 2004, the ACA released a discussion paper on regulating the use of IPND data.[138] In May 2005, it released a draft industry standard on the use of IPND data.[139] Had the draft standard been implemented, it would have applied to the 'public number data' section of the telecommunications industry.[140] It would have regulated further the use of IPND data; ensured that customers were aware of the purposes of the collection of IPND data and the purposes for which the information may be disclosed; and enabled customers to choose whether to include their data in a public number directory.

138 Ibid.
139 Australian Communications Authority, *Draft Telecommunications (Use of Integrated Public Number Database) Standard* (2005).
140 This would be determined pursuant to s 110 of the *Telecommunications Act 1997* (Cth).

63.108 In December 2006, however, the Australian Parliament passed the *Telecommunications Amendment (Integrated Public Number Database) Act 2006* (IPND Act). The IPND Act introduced a definition of 'public number directory' into the *Telecommunications Act* in order to prevent IPND data being used directly for unauthorised purposes, such as the development of reverse search directories, and the production of databases which are used for purposes such as marketing, data cleansing and appending, debt collection, identity verification and credit checking.[141] It is unlikely that consumers of telecommunications services would be aware of, or to have consented to, the use of their personal information for purposes beyond the existing public interest uses permitted by the *Telecommunications Act*, such as emergency services and law enforcement.[142] Arguably, therefore, such uses are problematic from a privacy perspective.

63.109 The IPND Act also introduced a new exception to the offence provisions under the *Telecommunications Act* that allows IPND information to be disclosed for specified research purposes that are in the public interest. ACMA have promulgated a *Telecommunications (Integrated Public Number Database—Permitted Research Purposes) Instrument 2007 (No 1)* that sets out the kinds of research that will be considered to be in the public interest. The public interest research exception is discussed further below.

63.110 Under former arrangements Telstra, as the IPND Manager, was responsible for deciding applications for access to the IPND for all users. The IPND Act amended the *Telecommunications Act* to provide that IPND data users are required to apply to ACMA for an authorisation to access the IPND. Telstra will only be permitted to disclose IPND data to persons holding such an authorisation.

63.111 The IPND Act also requires ACMA to establish a scheme for the granting of authorisations permitting persons to use and disclose IPND information.[143] The Act requires ACMA to consult with the Privacy Commissioner and Attorney-General's Department on development of the scheme.[144] Criminal sanctions apply for unauthorised secondary disclosure and use of IPND data by public number directory publishers, and for breaches of conditions of authorisations issued under the IPND scheme.[145] ACMA has established an IPND Scheme under the *Telecommunications Integrated Public Number Database Scheme 2007* and a number of other instruments.[146]

146 Including the *Telecommunications (Integrated Public Number Database—Permitted Research Purposes) Instrument 2007 (No 1)* and the *Telecommunications (Integrated Public Number Database Scheme—Conditions for Authorisations) Determination 2007 (No 1)*. These instruments are discussed further below.

Should the IPND be regulated under the Privacy Act?

63.112 One issue for consideration in this Inquiry is whether the IPND should be regulated under the *Privacy Act* rather than the *Telecommunications Act*.

63.113 DCITA submitted that, if only the NPPs were relied upon to govern use and disclosure of IPND information, the NPPs may prevent the disclosure and use of IPND information for purposes which are currently permitted under the *Telecommunications Act*. These purposes, DCITA argues, continue to be important for the effective operation of the telecommunications industry, and for public safety reasons.[147]

63.114 DCITA also submitted that NPP 2 provides that personal information that is not sensitive information can be used or disclosed for the secondary purpose of direct marketing if certain criteria are met. DCITA submitted that IPND information is not currently permitted to be used for direct marketing purposes and expressed the view that this should continue to be the case.[148]

ALRC's view

63.115 Although many of the issues raised by DCITA could be accommodated by amendments to the *Privacy Act*, the ALRC considers that the IPND should continue to be regulated under Part 13 of the *Telecommunications Act*. The IPND is an up-to-date, comprehensive database containing the details of all listed and unlisted telecommunications subscribers. The special nature of the IPND means that a high standard of protection should apply.

63.116 Further, personal information held on the IPND is required to be collected by law, but disclosed and used for purposes not always related to the purpose for which the information was collected. The Australian community is entitled to expect a high level of control over access to that information, and the purposes for which it may be accessed, used and disclosed. In the ALRC's view, the current legislative regime relating to the IPND under the *Telecommunications Act* provides adequate protection of information held under the IPND.

Research exception

63.117 Sections 285(1A)(c)(iv) and 285(1A)(d) of the *Telecommunications Act* provide an exception to the prohibition on use and disclosure of information contained in the IPND. If the disclosure is made to another person for purposes connected with the conduct of research of a kind specified in an instrument under s 285(3), and the other person has been authorised by ACMA to use and disclose the information, such access is permitted. Section 285(3) provides that the Minister may, by legislative instrument, specify kinds of research that are in the public interest.

---

147 Australian Government Department of Communications Information Technology and the Arts, *Submission PR 264,* 22 March 2007.

148 Ibid.

63.118 On 4 May 2007, the Minister for Communications, Information Technology, and the Arts issued the *Telecommunications (Integrated Public Number Database—Permitted Research Purposes) Instrument 2007 (No 1)*. The Instrument sets out permitted research for the purposes of the s 285(1A)(c)(iv) exception:

- research, or the compilation or analysis of statistics, relevant to public health, including epidemiological research, where the research is not conducted for a primarily commercial purpose;

- research regarding an electoral matter conducted by a registered political party, a political representative, a candidate in an election for a Parliament or a local government authority or a person on behalf of such a party, representative or candidate, where the research is not conducted for a primarily commercial purpose; and

- research conducted by or on behalf of the Commonwealth, a Commonwealth authority or a prescribed FMA agency which will contribute to the development of public policy, where the research is not conducted for a primarily commercial purpose.[149]

63.119 The OPC submitted that the research exception may be interpreted too broadly. The OPC believes that particular terms should be defined in the Act itself, such as what constitutes research in the public interest and, in terms of medical research, what would be considered 'non-commercial use'.[150]

63.120 A key concept in each of these categories is that the research 'is not conducted for a primarily commercial purpose'. This is in contrast to the National Health and Medical Research Council guidelines made under ss 95 and 95A of the *Privacy Act*.[151] These guidelines provide that where research may breach the IPPs or NPPs, the research must be approved by a Human Research Ethics Committee (HREC). Before approving a particular research proposal under the guidelines, HRECs are required to consider whether the public interest in the research *substantially outweighs* the public interest in the protection of privacy.[152]

---

149 *Telecommunications (Integrated Public Number Database—Permitted Research Purposes) Instrument 2007 (No 1)*. A 'prescribed FMA agency' is a body, organisation or group mentioned in the *Financial Management and Accountability Regulations 1997* (Cth) sch 1.

150 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

151 National Health and Medical Research Council, *Guidelines under Section 95 of the Privacy Act 1988* (2000); National Health and Medical Research Council, *Guidelines Approved under Section 95A of the Privacy Act 1988* (2001).

152 National Health and Medical Research Council, *Guidelines under Section 95 of the Privacy Act 1988* (2000), Guideline 3.2; National Health and Medical Research Council, *Guidelines Approved under Section 95A of the Privacy Act 1988* (2001), Guideline D.4.

63.121 In Chapter 58, the ALRC proposes that the test under the s 95 and 95A guidelines be amended to provide that, before approving an activity, a HREC must be satisfied that the public interest in the activity *outweighs* the public interest in maintaining the level of privacy protection provided by the proposed Unified Privacy Principles (UPPs).

63.122 In the ALRC's view, when considering whether IPND information should be made available for research purposes, consideration of whether a research project is for a commercial purpose is not the correct test. It will not always be clear when research is primarily conducted for a commercial purpose. Further, research that is clearly in the public interest may also have a commercial purpose. In the ALRC's view, the appropriate test is whether the public interest in the relevant research outweighs the public interest in maintaining the protection of the personal information held on the IPND.

Proposal 63–7 The Australian Government should amend the *Telecommunications (Integrated Public Number Database—Permitted Research Purposes) Instrument 2007 (No 1)* to provide that the test of research in the public interest is met when the public interest in the relevant research outweighs the public interest in maintaining the level of protection provided by the *Telecommunications Act* to the information in the Integrated Public Number Database.

Notifying the Privacy Commissioner of a breach

63.123 The *Telecommunications (Integrated Public Number Database Scheme—Conditions for Authorisations) Determination 2007 (No 1)* sets out the conditions upon which ACMA may grant authorisations for access to personal information contained in the IPND under the IPND scheme.

63.124 Clause 6 of the Determination provides that an authorisation under the IPND scheme is subject to a condition requiring the holder of the authorisation, as soon as practicable after the holder becomes aware of a substantive or systemic breach of security that could reasonably be regarded as having an adverse impact on the integrity and confidentiality of the protected information, to notify ACMA and the IPND Manager, and to take reasonable steps to minimise the effects of the breach.

63.125 In the ALRC's view, the holder of an authorisation should also be required to notify the OPC as soon as practicable after the holder becomes aware of a substantive or systemic breach of security that could reasonably be regarded as having an adverse impact on the integrity and confidentiality of the protected information. It is important

that the OPC be given an opportunity to investigate whether a breach of security has also resulted in an interference with an individual's privacy.[153]

Proposal 63–8 The *Telecommunications (Integrated Public Number Database Scheme—Conditions for Authorisations) Determination 2007 (No 1)* should be amended to provide that an authorisation under the integrated public number database scheme is subject to a condition requiring the holder of the authorisation to notify the Office of the Privacy Commissioner, as soon as practicable after becoming aware:

(a) of a substantive or systemic breach of security that could reasonably be regarded as having an adverse impact on the integrity and confidentiality of the protected information; and

(b) that a person to whom the holder has disclosed protected information has contravened any legal restrictions governing the person's ability to use or disclose protected information.

Public number directories not sourced from the IPND

63.126 The ACA has noted that Telstra's directory arm, Sensis, has a database of information provided to it by other telecommunications providers under bilateral agreements. This enables Sensis to publish the White Pages based on this information, rather than from information sourced from the IPND.[154] Consequently, Sensis is not subject to the IPND provisions under the *Telecommunications Act* because it sources the information for its directories directly from telecommunications companies and not from the IPND.

Submissions and consultations

63.127 In IP 31, the ALRC noted that it was interested in hearing whether current uses of personal information by producers of public number directories are appropriate and whether there should be any further protections on the use of such information.[155]

63.128 Concern was expressed in submissions that publishers of public number directories that do not use the IPND are not adequately regulated. ACMA noted that this was a key concern highlighted in submissions to ACMA's Telecommunications

153 In Chapter 47, the ALRC proposes that the *Privacy Act* should be amended to include a new Part on data breach notification, which will provide that an agency or organisation is required to notify the Privacy Commissioner and affected individuals when specified personal information has been, or is reasonably believed to have been, acquired by an unauthorised person and the agency, organisation or Privacy Commissioner believes that the unauthorised acquisition may give rise to a real risk of serious harm to any affected individual. See Proposal 47–1.

154 Australian Communications Authority, *Who's Got Your Number? Regulating the Use of Telecommunications Customer Information*, Discussion Paper (2004), 8.

155 Australian Law Reform Commission, *Review of Privacy*, IP 31 (2006), [10.33].

(Use of Integrated Public Number Database) Draft Industry Standard 2005.[156] It was noted that the IPND Act amendments to the *Telecommunications Act* will not affect publishers of public number directories that do not use the IPND.[157] A number of stakeholders suggested that directory publishers should be subject to the same regulatory standards, irrespective of the source of the data.[158]

63.129 It was also submitted that the current regulatory scheme results in an 'uneven playing field' and huge gaps in the protection of personal information.[159] In particular, it was noted that there is no prohibition on directory publishers producing directories which are not sourced from the IPND that are reverse-searchable.[160] ACMA noted that it routinely receives complaints from the community about the existence of reverse search directories. ACMA is unable to take action to shut down a reverse search directory where the data comes from another source, or if it cannot establish that IPND customer data is the source used. ACMA gave the following example:

> ACMA has previously investigated two incidences where telephone directories were provided on CD-ROM. In both these cases, ACMA was unable to confirm that information was obtained from a primary disclosure of IPND data, as prohibited by Part 13 of the Tel Act. In one of the cases, it was identified that the likely origin of the data was Sensis' White Pages directory.[161]

63.130 This was confirmed in other submissions to the Inquiry. One member of the public submitted that:

> It is an invasion of privacy that commercial marketers can use reverse telephone directories. I rent a telephone line from Telstra but I have not specifically given them permission to sell my personal information to any organisation, who can on-sell it to goodness knows who, for whatever purpose ... It is not appropriate that private individuals have to opt OUT of contact via these directories. It is appropriate that White Pages be prevented from on-selling information that has been collected for a completely other purpose.[162]

ALRC's view

63.131 There are arguments that directory products that are produced from sources other than the IPND should be subject to Part 13 of the *Telecommunications Act*. In particular, the ALRC notes that the *Telecommunications Act* does not prohibit directory publishers producing reverse-searchable directories which are not sourced from the

IPND. The ALRC is interested on further stakeholder views on this issue before coming to a final view.

> **Question 63–5** Should directory products that are produced from data sources other than the Integrated Public Number Database be subject to the same rules under Part 13 of the *Telecommunications Act 1997* (Cth) as directory products which are produced from data sourced from the Integrated Public Number Database?

Are public number directories desirable?

63.132 A significant issue for consideration is whether public number directories that contain contact details of residential consumers are still desirable. ACMA submitted that, given the proliferation of mobile phones and the corresponding lack of mobile phone directories, it may be that the community sees decreasing benefit in public number directories. This would especially be the case for non-business users. Many individuals now prefer to limit the provision of their information, rather than have it publicly available.[163]

63.133 A member of the public submitted that:

> We object to the publication of our house number (and street name and suburb) in the Telstra/Sensis 'White Pages Directory' … We are a telephone subscriber, not an address book subscriber and we regard the publication of our address in the above directory as an invasion of our privacy … A serious consequence of Telstra's selling of names, addresses and phone numbers to all and sundry, is the proliferation and onslaught of marketing phone calls one receives at all hours of the day and night. This has to stop and Telstra's authority to sell private details must be revoked, by legislation if necessary.[164]

63.134 The Australian Institute of Mercantile Agents submitted, however, that public number directories should be more readily available.

