

Claire Williams

I am writing as i would like the revised family law to include single mothers by choice. The law needs to include mothers who choose to be single parents by the use of sperm donation. And ensure these mothers and children are protected within the family law. The law needs to recognise ageements between donor and recipient and ensure a mothers choice to parent solo is protected if donor chooses to change his mind. Further more centerlink needs to recognise that solo mothers by choice are families and that they be treated like other family structure. I am part of a community of 600 single mothers through sperm donation and all of us agree that the law needs to protect the single parent by choice family structure.

Kind regards

Claire Williams
