

## CI 2425 M Suter

First name:

Mark

Last name:

Suter

Q1:

Q2:

The National Classification Scheme (NSC) should only be to provide information with which choices can be made. Those choices, whether by government, organisations, families or individuals, use the output of the NCS as their input.

Q3:

The technology or platform used to access content should not matter. What should matter is choice. There is a significant difference between something broadcast to many (for example, a large banner flown over a populous area) and something accessed by explicit choice.

Q4:

Most content should only be required to be classified if the content has been the subject of a legitimate complaint. This is a simple reality of any system that is open-by-default.

Q5:

Other comments:

Today's children will be adults for 67 years, that is, 82% of their lives[1]. We must ensure that any classification schemes do not harm those future adults.