> The IPND directories must be regarded as allowable public information. This is the only source of locator information our members have access to and yet availability of this data continually is challenged … Our industry is under the constant threat of banning access to information for debt collection purposes. The only persons assisted by such heavy handed misguided intervention are those who do not meet their contractual obligations.[165]

63.135 The ALRC does not have a view on whether public number directories are still desirable. The ALRC notes, however, that it is important that subscribers to telecommunications services are informed that their personal information will be

---

163 Australian Communications and Media Authority, *Submission PR 268,* 26 March 2007.

164 Confidential, *Submission PR 60,* 27 November 2006.

included in a public directory. One option for consideration is whether the *Telecommunications Act* should be amended to provide that a telecommunications provider is obligated to inform an individual that his or her personal information may be included in a public number directory. The ALRC notes that art 12.1 of the European Union *Directive Concerning the Processing of Personal Data and the Protection of Privacy in the Electronic Communications Sector* provides that:

> Member States shall ensure that subscribers are informed, free of charge and before they are included in the directory, about the purpose(s) of a printed or electronic directory of subscribers available to the public or obtainable through directory enquiry services, in which their personal data can be included and of any further usage possibilities based on search functions embedded in electronic versions of the directory.[166]

63.136 The ALRC does not consider that it is necessary expressly to provide for this duty in the *Telecommunications Act*. The ALRC understands that telecommunications providers generally inform their customers that their personal information will be included in a public directory. Further, the telecommunications industry is currently subject to NPP 1.4, which requires an organisation at or before the time it collects personal information from the individual to take reasonable steps to ensure that the individual is aware of the purposes for which the information is collected. The ALRC has proposed that this requirement remain under the proposed 'Specific Notification' principle.

63.137 NPP 5 requires an organisation to set out in a document clearly expressed policies on its management of personal information. The ALRC has proposed that this requirement remain under the proposed 'Openness' principle. These obligations would require a telecommunications supplier to indicate to individuals that their personal information may be included in a public directory.

63.138 Further, in Chapter 64, the ALRC proposes that the OPC, in consultation with ACMA, Communications Alliance and the TIO, should develop and publish guidance relating to privacy in the telecommunications industry. In the ALRC's view, this guidance should address a telecommunication supplier's obligation to inform an individual that their personal information may be included in a public number directory.

Unlisted numbers

63.139 The *Telecommunications Act* provides that an unlisted number cannot be disclosed except in specified contexts.[167] The Act is silent on whether a fee can be charged for an unlisted number. The *Carrier Licence Conditions (Telstra Corporation Limited) Declaration 1997* defines an unlisted number as a public number that is one of the following kinds:

---

166 European Parliament, *Directive Concerning the Processing of Personal Data and the Protection of Privacy in the Electronic Communications Sector*, Directive 2002/58/EC (2002).

167 *Telecommunications Act 1997* (Cth) ss 276(1)(a)(iv), 277(1)(a)(ii), 285(1)(a), 285(2).

- a mobile number, unless the customer and the carriage service provider that provides the mobile service to the customer agree that the number will be listed;
- a geographic number that the customer and the carriage service provider that provides services for originating or terminating carriage services to the customer agree will not be included in the directory;
- the number of a public payphone; and
- a number that, when dialled, gives access to a private telephone exchange extension that the customer has requested not be included in the directory.[168]

63.140 The ALRC notes that art 12.2 of the European Union *Directive Concerning the Processing of Personal Data and the Protection of Privacy in the Electronic Communications Sector* provides that a fee should not be charged for an unlisted number:

> Member States shall ensure that subscribers are given the opportunity to determine whether their personal data are included in a public directory, and if so, which, to the extent that such data are relevant for the purpose of the directory as determined by the provider of the directory, and to verify, correct or withdraw such data. Not being included in a public subscriber directory, verifying, correcting or withdrawing personal data from it shall be free of charge.[169]

63.141 ACMA noted that some stakeholders making submissions to it in relation to its Telecommunications (Use of Integrated Public Number Database) Draft Industry Standard 2005 suggested that the imposition of a fee may impact on a consumer's decision to choose to have an unlisted number. Consumers have queried whether such a fee contravenes the *Privacy Act*, and asked why a fee is imposed for an unlisted fixed line number, but not for mobile services.[170]

63.142 In its submission to ACMA on the Telecommunications (Use of Integrated Public Number Database) Draft Industry Standard 2005, the OPC noted that:

> One of the stated objects of the draft standard (clause 5(d)) is that an individual 'may choose whether his or her customer data is to be included in a public number directory'. A relevant question then is whether it is appropriate for individuals to be expected to pay for the right to make privacy choices. Charging a fee for a silent number or to make other choices may limit some individuals' ability to make such choices freely, and thereby hamper their ability to control their own personal information. The effect that free silent listings may have on the number of individuals that appear in directories of public numbers may also need to be considered.[171]

---

168 *Carrier Licence Conditions (Telstra Corporation Limited) Declaration 1997* cl 3.

169 European Parliament, *Directive Concerning the Processing of Personal Data and the Protection of Privacy in the Electronic Communications Sector*, Directive 2002/58/EC (2002).

170 Australian Communications and Media Authority, *Submission PR 268,* 26 March 2007.

171 Office of the Privacy Commissioner, *Submission to Telecommunications (Use of Integrated Public Number Database) Draft Industry Standard 2005*, August 2005.

63.143 While charging for an unlisted number may not be a breach of NPP 8, it reduces an individual's ability to control the use or disclosure of their personal information. Many people request an unlisted number because of safety concerns or because they do not wish to be contacted by telemarketers.[172] The ALRC proposes, therefore, that the *Telecommunications Act* be amended to prohibit the charging of a fee for an unlisted number in a public number directory.

Proposal 63–9 The *Telecommunications Act 1997* (Cth) should be amended to prohibit the charging of a fee for an unlisted (silent) number on a public number directory.

Small business exemption

63.144 The *Privacy Act* does not generally apply to businesses with an annual turnover of $3 million or less.[173] Telecommunications providers in this category are, however, obliged to comply with Part 13 of the *Telecommunications Act*. As discussed above, Part 13 only regulates the use and disclosure of information. It does not regulate other aspects of the information-handling cycle, such as the collection and storage of personal information.[174]

63.145 In addition, some organisations that are closely associated with the telecommunications industry may not fall under Part 13 of the *Telecommunications Act* or the *Privacy Act.* For example, organisations other than telecommunications providers can access information from the IPND or collect information from telecommunications providers to produce public number directories. If these organisations have an annual turnover of $3 million or less, they may operate outside all of the existing schemes that regulate privacy in the telecommunications sector.[175]

172 A number of respondents to the ALRC's National Privacy Phone-In on 1–2 June 2006 noted that they had unlisted numbers to avoid telemarketers. See Chapters 1 and 64 for discussion of the National Privacy Phone-In. In relation to the use of unlisted numbers and safety concerns, see Electronic Frontiers Australia, *Privacy Risks of Supply of Blocked Calling Numbers to ISPs* <www.efa.org.au> at 15 August 2007.

173 *Privacy Act 1988* (Cth) ss 6C, 6D. Businesses with an annual turnover of $3 million or less, however, are bound by the NPPs in certain circumstances such as when the business discloses personal information about another individual for a benefit, service or advantage: see *Privacy Act 1988* (Cth) s 6D(4).

174 Many of these providers were formerly subject to obligations similar to those imposed by the NPPs under the Australian Communications Industry Forum, *Industry Code—Protection of Personal Information of Customers of Telecommunications Providers*, ACIF C523 (1999). However, this code was repealed when the private sector provisions of the *Privacy Act* commenced in December 2001: see Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), 56.

175 Australian Communications Authority, *Submission to the Office of the Privacy Commissioner Review of the Private Sector Provisions of the Privacy Act 1988*, December 2004, [1.2].

63.146 This issue was discussed in the OPC Review and the Senate Committee privacy inquiry. The OPC recommended that the Australian Government consider making regulations under s 6E of the *Privacy Act* to ensure that the Act applied to all small businesses in the telecommunications sector.[176] The Senate Committee recommended that the small business exemption be removed from the *Privacy Act.*[177]

Submissions and consultations

63.147 It was submitted that the development of communications technologies and e-commerce has resulted in more businesses, particularly small to medium businesses, handling large amounts of personal information.[178] A number of stakeholders submitted that, given the high proportion of small business in the telecommunications industry, it was not appropriate to treat small businesses in the telecommunications industry differently from medium and large businesses.[179]

63.148 In its submission to the Inquiry, the OPC reiterated its recommendation in the OPC Review. The OPC noted that there are certain activities that should be regulated because of the nature of the activity, rather than the size of the organisation. This is already the case for the provision of health services, and trading in personal information. The OPC submitted that carriage service providers and ISPs fall into this category because of the amount of personal information they hold, and the potential for adverse impacts on individuals if that information is not protected appropriately.[180]

63.149 Communications Alliance recommended, however, that education and awareness raising and incentives to industry for voluntary adoption of the NPPs would solve the problem. The organisation did not support additional codes which would increase the regulatory burden on small businesses.[181]

ALRC's view

63.150 In Chapter 35, the ALRC proposes the removal of the small business exemption. The implementation of this proposal would solve the problems outlined above. In the meantime, however, the ALRC proposes that the Australian Government make regulations under s 6E of the *Privacy Act* to ensure that the Act applies to all small businesses in the telecommunications industry, including ISPs and public number directory producers.

176 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 8.

177 Parliament of Australia—Senate Legal and Constitutional References Committee, *The Real Big Brother: Inquiry into the Privacy Act 1988* (2005), rec 12.

178 Australian Government Department of Communications Information Technology and the Arts, *Submission PR 264,* 22 March 2007.

179 Ibid; Law Society of New South Wales, *Submission PR 146,* 29 January 2007; Confidential, *Submission PR 31,* 3 June 2006.

180 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

181 Communications Alliance Ltd, *Submission PR 198,* 16 February 2007.

63.151 The ALRC agrees with the OPC that the risks to privacy posed by small businesses are determined by the amount and nature of personal information held, the nature of the business and the way personal information is handled by the business, rather than by their size alone. The ALRC notes that a number of submissions highlighted that the telecommunications industry, in particular carriage service providers and ISPs, are increasingly handling large amounts of personal information. It is appropriate that the handling of personal information by these organisations is regulated by the *Privacy Act*.

63.152 The ALRC also agrees with Communications Alliance that education has an important role to play in securing compliance with privacy standards. The ALRC acknowledges concerns about the additional compliance burden for small business if they are required to comply with the *Privacy Act*. In Chapter 35, the ALRC discusses ways to reduce the compliance burden on small businesses. The ALRC proposes in Chapter 35 that: a special national helpline for small businesses, similar to the Australian Competition and Consumer Commission's small business helpline, be established; the OPC develop guidelines and other educational material to assist small businesses, and provide free of charge templates for Privacy Policies.

Proposal 63–10 Before the proposed removal of the small business exemption from the *Privacy Act* comes into effect (Proposal 35–1), the Australian Government should make regulations under s 6E of the *Privacy Act* to ensure that the Act applies to all small businesses in the telecommunications industry, including internet service providers and public number directory producers.

Criminal or civil penalties

63.153 A criminal penalty is the only remedy available for a breach of the use and disclosure offences under Part 13 of the *Telecommunications Act*. For example, s 276 provides that a person who contravenes that section is guilty of an offence punishable by imprisonment for a term not exceeding two years. In a regulatory context, criminal sanctions serve as a last-resort punishment after repeated or wilful violations.[182] There have been no prosecutions for breaches of the prohibitions under Part 13 since the *Telecommunications Act* was enacted.

63.154 Should Part 13 of the *Telecommunications Act* attract civil rather than criminal penalties? DCITA submitted that the ALRC might consider whether the administrative and civil regime embodied in the *Privacy Act* is more appropriate than the criminal regime set out in the *Telecommunications Act*.

182 Australian Law Reform Commission, *Principled Regulation: Federal Civil & Administrative Penalties in Australia*, ALRC 95 (2002), [2.40]–[2.44].

63.155 In Chapter 46, the ALRC suggests that there is a need to strengthen the overall enforcement regime of the *Privacy Act*. Accordingly, it proposes that the Act be amended to allow a civil penalty to be imposed where there is a serious or repeated interference with the privacy of an individual,[183] and for a failure to comply with the proposed data breach notification provisions.[184] Further, in Chapter 55, the ALRC proposes the removal of the credit reporting offences from Part IIIA of the *Privacy Act*, and their replacement with civil penalties where there is a serious or repeated breach of the proposed *Privacy (Credit Reporting Information) Regulations*.[185]

63.156 Civil penalty provisions are founded on the notion of preventing or punishing public harm. The contravention itself may be similar to a criminal offence and may involve the same or similar conduct, and the purpose of imposing a penalty may be to punish the offender, but the procedure by which the offender is sanctioned is based on civil court processes. Civil monetary penalties play a key role in regulation as they may be sufficiently serious to act as a deterrent (if imposed at a high enough level) but do not carry the stigma of a criminal conviction. Civil penalties may be more severe than criminal penalties in many cases.[186] One reason for introducing civil penalties into the *Telecommunications Act* would be to provide punishment for contraventions which fell short of a criminal offence, thus providing ACMA with a greater range of options. The ALRC is interested in stakeholder views on this issue.

Question 63–6 Should a breach of Divisions 2, 4 and 5 of Part 13 of the *Telecommunications Act 1997* (Cth) attract a civil penalty rather than a criminal penalty?

New technologies

63.157 This section considers briefly three relatively new technologies that are considered to have privacy implications—voice over internet protocol (VoIP), electronic numbering (ENUM) and web server logs. These technologies are also discussed in Part B.

Voice over internet protocol

63.158 VoIP enables spoken conversations to be conducted in real time over the internet. VoIP services usually operate over a telecommunications network and are classified as carriage services for the purposes of the *Telecommunications Act*.[187] This

183 Proposal 46–2.
184 Proposal 47–1.
185 Proposal 55–8.
186 Australian Law Reform Commission, *Principled Regulation: Federal Civil & Administrative Penalties in Australia*, ALRC 95 (2002), [2.40]–[2.44].
187 Australian Government Department of Communications Information Technology and the Arts, *Examination of Policy and Regulation Relating to Voice Over Internet Protocol (VOIP) Services* (2005), 19.

means that VoIP service providers will generally be 'carriage service providers' that are required to observe the provisions in Part 13 of the *Telecommunications Act*.

63.159 There are also, however, a variety of VoIP products and services that are closer to pure internet applications in that they tend only to operate over internet protocol networks, and not the Australian Public Switched Telephone Network (PSTN).[188] For example, instant messaging products such as Yahoo Messenger and MSN Messenger allow voice communications from computer to computer over the internet. If a VoIP service does not connect with the PSTN at all, the service provider may not be regulated by the *Telecommunications Act* but may be regulated by the *Privacy Act*.[189] It has been noted that:

> The *Telecommunications Act* does not govern the use of these products and services, and it can be persuasively argued that it does not need to. Those who utilise VoIP products and services of this class have no expectations of a telephony-grade service—they would not, for example, be likely to attempt to make an emergency call using such a service … On the other hand, the privacy issues raised by the use of this class of VoIP products and services are no less real simply because they are not appropriate to be regulated by the *Telecommunications Act*.[190]

63.160 The OPC submitted that it is unclear whether the definition of a 'carriage service provider' in s 87 of the *Telecommunications Act* will always encompass the regulation of ISPs, where ISPs provide services that are similar to those of traditional carriage service providers (for example, where an ISP is hosting VoIP services, which are telephone call services that do not route through the regular PSTN).[191] In the ALRC's view, it is outside the terms of reference for the current Inquiry to consider whether the definition of 'carriage service provider' under s 87 of the *Telecommunications Act* should be amended. This issue should be considered as part of the proposed review of the *Telecommunications Act*.[192]

63.161 Another concern that has arisen in relation to VoIP technology is that Australians may access voice services from providers outside Australia.[193] This may impact on the standards of protection for personal information disclosed during a VoIP call.[194] The OPC Review recommended that the Australian Government initiate discussions in international forums to deal with international jurisdictional issues arising from the global reach of new technologies such as VoIP.[195] The ALRC supports this recommendation.

---

188 The PSTN is the network of the world's public circuit-switched telephone networks. It was originally a network of fixed-line analog telephone systems, but is now almost entirely digital, and includes mobile as well as fixed telephones.

194 Ibid, 25.

195 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 70.

ENUM

63.162 ENUM is an abbreviation for electronic numbering or electronic number mapping. ENUM is 'an electronic numbering system that can link the public telephone network and the internet by allowing telephone numbers to be converted into internet domain names'.[196] In summary, ENUM enables telephones connected to the internet to make calls to the PSTN and receive calls from the PSTN.[197] The ALRC notes that ACMA has recently completed a trial of ENUM.[198] It is not known if or when ENUM will become available in Australia.[199]

63.163 ACMA submitted that the next development in ENUM technology, infrastructure ENUM, will involve the mapping of blocks of ENUM registrations 'to a single Internet resource—generally a Voice over Internet Protocol (VoIP) address'.[200] One application of infrastructure ENUM could involve the 'peering'—or direct connection—of VoIP services in isolation from the PSTN.[201]

Web server logs

63.164 Electronic Frontiers Australia noted that it is highly concerned that neither the *Privacy Act* nor the *Telecommunications Act* adequately protect personal information contained in web server logs and similar logs, due in part to an inadequate definition of 'personal information'. It considers that internet protocol addresses should be regarded as 'personal information' because they can be used to identify individuals.

> EFA considers legislative amendments are necessary as a matter of priority to prevent the disclosure of information about Internet users' web browsing activities on the grounds of claims that IP addresses are not personal information and that therefore disclosure and use is not regulated.[202]

63.165 The ALRC considers the definition of 'personal information' in Chapter 3. In that chapter, the ALRC notes that information that simply allows an individual to be contacted—such as an internet protocol address—in isolation, would not fall within the proposed definition of 'personal information'. The *Privacy Act* is not intended to implement an unqualified 'right to be let alone'. Contact information may, however, become 'personal information' in certain contexts, for example, once an internet protocol address is linked to a particular individual.

ALRC's views

63.166 In Chapter 7, the ALRC suggests that making the *Privacy Act* technologically neutral is the most effective way to ensure individual privacy protection in light of developing technology. Current technologies do not alter fundamentally the nature of the information-handling cycle. The ALRC notes the limitations of the *Telecommunications Act* in dealing with converging technologies in the telecommunications environment. The ALRC proposes that the OPC should provide guidance in relation to technologies that impact on privacy (including, for example, guidance for use of RFID or data collecting software such as 'cookies'). The aim of this guidance is to provide advice on compliance with the proposed UPPs.

63.167 In the ALRC's view, the privacy impact of new communication technologies should be addressed in guidance. ACMA, in consultation with the OPC, Communications Alliance and the TIO, should develop and publish guidance that addresses issues raised by new technologies, such as location-based services, VoIP and ENUM. This guidance should address not only compliance with the proposed UPPs, but also requirements under the *Telecommunications Act* and industry codes and standards.

63.168 In relation to web server logs, the ALRC notes that the use and disclosure offences under Part 13 of the *Telecommunications Act* protect any information or document that relates to the 'affairs or personal particulars (including any unlisted telephone number or any address) of another person'.[203] In the ALRC's view, this information would include an internet protocol address.

Proposal 63–11 The Australian Communications and Media Authority, in consultation with the Office of the Privacy Commissioner, Communications Alliance and the Telecommunications Industry Ombudsman, should develop and publish guidance that addresses issues raised by new technologies such as location-based services, voice over internet protocol and electronic number mapping.

Telecommunications regulators

63.169 Several bodies are involved in the regulation of the telecommunications industry. ACMA is a statutory authority[204] with specific regulatory powers conferred on it by a number of Acts, including the *Telecommunications Act* and the *Telecommunications (Consumer Protection and Service Standards) Act 1999* (Cth). The TIO is an industry body that investigates and determines complaints by users of

203 See, eg, *Telecommunications Act 1997* (Cth) ss 276, 277.
204 *Australian Communications and Media Authority Act 2005* (Cth) s 8(1).

carriage services,[205] including complaints about privacy.[206] The OPC deals with complaints of interference with privacy in the telecommunications industry. The various issues raised by the involvement of multiple regulators in the telecommunications industry are considered in more detail in Chapter 64. This section of the chapter considers some of the functions of the OPC and ACMA under the *Telecommunications Act*.

Guidance

63.170 The interaction between the *Privacy Act* and the *Telecommunications Act* requires clarification. The ALRC makes a number of proposals aimed at clarifying this interaction. In Chapter 64, the ALRC proposes that the OPC, in consultation with ACMA, Communications Alliance and the TIO, should develop and publish guidance relating to privacy in the telecommunications industry. This guidance should outline the interaction between the *Privacy Act* and the *Telecommunications Act*; provide guidance on the exceptions under Part 13 of the *Telecommunications Act*; and provide guidance about what is required to obtain an individual's consent for the purposes of the *Privacy Act*. This guidance should cover consent as it applies in various contexts, and include advice on when it is and is not appropriate to use the mechanism of 'bundled consent'.

Codes and standards

63.171 Under ss 117 and 134 of the *Telecommunications Act*, the Privacy Commissioner must be consulted about industry codes and standards that deal with privacy issues. In 2005–06, the Privacy Commissioner provided advice in respect of 12 codes being developed pursuant to the *Telecommunications Act*.[207] The Privacy Commissioner must also be consulted:

- before ACMA takes certain steps to promote compliance with an industry code relating to a matter dealt with by the NPPs or an approved privacy code;[208] and
- about the way in which law enforcement bodies certify that disclosure of telecommunications information is reasonably necessary for the enforcement of the criminal law.[209]

63.172 Communications Alliance has developed seven codes under Part 6 of the *Telecommunications Act* which contain privacy provisions or references to relevant privacy legislation.[210] In order to minimise confusion and duplication for the

210 Australian Communications Industry Forum, *Industry Code—Calling Number Display*, ACIF C522 (2003); Australian Communications Industry Forum, *Industry Code—Handling of Life Threatening and Unwelcome Calls Industry Code*, ACIF C525 (2006); Australian Communications Industry Forum,

telecommunications sector, Communications Alliance is in the process of preparing a single industry code which will capture the majority of its consumer industry codes. Communications Alliance is working with the OPC, the TIO, ACMA and the Australian Competition and Consumer Commission to formulate the content of the code. It is also undertaking an extensive public consultation process to enable input by all relevant industry stakeholders.[211]

63.173 The OPC submitted that Part 6 of the *Telecommunications Act* does not define clearly the Privacy Commissioner's powers to comment on whether a code derogates from the *Privacy Act*. In addition, the *Telecommunications Act* does not appear to provide that the Privacy Commissioner must be satisfied with a code before it is registered. The OPC believes that these provisions should be strengthened. For example, s 117 should provide specifically for the Privacy Commissioner to state if, in his or her opinion, the proposed code 'derogates' materially from the provisions of the *Privacy Act*.

63.174 The Australian Privacy Foundation submitted that the use of codes under the *Telecommunications Act* generally has not been successful. Code development takes an enormous amount of time and under resourced consumer groups struggle to make their voices heard in processes designed by and for industry participants. Once approved, adoption is voluntary unless they have been registered by ACMA. Many codes have not been signed by major telecommunications providers. The Australian Privacy Foundation also noted that, even when codes are registered, they are not actively enforced.[212]

ALRC's view

63.175 The ALRC does not propose any major amendments to the code provisions under the *Telecommunications Act*. Part 6 of the *Telecommunications Act* should be considered as part of the proposed review of the *Telecommunications Act*. The ALRC, however, does consider that the provisions relating to the OPC's role in the development of industry codes and standards should be strengthened. The development or amendment of industry codes and standards that deal with matters related to the *Privacy Act* should be subject to a condition that the Privacy Commissioner be consulted, and he or she advise ACMA in writing that he or she is satisfied with the code or standard.

Industry Code—Credit Management, ACIF C541 (2006); Australian Communications Industry Forum, *Industry Code—Billing Industry Code*, C542 (2003); Australian Communications Industry Forum, *Industry Code—Priority Assistance for Life Threatening Medical Conditions Industry Code*, ACIF C609 (2007); Australian Communications Industry Forum, *Integrated Public Number Database (IPND) Data Provider, Data User and IPND Manager*, ACIF C555 (2002); Australian Communications Industry Forum, *Industry Code—Complaint Handling Industry Code*, ACIF C547 (2004).

211 Communications Alliance Ltd, *Submission PR 198,* 16 February 2007.

212 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

Proposal 63–12 Section 117(1)(k) of the *Telecommunications Act 1997* (Cth) should be amended to provide that the Australian Communications and Media Authority can only register a code that deals directly or indirectly with a matter dealt with by the *Privacy Act*, or an approved privacy code under the *Privacy Act*, if it has consulted with the Privacy Commissioner, and has been advised in writing by the Privacy Commissioner that he or she is satisfied with the code.

Proposal 63–13 Section 134 of the *Telecommunications Act 1997* (Cth) should be amended to provide that the Australian Communications and Media Authority only can determine, vary or revoke an industry standard that deals directly or indirectly with a matter dealt with by the *Privacy Act*, or an approved privacy code under the *Privacy Act*, if it has consulted with the Privacy Commissioner, and has been advised in writing by the Privacy Commissioner that he or she is satisfied with the standard.

Reporting

63.176 Part 13 of the *Telecommunications Act* requires carriers, carriage service providers and number database operators to create records of certain disclosures of protected information.[213] These records must be provided to ACMA at the end of each financial year.[214] The Privacy Commissioner monitors compliance with the record-keeping requirements under the Act.[215]

63.177 The OPC noted that it understands that only one reason need be recorded for the disclosure. It suggested that the ALRC consider whether, where there is more than one applicable reason for the disclosure, it would be appropriate for each reason to be recorded.[216] The OPC also noted that participants in the telecommunications industry are not required to report disclosures of information if the disclosure is in the performance of a person's duties; to ASIO; for certain purposes relating to the IPND; by implicit consent of sender and recipient of the communication; or for business needs.[217]

63.178 The OPC also noted that, as part of an enhanced audit and monitoring program over the next few years, the OPC will consider monitoring the record-keeping aspects of relevant disclosures.[218]

213 *Telecommunications Act 1997* (Cth) s 306.
214 Ibid s 308.
215 Ibid s 309.
216 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
217 *Telecommunications Act 1997* (Cth) s 306(1)(b).
218 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

ALRC's view

63.179 It is the ALRC's view that, in the interest of transparency and accountability, when an eligible person or telecommunications provider discloses information or a document pursuant to more than one of the exceptions under Part 13 of the *Telecommunications Act*, each of the exceptions relied upon should be recorded. The recording of these reasons for disclosure will assist ACMA and the OPC to monitor compliance with the Act.

Proposal 63–14 Section 306 of the *Telecommunications Act 1997* (Cth) should be amended to provide that each exception upon which a decision to disclose information or a document is based is to be recorded when that decision is based on more than one of the exceptions in Divisions 3 or 4 of Part 13 of the Act.

A redraft of the Part

63.180 AAPT submitted that it is sometimes difficult to understand the requirements of Part 13 of the *Telecommunications Act*, and that this creates additional confusion in an area already complicated by the proliferation of legislation and regulation.[219]

63.181 The ALRC agrees with the concerns expressed by AAPT and proposes that Part 13 be redrafted to achieve greater logical consistency, simplicity and clarity. As discussed above, the scope of a number of the provisions is unclear—particularly the exceptions to the use and disclosure offences. Part 13 does not follow a logical structure. For example, the exceptions to the use and disclosure offences are separated by the provisions relating to the IPND authorisations. Finally, the provisions relating to the relationship between Part 13 and the *Privacy Act* should be located earlier in the Part.

Proposal 63–15 Part 13 of the *Telecommunications Act 1997* (Cth) should be redrafted to achieve greater logical consistency, simplicity and clarity.

ALRC's view 1934

Introduction

64.1 Chapter 63 examined the interaction between the *Privacy Act 1988* (Cth) and the *Telecommunications Act 1997* (Cth). This chapter considers a number of other privacy related telecommunications issues. The first section of the chapter examines access to and interception of information under the *Telecommunications (Interception and Access) Act 1979* (Cth). The next section looks at the regulation of spam and telemarketing under the *Spam Act 2003* (Cth) and the *Do Not Call Register Act 2006* (Cth).[1] The final section considers options to facilitate cooperation between the various bodies with responsibility for privacy in the telecommunications industry.

Interception and access

64.2 Laws relating to the interception of telecommunications were initially concerned with preserving the integrity of telecommunication systems.[2] In 1960, however, legislation was introduced to protect the privacy of individuals by making it an offence to intercept communications passing over telecommunication systems (with certain

1 Direct marketing is discussed more generally in Ch 23.
2 Australian Law Reform Commission, *Privacy*, ALRC 22 (1983), [753].

exceptions).[3] In 1979, this Act, and other legislation governing the interception of telecommunications, was repealed and replaced with the *Telecommunications (Interception) Act 1979* (Cth).[4] Since then, there have been a number of inquiries into telecommunications interception and numerous changes to interception legislation.[5]

64.3 Most recently, the *Telecommunications (Interception) Amendment Act 2006* (Cth) amended the *Telecommunications (Interception) Act* to change the name of the Act to the *Telecommunications (Interception and Access) Act 1979* (Cth). The 2006 amendments also implemented a number of the recommendations of the *Report of the Review of the Regulation of Access to Communications* conducted by Mr Anthony Blunn (the Blunn Report).[6]

64.4 The Blunn Report concluded that there was inadequate regulation of access to stored communications, as well as insufficient protection of privacy during the access, storage and disposal processes of stored communications.[7] The *Telecommunications (Interception) Amendment Act* expanded the regulatory telecommunications interceptions scheme by prohibiting access to stored communications, subject to a number of exceptions. It also introduced a regime for the use, disclosure, retention and destruction of accessed stored communications.[8]

64.5 The 2006 amendments broadened the exceptions to prohibited interceptions by introducing 'B-Party' warrants. B-Party warrants are directed to innocent third parties (a 'B-Party') who are likely to communicate with individuals under investigation for serious offences.[9] These controversial amendments are discussed below.

64.6 The Blunn Report concluded that the distribution of provisions between the *Telecommunications Act* and the *Telecommunications (Interception) Act 1979* (as it was then known) dealing with access to telecommunications data for security and law enforcement purposes was 'complicated, confusing and dysfunctional'.[10] The report recommended the introduction of comprehensive legislation dealing with access to all telecommunications and telecommunications data for law enforcement and security

purposes.[11] The Telecommunications (Interception and Access) Amendment Bill 2007 (Cth) will implement these recommendations.[12]

64.7 The ALRC's current Inquiry is focused on the extent to which the *Privacy Act* and related laws provide an effective framework for the protection of privacy in Australia. As discussed in Chapter 1, in the ALRC's view, communications interception generally is an issue that is outside the scope of this Inquiry. Federal legislation governing the interception of telecommunications, however, contains provisions about the use, disclosure and storage of information which may also be 'personal information'. These provisions, and their interaction with the *Privacy Act,* are within the scope of the Inquiry and are discussed further below.

Telecommunications (Interception and Access) Act 1979 (Cth)

64.8 The *Telecommunications (Interception and Access) Act* makes it an offence to intercept a communication passing over a telecommunications system without the knowledge of the maker of the communication, or to access a 'stored communication'[13] without the knowledge of the sender or intended recipient of the communication.[14] There are exceptions to these general offence provisions. Most importantly, law enforcement agencies can intercept or access communications if they have obtained a warrant to do so. In addition, other individuals, such as employees of telecommunication providers, can intercept or access communications in limited circumstances.[15]

64.9 The *Telecommunications (Interception and Access) Act* provides for two communication interception warrant processes. Part 2.2 of the Act provides for the issuing of warrants authorising the Australian Security and Intelligence Organisation (ASIO) to intercept telecommunications (ASIO warrants). ASIO warrants are issued by the Attorney-General at the request of the Director-General of Security.[16] Part 2.5 sets out a process for the issuing of warrants to agencies other than ASIO to intercept telecommunications. These agencies include Australian Government and state agencies, including a state police force and other bodies such as the Queensland Crime and Misconduct Commission.[17] These warrants (agency warrants) are issued by a judge or a nominated member of the Administrative Appeals Tribunal (AAT).[18]

64.10 The Act also sets out a warrant process for access to stored communications.[19] Whereas the interception warrant regime is limited to law enforcement agencies,

19 Ibid pt 3.

applications for stored communication warrants can be made by all agencies responsible for administering a law imposing a pecuniary penalty or administration of a law relating to the protection of the public revenue. This includes the Australian Customs Service, the Australian Tax Office, and the Australian Securities and Investments Commission.[20] Warrants are issued by an 'issuing authority' appointed by the Attorney-General and may include judges of courts exercising federal jurisdiction, a Federal Magistrate, or a magistrate. The Attorney-General may also appoint AAT members who are legal practitioners of at least 5 years' standing.[21]

64.11 The *Telecommunications (Interception and Access) Act* makes it an offence to record, use or disclose intercepted information, stored communication information, or information about an interception or stored communication warrant, except in certain circumstances.[22] For example, this type of information can be recorded, used or disclosed for the purpose of applying for a warrant or for investigating certain offences.[23]

64.12 The Act also contains a requirement that records of intercepted or stored communications be destroyed in certain circumstances.[24] Law enforcement agencies are obliged to keep records relating to interception and stored communication warrants,[25] and to provide the responsible Minister (currently the Attorney-General)[26] with an annual report containing information about these warrants.[27] The Minister is required to compile information received from law enforcement agencies into a report that must be tabled in Parliament.[28] Civil remedies are also available for unlawful interception of communications.[29]

Interaction with the *Privacy Act*

64.13 It is possible that information intercepted or accessed under the *Telecommunications (Interception and Access) Act* could constitute 'personal information' for the purposes of the *Privacy Act.* Accordingly, the handling of information under the *Telecommunications (Interception and Access) Act* could also be regulated under the *Privacy Act.*

64.14 The acts and practices of ASIO are completely exempt from the requirements of the *Privacy Act*.[30] Consequently, the handling of personal information that has been intercepted or accessed by ASIO will be regulated under the *Telecommunications*

(Interception and Access) Act and privacy guidelines issued by the Attorney General under the *Australian Security and Intelligence Organisation Act 1979* (Cth).[31]

64.15 Most Australian Government law enforcement agencies, such as the Australian Federal Police, are subject to the Information Privacy Principles (IPPs) under the *Privacy Act*.[32] The acts and practices of these agencies in relation to the handling of personal information are therefore regulated by the *Telecommunications (Interception and Access) Act* and the *Privacy Act.*

64.16 The handling of personal information in accordance with the *Telecommunications (Interception and Access) Act* will generally fall within an exception to one of the IPPs, and therefore comply with the *Privacy Act*. For example, the use and disclosure of personal information pursuant to the *Telecommunications (Interception and Access) Act* will be a use or disclosure that is 'required or authorised by or under law' under IPP 10 and IPP 11—and the ALRC's proposed 'Use and Disclosure' Principle.[33] If a law enforcement agency engages in an act or practice that does not comply with the *Telecommunications (Interception and Access) Act*, the act or practice would not be 'authorised by or under law' and so may breach the privacy principles.

Collection

64.17 The interception of, or access to, personal information by a law enforcement agency under the *Telecommunications (Interception and Access) Act* complies with IPP 1 where the collection is 'lawful' and 'necessary for one or more of its functions or activities'. This would also be the case under the proposed 'Collection' Principle.[34]

64.18 The *Telecommunications (Interception) Amendment Act* expanded the circumstances under which stored communications can be accessed to allow 'warrantless' access to stored communications. The *Telecommunications (Interception and Access) Act* allows for stored communications to be accessed without a warrant where one party to that communication has knowledge of the access.[35] A party has 'knowledge' where he or she has been provided with written notice.[36]

64.19 Professor Simon Bronitt, James Stellios and Kevin Leong submitted that this provision creates a regulatory loophole—officials are not required to obtain a warrant to access stored communications in cases where notification is given to one of the parties to a stored communication. It was argued that further consideration must be given to the significance and scope of notification, with careful evaluation of the

36 Ibid s 108(1A).

reasonable expectations of privacy in relation to stored communications and the competing public interests.[37]

64.20 The ALRC received only one submission on this issue. The ALRC has concerns, however, that this provision allows access to stored communications of many individuals where one participant in a communication has knowledge of the access. For example, a communication involving multiple participants (including non-suspects) such as an online bulletin board could be accessed if one participant in that communication was given written notice of the access. Arguably the collection by an agency of personal information about non-suspect persons is not a collection that is necessary for one or more of its functions or activities. As noted above, however, it is the ALRC's view that the circumstances in which communications can be intercepted is an issue that is outside the scope of this Inquiry. This issue should be considered as part of the review proposed in Chapter 63.[38]

Use and disclosure

64.21 The *Telecommunications (Interception and Access) Act* makes it an offence to record, use or disclose intercepted information, stored communication information, or information about an interception or stored communication warrant, except in certain circumstances.[39] As noted above, the use and disclosure of personal information by agencies pursuant to the *Telecommunications (Interception and Access) Act* is a use or disclosure that is 'required or authorised by or under law' under IPP 10 and IPP 11, and the ALRC's proposed 'Use and Disclosure' Principle.[40]

Dealing in information by organisations

64.22 Sections 63B and 135 of the *Telecommunications (Interception and Access) Act* set out circumstances in which a carrier (which may include a carriage service provider)[41] may communicate or make use of, or communicate to another carrier, lawfully intercepted or accessed information. For example, under ss 63B(1) and 135(3) of the *Telecommunications (Interception and Access) Act*, an employee of a carrier may communicate or make use of lawfully intercepted or accessed information or information that has been obtained by accessing a stored communication in the performance of his or her duties.[42]

64.23 Under ss 63B(2) and 135(4), intercepted and accessed information may be communicated to another carrier if the:

- communication of the information is for the purpose of the carrying on by the other carrier of its business relating to the supply of services by means of a telecommunications network; and

42 Ibid ss 63B(1), 135(3).

- information relates to the supply of services by the other carrier by means of a telecommunications network.

64.24 The use and disclosure by telecommunications providers of personal information pursuant to the *Telecommunications (Interception and Access) Act* is a use or disclosure that is 'required or authorised by or under law' under National Privacy Principle 2, and the proposed 'Use and Disclosure' Principle.

64.25 The Australian Communications and Media Authority (ACMA) submitted that 135(4) of the *Telecommunications (Interception and Access) Act* is significantly broader than s 291 of the *Telecommunications Act*, which outlines the circumstances in which information may be disclosed by a carrier or service provider as it relates to their business needs.[43] In ACMA's view, s 135(4) may be used by carriers and carriage service providers to disclose to each other personal information in stored communications that could not have been disclosed under the *Telecommunications Act*.

ALRC's view

64.26 While the ALRC acknowledges that the use and disclosure of intercepted and accessed material may be necessary for the performance of an employee of a carrier's duties, the scope of the exception is unclear. In Chapter 63, the ALRC considers the scope of a similar exception under ss 279 and 296 of the *Telecommunications Act*. The ALRC notes that one option would be to amend ss 279 and 296 to confine the exception to certain specified duties of an employee of a telecommunications provider. Another option would be to limit the exception to uses and disclosures that are related to the primary purpose of collection. The ALRC is interested in views on whether the exception under ss 63B(1) and 150(3) of the *Telecommunications (Interception and Access) Act* requires similar clarification.

64.27 In the ALRC's view, the scope of the exception in relation to the business needs of other carriers under ss 63B(2) and 150(4) of the *Telecommunications (Interception and Access) Act* requires clarification. In Chapter 63, the ALRC considers the scope of a similar exception under s 291 of the *Telecommunications Act*. The ALRC is interested in views on whether and how the exception under ss 63B(2) and 150(4) of the *Telecommunications (Interception and Access) Act* should be clarified.

Question 64–1 Should ss 63B(1) and 135(3) of the *Telecommunications (Interception and Access) Act 1979* (Cth) be amended to clarify when an employee of a carrier may communicate or make use of lawfully intercepted or accessed information in the performance of his or her duties?

43 Section 291 of the *Telecommunications Act 1997* (Cth) is discussed in Ch 63.

Question 64–2 How should the provisions that permit an employee of a carrier to communicate to another carrier intercepted or accessed information (ss 63B(2) and 135(4) of the *Telecommunications (Interception and Access) Act*) be clarified?

B-Party warrants

64.28 The Senate Legal and Constitutional Affairs Committee Inquiry into the Telecommunications (Interception) Amendment Bill 2006 heard a large number of concerns in relation to the interception of B-Party communications.[44] The Committee noted that a principal problem with the B-party warrant is the potential for collecting a great deal of information which may be incidental to, or not even associated with, the investigation for which the warrant was issued.

> As Senator Ludwig noted, 'it is not only the B-party but also the C, D E and F parties who may at some point end up talking to B and, therefore, being captured'. The result is that potentially not just one, but a great many non-suspects to be caught in the B-party warrant process.[45]

64.29 The Committee recommended that the Bill be amended to introduce defined limits on the use and derivative use of material collected by a B-party warrant.[46] The Australian Government did not accept this recommendation. It noted that material collected by a B-Party warrant is subject to the same rules as other warrants under Part 2.6 of the *Telecommunications (Interception and Access) Act*, and that the derivative use of information is restricted to circumstances where the intercepted information appears to relate to the commission of a serious offence which should be investigated by another agency.[47] Further, the communication of intercepted information by intercepting agencies is subject to the oversight of the Commonwealth Ombudsman and state equivalents.[48]

64.30 The ALRC accepts that the use and disclosure of information obtained by a B-party interception warrant is already governed by the *Telecommunications (Interception and Access) Act.* The ALRC is concerned, however, that there is potential to collect a large amount of information about non-suspect persons under a B-Party warrant compared with other types of warrants. The ALRC did not receive any submissions on this issue, but is interested in views on whether further restrictions should apply in relation to the use and disclosure of information obtained by a B-party interception warrant under the *Telecommunications (Interception and Access) Act.*

48 Australian Government Attorney-General's Department, *Government Response to the Senate Legal and Constitutional Legislation Committee Report on the Provisions of the Telecommunications (Interception) Amendment Bill 2006* (2006), 11.

Question 64–3 Should further restrictions apply in relation to the use and disclosure of information obtained by a B-party interception warrant under the *Telecommunications (Interception and Access) Act 1979* (Cth)?

Retention and destruction of records

64.31 Section 79 of the *Telecommunications (Interception and Access) Act* provides that a record, 'other than a copy', obtained by means of an interception must be destroyed if the chief officer of an agency is satisfied that it is unlikely that it will be required for certain permitted purposes. The Blunn Report noted that it was curious that the requirement to destroy a record under s 79 did not extend to copies of the record.[49] Section 150 of the Act contains a similar requirement to destroy information or a record obtained by accessing a stored communication. This section, introduced in 2006, does not distinguish between a record and a copy of a record.

64.32 In its submission to the Senate Legal and Constitutional Affairs Committee Inquiry into the Telecommunications (Interception) Amendment Bill 2006, the OPC suggested that s 150 may result in it being 'lawful for an agency to keep irrelevant information indefinitely'. The OPC recommended that

> consideration be given to amending the Bill to ensure that agencies take regular steps to review whether information they have accessed via stored communications warrants is still required for a permitted purpose eg; by setting a maximum period for review.[50]

64.33 The Senate Legal and Constitutional Affairs Committee recommended that the Bill be amended to specify time limits within which an agency must review their holdings of information accessed via a stored communications warrant and destroy information as required under the proposed s 150. The Committee stated its view that, given the potential to collect vast amounts of irrelevant information under a stored communications warrant, such a safeguard was essential.[51]

64.34 In its submission to the current Inquiry, the OPC reiterated its concerns about s 150, noting that it appeared that, until the chief officer has considered the relevant matters, the agency may lawfully keep the information or record. Without greater

specificity, the OPC is concerned that in some circumstances it may be lawful for an agency to keep irrelevant information indefinitely.[52]

ALRC's view

64.35 In the ALRC's view, the covert nature of interception and access to communications requires the safeguard that the intercepted or accessed information is destroyed as soon as it is no longer required. The proposed 'Data Security' principle provides that an agency or organisation must take reasonable steps to destroy or render non-identifiable personal information if it is no longer needed for any purpose permitted by the Unified Privacy Principles (UPPs).[53] In the ALRC's view, this rule should apply to records as well as copies of records of intercepted information. The ALRC proposes that s 79 of the *Telecommunications (Interception and Access) Act* be amended to provide that the chief officer of an agency must cause a record, including any copy of a record, made by means of an interception to be destroyed when it is no longer needed for a permitted purpose.

64.36 In the interests of transparency, the Attorney-General's Department should provide guidance on when the chief officer of an agency must cause information or a record to be destroyed when it is no longer needed for a permitted purpose under s 79 and s 150 of the *Telecommunications (Interception and Access) Act*. This guidance should include time limits within which agencies must review holdings of information and destroy information as required by the legislation. In the ALRC's view, this guidance is particularly necessary in relation to stored communications.

Proposal 64–1 Section 79 of the *Telecommunications (Interception and Access) Act 1979* (Cth) should be amended to provide that the chief officer of an agency must cause a record, including any copy of a record, made by means of an interception to be destroyed when it is no longer needed for a permitted purpose.

Proposal 64–2 The Attorney-General's Department should provide guidance on when the chief officer of an agency must cause information or a record to be destroyed when it is no longer required for a permitted purpose under s 79 and s 150 of the *Telecommunications (Interception and Access) Act 1979* (Cth). This guidance should include time limits within which agencies must review holdings of information and destroy information as required by the legislation.

Destruction of non-material content

64.37 The retention and destruction of information obtained by B-Party warrants will be subject to s 79 of the *Telecommunications (Interception and Access) Act*. In its submission to the Senate Legal and Constitutional Affairs Committee Inquiry into the

52 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.
53 See discussion in Ch 25.

Telecommunications (Interception) Amendment Bill 2006, the OPC expressed concern about the absence of rules to require the destruction of material outside the scope of the purpose stated in a B-Party warrant. It recommended 'enforceable, audited requirements that any intercepted material outside the scope of the purpose stated in the warrant be immediately destroyed'.[54] The Committee recommended that there should be strict supervision arrangements introduced to ensure the destruction of non-material content.[55] The Australian Government did not accept this recommendation. It stated that the current rules under the *Telecommunications (Interception and Access) Act* relating to the destruction of information obtained by a warrant under Part 2.6 already require the destruction of this material.[56]

64.38 As noted above, the ALRC is concerned that a large amount of information can be obtained about non-suspects under a B-party warrant, and that copies of records are not currently required to be destroyed under s 79. The ALRC did not receive any submissions in relation to this issue, but agrees with the concerns expressed by the OPC to the Senate Committee. The ALRC therefore proposes that s 79 of the *Telecommunications (Interception and Access) Act 1979* (Cth) be amended to require expressly the destruction of non-material content intercepted under a B-party warrant.

Proposal 64–3 Section 79 of the *Telecommunications (Interception and Access) Act 1979* (Cth) should be amended to expressly require the destruction of non-material content intercepted under a B-party warrant.

Reporting requirements

64.39 The *Telecommunications (Interception and Access) Act* sets out various record-keeping and reporting requirements in relation to intercepted telecommunications. For example, ss 80 and 81 of the Act require the chief officer of an agency to keep records of a large number of matters, including particulars of each application for a warrant and details of each warrant issued to the agency.

64.40 Section 100 sets out a large number of reporting requirements about agency warrants, including: the relevant statistics about applications for warrants that an agency made during the year; how many warrants included specified conditions or restrictions relating to the warrant; and the total number of telecommunication services

54 Office of the Privacy Commissioner, *Submission to the Senate Legal and Constitutional Affairs Committee Inquiry into the provisions of the Telecommunications (Interception) Amendment Bill 2006*, March 2006.

55 Office of the Privacy Commissioner, *Submission to the Senate Legal and Constitutional Affairs Committee Inquiry into the provisions of the Telecommunications (Interception) Amendment Bill 2006*, March 2006, rec 24.

56 Australian Government Attorney-General's Department, *Government Response to the Senate Legal and Constitutional Legislation Committee Report on the Provisions of the Telecommunications (Interception) Amendment Bill 2006* (2006), 11.

intercepted under particular warrants. Section 102 requires a report to set out information about the effectiveness of warrants, including the number of arrests and convictions recorded on the basis of lawfully intercepted information.

64.41 The record-keeping and reporting requirements in relation to access to stored communications are significantly less onerous than the requirements that apply to the interception of communications.[57] The Australian Privacy Foundation has noted that the large number of occasional users of the stored communications interception regime justifies at least as rigorous, if not greater, accountability mechanisms.[58]

64.42 The Senate Legal and Constitutional Affairs Committee Inquiry into the Telecommunications (Interception) Amendment Bill 2006 concluded that reporting obligations are vital to provide adequate transparency and accountability for the stored communications warrant regime. The Committee recommended that the Bill be amended to require agencies and the Minister to report on the use and effectiveness of stored communications warrants in a manner equivalent to the existing reporting obligations for telecommunications interception warrants.[59]

64.43 Although the Telecommunications (Interception) Amendment Bill 2006 was amended to provide that reports on access to stored communications must contain information about the effectiveness of warrants, the record-keeping and reporting requirements for stored communications warrants are still less rigorous and detailed than those for other kinds of warrants. The ALRC is interested in whether the *Telecommunications (Interception and Access) Act* should be amended to provide further reporting requirements in relation to the use and effectiveness of stored communications warrants.

Question 64–4 Should the regime relating to access to stored communications under the *Telecommunications (Interception and Access) Act 1979* (Cth) be amended to provide further reporting requirements in relation to the use and effectiveness of stored communications warrants?

Oversight

64.44 A number of bodies have oversight of the interception and access of communications under the *Telecommunications (Interception and Access) Act*. As noted above, ASIO warrants are issued by the Attorney-General, and agency warrants are issued by a judge or a member of the AAT. The Inspector General of Intelligence and Security (IGIS) and the Commonwealth Ombudsman both have oversight roles in relation to interception and access of communications. Further, agencies that intercept

57 See *Telecommunications (Interception and Access) Act 1979* (Cth) pt 3.6. See discussion of the ASIO, agency and stored communication warrant regimes above.

58 Australian Privacy Foundation, *Submission to the Senate Legal and Constitutional Affairs Committee Inquiry into the provisions of the Telecommunications (Interception) Amendment Bill 2006*, March 2006.

59 Parliament of Australia—Senate Legal and Constitutional Legislation Committee, *Provisions of the Telecommunications (Interception) Amendment Bill 2006* (2006), [3.88], rec 11.

and access communications under the Act are also subject to ministerial and parliamentary oversight.[60]

Inspector General of Intelligence and Security

64.45 The IGIS is an independent statutory officer who is responsible for ensuring that Australian intelligence agencies, such as ASIO, conduct their activities legally, behave with propriety, comply with any directions and guidelines from the responsible minister, and have regard for human rights, including privacy.[61] The IGIS therefore has oversight of ASIO in relation to the interception and access of communications under the *Telecommunications (Interception and Access) Act*.

64.46 The IGIS submitted to the Senate Legal and Constitutional Affairs Committee Inquiry into the Telecommunications (Interception) Amendment Bill 2006 that, because B-Party interception warrants involve a potential for greater privacy intrusion for persons who may not be involved in activities of legitimate concern, he will give particular attention to this type of warrant.[62]

Commonwealth Ombudsman

64.47 The Commonwealth Ombudsman is an independent statutory office established by the *Ombudsman Act 1976* (Cth). The Act provides that the Ombudsman is to investigate the administrative actions of Australian Government departments and prescribed authorities in response to complaints or on the Ombudsman's own motion. The Commonwealth Ombudsman has oversight of law enforcement bodies, such as the Australian Federal Police, that access and intercept communications under the *Telecommunications (Interception and Access) Act*.[63] Further, the Commonwealth Ombudsman has specific powers under the *Telecommunications (Interception and Access) Act* to enter premises occupied by agencies, obtain relevant material, inspect records and prepare reports in relation to the interception of or access to communications.[64]

Public Interest Monitor

64.48 One issue for consideration is whether the interception of and access to communications under the *Telecommunications (Interception and Access) Act* requires additional oversight. One option, suggested by the Office of the Victorian Privacy Commissioner (OVPC),[65] is the establishment of a Public Interest Monitor (PIM).

---

60 For further discussion of these accountability mechanisms see Ch 31.

61 For a detailed discussion of the Inspector General of Intelligence and Security see Ch 31.

62 Parliament of Australia—Senate Legal and Constitutional Legislation Committee, *Provisions of the Telecommunications (Interception) Amendment Bill 2006* (2006), [4.17].

63 See, eg, *Ombudsman Act 1976* (Cth) ss 5–7.

64 *Telecommunications (Interception and Access) Act 1979* (Cth) pt 2.7, pt 3.5 div 2.

65 Office of the Victorian Privacy Commissioner, *Submission PR 217,* 28 February 2007 referring to Office of the Victorian Privacy Commissioner, *Submission to the Australian Government Attorney-General's Department's Review of the Regulation of Access to Communications*, May 2005.

64.49 A PIM was established in Queensland under the *Crime and Misconduct Act 2000* (Qld) and the *Police Powers and Responsibilities Act 1997* (Qld). Under the *Crime and Misconduct Act*, the PIM monitors applications for, and the use of, surveillance warrants and covert search warrants.[66] Under the *Police Powers and Responsibilities Act*, the PIM monitors applications for, and the use of, surveillance device warrants, retrieval warrants and covert search warrants.[67]

64.50 The PIM's primary role is to represent the public interest where law enforcement agencies seek approval to use search powers and surveillance devices which have the capacity to infringe the rights and civil liberties of citizens. The role is based on the public interest in ensuring that law enforcement agencies meet all legislative requirements, and that their proposed actions do not extend beyond the parameters laid down by the Queensland Parliament.

64.51 PIMs perform a variety of functions. For example, under the *Crime and Misconduct Act*, the PIM's functions include:

- appearing at any hearing of an application to a Supreme Court judge or magistrate for a surveillance warrant or covert search warrant to test the appropriateness and validity of the application;
- monitoring the Queensland Crime and Misconduct Commission's compliance with matters concerning applications for surveillance warrants and covert search warrants;
- gathering statistical information about the use and effectiveness of surveillance warrants and covert search warrants; and
- issuing an annual report.[68]

64.52 The ALRC notes that the New South Wales Law Reform Commission (NSWLRC) considered PIMs in its interim report *Surveillance*.[69] In that report, the NSWLRC concluded that the regime recommended in the Report embodied sufficient accountability measures to ensure that public interest concerns are addressed, without the need for a PIM.[70] Accordingly, the NSWLRC did not make a recommendation on this issue, but raised it for further consideration.[71] The ALRC notes that the NSWLRC has since released its final report on surveillance.[72] The final report does not include any consideration of PIMs.

ALRC's view

64.53 The ALRC's preliminary view is that there is adequate oversight of the interception and access of communications under the *Telecommunications (Interception and Access) Act*, but the ALRC is interested in stakeholder views on the need for a PIM. The functions of a PIM at the federal level could include to: appear at an application made by an agency for interception and access warrants; test the validity of a warrant application; gather statistical information about the use and effectiveness of warrants; monitor the retention or destruction of information obtained under a warrant; provide to the IGIS, or other authority as appropriate, a report on non-compliance with the legislation; and report to the Australian Parliament on the use of interception and access warrants.

Question 64–5 Should the *Telecommunications (Interception and Access) Act 1979* (Cth) be amended to provide for the role of a public interest monitor? If so, what should be the role of the monitor? Should its role include, for example, to:

(a) appear at any application made by an agency for interception and access warrants under the *Telecommunications (Interception and Access) Act*;

(b) test the validity of warrant applications;

(c) gather statistical information about the use and effectiveness of warrants;

(d) monitor the retention or destruction of information obtained under a warrant;

(e) provide to the Inspector General of Intelligence and Security, or other authority as appropriate, a report on non-compliance with the *Telecommunications (Interception and Access) Act*; or

(f) report to the Australian Parliament on the use of interception and access warrants?

The role of the Privacy Commissioner

64.54 The Australian Mobile Telecommunications Association submitted that the OPC should have a more visible and formally recognised role in the formation of policies affecting telecommunications and law enforcement. This would include the OPC being involved in any reviews of the *Telecommunications (Interception and Access) Act*.[73]

64.55 The Australian Privacy Foundation noted that the Privacy Commissioner has been excluded from the deliberations of the ACMA Law Enforcement Advisory

73 Australian Mobile Telecommunications Association, *Submission PR 154,* 30 January 2007.

Committee. The Foundation submitted that the *Telecommunications Act* expressly should require the Privacy Commissioner to be consulted, preferably through membership of this forum.[74]

64.56 The Law Enforcement Advisory Committee assists ACMA in performing its telecommunications functions as set out in s 8 of the *Australian Communications and Media Authority Act 2005* (Cth), by providing advice and recommendations to ACMA on law enforcement and national security issues relating to telecommunications. The Committee meets on a quarterly basis and is made up of representatives from criminal law enforcement and national security agencies, carriers and carriage service providers, the Australian Government Department of Communications Information Technology and the Arts (DCITA), and the Attorney-General's Department.

64.57 The OPC currently has the capacity to be involved in reviews of the *Telecommunications (Interception and Access) Act.* In the ALRC's view, however, the OPC should have a more formal role in relation to law enforcement issues relating to telecommunications. The OPC should be a member of the ACMA Law Enforcement Advisory Committee. Membership on this Committee would complement its legislative scrutiny function.[75] It also would complement the power proposed in Chapter 44 to allow the Privacy Commissioner to direct an agency or organisation to carry out a privacy impact assessment in relation to a new project or development that the Privacy Commissioner considers may have a significant impact on the handling of personal information.[76]

Proposal 64–4 The Office of the Privacy Commissioner should be made a member of the Australian Communications and Media Authority's Law Enforcement Advisory Committee.

Spam and telemarketing

64.58 'Spam' refers to the use of electronic messaging systems to send unsolicited commercial messages. While the most widely recognised form of spam is email spam, the term is also applied to similar activities in other electronic media, including instant messaging and mobile phone messaging or short message service (SMS) messaging.

64.59 Spam has the potential to threaten the viability and efficiency of electronic messaging by damaging consumer confidence, obstructing legitimate business activity and imposing costs on users.[77] It was recently noted that:

> Spam's growth has been metastatic, both in raw numbers and as a percentage of all mail. In 2001, spam accounted for about five per cent of the traffic on the Internet; by 2004, that figure had risen to more than seventy per cent. This year [2007], in some

> regions, it has edged above ninety per cent—more than a hundred billion unsolicited messages clogging the arterial passages of the world's computer networks every day.[78]

64.60 'Telemarketing' is the marketing of goods and services to the consumer by telephone. Many Australians consider spam and telemarketing to be an invasion of their privacy. In 2005–06, the Telecommunications Industry Ombudsman (TIO) reported that it had received 1,858 complaints about telemarketing.[79] In that same year, ACMA received 2,133 formal complaints, of which 1,796 (84%) related to email spam and 337 (16%) related to SMS spam. ACMA has also reported that it has received 3 million email reports of spam and 1,400 verbal and written enquiries.[80]

64.61 A large number of submissions to the current Inquiry raised concerns about spam and telemarketing.[81] On 1–2 June 2006, the ALRC invited members of the public to contact the ALRC to provide their views and experiences of privacy protection in Australia. This initiative—the National Privacy Phone-In—attracted widespread media coverage, which prompted a large community response. In total, the ALRC received 1,343 responses. The great majority of respondents (73%) nominated telemarketing as their main concern.[82] For example, one member of the public noted:

> I take offence to being phoned at home, particularly after hours, and find these callers very pushy and rude. Due to such callers, we have switched over to a silent home number however we are still receiving calls. This is totally unacceptable. I understand that these people are trying to do their job, but surely there is some way to prevent them from obtaining access to home numbers for the same type of calls over and over again.[83]

64.62 A large number of respondents to the National Privacy Phone-in also considered spam to be an interference with their privacy:

> Today I received an email from an Australian company which I had previously subscribed and then unsubscribed from. The email was along the lines of 'we know you have unsubscribed, if you resubscribe with us you can get a special discount on our products'. I can't believe this is permissible. I unsubscribed, if I wanted to

> resubscribe I would have. This is spam, I consider it to be an intrusion and unacceptable.[84]

Should the *Privacy Act* regulate spam and telemarketing?

64.63 Many small businesses that use spam or engage in telemarketing are exempt from compliance with the *Privacy Act*.[85] Further, the definition of 'personal information' in the *Privacy Act* may not cover information that enables individuals to be contacted, such as email addresses that do not contain a person's name. DCITA gave the following examples:

> Regulating direct marketing activity by regulating the use of 'personal information' therefore has a significant limitation because of the technologies used in direct marketing practices. For example, the making of a telemarketing call using a predictive dialler or the sending of a spam email to an email address that has been randomly generated may not be regulated by the *Privacy Act* as the activities may not necessarily use personal information as defined by the *Privacy Act*.[86]

64.64 In addition, NPP 2 does not apply to, or restrict, the use of personal information for the primary purpose for which it was collected, which could be to engage in telemarketing.[87] NPP 2.1 also explicitly authorises organisations to use personal information for the secondary purpose of direct marketing (which includes telemarketing) in certain circumstances—although an organisation that uses information in this way must offer the individual an option to refuse any further direct marketing communications.

64.65 For these reasons, the *Privacy Act* has left unregulated some practices in the telecommunications context that interfere with privacy. Accordingly, two pieces of federal legislation were introduced to regulate specific activities that impact on privacy in the telecommunications context—the *Spam Act 2003* (Cth) and the *Do Not Call Register Act 2006* (Cth).

Submissions and consultations

64.66 One issue for consideration is whether the *Privacy Act* should regulate spam and telemarketing. One stakeholder submitted that these issues should all be dealt with in the one piece of legislation.[88] The Australian Direct Marketing Association stated, however, that the regulation of specific technology and channels should occur as it does now, through specific legislation such as the *Spam Act* and the *Do Not Call Register Act*.[89]

---

84 *ALRC National Privacy Phone-in*, June 2006, Comment #9.

85 *Privacy Act 1988* (Cth) ss 6C, 6D. The small business exemption is discussed in Ch 35.

86 Australian Government Department of Communications Information Technology and the Arts, *Submission PR 264,* 22 March 2007.

87 The ALRC notes that the proposed 'Direct Marketing' principle will prevent the use and disclosure of personal information for the primary and secondary purpose of direct marketing unless a number of conditions are met. See Ch 22.

88 AAMI, *Submission PR 147,* 29 January 2007.

89 Australian Direct Marketing Association, *Submission PR 298,* 29 June 2007.

64.67 DCITA submitted that the *Spam Act* and the *Do Not Call Register Act* are legislative responses to specific areas of public concern. While these Acts are not intended to derogate from the protection provided in the *Privacy Act*, both pieces of legislation were developed in recognition that regulation of direct marketing activity—such as the sending of commercial electronic messages and the making of telemarketing calls—cannot be achieved effectively solely by protecting the use of personal information.[90]

> Under current legislative arrangements the most effective means of addressing both spam and unwanted telemarketing calls is through communications-specific legislation. This is in recognition that regulation of some direct marketing practices—such as sending of spam email to a randomly generated email address—cannot be achieved by protecting the use of personal information, since personal information is not necessarily what is used to initiate the activity.[91]

ALRC's view

64.68 The ALRC considers that the *Spam Act* and the *Do Not Call Register Act* should continue to regulate spam and telemarketing. In Chapter 23, the ALRC looks at whether the *Privacy Act* should impose a blanket rule for all types and aspects of direct marketing, but suggests that this would be too restrictive. There is a strong view in the community that some forms of direct marketing are more intrusive than others. Those forms of direct marketing should be subject to stronger regulation than applies to less intrusive forms of direct marketing.

64.69 In light of the recent review of the *Spam Act* by DCITA,[92] the introduction of the *Do Not Call Register Act* and the Senate Environment, Communications, Information Technology and the Arts Committee inquiry into that Act,[93] the ALRC does not propose to conduct another detailed study of the *Spam Act* and the *Do Not Call Register Act*. The following section does, however, consider how they interact with the *Privacy Act*.

Spam Act 2003 (Cth)

64.70 The *Spam Act* prohibits the sending of commercial electronic messages via email, SMS, multimedia message service or instant messaging without the consent of the receiver. Accordingly, it establishes an opt-in regime that is different from the provisions governing the use of information for direct marketing in the *Privacy Act*.[94]

94 *Spam Act 2003* (Cth) s 16. Direct marketing is discussed further in Ch 21.

64.71 The *Privacy Act* provides that 'consent' means 'express consent or implied consent'.[95] Under the *Spam Act*, however, consent can be express and inferred, although it may not be inferred from the mere publication of an electronic address.[96] Consent can be inferred from 'conspicuous publication' of certain electronic addresses, such as the electronic addresses of employees, directors or officers of organisations, so long as the publication is not accompanied by a statement to the effect that the account-holder does not wish to receive unsolicited commercial electronic messages.[97] Regulations may specify in more detail the circumstances in which consent may or may not be inferred.[98] Consent can be withdrawn if the account-holder or a user of the account indicates that he or she does not wish to receive any further commercial electronic messages.[99]

64.72 The *Spam Act* does not prohibit sending 'designated commercial electronic messages'. A commercial electronic message is a 'designated commercial electronic message' if it consists of no more than factual information,[100] or the message is authorised by:

- a government body, registered political party, religious organisation, a charity or charitable institution, and the message relates to goods or services, and the body is the supplier, or prospective supplier, of the goods or services concerned;[101] or
- an educational institution, and the account holder is, or has been, enrolled as a student in that institution or is a member or former member of the household of the relevant electronic account holder and is, or has been, enrolled as a student in that institution, and the message relates to the supply of goods or services, and the educational institution is the supplier, or prospective supplier, of the goods or services concerned.[102]

64.73 The *Spam Act* requires lawful commercial electronic messages to contain certain information, such as information about the identity and contact details of the sender.[103] It also provides that a person must not send a commercial electronic message unless the message includes a statement to the effect that the recipient may use an electronic address set out in the message to send an unsubscribe message to the individual or organisation who authorised the sending of the message, or a statement to similar effect.[104] The requirement to include an unsubscribe message does not apply to designated commercial electronic messages.[105]

102 Ibid sch 1 cl 4.
103 Ibid ss 17.
104 Ibid s 18
105 Ibid s 18(1)(b).

64.74 The *Spam Act* also contains rules prohibiting the supply and use of 'address-harvesting software'[106]—that is, software that is used to search the internet for electronic addresses to compile or 'harvest'.[107] Ordinary telephone calls and facsimile communications are not covered by the Act.[108] ACMA has a range of powers to enable it to enforce the provisions of the *Spam Act*.[109]

64.75 Two industry codes dealing with spam have been developed under the *Telecommunications Act* since the introduction of the *Spam Act*. These are the *Australian eMarketing Code of Practice*[110] and the *Internet Industry Code of Practice*.[111] These codes are intended to complement the operation of the *Spam Act* by outlining action to be taken by industry members to help to counter spam.

64.76 In 2006, the Federal Court of Australia delivered the first significant decision dealing with the *Spam Act*. In *Australian Communications and Media Authority v Clarity1 Pty Ltd*, the Court found that the respondents (Clarity1 and the company's director, Wayne Mansfield) had sent tens of millions of message to recipients whose email addresses had been obtained by the use of harvested address lists.[112] The respondent raised a number of defences which were unsuccessful, including that the recipients of the messages had consented to the sending of the messages because they failed to use the 'unsubscribe facility' in the messages.

64.77 The respondents sought to rely on the OPC-issued *Guidelines to the National Privacy Principles*, which provide in relation to NPP 2 that 'it may be possible to infer consent from the individual's failure to opt out provided that the option to opt out was clearly and prominently presented and easy to take up'.[113] Nicholson J did not accept this argument, finding that non-legislative guidelines do not assist in the interpretation of legislation. Nicholson J also held that the inclusion of an unsubscribe facility in a commercial electronic message does not support an inference that a recipient consented to receiving a message by failing to use the facility. He noted that:

> There are a variety of methods available to recipients to deal with unwanted [commercial electronic messages (CEMs)]. These include simply deleting the CEM without reading it and so being unaware of the unsubscribe facility; ignoring the CEM and/or reporting it to the applicant; utilising a filtering or blocking technique. The sender, in this case Clarity1, would have no way of knowing whether the CEM has

> been opened or read; it is equally open to inference that it may not have been so that the unsubscribe facility was unknown to the recipient.[114]

64.78 In its review of the private sector provisions of the *Privacy Act* (OPC Review), the OPC indicated it would discuss with the Australian Communications Authority (ACA) (now ACMA) the development of guidance to clarify the relationship between the *Privacy Act* and the *Spam Act*.[115] In 2006, DCITA concluded a review of the operation of the *Spam Act*.[116] DCITA found that the Act was operating successfully and should remain unchanged. It recommended, however, that additional advice be developed on the operation of certain aspects of the Act. It also recommended that steps be taken to educate the public about the operation of the Act. To this end it recommended that the OPC and ACMA develop 'joint awareness materials to clarify the relationship between the *Spam Act* and the *Privacy Act*'.[117] DCITA also recommended that the Australian Government undertake further consultation to determine whether facsimile communications should be regulated by the *Spam Act.*

Submissions and consultations

64.79 AAMI noted that the different requirements under the *Spam Act* and the *Privacy Act* contribute to compliance burden and cost, particularly for national businesses that have to develop procedures that comply with both the Acts.[118]

64.80 A number of submissions noted that the *Privacy Act* is inconsistent with the *Spam Act*, because the *Privacy Act* provides an opt-out model for use and disclosure of information for direct marketing, while the *Spam Act* is based on an opt-in model.[119] The Fundraising Institute expressed a preference for an opt-out model.[120] DCITA noted, however, that an opt-out model for the regulation of spam is impracticable:

> Spam is usually sent in an untargeted and indiscriminate manner; includes or promotes offensive or illegal content; is sent in a way that disguises the originator and does not offer a valid and functional address to which respondents may opt-out of receiving further messages. The Department believes that the *Spam Act* provides the best model for the regulation of electronic messaging.[121]

64.81 Electronic Frontiers Australia submitted that, at a minimum, NPP 2 should be amended to be equivalent to the *Spam Act* in relation to consent. It also submitted that

120 Fundraising Institute—Australia Ltd, *Submission PR 138,* 22 January 2007.
121 Australian Government Department of Communications Information Technology and the Arts, *Submission PR 264,* 22 March 2007.

the *Spam Act* should be amended to require all senders to provide a functional unsubscribe facility and thereby remove the inconsistency with NPP 2.[122]

64.82 The Australian Privacy Foundation submitted that the *Spam Act* and the *Do Not Call Register Act* would not be necessary if there was a properly functioning 'Use and Disclosure' principle in the *Privacy Act*, together with adequate sanctions and active enforcement. The same effect would be achieved if NPP 2 clearly identified unsolicited direct marketing as a secondary use which required express or implied consent.[123]

64.83 ACMA noted that there would be benefits in considering amendments to the *Privacy Act* to reflect the problem of spam. It submitted, however, that the introduction of an opt-in marketing scheme for commercial electronic messages reflects the unique characteristics of email marketing when compared to other forms of direct marketing. ACMA submitted that the *Guidelines on the National Privacy Principles* are now out-of-date in relation to businesses' obligations under the *Spam Act*.[124]

64.84 ACMA also noted that Bluetooth messages may constitute spam but do not meet the definition of 'electronic messages' under s 5 of the *Spam Act* because the messages are sent to electronic addresses (a device's Bluetooth address) in connection with individual devices. The *Spam Act*, however, defines 'electronic message' as being sent to electronic addresses in connection with individual 'accounts'. ACMA submitted that future consideration should be given to whether Bluetooth messages should be regulated by the *Spam Act*.[125]

64.85 The OPC Review recommended that the OPC hold discussions with ACMA on the possibility of issuing joint guidance on the application of the two Acts.[126] The OPC noted, in its submission, that although no joint guidance has been issued to date, it continues to see merit in such an undertaking.[127] DCITA also supported the issuing of guidance on the interaction between the two Acts.[128]

ALRC's view

64.86 As noted above, it is the ALRC's view that the *Spam Act* is an appropriate response to public concern about unsolicited commercial electronic messages.

126 Office of the Privacy Commissioner, *Getting in on the Act: The Review of the Private Sector Provisions of the Privacy Act 1988* (2005), rec 11, 62–63.

127 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

128 Australian Government Department of Communications Information Technology and the Arts, *Submission PR 264,* 22 March 2007. See also Australian Government Department of Communications Information Technology and the Arts, *Report on the Spam Act 2003 Review* (2006), rec 22, 96–7. See also Australian Mobile Telecommunications Association, *Submission PR 154,* 30 January 2007.

However, there is some confusion about the interaction of the *Privacy Act* and the *Spam Act*. The ALRC considers that the OPC, in consultation with ACMA, the Australian Communications Alliance and the TIO, should develop and publish guidance relating to privacy in the telecommunications industry that addresses the interaction between the *Privacy Act* and the *Spam Act*.

64.87 The ALRC acknowledges concerns about the different approaches to opting in under the *Spam Act*, and opting out of direct marketing under the *Privacy Act*. The ALRC agrees with DCITA, however, that the opt-in regime under the *Spam Act* is required to deal with the untargeted and indiscriminate manner in which spam is sent. It is impractical to expect that an individual should have to opt out of the potentially vast number of spam messages sent to a particular address.

64.88 In the ALRC's view, the definitions of 'consent' under the *Privacy Act* and the *Spam Act* are broadly consistent. Further, due to the technology employed to send spam, it is appropriate that the *Spam Act* provides more detailed guidance on when consent can be inferred (for example, from 'conspicuous publication') and that the account holder is the person who can give or withdraw consent. The ALRC considers, however, that the proposed guidance on the interaction between the *Privacy Act* and the *Spam Act* should address what is required to obtain an individual's consent for the purposes of the *Privacy Act* and the *Spam Act*. This guidance should cover consent as it applies in various contexts and include advice on when it is and is not appropriate to use the mechanism of 'bundled consent'.[129]

64.89 The ALRC notes that the *Spam Act* does not regulate Bluetooth messages or facsimile messages. Only ACMA addressed this issues in its submission. The ALRC is interested in further views on whether commercial electronic messages sent via these technologies should be regulated by the *Spam Act*.

64.90 The ALRC is also interested in views on whether all commercial electronic messages should be required to include an unsubscribe message, including designated commercial electronic messages sent by organisations such as charities and political organisations and designated commercial electronic messages that consist of no more than factual information. Although it may be appropriate that commercial electronic messages sent by these individuals are exempt from many of the requirements under the *Spam Act*, it is arguable that such messages should include a facility whereby individuals can opt out of receiving further messages.

64.91 In Chapter 23, the ALRC proposes that an organisation must not use or disclose personal information about an individual for the primary purpose or secondary purpose of direct marketing unless a number of conditions are met, including that in each direct marketing communication with an individual, the organisation draws to the individual's attention, or prominently displays a notice, that he or she may express a wish not to receive any further direct marketing communications. This would require those bodies that send designated electronic messages to include an unsubscribe message. The ALRC is interested in views on whether the *Spam Act* should also

---

129 See discussion of bundled consent in Ch 16.

provide that designated electronic messages should include an unsubscribe message, or if they should be exempted from that condition under the proposed 'Direct Marketing' principle.

64.92 Further, in Chapter 37, the ALRC suggests that, in the interests of promoting public confidence in the political process, those who exercise or seek power in government should adhere to the principles and practices that are required of the wider community. The ALRC therefore proposes that registered political parties and political acts and practices should only be exempt under the *Privacy Act* to the extent required to avoid a contravention of the implied freedom of political communication.[130] The Explanatory Memorandum to the *Spam Act* 2003 (Cth) noted that the exception in relation to registered political parties aims to ensure that there is no unintended restriction on religious or political speech.[131] It is arguable, however, that requiring registered political parties to obtain consent before sending commercial electronic messages that relate to goods and services would not necessarily contravene the implied freedom of political communication. The ALRC is interested in hearing further views on this issue.

Question 64–6 Should the *Spam Act 2003* (Cth) be amended to:

(a) provide that the definition of 'electronic message' under s 5 includes Bluetooth messages;

(b) provide that facsimile messages are regulated under the Act;

(c) provide that an electronic message is required to include an unsubscribe message if the electronic message:

  (i) consists of no more than factual information; or

  (ii) has been authorised by a government body, a registered political party, a religious organisation, or a charity or charitable institution, and relates to goods or services; or

  (iii) has been authorised by an educational institution, and relates to goods or services;

(d) remove the exception for registered political parties?

130 Proposal 37–2.

131 Explanatory Memorandum, Spam Bill 2003 (Cth), 107.

Do Not Call Register Act 2006 (Cth)

64.93 The ALRC examined telemarketing (and other forms of direct marketing) in its 1983 report, *Privacy* (ALRC 22).[132] The Report recommended that the Human Rights Commission[133] develop guidelines about telemarketing practices.[134] Since ALRC 22, however, there has been a huge increase in telemarketing activities.[135]

64.94 The OPC Review recommended that the Australian Government consider amending the *Privacy* Act to provide consumers with a right to opt out of receiving all forms of direct marketing at any time,[136] and establishing a 'Do Not Contact' register.[137] The Senate Committee privacy inquiry agreed with the desirability of establishing a 'Do Not Contact' register, but recommended that the ALRC consider, as part of a broader review of the *Privacy* Act, whether an opt-in approach like that adopted by the *Spam Act* should be introduced for all direct marketing.[138]

64.95 On 3 May 2007, the Minister for Communications, Senator Helen Coonan, launched the national Do Not Call Register.[139] The scheme was established under the *Do Not Call Register Act*, which enables the holder of an account for an Australian telephone number to elect not to receive unsolicited telemarketing calls. The Act was introduced in response to 'rising community concerns about the inconvenience and intrusiveness of telemarketing, as well as concerns about the impact of telemarketing on an individual's privacy'.[140]

64.96 The *Do Not Call Register Act* enables account holders, and nominees of account holders, to apply to have their telephone numbers included on a Do Not Call Register held by ACMA. This establishes an opt-out regime that is different from the provisions governing the use of information for direct marketing in the *Privacy Act*.[141] The *Privacy Act* prohibits the use of personal information for the secondary purpose of direct marketing unless an organisation draws an individual's attention to the fact that he or she may opt out of any further direct marketing. The Act also prohibits direct marketing to an individual who has made a request not to receive direct marketing communications. The *Do Not Call Register Act*, however, prohibits the making of unsolicited telemarketing calls without consent to a telephone number on the Do Not Call Register.[142]

140 Explanatory Memorandum, Do Not Call Register Bill 2006 (Cth).
141 *Do Not Call Register Act 2006* (Cth) ss 13–15. Direct marketing is discussed further in Ch 23.
142 Ibid s 11. Consent is discussed further in Ch 16.

64.97 As noted above, under the *Privacy Act* consent may be express or implied. Under the *Do Not Call Register Act*, consent can be express or inferred, although it cannot be inferred simply from the publication of the telephone number.[143] Regulations may specify in more detail circumstances in which consent may or may not be inferred.[144] If express consent is given, and it is not given for a specified period or for an indefinite period, it is taken to have been withdrawn after three months.[145]

64.98 'Designated telemarketing calls' are exempt from the prohibition on making unsolicited telemarketing calls to a number registered on the Do Not Call Register. 'Designated telemarketing calls' include certain calls authorised by: government bodies; religious organisations; charities or charitable institutions; registered political parties; independent members of the Commonwealth Parliament, a state parliament, or the legislative assembly for an Australian territory, or a local governing body, or a candidate in an election; or educational institutions.[146] In addition, certain telephone numbers—such as numbers used exclusively for the sending or receiving of facsimile communications—cannot be included on the register.[147]

64.99 Telemarketers can request information from ACMA about whether a particular telephone number is on the register.[148] Numbers are registered for a period of three years, after which they are removed from the register unless another valid application for registration of the number is made.[149]

64.100 ACMA has a range of powers to enable it to enforce the provisions of the *Do Not Call Register Act*.[150] In addition, ACMA is required to establish a national industry standard to regulate the conduct of telemarketers, including those exempt from the operation of the Act.[151] On 22 March 2007, ACMA made the *Telecommunications (Do Not Call Register) (Telemarketing and Research Calls) Standard 2007*.[152] The Standard establishes minimum standards in four main areas:

- restricting the calling hours and days for making telemarketing and research calls;
- requiring provision of specific information by the caller;
- providing for the termination of calls; and

- requiring callers to enable calling line identification.[153]

64.101 There is an exception to the rules where consent has been given in advance by the call recipient to receive the call during the prohibited calling hours.[154]

Submissions and consultations

64.102 DCITA considered that the *Do Not Call Register Act* sets out clear obligations for telemarketers, and an easily understandable regime for individuals. DCITA submitted that the *Privacy Act* has not been successful in protecting individuals from unwanted and intrusive telemarketing. It also noted that, in many cases, it is unclear whether information is being collected for the primary or secondary purpose of direct marketing. This makes it difficult for individuals to understand the requirements on the organisation using their personal information.[155]

64.103 DCITA also submitted that the general principles relating to 'consent' under the *Privacy Act* and 'consent' under the *Spam Act* and *Do Not Call Register Act* are broadly consistent. That is, the use and disclosure of certain personal information is limited, but can be used or disclosed with consent, either express or implied. DCITA also noted that the *Do Not Call Register Act* is designed to limit the direct marketing activity received on a telephone number or account. Consequently, the consent arrangements have been specifically designed to reflect those authorised to consent to receiving telemarketing calls on a particular number.

> These consent arrangements are designed to recognise that the account-holder is the most appropriate person to consent to calls made to their telephone number. They are the only individual who can make arrangements in relation to access and use of the telephone.[156]

64.104 The National Australia Bank and MLC noted, however, that the *Privacy Act* and the *Spam Act* do not require consents to include a specified time frame, but the *Do Not Call Register Act* does. They also noted that the different approaches to consent create uncertainty about how an act or practice may be interpreted, both for the organisation and the customer.

> This is because an organisation such as MLC will set out to attain consent from its customer for the use and disclosure of their personal information once and in a single approach. It will not ask a different consent question for each different piece of personal information, therefore this will require taking a common position across the requirements of all legislation that may at times be considered compliant by one regulator but not another.[157]

64.105 The Australian Direct Marketing Association suggested that it is appropriate that the *Do Not Call Register Act* provides for an opt-out regime because it is more

---

153 Ibid ss 5–8.
154 Ibid s 5(5).
155 Australian Government Department of Communications Information Technology and the Arts, *Submission PR 264,* 22 March 2007.
156 Ibid.
157 National Australia Bank and MLC Ltd, *Submission PR 148,* 29 January 2007.

consistent with the *Privacy Act*, and an opt-in regime would decimate the direct marketing industry.[158]

64.106 ACMA submitted that the exemptions for designated telemarketing calls under the *Do Not Call Register Act* allow organisations to make calls to carry out work that is considered to be in the public interest. ACMA noted, however, that exempt organisations must comply with the *Telecommunications (Do Not Call Register) (Telemarketing and Research Calls) Standard 2007*.[159]

64.107 The ALRC heard concerns in consultation meetings and submissions that the exemptions watered down the effect of the Do Not Call Register. For example, one submission noted that, while the development of a Do Not Call Register is welcome, it was disappointing that the Government created an exception for charities, amongst others.[160] Another submission stated:

> I was distressed to see how what I always believed was a right has been emasculated by the exemptions to the Do Not Call Register Bill 2006. The number of organisations that are exempted is far greater than that of those who aren't, effectively making this legislation and the register virtually valueless.[161]

ALRC's view

64.108 The *Do Not Call Register Act* is an appropriate response to the public concerns about telemarketing. The ALRC notes, however, that some stakeholders find the interaction between the *Privacy Act* and the *Do Not Call Register* confusing. The ALRC has suggested that the proposed guidance on privacy in the telecommunications industry should address the interaction between the *Privacy Act* and the *Do Not Call Register Act.*

64.109 Concerns were also expressed in submissions about the different approaches to consent under the *Privacy Act* and the *Do Not Call Register Act*. The definitions of consent under both Acts are broadly consistent. The ALRC notes, however, that the *Do Not Call Register Act* contains additional requirements in relation to consent, including that consent is taken to have been withdrawn at the end of three months. This requirement ensures that telemarketers cannot continue to contact account holders after the time period. Submissions indicate, however, that more guidance is required. The ALRC proposes that the guidance on privacy in the telecommunications industry proposed above address the requirements to obtain an individual's consent for the purposes of the *Privacy Act* and the *Do Not Call Register Act*.

64.110 The ALRC also notes concerns about the authorised exceptions for designated telemarketing calls—especially for politicians and electoral candidates. As noted above, it is the ALRC's view that those who exercise or seek power in

161 F Pilcher, *Submission PR 17,* 1 June 2006.

government should adhere to the principles and practices that are required of the wider community. The ALRC is therefore interested in hearing views on whether the exception that allows registered political parties, independent members of parliament and candidates in an election to make certain calls to numbers registered on the Do Not Call Register should be removed. The ALRC is conscious of the implied freedom of the political communication and the general public interest in free political discourse. In the ALRC's view, however, it is arguable that the exception could be removed without inhibiting political communication or contravening the constitutional freedom.

64.111 The ALRC also notes that the Explanatory Memorandum to the Do Not Call Register Bill states that the exception would enable political parties to make calls which have a fundraising purpose and would also enable membership drives.[162] In the ALRC's view, however, there are a variety of other methods that political organisations and election candidates can use to raise funds and attract membership that do not involve intrusions into an individual's privacy.

Question 64–7 Should the *Do Not Call Register Act 2006* (Cth) be amended to remove the exception for registered political parties, independent members of parliament and candidates in an election?

Telecommunications regulators

64.112 Several bodies are involved in the regulation of the telecommunications industry. ACMA is a statutory authority[163] with specific regulatory powers conferred on it by a number of Acts, including the *Telecommunications Act*, *Telecommunications (Consumer Protection and Service Standards) Act 1999* (Cth), *Spam Act* and the *Do Not Call Register Act*.

64.113 The TIO is an external dispute resolution (EDR) scheme that investigates and determines complaints by users of carriage services,[164] including complaints about breaches of the NPPs.[165] The OPC deals with complaints of interference with privacy in the telecommunications industry.

64.114 The Commonwealth Ombudsman inspects, and reports on, actions taken under the *Telecommunications (Interception and Access) Act* by Commonwealth law enforcement agencies.[166] The IGIS also has various oversight powers under the *Telecommunications (Interception and Access) Act*.[167]

64.115 Each of these regulatory bodies receives privacy related complaints from consumers. ACMA noted that concern about privacy was a theme in a number of the

162 Explanatory Memorandum, Do Not Call Register Bill 2006 (Cth), 88.

166 Commonwealth Ombudsman, *Submission PR 202,* 21 February 2007.
167 See discussion of the Inspector General of Intelligence and Security above.

complaints it received in 2005–06.[168] In this same period, the TIO received 3,379 complaints relating to privacy of consumers with a landline, mobile telephone or internet connection.[169] In 2005–06, the OPC received 83 complaints about privacy in the telecommunications sector (approximately 7% of all NPP complaints) and 763 telephone enquires about privacy in the telecommunications sector (approximately 4% of all NPP telephone enquiries).[170]

64.116 These regulatory bodies have different powers to resolve complaints. For example, the TIO has the power to order service providers to provide complainants with compensation of up to $10,000.[171] There is no statutory limit on the amount of compensation that the Privacy Commissioner can award to a complainant.[172]

64.117 Submissions to the OPC Review noted that the existence of multiple regulators in the telecommunications industry had the potential to: confuse consumers wishing to complain about telecommunications privacy issues; delay or complicate the resolution of complaints;[173] and waste agency resources.[174] Telstra suggested that industry complaint-handling bodies be given responsibility for considering privacy related complaints at first instance. It submitted that this would ensure the efficient and timely investigation of complaints and enable the OPC to focus on broader privacy issues.[175] The OPC noted that it could work closely with other privacy regulators to

---

169 Telecommunications Industry Ombudsman, *Annual Report 2005–06* (2006), 40, 37, 45. The TIO received almost 600 more privacy complaints in 2005–06 compared to 2004–05 (2,718 complaints): Telecommunications Industry Ombudsman, *Annual Report 2004–05* (2005), 39, 47, 54. Communications Alliance noted that it has conducted an analysis of the privacy related complaints data generated by the TIO as a result of Communications Alliance's review of the Australian Communications Industry Forum, *Industry Code—Protection of Personal Information of Customers of Telecommunications Providers*, ACIF C523 (1999). This research suggests that the TIO is classifying what are actually telemarketing related complaints as privacy complaints. Further, some of these complaints may be attributed incorrectly to the telemarketing activities of a supplier, when the unsolicited telemarketing activity is the action of an independent telemarketing agency. Communications Alliance submitted that, although the TIO recorded 2,718 complaints relating to privacy in 2004–05, it may be that reported privacy breaches in the telecommunications sector are not as prevalent as the TIO's statistics would suggest: Communications Alliance Ltd, *Submission PR 198,* 16 February 2007.

'ensure that privacy complaints are handled efficiently and to minimise confusion and costs for both individuals and organisations'.[176]

64.118 Although it is not a regulator, the Australian Communications Alliance plays a key role in the regulation of the telecommunications sector. Membership of the Alliance is drawn from a cross-section of the communications industry, including service providers, vendors, consultants and suppliers as well as business and consumer groups. The Alliance develops and promotes compliance with industry codes. It has put in place a scheme that allows a carrier or carriage service provider to commit formally to comply with Communications Alliance Industry Codes. Part 6 of the *Telecommunications Act* provides that organisations such as Communications Alliance can create industry codes in relation to privacy for the telecommunications sector.

Submissions and consultations

64.119 In IP 31, the ALRC asked whether the existence of overlapping regulators in the telecommunications industry raises any issues. The ALRC asked what bodies (public or private) should be involved in the regulation of personal information in the telecommunications industry.[177]

64.120 Some stakeholders noted that the overlapping complaints regime results in confusion and a loss of confidence by consumers in the ability of the telecommunications industry to handle their complaint;[178] delay in the resolution of complaints;[179] increased compliance costs for telecommunications providers; and duplication of effort by regulators.[180] It was submitted that the regulatory roles of ACMA, the TIO and the OPC, as well as the Communications Alliance should be clarified and relationships strengthened.[181]

64.121 Stakeholders also noted that the existence of multiple complaint handlers can lead to forum shopping. The Australian Mobile Telecommunications Association submitted that this is inefficient and undesirable, for both the individual and the various regulatory and dispute resolution bodies.[182] It was also noted that this places additional pressure on telecommunication suppliers, which may believe that a complaint has been closed but find that it has been re-opened by a separate complaints handling body several months later.[183]

179 Telstra, *Submission PR 185,* 9 February 2007; Electronic Frontiers Australia Inc, *Submission PR 76,* 8 January 2007.

180 Telstra, *Submission PR 185,* 9 February 2007.

181 Ibid; Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.

182 Australian Mobile Telecommunications Association, *Submission PR 154,* 30 January 2007.

183 AAPT Ltd, *Submission PR 87,* 15 January 2007.

64.122 AAPT submitted that the OPC should be responsible for all telecommunications privacy matters, including complaints handling.[184] Similarly, Telstra submitted that privacy complaints should be dealt with by the OPC in accordance with the framework outlined in the *Privacy Act*.[185]

64.123 Electronic Frontiers Australia submitted, however, that the OPC does not have the resources or the expertise to deal with telecommunications privacy matters. It submitted that it would not support the removal of the telecommunications-specific regulators from the process, because a general complaints body like the OPC is unlikely to be able acquire and maintain sufficient technical knowledge in relation to existing and emerging telecommunications issues.[186]

64.124 AAPT suggested that the OPC is viewed as a 'toothless tiger' because it does not have the legislative power to impose and enforce large penalties.[187] The Fundraising Institute submitted that the OPC has not adequately promoted the *Privacy Act* or provided education and guidance for both agencies and organsiations.[188] The Australian Privacy Foundation submitted that the TIO, as a consumer focused complaint-handling process, has been able to handle some privacy complaints much more quickly and effectively than could the OPC.[189]

64.125 The OPC noted that it may be more efficient for the TIO to handle an individual's complaint which involves both privacy and non-privacy related issues. The OPC submitted, however, that the TIO's jurisdiction to deal with privacy related matters is not equivalent to that of the OPC, whether in terms of the range of matters that can be dealt with, or the type of outcomes that may be available. Further, the OPC noted that the overlap creates the theoretical possibility of each regulator providing divergent views when interpreting the provisions of the *Privacy Act*.[190]

64.126 The OPC submitted that if the TIO retains its role in handling *Privacy Act* complaints in the telecommunications sector, the *Privacy Act* should be amended to provide:

- the Privacy Commissioner with a discretion to decline to investigate, or close a complaint, if an industry ombudsman or similar body has already dealt adequately with the privacy aspects of the complaint, or is currently doing so; and

189 Australian Privacy Foundation, *Submission PR 167,* 2 February 2007.
190 Office of the Privacy Commissioner, *Submission PR 215,* 28 February 2007.

- for a combined 'decline and referral' power for the Privacy Commissioner, exercisable where an industry ombudsman (or similar body) would be a more appropriate forum to handle the complaint.[191]

ALRC's view

64.127 Stakeholders have suggested that overlapping regulators in the telecommunications industry create a number of problems, including confusion about which body to approach with a privacy complaint and a compliance burden for telecommunications providers. The ALRC has considered various options to deal with the issues raised in submissions, including whether the OPC, or the TIO alone, should deal with telecommunications issues.

64.128 The ALRC considers that there are advantages in having multiple bodies with responsibility for privacy in the telecommunications industry. Industry-specific regulators such as ACMA and TIO, play an important role in this context as they provide industry expertise. Industry-specific regulators also reduce the volume of privacy complaints that would otherwise be made to the OPC, freeing the OPC's resources for other functions. Another potential benefit is peer review and the promotion of high standards of performance.

64.129 In the ALRC's view, however, the relationship between the various bodies with responsibility for telecommunications privacy needs to be strengthened. The ALRC makes a number of proposals aimed at: facilitating cooperation between the OPC, ACMA and the TIO; clarifying the interaction between the legislation that each of the bodies administers;[192] and enhancing public understanding about the privacy obligations of telecommunications providers.

64.130 The ALRC notes that it has only considered the role of each of these bodies in relation to the regulation of privacy. The role and function of each of these bodies in the regulation of the telecommunication industry more broadly should be considered as part of the review proposed in Chapter 63.[193]

New powers of the Privacy Commissioner

64.131 In Chapter 45, the ALRC makes a number of proposals directed to improving the relationship between the OPC and EDR schemes, such as the TIO. The ALRC proposes that the *Privacy Act* be amended to empower the Privacy Commissioner to decline to investigate, or investigate further, a complaint that is already being handled by an EDR scheme.[194]

64.132 The ALRC also proposes that the Privacy Commissioner be empowered both to decline to investigate a complaint and refer it on to an EDR scheme, where the Commissioner is satisfied that the complaint would be handled more suitably by the

---

191 Ibid. See also Office of the Victorian Privacy Commissioner, *Submission PR 217,* 28 February 2007.
192 See discussion of *Telecommunications Act 1997* (Cth) in Ch 63.
193 Proposal 63–1.
194 Proposal 45–2.

scheme.[195] In the ALRC's view, this power should increase transparency around the role of EDR schemes in the privacy context. It should also increase efficiency in dealing with privacy complaints and help provide parties with a 'one-stop-shop' in resolving complaints that are partly about privacy and partly about telecommunications service delivery. The ALRC notes that the EDR schemes under these proposed powers must be approved by the OPC. As noted in Chapter 55, the OPC could be expected to approve EDR schemes with a statutory basis (such as the TIO).

64.133 The ALRC notes further that the OPC currently has the power under the *Privacy Act* not to investigate, or not to investigate further, an act or practice about which a complaint has been made if the Commissioner is satisfied that the act or practice is the subject of an application under another federal law and the subject matter of the complaint has been or is being dealt with adequately under that law, or that law provides a more appropriate remedy.[196] In the ALRC's view, this power would allow the OPC to cease investigating a matter being considered by ACMA under Part 13 of the *Telecommunications Act*.

Memoranda of understanding

64.134 The ALRC notes that the Privacy Commissioner and the New Zealand Privacy Commissioner have entered into an agreement that allows for cooperation on privacy related issues. The Memorandum of Understanding covers the sharing of information related to surveys, research projects, promotional campaigns, education and training programs, techniques in investigating privacy violations and regulatory strategies. Other areas addressed include cooperation on complaints with a cross-border element and the possible undertaking of joint investigations. The Privacy Commissioner has also signed an agreement with the Commonwealth Ombudsman that allows for greater cooperation between their respective offices when dealing with privacy related complaints.

64.135 In the ALRC's view, the OPC, TIO and ACMA should develop memoranda of understanding that address the roles and functions of each of the bodies in relation to complaints handling under the *Telecommunications Act*, *Spam Act*, *Do Not Call Register Act* and the *Privacy Act.*

64.136 Such agreements should also address the exchange of relevant information and expertise between the bodies. As the regulator with expertise in privacy, the OPC should provide advice to the TIO in relation to the interpretation of the proposed UPPs, and to ACMA on whether a privacy issue is dealt with better under the *Privacy Act* or the *Telecommunications Act*. Conversely, given that the TIO and ACMA have expertise in telecommunications issues, they should assist the OPC when it is investigating a telecommunications-related privacy matter.

---

195 Proposal 45–2.
196 *Privacy Act 1988* (Cth) s 41.

Proposal 64–5 The Office of the Privacy Commissioner, the Telecommunications Industry Ombudsman and the Australian Communications and Media Authority should develop memoranda of understanding, addressing:

(a) the roles and functions of each of the bodies under the *Telecommunications Act 1997* (Cth), *Spam Act 2003* (Cth), *Do Not Call Register Act 2006* (Cth) and the *Privacy Act*;

(b) the exchange of relevant information and expertise between the bodies; and

(c) when a matter should be referred to, or received from, the bodies.

Complaint-handling policies

64.137 In Chapter 45, the ALRC proposes that the OPC prepare and publish a document setting out its complaint-handling policies and procedures.[197] Consolidating this information into one document should increase the accessibility and transparency of the complaint-handling process, and provide a useful resource for agencies, organisations and individuals. The ALRC also proposes that the OPC should develop and publish enforcement guidelines.[198] Both these documents should set out the roles and functions of the OPC, TIO and ACMA under the *Telecommunications Act*, *Spam Act*, *Do Not Call Register Act* and *Privacy Act*; including when a matter will be referred to, or received from, the TIO and ACMA. The TIO and ACMA also should develop and publish a complaint-handling policy and enforcement guidelines.

Proposal 64–6 The document setting out the Office of the Privacy Commissioner's complaint-handling policies and procedures (see Proposal 45–8), and its enforcement guidelines (see Proposal 46–2) should address:

(a) the roles and functions of the Office of the Privacy Commissioner, Telecommunications Industry Ombudsman and the Australian Communications and Media Authority under the *Telecommunications Act 1997* (Cth), *Spam Act 2003* (Cth), *Do Not Call Register Act 2006* (Cth) and the *Privacy Act*; and

(b) when a matter will be referred to, or received from, the Telecommunications Industry Ombudsman and the Australian Communications and Media Authority.

197 Proposal 45–8.
198 See Ch 46 and Proposal 46–2.

Guidance

64.138 As noted in Chapter 63, since the deregistration of the Australian Communications Industry Forum *Industry Code—Protection of Personal Information of Customers of Telecommunications Providers*, there is little published guidance on information privacy in the telecommunications industry.

64.139 Submissions to the OPC Review and the current Inquiry indicate that telecommunications providers, regulators and individuals would benefit from the development of such a document, particularly in relation to the interaction between the *Privacy Act* and other legislation that deals with telecommunications privacy issues. The ALRC believes that all bodies with responsibility for telecommunications privacy should be involved in the development of this guidance.

64.140 The guidance should outline the interaction between the *Privacy Act*, *Telecommunications Act*, *Spam Act*, and *Do Not Call Register Act* and include advice on the operation of the exceptions, and on what is required to obtain an individual's consent under each Act. Issues related to exceptions and consent under telecommunications legislation are discussed in more detail above and in Chapter 63.

Proposal 64–7 The Office of the Privacy Commissioner, in consultation with the Australian Communications and Media Authority, Australian Communications Alliance and the Telecommunications Industry Ombudsman, should develop and publish guidance relating to privacy in the telecommunications industry. The guidance should:

(a) outline the interaction between the *Privacy Act*, *Telecommunications Act 1997* (Cth), *Spam Act 2003* (Cth) and the *Do Not Call Register Act 2006* (Cth);

(b) provide advice on the exceptions under Part 13 of the *Telecommunications Act*, *Spam Act* and the *Do Not Call Register Act*; and

(c) outline what is required to obtain an individual's consent for the purposes of the *Privacy Act*, *Telecommunications Act, Spam Act* and the *Do Not Call Register Act*. This guidance should cover consent as it applies in various contexts, and include advice on when it is, and is not, appropriate to use the mechanism of 'bundled consent'.

Educational material

64.141 The ALRC notes that the TIO publishes a number of 'Position Statements' designed to inform the public about a range of telecommunications issues, including privacy. ACMA also publishes on its website some material on Part 13 of the *Telecommunications Act*. There is little information about the operation of the

Telecommunications (Interception and Access) Act on the website of the Australian Government Attorney-General's Department.

64.142 In the ALRC's view, it is important that individuals are aware of agencies and organisations' obligations under telecommunications privacy laws, and know how to seek redress for a breach of those obligations. The ALRC proposes that the OPC, in consultation with ACMA and the TIO, develop and publish educational material that addresses: the rules regulating privacy in the telecommunications industry; the various bodies that are able to deal with a complaint in relation to privacy in the telecommunications industry; and how to make a complaint to those bodies.

64.143 These educational materials should also address agencies and organisations' obligations under the *Telecommunications (Interception and Access) Act*. The OPC should consult with the bodies with responsibility for the administration and oversight of that legislation, namely, the Attorney-General's Department, the IGIS, and the Office of the Commonwealth Ombudsman.

Proposal 64–8 The Office of the Privacy Commissioner, in consultation with the Attorney-General's Department, the Australian Communications and Media Authority, the Office of the Commonwealth Ombudsman, the Inspector General of Intelligence and Security and the Telecommunications Industry Ombudsman, should develop and publish educational material that addresses the:

(a) rules regulating privacy in the telecommunications industry;

(b) various bodies that are able to deal with a complaint in relation to privacy in the telecommunications industry, and how to make a complaint to those bodies.
